 ago, and all the efforts of the workmen at the
 time and subsequently have been quite ineffec-
 tual to extinguish it. A short time ago it
 was ascertained that the flames were approach-
 ing the bottom of the shaft, and it was then
 resolved, if possible, to stay their progress, so
 that they might not extend to other parts of
 the workings. At length the superintendent
 of the collieries conceived the idea of building
 a wall to shut in the fire, and in order to as-
 certain the best site for this wall, several of
 the officials crept on their hands and knees
 through the dense stifling smoke, as far as
 possible into the workings. Their efforts
 were successful, and a wall is now completed
 nearly 1000 yards in length, and varying from
 9 inches to 5 feet in thickness. At distances
 varying from 30 to 50 yards metal pipes have
 been inserted in this wall, which are securely
 plugged at the end, so that at any time, by
 removing the plugs, the state of the air on
 the side of the fire, and even the position of
 the fire itself, can be ascertained. So intense
 is the heat arising from this fire that people
 possessing gardens above the colliery declare
 that the growth of plants is materially affect-
 ed, and that they are enabled to obtain two
 and three crops every year.—*London News.*

Substitute for Tea and Coffee.—We observe
 in a late number of the "Pharmaceutical
 Journal," a paper by Mr. Cooke on Guaranae,
 the seeds of a tree termed the Paulinia sorbitis,
 and which does not appear to have hith-
 erto entered into European commerce.

The guarana-yielding tree is found abun-
 dantly in the Amazons. The fruit is scarcely
 as large as a walnut, and contains five or six
 seeds, which are washed, then mixed with
 water, and moulded into a cylindrical form
 resembling a large sausage, and finally dried
 in an oven. Before being used it is grated,
 and then resembles cacao. Two spoonfuls of
 this powder are mixed in a tumbler of water,
 and this drink is regarded as a stimulant and
 nervine tonic. Like strong tea or coffee, it
 is said to take away the disposition to sleep.
 The active chemical principle is an alkaloid,

that Dr. Stenhouse has shown to be identical with theirs. Guarana contains more than double as much of this alkaloid as good black tea, and five times as much as coffee, the proportion being 5.07 p. ct. in guarana.—*Lancet.*

A Fearful Responsibility.—Raboo Chunder Sen, the leader of the Brahma-Somaj in India, in his recent visit to England arraigned the British Government for the crime of introducing intemperance among his countrymen, whom he pronounced remarkable for sobriety, temperance, and abstinence, till they were interfered with by a Christian nation and a Christian Government. He said, "In India you will see how hundreds upon hundreds, ay, thousands upon thousands of enlightened, energetic, and promising young men and women are dying month after month and year after year, as the necessary and inevitable consequence of that iniquitous system of liquor traffic which the British Government, to its shame, introduced into India." Is it a wonder that he called that "Christianity a mockery, and that civilization a solemn sham?"

True Nobleness of Soul.—To act uniformly as the true servants of God, satisfied with his approbation, under the regulation of his will, and for his sake cheerfully to bear whatever hardships a compliance with duty may expose us to, enduring grief, suffering wrongfully, and acting in the spirit of benevolence and meekness, not only to the good, but also to the froward; this indicates a true nobleness of soul. And to this we are called by our profession: for thus Christ suffered. He did no sin, neither was guile found in his mouth; yet he was reviled, but he reviled not again.

THE FRIEND.

SECOND MONTH 11, 1871.

SUMMARY OF EVENTS.

FOREIGN.—The members of the Conference on the Eastern question met again in London on the 3d inst., all the great Powers, except France, being represented. After a session of several hours the conference adjourned to the 7th inst.

The armistice between the French and Germans did not go into effect in the eastern departments of France, until the first inst. During the three days immediately preceding, the Germans had a series of engagements with the rear guard of Bourbaki's army and captured nineteen cannon and mitrailleuses, and 15,000 prisoners. The main portion of the French army, finding that escape was impossible, crossed the frontier into Switzerland, and surrendered to the Swiss authorities. A Berlin dispatch says there are now 66,000 French soldiers in Switzerland. The men are very badly clad, and the Swiss government has asked the French authorities to send clothing for their use.

The agreement between Bismarck and Jules Favre, providing for a temporary cessation of hostilities, the calling of a Constituent Assembly, &c., is published in full. By the 11th and 12th articles the city of Paris is obliged to pay "a municipal contribution of war," amounting to 200,000,000 francs, before the fifteenth day of the armistice, and the French during its continuance are prohibited from taking away any public objects of value which may serve as a pledge for the recovery of war contributions. The German army is not to enter Paris during the armistice. The garrison are to lay down their arms. "At the expiration of the armistice all combatants belonging to the army confined in Paris will have constituted themselves prisoners of war to the German army, if peace has not previously been concluded." The number thus held as prisoners in Paris is stated to be about 180,000, the national guards, gendarmes and 12,000 other armed men, being exempted in order to preserve peace and quiet in the city.

The destitution in Paris was found to be extreme. The Germans immediately sent in some supplies, and limited quantities have arrived from other quarters, but several days after the capitulation there was great want of food, and many persons were dying from actual starvation. The government at Bordeaux has issued a decree ordering elections for the National Assembly to be held on the 8th inst.

It disqualifies for election to the Assembly the members of families reigning over France since 1789: all persons who have acted as imperial or official candidates in past elections, or held office as ministers, senators, or members of the State, and the empire, and prefects who have accepted office between the 2d of December, 1851, and the 4th of September, 1870. This proceeding is disapproved by the Paris government. Jules Favre insists that the electors shall be free and untrammelled in their choice of members of the Assembly. There is consequently an open rupture between Gambetta and the more moderate members of the French government. The election has been ordered for the 8th inst. throughout France.

The Emperor of Germany does not intend to return to definite treaty negotiations, but has been concluded. In view of the possible rejection of the German demands by the French Assembly, the Emperor has issued a call for 300,000 more men between the ages of 27 and 47, to be ready to march into France at short notice.

A special telegram to the London *Times* from Berlin says the conditions of peace prescribed by Bismarck to Favre embrace the cession of Alsace and Lorraine, with Belfort and Metz, the payment of ten millions of francs as indemnity for the expenses of the war, the cession of the colony of Pondicherry, and the transfer to the German navy of twenty first-rate frigates. Favre reserves these terms to the National Assembly, to meet at Bordeaux.

At the latest dates gold was rising rapidly in Paris on account of the heavy money imposition made by the Germans. The price of provisions had not yet lowered. The prospect of the success of the peace negotiations is succeeding the exultation caused by the fall of the Empire. Funds are depressed, and there is no confidence felt that the terms of peace will be accepted by the Bordeaux Assembly. Incessant exertions are making for the resumption of the war, the plan being to re-equip the army, to take the whole of the country, and reduce it to submission by a relentless campaign.

The Italian Chamber of Deputies, by a vote of 232 against 29, has resolved to transfer the capital of Italy to Rome.

London, 2d mo. 6th. Consols, 92. U. S. 5-20's of 1862, 90; of 1863, 90; five per cents, 80.

Liverpool.—Uplands cotton, 7½ a 7¼; Orleans, 7½ a 8d.

UNITED STATES.—*The Public Debt.*—On the first inst. the total debt, less amount in the Treasury, was \$2,225,026,807, which is \$4,010,987 less than on the first of the previous month. Of this debt \$428,669,039 bears no interest.

Congress.—The House of Representatives, by a vote of 102 to 84, has referred the bill extending the time to construct a railroad from the St. Croix river to the west end of Lake Superior, to the Committee on Public Lands. The Senate, by a vote of 23 to 17, referred to the Committee on Public Lands will not be called during the present session of Congress. The House has passed the act modifying the disabilities act of rebels that had previously passed the Senate. The effect of the new act will be to increase largely the number of rebels who can sit in Congress. The act also introduces a large class of men of ability and means, who were incapacitated by their participation in the rebellion.

The Senate has passed a joint resolution authorizing the President to station at the port of New York one or more vessels to the Pennsylvania Hospital, and to be contributed by people of the United States to France and Prussia for the destitute and suffering people there.

Philadelphia.—Mortality last week 328. Of consumption, 65; inflammation of the lungs, 38; crop, 10; scarlet fever, 14. The mean temperature of the First in the 7th year of her age was a member of the Sanitary and Plymouth Monthly Meeting. She a tender parent, and a sympathizing friend of poor and afflicted. During her last sickness, which severe, she was favoured with calmness and resigning, remaining entirely sensible to the last, and we will trust she is gathered into everlasting rest.

—, on the 12th of Third month last, Wil Motz, an esteemed member of Southland Park and Plymouth Monthly Meeting, Ohio, in the year of his age. This dear Friend became a member of our religious Society by conviction, about twenty-five years ago, and ever since has been therein. He was sound in doctrine, and faithful support of the testimonies of the gospel as upheld by religious Society. He was also concerned for the support of our discipline, and was usually employed in the exercise thereof. His removal is much to be regretted by his friends. During the latter part of his life, he frequently visited the poor and afflicted residents in his neighborhood, to mutual satisfaction. Thru out his sickness, which was of short duration, he expressed a desire to go home; and said that he comfortable hope that through redeeming mercy he might be accepted; leaving his friends the consolation that his end was peace.

three of which are steamers, were loading at New York, for Cork, &c., for France.

Pennsylvania Coal and Iron.—The Anthracite Bituminous coal, mined and sent to market in 18 stated at 21,242,025 tons. Nearly three-fourths of amount was anthracite. The quantity of anthracite iron made last year is stated to have been "appreciated" nearly 680,000 tons of cast iron, 60,000 tons, and made with coke and bitum coal 290,000 tons—total 1,030,000 tons, being an inc of 158,000 tons over the production in 1869.

The Markets, &c.—The following were the quot on the 6th inst. New York. American gold, U. S. sixes, 1851, 113½; ditto, 5-20's, 1302, 111½; 1868, 1090; ditto, 10-40, 5 per cents, 109½. S. flour, \$5.50 a \$6.45; shipping Ohio, \$6.80 a \$7 brands, \$7.25 a \$10.00. No. 1 Chicago spring w. \$1.56 a \$1.57; No. 2 do., \$1.52; amber western, \$1.50 Michigan, \$1.70; white Genesee and Fall \$1.80. Ohio, \$1 a 95 cts. Eye, \$1.12. Western corn, 82 cts.; yellow, 86 cts. *Philadelphia.*—Cotton a 16 cts. for middling uplands and New Orleans, 8 fine flour, \$5.25 a \$5.50; extra, \$5.75 a \$6.25; brands, \$6.50 a \$9.50. Indiana red wheat, \$1.82-84. Rye, \$1. Yellow corn, 80 cts.; western M. 77 a 78 cts. Oats, 57 a 60 cts. Clover seed, 11 cts. per lb. Timothy, \$8 a \$6.25. The arrival sales of beef cattle at the Avenue Drove-yard re about 1900 head. Extra sold at \$8 a 8½ cts.; choice at 8 cts.; fair to good, 7 a 8 cts., and comm 6½ cts. per lb. gross. Sales of 60,000 sheep at 100 lb. net. Hogs, and 4,500 hogs at \$10. \$1.25, 100 lb. net. Chicago.—No. 2 wheat, \$1.34, 1½ corn, 50½ cts. No. 2 oats, 47 cts. No. 2 rye, 8 Barley, 74 cts. Lard, 12½ a 12½ cts.

RECEIPTS.

Received, for the Freedmen, from Friends of cord Monthly Meeting, per John Trimble, \$10; Friends of Greenwood Preparative Meeting, per Hancock, \$11.

FRIENDS' BOARDING SCHOOL FOR INFANTS (CHILDREN, TUNESSA, NEW YORK.

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm needed with it. Application may be made to

Ebenezer Worth, Marshallton, Chester Co.,
Thomas Wistar, Fox Chase P. O., Philadé
Samuel Morris, Olney P. O., do.
Joseph Scattergood, 413 Spruce Street, do.

FRIENDS' ASYLUM FOR THE INSAN.
New Frankford, (Twenty-third Ward), Philadé

Physician and Superintendent.—JOSHUA H. W. KERRIS, M. D.

Applications for the Admission of Patients in made to the Superintendent, or to any of the Board Managers.

DIED.—At the residence of her son-in-law, in Wilton, Clinton Co., Ohio, on the 27th of First mo. SARAH LITZKEY, widow of the late John K. Litz in the 78th year of her age, a member of the Sanitary and Plymouth Monthly Meeting. She a tender parent, and a sympathizing friend of poor and afflicted. During her last sickness, which severe, she was favoured with calmness and resigning, remaining entirely sensible to the last, and we will trust she is gathered into everlasting rest.

Account of Richard Smith, author of "A Letter
Priest of the Church of England," A.D. 1660.

(Continued from page 184.)

Richard Smith, author of the foregoing letter, was the son of Richard Smith, of Ham, a member of the established church of England, and possessor of a fair estate at Ham, West Riding of Yorkshire, where he was born A. D. 1593, in the reign of Queen Elizabeth. The subject of the present sketch was born A. D. 1626, in Charles I. reign, and educated, as he himself has recorded, "for my own," that is, for the profession of the law, but "the civil dissensions" between the king and the Parliament, which finally resulted in Charles' deposition and death, reaching a crisis by his close imprisonment in 1647, converted, says Richard Smith, "my profession." He was now in his 21st year, when he died, and he succeeding to the profession, continued to live quietly in the seclusion, without other cares than those of a lawyer. He married in 1653, Anne, daughter of William Yeates, of Alborough, who, as well as his son-in-law, Richard Smith, was a Friend and "an early sufferer from the persecution as professed by the people called Quakers." "He" (W. Y.) "was set in the stocks in the year 1655, for being present at a meeting held there. In the year 1660 he was set in the stocks for the like cause in York Castle, and upwards of five hundred of his fellow-professors, where five of them died of the unhealthiness of the place in which they were thronged together. The rest part of them were discharged in about two months, without either accusation or punishment, though a number were arbitrarily detained some time longer."—(Taken from "Sufferings of the Quakers.")

In the existence of a family Bible, said to have formed part of the furniture of the manor house, or "hall," and which is one of the rarest editions known as the "Bagges" edition, printed in gothic or "black letter" by the martyr Tindal, in the year 1530, mention of which only two copies are said to exist in England, there is some ground for opinion of some descendants in the last century, that Richard Smith, the father and grandfather of Bramham, were of the lineage of that

associate of Tindal's of whom "it is recorded in the third volume of Fox's Acts and Monuments of the Church, under date 1555, in the reign of Queen Mary, that one of the servants of God of the name of Richard Smith, died a prisoner in the Lollard's Tower, through the cruel usage of Bonner, Bishop of London, for his conscientious testimony against the idolatrous inventions of Antichrist." It is at all events probable from the possession of the Tindal Bible, that our subject's ancestors were Lollards at that early period, and thus, in advance of their times in matters of religion and freedom of conscientious opinion in that day, as was Richard Smith, their descendant, in his.

We learn from Sewel's "History of the Rise, Increase, and Progress of the Christian people called Quakers," (edition of 1725, p. 43,) where he speaks of George Fox's first visit to Yorkshire in 1651, that "William Dewsbury was one of those that had already been immediately convinced, as G. Fox himself was, who coming to him, found himself in unity with him." And again, in this visit, he records (p. 53) that G. Fox "went to a meeting at Justice Benson's, where a people met that were separated from the public worship," and where his preaching gave "general satisfaction." It appears from these instances that in Yorkshire the rise of the Society of Friends was independent of the teaching of G. Fox, having its origin in immediate conviction similar to his own. Such an independent or immediate conviction must have been that of Richard Smith, for we find in his verses called "A Poetical Epistle, or Christian Directory," by Richard Smith, 1650, written a year before G. Fox's first visit to Yorkshire, a clear exposition of Friends' cardinal principle of the indwelling of the Holy Spirit as a guide in every heart.

Joseph Sansom, writing in the latter part of last century, says of him, "Richard Smith was possessed of very good natural parts, improved by an attentive observation of men and things." He then speaks of a M.S. of R. S.'s, as containing "some curious specimens of his skill in law, physic, and divinity," and adds that he publicly "embraced the religious principles of the people called Quakers shortly after his marriage in 1653, and afterwards suffered grievous persecution and imprisonment, both under the protectors and after the restoration, for the public testimony which the Lord gave him to bear amongst that people, although he lived to see liberty of conscience permitted to Dissenters of all denominations by a Popish Prince, about the year 1685." (This was King James II.) "Samuel Hopwood, who visited this continent in the service of the Gospel, early in the present (18th) century, said he had frequently heard Richard Smith preach in his chimney corner, to the little audience of Friends and neighbors, who were neither afraid nor ashamed to worship God according to their consciences, in that

persecuting age, when the most devout performance of preaching, praying or silently waiting upon God, except under the forms of national worship, not only rendered a man obnoxious to the laws, but left his person at the mercy of the rabble, and his property a prey to constables and informers. The fines imposed on these occasions were frequently levied with such inexorable severity, that the poorer classes of people were stripped of almost every necessary of life; and in many instances those things which had been lent them by their charitable neighbors were also seized upon to many times the value of the demand. Incredible outrages were committed upon these innocent and patient sufferers. Some of them actually died of the wounds they received in their peaceable meetings, but no notice was taken of their deaths, and the murderers repeated their cruelties even in the presence of the officers of justice; yet they remained immovable in their resolution to confess Christ in that despised and persecuted way into which he had called them, wherein he wonderfully supported them against all opposition."

It appears from the above account of Samuel Hopwood, that the Friends' meetings of that neighborhood were held in Richard Smith's house, where he exercised his ministry, preaching from the "chimney corner" to those assembled in the room. It is interesting to figure to oneself what kind of house this old mansion, in which these early meetings were held, may have been. It was probably a substantial middle-class house of the "Tudor" style of architecture, and there is no doubt but that the "chimney-place" must have been one of those great fireplaces which were built in those days, as large as a small room, with space for a large fire of logs in the middle, and a chimney-corner settle or bench on each side, which seats, as the warmest, were considered the places of honor, and reserved for persons of age and dignity. The room in which these meetings were held would probably be the "hall" which gave name to the house; these halls were generally large rooms with a height often extending through more than one story; the main stairway opened from them, and they were used as dining-rooms and places of general assembly. There was an old house existing some years back in Barlington county called Bramham-hall, and understood to be named after this old English house.

Richard Smith's name appears in Sewal as one of several who became security for Thomas Salthouse and Miles Halhead in 1655. In "Besse's Sufferings," "Richard Smith of Bramham," is mentioned as assessed £10 2s. 0d. for tithes. This was not our Richard, however, but his youngest son, of the same name, as our subject's death occurred 1st mo. 26th, 1688, and this assessment was in 1690. It thus appears that our Richard Smith made no report of his losses, which were, however,

heavy. On the 13th of 5th mo. succeeding his death in 1688, his newly made widow, Anne Smith, is mentioned by Besse as "committed to York Castle at the suit of William James, priest of Bramham." In 1690, the year of the above assessment on her son Richard, we find "Anne Smith, widow, of Bramham, Yorkshire, tithes taken in kind, corn, hay, lambs, &c., of value of £13. 15s. 0d." Richard Smith, the father, we find, on 12th mo. 9th, 1660, "taken out of a meeting at Market Wighton," near Bramham. The name of William Smith precedes Richard's in the list of Friends taken on this occasion. As William Smith, the eminent minister and friend of George Fox, was convinced in 1658, it is not improbable that it was he who was taken in company with Richard Smith on this occasion, and they may very likely have been related.

The elder Richard Smith's own frequent sufferings from persecution have left their traces even in his memoranda of the births of his children, copied into the family Bible aforesaid, which, as curious and interesting in themselves, are subjoined in the original spelling: Eldest.—Hannah, signifying merciful, taking rest, or gracious. * * * * *

Second.—Mary, * * * * *
Third.—John, signifying the grace or gift, or mercy of God; born the 27th day of March, 1657.

Fourth.—Sarah, signifying a lady, same or mistress (or princess). * * * * *

Fifth.—Deborah, signifying a word, or a bee.

Sixth.—Benjamin, signifying the son of my right hand (or a son of sorrow) because at that time I was prisoner for the testimony of truth; borne the twenty-sixth day of November, in the year 1662.

Seventh.—Elkanah, signifying the zeal of God; because then the king and parliament had newly put forth an act of persecution to banishment; borne the ninth day of the month called August, 1664. Dyed the 28th and was buried the 29th of the same month.

Eighth.—Daniell, signifying the judgement of God; because at that time the plague and other high judgements of the Lord, was in an high manner stretched over this nation; borne the 14th day of the 11th month, 1665, about 5 or 6 at night (being the second day of the week) which day I was set free, having been prisoner one month for being at a meeting.

Ninth.—Joseph, signifying increase, encreasing, or perfect; because at that time the truth was in a peaceable, flourishing, encreasing, or perfect posture, unmolested of the Enimyes thereof, so drawing into perfection; borne the fourth of March, 1667, between 9 and 11 in the morning.

Tenth.—Samuell, signifying appointed, established, or heard of God; borne the 11th day of the 3rd mo. 1672, about 10 or 11 o'clock in the forenoon; because at that time the truth was established, being the king had tolerated liberty to all, and truth flourished in a peaceable posture in all places.

Eleventh.—Richard, (without signification,) borne the 25th of the Second month, 1674, between 9 and 10 o'clock, truth being honorable everywhere.

The entry of the tenth child, Emanuel, is out of the book.

Quaint in expression and spelling as this old family record appears to modern eyes, it has

its admirable points; of which one is, that no more impressive mode of fixing in the children's minds the most important events of church, national, and family history could easily have been devised by the father than this of giving them the Hebrew names, the recorded meanings of which illustrated the "posture" of church and state affairs, and the personal experiences of their parent at the periods of their respective births.

(To be continued.)

For "The Friend"

Kamchatka and its People.

(Continued from page 199.)

"The vegetation every where, untouched as yet by the autumn frosts, seemed to have an almost tropical luxuriance. High wild grass, mingled with varicolored flowers, extended to the very river's brink; Alpine roses and cinquefoil grew in dense thickets along the bank, and dropped their pink and yellow petals like fairy boats upon the surface of the clear still water; yellow columbine drooped low over the river, to see its graceful image mirrored beside that of the majestic volcano; and strange black Kamchatkan lilies, with downcast looks, stood here and there in sad loneliness, mourning in funeral garb some unknown flowery bereavement.

"Nor was animal life wanting to complete the picture. Wild ducks, with long outstretched necks, shot past us continually in their swift level flight, uttering hoarse 'quacks' of curiosity and apprehension; the 'honking' of geese came to us, softened by distance, from the higher slopes of the mountains; and now and then a magnificent eagle, starting from his solitary watch on some jutting rock, expanded his broad-barred wings, launched himself into air, and soared upward in ever-widening circles until he became a mere moving speck against the white snowy crater of the Avatchinski volcano. Never had I seen a picture of such wild primitive loneliness as that presented by this beautiful fertile valley, encircled by smoking volcanoes and snow-covered mountains, yet green as the vale of Tempe, teeming with animal and vegetable life, yet solitary, uninhabited by man, and apparently unknown.

"The inhabitants of these native settlements in Southern Kamchatka are a dark swarthy race, considerably below the average stature of Siberian natives, and are very different in all their characteristics from the wandering tribes of Koraks and Chookchees who live farther north. The men average perhaps five feet three or four inches in height, have broad flat faces, prominent cheek bones, small rather sunken eyes, no beards, long, lank, black hair, small hands and feet, very slender limbs, and a tendency to enlargement and protrusion of the abdomen. They are probably of Central Asiatic origin, but they certainly have had no very recent connection with any other Siberian tribe with which I am acquainted, and are not at all like the Chookchees, Koraks, Gakoots, or Tungoos. From the fact of their living a settled instead of a wandering life, they were brought under Russian subjection much more easily than their nomadic neighbors, and have since experienced in a greater degree the civilizing influences of Russian intercourse. They have adopted almost universally the religion, customs, and habits of their conquerors, and their own language, which is a very curious one, is

already falling into disuse. It would be tedious to describe their character by negatives. They are not independent, self-reliant, or of a combative disposition, like the northern Chookchees and Koraks; they are not avaricious, dishonest, except where those traits are the results of Russian education; they are suspicious or distrustful, but rather the contrary; and for generosity, hospitality, simple good faith, and easy, equable good-nature under all circumstances, I have never met their equals. As a race they are undoubtedly becoming extinct. Since 1780 they have diminished in numbers more than one-half, frequently recurring epidemics and famines soon reduce them to a comparatively weak and unimportant tribe, which will finally be absorbed in the growing Russian population of the peninsula. They have already lost most of their distinctive customs and superstitions, and only an occasional sacrifice of dog to some malignant spirit of storm or disease enables the modern traveller to catch glimpses of their original paganism. They depend mainly for subsistence upon the salmon which every summer run into these northern rivers in immense quantities to spawn, and are speared, caught in seines, and trapped weirs by thousands. These fish, dried without salt in the open air, are the food of the Kamchatkals and of their dogs through the long, cold northern winter. During summer, however, their bill of fare is varied. The climate and soil of the river bottoms in Southern Kamchatka admit of cultivation of rye, potatoes, and turnips, and the whole peninsula abounds in animal life. Reindeer and black and brown bears rove every where over the mossy plains and through the grassy valleys; wild sheep and a species of ibex are not unfrequently found in the mountains; and millions upon millions of ducks, geese, and swans, in almost endless variety, swarm about every river and litt marshy lake throughout the country.

"It is astonishing to see in what enormous quantities and to what great distances salmon ascend the Siberian rivers. Dozens of small streams which we passed in the interior of Kamchatka, seventy miles from the sea-coast, were so choked up with thousands of dying, dead, and decayed fish, that we could not use the water for any purpose whatever. Even in little mountain brooks, so narrow that a child could step across them, we saw salmon eighteen or twenty inches in length, still working their way laboriously upstream in water which was not deep enough to cover their bodies. We frequently waded in and threw them out by the dozen with our hands. They change greatly in appearance as they ascend a river. When they first come from the sea their scales are bright and hard, and their flesh fat and richly colored, but as they go higher and higher up stream their scales lose their brilliancy and fall their flesh bleaches out until it is nearly white, and they become lean, dry, and tasteless. This reason all the fishing stations in Kamchatka are located, if possible, at or near mouth of some river. To the instinct which leads the salmon to ascend rivers for the purpose of depositing its spawn, is attributed the settlement of all Northeastern Siberia. If it were not for the abundance of fish, a whole country would be uninhabited and uninhabitable, except by the Reindeer Koraks. As soon as the fishing season is over,

ntchadals store away their dried 'yout' in 'bologans,' and return to their winter-ters to prepare for the fall catch of the es. The number of sable caught in the ntchatkan peninsula annually, varies from 30 nine thousand, all of which are exported Russia and distributed from there over then Europe. Nearly all the inhabitants entral Kamtachatka are engaged directly irectly during the winter in the sable e, and many of them have acquired by it mfortable independence."

For "The Friend."

o THE EDITORS:—I forward a selection e Journal of our late beloved friend . Evans, for publication in "The Friend." views therein expressed seem to me so e accordance with the truth, as well as able to many in our day, that I should them very generally read by Friends.

In the course of my short pilgrimage, g now in the fiftieth year of my age, I encountered some difficulties, and passed gious seasons of deep discouragement on ous accounts. On commencing business myself, I fully believed that my life, and talents, should be devoted to the service y Heavenly Father. Though it was neces- to make suitable provision for myself, for those who might be dependent on me, in my view, this was secondary to the oject of serving Him; and through the of his blessed spirit, taking part in the in- ts and concerns of his church and people, earily I had the promise, that if I devoted lf to his service, I should never want o raiment. But though I fully believed certainty of the promise, and have never e permitted to doubt its fulfilment; hen things in the outward have worn a y aspect, and my business was very l, and an increasing family looking to e their daily supplies, my faith at times has e closely proved. This has had a very hum- e effect; and while I have been wearied e desire after outward things, both s and temporal enjoyments, it has tended e me many times, in a prostrated state ind, to my footstool, and to lay all before e, and ask for the continuance of his counte- e and mercy toward me, a poor unworthy e before Him. Herein I have experie- e the renewed extendings of his unmerit- e regard; the load under which my mind e been laboring, was for the present, ead; and ability was received to feel with e for the afflicted, and to hold forth to them e language of consolation, in their secret e bitter conflicts. Under the discipline of e Cross of Christ, I have been convinced e much too great a part of the time, and e energies of body and mind, are absorbed e pursuit of worldly things. A great part e kind miss of the true enjoyment of the e isions of a beneficent Providence, even e they gain them, for want of living to e, and not to themselves. They are kept e in a constant hurried frame of mind, ead, or in doubt what to lay hold of to e happiness, or they settle down in the e of money; hoarding it, and husbanding e of a sordid attachment to it. They are eads; unable to enjoy, or to see in what e enjoyment consists. The work of religion e they overlooked, rarely attended to, e orned to a future day, when they think e suit their inclination and convenience.

I am convinced that it is in our power, as we live in obedience to the Divine will, to find time for all our duties, social and religious. Even the poor, with common industry, as their desires and expenses are circumscribed by the Divine will, may through his blessing, procure sufficient food and raiment; and when it is proper to leave their outward business, in order to perform their religious duties, they may confide in his superintending providence over their affairs, and their families, so that they shall not suffer from their faithfulness. How simple, and how few are the wants of such! They do not envy the rich nor covet their possessions. Their delight is in the law of the Lord, and therein they meditate day and night. They eat their bread with gladness and singleness of heart. Their labors and their rest are sweet; and as they seek first the kingdom of God and the righteousness thereof, all those things necessary to their accommodation, will be added. Here the devoted follower of Christ experiences the right use of his time and talents; and the true enjoyment of the various blessings which his Heavenly Father provides, and bestows upon him. As time and the energies of body and mind are wasting away, he is growing in grace, and in the knowledge of those things which pertain to life and salvation; he is laying up treasure in Heaven, where his heart centres, and he becomes more and more established upon that Rock, against which death, hell, and the grave cannot prevail."

Harrisville, Ohio.

For "The Friend."

Incidents in the Life of Edward Wright.

(Continued from page 195.)

For more than thirteen weeks poor Ned tramped the streets of London, seeking work, and finding none. During this time some Christian friends gave a little assistance, and his wife labored day and night at the washing-tub, until she fell ill through over-work. Ned describes this as one of the most trying seasons in the whole course of his life; for, having parted with nearly everything in the house that would realize a halfpenny, he and his wife sat one evening gazing at the few embers in the firegrate, without any articles that could be pawned, when in came the little ones from the street, in which they had been playing, crying out, both at once, "Mother, give us some bread; I am so very hungry." The saddened parents were unable to answer, and, after looking at one another for a few minutes, Ned broke the silence by asking, "Isn't there any bread in the house, mate?" when, walking to the cupboard, she produced a piece about the size of a penny loaf from the shelf, and having asked the Divine blessing upon the frugal meal, she divided the bread between the two children.

Ned very touchingly describes his emotions: "At this moment there began a most terrible struggle between my soul and Satan; the Enemy suggesting that I should get bread for my children anyhow, either by fair means or foul, since even an infidel would do that. Here I buried my face in my hands, and cried bitterly; at which my dear wife exclaimed, as she fell down upon her knees and tried to comfort me, 'Oh, Ned, don't cry, but cheer up; remember that a crust with Christ is better than all the world without Him.' Feeling a little encouraged by these words of comfort, I knelt down by the side of my wife, and

asked God to help me; and within an hour after this prayer we received the intelligence that a Christian man was prepared to give me twenty-five shillings per week to sell Bibles and Testaments among my old companions; and although this appeared too good to be true, yet we had faith in God to believe that He had thought fit to answer our prayers; and, indeed, that very day, I received a sovereign to enable me to redeem my clothes from the pawnbroker's, and to procure some substantial food."

During the time he was in such great poverty from want of employment, "he wandered down to the waterside between Blackfriars and Waterloo bridges, and observing several vessels waiting the tide to go up through the bridges, the thought struck him that if he could get off to some of these craft, he might obtain the job of navigating some of them up the river. A waterman who knew Ned, and who was rejoiced to hear from him that he had given up all his dishonest practices, lent him one of his boats to endeavor to get a job. Ned thereupon rowed towards Waterloo Bridge, and as it was nearly low water, he saw, just above the bridge, something black, lying half-concealed in the mud, and having the appearance of a dead body. Rowing his boat aground, and stripping off his shoes and stockings, he waded through the mud, and found the black substance to be a large tarpauling, used for protecting the cargoes of barges navigating the river. Having washed the mud off his prize, and hauled it into his boat, he found the tarpauling to be new and valuable.

"While thus occupied, he was observed by the captain of a billy-buoy lying close at hand, who seemed somewhat vexed that he had not picked up the prize, as he had seen it before Ned had arrived. The captain called out, 'Don't take that away, young man; I'll give you ten shillings for it.' Ned was confounded; he looked first at the prize, then at the man; he had found the article, he wanted his breakfast, and so did his children, and ten shillings were worth having in his poverty-stricken condition. What was he to do? Something seemed to say to him, 'Ned, it is not yours to sell.' So he washed off the mire, and discovering the name, 'J. Hasler, Paul's Wharf,' he resolved at once to return it to its proper owner. The enraged captain, when told by Ned that he 'was converted the other day,' and could not sell the article, all the more as the owner's name was upon it, remonstrated with Ned for being a fool; but he insisted that God has said, 'Let him that stole, steal no more,' and rowed away from the tempter, only, however, to be troubled by another, who seemed to say to Ned, 'What a fool you are to refuse that half-sovereign! if you return the tarpauling to the owner, perhaps he will only give you the price of a pot of beer, or a glass of grog, for all your trouble, and yet your wife and little ones are starving at home. You have been asking God to supply your wants, and now He has put this thing in your way, and you refuse the gift. If God had not intended you to benefit by it to the amount of ten shillings, you would never have seen it.' To Ned, unaccustomed as he was to specious reasoning, these injections of Satan seemed very plausible. He rowed a little reluctantly down the river; 'Satan,' as he puts it, 'seemed to clog the sculls,' and the boat appeared as disinclined as himself to leave the ten shillings

behind. And yet Ned felt convinced he was only acting rightly in refusing the captain's offer, and was glad that he had had sufficient courage to resist the temptation. Having reached the shore opposite Paul's Wharf pier, he went at once to the owner of the tarpauling, and informed him of the recovery of the lost article. Mr. Hasler was glad, looked over his purse as if searching for some small coin; and Ned, fearing that a sixpence might be offered him, was surprised to hear the gentleman say, "Young man, I have no smaller change than half a sovereign; I dare say you have had a deal of trouble with the tarpauling, so take that, and I'm much obliged."

"Was it possible! He looked first at Mr. Hasler, and then at the gold coin, in blank astonishment. 'Half a sovereign—honestly obtained—the very same sum the captain had offered him! He rowed with speed to the other side of the river, and hurried home, and showed his wife the half-sovereign, and told her how God had enabled him to resist the temptation, and had rewarded him with His goodness. And they both knelt together in prayer, with hearts full of gratitude, for 'grace to help in time of need.' Blessed is that man that endureth temptation; for when he is tried, he shall receive a crown of life, which the Lord hath promised to them that love Him."

"Ned had not long entered upon his 'new life' before he was surrounded by temptations of still greater potency than the one we have just described. His old companions sought by cunning devices to bring him again under subjection to evil. While he was seeking their best welfare, they laid traps to undermine his integrity. His little sermons to them about the love of Jesus Christ were ridiculed, although their power was really felt. The barge-men, with whom he had so frequently been intoxicated, tempted him with drink and laughed with scorn when he told them that, although not a pledged teetotaler, he had given up all alcoholic drinks. "I'm more of that for me," he cried, as they offered him a full pot to drink; "I've had my share of it, and now I have turned it all up; for God has pardoned my sins, and I am a different man now."

(To be concluded.)

For "The Friend."

While striving to maintain in our religious Society a sound and free gospel ministry; let us also endeavor to keep it so that it may be most effective by guarding it from those habits and tones of expression that raise in the minds of hearers an instinctive repugnance. Much pains has been lately bestowed in our schools in order to make correct and agreeable readers, and in this way the taste becomes cultivated and the ear grows sensitive. Shall the most important messages for an assembly be given in an unnatural and painful manner, without any effort being made to help the sincere and devoted laborer in his Master's harvest field? Our discipline advises against "affectation of tones and gestures and everything that could hurt their service" more frequent than affectation is an unconsciousness of such defects, and no doubt a loving care on the part of Friends would remove or lessen them. Far be it from us to discourage in the least degree any who are called to speak publicly in the name of the great Head of the Church, or to excite a spirit of criticism;

but the purity and sacredness of their office ought to be preserved from everything that can lessen their force.

Selected.

THE SEA-SIDE WELL.

"Waters flowed over mine head: then I said, I am cut off." Lam. iii. 54.

One day I wandered where the salt sea-tide

Backward had drawn its wave,

And found a spring as sweet as e'er hill-side

To wild flowers gave.

Freshly it sparkled in the sun's bright look,

And 'mid its pebbles strayed,

As if it thought to join a happy brook

In some green glade.

But soon the heavy sea's resistless swell

Came rolling in once more;

Spreading its fitter o'er the clear sweet well

And pebbled shore.

Like a fast, dark burial in a cloud,

Or life in the grave's gloom,

The well, enwrapped in a deep water shroud,

Sank to its tomb.

As one who by the beach roams far and wide,

Remnant of wreck to save,

Again I wandered when the salt sea-tide

Withdrew its wave;

And there, unchanged, no taint in all its sweet,

O'er anger in its tone,

Still I thought some happy brook to meet,

The spring flowing on.

While waves of bitterness rolled o'er its head,

Its heart had folded deep

Within itself, and quiet fancies led,

As in a sleep.

Till when the ocean loosed his heavy chain,

And gave it back to day,

Calmly it turned to its own life again

And gentle way.

Happy I thought, that which can draw its life

Deep from the nether springs,

Safe 'neath the pressure, tranquil 'mid the strife

O'er surface things.

So, 'neath the sources of the nether springs

Up in the far hills lie;

Calm—for the life its power and freshness brings

Down from the sky.

So, should temptations threaten, and should sin

Roll in its whelming flood,

Make strong the fountain of Thy grace within

My soul, O God!

If bitter scorn, and looks, once kind grown strange,

With crushing chillness fall,

From secret wells let sweetness rise, nor change

My heart to gall!

When sore Thy hand doth press, and waves of Thine

Afflict us like a sea—

Deep calling deep—infuse from source divine

Thy peace in me.

And when death's tide, as with a brimful cup,

Over my soul doth pour,

Let hope survive—a well that springeth up

For evermore!

Above my head the waves may come and go,

Long brood the deluge dire,

But His lies hidden in the depths below

Till waves retire—

Till death, that reigns with overflowing flood,

At length withdraw its sway,

And life rise sparkling in the sight of God

And endless day.

American Gas Wells.

At present no one can tell the number or the location of these gas deposits. Still more is it impossible to determine the nature of the mysterious process going on in nature's subterranean laboratory, by which these gases are generated. This much, however, seems probable, that the generation of the gases in question is continuous, rather than the result of some former chemical action, by which accumulation has been stored up, and now the supply is now obtained. This view

is based on the fact that the flow seems increasing rather than diminishing in volume even from wells that have been delivering for years.

The most important of these natural deposits yet discovered, seems to be at Erie Pa.

The first well at Erie was discovered 1859. In this year an adventurous oil-seeker commenced boring for oil at a point near w. is now called Eighteenth street, and a boring to a depth of about two hundred relinquished the undertaking, although there were strong indications of oil, and abundant flow of gas.

In 1864 a well was sunk by the "Erie Oil Company," to the depth of 750 feet. oil was obtained, but a very large flow of gas has issued ever since from the boring. The well being abandoned by the company, enterprising soap manufacturer caused it to be tubed, and has used the gas for five years as fuel and lighting material for his factory and also now heats and lights his dwelling house, near by, by the same gas. He has six large kettles in his factory besides lighting and warming it, and uses no other whatever. The flow of gas from this well is stated to be on the increase. A considerable surplus over what is used for the above mentioned purposes escapes.

In 1865 another well was sunk, which the depth of 640 feet, yielded a supply of sufficient to light a number of manufacturer establishments, and to generate steam at "Erie City Iron works."

There are now no less than eighteen completed gas wells, five in progress, and the shortly to be commenced.

Among these may be specially mention the "Water Works Well." Of this well the "Erie Daily Republican" says: "Its depth is feet. For the first five weeks the gas sufficient to make all the steam necessary pumping 500,000 gallons of water per (the amount then used in the city). At present time the amount of water used 1,000,000 gallons per day, and it is found necessary to use some coal. The present supply of gas is equal to from two and a half to three tons of coal per day. The derriek and turbines for a second well are now being put and it is proposed to go down at least thousand feet, or far enough to thorough test the question of both oil and gas."

The "Hopedale Flouring Mills" obtain enough gas from their well to drive a three horse power engine, and to light and warm the mill. Of this well the paper above quotes remarks:

"It was first used about the first of October, and has not been relieved of any way since that time, and the flow has been uniform. When the engineer first commenced, he marked the cock that supplies boiler, so that he might determine the pressure. The result is, that there has not been the thirty-second part of an inch difference one way or another. The furnace under boiler is supplied entirely with gas, the warmed and lighted, the proprietor, and lights his house, his miller does the same, and a brewery is furnished with an amount sufficient to run one fire, several lights, at ten horse-power engine. After supplying these it is estimated that there still remains a surplus of from 35 to 40 per cent, which allowed to escape.

The gas company put down a well last fall, which has been in use about six weeks. Its depth is 700 feet, and it is estimated to produce 1,000 cubic feet per day, which proves to be so profitable to the company that they have commenced a second well on Seventh street, east of the large gasometer.

It seems that this gas may be obtained anywhere in the vicinity of Erie, by boring for it, and if, as the prolonged tests already made indicate, the supply is a permanent one, must add greatly to the resources (already large) of that city, as a manufacturing center. *Scientific American.*

For "The Friend."

Selections from Memoranda concerning Hannah Gibbons; a Minister deceased.

(Continued from page 197.)

With the last number closed the memoranda of our dear friend as kept by herself I propose some further selections from an agenda by her daughter, who was her constant faithful attendant and companion, and which are thus introduced by her, viz: "Some impressions of Hannah Gibbons during attacks, severe illness in the years 1857, and 1862." And lastly, notes taken "at the last few years of her life, in which she was mostly confined her bed."

On the 19th of 1st mo. 1857, our dear mother is prostrated with a chill followed by feverish symptoms of pneumonia. After suffering between two and three weeks, the disease yielded so far as to enable her to sit up occasionally, and a few times to walk with assistance into the entry adjoining her chamber. But about the 18th of 2nd mo. she became increasingly ill, caused by inflammation of the mucous membrane of the stomach, and suffering for many weeks was great attacks, inducing the belief with herself and those around her, that the period of her release drew nigh. But the healing Hand was tendered, so that on the 25th of 6th mo. she is able to come down stairs.

Being now so debilitated, as well as so aged, I never attended a Yearly Meeting again; but but once a Quarterly Meeting. But for several succeeding years she mostly got to her own, it being very near.

2d mo. 1st, 1857. Having read at her request a part of the second chapter of Luke, (some verses of the 23d Psalm, she said as follows: "I think I feel no condemnation. I've had many struggles, many secret contritions, known only to Him who knoweth the secrets of all hearts. My way of getting along has been a little way, a one talent; but as that has been improved, the penny has been given. I think I feel an assurance that the Arms of mercy are open to receive me."

14th. It is the hidden life the enemy seeks to destroy, and is unwearied in his endeavours for this end. But what a mercy it is that "He that is in you, is greater than he that is in the world." I have lived many years, and experienced many conflicts, and though I have done but little for the Truth, I have been preserved from marring it, it is His mercy in whom is all strength. Many visions and some commissions I have to acknowledge; but I think I can appeal to the archer of hearts, that it has been more owing fear of putting a hand to the work, than from wilful disobedience. There are many passages of Scripture that are at times as a sealed book, which at other

times open with encouragement. I have been thinking of the passage in Revelations, "The wonder in Heaven—the woman clothed with the sun, and the moon under her feet;" and commented with interest on most of the chapter, and though she did not wish at all to compare herself to the woman, and it was a great thing for her to say it, yet she thought she had known a being helped when floods of discouragement seemed ready to overwhelm. I want you, my dear children, to be faithful; though trials attend, which may seem at times as the blast of the terrible one, yet as we put our trust in the Lord alone. He will put the armies of the aliens to flight, and we shall know a coming off victorious: to these He will give a white stone and a new name. It was brought to my remembrance, she continued, at a time of deep exercise, that the candlesticks in the Lord's house were to be made of beaten gold, implying that the work of preparation for His service must be thorough.

On the morning of Second month 10th, she requested her children to sit down in her chamber, and after a little silence, she said, "My aspirations on your behalf have been frequent and fervent,—indeed I may say you are the children of many prayers; but, as 'no man can redeem his brother, or give to God a ransom for him,' I want each of you to seek the Truth for yourselves. If you live, you will have many conflicts, many trials, and may at times be ready to conclude you are forsaken. Seasons of this kind are permitted for our refinement, and self-abasement; but 'He who knoweth our frame, and remembereth we are dust,' will not suffer his seeking children to be tried about what He will enable them to bear. His name is a strong tower, whereunto the righteous run, and find safety."

3d mo. 27th. When suffering from extreme sickness and headache, she said, if it would please my Heavenly Father to release me, what a favor it would be; but I desire to bear it with patience and resignation. The belief being expressed that the everlasting Arm was underneath for her support, she replied, "though I have passed through seasons of poverty, of strippedness, and conflict of latter time more than in the early part of my sickness, yet I desire not to let go my confidence and trust; but, as my dear father said, I hope through adorable mercy I shall be admitted within the gate."

31st. A friend with one of her daughters being in the room, she said, I desire you may be of the truly humble-minded. These true Shepherd enables to distinguish between His voice and that of the stranger.

4th mo. 15th. Being very ill, she said, "I should be glad my dear children were here. Give my love to them if I do not live to see them again; my heart is expanded in love to the whole human family. Heavenly Father! wilt Thou be near me. Through thy adorable mercy I feel nothing in my way! Holy One! be pleased to receive my spirit. I sometimes query why my sufferings are thus prolonged. But oh! enable me to bear with patience all thy varied dispensations."

18th. "Oh! that I might be permitted to join the heavenly host; and that thou, my dear child, in due time may follow me. I trust thy Heavenly Father will care for thee and keep thee as in the hollow of His Holy Hand; and He will do so if thou continue to live in His fear."

19th. On hearing of a Friend being exercised in the Select Yearly Meeting on the subject of silent, reverential waiting, and recommending it as one of our peculiar privileges, she said, "It did me good to hear it! *this is what we want as a Society, even silent waiting before the Most High.*" This worthy spirit which is among us, I don't know what it will come to; and yet I would not check the lisping of a babe in Christ Jesus. A few words fitly spoken are compared to apples of gold in pictures of silver."

On the same day she said, "I think it was Samuel Emlen who expressed on the bed of death, 'Hark ye! it is an awful thing to die! The invisible world, how awful!' I think I may say the same; but what a mercy it is to have a well-grounded hope of a happy immortality. How many encouraging passages," she continued, "there are in the Scriptures of truth; such as 'One is your Master, even Christ,' &c., and, 'God is no respecter of persons,' &c. On the same evening she said to her daughter, "Thy unwearied efforts for my comfort are grateful; but I want thee to let me go."

26th. In allusion to the late Yearly Meeting, she said, "I think I saw on Seventh-day morning with undoubted clearness, that if Friends gathered under feelings of reverence and holy fear—fear to offend—and if anything was expressed, if it was under the same precious influence, it would have a tendency to gather; but if the wisdom of man got up, striving to do a great deal, it would make scattering work;" adding, "it is only that which comes from above can gather there. Oh! that the great 'I Am' may thence." On being informed it was thought a better feeling prevailed, she said, "this is what we want;" and seemed greatly comforted. Near this time she repeated,

"I thank Thee for Thy mercies past
And humbly hope for more."

Soon after when extremely sick, the language was feebly uttered, "Lord, be with me," and immediately fainted; on reviving, she said, "what a holy solemnity!"

28th. When very weak, she said, "Oh! that I might depart and be with Christ." During the day some white violets were brought to her. On smelling them, she said, "How sweet and beautiful! I thought some time ago, if I should live to see the beautiful flowers again, I should enjoy them more than ever. The thought arose, all things are possible; and I have lived to see them." Near this time, she said, "I have often in the feeling of my long continued weakness, thought of the passage, 'Hath this man sinned, or his parents, that he was born blind?'" and repeating the answer, continued, "I think my being sustained in so much suffering, is to show forth the power of the Almighty. I often see thou looks sad, my dear child! But I trust the Lord will sustain me to the end; and thee when I am gone." At another time she thus expressed herself: "When I awoke last night, the language presented, 'In all their affliction He was afflicted, and the angel of His presence saved them.' I believe it was said in reference to Christ's church; but I thought then, as at other times, it might be applied to individuals. I have passed through much weakness, but have been wonderfully sustained. I think it has been my concern to live in the fear of the Lord from my youth up; and now, unworthy as I am, He does

not forsake me." And again, "What an unspeakable favor it is not to have a guilty conscience at such a time as this. I trust my sins have gone beforehand to judgment; and, through adorable mercy, I have an abiding hope that my heavenly Father will receive my spirit."

5th mo. 2nd. In the night, when suffering, and unable to sleep, she said, "I have desired if anything remains for me to do, it may be shown me." And again, though desiring to be released, she craved patience to wait the Lord's time. On reading to her a letter from a friend, who spoke of her (H. G.'s) christian example, she said, "I wonder why my friends should think thus of me, unworthy as I feel. I sometimes fear it may have a tendency to settle me in a false rest, without trying the ground for myself: but I have endeavored to examine, and am favored to feel nothing in my way—an unspeakable mercy. Though many passages of Scripture occur, I do not feel worthy to apply them to myself: such as, 'I have graven thee on the palms of my hands,' &c. I sometimes fear I may be deceiving myself and others; but I have a hope. The hope of the hypocrite faileth, but mine does not fail."

To her daughter A., she said, "It is remarkable how things occur to me since lying here, that happened long ago. I now remember when Rebecca Young and Deborah Darcy were at my father's, and about to leave, they did not feel easy without having us children called into the parlor: when one of them addressed me as follows: 'Be thou faithful in the Lord, and thou wilt be a blessing to many; be thou faithful in the Lord, and thou wilt be a blessing to the church.' I have often thought of it since, and as often have felt my own weakness. I remember she also said, 'Who are fit for the Lord's service, but those who feel their own unfitness?'"

(To be continued.)

For "The Friend."

Mount Washington in Winter.

The summit of Mount Washington is usually cold and stormy enough, even in mid-summer, as nearly all who have visited it can testify from personal experience; and some forty cords of wood are annually consumed at the "Tip Top House," in the warmest part of the year during the three or four months that this unique house of entertainment is kept open. Until the present season the summit has very seldom been visited in winter, even for a brief stay of an hour or less: but now a scientific party are regularly sojourning there, chiefly for the purpose of making meteorological observations, the results of which they transmit by telegraph to the world below. The following account of the expedition and of the experience of the party, is copied with some verbal changes from the *Boston Journal*:

"Twelve years ago Professor C. H. Hitchcock and J. H. Huntington, independently of each other, conceived the project of spending the winter upon the summit of Mount Washington, but the project did not take shape till the organization of the geological survey of New Hampshire in 1868. They found it impossible to make the necessary preparations for occupying the summit during the winter of 1869, chiefly for want of a dwelling. Hence they sought for a less elevated summit, where a single winter's experience might prepare

the way for a greater adventure. That peak was Moosilauke, nearly 5,000 feet above the ocean. The lessee, D. G. Marsh, of Warren, N. H., obligingly placed his house at the service of Professor Huntington and his comrade, A. F. Clough, of Warren, photographer. Their three months' occupation of Moosilauke was full of adventure, and experiences were acquired of the highest importance. The scientific results were important, disclosing the knowledge of violent winds there accurately measured and remarkable forms of frostwork never before described or photographed. Attention was called to this mountain, and a carriage road was in consequence constructed in the following summer. In the Ninth month, 1869, the Mount Washington Railway Company generously tendered the use of their depot upon the summit to this meteorological party during the winter, and the necessary supplies were immediately purchased and forwarded to the mountain. The enterprise, though of a meteorological character, has been adopted by the geological survey of the State, while the expense has been assumed by the State geologist, relying upon a sympathizing public to provide the funds by subscription. Nearly enough has been subscribed to meet the amounts already paid out, and it is hoped that friends will not allow the adventurous observers to suffer any pecuniary loss in return for their labors. They expect no remuneration for services, only their necessary expenses. While some were busily engaged in transporting supplies to the summit and preparing the building for comfortable occupation, others were occupied in the less agreeable task of soliciting subscriptions. In the midst of the preparations, the acquaintance of S. A. Nelson, of Georgetown, Massachusetts, was made. He had been for several years one of the Smithsonian meteorological observers, and had, independently of the others, conceived the idea of spending a winter among the Arctic hills of New Hampshire for science. After an interchange of views S. A. Nelson became identified with the expedition. Congress recently appropriated funds for the establishment of a 'Bureau of Telegrams and Reports for the Benefit of Commerce.' After some correspondence with the efficient officer in charge of this bureau, General Myer ordered an insulated telegraph wire, with suitable instruments, to be sent to the mountain in order to facilitate the transmission of the meteorological reports, both to the public and to the office of the bureau in Washington. The wire has been laid, and the summit is now in telegraphic communication with the world. The chief signal officer, also detailed for special service upon the mountain, is an experienced telegrapher and meteorologist, Sergeant Theodore Smith, of the United States Army. The photographers of the expedition are A. F. Clough, of Warren, of Moosilauke fame, and Howard A. Kimball, Concord, N. H., both eminent in their profession. The latter gentleman spent much time in providing photographic material for the mountain, and in soliciting subscriptions. Their views of the peculiar phenomena of the mountain will soon be on exhibition. Thus the party consists of six persons: Professor Hitchcock, whose office in Hanover, N. H., is connected by telegraph with the summit; Professor Huntington, and S. A. Nelson, observers; A. F. Clough and H. A. Kimball, photographers; and Sergeant Smith, tele-

grapher and observer. All of them are up upon the mountain at the same time. They relieve each other to a considerable extent the work, and the company will be kept informed of their whereabouts.

"From the Mt. Washington Railway, in summer, the ascent on foot, if a person is accustomed to walking, is quite easy. Although the ties are three feet apart, and there is a foot in three a part of the way, yet, person with muscles strong from exercise, walk to the very summit of the mountain without sitting down to rest. [?] But suppose it is winter. The snow has accumulated to a considerable depth, even in the ties; but then it is no great hindrance; should it, however, be attempted the second time, you would find that the snow that was compressed beneath the feet has changed to ice, and that oval forms give a still less secure footing; it is thawing, and the ice is almost ready to slip off as you tread upon it, every one will see that walking is somewhat dangerous, as soon of the trestle work is thirty feet high, and walk down is a feat from which even a most expert acrobat would shrink. If at the depot we take snow shoes we can walk with comparative ease half way up, and then the snow is so compact that they are no longer needed and as there are few irregularities in the surface the walking is better than in summer. Above the limit of the trees the railway covered with ice of very fantastic shape, and the frame work of the Gulf tank is now ornamented that one can hardly believe it is the rude structure we see in summer. The Lizzie Bourne monument, which we have been accustomed to see only a rough pile of stones, is now an object of architectural beauty such as no sculptor can carve from marble. Immediately above the monument the timber trestles are completely covered with deposits of frozen mist, extending two or three feet horizontally from the timber on which the track is laid, and every piece of timber which forms the trestle is ornamented with beautiful forms of 'frost work,' deposited in graceful curves as the wind sweeps through the trestle. On the summit the buildings, t piles of rock and stone, so rough in summer are now completely covered with frost, which the snow fills the spaces between the jagged rocks. On the sides of the buildings toward the northwest the frost has accumulated that now it is more than a foot in thickness. Although the 'frost work' on the depot everywhere the same general appearance, it points show exactly the direction of the wind as it came into every nook and corner of the building. The frost on the braces and timbers that extend outward seem like one triangular mass, and on the chains it is often two feet diameter.

"During the last two weeks in the Eleven month the average of the thermometer was 16. The wind was northwest nearly the whole time. The weather was generally veiled, and the number of clear days was much greater than the usual average."

A later account says: "A gentleman who left the winter observatory on Mount Washington, a day or two since, reports that when the thermometer at the Crawford has fallen as low as twenty-four degrees below zero, the minimum point on the summit as yet is 14 fifteen [below zero we presume]. During the stay no one has been indisposed, even for short time, and those suffering from col-

on ascending recovered on the succeeding day. After being out for a moment one was frosted over, and eye-winkers rapidly one weighted down with ice. As for askers and hair, they are Santa-Claus-like a trice. The wind comes so stiff at times that it is necessary to lie down and wait for all in its force; and in taking views the men has to be guyed up like a derrick, the negative secured in the twinkling of an eye. In Tuckerman's Ravine there lies a th of loose snow of some two hundred feet, and in order to reach it about a half mile steep crust has to be descended. A slip will send a man on a breathless slide to the bottom.

For amusements, plenty of books are provided, and after eight o'clock P. M., Prof. Cheock, from the headquarters in Hanover, is accustomed to telegraph work and for news to the isolated adventurers. The latest report we have seen was transmitted from the summit at 7 o'clock in the evening of the 26th inst. Our readers will remember that on that day, we had a great storm and that the weather was very variable, the thermometer early in the morning being at 5° in Philada., at noon 8°, and in the night about 13°. The dispatch just referred to informs us that on the top of Mount Washington that evening the thermometer was 5° above zero, barometer 23.58, wind S. Velocity of wind 25 miles per hour. At 1 A. M., the wind was north from one point, and veered that directly opposite, a common occurrence there. It commenced snowing at 2 P. M. being the first time they had ever had snow when the clouds were not resting on the mountain.

month 30th, 1871.

The Wreathing Action of the Sea.—The last landing slip at Whitby, occurred in 1787, the present one is only the continuation of a process which has been going on for hundreds of years. The sea is steadily rising on the land of the east coast of England, especially where the geological formations are not of a kind that offers great resistance. But in its attacks on high rocks, such as Whitby presents, after long periods of gradually undermining, a sudden catastrophe ensues. The land cracks at the base, and on it slip down, and the rock above it topples over or sinks abruptly by a vast fissure or depression. From nearly up to Flamborough the coast is a bank composed of sand, pebbles, &c., the village after village has been silently taken away. According to Professor Phillips, waste has been calculated as going on at the rate of about "two and a half yards in the hundred which upon thirty-six miles of coast amount to thirty acres. One mile in length has been lost since the Roman occupation, and two miles since the Romans occupied the coast." Kilsness finally disappeared in 1665. Ranspurn and Outhorne, with its tower and burial ground, with its tower, on the Orkshire maps the words are still to be seen—"Here stood Auburn, which was taken away by the sea;" "Hartburn, taken away by the sea;" "Hyde, lost in the sea." In ancient documents mention is made of other places. Frismersk, Thactesthorpe, Hydray, Pennysmak, Upsal, Pottersdall, &c. of them are to be seen at the present day. The sea, which now overlooks the sea, was

once, according to tradition, ten miles distance from it. At Bridlington, the gradual waste and break down of the cliff are very apparent. When we reach the chalk base nearer to Flamborough the rock decays and crumbles; nevertheless, it is certain, that the sea gains. The small islands or isolated columns of chalk which stand up in the sea off Flamborough Head, have no doubt once been joined to the mainland. Spurn Point, or Head, on which stands the light-house, owes its safety to a curious balance of forces. It stands at the mouth of the Humber, at the extreme south-east extremity of Yorkshire, and is a long, narrow, crescent shaped bank. On the south side it is often washed by the currents; but fresh materials are continually brought to it from the cliffs further north, as they gradually crumble away into the sea. To quote Professor Phillips, "It is out of the River of Holderness that the spurn is constituted and maintained." On the other hand it is stated that the sea is receding on our western coast. If this double action continues, it may be in the future that Liverpool will find itself an inland town, with a dried up harbor, when Hornsea, Bridlington and Whitby are only names of the past.—*Pull Mall Gazette.*

Refinement from the Divine Presence.—Such long persecution, met as it was by such Christian zeal and immovable resolution in maintaining their right of publicly assembling for the worship of God, is an indication that in those assemblies they were made partakers of that *solid comfort and celestial sweetness which attend the true and evangelical worship which they valued above all the delights, pleasures, and enjoyments of this world, and which* * * * enabled them cheerfully to undergo not only the spoiling of their goods, but imprisonments, banishments, and even death itself. * * * May their constancy stir up those who now freely enjoy what they so dearly purchased.—*Besse's Sufferings of Friends.*

An English writer who advocates the dropping of the letter v from the termination *our*, as is the universal practice in the United States, says that the needless retention of this letter in a single copy of the London Times costs £10, and that in English books and periodicals alone, it increases the cost of publication fully £10,000 a year, without yielding any practical good.

THE FRIEND.

SECOND MONTH 18, 1871.

Beautiful is the description by the evangelical prophet of the redeemed and sanctified church of Christ, "Look upon Zion, the city of our solemnities; thine eyes shall see Jerusalem a quiet habitation, a tabernacle that shall not be taken down; not one of the stakes thereof shall ever be removed, neither shall any of the cords thereof be broken. But there the glorious Lord will be unto us a place of broad rivers and streams, wherein shall go no galley with oars, neither shall gallant ship pass thereby. For the Lord is our judge, the Lord is our lawgiver, the Lord is our king; He will save us."

How great and radical must be the change effected in man, before he can become a member of this glorious church "without spot or

wrinkle, or any such thing." Yet that change has been effected in thousands, is now going on in thousands, and the power to produce it is inexhaustible, and freely offered to all.

Why then are not more, why are not all, surrendering themselves to the glorified Head of this church, to be made members of it? The response of every one speaking the truth, must be, the cross is in the way, the terms are hard for flesh and blood, the natural man shrinks from having the yoke of Christ laid upon, and kept upon his self-gratifying propensities.

But there is no becoming a member of this church, a citizen of Zion the city of the saints' solemnities, where Christ is judge, lawgiver and king, but by submitting to his preparation, and being introduced by him. The only valid evidence of citizenship cannot be counterfeited. The love of the world must be renounced, and each one must show by practical example, that he admits the truth and force of Christ's words, "That which is highly esteemed among men is abomination in the sight of God," and acting in the spirit of this far-reaching declaration, he will have Christ's spirit bearing testimony with his own, that he is his.

So far as we have knowledge of the lives of those in our own religious Society, who, in their day, were lights in it and in the world, attaining to the stature of strong men in Christ Jesus, and becoming pillars in his church, we find that, as a cloud of witnesses, they give uniform testimony that they had to sell all to purchase the pearl of great price. They made no half way work in denying self and bearing the daily cross. For Christ's sake they became fools, relinquished the treasures, the pleasures, friendships and the maxims of the world, refusing to be conformed thereto. Thus dying daily, nevertheless they lived, yet not they, but Christ lived in them; and the life they lived in the flesh was by the faith of the Son of God. They became, and continued to be what they were, by Divine Grace; and this is the only way any among us, in the present day, can walk as they did in that path which the vulture's eye hath not seen, nor the lion's whelp trodden in, but which leads to the heavenly Jerusalem, the general assembly and church of the first born which are written in heaven. This Grace is unchangeably the same; the compassionate regard of the glorified Head of this church is undiminished; his gifts and graces are inexhaustible; and all that is wanting to bring the members of our poor Society into "a quiet habitation, a tabernacle that shall not be taken down," is to submit to the unalterable terms of discipleship, maintaining the watch in that holy Light purchased for us by redeeming love, and in it taking up the daily cross and following Christ step by step in the regeneration. Thus would we become detached from the love of money or popularity, esteeming the reproaches of Christ greater riches than all the treasures of Egypt; the love of Christ and the spread of his kingdom would be our absorbing delight, and He would be unto us a place of broad rivers and streams, wherein shall go no galley with oars, neither shall gallant ship pass thereby.

SUMMARY OF EVENTS.

FOREIGN.—Queen Victoria opened the second Two Houses of Parliament in London, on the 9th inst. There was a full attendance of members. The Lord

Chancellor read the royal speech, and at its conclusion the Queen left the House of Lords.

Gladstone has given notice of a bill altering religious tests, and Cardwell of a bill for the reorganization of the army. In the budget about to be submitted to Parliament, the expenses of the army amount to £15,581,700, an increase of £1,700,000 of last year. The increase of the regular army is to be brought up to 133,200 men, an increase of 19,800. New fortifications are to be built at Dover and Harwich, and on the island of Malta.

On the 11th a violent gale prevailed on the British coasts, causing great damage and loss to shipping. Numerous wrecks are apprehended.

The proceedings in the conference for the settlement of the eastern question, have not reached their final stage, but await the conclusion of a formal treaty, to which France must be a party.

Favre, in a dispatch to Granville, thanks England for the success sent to Paris, and for other proofs of sympathy and friendship.

Odo Russell, the British representative at Versailles, has been instructed to sustain the demand made by France for an extension of the armistice.

A Havre dispatch says that the Prussians have made a contribution of 4,000,000 francs on Rouen, which must be paid to-day, and another of 2,000,000 francs payable to-morrow. They have also exacted 640,000 francs from the people of Fecamp.

A Berlin dispatch says that the contribution of 200,000,000 francs exacted from Paris has been apportioned 150,000,000 to North Germany and 50,000,000 to South Germany.

Count Bismarck has refused to negotiate with Switzerland for the return to France of French prisoners detained in that country, because, as he says, experience had shown that returned soldiers would not again take up arms against Germany. He asks Switzerland to continue its exercise of the duties of loyal neutrality, and thereby hasten the return of peace.

The Swiss government has ordered the sale of the horses belonging to the French cavalry detained in Switzerland. Sixty-two railway wagons laden with provisions for the French prisoners, had arrived from France.

The siege and bombardment of Belfort have continued during the armistice, and some of the outposts have been carried by the Germans.

On the 8th, the Emperor Napoleon issued an address to the electors of France. He denounces the present Republican government as having sprung from insurrection and mob violence, and says all its acts are illegitimate. There is only one government, he says, resides the national sovereignty able to heal the wounds, bring hope to the resister, and reopen profaned churches for prayer, and to restore industry, concord and peace.

The delivery of the cannon and small arms of the army of Paris to the Germans, commenced on the 7th and continued on subsequent days. There was great suffering and distress in Paris, and the city is in considerable quantities. The routes to Paris are all open. It is said that the present winter has been the coldest in France since 1830, when elaret and other light wines froze in the vats.

The chief elections in France now centres in the result of the election held on the 8th for members of the National Assembly. The German officials in France were instructed to abstain from the exercise of a vigorous censorship over the French press while the elections were pending, and many journals which had been suppressed, resumed their publication. The Republicans seem generally to have elected their candidates in the large cities, but throughout the country the conservatives were in the majority. Official returns from the Department of the North show that monarchical candidates polled 195,000 votes, and the republicans 147,000. A Brussels dispatch of the 12th says the report of the suffrage in fifty-four of the eighty-nine Departments is up to 370 Bonapartists and Orleansists, and 80 Republicans. The Assembly is to meet at Bordeaux on the 15th, and its first duty will be to consider the terms of peace which may be offered by the Germans. The result will be variously published. It will not be certainly known until the day are laid before the assembly.

Bordeaux dispatches of the 13th state that a preparatory sitting of the National Assembly had been held that day, at which about 300 deputies were present. The session was formally opened, and the secretary appointed. The day was chiefly devoted to twenty departments which were still unknown. Most of these departments are occupied by German troops. Thiers is elected by eighteen departments, and Trochu by seven. Garibaldi

was chosen by several of the departments, but declines serving.

Hostilities continue in the departments of Jura and Doubs, on the eastern frontier, the French refusing to accept the armistice. It is reported that the armistice will be extended to the 28th inst. On the 13th, provisions were arriving in Paris in large quantities. The French government has ceased buying food for the inhabitants. A Versailles dispatch says that the German Emperor will enter Paris on the 19th, and proceed to the Tuilleries, where he will hold court. The general officers of the army will then inspect the army of investment as it marches over a designated route through the city. The French forces have completed the delivery of their arms to the Germans. A correspondent of the Times, at Berlin, telegraphs to that paper that it is not certainly expected at present that the general officers will be arrested. Nevertheless military and financial preparations continue.

The Prussian Parliament has been asked to advance fifty millions of thalers to the empire, which will be refunded by the Parliament of Germany. The Germans continue to levy heavy contributions on the cities and towns to the north of France. It is said the department of the Seine-Inférieure has already paid 25,000,000 francs.

The city of Paris has been authorized to contract a loan of 200,000,000 francs, and to levy a municipal war tax.

The steamship Cuba, which sailed from Liverpool on the 11th inst, took out among her passengers Earl de Grey, Lord Tenterden, Montague, Bernard and Viscount Goderich, of the joint high commission for the settlement of the fishery question between Great Britain and the United States, and also of the Alabama and other claims in dispute between the two nations.

London, 2d mo. 13th. Consols, 92½. U. S. 5-20's of 1862, 91½; ten forty's, 87½.

Liverpool.—1 Plands cotton, 7½ a 7¼; Orleans, 7½ a 8d. Red western wheat, 10s. 9d. a 11s. 2d. per 100 lbs.

UNITED STATES.—The income tax, which is now in force, with the exceptions of Georgia, Mississippi and Texas.

The Railroad Journal says the number of miles of railroad opened in the United States, at the end of 1870, was 54,453, made at a cost for road and equipment of \$2,573,726,109. The increase in the year 1870 was 10,000 to 3,574 miles, at a cost for road and equipment of \$234,910,000. The largest increase has been in the States of Illinois, Iowa, Missouri, and Kansas.

The number of internations in Philadelphia last week was 280. The deaths from consumption were 47; inflammation of the lungs, 25; and debility, 25; old age, 11. There were 1637 marriages.

The recent Septennial enumeration of taxable inhabitants in the State of Pennsylvania, shows a total of 856,097, of whom 158,622 reside in Philadelphia. Allegheny has 65,995 taxables; Luzerne, 43,022; Lancaster, 28,525; Schuylkill, 23,142; Berks, 25,093. The State has 24 counties. The smallest is Forest with only 749 taxables.

The government of Great Britain having indicated a willingness to appoint a high commission to settle all existing differences between the two countries, the measure was approved by the Senate of the United States. The names of five commissioners on the part of the United States, viz: the Secretary of State, Hamilton Fish, the newly appointed Minister to England, Gustave Schenck, ex-Ambassador General Hoar, Associate Justice Nelson, of the Supreme Court, and Senator William H. Seward, were named.

The Joint Commission is to meet in Washington at an early day.

According to the annual statement of the chief mercantile agency in this country, the number of business failures in 1870, which have been made public, was 3,551, representing liabilities to the amount of \$88,722,000. In the same number in the city of New York, with liabilities amounting to \$20,575,000.

Last year 4,800 vessels arrived in the port of New York, including 789 steamers. Of the entire number 2,184 vessels were American, 1,979 British, 910 North German. No other nation had more than 100 vessels. The number of letters sent to the New York post-office for 1870, shows that the whole number of letters sent to foreign countries was 6,164,434, the number of foreign letters received was 5,757,174.

The Markets, &c.—The following were the quotations on the 13th inst. New York, 111½; London, 111½; 1881, 114½; ditto, 5-20's, 1862, 112; ditto, 1868, 110½; ditto, 10-40, 5 per cents, 110½. Superfine flour, \$5.95 a \$6.40; western shipping, \$6.75 a \$7; finer brands, \$7.15 a \$10.60. Amber western wheat, \$1.60; No. 2 Chicago spring \$1.54. Canada barley, \$1.07.

Oats, 67 a 69 cts. Yellow corn, 86 a 87 cts.; west mixed, 82 cts. Philadelphia.—Superfine flour, \$5.25 a \$5.50; finer brands, \$5.75 a \$9.00. India red wheat, \$1.55 a \$1.60; ditto, \$1.45 a \$1.55. Penna. red, \$1.45 a \$1.45. Yellow corn, 75 a 80 cts. Oats, 59 a 61 cts. The arrivals and sales of beef cattle at the Ave Drive-yard reached about 2250 head. Extra sold \$3 a 9 cts.; fair to good, 6 a 8 cts., and common 5 cts. per lb. gross. Sales of 14,000 sheep at 53 a 64 cts. per lb. gross, and 4,500 hogs at \$10.50 a \$11.50 per lb. net. Baltimore.—Choice white wheat, \$1.90 a fair to prime, \$1.60 a \$1.85; prime to choice red, \$1 a \$2; fair to good, \$1.50 a \$1.60. Yellow corn, 80 a 85 cts. Oats, 60 cts. Chicago.—No. 2, white, \$1.23, 2 corn, 51 cts. No. 2, oats, 48 cts. Barley, 82 cts. 1 1/2 a 1 1/2 cts.

WEST-TOWN BOARDING SCHOOL.

A Stated Meeting of the Committee on Instruction will be held at Philadelphia, on Seventh-day month the 25th inst., at 10 o'clock.

CHARLES J. ALLEN,
Clerk

WEST-TOWN BOARDING SCHOOL.

Wanted a Teacher for the Boys' first mathematics school. Application may be made to

Thos. G. Conard, West Grove, Chester Co., I
D. Charles Evans, 702 Eace St., Philadelphia
Geo. J. Scattergood, 413 Spruce St., "

FRIENDS' BOARDING SCHOOL, TUNNESSA, NEW YORK.

A Teacher is wanted in this Institution. Application may be made to
Samuel Morris, Olney P. O., Philadelphia.
James E. Rhoads, Germantown.
Geo. J. Scattergood, 413 Spruce St., Philad.

FRIENDS' BOARDING SCHOOL FOR IND CHILDREN, TUNNESSA, NEW YORK.

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm connected with it. Application may be made to
Ebenezer Worth, Marshallton, Chester Co.,
Thomas Wistar, Fox Chase P. O., Philadeph
Samuel Morris, Olney P. O., Philadelphia.
Joseph Scattergood, 413 Spruce Street, do.

FRIENDS' ASYLUM FOR THE INSANE

New Friends, (Twenty-third Ward) Philadelphia. Physician and Superintendent—JOSIEA H. WOODS, M. D.

Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

DIED, on the morning of the 25th of Eleventh mo 1870, at her residence in Amity, Berks Co., Pa., M. D., wife of Thomas E. Lee, an overseer and old Exeter Monthly Meeting of Friends, and a member of the Yearly Meeting of the Friends in 1740. In the removal of this dear Friend Society and her bereaved family and friends have attained a great loss; but have the consoling belief it is her eternal gain, humbly trusting that through mercy and merits of her Redeemer, she has entered that rest which remains for the just of all generations.

—, at her residence near Morrisville, Bucks Pa., on the 28th of 12th mo. 1870, JANE, wife of Mr Moon, in the 50th year of her age, a useful and beloved member of Falls Monthly Meeting of Friends, and a member of the Yearly Meeting of the Friends in 1740. She was mercifully preserved from alluring follies and vanities in the world; by v Satan seeks to destroy the immortal soul; and by g heaving to the still small voice, she grew in grace a good knowledge of our Lord Jesus Christ. Obtrusive worth, and a self-seeking disposition, conspicuous traits in her character. Her end was p

—, at her residence in Upper Darby, Delaware Pa., on the 1st of 2d mo. 1871, PHILEE E. GARD wife of the late Isaac P. Garrett, a valued elder-offer Monthly Meeting. From early life she endeavored to walk as a loving follower of the Lord Jesus, an experienced the fulfillment of His promise, "Lo, with you away, even unto the end of the world." Her last illness she expressed a belief that a ma was prepared for her, and her frequent prayers f Divine presence and support were graciously answered.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XLIV.

SEVENTH-DAY, SECOND MONTH 25, 1871.

NO. 27.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

at No. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Single Copies, when paid quarterly in advance, five cents.

It should have been stated in our last number, that the letter of Richard Smith a priest of the Church of England, was taken from a manuscript Biography of the person and Smith families, written by Joseph Gosson in the year 1788.]

For "The Friend,"

an Account of Richard Smith, author of "A Letter a Priest of the Church of England," A.D. 1660.

(Continued from page 202.)

The "peaceable posture" of Truth as held by Friends, which the latter portion of these series refers to, as then established in England, was due in part to the court influence of William Penn, and in part to the Popish denials of King Charles the Second, and the actual Romanism of King James the Second. Roman Catholics in England are of course "Dissenters," and in order to spare the life, it became necessary to remove the heavy load of oppressive power from Dissenters in general, including Friends. Credit, unfortunately, cannot be given to the Established Church for having become more noble-spirited, more Christianly tolerant, or liberal. Subservience to a Romanising court was, alas! the cause of the change in her entreatment of "Dissenters." It seems to be a trait of human nature, that no sooner has a sect escaped under the heel of persecution for non-conformity of opinion and practice in religion, than it turns round and seeks to compel conformity to its own "non-conformist" views by the same methods to those lately used against itself.

Not being disposed to trust implicitly to a manerence of the improved order of things, which began in the latter half of the seventeenth century to look towards the colonies of America as a haven of more assured rest and religious liberty. Without referring to Pennsylvania, I will take up the history of New Jersey, as connected with the subject of this paper, who was one of the earliest proprietaries of the Province of Nova Caesarea New Jersey.

I am indebted for the following sketch of the primitive history of West New Jersey to several papers read before the West New Jersey Surveyor's Association at sundry times, and to the fundamental law of New Jersey,

Learning and Spicer's Laws, and Smith's History of New Jersey, &c.

The early settlers upon the Hudson and Delaware rivers were Dutch and Swedes, who established governments of their own. But about 1663-64, the British government claiming right by discovery, reduced the whole country under their control; and King Charles II., by letters patent bearing date the 12th March, 1663, (from the authorized Books of Grants, &c.,) granted unto his brother, James Duke of York, his heirs and assigns, "All that Part of the main Land of New England beginning at a certain place called or known by the name of St. Croix, next adjoining to New Scotland in America; and from thence extending along the Sea Coast unto a certain place called Petaquine or Pemaquid, and so up the River thereof to the furthest head of the same as it tendeth Northward; and extending from thence to the River of Kenebecque, and so upwards by the shortest Course to the River of Canada, Northward; and also all that Island or Islands commonly called by the several Name or Names of Matowacks or Long Island situate lying and being towards the West of Cape Codd and the Narrow-Higansetts abutting upon the main Land between the two rivers there, called or known by the several Names of Connecticut or Hudson's River; together also with the said River called Hudson's River, and all the Lands from the West side of Connecticut to the East side of Delaware Bay. And also all those several Islands called or known by the names of Martin's Vineyard and Nantukes or otherwise Nantucket."

The limits of this grant are quite problematical, though interpreted as including New York, New England and New Jersey; but the terms of the next, from the Duke of York, define the boundaries of the present New Jersey quite accurately. The Duke by his deeds of lease and release, dated 23d and 24th of June 1664, "in consideration of a competent sum of good and lawful Money of England" grants and conveys unto "John Lord Berkeley, Baron of Stratton, one of the King's Privy Council, and Sir George Carteret of Saltrum, in the County of Devon, Knight, and one of the Privy Council, and their heirs and assigns forever, All that tract of land adjacent to New-England, and lying and being to the Westward of Long Island and Manhitas island and bounded on the East part by the main Sea and part by Hudson's River and hath upon the West Delaware Bay or River and extendeth Southward to the Main Ocean as far as Cape-May at the Mouth of Delaware Bay and to the Northward as far as the Northernmost Branch of the said Bay or River of Delaware, which is forty-one Degrees and thirty minutes of Latitude, and crosseth over thence in a strait line to Hudson's River in forty-one Degrees of Latitude; which said Tract of Land is hereafter to be called by the Name or Names of New Caesarea or New

Jersey; and also all Rivers, mines, minerals, woods, fishings, hawkings, huntings and fowlings, and all other royalties, profits, commodities and hereditaments whatsoever to the said lands and premises belonging or in any way appertaining.

(Signed) JAMES." In the same year the new Lords Proprietors, Berkeley and Carteret, promulgated a document by way of constitution and fundamental law for the Territories just acquired. From this document, entitled "The Concessions and Agreement of the Lords Proprietors of the Province of New Caesarea or New Jersey to and with all and every of the Adventurers and all such as shall settle or plant there." I extract the following, as showing a strong contrast with the spirit of the constitution adopted by the Friends who ultimately became Proprietors. Every free settler who should receive a grant of land was required to come "arm'd with a good Musket, bore 12 Bullets to the Pound, with 10 pounds of Powder, and 20 pounds of Bullets, with Bandiliers and Match convenient," and "every able Servant that he shall carry with him arm'd and provided as aforesaid." They were to "constitute trained bands and companies, with the number of soldiers, for the safety, strength, and defence of the said Province, and of the forts, castles, cities, &c., to suppress all mutinies and rebellions, to make war offensive and defensive, with all Indians, strangers, and foreigners, as they shall see cause; and to pursue an enemy as well by Sea as by Land." These concessions make no provision for purchasing the rights or conciliating the feelings of the Indians, but Governor Philip Carteret, appointed on the day of the date of the concessions, on his arrival late in the summer of the next year, 1665, thought it prudent to purchase their rights.

Berkeley and Carteret held the Province for over ten years. During this period Richard Hartshorne, "a Friend of high standing," settled in East New Jersey, having purchased land from former patentees of the Duke of York. The Indian claims not having been satisfied by the Duke, nor by the patentees under him, Richard found his rights called in question by the natives. "The Indians," says he, "came to my house and laid their hands on the post and frame of the house and said that house was theirs, they never had anything for it, and told me if I would not buy the land, I must be gone. But I minded it not, thinking it was Davis's land, and they wanted to get something of me; they at last told me they would kill my cattle and burn my hay, if I would not buy the land nor be gone; then I went to the Patentees, which were James Grover, Richard Stout, John Bound, and Richard Gibbons; they told me it was never bought, nor had the Indians anything for it. * * * I told them I would not live on those terms, and not only so, but it was dangerous, for the Indians threatened to

For "The Friend"

kill my cattle." Richard afterwards repurchased his lands from the Indians; it may well be doubted, and was doubted by the primitive settlers, whether the natives had any more real intrinsic right to desert and undivided lands than the English; but following the golden rule, "whatsoever ye would that men should do to you do ye even so to them," proved in this case as in so many others, the best worldly wisdom as well as the best religion. While New England and Virginia were scenes of violence and cruelty, and insecurity of life and property to both Indians and English, in New Jersey as afterwards in Pennsylvania, the two races lived side by side in mutual goodwill, and "the Indians," to use the language of Samuel Smith, "became, of a jealous, shy people, servicable good neighbours."

An account of the country written by Richard Hartshorne and circulated among Friends, is perhaps entitled to the credit of having given the first decisive impetus to the emigration movement among them.

Passing over the temporary repossession of the Province by the Dutch in 1673, its retrocession by them to the English in 1673-4, and the new grants thereby rendered necessary from the king to the Duke of York, and from the latter to Berkeley and Carteret to confirm their title, we arrive at the period, (A. D. 1675,) when Lord Berkeley, becoming weary of his Proprietorship, offered it for sale at a low price. At that time John Fenwick, of London, a Friend of considerable means, and acting as Trustee for Edward Byllinge or Byllinge, a gentleman of large though encumbered estate, conceived the idea of purchasing, conjointly with Byllinge as chief, the proprietorship, and of removing with his own family to the "land of promise." Thus not only would Fenwick himself and such Friends as might choose to join his venture, attain the coveted religious freedom and security from persecution, together with the advantages which the virgin soil of America offered to planters, but a large pecuniary profit would, he believed, be reaped by Byllinge and himself from dividing and retailing the immense tract, so bought at wholesale. Edward Byllinge, also a Friend, appears to have been sincerely anxious to promote the removal of such Friends as desired to join the proposed religious colony, while not intending to remove himself. The proprietorship was to be in his name as chief, and Fenwick was to receive one tenth of the lands for acting as his Trustee. In accordance with their mutual understanding, Fenwick and Byllinge now proceeded to make their bargain with Lord Berkeley, which was consummated in the same year, by his conveyance to Fenwick in trust for Byllinge and his assigns, of his moiety or half part of Nova Caesarea or New Jersey. The purchase money required, even allowing for the manifold greater value of money in those days, was comparatively small; and yet the situation of Byllinge's affairs was such, that even this small sum of one thousand pounds had to be advanced by Fenwick. The peculiar circumstances of the case gave rise to misunderstanding and disagreement between Byllinge and his trustee, and they concluded to refer their dispute to William Penn as arbitrator; who, after carefully examining the case, gave his award. This not being satisfactory to Fenwick, the latter refused to comply with it.

(To be continued.)

There is a very striking coincidence of feeling and sense of judgment in the views held forth in the Epistle of Caution and Advice, to which the readers of "The Friend" were referred in a note under an article of correspondence by Samuel Fothergill, in the issue of the 21st of last month, and those contained in Mary Peisley's letter to John Pemberton, written near the same time, on the subject of paying a tax for the support of war: the reading of it may be of use to the members of our religious Society, and especially to such as are standing in the position of justifying themselves in the payment of a tax for the like purpose. We think the former is well worthy of a place in the columns of "The Friend," and it is sent for insertion in that journal, should it be deemed proper; and we would refer the letter to the perusal of Friends: it will be found on pages 113 and 114, of vol. 11 of Friends' Library. Both holding forth the united belief and sense, that the Lord was about to exalt the blessed day foretold by the prophet, that "Nation shall not lift up sword against nation, nor learn war any more."

The signers of the Epistle say, "It is his determination to exalt this blessed day in this our age, if in the depth of humility we receive his instructions, and obey his voice.

The expression used by Mary Peisley is: "Though I have not the least intention to derogate from the real worth of those honorable sons of the morning, who were made instrumental in a good degree to break down the partition walls which carnal, selfish men, had raised between the people and the Sun of Righteousness; yet I am not afraid to say, and give it under my hand, that it was and is the design of God, that his people in future ages should make an improvement on their labors, and carry on the work of reformation even further than they did: and notwithstanding a night of apostasy has come over us as a people, (as day and night succeed each other in their season, and God keeps his covenant with both) yet am I of the judgment, that day has begun to dawn, in which the Sun of Righteousness will rise higher and higher, and with greater lustre than heretofore. But if those who are called of God to be the sons of this morning, look back to the night, and to them who have slept, and been drunken in the night, (by sipping of the golden cup of abomination) or even to the latter day—they will frustrate the designs of Providence respecting themselves, but not respecting his own work. For it is his sacred determination to be glorious in heaven and glorified on earth, though those who would be called *His Israel* be not gathered."

Mary Peisley and her companion in the bonds of the gospel, Catherine Payton, and their fellow laborer, Samuel Fothergill, paid an extensive religious visit in America between the years 1753 and 1756: through the exercises attending, they were introduced into a lively sense of the state of the churches at that period; when not a few of the members opposed the reformation pointed to in the before mentioned documents. The former of them states the cause as arising from a state of worldly mindedness, saying, that "divers parents of this age, have bent their thoughts and desires too much to earth, to have a clear and distinct discerning of the times and seasons in a spiritual sense, and of the sacred purposes of Him, whose wisdom is

inscrutable, and whose ways are past finding out, by all the penetrations of finite understanding, unassisted by His own eternal light."

About the middle of the last century, the blessed Head of the church raised up an qualified band of faithful Friends—the Peabertons, Churchman, Woolman, Benezet, Eyles, Dylwin, and not a few other lively spirits, and exercised members of our religious Society, who dwelt under the weight of the cocern already alluded to, and also as regards the state of the church in relation to slavery until 1774 and 1776, when, on both these subjects, such disciplinary arrangements were adopted as those which now exist for the excluding of members for countenancing military services, either by the payment of a tax levied for the support of war, or in any other manner giving encouragement to the unstable spirit of war.

Thus, through the faithfulness of our predecessors, is transmitted to us and succeeding ages, an inheritance "to hold fast that no man may take our crown." It does not become a of their successors in religious profession to throw down any of the altars the Lord has raised in his church. But if any have paid tax levied for warlike purposes, whether advertently or otherwise, let them not stand in justification of the act, or be placing a candle under a bed, and saying, Friends have always paid a war tax; or throwing forth doubts concerning the testimony, or the propriety of the faithful observance of the whole some rules already decided on by the church, presuming that if the concern for such be right one, it will make its way. Are we not admonished by an apostle, "to contend earnestly for the faith once delivered to the saints." This exercise, the christian traveller often finds needful in his own particular, and we equally apply to his exercises in the church as divine ability is afforded.

Second month, 1871.

Iceland.

Was there ever such an anomaly as the land of Iceland? Geographically it belongs to the Western continent, and yet, historically and politically, it is a member of the Eastern. It lies close under the Arctic circle, where winter prevails during three quarters of the year, and is surrounded by seas filled with bergs; and yet boiling geysers and fountains of heated steam burst everywhere from the surface, while great volcanoes pour down in its valleys and upon its plains streams of molten lava. The nearest neighbors of the Icelanders are the Eskimos of Greenland; yet while the Eskimos are sunk to the most level of ignorance, the Icelanders have raised themselves to an elevated plane of enlightenment. And so the wonderful island lies like a link between the two hemispheres; a sphere where the most opposite elements, heat and cold, are constantly contending for sovereignty; the seat of a race of the highest civilization in close contact with a race of the lowest barbarism. Nor does this end to a chapter of contradictions. Lying almost beyond the range of either animal or vegetable production, the island still yields commodities which many more favored localities cannot furnish. It rivals semi-tropical Italy in the value of its sulphur mines, temperate Germany in the variety of its mineral waters, Scotland and Norway in the fertility of its salmon fish-

ies, and annually produces, in proportion to population, three times the number of rses and sheep raised in our own State of w York. It exports several articles which are either found nowhere else, or, if found, of greatly inferior quality, such as the w of the eider duck, which makes its way every palace, and upon which the heads of the kings of the earth easily or uneasily the feldspar so largely used in optical eximents, and that semi-carbonized wood, own as surlubrandur, which, as a material in the manufacture of furniture, equals the nous ebony of the tropics. A land of glars, and suffering keenly from the chill winds at blow off the icy shores of Greenland, land's chief harbors are open all the year and, while those of the Baltic, far to the uth, are frequently closed. A treeless couny, its inhabitants often burn the costliest of ods—mahogany, rosewood, and Brazil od—which has been borne to them from the pies, at no expense for freight, by the cur of the Gulf Stream. A land where wheat l not ripen, its people possess in abundance vegetable growth, the *lichen islandicus*, which, in far richer countries, is accounted a cury. A nation almost destitute of schools, of its sons and daughters are taught to d and write from their earliest years.

The history and philology of the island pre it features equally strange and striking. It the smallest of all Teutonic communities, ile its speech is the most ancient, and, amatically, the richest of all the Teutonic lects. In it are preserved the oldest poems, the oldest political orations, and the oldest igious ideas of our race. It is, as has been d, the feeblest of all Teutonic communities, it was the first to develop a republican tem of government, the first to establish y jury, the first to compile codes of law, e colonization of the island furnished a rallel in the ninth century to the coloniza on of New England in the seventeenth, its ivers seeking its barren shores for the self-e reason that led the Puritans to the rock-d coasts of Massachusetts and Connecti-

c. Its sturdy sons helped to delay the fall the Eastern Empire by enlisting in the lyard of the Byzantine monarchs; took r, under Rurik, in the foundation of the sian monarchy; took part, under Rollo, in the establishment of that Norman dynasty hich subsequently conquered England; set kingdoms, and left traces of their speech, Ireland and Scotland; built churches and rns in Greenland; and preceded Columbus, five hundred years, on the dreary, watery th which led to the mainland of America. No nation so small as Iceland has so large literature. The number of printed books ounts to many thousands, and the number unprinted works, preserved as manuscripts the public libraries of Europe, is at least ally great. Nor is this literature, as is the e with many minor nationalities, and with est colonial communities, made up of rans, but is almost wholly composed of iginal works. With the exception of the Bible d a few theological works, Homer and one or two other classics, Milton, Klopstock, Pope, nd portions of Shakespeare, Byron, and rns, very little of the literature of oth ers has been translated into Icelandic. he modern literature, especially of this cen y, is rich in poetry and in poetical works. The Icelandic throws a flood of light upon

the history of the English language. In their early stages, so nearly connected were the two tongues that we can very well imagine an intelligent Anglo-Saxon and an intelligent leelander making themselves mutually understood, with some little slowness and difficulty perhaps. At a later period the Icelandic greatly influenced the English, especially in its northern dialects, so that most of the dialectic words used by Burns are at once comprehensible to the student of the insular language. Yet, notwithstanding its importance to the English scholar, the Icelandic has hitherto been, to the great mass of students of English lineage, a sealed book. While the philologists of Scandinavia were making broad reputations by their investigations in the old Northern domain, while the philologists of Germany were cleverly availing themselves of this field, the English knew so little of the harvest which was awaiting the reaper, that the number of men in England and America who had ever paid any attention to Icelandic might almost, until within the last decade, have been reckoned up on the fingers of a single man. But in England a new era has dawned. The labors of Laing and Dasent and Thorpe in Icelandic literature are beginning to excite interest in the Icelandic language, and a great impulse has latterly been given to the new movement by the publication of the first part of an excellent Icelandic-English lexicon, through the agency of the University of Oxford.

But through it all, through the present days when its speech opens up a mine of wealth to the linguist of every Germanic tribe, as through those past days when its writers were the chroniclers of all the neighboring Germanic nations, the venerable island floats upon the gray waters of the distant Northern sea, the wonder alike of the naturalist and the philosopher. The former sees in it a display of nature's powers under forms which they nowhere else assume; the latter sees in it a nation, weak in numbers, maintaining unchanged for almost a thousand years, against obstacles never before surmounted by man, its language, its literature, and its customs.

For "The Friend."

Incidents in the Life of Edward Wright.

(Concluded from page 204.)

"During the first week of his foremanship, Ned sent five barges to Victoria Dock at high water, with two men in each, while he followed in his barge alone. Having arrived at the dock in due course, he made his barge fast to the floating pier. The tide was just then running out very hard, and before he could get his oars put in, and prepare to drop his barge clear of the pier, to allow the passenger steamboat to approach, the pierman cast off the rope which held Ned's barge, and sent him adrift, although the passenger boat was then at Blackwall. This was a malicious act, and Ned's anger was so aroused that the consequences might have been serious, had the pierman been at hand. Away went the barge, the tide taking her still farther and farther from the shore, and drifting her right over to the other side. Ned was at a loss to know what to do, having no anchor to let go, and nothing on which to lay hold to check her course. At last a Christian man, master of a small tug, observed Ned's dilemma, and steaming after the barge he took the headfast,

and towed the barge back to the pier, and laid her athwart the lighter.

"Ned at once remonstrated with the pierman for his unkind action, upon which he became abusive, and made use of the disgusting language so common among low men provoked. Whenever Ned was on the pier he was irritated by similar abusive words, and at last was so angered, that he seized the man by his coat collar, ran him violently along the pier to the extreme edge, and threatened to throw him overboard. Never was man held in a more powerful grasp, and it would have been easy for Ned to carry out his intention. But just as he was about to let go, he remembered God, and was troubled. Immediately he dragged the man back, and walked off the pier.

"The wretchedness that filled his soul at that moment Ned had not forgotten. The peace of mind which had once filled his heart with joy had departed. He had permitted Satan to master him, and had pained his Saviour. During the whole of the day his remorse was great, and when he got home he sought his heavenly Father, and confessed with bitterness of soul his sin. His old feelings, however, were not restored; he felt self-condemned and unhappy." A judicious friend observed his dejected look and inquired the cause, and when he had heard the story, told him it was his duty to go to the man and acknowledge that he had done wrong—reminding him of the Scripture passage: "Therefore, if thou bring thy gift to the altar, and there rememberest that thy brother hath aught against thee, leave there thy gift before the altar, and go thy way; first be reconciled to thy brother, and then come and offer thy gift." It was a severe trial, Ned's natural pride revolted at the humiliation. "I can't humble myself before him," he said to himself. "It's no use, I can't do it. The man was the first aggressor, he cast off the rope; had it not been for the owner of the steam tug, a whole tide's work would have been lost. How can I submit to this man of all others? He would tell it out to all his mates and acquaintances that Ned Wright had begged his pardon.

"And yet he could not bear the intolerable load of misery which weighed upon his spirits. He sought refuge in sleep, but nature's kind restorer" could not bring him relief. He endeavored to pray, but found something clogging his utterance. Next morning he went as usual to his work, but his mind was occupied with thoughts that distressed him. He knew that he must go through the trial. He pictured himself going on to the pier, begging his enemy's pardon, and hearing in return the sneer, and bitter taunt, and jeering laugh. He had been unaccustomed to such a scene. Before his conversion he would have disdained the thought of submission, and for ever dispelled it from his mind; but now he could not shake off these feelings. Every sound he heard had for its echo, 'Victoria Dock,' and at every step he took he seemed to confront 'Victoria Dock.' At the close of the day he found himself at Fenchurch Street Station. How he got there he scarcely knew; but being there, he took a ticket for Blackwall. Leaving the train, he walked on the pier. The boat was there waiting to convey passengers to Victoria Dock, and Ned half wished she would start before he could reach her. The struggle between the flesh and the

spirit here reached its climax. He had fought bravely with members of the 'ring,' and had not been troubled with misgivings and fears; but this conflict vexed him more than any other. Standing undecided as to what he should do, with one foot on the bulwark rail of the boat and the other on the edge of the pier, the boat at last moved off, and a voice cried, 'Look was the decisive moment. He must either jump one way or the other, or fall into the river; and just as he was about to spring on to the pier, a hand behind seized and pulled him on board the boat. He had no alternative now; he must go to Victoria Dock. On his arrival there he saw the very man he so much dreaded stationed to collect the passengers' tickets as they landed. Ned's heart began again to quake. He walked around the boat several times, allowing every passenger to land but himself. His turn, however, came; and so, giving up his ticket, he said to the man, 'George, I want to see you.'

'I should think you did,' was the reply, 'after the manner you served me yesterday. Why, you might have drowned me.'

'Well,' said Ned, 'the fact is, George, I was converted a little while ago, and I now confess to you how very wrong I was to act toward you as I did yesterday. It has made me very miserable and unhappy ever since, and I am compelled to come and acknowledge myself in fault, and beg of you to forgive me. It is a wonder, George, I did not turn you overboard; for you know what a character I have been in times past, before God, in the greatness of His mercy, converted me. Ah, George, I would have thrown you into the river then; but now God's preventing mercy restrained me. I shall be contented and happy now that I have told you, and I am sure you won't take further notice of it, or be offended.'

This humble acknowledgment and the request for forgiveness which followed, touched a tender chord in the heart of the rough pierman, and he burst into tears, and acknowledged his own wickedness.

The narrative of E. Wright furnishes an interesting illustration of the language of Robert Barclay, when speaking of the spirit of Christ, even that Divine saving Light, which he says, "Comes upon all at certain times and seasons, wherein it works powerfully upon the soul, mightily tenses it, and breaks it; at which time if man resist it not, but closes with it, he comes to know salvation by it. Even as the Lake of Bethesda did not cure all those that washed in it, but such only who washed first after the angel had moved upon the waters; so God moves in love to mankind, in this seed in his heart, at some singular times, setting his sins in order before him, and seriously inviting him to repentance, offering to him remission of sins and salvation: which if man accept of, he may be saved." "This then," he adds, "O man or woman! is the day of God's gracious visitation to thy soul, which if thou resist not, thou shalt be happy forever."

The memorable evening when E. Wright was providentially led to a place of religious worship, appears to have been to him such a "singular time," and it was indeed an unspeakable favor to him, that he was enabled to submit to the heavenly visitation. He often spoke of it as the time of his "conversion"—and so it truly was in the proper sense

of the word, which signifies a turning or changing; for his thoughts were turned from the pursuit of mere sensual gratifications to the possession of heavenly treasures. But he experienced, as all true Christians will, that though his feet had been happily turned into the path that leads to Heaven, yet many struggles and conflicts were to be encountered in his journey thither. Like the woman who had been a sinner, of whom the dear Redeemer said, "Her sins which are many are forgiven; for she loved much," E. Wright became animated with a fervent love for the Saviour, and a strong desire to promote his kingdom—especially among his former associates in labor and crime. Rough and unpolished as have been his efforts, a measure of success appears to have attended the honest sincerity which marked them.

Selected.

"REMEMBER NOT THE SINS OF MY YOUTH."

Could I recall the years that now are flown,

For evermore:

Revive my early visions—long o'erthrown—

And hope restore:

How blest it were to mould my life anew,

And all my broken vows of youth renew!

Oh were I once again but free to choose

As in past days,

How oft the sun lit path I would refuse

For sterner ways!

Content to turn aside from every road

Save that which kept me in the smile of God.

But vain the dream; the strife is o'er with me:

Dark days remain:

I could not trust my heart, if I were free

To choose again:

The dazzling morning might again deceive,

Life be mis-spent, and age be left to grieve.

I would not, if I could, recall the years

That now are fled:

Their cares and pleasures, labors, hopes and fears

For me are dead:

I ask but mercy for the weary past,

And grace to guide me gently home at last.

Good Words.

For "The Friend."

Selections from Memoranda concerning Hannah Gibbons; a Minister deceased.

(Continued from page 206.)

1st mo. 31st, 1862. Our dear mother was again taken ill, which was followed by several months of suffering; during which, at times, her life was despaired of. But, contrary to expectation or her own desire, she recovered so as to get down stairs the 10th of Sixth month; and Seventh month 13th, she was able to get to meeting.

A few days after this attack, she remarked to a friend, "I have had a time of suffering since I saw thee; but, for the most part, my mind has been centered in peaceful quiet, which I esteem an unmerited favor. I believe that He who has been with me all my life long, does not forsake me in old age."

At one time, she said, "I think it an awful thing to die. I have often looked over the leaves of my life, and think I may say I feel nothing in my way; which is surely of the Lord's mercy. I hope, my dear child, thou wilt be cared for, which perhaps will be the case beyond thy expectation. I have suffered often, and if it is the Lord's will to continue me in suffering, I hope He will give me strength equal to all He may lay upon me;" adding, "I have been an unprofitable servant."

3d mo. 10th, she was greatly prostrated. Her physician being present, she said, "he

need not fear to tell me when he thinks that change is near."

19th. She asked to have the text read, "Can a woman forget her sucking child," &c saying, "it has occurred to me with encouragement. Sometimes I seem left to myself, I cannot so well bear my sufferings. But as the outward, day and night succeed each other, so it is in our spiritual experience." A few days after she remarked to a friend: "Thou has been a suffering illness. Patience some times seemed almost ready to fail, with scarcely any ability to ask for more. At other times (I hope it is not too much for me to say) am comforted with Heavenly good. 'I have given thee on the palms of my hands,' & has been remembered to my consolation."

"22d. Brother A., his wife, and sister being with us, mother addressed us on the importance of heeding the monitions of Divine grace saying, "it will do great things for you."

29th. After a time of suffering from extreme sickness, by which she was much exhausted, upon something being done for her comfort, she said: "It is a great favor to be kindly cared for. I have some doubts at conflicts of spirit; but I have a blessed hope which, with thankfulness I think I may say does not fail."

On the 27th of 2d mo. 1864, our dear mother had a slight paralytic affection which enfeebled her right hand and affected her speech. For this time until her death she was almost wholly confined to her bed. Poverty of spirit and discouragement were much her experience, partly, no doubt, from nervous weakness: yet through all, some seasons of consolation were granted.

4th mo. 6th. She said, "Passages of scripture often revive;" and repeated, "The Lord is my shepherd," &c., and, "He shall cover thee with his feathers, and under his wing shalt thou trust; his truth shall be thy shield and buckler." Adding, "but I cannot take this to myself;" and dwelt much on her unworthiness, and that she had nothing to trust to but the Lord's mercy.

5th mo. 29th. To a friend she said, "Power of spirit is much my portion; but I have hope in the goodness and mercy of my blessed Saviour."

6th mo. 12th. She revived the desire for patience; saying, "I suppose you think I am often lacking in it, but I feel many ways without ability to help myself. It is a consolation I have often looked towards, but the reality is different from anticipation." Being told she bore her suffering with much resignation, it seemed to comfort her.

7th mo. 4th. When in much pain she said, "If these afflictions which are but for a moment, work out for us a far more exceeding and eternal weight of glory, what a mercy will be. My great desire is to wait the Lord's time; and that I may not cast away the substance of faith as though it had not been appointed."

29th. Being distressed with nervous restlessness, she said, "I beg for patience; I am feeling so badly. I sometimes think I like a fretful child." On being told she did not appear so, and it was believed much her discomfort arose from nervous debility, she replied, "I think it must be so. I have loved the Lord from my youth, and endeavored to serve Him; and now have nothing to trust to but His mercy. I sometimes think I see nothing in my way."

"This grievous war, with brother array

nt brother, is very distressing to my feel-

Oh! how often do I desire that the Lord would turn the hearts of the people to self, even as a man turneth a water course to the field. That wars and fightings may cease, and peace be restored to our once peaceful land. The gospel dispensation was ushered in with 'Glory to God in the highest: on earth and good will to men.' Truly the time come when 'Vain is the help of man.'

The prophetic vision, the man which had written's ink-born by his side, was to go through the midst of the city of Jerusalem, "set a mark upon the foreheads of the people that shal, and that cry, for all the abominations that be done in the midst thereof." The rest were to be wholly smitten or slain. Nah Gibbons bore unmistakable marks being one of the former of these. And remembering the record: "Ten righteous men have saved a city once," we know how far the sighs and the cries of this faithful servant, with that of other similarly exalted spirits, in the two-fold duty of watchful prayer on their own accounts; while the same time thinking of a world that is not for itself; and of bearing it on their backs before the Lord, might have had in view the desolating scourge then wasting the highly favored land.

While there are sighers and criers in the present day, some more manifest, as well as some more hidden ones, that are but little known save to the secret-seeing eye of their Father in heaven, who still hath especial regard to the lonely sparrows of His heritage, none of whom is forgotten before Him, how desirable that this afflicted remnant, comparable, it may be, to "two little flocks of sheep pitched before the Syrians who filled the cry," (1 Kings xx. 27,) should be not only animated by a renewal of the holy faith and patience, granted at times to those who followed Him, but that their ranks should be increased through a faithful surrender on the part of others to the Lord Jesus Christ, and a no less faithful maintenance of the principle of self-denial and the daily cross, in a fashion-following, pleasure-loving, custom-serving world. Were this the will of the government of the heart placed on the shoulders of the Lord of life and truth, whose right it is to rule and to reign, how would He, as He did with our dear Lord, set His preserving mark upon these; His ancient promise of being "to them as a sanctuary in the countries where they come;" "enamor their souls more and more of His love and His mercy; bestow upon them gifts for the edifying of His church; and then to see that of the increase of His gift and peace when allowed to reign in their hearts, there shall never be an end.

date. She spoke of the comfort of having religious sympathizing friends to visit but desired more and more to be in the land, saying, "I love the quiet habitation, the neither galley with oars nor gallant shall enter."

on the 6th. Having a severe time from pressing sickness she said, "My dear child, unwearied efforts for my relief, thank you for your faithful acknowledgment and thank you for your Father in Heaven; who continues to strengthen thee in mind and body to add to my comfort. I have remembered, on the Lord loveth, he chasteneth." I chastened; but trust it is all in mercy

for my refinement and purification. And if I am only ready for the call, it will be through the mercy of God in Christ Jesus."

7th. First-day. She spoke, as she frequently had done, of the privilege of attending religious meetings; and greatly desired our young people might value these opportunities; and that they may embrace the visitations of Heavenly love and mercy, and regard them with reverence and holy fear.

9th mo. 4th. Dear mother said, "The present seems to me a very serious time on account of the desolating war; and I think it behooves each one of us to examine our standing, and know whether we are building on the Rock or on the sand. 'Watch and pray lest ye enter into temptation,' is as needful now as when the command was given by our blessed Saviour. But how true it is the spirit is willing, but the flesh is weak. I often feel myself a poor creature, with nothing but mercy to trust to: and added, 'Not by works of righteousness which we have done;' &c."

12th mo. 28th, 1864. Having an increase of feebleness in her left hand, and being otherwise more indisposed, she said, "How I long for a more abiding sense of acceptance with my Heavenly Father! But I desire to say 'Though he slay me, yet will I trust in Him.' For, 'To whom shall we go? Thou hast the words of eternal life.' I think I may say I have loved the truth from my youth, though I have done little for it."

3d mo. 12th, 1865. Mother feeling her mind religiously exercised towards a person whom she saw pass from the house of a neighbor, yet being fearful to act, she thus supplicated: "Oh Heavenly Father! enable me to do thy blessed will; lest, after all I have known of Thee, I may slide as some have slidden from thy holy commandments. Oh! give me to see with clearness the things which belong to thy honor and my soul's peace."

(To be concluded.)

For "The Friend."

Travels of a Naturalist.

A fondness for natural history, even when we possess but a moderate knowledge of its details, furnishes to the mind a large and varied field of interest and instruction. He who knows something of Geology will notice the different soils and rocks, which he meets with, as he journeys over the country. What to another is a mere clod or stone, to him will be a volume full of thought and suggestion. He will see the evidences of forces which have operated many ages before, and read in the specimens before him the history of the destruction of older continents, the upheavals from beneath the waters of new homes for terrestrial beings, and the long series of changes by which an allwise Providence has fitted the earth for those who now dwell on its surface.

The eye of the botanist will observe the new species of plants which he meets with. Some forms are only to be found on the sandy margin of the sea, others in the alluvial deposits, and another class penetrate with their roots the crevices of the rocks. The swamps, the uplands and the mountain tops, all have their appropriate and peculiar residents. It is so in other departments of natural science; every section of country has its own distinctive features—and these arrest the attention of the travelling naturalist, and furnish him with an ever accumulating store of facts, and with fresh food for thought. In illustration

of this, some extracts follow from the descriptions given by Arthur Adams, who as surgeon accompanied one of the vessels of the British navy to the East Indies. He thus describes some of his rambles in the vicinity of Rio Janeiro, where their vessel called on its outward voyage.

"On all sides rose sombre-tinted granite rocks of colossal magnitude, smooth, and speckled every where with lichens white, black, yellow, reddish, and brown. Growing from the fissures of the rocks that skirted the shore, were clumps of huge columnar cactuses, and springing from the sides of yawning gaps, were aloes with dark green, spiky leaves, and flowering stems, twenty, and even thirty feet high. Some of us have read about the strawberry-plant of Saint Pierre, and how he despaired of ever being able to write the history of animals, when he found what time and labor were necessary to study the habits of all the visitants to and dwellers about the leaves and blossoms of the plant on his window-sill. The minute investigation of one of these aloes astonished me almost as much. Little snails, with smooth, yellow shells, called *Helicine*, lurked under the decaying foot-stalks; creatures, belonging to the bug or hemipterous tribes, of extravagant shapes, reposed on the long green leaves; gigantic spiders called *Nephila*, with very long legs, and gold and silver spotted bodies, hung, head downwards, motionless in the middle of their wide-spread nets, suspended from leaf-point to leaf-point; hairy spiders, short-legged and bloated, guarded jealously their nests, soft, yellow, silken bags filled with young spiders in the deep-set axils of the leaves; while among the ragged fibres of the root roamed thousand-legs and centipedes!

"Leaving the shore and proceeding a little inland, I found myself surrounded on all sides by troops of floral beauties. There were flowers with trumpet-shaped, starlike, and crown-like corollas, whose names were entirely unknown to me. I recognised, however, the sweet, modest, dark-eyed *Thunbergia*, the bright blue blossoms of *Plumbago*, and the rich and crimson corymbs of the *Aselepias*."

"Another day was devoted to the small island named *Praya de Vermelha*. The heaped-up boulders were crowded with aloes, always hereabout a conspicuous feature in the scene; and the rents and fissures were green with prickly pears. Overcome by the heat, I seated myself on the rocks by the sea, and watched the habits of the creatures peopling the marine aquaria beside me. The stone-basins were filled with translucent water, and fringed with purple sea-weeds. Purple, long-spined sea-urchins were laboriously crawling up the steep and rugged sides by the aid of their tubular feet; the barnacles, which clothed the submerged surface of the rocks, threw out spasmodically at regular intervals their tufted feet; while above high-water mark, a *Littorina* (a zebra-striped and beautiful periwinkle) adhered by thousands to the smooth, worn granite. But the crabs amused me most. They nearly all belonged to the genus *Sesarma*, or painted-crabs, and were very numerous. From the stilly pond they stealthily climbed the rocks just above the wash and ripple of the tide, and once on terra firma, they deliberately scrutinized the weed-clad surface around them. The barnacles were for their prey, and they speedily selected one, for their appetite was keen. One set himself

down resolutely before the tempting dish. The lids, formed of the opercular valves, were soon removed, and Sesarua luxuriously helped himself first with one hand and then with the other, like a greedy boy from a bowl of savoury porridge. One poor fellow had lost an arm in some fierce fray, but he plied the remaining member with increased activity, as if to make up for lost time."

"Having accomplished the purpose for which we were sent to Rio Janeiro, we left it, on our return, towing the 'Dove,' our little steam-tender, by two 9-inch hemp hawsers, and after a voyage of six weeks, we reached the Cape of Good Hope. On our arrival the hawsers, which were quite new on starting, were hauled inboard, when they were found covered with barnacles along their whole length. So numerous were they, that even when the hawsers were comparatively freed from them, they became so offensive, from the decaying animal matter about them, as to require washing with Sir W. Burnett's solution, and they had to be kept on deck a considerable time before they could be reeled up below.

"On another occasion we fell in with a floating spar seven hundred miles from the Azores. From the fact of its being covered with barnacles, it was the general impression that it must have been a long time in the water. On a boat being lowered, however, the carpenter examined it, and pronounced it to be a new spar, the lower-mast of some vessel. It was entirely covered with full-grown *Lepas anatifera*; a fact which goes to prove how rapid is the growth of the *Lepades*, and also how desirable it is, for the sake of humanity, to examine these floating wrecks, even when they seem apparently hoary with age. The fate of many missing vessels might possibly be determined by reading the name marked upon such floating spars."

At the Cape of Good Hope, their vessel tarried but a short time; our author says: "The long stretch of flat sandy shore between Simon's Town and Fish-hook Bay was a favorite walk of mine, fresh, breezy, and full of interest. The weather had been very stormy of late, and as I strolled leisurely along 'the beached margin of the sea,' I stumbled across a stranded fiddle-fish, with a head like a ray and a tail like a shark. The shore was strewn with many other remnants of fish, crab, and cuttle, to which various fatal casualties had occurred. Among these we observed an entire flotilla of *Lanuthinas*, or violet sea snails, which had suffered shipwreck despite the buoyant floats with which each tiny vessel has been provided by Nature. Now, however, the scene was very peaceful. Out at sea only two little boats were visible, fishing for snook, (a kind of long-nosed mackerel,) between Noah's Ark and the Roman Rocks. The long rolling breakers came tumbling in with a deep and hollow roar, and on the huge bare rocks along one portion of the shore sat the cormorants drying their dusky wings, or sitting upright, motionless, like learned doctors met in solemn conclave. Near them were foolish penguins, gorged with fish, dozing in the fitful sun-gleams. Three skulls of the 'right whale' were bleaching on the sand, and the eye of the great sea-eagle watched us from above.

"Strolling a little inland to seek shelter from a shower among the stunted trees and scrub, I observed hundreds of large globular

land-snails suddenly make their appearance on the sandy soil where before the rain they had lain perdu to avoid the heat and dryness of the sun. Here then we had before us a true burrowing snail."

Their vessel was stationed for some time at the Straits of Sunda, and they beguiled the time by making excursions to the neighboring islands. "At Anjer, on the mainland of Java, where we landed on one occasion, we strolled under the shade of the cocoa palms which stretch along the level sandy shore, and watched the artful manners of the sand-crab, which has some very amusing tricks. Near the village we loitered about the great banyan tree, under the shade of whose many-drooping branches and wide-spread foliage cluster the indolent Javaneese, in their loose sarongs and bamboo hats, offering for sale their multifarious wares. Squatting on the ground sat a hideous baboon, complacently mauling a banana, at the same time keenly watching, with little twinkling eyes (the expression of which was very mischievous), every movement of those around him. Pensive and subdued, hugging his knees with his slender hands, I observed a long-armed ape, while several smaller monkeys, grinning, chattering, and showing their teeth at all who approached them, were quarrelling among themselves, or stealing everything they could lay their hands on. Lories, love-birds, large black and brown squirrels, and Java-sparrows were confined in neat little bamboo cages. Tamarinds and water-melons were exposed for sale. Here and there might be seen a dingy flat-backed water-tortoise, and sometimes a python with splendid spotted skin. Every where baskets of the larger and more showy conchs and cowries were so arranged as to attract customers. There were also mounds of coconuts, heaps of pine-apples, enormous yams, huge bunches of ripe bananas, and numerous aromatic shaddocks which had been grown in the neighborhood of Batavia, and which always have a finer flavor than any produced elsewhere.

(To be continued.)

Selected for "The Friend."

An Epistle of Tender Love and Caution to Friends in Pennsylvania.

Dear and well beloved Friends,—We salute you in a fresh and renewed sense of our Heavenly Father's love, which hath graciously overshadowed us in several weighty and solid conferences, we have had together with many other Friends, upon the present situation of the affairs of the Society in this province; and in that love, we find our spirits engaged to acquaint you, that under a solid exercise of mind to seek for council and direction, from the Holy High Priest of our profession, who is the Prince of Peace, we believe he hath renewedly favored us with strong and lively evidences that in his appointed time, the day which has dawned in these latter ages, foretold by the Prophet, wherein swords shall be beaten into ploughshares, and spears into pruning hooks, shall gloriously rise higher and higher; and the spirit of the gospel, which teaches to love enemies, prevail to that degree, that the art of war shall be no more learned. It is his determination to exalt this blessed day, in this our age, in the depth of humility we receive his instructions and obey his voice. And being painfully apprehensive that the large sum granted by the late act of

assembly for the king's use, is principally tendered for purposes inconsistent with peaceable testimony; we therefore think, as we cannot be concerned in wars and things, so neither ought we to contribute to by paying the tax directed by the said though suffering be the consequence of refusal, which we hope to be enabled to with patience. Though some part of money to be raised by the said act, is so far for such benevolent purposes, as supping our friendship with our Indian nee and relieving the distresses of our fellowjects, who have suffered in the present calamities, for whom our hearts are deeply pained and we affectionately, and with bowels of tenderness, sympathise with them therein; we could most cheerfully contribute to the purposes, if they were not so mixed that cannot in the manner proposed, show hearty concurrence therewith, without a same time assenting to, or allowing practice which we apprehend contrary to the name the Lord has given us to bear, for Name and truth's sake.

Having the health and prosperity of Society at heart, we earnestly exhort you to wait for the appearing of the true light and stand in the counsel of God, that we know him to be the Rock of salvation place of refuge forever. Beware of the state of the world that is unstable, and often dived into dark and timorous reasonings, less good thereof should be suffered to blindness of the mind. Such, not knowing sure foundation, the Rock of ages, may take of the terrors and fears, which are known to the inhabitants of that fold, who the sheep and lambs of Christ ever have quiet habitation, with a measure of which remnant have to say, to the praise of name, they have been blessed, in this distress. Our fidelity to the present government, and our willingly paying all tax purposes which do not interfere with consciences, justly exempt us from the imputation of disloyalty; and we earnestly exhort that all, who by a deep and quiet seeking direction from the Holy Spirit, are, or be, convinced that he calls us as a people this testimony, may dwell under the guidance of the same Divine Spirit, and manifest b meekness, and humility of their converse; that they are really under that influence therein may know true fortitude and patience to bear that, and every other testimony committed to them faithfully and uniformly. may all friends know their spirits clothed true charity, the bond of Christian fellowship wherein we again tenderly salute you, remain your friends and brethren.—*Churchman's Journal.*

Philadelphia, Twelfth mo. 16th, 1755.

THE FRIEND.

SECOND MONTH 25, 1871.

WESTERN INDIANS.

Two years have elapsed since the Press of the United States invited Friends to their assistance in an effort to carry out benevolent intentions of the General Government, to stop the destruction of the Indians on the Western Plains, to introduce to them the blessings of Christian civilization.

endeavor to induce them to adopt and t by them. The work was one of great tude, surrounded with difficulties and uragements which, we apprehend, few ave not been immediately connected it, can fully understand or adequately ate. That part of the field of labor ened to the care of Friends up, we have on to know, entered upon by them with y fears and misgivings, the responsibility felt to be great, as the principles and acter of the Society were more or less in the success or failure of the efforts e, and many were looking with a jealous and some with unconcealed desires that experiment would prove abortive. We care was taken that in commencing carrying on the work, only such agents ld be employed as were not ashamed to y dress, address and conduct that they Friends, and who in their intercourse the natives and others with whom they brought into contact, would maintain loctrines and testimonies held by the S. This concern may not have been al- rewarded by success, but we believe it nes to prevail, and it is evident that un- such shall be the case there can be no ad to expect the object aimed at will be ed, or that the efforts of Friends will be profitable to the tribes under their ge, than those of any others. As much appears to have been made, in what be called the rudimental labor, as the ness of the time and the perplexing obs would warrant us to expect. The rment and the Indians generally ap- to be satisfied with the care and labori- application bestowed by those occupying arious posts among the latter, and we ge the hope that as this interesting un- king is carried on under that guarded ones concern which alone can insure the blessing, it will be a powerful means outing the aborigines from their degrad- ed suffering condition, and of finally elg so as to fit them for citizenship and a e table position in the Christian com- ty.

The following letter has been kindly sent for publication by the Friend to whom addressed.

Lawrence, Kansas, Second mo. 6th, 1871.
Dear Friend,—I am in receipt of thy acceptable letter of the 20th ultimo, and assure thee it was comforting again to re from thy pen the encouraging infor- mation thy letter contained. Thou hast been ed, doubtless, by Dr. N. and E. Earle, r southern trip to the several agencies. I satisfied the Cheyennes, Arapahoes, s, Sac and Foxes, are gradually advanc- ing a better life. The Kiowas and Co- ches are the only tribes that I have any of, and if we can keep all the others their evil influences, we can afford to r them a little longer. Thou wilt re- ber I usually take a more encouraging of the field than my venerable friend; thy should I not, when I know that in ad te confederation of the tribes of the west,—65,000 in all represented—some civilized, educated, gain their livelihood lustrial labor, and are, to a commenda- agree, advancing in civil life, as much r neighboring whites in adjoining States; there are outside of the Confederation, Superintendency, not more than 10,000

roving, hunting Indians; and of this number many leading men propose to settle down on farms; and the large number of the former class urgently extend the hand of friendship to the latter, urging them to abandon the hunt, and adopt civilized habits. If the peo- ple of the United States will but second and sustain the worthy resolution of the civilized tribes in this, their new resolution, it would work powerfully as a civilizing influence. I feel, my dear friend, that all parts of the labor are working as prosperously as we could reasonably expect, and now after near two years of very busy life in this office, on look- ing back over the past, I cannot see where I could have much difficulty in any cases of im- portance. The tribes very generally regard us as their friends. In the recent "General Council," the question was largely discussed as to admitting none but *native* citizens of the tribes in the formation of their Government, as officers of the same; and it was a *united* feeling, that if they could have assurance that Gen. Grant's Indian Policy would not be changed by the change of future administra- tions, they would be willing for the General Government to appoint their officers.

I want to hear from thee often, and would gladly write thee oftener, if my pressing du- ties would permit. I hope to do a good work with absentee Shawnees; many of Black Balbs have joined them. The citizen Potto- watomies also take that country surrounding and absorbing them. We help them to schools, blacksmiths and implements. We hope to have J. H. Pickering for Sac and Fox agent, under whom they will report; he is now about starting to put in a mill for the Sacs and Foxes. Agent Gibson has a mill started for the Osages, and will soon have agency buildings up and some farms opened. We are doing an en- couraging work with the tribes at Spring River. Two good school houses built and schools in successful operation. I think Agent Roberts' labor will soon be closed, as the Shawnees are nearly all gone. Blue Jacket and G. Rogers have removed; the former lost his wife, and has married again. The poor Kawas remain about as usual, only Agent Stubbis has managed affairs more economi- cally, and a general improved feeling prevails. But little progress in a better life can be ex- pected until their removal, which they are now ready for. Jonathan Richards has com- menced in earnest with the Wichitas, and I hope to hear of a good work. Dear Margar- et is a true helper. Brinton has made quite a change at his agency; it looks like a little town. Three large stores and the large com- missary building from Camp Supply, and many other buildings; and the Indians love and re- spect him.

I have just received the new Indian Report, and regret to see the printer has commenced it with "Sir," which I never use.

I often remember with pleasure our many rides to the agencies. I now go most entirely by rail, in Kansas.

I remain affectionately,

thy sincere friend,

ENOCH HOAG.

"Liberty and Equality." "The brother- hood of man." These have been adopted as party cries, by men boasting themselves as lovers of mankind, who seem to think that in enunciating these sweet-sounding aphorisms they have provided a panacea for all the evils

of political government, and all the ills of so- cial society. They certainly embody abstract truths, and were they lived up to in their true meaning, we might materially modify the sadness of Job's declaration that "man is born unto trouble as the sparks fly upwards."

Little good, however, can result from the announcement of a cure for the ills under which mankind have so long groaned, unless we are also told how to procure and apply it. Except that we hear they are to perfect vision in the eye of the law, the application of the all potent remedies are not pointed out by those who offer their services to heal the chronic diseases of society. If equality is necessary, unless all are to sink to the lowest level, there must be some means pursued to elevate the lower ranks; to induce the multitude to consider the object and end of their existence, the duties that attach to a higher scale of being, and the means to be employed to exalt the dignity of their nature. How are the poor, the ignorant and the miserable to be induced to enter on the study of their own being, and their relations to each other and to society?

The carnal mind is prone to think haughtily of itself, while it is supercilious and jealous towards others; therefore it is not only in enmity with God, but with all who stand, or are supposed to stand, in the way of its self-indulgence. The point aimed at by the greater part of the loud-spoken apostles of "liberty and equality" is to remove most of the checks and limitations established by law, so irksome to the carnal mind, because they prevent every man becoming—what they say is the great desideratum—his own master; that is, to go very much as he pleases. But all experi- ence, from the creation of Adam until now, has shown, that unless men are brought under the control of some power superior to that they possess of themselves, they become slaves to their own lusts; than which there is no servitude more tyrannical, more unscrupulous or more miserable.

If, then, "liberty and equality" are to be- come watchwords of political and social im- provement, they must be preceded or accom- panied by such a development of moral virtues as will curb selfishness, and secure the per- formance of the duties we owe to each other. But this implies laying the axe to the root of the trees, so that every one that bringeth not forth good fruit is hewn down and cast into the fire.

The truth then is, that to become free, man must allow himself to be brought under the dominion of a power that can transform him. He must be emancipated from his natural self. As the spirit of Him who is perfect Love, is allowed thus to reign in the individual mem- bers of a community, true liberty and equality are established; the obstacles to mutual affection and a common interest are removed, and each and all realize the truth of the declara- tion, One is your master, even Christ, and all ye are brethren.

We believe the inhabitants of the earth are on the way towards this consummation, but, as yet it appears to be a good way off, and from what we have seen we can hardly hope for its being reached through the teachings of political theorists.

SUMMARY OF EVENTS.

FOREIGN.—The ex-Emperor Napoleon has received a notification not to again overstep the privileges of a

prisoner, and to abstain from interference in politics by watch his proclamations. Orders have been given to protect him closely.

The total war contribution required by the Germans from the city of Paris has been advanced by the Germans of France. The disarmament has been nearly completed. The destruction of the heavy guns of the forts was in progress. The Paris *Patrie* thinks that the prospects of peace are improving. It is said that the armistice will be prolonged until the close of this month. It is noted that the French have opened the markets to the German army through Paris, and the hope is expressed in Paris that if peace is soon concluded the proposed triumphal entry will not be made. It is reported that the Emperor will not return to Berlin before peace is concluded. Belfort has surrendered and the garrison was permitted to march out with the honors of a defeated war. The armistice now extends to all parts of France.

On the 16th the National Assembly elected Grevy President of the body, by a vote of 519 out of 538. On the 18th the number of deputies in attendance exceeded 600. Thiers has been chosen by an almost unanimous vote Executive Chief of the Republic of France, with power to choose his council over which he will preside. On the 19th, Thiers announced a new Ministry as follows: Dufaure, Minister of Justice; Favre, Foreign Affairs; Picard, Interior; Simon, Public Instruction; Lamoureux, Commerce; and Delo, War; Pevelian, Marine. The Finance Minister was not named. The English, Austrian and Italian ambassadors have officially visited Thiers and recognized the new Government.

In the assembly on the 17th, a declaration was presented bearing the signatures of the deputies from Alsace and Lorraine protesting on behalf of the inhabitants of those provinces against their separation from France. The subject was referred to a committee who subsequently submitted a report expressing the strongest sympathy with the populations of Alsace and Lorraine, and directing that their declaration be spread upon the records of the Assembly, and referred to by French negotiators when they come to treat with the Germans. Thiers insisted that the Chamber must, on its own responsibility, clearly declare its wishes upon the question.

All the contributions which have been collected by the Germans in France, other than the penalties, will be returned in the form of indemnity. The Emperor has consented to a reduction of the contribution exacted from the Department of the Seine inferior from one-third the original amount.

A petition to the French National Assembly is circulating among the French prisoners in Germany, in reference to a decision by the commission of the question whether the government of France be a monarchy or a republic, to universal suffrage.

A Versailles dispatch of the 19th says, there is not the slightest doubt in high quarters regarding final peace. Favre expresses the opinion that the Assembly can be relied on to reject most of the German demands, except in matters of territory.

The French forces now in the field are stated to be with Chanzy 120,000 men, with Faidherbe 135,000, at Cherbourg 70,000, and Havre 40,000, the latter in bad condition. Chanzy and Faidherbe both declared in the Assembly that a defensive war was still practicable.

The British House of Commons, on motion of Gladstone, has voted a dowry of £30,000 to the Princess Louise, and an annual allowance of £6,000. The vote was almost unanimous. A member moved a resolve in relation to the House it is the duty of neutral powers to interpose to procure such moderate terms of peace as may restore tranquility to Europe and independence to France. The resolve was opposed as inopportune and impolitic. Gladstone believed that magnanimity on the part of the Germans would benefit not only France and Germany itself, but also made some explanations in regard to the Anglo-American Commission. It was empowered to discuss amicably all differences, and any difficulties arising were to be referred to the home government by cable, and instructions would be returned in the same way. No further meeting of the British and American Commission is anticipated, still awaiting the arrival of representatives from France, who are soon expected. Cardwell, Secretary of War, has introduced a bill for the reorganization of the army. He declared that it was now established that the colonies must pay for their own defence. It is proposed to place the War Office under the supervision of the administration, and to abolish the purchase system. The defensive works proposed by the Secretary are estimated to cost £50,000,000, and the new artillery £10,000,000 more.

A Paris dispatch of the 19th says: There is good authority for stating that Germany's final conditions of peace include the cession of Alsace and Lorraine, and the fortresses of Thionville and Belfort, and an indemnity of £50,000,000 sterling.

A Bordeaux dispatch of the 19th says: In the National Assembly to-day M. Thiers delivered a speech in the capacity of chief executive of the French republic. He dwelt upon the distress and suffering which had been caused by the war and the necessity of peace, and upon the necessity of peace. "Nevertheless," said M. Thiers, "the terms of peace would be courageously discussed with the Prussians, and would only be accepted if consistent with the honor of France. The task of the administration is to pacify and reorganize the country, restore its credit and reorganize its finances, when this is accomplished the country itself will decide its destiny."

The Assembly subsequently adopted a proposal made by the government to send a commission of fifteen deputies to Paris to act as intermediary between the negotiators and the Assembly. M. Thiers proposed that the Assembly suspend its sittings during the negotiations. Thiers, Picard and Favre left for Paris this evening.

In the House of Commons, Gladstone, in reply to an inquiry, denied that any proposals had been received from the United States for the purchase of the British Colonies in the North American continent. He expressed his indignation at questions of this character, and ending the sittings of the Joint High Commission at Washington.

UNITED STATES.—The revenue receipts for the first six months of the fiscal year ending 6th mo. 30th, 1871, show a falling off of \$8,769,818 from the amount collected during the corresponding period of the preceding year. The receipts of the Treasury for the quarter ending 12th mo. 31st, 1870, were from customs \$2,654,523.98; internal revenue, \$31,033,265.08; public lands, \$510,915.28; miscellaneous, \$11,498,416.26; total, \$85,097,120.60. The payments for the same time were: Civil and miscellaneous, \$18,052,316.73; interest, \$3,109,000.00; pensions, \$5,242,233.34; interest on public debt, \$25,494,664.80; total, \$63,111,723.42.

Internal revenue statistics show that 402 grain, and 5 molasses distilleries were in operation 2d mo. 1st, 1870, producing 275,707 gallons of spirits daily. On the first of the 3d mo. 1st, 1871, there were 392 grain, and 5 molasses distilleries, producing 236,146 gallons daily.

The bill providing a territorial form of government for the District of Columbia has passed both Houses of Congress, and been sent to the President. The bill creating a more complete school system has passed to a second reading, a motion to table having been defeated, 56 to 116.

The first resident Japanese minister to the United States arrived at San Francisco on the 16th. The name of the minister is J. H. Mutsini Litzniska, an uncle of the reigning Mikado. His suite consists of seventeen persons, and is accompanied by thirteen students. The oldest member of the mission is under thirty.

There were 274 interments in Philadelphia last week 43 deaths from consumption, 27 inflammation of the lungs, and 13 old age.

The steamer *Tenille*, which sailed from New York on the 27th inst., with the Dominican Commissioners, a scientific corps and various attaches, made her voyage to Sanama Bay in about eight days, remained there a week, and arrived at San Domingo on the 2d inst. President Baez gave the Commissioners a warm welcome, and the inhabitants appeared to be friendly to annexation. General Cabral, the rival of President Baez, had been invited to make a visit to San Domingo, and would visit Azua, a port sixty miles west of St. Domingo, and return to the United States early next month.

The House of Representatives has passed a bill authorizing the President to appoint for a joint commission to establish the north-west boundary between the United States and Great Britain, and the United States.

The gross earnings of the United Pacific Railroad for the first mo. 1871, were \$418,592.76, and the expenses \$281,061.63, leaving net \$137,531.13.

The Markets, &c.—The following were the quotations on the 20th inst. *New York*—American gold, 111½; silver, 127½; gold and silver, 187½; cotton, 10½; wheat, 10-40, 5 per cent, 110½. Superfine flour, \$5.95; No. 1, \$6.30; finer brands, \$6.50 to \$10.65. No. 2 spring wheat, \$1.52. Canada barley, \$4.12 to \$4.20. Oats, 66 a 69 cts. RECEIPTS.

Received from Friends of Springfield Prep Meeting, Ohio, per Jehu L. Kite, \$30, for the men.

WESTTOWN BOARDING SCHOOL.

A Stated Meeting of the Committee on Instr will be held at Philadelphia, on Seventh-day mo the 25th inst., at 10 o'clock.

CHARLES J. ALLEN,

Second month, 1871.

WESTTOWN BOARDING SCHOOL.

Wanted a Teacher for the Boys' first mathen school. Application may be made to Thomas Conard, West Grove, Chester Co. Dr. Charles Evans, 702 Race St., Philadelphia Geo. J. Scattergood, 413 Spruce St.,

FRIENDS' BOARDING SCHOOL, TUNES NEW YORK.

A Teacher is wanted in this Institution. Application may be made to Samuel Morris, Olney P. O., Philadelphia James E. Rhoads, Germantown. Geo. J. Scattergood, 413 Spruce St., Phila

FRIENDS' BOARDING SCHOOL FOR THE CHILDREN, TUNESSA, NEW YORK.

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm near it. Application may be made to Ebenezer Wurt, Marshallton, Chester Co. Thomas Wistar, Fox Chase P. O., Philadelphia Samuel Morris, Olney P. O., Geo. J. Scattergood, 413 Spruce Street, do

FRIENDS' ASYLUM FOR THE INSANE

New Franklin, (Twenty-third Ward,) Philadelphia Physician and Superintendent.—JUSTINA H. W. MORRIS, M. D.

Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

DIED, on the 10th inst., at his residence Spring Delaware Co., Pa., JOSEPH EVANS, in the 82d year his age a beloved Elder in Springfield Partical Chester Monthly Meeting. Having early in life been admitted to have the yoke of Christ placed upon him naturally strong will and propensities were by under the government of Divine Grace, and he was able to adhere to the doctrine of God his Servant, and his conversation conformed with the press made. Clothed with a meek and quiet spirit, an apt in the expression of his religious experience judgment, he was yet ever watchful and firm maintenance of the doctrines and testimonies of the Gospel as held by Friends, commending by example self-denying religion to Christ, "to every man in the sight of God;" and thus he became preacher of righteousness to all observers among he walked. During his short sickness he suffered from difficulty of breathing, and his petitions were vent for patience and divine help to bear his affliction, and that "it was the Lord's will the work must out short in righteousness." It being remarked the work of preparation for death was not now done, and that he had been long engaged in it, he said, "I have been a sinner, the things of this have, at times, had too much place with me, and nothing has been so precious to me as to see the Lord God who taketh away the sin of the world." He was crowned with peace. "Precious in the sight Lord is the death of his saints."

He was suddenly on the 31st of Twelfth month JACOB OGDEN, of Benton, a member of Muncy Mt Meeting, Pa., in the 74th year of his age.

WILLIAM H. PILE, PRINTER.

PHILADELPHIA.

Age, when paid quarterly in advance, five cents.

For "The Friend."

Travels of a Naturalist.

(Continued from page 214.)

We watered the ship at Mew Bay, near entrance to Sunda Straits. I went ashore with the watering party, and wandered about to have a look at the place. On the steep, wooded shore I noticed a beautiful little cascade which fell down a rock into the sea, and under the shade of dark-leaved trees, water-casks were filled without let or lance. There was a legend among the people of a rhinoceros having charged a watering party at this very spot some time previously, which exciting incident, if ever it occurred, lent an additional charm to the spot in the eyes of these danger-loving sons of the forest.

In sober truth, however, the ground all about was literally ploughed up by the tracks these huge unwieldy pachyderms. Instead of landing at the watering place, however, I preferred making a little *detour* through the forest, at no great distance from shore. Dead, hoary, lichen-spotted, ferned trunks lay prostrate in my path, and it, green, sombre trees overshadowed the white coral strand, which gleamed beneath their wide-spread orchid-laden branches. Progress at first was somewhat slow and cautious, on account of jungle parasites and many creepers; but as I proceeded I looked out and hunted for specimens of natural history. Coming to a fallen tree, I overturned and discovered a slender green snake, with a pointed nose, and otherwise peculiar in its movements and appearance. The creature, being vigilant, wide-awake, and very naturally made its escape as soon as I found itself disturbed in its retreat. A few feet further onward I came upon a fallen tree overgrown with ferns. On raising it I perceived beneath it two ugly scorpions, one of a formidable size, and coiled affectately round a numerous progeny. These creatures were rather repulsive in appearance. With cautious care, for I suspected their bite to be potent, I passed a running noose vine round their knotted tails, and secured the parents of this interesting family by suspending them to a convenient twig.

I next came to a huge tree, which, from its appearance, seemed to promise some re-

sponse to the anxious inquiries of the naturalist. Its decayed trunk was covered with toadstools, and tenanted by legions of white-ants; we also discovered on it some funguscating beetles, a very handsome species, of a goodly size, marked prettily on the back with a black-and-red pattern. Stripping off a portion of the loose and partially-detached bark, I was momentarily startled by the appearance of a little, nimble, dusky, splay-footed, flat-bellied gecko, a sort of lizard, which was instantly taken up and made a prisoner, not, however, alas! without the loss of his tail, which fell off in the struggle. A couple of yellow centipedes were more fortunate in their attempt to escape; dropping on the ground, they vanished in a most desperate hurry. Numerous shining, smooth 'thousand-legs' were coiled up in the rotten wood, and under the damp, close-laid masses of bark were the flattened forms of several strange bark-beetles.

"This wild tiger-haunted corner of Java is permeated by small trickling rivulets which flow beneath the 'undergrowth.' Stooping down to take a drink at one of these (for the thermometer here stands at 90° in the shade), I noticed something which made me start. Robinson Crusoe, when he saw 'the print of a man's foot in the sand,' could not have been more completely taken aback than I was by the object on which my eye was riveted. Under my very nose, the fresh imprint of a tiger's paw was manifest, so large that my outspread hand just covered it. Aware, however, of the twilight-loving habits of these cat-like monsters, I felt somewhat reassured, and was by no means inclined to be diverted from my scientific investigations. The finding of some pretty fresh-water shells in the stream diverted my attention from this ominous trace of the much-dreaded man-slayer. It must not be supposed, however, that there was no cause for alarm; two villages in the immediate neighborhood were at that very moment deserted, having been recently desolated by these formidable animals.

"Still, knowing that, though by no means impossible, it was not very likely that they would be prowling about, or venture to make an attack in the full blaze of sunshine, I continued my researches. Among the foliage of the trees I discovered some handsome land-snails, and several other kinds of land-shells under the dead leaves, while pretty silver-marked helmet-beetles alighted on the sunlit blades of horizontal leaves. The loud grating noise of the tree-crickets, or cicada, vibrated through the otherwise silent leafy wilderness without a moment of cessation.

"A few days later, I spent several hours in exploring Mew Island, a little coral islet near the entrance of the Sunda Strait. This island is densely wooded to the water's edge, and is partly encircled by a barrier-reef. As I stepped from the boat upon the reef, I was struck at once with the extreme beauty of a species

of amphitrite, a sea-worm living in holes of the great solid madrepores which compose the reef. The gills of these lovely creatures are in the form of spiral ribbons of a brilliant orange-green and blue; these resplendent gaudy plumes are alternately extruded and withdrawn, and seen through the pellucid water, present a very singular and beautiful appearance. On the moist sand within the reef were numbers of pale grey crickets, veritable maritime Orthoptera, which share the strand with horseman-crabs, and perforate the soil in every direction. It was now calm, as well as hot, and the still water under the dark shadow of the overhanging trees abounded with long-spined purple sea-eggs, glancing here and there among which were black and yellow chaetodons, fishes of a strikingly handsome appearance, on account of the contrast of color which they present. Jumping from stone to stone like so many tiny seals, were numbers of periophthalai, fish as singular in form as the chaetodons are vivid in color. Sea-slugs, or holothuria, were lying quiescent in the shallow pools, or 'dragging their slow lengths along' the coral debris; some crabs, with bright scarlet eyes, were detected hiding beneath the madrepores; and starfish, with slender snake-like rays, were observed wriggling their way among the dead shells and seaweed. Such were some of the curiosities of nature which struck me as worthy of observation during my sojourn on this tropical barrier-reef.

"On penetrating the jungle, I could not but admire the great gutta-percha trees firmly anchored in the loose coral, and supported by broad buttresses which extended beyond the base of their trunks. One giant tree had fallen, and his prostrate form was already clothed with a drooping pall of epiphytes, and nearly screened from view by the pinnate fronds of that fine fern *Lomaria*, and the cylindrical branches of enormous club-mosses, or *Lycopodiums*. A species of solitary-wasp, and legions of indefatigable white-ants, were engaged on the work of demolition, which in the tropics is soon effected; while in the tree-tops overhead, the cicada were chanting a monotonous dirge over the decaying form of the vegetable giant. This was the first time I had seen the *Cycas* in fruit, and I obtained some fine specimens, of the size and shape of large pine-apples. I perceived also a species of *Nepenthes*, with very pretty pitchers growing in great luxuriance in one part of the island.

"Continuing my walk, I came upon a deserted village, which offered a picture of mingled luxuriance and desolation—the luxuriance natural, the desolation human. The ruined huts were encircled by verdurous broad-leaved bananas, and the blackened stems of burnt palms, while some were overgrown with ferns, or half buried beneath dense masses of parasitic creepers. The capsicum and cotton-plants around were choked by the rank

growth of trailing convolvuli, and the village paths were green with weeds, and obstructed by rotten trees swarming with centipedes and scorpions. Absorbed in the contemplation of this strange scene, I was startled by the sound of heavy, flapping wings, and looking up saw two large birds with outstretched necks, swinging their way to a tall bare tree adjacent; as they perched side by side upon it, I recognised the great black-and-white horribill. In the perfect solitude of the jungle, sudden sounds of mystery, like the vibration of the wings of these birds, the light crafty step of the tiger, or the apprehension of the unknown horrors of the jungle, induce one to carry his hand instinctively towards the faithful revolver. The tigers were very persevering in the pursuit of their prey. Several Malays had come over here to avoid those which had devastated their village on the mainland, but these man-slayers, having once tasted human blood, swam over to the island in pursuit of the fugitives, and so molested them that they were forced to quit the neighborhood altogether."

The vessel to which our author was attached proceeded to China, and this gave him an opportunity of becoming acquainted with some of the productions of that country, and the industrial pursuits of its inhabitants. While walking along the banks of the Yang-tze-Kiang river, he says: "Turning my eye in one direction, I perceived an individual with basket on arm, surveying the willows with inquiring eye. I was anxious to know on what he was intent, and observed his motions. By means of a little sizzle at the end of a long bamboo he ever and anon detached brown swinging cradles from the slender boughs, and deposited them that he was a pupa-gatherer, and that those tiny mummy-like objects of his solicitude were the pupa-cases of a species of moth. When I humbly desired to know the use to which these accumulated grubs were to be put, the face of the old man relaxed into a smile, and he did his best to assume the appearance of a duck gobbling up imaginary fat grubs with impatient greediness and noise. From this pantomime I gathered that he was collecting food for his ducks; for this is one of the several ways which they have of fattening ducks in China."

"There is a wide marshy plain at the junction of the Woosung and Yang-tze rivers, with mudflats stretching away for miles. Here the uncouth buffaloes delight to wallow in the ooze; the white pad-birds stand in a row at the edge of the water; and far in the distance, like a sentry at his outpost, watches the gray solitary heron. A flock of teal settles down in the water, and the sparkling surface of the river is dotted with brown-sailed junks. A vole or field-mouse sometimes runs across your path, or the gliding form of a snake is seen vanishing in the grass."

"Towards evening, frogs are demonstrative, croaking loudly and without cessation, and leaping by hundreds down the banks of the dykes and streams. Now these merry batrachians are good for ducks, and Chinamen are particularly fond of fat ducks. The natural result is that, at this 'witching hour of night,' silent boys and old patient men are seen in these frog-haunted precincts, a long bamboo rod in their hand, and a string baited with a worm, angling for frogs! In my homeward walks, when the brown owl swooped down and settled on the cotton fields, and the huge

black shard-beetle flew across my face, I often fell in with an old man bending under the weight of a hamper of frogs, the produce of his evening's fishing."

(To be continued.)

For "The Friend."

Selections from Memoranda concerning Hannah Gibbons; a Minister deceased.

(Concluded from page 213.)

4th mo. 5th, 1865. Dear mother is more comfortable to-day, and is able to select some tracts for distribution: but remarked as before, on similar occasions, "I have more need to be concerned for myself," reviving the desire to be prepared for the solemn summons.

5th. mo. 7th. Seeing her in the evening very weary and unable to change her position, with an exercised mind also, it was proposed to have a chair with wheels, so that she could be moved from one part of the chamber to another. She said, "My dear child, it is very kind of thee; but I sometimes think of Isaac Pennington's language, 'Nothing but Christ, nothing but Christ.' I think our Saviour said, 'Ye are my friends if ye do whatsoever I command you.' To have Him for our Friend, and to be His friend, is more than any earthly attainment."

7th mo. 21st. When in much pain she remarked, "My suffering is great; and the Lord only knows why it is so. May He grant me patience to bear it, until He is pleased to say it is enough."

12th mo. 26th. Under exercise, without being able to discern clearly the pointings of duty (which is much her experience) she said, "I think my Heavenly Father knows there is nothing I so much desire as a quiet mind and an approving conscience; and why I am thus tossed I do not know; but if it is designed for my furtherance in best things, I desire to be resigned."

"5th mo. 2d, 1866. After a suffering day she repeated, "I have nothing to trust to but mercy. I think it is a favor to have faith that the foundation of God standeth sure."

8th. Feeling herself very ill in the night, she said, "My hope is in the mercy and goodness of my blessed Saviour; and I think I feel He is near me. If I do not live to see my dear children again, tell them I desire they may keep their religious duty first in view, and let worldly concerns be of a secondary nature."

6th mo. 6th. Mother repeated the language, "Cast me not off in the time of old age, for sake me not when my strength faileth," adding, "if I could have evidence of my acceptance it would be an unspeakable favor; but I may have much yet to suffer; and if so, I trust patience will be given equal to the day."

18th. When in much suffering, she said, "Lord increase my faith, and the things I know not, teach Thou me."

7th mo. 2d. She was attacked with violent pain in her side attended with other distressing symptoms, so as to induce the belief that the time of her release drew near. After a time of great weakness, she said, "I can adopt the language of Samuel Emlen, near the close of his life, that the kindness of dear children and near relations I esteem a blessing from Heaven." To aunt M. G., she remarked, "What a favor to have thee to comfort my dear daughter in this time of trial, in which we seem about to be separated, after having lived so many years in near unity; and, ac-

ording to our little measure, gospel fellowship."

30th. Being very sick in the afternoon followed by a disturbed night, she said, "H I long for the rest of Heaven!" Such expressions being generally followed by that a desire to be preserved from a murmur spirit.

31st. In the evening she expressed as follows: "I often think at the close of the day whether it has been spent in a manner consistent with a disciple of Jesus Christ. I think it is my daily desire to live so as to have approbation of Him who seeth not as men seeth."

9th mo. 16th. When suffering much, she said, "Why am I so long detained here? May I be strengthened to bear all as I ought. I may will, O Lord, but 'Thine be done!' pleased to renew my faith."

30th. The past two weeks, mother has the effects of a heavy cold, with increase of cough and oppression; but again the healing Hand has been extended. The weary spirit often longs for a release; yet submission the Divine will is the daily desire of her heart.

3d mo. 25th, 1867. Feeling unusually weak and prostrated, she said, "It seems an intention to prepare for the close. May the Lord sustain me unto the end, and my dear child also."

5th mo. 22d. On parting with my brother mother revived the language of her father on his first visit after her marriage: "Farewell, my dear child, don't let the things of this life choke the better seed. I hope I may never see thee again. My hand and trust are in Jesus Christ my Saviour."

11th mo. In allusion to my sister's brother-in-law coming to spend the winter with us, mother said, "May we all be established on the only sure foundation, Christ Jesus. I often remember the language, 'I that cometh unto me, I will in no wise out.' I do endeavor to come unto Him."

No date. Our dear mother passed the winter in better health than usual; though she suffered from weariness and nervous restlessness, particularly at night. Her desire of patience to wait the Lord's time for her release was often expressed; as also were blessings recounted. A deep and almost abiding sense of her unworthiness attend the expression that she had no other trust to but the mercy of God in Christ Jesus was often repeated.

During the last week of her illness, mind wandered at times, but she had intermissions of brightness throughout. At one time she hoped her iniquities and shortcomings would be forgiven and remembered more. When suffering from pain and oppression, she expressed to a relative that she desired to be preserved from a murmuring spirit, and enabled to adopt the language, "Thou shalt say ye will I trust in him." Pass of Scripture were often repeated: such as "This is the way, walk ye in it." "The Broom cometh, go ye forth to meet him." Fourth-day night she supplicated thus: "kingdom come, thy will be done, forever, forever, and forever." The hope being expressed that when the summons came it would joyful to her, she replied, "I think I may wish dear William Jackson, 'I have a heart that when done with the things of tin shall be admitted into the assembly of just of all generations.'" At another time

Oh Lord! my only Helper, keep and preserve my soul I pray Thee; lest after all I have known of Thee, I slide as many have fallen, from the path of Thy holy commandments."

Fifth-day, the last of her precious life on earth, was one of great weakness and suffering. Though expression was attempted, articulation had become so difficult, that but little could be understood. In the evening she said nothing about being released, and queried, "Why do I linger?" A little after, "I am like a poor creature!" Her little remaining length was now fast declining, and about o'clock in the evening of Fourth month 2d, 1768, and when aged about 97 years and two months, her weary, waiting spirit was gently passed from its suffering tenement: and, we need not doubt, was permitted to enter that so often longed for.

For "The Friend."

An Account of Richard Smith, author of "A Letter to a Priest of the Church of England," A.D. 1660.

(Continued from page 210.)

When being called in as Arbitrator between Edward Byllinge and his Trustee would appear to have been the first introduction of William Penn into active participation in American affairs. The following letter shows the uneasiness, which the obstinacy of Fenwick in refusing to accept his award, brought worthy arbitrator into, lest the good name and peace of the parties, and of society, should suffer by the contention.

John Fenwick:—The present difference betwixt thee and Edward Byllinge fills the hearts of Friends with grief, and with a reason to take it in two days into their consideration to make a public denial of the perdition offers violence to the award made, or it will not end it without bringing it upon public stage. God, the righteous Judge, visit him that stands off. Edward Byllinge I refer the matter to me again, if thou wilt the like. Send me word: and as opposeth I am with business, I will find an afternoon morrow or next day to determine, and so prevent the mischief that will certainly follow by neglecting it in Westminster Hall. Let me know by the bearer thy mind. O John! let it be with thee, and the honor of it in this day, prevail to him that causeth offences!"

From another letter:—
O John! I am sorry that a toy, a trifle, should thus rob men of their time, quiet, and more profitable employ. I have had a good science in what I have done in this affair; if thou reposest confidence in me, and best me to be a good and just man, as thou hast said, thou shouldst not be upon such uncertainty. Away with vain opinions, I beseech thee, and fall closely to thy business. Thy days spend on that and make the best of what thou hast. Thy grand children will be in the other world before the land thou hast allotted will be employed. Myself, I will answer for it, shall do thee all that I can and service in the affair that becomes me, who, I told thee at first, should draw it as for myself. If this cannot scatter thy fears, thou art unhappy, and I am sorry.
Thy friend,
WILLIAM PENN."

This dispute being at length adjusted, the same year, 1675, "by the kind offices of Penn, Fenwick embarked with his family the ship Griffith, accompanied by several

other Friends, to take possession of the land assigned him. They landed at a 'pleasant rich spot' on the river Delaware, where they commenced a settlement, to which he gave the name of Salem," (or, "peace.")

"This was the first English ship that came to the western part of New Jersey, and none followed for nearly two years. In the mean time Edward Byllinge becoming embarrassed in his circumstances, was desirous of transferring to his creditors his interest in the territory, being the only means he had to satisfy their claims.

"At his earnest entreaty Penn consented to be associated as joint trustee, with two of the creditors, Gawen Lauric" (or Lawrie) of London, and Nicholas Leucis, of Hertford, to carry out his intentions and render the property available. Penn thus became one of the chief instruments in the settlement of New Jersey, and establishment of its colonial government, which prepared him for the still greater work of founding a colony of his own." (Janny.)

"The others accepting the charge," says Samuel Smith, "they became trustees for one moiety or half part of the province; which though yet undivided, necessity pressing, they soon sold a considerable number of shares of their propriety to different purchasers, who thereupon became proprietors (according to their different shares), in common with them; and it being necessary that some scheme should be fallen upon, as well for the better distribution of rights to land, as to promote the settlement, and ascertain a form of government; concessions were drawn, mutually agreed on, and signed by some of the subscribers, (for they did not all sign at once.) It was next the business of the proprietors, who held immediately under Lord Berkeley, to procure a division of the province."

"The concessions above referred to, entitled 'The Concessions and Agreements of the Proprietors, freeholders and inhabitants of the Province of West New Jersey, in America,' being, in fact, the Concession of the Constitution and laws of that province, from the Proprietors to the people and settlers thereof, and the Agreement thereto and acceptance thereof by all settlers, whether proprietors or not, constitute to this day the fundamental law of New Jersey. They are signed by, in all, one hundred and fifty-one names; being those of proprietors under the Trustees of Byllinge, and old holders under patents of the Dutch, Swedes, and the Duke of York. They did not, as S. Smith says, all sign at once, and to explain the method of their signatures, we must refer once more to E. Byllinge and his debts.

It will have been observed that Berkeley and Carteret had held New Jersey as equal partners or "tenants in common," each having an equal right in the whole. The entire rights or "half part" of Berkeley, had been transferred to Byllinge and by him to his new trustees, but no territorial division had yet been effected with Carteret, by which the Trustees could claim sole property within definite limits. Nevertheless, to accommodate the creditors, the Trustees agreed upon a division of the property into shares; and, in advance of settlement with Carteret, began to allot them, pro rata, among creditors. The moiety of New Jersey was "cast into one hundred parts, lots, or properties;" ten of which, (or one tenth of the whole,) were al-

lotted, as we have seen, to Fenwick. The principal creditors were allowed a first choice in the remainder.

Edward Byllinge owed, by borrowing or otherwise, £11,500, a sum insignificant in these days, but great in those. The largest debts, or those of longest standing, seem to have been owed to Friends in Yorkshire, though a large sum was also owed to London Friends. It seems to have been on this account that a preference in choice of allotments was given to Yorkshire Friends in the "Concessions," in the following directions to the Commissioners of property:—

"And the commissioners for the time being are to take care for setting forth and dividing all the lands of the said province as be already taken up, or by themselves shall be taken up and contracted for with the natives; and the said lands so taken up and contracted for, to divide into one hundred parts, as occasion shall require; that is to say, for every quantity of land that they shall from time to time lay out to be planted and settled upon, they shall first, for expedition, divide the same into ten equal parts or shares, and for distinction sake, to mark in the register, and upon some of the trees belonging to every tenth part, with the letters A, B, and so end at the letter K. And after the same is so divided and marked, the said commissioners are to grant unto Thomas Hutchinson of Beverly, Thomas Pearson of Bonwicke, Joseph Helmsly of Great Kelke, George Hutchinson of Sheffield, and Mahlon Stacy of Hansworth, all of the county of York, or their lawful deputies, or particular commissioners, for themselves and their friends, who are a considerable number of people, and may speedily promote the planting of the said province. That they may have free liberty to make choice of any one of the said tenth parts or shares, which shall be first divided and set out, being also done with their consent, that they may plant upon the same as they see meet; and afterward any other person or persons who shall go over to inhabit, and have purchased to the number of ten properties, they shall and may have liberty to make choice of any of the remaining parts or shares to settle in."

The five Friends of Yorkshire above named, acting "for themselves and their friends," the other Yorkshire creditors, took ten Properties for debts amounting to £3,500. We thus arrive at the then estimated value of a choice Property or one hundredth share of West New Jersey, viz. £350.

The "Concessions and Agreements" were, with some irregularity caused by distant residence, &c., signed by the Proprietors in the following general order: First, E. Byllinge's Trustees, next the Yorkshire creditors, next the London creditors, then the proprietors who afterwards purchased shares, or who already held under Dutch and Swedish patents and those of James or Fenwick. Of the 15 names about 30 are Dutch and Swedish, leaving a balance over and above the 104 new Friendly proprietors, of 16 or 17 whose titles came from the Duke of York or Fenwick.

The signature of Richard Smith of Bramham, in a fair and clerly handwriting, appears on this document among those of the Yorkshire creditors, immediately succeeding that of Byllinge. His two eldest sons' names also appear as Proprietors, but as they were minors at the date of the document, their shares were probably taken for them by their

father, and they affixed their names long afterward.

John Smith, the eldest son, though a Yorkshreman, is found among, and located with, the "London Company" of creditors and settlers, and this circumstance, and that of Richard Smith's signature being next to Edward Byllinge's, renders it probable that the latter was in London at the time of the composition of the document, and, as a friend of weight and character, and one of the chief Proprietors, was consulted as to its provisions by Byllinge and the Trustees, and hence signed with them.

(To be continued.)

MUSIC OF THE SEA.

The gray, unresting sea,
Adown the bright and belting shore,
Breaking in untold melody,
Makes music evermore.

Centuries of vanished time,
Since this glad earth's primeval morn,
Have heard the grand unspanning chime,
Momentally new-born.

Like as in cloistered piles,
Rich bursts of massive sounds upwell,
Ringing along dim-lighted aisles,
With a spirit-trancing spell;

So on the surf-white strand,
Chants of deep peal the sea-waves raise,
Like voices from a viewless land,
Hymning a hymn of praise.

By times in thunder notes,
The booming billows shoreward surge;
By times a silver laugh it floats;
By times a low, soft dirge.

Souls more ennobled grow,
Listing the worldly anthem rise;
Discords are drowned in the great flow
Of Nature's harmonies.

Men change, and "cease to be,"
And empires rise, and grow, and fall;
But the weird music of the sea
Lives and outlives them all.

The mystic song shall last
Till time itself no more shall be;
Till seas and shore have pass'd,
Lost in eternity.

—Once a Week.

"Sow th' rock repel thee
In its cold and sterile pride,
Some cleft there may be given,
Where the little seed may hide,
Fear not for some will flourish,
And th' trees abound,
Like the willows by the waters
Will the scattered seed be found.

Work while the day-light lasteth,
Ere the shades of night come on,
Ere the Lord of the vineyard cometh,
And the laborers are done;
Watch not the clouds above thee;
Let the wild winds round thee sweep,
God may the seed-time give thee,
But another hand may reap."

For "The Friend."

Mount Washington in Winter.

In a letter from Professor Huntington recently published, he states that of all the atmospheric phenomena observed or experienced in their elevated and exposed winter quarters, the wind is the most interesting as well as the most fearful. He says:—

"The wind comes quite often enough to keep us wide awake, even if there was no other excitement in other ways. For instance,

we can take our sled and go down to the gulf tank quicker than any one would dare to slide on the railway. If there are any who think there is no excitement in sliding on the railway or on the sled, we would advise them to come up here and try it. If on the railway they should fall through the trestle, or on the sled should narrowly escape running over into the great gulf, they might conclude there was too much excitement.

"Very few meteorological observers measure the velocity of the wind. They judge what kind of wind there is—gently pleasant, pleasant brisk, very brisk, high wind, &c., and these are arranged according to a certain scale, generally from nought to ten; nought representing a calm and ten a most violent hurricane. The velocity of the wind can be measured quite accurately by an instrument called the anemometer. The one most in use is Robinson's.

"On most observatories the cups are exposed all the time, the shaft extending down to the observer's room, but here, on account of the accumulation of frozen mist, the cups become in a short time so coated with ice that it soon ceases to register correctly; so most of the time the instrument has to be kept in the house. The one used here being portable, it can be moved without any difficulty. Very few persons have any idea of the wind or its pressure. The greatest velocity that has been measured at the observatory at Central Park, New York city, is thirty-five miles per hour. As the observatory is in an exposed situation, and near the seaboard, it is reasonable to conclude that this is as great a velocity as is experienced anywhere on the Atlantic slope, where the altitude is not much above the sea level. The pressure per square foot for this velocity is six pounds.

FORCE OF THE WIND.

"As the pressure varies as the square of the velocity increases, when the wind's velocity is twenty miles per hour, its force is four times as great as that of the wind blowing ten miles per hour. It requires a man of considerable physical strength to stand against the wind when it is blowing from sixty to seventy miles per hour, as the pressure is then from eighteen to twenty-four pounds per square foot. If a person presents a surface of six square feet, and knows his physical strength, he can easily tell how great a velocity he can withstand. It is a very different thing, however, being merely able to stand, bracing oneself, from going against the wind, for in that case we have, as it were, to push the weight of the pressure of the atmosphere before us. The summit of the mountains is rarely free from winds, and they have a greater velocity than at any point where they have ever been measured, except those measured by Mr. Clough and myself on Moosilauke, last winter.

"The reason why it is so much greater here than elsewhere is from the fact that in the valleys the wind is unsteady, blowing in gusts, while here, as a general thing, it is continuous; often there is not the slightest lull until the storm reaches its culmination, then there are lulls, which continually lengthen until the storm ceases. The greatest velocity probably exceeds a hundred miles per hour, though the greatest measured has been ninety-two. Calms are very rare, and of short duration. They occur only when the wind is on the point of changing. At times the changes are very sudden; the wind may be southeast, and in an

hour there will be a stiff breeze from the northwest, which soon increases to a gale. A change of the wind from a point to the exactly opposite is not uncommon. The prevailing wind has been northwest, and the violent winds have thus far come from that direction, or a few points farther north.

"As the side of the house presents a surface of more than six hundred square feet, the force of the wind, when it reaches its great velocity, is tremendous, especially when it comes in heavy gusts; it puts the house to severest test. After a time of light wind when the building is full of frost and the ice are frozen, a heavy wind loosens the ice with a report that is startling; so sharp is it until we become accustomed to it, we hardly believe but that the house is coming down over our heads. These reports, with almost constant roar of the wind, are trying to weak nerves, and even if a person has considerable courage it is sometimes difficult to be perfectly cool, particularly when the thermometer gets below —40, as the chances escape are very small should the house be crushed. But in general it only furnishes excitement enough to keep off the ennui incident to isolated life.

NIGHT WINDS.

"Nothing has surprised me more than fierce winds we have when it is perfectly clear. We expect them when there are clouds on mountains, but we have had the wind run about eighty miles per hour when there was not a single cloud above the summit. The wind at such times is rarely a steady pressure as it is during a period of storm. Now the elements is so remarkable as when the invisible elements rage with such fury at this high summit on a clear, cold, moonlight night in mid-winter. At such times the ice is intensely blue; the moon looks coldly down and the stars shine as nowhere else, except high altitudes and in northern latitudes. Beside the roar of the wind and the creaking of the house, the wind seems to be trying utmost to draw the coals upward through the stovepipe, for it tugs and pulls and jerks, now, as if gathering all its force, it gives long, steady pull, but the coals are too heavy for it. With light wood it would certainly succeed, if not in taking the wood away, at least in taking every spark of fire—for it was done several times during my stay on Moosilauke.

"Now the sound is a hoarse, deafening roar that dies away into a plaintive moan; no screeches and howls, but in an instant sound ceases, only however to be renewed by others so weird and strange that one almost believes that the ghosts of the aborigines, were guilty of having ascended where the lichens grow, still hover about the summit; for they had a tradition that such never reach the happy hunting-ground beyond the sunset, but must wander for ever around the mountain they had dared profane. Now it seizes the damper in the pipe, rattles and vibrates, and seems to offer no assistance to the passing currents in the air.

WIND AND VAPOR.

Thus the wind through the pipe roars shrieks, growls and howls, pipes and gratings and jarring, creaking and twanging, then gently breathing with a plaintive moan while outside it comes in waves, as the oceans in heavy surges on the shore. Almost every one who has been here in summer

iced, when at intervals there are clouds rising over the mountain, that the winds with greater velocity while the clouds are on the mountain. This is probably due to the greater humidity, as it is well known that an excess of aqueous vapor gives rise to fogs in the atmosphere. As the motion of the atmosphere is from the place where it contains least vapor to that where there is most vapor, this may be the cause of the falling northwest winds. On account of the proximity of the ocean, there must be an excess of vapor there as compared with the winds on the summit of Mt. Washington."

THE WIND AND THE BAROMETER.

That there is a close connection between the force of the wind and the height of the barometer, even in low situations, is well known. The barometer generally falls before a high wind begins, and with more or less rapidity, according to the character of the atmospheric disturbance which is approaching. This is not all; during the prevalence of a storm, the height of the mercurial column is as the force of the wind varies, the falling as the latter increases and rises as it subsides. For when the air is in rapid horizontal motion it presses with less force vertically than when it is still. This may be illustrated by experiment: thus if we blow with the breath a pair of bellows directly across one end of a tube (open at both ends) with a flock light wad of cotton in it; the latter, if the experiment be properly conducted, will be blown towards that end of the tube, thus indicating that the atmospheric pressure in the interior of the tube is less there than at the other end; although a part of this effect is due to the friction of the air. For the same reason it is frequently noticeable that our chimneys have a stronger draught when we have a high, steady wind. An interesting illustration of this kind is given by one of our professors, H. speaks of the ancient efforts of the wind to draw the coals of the chimney.

The barometer, as a meteorological instrument, has been chiefly used to indicate approaching storms, and hence its action beforehand has probably been more studied than its changes during the prevalence of storms. On this latter point Professor Huntington thus expresses his experience on the summit of Mount Washington. He says: "From my observations here and on Moosilauke, it is quite certain that during periods of storm there is a close connection between the velocity of the wind and the rise and fall of the barometer. During a period of storm we mean the time commencing in any severe and extensive commotion of the atmosphere. These commotions usually last here from twelve to thirty-six hours, and may extend to forty-eight hours; the barometer rises to its mean height at the commencement of each period of storm during our observations. I have constructed two curves on the same time scale, one representing the velocity of the wind, the other the rise and fall of the barometer, and find that the ordinates of these curves almost exactly correspond. In some instances the barometer went up when the wind subsided; in the midst of a storm, but at the close of the velocity of the wind again increased, which is continued to do for half an hour, when there were frequent lulls, accompanied by a gradual rise in the barometer until the storm ceased."

In further illustration of the force and effects of the wind on the summit of Mount Washington, we give the following extract from a letter dated the 10th instant, from a correspondent of the *Boston Journal*, who has been sojourning for a time with the scientific party there.

"Our temporary sojourn with the scientific party on Mount Washington is likely to give us varied experiences of life in the clouds. To day is a marked contrast with yesterday in respect to every condition of the atmosphere. The falling of the barometer last evening indicated a coming change, and the weatherwise were able to predict a high wind, which surely enough came. During the night the wind, which had shifted round to the northwest, reached a force that was estimated at eighty miles an hour or more. This is nearly double the velocity of the highest wind registered in low altitudes, but is much less than has been noticed here several times this season. Under the fierce attacks of rude Boreas, the depot shakes, quivers and creaks in a manner that would drive all sleep from the eyes of persons with weak nerves. The occupants of Mount Washington do not come under this head, and all sleep quite soundly. There was a sort of lull in the wind toward morning, and at seven o'clock its velocity was ascertained to be fifty miles per hour, the thermometer standing at zero. Soon after it increased in fury, and the cold also grew a little more intense. At 10½ the temperature was 2° below zero, and the velocity of the wind was eighty seven miles per hour. At 12 o'clock the temperature was 2° below zero, and the wind's velocity had lessened to forty eight miles per hour. The building creaks and rattles like a ship in a storm. It is an impossibility to stand up against the terrific blasts, and out door exercise is at a discount. Within doors every thing is as comfortable as need be. The summit has been enveloped in clouds since Wednesday noon.

"None of us have ventured out of doors, except to take observations of the wind's velocity with the anemometer, save once, when Professor Huntington went out to remove a ladder from the side of the building. In taking wind observations, the operator would go only a rod or so from the door, so as to expose the instrument fully, and then it was necessary to sit down or lie down, for no person could stand for a single moment against such a terrific assault. A perfect shower of ice and fragments of frost work fly across the summit, and one is in as much danger as when exposed to a shower of brickbats. A terrific bombardment of the house has been kept up through the day. Between 6 and 7 o'clock one of the double windows, although protected by wooden bars without, was struck by one of the missiles and broken. The damage was soon repaired by nailing boards over the aperture from within. At 2 o'clock P. M., the wind's velocity was eighty-eight miles per hour; at 3 had decreased to seventy-six miles, and the observation just made brings it up again to eighty-eight miles. The summit continues covered by clouds."

The Arch in Babylon.—It had long been a question how the Hanging Gardens of Babylon were supported at so great a height—the idea being, until lately, taken for granted that the Babylonians did not understand the principle of the arch. But it is now known that

very perfect arches were built in Egypt, in Assyria, and in Babylon, centuries before Nebuchadnezzar's time, and so the question is simplified. The ancient Romans, when they had to carry a stone aqueduct across a deep ravine, sometimes built three or four tiers of arches, one above another, till the required level to which the water was to be carried was reached. In the same manner, only on a larger scale, were the hanging gardens raised. They built one story of arches, covering the required space; on this was placed a second story, and thus was story after story raised.—*The Architect.*

For "The Friend."

The following, though written more than one hundred and fifty years since, may not be inapplicable at the present day; and believing it might be interesting to the readers of "The Friend," is copied for insertion therein.

"Thomas Chalkley, in his journal, says: When I was travelling in those parts, I had a concern on my mind to visit the Indians living near Susquehanna, at Conestoga, and I laid it before the elders of Nottingham Meeting, with which they expressed their unity, and promoted my visiting them. We got an interpreter, and thirteen or fourteen of us travelled through the woods about fifty miles, carrying our provisions with us, and on the journey sat down by a river and spread our beds on the grass, and refreshed ourselves and horses, and then went on cheerfully, with good will and much love to the poor Indians; and when we came they received us kindly, treating us civilly in their way. We treated about having a religious meeting with them, upon which they called a council, and were very grave, and spoke one after another without any heat or jarring; and some of the most esteemed of their women do sometimes speak in their councils. I asked our interpreter why they permitted the women to speak in their councils? His answer was, 'That some women are wiser than some men.' Our interpreter told me, that they had not done any thing for many years, without the counsel of an ancient, grave woman; who, I observed, spoke much in their council; for I was permitted to be present at it; and I asked what it was the woman said? He told me she was an empress; and they gave much heed to what she said amongst them; and that she then said, 'She looked upon our coming to be more than natural, because we did not come to buy, or sell, or get gain, but came in love and respect to them, and desired their well-doing both here and hereafter;' and further continued, 'That our meetings amongst them might be very beneficial to their young people,' and related a dream which she had three days before, and interpreted it, viz: 'That she was in London, and that London was the finest place she ever saw, it was like to Philadelphia, but much bigger, and she went across six streets, and the seventh she saw Wm. Penn preaching to the people, which was a great multitude, and she and Wm. Penn rejoiced to see one another; and after meeting she went to him, and he told her that in a little time he would come over and preach to them also, of which she was very glad, and now she said her dream was fulfilled, for one of his friends was come to preach to them!' She advised them to hear us, and entertain us kindly; and accordingly they did. Here were two nations of them, the Senecas and

Shawanees. We had first a meeting with the Senecas, with which they were most affected; and they called the other nation, viz.: the Shawanees, and interpreted to them what we spoke in their meeting, and the poor Indians, particularly some of the young men and women, were under a solid exercise and concern. We had also a meeting with the other Nations, and they were all very kind to us, and desired more such opportunities; the which, I hope divine Providence will order for them, if they are worthy thereof. This gospel of Jesus Christ was preached freely to them, and faith in Christ, who was put to death at Jerusalem, by the unbelieving Jews; and that this same Jesus came to save people from their sins, and by his grace and light in the soul, shows to man his sins, and convinceth him thereof, delivering him out of them, and gives inward peace and comfort to the soul for well-doing, and sorrow and trouble for evil-doing; to all which, as their manner is, they gave public assent; and to that of the light in the soul, they gave a double assent, and seemed much affected with the doctrine of truth; as also the benefit of the Holy Scriptures was largely opened to them.*

For "The Friend"

Friends' Freedmen's Association.

Oakland Lodge, 2d mo. 20, 1871.

Our new colony of Freedmen, at Raleigh Cross Roads, two-and-a-half miles from New Garden, (Guilford Co., N. C.) is progressing nicely. One of their poor white neighbors wishes to sell me his place for \$175.00. There are thirty-six acres of land, a log house, and all ready for a poor colored family to commence life. I would have purchased it if I could have spared the money. Will any Friend undertake this small investment? My English funds are only for houses.

GEORGE DIXON.

Norwegian Boxes of Felt for Cooking.—Take a box a foot square, line it with successive layers of felt, leaving a round space in the centre large enough to hold the kettle customarily used for cooking food. Have a thick cap to cover up the kettle after it is introduced, so that it is in the middle of the box surrounded by a thick layer of non-conducting material. When it is required to boil meat, it is only necessary to heat the kettle for a few minutes up to the requisite temperature, and then to put it into the snug place prepared for it. Here the cooking will go on by itself as long as may be desirable, up to certain limits; and the meat will remain warm for 5 or 6 hours. By having a series of these boxes, the dinner can be prepared at no expense, save the original cost of starting the fire. A little experience will enable the cook to determine the length of time to leave the kettles in the boxes. It is easy to be inferred that the same arrangement will serve to keep ice-cream from melting, or substances from growing warm which have been previously cooled in ice.—*Annual of Scientific Discovery.*

* It is worthy of notice, that at the first settling of Pennsylvania, William Penn took great care to do justice to the Indians, and bought his land of them to their satisfaction, and settled a trade with them; so that whereas the Indians were destructive to the other colonies, they were helpful to Pennsylvania; and to this day they love to hear the name of William Penn.

THE FRIEND.

THIRD MONTH 4, 1871.

In the "Christian Advocate," published in New York, which we believe is the authorized denominational organ of the Methodists in the Atlantic States, and is in the charge of one of their "clergy," appointed to the editorship by their "General Conference," and therefore having a wide circulation among their members, there was, a few weeks ago, an editorial article calculated, as we apprehend, to lay waste some of the prominent principles of the christian religion, and which has, therefore, given us no little sorrow. Its caption is, "The good things of War," and its reasoning is designed to show that, though war, is in some aspects, to be looked on as a great evil, yet it is necessary, and under many circumstances justifiable and a blessing. That it has been, and continues to be, the great regenerator of man in his political and civil life, and that no great national advancement is likely to take place, unless the self-gratification and effeminacy produced by long continued peace, are broken up by war.

Thus, after speaking of different nations whose increased freedom is represented to have been the fruit of war, the writer says, "Viewed, therefore, as the means necessary for the achievement of national emancipation, and for the development of popular freedom, it may well be asked, whether war is not a boon to be coveted, rather than an evil to be deprecated?"

Again in reference to war teaching the use of arms, and thus giving the people power to wrest their rights or privileges from their rulers, it is said, "The possessors of power cannot be expected to surrender it without a struggle, and since the rising of the spirit of freedom will not be stifled, wars are the necessary result, and the promoters as well of popular freedom."

After speaking disparagingly of the citizens of the United States as having greatly degenerated from their forefathers, and sinking into a "race of money-makers and effeminate lovers of pleasure" prior to the late rebellion, he remarks, "But four years of terrible war has wrought a great change in the national heart, and terrible as was the expense of that war in blood and treasure, who shall say that the purchase was not worth the price?"

It is sorrowful to find such sentiments as these sown broadcast among the people, by a professed minister of the Prince of Peace, in order to reconcile with the blessed gospel of peace and salvation preached by the Saviour of men, the practice of one of the greatest, if not the greatest evil that afflicts mankind, and which an inspired Apostle declares has its origin from the corrupt lusts of the human heart, and is therefore, we must believe, fomented by Satan to secure the perdition of souls.

We have no intention of following the author throughout, what appears to us, his unauthorized assumptions, his false reasoning and his self-contradictions. It is not necessary, for one of his admissions, if rightly applied, overturns the whole superstructure he has reared on those fallacies. He says, "There can be no question as to the antagonism

between the Spirit of the gospel and the spirit, and it is equally clear that the unwise prevalence of Christianity among men will be an end of war." If this is true,—and christian can doubt it—by which of these Spirits should christians be governed? or a man is governed by that Spirit which antagonism with war, and which if allowed to prevail, is intended to, and must make end of war, how can he, under any pretence, engage in war? Can a disciple of Christ engage in any thing antagonistic to Christ's gospel, or give countenance to an act which, so long as it exists, must prevent complete ascendancy of Christ's kingdom government in the earth? But it is in following that we wish to offer a few objections:

"The 'Peace principles' of the Quakers involve two important fallacies. They deny right to take human life, applying the prohibition of killing not simply to individuals also to governments. The same answer applies alike to this objection, whether to a capital punishment or to war. Civil government is a divine institution, and its administrators are vested with more than merely human prerogatives. Their authority is not merely the united authorities of their fellow-citizens but a divine bestowment. 'The powers be are ordained of God.' If, then, the ruler engages in war—justly and necessary—in the discharge of his official duties acts in the right of his divinely ordained station; and who shall judge him? The second fallacy consists in the assumption that it incumbent upon every one to do and now, in this present world, without respect to the prevailing sins and wickedness of society. Because it is granted that, could the big ideal of a Christian commonwealth, co-extensive with the whole world, be realized there would be no more war, it is assumed that it is the duty of each one to take stand upon that high position, and to conduct accordingly. However this be as to one's private affairs—and even there we apprehend its realization will be scarcely possible—in public matters it is neither practicable nor always desirable. Law of non-resistance, given in the Sermon on the Mount, must, as all other laws, be applied with discrimination and the exercise of common sense. An unqualified application of command not to resist evil is not required neither by the Spirit of the Gospel nor by letter of the law itself, intelligently interpreted and applied."

What is here designated the "peace principles of the Quakers,"—in order, we fear depreciate them as being merely sectarian, are, according to his own admission as already quoted, the peace principles of the gospel is not the application of these principles the Quakers that is condemned, but the people themselves, and therefore, according to this writer, the gospel of Christ involves "important fallacies" which it certainly if war is right or justifiable, and productive of many benefits he attributes to it.

Friends, or Quakers, have always acknowledged Civil Government as a Divine sanction or institution, and have been clothed with powers superior to those of any other exercise without its sanction. But in stouping those prerogatives, and will government the Almighty accompanied them, no sanction for it to use them to breed

end his revealed laws, to accomplish ends right in themselves, or to engage in acts antagonism with the Spirit of the gospel is Son, and which obstruct the establishment of his kingdom and government in the world. It is true that nowhere in the New Testament do we find authority given to government to take human life, therefore Friends approve of its being done; and experience abundantly proved that resort to this irrevocable punishment is not necessary to secure the ends of civil government. But were it proved that civil government may rightly at the death penalty on criminals, it did not justify war; the two cases differ widely and essentially to be brought into same category. He who is accused of a fatal crime has the opportunity given him to show his innocence by a dispassionate trial before a judge and jury, and should his guilt be proved, and he judicially convicted, he not only suffers the awful punishment which law imposes on the guilty. But in war it is no investigation as to the guilt or innocence of the men forced or induced to fight. Each side summarily declares the other guilty, and tens of thousands of the beings, with souls to be saved or lost, probably had nothing to do with bringing on the war, are dragged into a service of loathe, and are murdered without law, or by a jury. And not only are those engaged in fighting made to suffer the most agonizing tortures, but tens of thousands of others who are altogether innocent of any responsibility for the war, are punished invariably by the rapine and destruction which always accompany war: witness the condition of France and Germany. As we are told, "If the civil ruler engages in a just and necessary—in the discharge of his official duties, he acts in the right which is divinely ordained position; and who judge him?" This is an easy way of leaping all difficulties by begging the question. Under the gospel dispensation, "the divinely ordained position" of the ruler is set forth in the New Testament, nowhere else, and we can not find there right conferred on him to contravene the commands of Christ, and engage in war; he cannot engage in it justly and necessarily. On the contrary, nearly every page shows writings of inspired penmen abundantly precepts, principles and injunctions directly opposed to war, to its spirit, to its innumerable accompaniments, and which, when read, cut it up by the roots. Take the following emphatic command of our Saviour, you have heard that it hath been said, Thou shalt love thy neighbor and hate thine enemy. I love you to you love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you and persecute you, that ye be the children of your Father which is in heaven." No one, we believe, can seriously assert that this explicit command can be obeyed, by those engaged in war, which is from man's corrupt propensities; unless one reconcile doing good to those who hate, loving and praying for those who will injure and persecute and torturing them, and so on. The man does not only this command of our Saviour, but does away with the new command of our generation. The duties of war being thus, strive to do right, or pervert its meaning, by bringing

that what individuals may not do, communities or governments are allowed to do.

But our Saviour's positive command admits of no such distinction. It applies to man individually and collectively under all circumstances. His object is clear, to ennobel and enervate those evil passions natural to man's fallen nature from which war springs, to enjoin upon all his disciples, that instead of these they must cultivate love, long-suffering, forgiveness, and all those virtues which belong to his kingdom of peace and goodwill. If it is therefore sinful for one man to indulge those evil lusts, can that sin be removed or lessened in proportion to the numbers that give way to them.

As regards what is called the "second fallacy," we apprehend there need not be much said. If all the principles, and the spirit of the gospel are not binding on the professors of christianity until the world is completely brought under the government of those principles and spirit, how are the prophecies that war shall cease and the kingdoms of this world become the kingdoms of our Lord and his Christ, to be fulfilled? Christ came to save sinners; not to call the righteous but sinners to repentance; not to heal the whole, but those who are sick; and he adapted his religion to save a perishing world. His message of glad tidings, his precepts and commands were recorded by holy men of old, his gospel was then and is still preached by his ministers, and by his Spirit, in the heart of man, for the very purpose of placing him in "the high position" of a forgiven, regenerated and obedient follower of Him, and to make him feel it his incumbent duty "to order his conduct accordingly."

To say that until "the highest ideal of a Christian commonwealth" is realized, full compliance with the gospel "in public matters, is neither practicable nor always desirable," and therefore that christians under certain circumstances are justified in disregarding a strict observance of the letter and spirit of the religion they profess, is virtually throwing away their obligation to conform in public matters to the religion of Christ, whenever they may think or plead that the world is not yet prepared for such near approach to what their professed Lord and Master requires. If they may engage in war, which necessarily involves robbery and murder, hatred and revenge, because the millennium has not yet come, why may they not for the same reason comply with the demands to do away with the obligations and sanctity of the marriage covenant? and how can they consistently punish the cheat or the burglar who may plead that as the community are not all christians, the obligation to be honest is not yet binding on him. We would ask the editor of the *Advocate* how it was that he denounced so unparingly and effectually, slavery and slaveholding, if professing christians were not yet bound in such matters to regulate their conduct by the principles of christianity, on which he proved that these things were sins? Were not the slaveholders justified, according to his present position, in claiming to be good christians and acting rightly in holding their slaves until the "ideal of a christian commonwealth coextensive with the world was realized," and every man did unto others as he would have others do him.

Christ and his apostles taught no such subterfuge to the wicked practices of the people.

They gave no sanction to hiding the light of the gospel under a bushel because the world was in darkness. All who embraced the faith they preached, were commanded to place that light on a candlestick, that it might illuminate all around them; to be perfect even as their Father in heaven is perfect. And until the church became corrupted by those who perverted the faith, the primitive christians carried out the peace principles of the gospel, refusing to participate in war in any way; giving as a reason the commands of their Master. They shrank not from a strict compliance with the letter and spirit of the religion they professed, "applied with discrimination and the exercise of common sense," because "the highest ideal of a christian commonwealth, co-extensive with the whole world," was not then realized; but when put to the test, laid down their lives rather than betray their Master and his cause. Their language was "I am a christian, and therefore I cannot fight."

Granting that war, or power for war, has sometimes resulted in extending or securing the freedom of a people, of which however it had previously deprived them, it is a poor apology to make for it, with all its complicated horrors and depravity; especially coming from one whose vocation it is to teach christianity. It is this kind of apologizing for war by men in that station, that has kept it so long existing among professing christians. Had that class, claiming to be the representatives and ministers of the Prince of Peace, rightly apprehended and earnestly taught his religion,—the religion of love, of peace, of brotherly kindness,—in its completeness and perfect adaptation to the wants of man, and all the trials of his life in private or public, we fully believe the nineteenth century would have known of war only as a barbarism of the past, and the rights of man, individually, and of communities, would have been advanced and secured far beyond what they now are. Christendom instead of being justly appraised by the poor benighted heathen, for the inexorable hate and savage cruelty exhibited on its blood drenched battle fields and desolated countries, and thus repelling them from embracing a religion which they are told sanctions such horrible inhumanity, might have gone to them with the same angelic announcement that ushered in its professed religion, "Glory to God in the highest, peace on earth, good will to man," and the glorious gospel of life and salvation would have found entrance where the people still sit in darkness and the shadow of death.

SUMMARY OF EVENTS.

FOREIGN.—The foreign policy of England has been the subject of earnest discussion in the House of Commons. Disraeli, the leader of the opposition, urged the House to consider the gravity of the Eastern question, and the serious consequences of Russia's repudiation of the treaty of 1856, which it had cost England such sacrifices to make. He said it had been generally believed Odo Russell's errand to Versailles was to announce to Bismarck that England stood ready to join Prussia in opposing Russian repudiation. Now it seemed the government denied that such was the object of Russell's mission.

Gladstone, in reply, denied Disraeli's inferences, and expressed surprise that he should condescend to hear and repeat the rumors on which they were based. The proposal to estrange Russia at a moment so critical was simply mad. The conference would hear Russia's case in all fairness, and act on it with justice. He declared there was no truth in the report that a messenger had been sent to Versailles to congratulate the Prussian Prince on their victories.

On motion of Gladstone a joint committee of inquiry has been appointed in relation to Indian finances. The University bill has passed the House of Commons, and one leveled against the Catholics assuming ecclesiastical titles passed its second reading by a large majority.

On the 25th a terrible colliery explosion occurred in South Wales. Fifty dead bodies had been taken from the mine.

Dispatches from Paris and Versailles state that the Peace Commissioners at the National Assembly have assented to the conditions demanded by the Germans. The exact terms will not be known until the treaty has been submitted to the Assembly and received its sanction or been rejected. A Paris dispatch of the 26th says: The conclusion of peace is now certain. Thiers and Favre and the consensations have been ratified. The following are the conditions: First, The cession of Alsace and Metz, but Belfort is to be restored to France. Second, the payment of a war indemnity of five thousand millions of francs. Third, a portion of French territory, with some fortified towns like Sedan, to remain in possession of the Germans until the conditions of the treaty are fulfilled. Fourth, the German army to enter Paris and occupy the Champs Elysees. Fifth, peace to be proclaimed when the French Assembly ratifies these conditions. Thiers and the delegation retired to Bordeaux to-day.

The Paris *Mouvement* states that 602 field pieces belonging to the army of Paris, have been delivered to the Germans, and 1537 cannon in good condition were found in the forts. The Parisians are advised to close their houses and remain invisible during the triumphal march of the Germans through the city.

The removal of the government to Tours or Blois has been proposed, but there is really no belief in its probability. After the declaration of peace, it is expected that the National Assembly will prorogue its sittings, and upon reassembling will meet in Paris. The city is resigning its ordinary appearance, and is again lighted with gas. Provisions are more abundant and prices lower. Northern Railroad, 14,352 oxen, 15,352 sheep, 1,776 cows, 3,768 pigs, and immense stores of grain, flour and biscuits.

By an imperial decree the opening of the German Parliament is postponed until the 16th inst. The French territory which is proposed to annex to Germany, had by the last census a population of 1,635,546. With this addition the new German empire will have a population exceeding forty millions, and will be the largest in Europe except Russia. Official returns received at the War Office in Paris, including the first month of the year, show that the losses of the Germans, amounted to an aggregate of 350,000 men. The German loss was comparatively quite small.

A Paris dispatch of the 27th says, the preliminaries of peace were signed yesterday at 5.30 P. M. The conditions are those already stated, but three years will be allowed for the payment of the war indemnity, during which time 50,000 German troops will occupy Champagne, living at the expense of the French government. If payment is completed before the time expires Champagne will be immediately evacuated.

The *Journal des Debats* comments on the crucial terms of peace imposed upon the Germans by Thiers and Favre on several times on the point of breaking off the negotiations at the risk of a resumption of hostilities, and yielded only to dire necessity. Bismarck at first demanded ten thousand millions of francs indemnity, and it was reduced to the sum finally agreed upon only through the most strenuous exertions. It has been stipulated that only 30,000 German troops shall enter Paris, and they shall not march beyond the Place de la Concorde.

Another dispatch states that the French negotiators offered to pay a thousand million more francs if the Germans would relinquish Metz, but on this point Bismarck was inflexible. The design doubtless is that France shall be rendered powerless for attack by being deprived of the necessary supports for an army operating against Germany, while the latter shall be enabled to take the offensive at her pleasure. The treaty will be strongly opposed in the Bordeaux Association. It will be ratified in exactly a matter of doubt. The armistice has been extended to enable the National Assembly to consider and decide the question of acceptance.

A Berlin dispatch of the 27th says, the news of the conclusion of peace has occasioned tremendous excitement in this city. The streets are crowded with houses decorated with flags and festoons, and thousands of people are in front of the palace. There will be a general illumination to-night. The triumphal entry of the Germans into Berlin is to be delayed two months, as the whole

people of Germany will observe six weeks mourning for the victims of the war.

In the British House of Commons, the Premier was asked by the government how he meant to mitigate the rigidity of the terms of peace imposed upon France. Gladstone replied that the German Minister had notified Earl Granville and himself that the preliminaries of peace had been signed. He added that the diplomatic representatives of the British government in France had been instructed to inform the Germans on their entry into Paris, and declined to make any further response to the question.

The Marquis of Harrington, in debate on the state of Ireland, announced that there was a marked improvement in the preservation of order and the observance of the law, partly due to the vigour and partly to the more vigorous police. It was, however, necessary to ask the House for a committee to devise further measures and to grant greater powers to enable the government to effectually repress the mischief of secret combinations in Ireland.

UNITED STATES.—The instructions of the Treasury department provide for the sale of \$7,000,000 gold in the purchase of \$10,000,000 of 8 bonds in this month.

The Intermets in Philadelphia last week numbered 285. There were 50 deaths from consumption, 27 inflammation of the lungs, 9 of croup, and 16 old age. The number of births registered in this city during the year 1870 was 17,194, viz: 9,134 males, and 8,060 females; the number of marriages was 6,421. The interments numbered 16,750, an increase over 1869 of 1,964; 8,787 were males, and 7,963 females. The principal causes of death were consumption, 2,803; cholera infantum, 1,002; scarlet fever, 956; still born; 282; debility, 809; convulsions, 753; old age, 588; influenza, 578; typhoid fever, 410; diphtheria, 409; croup, 326; apoplexy, 240; cancer, 261.

The gross earnings of the Pennsylvania Railroad last year amounted to \$1,375,706.82, and the expenses to \$1,260,085.15, leaving the net earnings for that time \$6,721,621.67.

The following is a comparative statement of the Internal Revenue collections of the government. From 7th mo. 1st, 1869 to 2d mo. 24th, 1870, \$109,184,390.51
7th mo. 1st, 1870 to 2d mo. 24th, 1871, \$100,278,251.48

Decrease, \$8,906,139.03

The proceedings of Congress for the most part have been devoid of interest. Both Houses have passed the bill to aid in the construction of the Southern or Texas Pacific Railroad. This road commences at Marshall, in the State of Texas, and is to end at San Diego on the Pacific, 500 miles south of San Francisco. The most of the route is through an uninhabited region.

Experiments are now being tried whether the western plains, beyond the limits of the water courses, can be cultivated without artificial irrigation. The results as to raising grasses are stated to have been satisfactory, and it is believed that after the sod had been turned over, some success would be obtained in raising crops as large as. As to the growing of trees, it is asserted that forests can be established in all parts of the western plains without artificial irrigation, though much deeper plowing will be required than for wheat and grasses.

The Joint High Commission held its first conference in Washington on the 26th inst. The United States Commissioners were present except Judge Hoar, and all the British deputation except Sir John Macdonald and Sir Stafford Northcote. The proceedings are to be conducted secretly.

The Conference Committee of Congress in relation to the right of the Senate to originate a tax to repeal the tax, have reported in favor of the claim of the House solely to originate all bills directly affecting the revenue, and inferentially those reaching the same end indirectly.

The Markets, &c.—The following were the quotations on the 27th ult. *New York*.—American gold, 111 ½; 1848, sixes, 1881, 111 ½; ditto, 5-20's, 1865, 111; ditto, 10-40, 5 per cents, 111 ½. FRIENDS' ASYLUM FOR THE INSANE

New Frankford, (Twenty-third Ward), Philadelphia.
Physician and Superintendent—JUSTUS H. W.

KEYES, M. D.

Applications for the Admission of Patients in made to the Superintendent, or to any of the Do. Managers.

DIED, on the 13th of Twelfth mo. 1870, JEREE WILLIAMS, Jr., aged near 42 years. This dear E. was brought to feel his nothingness, and to look Most High for help; and we reverently believe through the mercy of God in Christ Jesus, he was deemed from sin; and that before his departure his song was put into his mouth, as evidenced by his exclamation, "The living, the living, he shall praise as I do, this day."

He resided on the 13th of Second month, 1871, at residence, Mt. Laurel, Burlington Co., N. J., MA wife of David Darnell, in the 63d year of her beloved member and overseer of Evesham Mt. Meeting of Friends. Being firmly attached to the truths and testimonies of our religious Society, desiring to uphold them, both by precept and ex. She was regular in her attendance of meetings, as encouraged her family to faithfulness in this duty, some months there were symptoms of declining I causing much anxiety and mental exercise. As was confidently to her children, she remarked to a "This is not unexpected to me, I have not seen how it is to terminate, but feel willing to leave; hope the days' work will be done. I trust it h have been left until now." At times she experienced great poverty of spirit, but was enabled to bear it well as her bodily sufferings, with patience and resignation. Though her removal is deeply felt by her friends, and to whom she was endeared by her fidelity, clear judgment, and upright character, yet we are comforted in believing that through redemption and mercy, she was prepared to meet her ever rest.

Second mo. 17th, 1871, died, at the residence of Stokes, a member of Upper Merioneth, July 11, N. J., in the 56th year of age.

For "The Friend,"

An Account of Richard Smith, author of "A Letter to a Priest of the Church of England," A.D. 1660.

(Continued from page 230.)

Among the many excellent provisions of this document, which is "dated this third day of the month commonly called March, in the year of our Lord one thousand six hundred and sixty-six," and may be seen, beautifully engraved on vellum, in the Surveyor General's office in Burlington, I transcribe two:—

"CHAP. XVI.

That no men, nor number of men upon earth, hath power or authority to rule over man's consciences in religious matters; therefore it is consented, agreed and ordained, that no person or persons whatsoever, within the province, at any time or times hereafter shall be in any ways, upon any pretence whatever, called in question, or in the least punished or hurt, either in person, estate, or private, for the sake of his opinion, judgment, or worship towards God, in matters of religion; but that all and every such person or persons, may from time to time, and at all times, freely and fully have and enjoy his or their judgments, and the exercise of their sciences, in matters of religious worship throughout all the said province.

"CHAP. XXV.

* * In case any of the proprietors, freeholders, or inhabitants, shall any wise wrong or injure any of the Indian natives there, in person, estate, or otherwise; the commissioners are to take care, upon complaint to them made, or any one of them, either by the Indian natives or others, that justice be done to the Indian natives, and plenary satisfaction made them, according to the nature and quality of the offence and injury: And that all trials wherein any of the said Indian natives are concerned, the trial to be by six of the neighborhood, and six of the said Indian natives, to be indifferently and impartially given by order of the commissioners; and that the commissioners use their endeavour to persuade the natives to the like way of living; when any of the natives do any ways wrong or injure the said proprietors, freeholders or inhabitants, that they choose six of the natives, and six of the freeholders or inhabitants, to judge of the wrong and injury

done, and to proportion satisfaction accordingly."

It is not to be doubted that the chief inspiration of this remarkable Charter emanated from that truly great and good man, William Penn. The trustees and By-lings now proceeded to effect a partition with Sir George Carteret, which they did by deed Quintipartite, dated "the first day of July, 1674," which assigns East New Jersey to Sir George, and West New Jersey to the new Proprietors, fixing the dividing line as shown in the following extract of a letter from them to Richard Hartshorne:—

"1st. We have divided with George Carteret, and have sealed deeds of partition, each to the other; and we have all that side on Delaware river from one end to the other; the line of partition is from the east side of little Egg Harbour, straight North, through the country, to the utmost branch of Delaware river; with all powers, privileges, and immunities whatsoever: ours is called New West Jersey, his is called New East Jersey."

"2d. We have made concessions by ourselves, being such as Friends here (and these we question not) will approve of, having sent a copy of them by James Wassar; there we lay a foundation for after ages to understand their liberty as men and christians, that they may not be brought in bondage, but by their own consent; for we put the power in the people, that is to say, they to meet and choose one honest man for each propriety, who hath subscribed to the concessions; all these men to meet as an assembly there, to make and repeal laws, to choose a governor, or a commissioner, and twelve assistants, to execute the laws during their pleasure; so every man is capable to choose or be chosen: No man to be arrested, condemned, imprisoned, or molested in his estate or liberty, but by twelve men of the neighbourhood: No man to lie in prison for debt, but that his estate satisfy as far as it will go, and be set at liberty to work: No person to be called in question or molested for his conscience, or for worshipping according to his conscience; with many more things mentioned in the said concessions."

It is probably a safe conclusion, that rather to the Friends of New Jersey and Pennsylvania, than the Puritans of New England, is the America of to-day indebted for the foundation of her civil and religious liberty. A late judicious writer says, "So comprehensive and perfect are the forms of government and the rights of the people as laid down in these concessions, that it may well be doubted whether we have in any one thing improved in the theory and principles. * * Indeed it might seem that they have served for a model for our State and general government." "The Western Proprietors" (to quote again from Samuel Smith) "soon published a description of their moiety; on which many removed thither: But lest any should not sufficiently weigh the importance of this un-

dertaking, and for other reasons, the three principal proprietors published the following cautionary epistle:—

"Dear Friends and Brethren,—

"In the pure love and precious fellowship of our Lord Jesus Christ, we very dearly salute you: Forasmuch as there was a paper printed several months since, entitled *The description of New West Jersey*, in the which our names were mentioned as trustees for one undivided moiety of the said province: And because it is alleged that some, partly on this account, and others apprehending that the paper by the manner of its expression came from the body of Friends, as a religious Society of people, and not from particulars, have through these mistakes, weakly concluded that the said description in matter and form might be writ, printed and recommended on purpose to prompt and allure people, to dissettle and transplant themselves, as it's also by some alleged: And because that we are informed, that several have on that account, taken encouragement and resolution to transplant themselves and families to the said province; and lest any of them (as is feared by some) should go out of a curious and unsettled mind, and others to shun the testimony of the blessed cross of Jesus, of which several weighty Friends have a godly jealousy upon their spirits; lest an unwarrantable forwardness should act or hurry any beside or beyond the wisdom and counsel of the Lord, or the freedom of his light and spirit in their own hearts, and not upon good and weighty grounds: It truly laid hard upon us, to let Friends know how the matter stands; which we shall endeavour to do with all clearness and fidelity."

After a general description of New (West) Jersey, a recital of the title thereto, and an announcement of the division thereof into one hundred proprietries, and that the balance of these is now for sale, the letter proceeds:—

"And forasmuch as several Friends are concerned as creditors, as well as others, and the disposal of so great a part of this country being in our hands; we did in real tenderness and regard to Friends, and especially to the poor and necessitous, make Friends the first offer; that if any of them, though particularly those that being low in the world, and under trials about a comfortable livelihood for themselves and families, should be desirous of dealing for any part or parcel thereof, that they might have the refusal. This was the real and honest intent of our hearts, and not to prompt or allure any out of their places, either by the credit our names might have with our people throughout the nation, or by representing the thing otherwise than it is in itself."

"And be it known unto you all, in the name and fear of Almighty God, his glory and honour, power and wisdom, truth and kingdom, is dearer to us than all visible things; and as our eye has been single, and our heart, sincere to the living God, in this as in other

things; so we desire all whom it may concern, that all groundless jealousies may be judged down and watched against, and that all extremes may be avoided on all hands by the power of the Lord; that nothing which hurts or grieves the holy life of truth in any that goes or stays, may be adhered to; nor any provocations given to break precious unity."

"This am I, William Penn, moved of the Lord to write unto you, lest any bring a temptation upon themselves or others; and in offending the Lord, slay their own peace: Blessed are they that can see, and behold him their leader, their orderer, their conductor and preserver, in staying or going: Whose is the earth and the fullness thereof, and the cattle upon a thousand hills. And as we formerly writ, we cannot but repeat our request unto you, that in whomsoever a desire is to be concerned in this intended plantation, such would weigh the thing before the Lord, and not headily or rashly conclude on any such remove; and that they do not offer violence to the tender love of their near kindred and relations; and so soberly and conscientiously endeavour to obtain their good wills, the unity of Friends where they live; that whether they go or stay, it may be of good savour before the Lord (and good people) from whom only can all heavenly and earthly blessings come. This we thought good to write for the preventing of all misunderstandings, and to declare the real truth of the matter; and so we commend you all to the Lord, who is the watchman of his Israel.

We are your friends and brethren,

WILLIAM PENN,
GAWEN LAWRIE,
NICHOLAS LUCAS."

This letter shows the religious carefulness and tender conscientiousness of the principal proprietors in a beautiful light.

Born in the throes of a spiritual travail such as this letter shows on the part of some of the most deeply exercised minds of the century, watched over in its first movements by such wise and tender "nursing fathers" as William Penn, George Fox, and Robert Barclay, supported as it advanced by substantial and pious characters like him whom I have introduced to the reader in this sketch, it was to be expected that blessing would attend the steps of the infant colony. Nor was that expectation disappointed.

(To be concluded.)

For "The Friend."

To speak lightly of the manifestation of religious concern, on account of those high in profession and stations in society, has ever seemed evidence of want of charity and of religious decline, which view has been confirmed by observation. It is ever occasion of sorrow to witness in any claiming friendship for Truth, the disposition to ridicule any of the testimonies which the truly conscientious may be concerned and engaged honestly to bear, in order for the peace of their own minds.

As good example is the loudest and most effectual preaching, and none can be truly reaching and convincing without it, it seems meet that all who profess the christian religion as held by Friends, should feel themselves subject to advice and correction, in any case of deviation from this, either in word or practice, without endeavouring to expose to ridicule and censure those who may deem it their

place honestly and forbearingly to remind them of such departures, and if need be, to warn them of their tendency and danger, both as it respects themselves and those who may be witnesses of the inconsistency.

The obligation to secrecy in our labors with those who offend, seems binding also upon the offender, and loss and weakness often result to both offender and offended, by a deviation from this. "If thy brother offend thee, tell him his fault between thee and himself alone." When the blessed Redeemer had opened the eyes of the blind man, he commanded that he should tell it to no man. To speak of rebuke and reproof, honestly and advisedly administered, even without the disposition to murmur or ridicule, is of doubtful propriety, and with the indulgence of this is truly unwise and hurtful; and when good is effected, it is better to ponder it in our minds than to speak openly of it; even as Mary did when instructed by the blessed Master.

The disposition to converse too freely upon the good or evil which we may have received or witnessed, has a scattering, dissipating effect, frustrating in measure the intended benefit. It is better to bear our burdens as well as to do our alms in secret, praying for strength to endure, and to be made worthy of the blessing to which no sorrow is added, than to be seeking human sympathy and praise, or even our own vindication before men, who are not to be our judges or avengers.

For "The Friend."

The Total Eclipse of 1870.

The attention and interest of scientific men have been much directed of late years to the beautiful phenomena attending total eclipses of the sun. Armed with the telescope which has revealed so much to Astronomers during the last two centuries and a half, and with those comparatively very recent but scarcely less wonderful instruments, the spectroscope and the polariscope, they have observed and studied the phenomena which the sun presents during and immediately before and after totality, with much zeal and self-sacrifice. The object of this study and observation is to learn something respecting the nature of the sun and its atmosphere, of the "rose-colored protuberances," and of that beautiful halo of light which appears to surround the sun, and which bursts on the beholder the moment the last of the sun's disk disappears behind the moon.

On the 22d of Twelfth month last, a total eclipse of the sun was to occur, the belt of totality, or path of the moon's shadow, embracing portions both of the northern and southern shores of the Mediterranean. The United States Congress having appropriated \$29,000 to enable the Superintendent of the Coast Survey to observe this eclipse, Professor Peirce organized two parties, one of which under his own lead was to occupy several points in Sicily, while the other under Prof. Joseph Winlock, was to occupy points within the belt of totality in Spain. Four observers were also sent out on the part of the U. S. Naval Observatory.

Four parties went from England for the same purpose, under the auspices of the British Government; one to Cadiz, in charge of S. J. Perry, one to Gibraltar, under Captain Noble, a third to Oran, Algiers, and a fourth to Sicily; the last being under the direction of the astronomer J. Norman Lockyer, whose name

has of late years been intimately connected with researches of this kind.

These expeditions were only partially successful. "Cloud in Sicily, cloud in Spain, cloud in Africa," exclaims J. N. Lockyer, in a 1 article in "Nature" as being apparently first sight the only result of the observation on the eclipsed sun of 1870." His party, indeed, saw but little. "At Catania," he says "we saw a portion of the corona for 13 seconds through a cloud, and that was all!" It should be mentioned that this party was shipwrecked seven days before the eclipse, the "beaute but unfortunate Psyche" on which they embarked with their scientific instruments founded on a sunken rock off Catania, all hands were saved, and none of their instruments, we believe, were lost.

The American parties were more successful. Prof. Hale, one of the four sent out from U. S. Naval Observatory, writing from Syracuse, says: "The four contacts were well observed. During the total eclipse, clouds covered the Moon, making, I think the physical observation somewhat doubtful. The protuberances were very well seen. There were of a pale red color, and not so bright I expected them to be. The clouds interfered with my observations of the Corona could detect but very little of the radial and curved streamers given in so many times, and the slight radiation that I might have been produced by the clouds need hardly say that the total eclipse was beautiful sight."

Prof. Harkness, also one of the four of the U. S. Naval Observatory, was stationed not far from Catania, Sicily. They arrived to determine the latitude and longitude of their position and other preliminary observations. Up to the 20th of the month "the weather," he says, "was very fine. On that day barometer fell and the sky became cloudy. On the 21st and 22d, however, excellent observations for time were made, and our operations for the eclipse were complete. A beginning the sky near the Sun was perfectly clear. The first contact was observed at 10 hours, 35 minutes, 27.5 seconds. As the eclipse advanced, the bright line was looked upon which was shown in such a marked manner along the edge of the Moon's limb in photographs taken at Des Moines last year, but no trace of it could be seen till 12 hours, 8 minutes, when I thought I perceived it.

"Fifteen minutes before totality a dim cloud hid the Sun entirely. The wind blowing with a force of from 3 to 5; so the telescope, though sheltered by the parapet of the bastion, was steady [unsteady?] the lanterns could not be lit near it. Within five minutes of totality, the cloud over the Sun fast became less dense. Presently, a crescent was all that remained of the Sun this dwindled rapidly away, so that at 11 seconds I observed the commencement of totality with the naked eye. The cloud sufficiently thin to allow the Corona to appear, but diminished in extent and brilliancy, appearing scarcely more than two-thirds large as that seen in Des Moines.

"With an Arago polariscope in hand the first ten seconds were spent in observing the sky was polarized all around the Corona while the Corona itself showed no polarization. Springing to the spectroscopic I saw the green line of which I found reading to be about the same with the

69. The spectroscope directed to many different parts of the Corona by my friend Captain Tupman, R. M. A., showed the same line.

"During the last few seconds of the totality, the thin cloud covering the Sun became nearly dissipated, and the faint continuous spectrum of the Corona became visible. I could not believe that the eclipse had lasted, according to the chronometer, one hundred and fifteen seconds; it seemed a moment only.

"I think that our observations, though made at disadvantage by the high wind and the thin cloud, prove beyond question that the corona does belong to the Sun; that it is to a great degree, if not entirely, self-luminous, and that its light gives a green line at about 74 divisions of Kirchhoff's scale. The observations by the polariscope go to prove that the light from the Corona is not polarized. Five minutes after the totality was over the sky became perfectly clear."

S. Newcomb, another of the Professors at the Naval Observatory, reports from a shorter but yet more favorably.

"I had chosen a position more than a mile from the town near the southern end of the park, because the authorities have all agreed at a 'Levante' would cover the rock with shadow, though it might be clear both to the north and south. An hour before the eclipse commenced, it rained so hard that I had to cover my instruments; in a half-hour more, the straits were covered with clouds and mists, and hardly a patch of sky to be seen except the north, but 20 minutes later the clouds moved north, leaving some thin places through which the Sun was seen at intervals. I succeeded in observing the first contact which did not occur till about 25 seconds later than the time predicted by Hanson's tables in the British Nautical Almanac, but very near the one of the American Ephemeris. During the intervals in which I could see the Sun, using the lightest shade, I succeeded very well in obtaining transits of the cusps for determining the direction of the centre of shadow."

"I got the commencement of totality very well. During the total phase, the clouds thinned out enough to give a view of the corona and the protuberances through the thin cloud. The observations to which I had intended to devote the two minutes of totality, reference to the physical appearance of the phenomenon; its form and dimensions, and the relative brilliancy of its parts and its apparent structure. I desired to note especially whether it seemed nebulous or whether it rather seemed soft and uniform. The clouds, however, prevented my seeing more than this, at the light was perfectly soft and milky without any appearance of cloudiness. The radiation so frequently described by observers as certainly not there. There was nothing whatever in the shape of rays to be seen through the cloud. The protuberances were very numerous and much more brilliant than the Corona, exhibiting the numerous fantastic shapes shown in the photographs of the last eclipse. Their redness was very brilliant indeed. The most noticeable rose up from the bottom like a horn. The darkness was even less than I expected, as I could read the face of the chronometer within my tent without difficulty."

Prof. Peirce's expedition was divided into two parties. At Catania were the photographers with two others of the party. They

had the same experience as Lockyer's company at the same place. Clouds prevented observations of the Corona. At Monte Rossi (3000 feet altitude) Prof. Peters, renowned for his discoveries of Asteroids, failed from clouds. One account says he was in a furious snow storm. An English party some 5000 feet up Mount Etna, were also in the storm, and Genl. Abbot, 8,400 feet up Mount Etna, saw nothing of the phenomena. At Carlentini (on the contact line south of Catania) obtained very good observations of the Corona; and Prof. Peirce, who with his wife and two sons was at a villa two miles north of Catania, obtained good results with his polariscope, and made valuable sketches of the Corona. And yet he was in the immediate neighborhood of the English and American observers at that town who had such poor success. He says, writing from Catania on the afternoon of the eclipse:

"Well the eclipse is over, and, wonderful to relate all the success [of the Catania observers] seems to have been reserved for our party. * * * All the large party assembled at the villa were delighted at the whole phenomenon, to which the epithet of *magnifique* was applied on all sides. And you would like to know how it was that there was so great success with us, and not with the others. Well, it was thus: early in the morning all was bright and fair, but as the day advanced clouds began to appear, which increased greatly with the cold, arising from the diminished action of the sun upon the earth. These clouds kept growing with a rising wind till nearly at the middle of the eclipse, the sun was hidden behind a thick, black screen, and all hopes of further view of it deserted us. But just previously to the instant of total obscuration there was a break in the clouds, which was the more remarkable because it was raining and hailing at the time. This break did not extend a thousand feet from the place where we observed. But it gave us a superb view of the Corona and the whole totality, and enabled us to establish very important conclusions. It must be said, however, that there was just enough haze to deprive us of what I am disposed to call the false corona, and which I consider to be a part of our own atmosphere. But the true solar corona is clearly proved to be a solar atmosphere extending about eight [eighty?] thousand miles above the ordinarily visible surface of the sun. There were three different sources of proof of this conclusion. The work is done successfully."

The American observers in Spain appear to have had better weather than those in Sicily. Even there, however, Prof. E. A. Young reports that "the sun was obscured until totality, and just then a small rift in the heavy clouds opened the sun to view and gave an opportunity for excellent observations. One good photograph of the Corona was obtained." Prof. Young was at Jerez, 16 miles N. W. of Cadiz.

The weather was very unpropitious to the English and French parties who crossed the Mediterranean into Africa. Those at Oran were in a storm. Janssen, who so successfully observed the eclipse of 1868 in India, was in Paris when the siege commenced. Anxious again to get within the shadow of the Moon, he incurred the perils and expense of an escape by balloon from the beleaguered city. He reached the intended place of observation in safety but saw nothing. The clouds overshadowed the locality he had selected.

It is somewhat remarkable that although the weather was so unfavorable on the eastern shores of Sicily, yet at a short distance from the coast those on board a small fleet engaged in attempting to save the *Psyche*, observed the magnificent phenomenon in unclouded splendor. Three iron-clads, two steamtugs and an Italian gunboat were thus engaged in near proximity to one another, and a few miles north-east of Catania. Good drawings of the Corona were made on board some of these vessels.

For "The Friend."

Hannah Gibbons.

No doubt very many readers of "The Friend" are deeply interested in the memoranda which have for a considerable time been appearing in its columns, from the diary of, and concerning our friend Hannah Gibbons, deceased. The striking features in her life and character are the early surrender of herself to her dear Redeemer, and submission of heart to His purifying baptism and regenerating grace; her perseverance, despite the conflicts of flesh and spirit, in faithful obedience to His will; her meekness, and gentleness, and self-distrust, and withal her inwardness and prayerfulness of spirit and her watchfulness. Then her care in the exercise of her gift in the ministry, received in her measure as the Apostle expresses, "according to the gift of the grace of God given unto me by the effectual working of His power;" her renouncing all things esteemed once as gain, for the excellency of the knowledge of Christ Jesus her Lord; being desirous to have nothing to trust or glory in but His cross, which, when yielded to, ever crucifies to the world, and the world to us; are equally impressive and instructive. It was in the good old way that she was enabled to grow in grace, and in that saving knowledge which is life eternal, "into a perfect man, unto the measure of the stature of the fullness of Christ." Such a practical example of a life of dedication and holiness is truly valuable, as adding to the "cloud of witnesses" gone before; inciting us "to lay aside every weight, and the sin which doth so easily beset us, and to run with patience the race that is set before us," &c. Truly should such evidences of the goodness and mercy of the Lord, be treasured by us as signs and as way-marks to that heavenly country, for the attainment of which this life is but a state of probation. Which heavenly country will abundantly make up for all we may have to bear or to suffer as "strangers and pilgrims" here, being "the recompense of the reward" thus cheerfully represented by the Prophet: "Since the beginning of the world men have not heard, nor perceived by the ear, neither hath the eye seen, O God, beside thee, what he hath prepared for him that waiteth for him."

There is something particularly solemn, while at the same time deeply stirring and instructive in such recorded experiences as the last few "Selections" more particularly have been, of this life-long dedicated servant of her Lord. Though so used to the harness, she was nevertheless so wholly dependent upon the fresh flowings of heavenly grace and mercy, as to have nothing by way of supply of her own, like to manna gathered yesterday to trust to, or to subsist upon. But under a sense of her own unprofitableness and weakness as taught by Him who is the Way, the

pleading language of the heart was, Give me day by day my daily bread: Feed me with food convenient for me.

What a rebuke are such substantial christian experiences to some in these days of "sensation and excitement," and of railroad speed, who claim that they are justified and saved almost before, to the view of others, they have begun the pilgrim's journey,* or have submitted to the self-denial, creaturely humiliations, and painful, sin-purging baptisms, which the cross-bearing, and true followers of the lowly Jesus have ever had to partake of. In that way of holiness, "which the unclean self-nor not pass over," there is no escaping the self-reducing, and crucifying power of the cross of Christ, with the purifying baptisms of the Holy Ghost and fire, which accompany repentance and amendment of life. Our divine Lawgiver expressly told two of His disciples, "Ye shall indeed drink of the cup that I drink of, and with the baptism that I am baptized withal, shall ye be baptized." More than implying that there was no other way to the heavenly kingdom than by the washing of regeneration, and the renewing of the Holy Ghost; whereby alone we can experience that which is declared of all the true followers—all the "arrayed in white robes"—all the saved of the Lord Jesus: "We must through much tribulation enter into the kingdom of God." And again, "These are they which came out of great tribulation, and have washed their robes, and made them white in the blood of the Lamb." Ever in vain will be the attempt to climb up some other way to the heavenly kingdom than that which Christ Jesus, the High Priest of our profession, the Author and Finisher of our faith himself hath trodden, "leaving us an example that we should follow His steps." Of whom it is also declared, "For the joy that was set before him, he endured the cross, despising the shame," and is set down at the right hand of the throne of God; where He ever liveth to make intercession for them that come unto God by Him. This is the way in which the beloved subject of these memoirs worked out, in humility and meekness, and much self-distrust, her soul's salvation; and it is the same in which the righteous of all ages, have, through sore travail of soul, and great denial of self, washed their robes in the Fountain set open for sin and uncleanness. For while, through the matchless mercy of the Lord Jesus Christ, the quickened and penitent sinner receives, through the Saviour's great offering, remission of sins that are past, it is through obedience to His saving grace in the heart, that any are enabled to know their sins washed white in His blood, and the new man, which after God is created in righteousness and true holiness, to be put on. This the deeply humbled and chastened, but renewed soul, may or may not be able mentally to lay hold of; being like to the publican in the parable capable of but little more than to smite the hand on the breast saying, "God be merciful to me a sinner;" or, like those spoken of by our blessed Lord (Matt. xxv. 34, 40) who knew not that they had acceptably ministered to His necessities till told so by Him, when with all the holy angels He was seated upon the throne of His glory. Never to be forgot-

ten, moreover, but deserving our most serious attention, is the declaration of our Lord and Lawgiver, viz: "For judgment I am come into this world; that they which see not might see, and that they which see might be made blind." And again to the Pharisees: "If ye were blind, ye should have no sin; but now ye say, we see; therefore your sin remaineth."

The written experience of one but recently passed from us, that she found no place of abiding rest and security from the great enemy, short of the heavenly mansion, which she hoped through mercy, to attain in the Father's house. Another, who, after the long space of seventy years of marked service and faithfulness, could but say: "Even now, I seem like a child beginning to learn the perfect will concerning me." Another, of singular devotion and purity of life, when on the bed of death exclaimed: "Oh, how precious a thing it is to feel the Spirit itself bearing witness with our spirits that we are His." "Oh! this soul is an awful thing; I feel it so. You that hear me, mind, it is an awful thing to die: the invisible world how awful!"

How steadfastly should we all guard against anything that looks like taking heaven by force, (Matt. xi. 12.) in presuming that we have attained, and that we are already fitted for "the solemn after scene" before the great fight and life of faith—that saving faith which purifies the heart, and giveth victory over the world—it is to be feared has but little more than begun. Is there not ground for the apprehension that,

"The pardon such presume upon
They do not beg, but steal;
And when they plead it at Thy throne,
Oh! where's the Spirit's seal?"

We are here reminded also of a remark of good old George Dillwyn, viz: "When persons who think they have attained to a stability in religion, speak lightly, or seem to make no account of those little steps of faith and obedience by which the Lord sees meet to lead his flock, and fit them for his fold, it is questionable if they have not missed the right way, and are trying to get in some other way." In the last sermon that minister of Christ, William Dewsberry, preached, are the following weighty expressions: "Do not make the way to heaven easier on your minds and imaginations than indeed it is." "All shuffling people that would have salvation by Christ, and will not let him exercise his heavenly power—his princely glorious power—to baptize them into his death, it is they that come short of salvation." "I was made a christian through a day of vengeance and burning as an oven, and the haughtiness and pride of man in me was brought low."

Truly lamentable would it be, if for want of knowing ourselves and our real state in the sight of Him with whom we have to do, any should come short of the Lord with whom there is no shortness; or fail of His sustaining, preserving grace, faithful obedience to Him—the saving oil in the vessel with our lamps—must surely now as ever, lead the humble, careful traveller, and wise virgin, to peace with the Bridegroom of souls; as well as finally to drink of that river of never-failing joy which makes glad the whole heritage of God. But when the reasoning of man, a false interpretation of Scripture, an unequal upholding of Divine truth, or any unsanctified trust or hope whatever, is allowed to take the place of simple, passive obedience to the quickening, trans-

forming power and life of the Holy Spirit Christ our Saviour, derived to us through His great propitiatory sacrifice on Calvary, that a falling short, if not blindness and insensibility of heart must ensue; because "by grace are ye saved through faith;" and, "He, (Christ Jesus) became the Author of eternal salvation to all them that obey him." It is to Him in His inward and spiritual appearance in the heart as our Emmanuel, that every knee must bow and every tongue confess, if we are enabled, after the power of an endless life, grow in the grace that brings salvation, or in the knowledge of our Lord and Saviour being, through holy help and mercy, built a spiritual house, an holy priesthood, to do up spiritual sacrifices acceptable to God through Jesus Christ.

Whatever turnings and overturnings the Lord Almighty may permit to come upon as a church and people, we cannot belie that the precious doctrines and testimonies committed to this religious Society to uphold before the world, will ever be suffered by compassionate Shepherd of Israel to fall the ground. But that, in the renewings of His mercy, and in view of the promise, "The earth shall be filled with the knowledge of glory of the Lord, as the waters cover the sea," standard-bearers and testimonies, and in the true power of the anointing, and with the fresh descendings of heavenly life, will be raised up to stand for the law and the testimony, which our forefathers in the Truth maintained so nobly before a rebellious persecuting world. Thus, while God and we are believed to be in store for the member this religious Society, if on our part we are in the obedience which is of faith, and if the offers and visitations of the Holy Spirit yet if we reject Him in this way of His offering, and thus do despite to His Spirit of grace in our hearts, it may be consistent with righteousness and justice, to call and to "compel" those from the highway and hedges to come in, that His table may be furnished with guests; and the plaintive lamentation of the Prophet be fulfilled in our awful experience: "The waste places of our fowels shall strangers eat."

For "The Friend" Travels of a Naturalist. (Continued from page 215.)

A wonderful shower of beetles is thus described:

"A black species of *Rhizotragus* (a sort of chaffer) fell down upon the ships in count numbers. Our awnings were spread, and beetles descended continuously all the watch. Numbers were crushed and trod into the deck, leaving greasy patches which it required the carpenter's plane to obliterate. They afforded constant excitement to "Be a beautiful retriever, who passed the night chasing and crunching them between his teeth." In the morning heaps of the dead wounded were swept into corners and dug out. Coal-black lines, following the rip of the tide, stretched away for miles down Gulf formed entirely of the dried bodies of these insects."

Their vessel proceeded northward to Japan Islands.

"We arrived late in the evening off I Bama, in the Oki Islands, a very charming little group not far from the shores of Nippon. As we neared the anchorage the lights on

* Wm. Penn, in his "No Cross, No Crown," says, "The unfortified christian and the heathen are of the same religion."

er were so numerous and brilliant, and alling about in such an exceedingly ignis kind of manner, that a boat was sent the interpreter to ascertain the cause of an unusual spectacle. On his return lah' reported that the maritime will-o'-wisp belonged to fishing-boats, hundreds hich, he said, were out looking for 'Ikame,' an appellation which, after some circloction, and many elaborate attempts at anation, we ascertained meant simply 'ids.' The lights were produced by birch-kindled in small kinds of gratings with wooden handles. The flame of the fiery clear and vivid, and the gratings are over the boats to attract the squids, e, I find, are a species of sea-cuttle, which return in its habits, and which swims rapidly near the surface in immense s. They are taken by a method which own among fishermen as 'jigging.' The is made of iron, and consists of a long s surmounted by a circlet of small red hooks. These cuttles are famous article of diet, both with the Japanese and Chinese and are carefully dried for the market, they are sold in vast quantities. They lo extensively used as bait in fishing for and other large fish of the mackerel which abound along the coast. The is strung through its entire length, the of one of the long tentacular arms arctwing and concealing the hook.

near Hakodadi there is a small fishing exclusively devoted to the capturing of these nutritious Cephalopods. Hundreds of thousands may here be seen drying in the open air, suspended along rows on lines, which are raised on about six feet from the ground, all very cleaned and kept flat by means of bam-tretchers. The open spaces are filled these squid-ladle lines, and before all ones in the village, squids everywhere a novel kind of screen. The Japanese of the place is Shai-Sawati, but by us always called 'Squid village.'

Among the curiosities obtained in Japan, two Japanese bears, which were a source of amusement to the sailors. "They were docile, but their motto seemed to be 'no tangore;' for when teased they bite their tormentors severely. They are christened *Urso Major* and *Urso Minor*, the former being the favorite. Major more wilful and mischievous than Minor, more frequently in hot water. He was verse to poultry, and would boldly ab-fowls from a Japanese covered basket or a moment in his way. He once d with one screaming bird in each paw, orth with pursued, and, not without an ant protest, was made to relinquish his On another occasion, seizing his oppo-ity, he clawed a favorite bantam out of p, and immediately consumed it on the dder. He would walk down the accommoda- score nearly as big as himself. He once d overboard, and swam to some native ying off the ship, into one of which he lo, to the consternation of the old wo- possession, who held up boards behind they hid themselves in terror. He was ot on board and tied up for his bad be- not, however, without remonstrances ies in a peevish voice, like that of a

cross boy exclaiming, 'Don't! don't!' He was partial to sweets, and when the mouth of a jam-pot with which he was presented proved too small for him, he seized hold of the coxswain's hand, and made of it a cat's paw to abstract the tempting contents. He had rum and sugar given him by a 'monkey' of a boy as mischievous as himself. He partook of it, and soon became very intoxicated, staggering about the deck, and finally falling to the ground insensible. With careful treatment, however, he was restored, even after his life had been despaired of. On one occasion he disappeared. He was supposed to have fallen overboard, or to have swum ashore. His description was made out, and a reward offered for his recovery by the police. Next day he was found fast asleep in the hammock-netting, and resumed his mischievous pranks, in perfect ignorance of the trouble and anxiety he had caused his friends."

On their homeward voyage, "at Ascension, while the ship's company were fishing from the maindeck ports, some excitement was occasioned by one of their hooks being seized, apparently by a large fish. The imaginary prize was heavy, and when rapidly hauled up, appeared to the amused bystanders in the form of an old iron tea-kettle without a spout! Curiosity induced a sailor to peer into the interior, when he observed two eyes of some strange animal, undreamed of in his philosophy, gazing at him. Attempts were made to get him out, but the occupant could not be dislodged. As persuasion was of no avail, a bold hand was introduced, when it was immediately seized by a fleshy coil, and retained by a hundred suckers. The hand was forcibly withdrawn in terror, while the great eyes continued to stare upwards from the place of security where it had settled itself. The kettle with its mysterious lodger was now submitted to the doctor, who was expected to solve all questions respecting this strange phenomenon. While pondering on the best means of dislodging the creature, he unexpectedly relieved us from the dilemma by suddenly making his exit, and shuffling rapidly along the deck in a grotesque and startling manner, revealing at the same time the form and action of a great warty cuttle-fish. Alas! poor *Octopus rugosus!* He was at once caught, and very soon became a specimen in spirits."

For "The Friend."

Reasoning vs. Duty.

There is evidently in some parts of our religious Society, an increasing departure from the testimonies which our forefathers in the Truth felt to be laid upon them to bear. Customs and practices which they felt to be either wrong in themselves, or of evil tendency in leading the mind away from the cross, and exposing the individual to increased temptation and danger, and which they therefore felt themselves called upon to avoid and to bear testimony against by the powerful preaching of a consistent example, are now practised by many under our name, and defended by specious reasoning; and the efforts of honest-hearted Friends to preserve their fellow members within the safe enclosure of primitive example and practice, are partially neutralized by the influence and even persuasions of those who have too much thrown aside the restraints of the cross.

The experience of all ages has shown that

it is an easy matter to find reasons for any course we wish to pursue, however much that course may conflict with the impressions made on our mind by the Divine hand, and which it is our duty faithfully to obey. Thus it was that in the garden of Eden, Evey was tempted to disobey the express command of the Almighty, and from that day to this her descendants have too often fallen into the same snare. We wish neither to speak nor to feel unkindly of those over whose course in these things we mourn, but we feel persuaded that they are in error, and that they do not foresee the consequences which will follow from persistence in their present path. Take the testimony of the Society against music and consider the reasonings that are advanced. We are told that a musical sound is the result of rhythmical vibrations of the air; that it is a matter of scientific inquiry, and that there is nothing intrinsically wrong in it. From these premises, which are true, the false conclusion is drawn that we may innocently and properly introduce musical instruments into our families, teach our children the use of them, and adopt musical entertainments as a part of the allowable means of recreation. If we apply the same line of argument to other subjects we may say, (and many professors of christianity do say) that dancing is only the practice of certain regulated motions of the body, that these motions are innocent in themselves, and that therefore we may innocently participate in the gaiety and frivolity of the ball-room. Theatrical exhibitions, if may be contended, are only efforts to convey to the mind, by physical representations, historical and other events in a more striking and impressive manner, than could be done by simple narration; and therefore are not necessarily to be condemned. This line of argument may even be made use of by one who is seeking for an excuse for undue indulgence of his physical appetites and passions. Thus we may, step by step, fritter away all the restraints which Divine Providence has seen meet to place around us, and altogether throwing aside the cross which, in our fancied superiority of intellect, we have discovered to be no longer needful, we may attempt to widen the strait and narrow way, to make it broad enough to accommodate all our habits, and still imagine that we are treading in the path in which the ransomed and redeemed of the Lord are to walk.

The wisdom of this world is foolishness with God, and whenever we attempt by a process of reasoning to set aside those testimonies which the Head of the Church laid upon this people to bear, and which He has from one generation to another confirmed as duties on the hearts of its faithful members, we may feel assured that we are deserting the one infallible guide, and entering a devious path of which we know not the ending.

We apprehend that some Friends have not sufficiently considered that things innocent in themselves may be wrong for us, if their tendency is to lead the mind from that submission to the cross of Christ in which only is safety, and to open the way for wider and wider departures from the self-denying path of the christian.

Life in the Mammoth Cave.

Dr. Forwood, in his recent work on the great Mammoth Cave of Kentucky, says: "A peculiar kind of rat is sometimes found in

Crogan's Hall as well as in other parts of the cave, which is a size larger than the Norway rat. The head and eyes resemble those of a rabbit, and the hair on the back is like that of a gray squirrel, but that of the legs and abdomen is white.

"Cave crickets and lizards are also found here. The cave crickets are about an inch in length. The body is yellow, striped with black. They are provided with large eyes, but seem to direct their course mainly by their antennae, or feelers, which are enormously developed. They are sluggish in their movements, and, unlike other crickets, observe an eternal silence.

"The cave lizards vary in length from three to five inches. The eye is large and prominent. The body is yellow and dotted with black spots, and is semi-transparent. They are sluggish in their movements.

"The abundance of animal life at this point (Crogan's Hall) would seem to indicate that there is a communication with the surface of the earth at no great distance."

Bats are found in all parts of the cave, we are told by Dr. Wright, but most abundantly in Audubon's Avenue.

Professor Silliman says: "There are several insects, one of which is a sort of cricket with enormously long antennae. Of this insect, numerous specimens will be found among the specimens sent to Professor Agassiz. There are several species of coleoptera, mostly burrowing in the nitre-earth. There are some small water insects also, which I suppose are crustacean. Unfortunately, these vials, containing numerous specimens of these insects, were lost with my valise from the stage-coach, and I fear will not be recovered.

"The only mammal, except the bats, observed in the cave, is a rat, which is very abundant, judging from the tracks which they make, but so shy and secluded in their habits that they are seldom seen. We caught two of them, and, fortunately, they were male and female.

"The chief points of difference from the common rat, in external characters, are in the color, which is bluish, the feet and belly and throat white, the coat, which is of soft fur, and the tail also thinly furred, while the common or Norway rat, is gray or brown, and covered with rough hair. The cave rat is possessed of dark, black eyes, of the size of a rabbit's eye, and entirely without iris; the feelers, also, are uncommonly long. We have satisfied ourselves that he is entirely blind when first caught, although his eyes are so large and lustrous."

"By keeping them however, in captivity, and in diffuse light, they gradually appeared to attain some power of vision. They fed on apples and bread, and will not at present (soon after capturing them) touch animal food. There is no evidence that the cave rats ever visit the upper air, and there was no one who could tell me whether they were or were not found there by the persons who first entered this place in 1802."

Dr. Forwood thinks that the inability of the rat to see when first taken from the cave, was owing to the unaccustomed, blinding light by which it was examined. It seems that the eye of the animal when gradually accustomed to light, became adapted to the new medium. It is inferred that the organs of vision were originally in a perfect condition, and afterwards adapted to the state of darkness in

which the animal existed; which may be conjectured to be a transitory state to a total obliteration of the visual organs, as has been accomplished in the fishes.

"Bats are numerous in the avenues within a mile or two of the mouth of the cave, and Mantell thinks he has secured at least two species. Several specimens are preserved in alcohol. It was not yet quite late enough in the season when we were at the cave, Oct. 16th—22d, for all the bats to be in winter-quarters, as the season was very open and warm. Still in the galleries where they most abound, we found countless groups of them on the ceilings, chipping and scolding for a foot-hold among each other. On one little patch of not over four or five inches, we counted forty bats, and were satisfied that one hundred and twenty at least were able to stand on the surface of a foot square; for miles they are found in patches of various sizes, and a cursory glance satisfied us that it was quite safe to estimate them by millions. In these gloomy and silent regions, where there is neither change of temperature nor difference of light to warn them of the revolving seasons, how do they know when to seek again the outer air when the winter is over, and their long sleep is ended? Surely, He who made them has not left them without a law for the government of their lives."

For "The Friend."

Friends' Freedmen's Association.

Danville, Va., 3d mo. 1st, 1871.

It is often difficult and trying, to tell where to stop in administering to the wants of the poor around us, so many are needy, and some dependent for almost all they eat, wear, and wear themselves with. . . . The awful condition of many renders it impossible to prevent suffering this cold, wet time, in their open shanties. The measles and whooping cough still prevail, deaths are frequent. . . . We cease to be shocked by funeral processions—more are buried without any funeral than with—sometimes the remains are taken in wagons; sometimes on a man's shoulders. Robert Lee, the colored grave-digger, just now carried a corpse past our door on his shoulder, he was followed by four women. On being asked how old it was he turned to its mother, who was "toting" a few rough pieces of boards to put over it, for an answer. . . . Care will be taken to keep the teachers supplied with the means to feed the poor and to supply their needs. ALFRED H. JONES, Supt.

For "The Friend."

A Boarding House for Friends.

Is it practicable? That the want of such an establishment in Philadelphia is sensibly felt by Friends residing in the country, there can be no doubt. How it is to be attained is not so clear. If there is any fund now within the control of the Yearly Meeting, left for the purpose of aiding or inviting in any way the attendance of Friends from the country to the annual meetings of the Society, would not the erection of suitable buildings, and opening a house where quiet and comfortable accommodations could be had for a moderate and just compensation, be clearly within the scope and object of such a donation or legacy? This, it is presumed, would depend upon the technical language employed by those who made such bequests or donations, and which could readily be ascertained by submitting the same

to competent legal authority. Such an institution would not only be a great accommodation to those who wished to attend Yearly Meeting, and have not relative friends with whom to make their home also for those who at other times visit city on business of the Society, or their private business, and who much desire a resting place. Another and very important would be supplied to young men, those who go to Philadelphia to learn a trade, and those who in profitably conduct their farm operations, find it necessary to tend market once or twice during the year throughout a great part of the year, which in most instances, necessitates taking lodgings at public houses, where evening is too often spent in the bar—subjecting them to society and scenes, are neither profitable nor we hope tasteful many of them. A COUNTRY FRIEND

For "The Friend."

Many amongst us of the present day peer not to comprehend the difference between love and unity; believing that because we cannot unite with them, we are devoid of Christian love, which is far from being the case; for if any thing, they love and unite the most over those they cannot unite. He who was perfection itself, went over Jerusalem: was it because He loved her not verily, but for His disunity with her she refused to be gathered, therefore mourned over; for if He had united with rejoicing would have escaped His lips of account.

Our hearts should be filled with love to the whole human family, earnestly desiring their restoration and final redemption when we meet with those who are a household of faith, we cannot but unite with them, for they are branches of the tree in which the real unity subsists; for the one concerned to build up the church, and to promote Christ's kingdom, and whose improvements are, "come have fellowship us, for our fellowship is with the Father and with His Son, Christ Jesus." Therefore none conclude, that love hath no room in hearts, or that we are not united with all, for because we cannot unite with all, for examine the 13th chapter of our Holy Revelation, "By this shall all men know that I am His disciples, if ye have love one unto another." Was after the departure of our Holy Redeemer, and He who knew all things that those remaining were His disciples indeed, some of whom went to prison and death for His sake. Who among us are prepared to follow in their footsteps?

THE FRIEND.

THIRD MONTH 11, 1871.

In reflecting on the proneness of man as exhibited in history, to satisfy then with yielding homage to something of our own creation, either mental or manual imaginary deity, or some tangible or sense their religious sensibilities, or their devotional instincts; and observing present condition of what is designated Christian world, we are induced to think that the disposition to worship the e-

ad of the Creator, is not yet eradicated, need not much less discernible, among us in the present era of boasted civilization than it was in some, called dark ages, have preceded it. We see the same disposition to idolatry, to substitute some secondary cause, and exclude a full and practical faith in the omnipresence and all-sustaining directing power of the Creator in man's erration and guidance, and in the immense and complicated works of his Almighty Father. Not but that there is a verbal acknowledgment of the being of a God, his divine attributes and perfection; but we can discover the same time the natural bias to place far off from the affairs of the world he made, and to shrink from recognizing his ediate notice and judgment of the conduct and opinions of men.

Those who take the time and trouble to obtain some knowledge of the progress of science and the theories broached by or in vogue among the scientists of note, we think can hardly be sensible that, to say the least, the theory of the latter is towards materialism; hence the belief boldly avowed by a leader of the popular schools, that life and thought are nothing more than inherent properties of matter, and, like light and heat, are brought into action by accidental circumstances.

There is that mysterious something which animates the physical system, stimulates and directs all the forces and functions of that system to an harmonious, individual end, has hitherto baffled the keenest intellect, and has defied the profoundest research to detect in or of its consists, or what that is which divides matter and death.

We do not profess to be sufficiently familiar with the theories and reasoning of those who have sought to be the more successful discoverers in natural science to attempt to exhibit them in their suitable place. But from the perusal of some of their more popular publications it is evident, that unwilling to confess the incapacity of their powers to unravel the mystery of their own existence, and having accomplished much by their intellectual labors in demonstrating the elements of the natural world, the laws which govern their nations, and the forms; and forces deduced thereby, they have deluded themselves with, and are trying to reconcile the human mind, to receive the assumption, that such as heretofore we have had no adequate explanation of the relation of life and matter, but have been satisfied with some conclusions, drawn from premises, admitted to be scientific—meaning the theories—and as we know little or nothing of the mind but as they are connected with the physical organization, therefore it is rational to conclude they are the result of that organization, and consequently must be thematerial in their nature. Thus to use the language of Huxley: "Life is the result of the molecular forces of the protoplasm which they are. It is thought is the expression of molecular changes in this life-stuff, and is as a function of matter as motion is." It is never more to be the effect on the religious of a mind whose consciousness and rationality have resulted in such unsupported conclusions, we do not know, but we apprehend there can be little doubt, that if once discredited in the popular belief, they would result in general atheism.

The theory of "Selection and development,"—which is now having its day of learned discussion and supposed demonstration, as many such theories have enjoyed before it,—even where not claiming that "life is an inherent property of matter," but admitting a Supreme Author of life, who set the original creative power in motion, and ordained the laws by which it was to work, dismisses Him from further care or action, and claims all animated nature to be the product from the primordial cells, developing and selecting the various organisms, so as to modify previous forms of existence, and to create new ones. The account of the creation generally accepted as having been revealed to Moses by Him who called it into existence by the word of his power; of the formation of man out of the dust of the earth, and breathing into him a living soul, thus making him an heir of immortality; is either scoffed at as an eastern myth, unworthy the acceptance of men of science, or is said not to have been intended to record scientific truths, and therefore should not be brought into competition with the discoveries of the learned. Man, instead of having been created a little lower than the angels and crowned with glory and honor, to have dominion, as God's representative, over all inferior beings, is represented as occupying no higher rank than an improved ape; possessing the organism and intellect he now has, not as gifts immediately bestowed by an almighty and beneficent Father, but worked out by the development and selection of the perishing beasts whom he must claim as his ancestors. Thus belief in the divine inspiration of the men who wrote the scriptures, and in so much of the contents of the latter as may contravene what science claims to have divulged, is virtually destroyed; and, a system built up by the deceptive reasoning of fallible man, is substituted therefore; by which the Almighty is resolved into little more than a mere lawgiver, who, millions of years ago, after the initial creation of matter and prescribing rules for its action, left the primordial protoplasm to work out such results as accident might stumble on, or surrounding circumstances direct under the laws of its being; and to this, we are told, is to be ascribed the innumerable variety of living beings.

We may readily admit there is much of truth in the theory of "selection and development," and that valuable knowledge has been gained in prosecuting the investigations and arranging the facts on which it is predicated; but its authors, and the extreme, supposititious conclusions they advocate, add another to the many preceding evidences of man's infirmity, in his fallen condition, and, with all the knowledge he may attain in searching after truth, how incapable are his natural powers to secure him from fatal error, when attempting to comprehend and explain things, placed by his Maker, beyond the reach of his finite understanding. And yet while he looks with contempt on what he may brand as superstition in the more unlearned, his own pride and self-conceit may be the true causes why he does not accept, in childlike faith, as they have been revealed, the very truths which he is toiling after.

In this age of high intellectual culture, when we have become accustomed to analyse and give reasons for almost every process of nature, and every circumstance of life; when

the learned are restless and dissatisfied until they can trace every effect to its supposed cause, and bring every phenomenon in subordination to some one or more of what we call the known laws of nature, there is a strong tendency in many leading minds, as we have already said, under the influence of that "knowledge which puffeth up," to take very narrow views of the necessity for the interference of Omnipotence to keep our globe, and its varied living inhabitants in being and action; and by the multiplication of secondary causes, to thrust the Almighty so far back from the world we find around us, that his agency is hardly acknowledged. He alas! seems to be unseen and unfelt; and in this, as in other things, the theories built up by men's boasted powers, become the objects of their idolatry.

How little can we recognize in the labors and reasoning of many now making much noise in the world of science, that evinces regard for the religion of Christ: how little that betrays concern for the effect produced on their admirers, by the imputation of their doubts and unbelief, and by teaching them that their actions are determined by their mental and physical constitutions.

Opposed to this is the simple faith and reverence, the filial confidence and trust, produced by the christian religion in the heart of whoever receives and lives up to it. However accomplished a scholar he may be, he does not forget, in the search after truth, that even in the works and workings of nature, there are secret things which belong unto God, and things divinely revealed which his finite reason cannot penetrate or explain. He knows that the providence of the Creator is not occasional or exceptional, but is constantly extended over the whole creation; of his wisdom and power, as the loving care of a father over his off-spring; that He hears and answers the young ravens when they cry for food, and not a sparrow falls to the ground without his notice. He can take delight in investigating the secrets of nature, but it is in the spirit of the perfect man of old, "Ask now the beasts and they shall teach thee, and the fowls of the air and they shall tell thee; or speak of the earth and it shall teach thee; and the fishes of the sea shall declare unto thee. Who knoweth not in all these that the hand of the Lord hath wrought this? In whose hand is the spirit of every living thing, and the breath of all mankind." Thus to use the language of a christian poet:

"The soul that sees Him, or receives subdued
New faculties, or learns at least to emulate
More worthily the powers she owned before,
Observes in all things what, with stupid gaze
Of ignorance before, she overlooked;
A ray of heavenly light gilding all forms
Terrestrial, in the vast and the minute;
"The man begins to gaze on the
Who gives his lustre to the insect's wing,
And wheels his throne upon the rolling worlds."

SUMMARY OF EVENTS.

FOREIGN.—Peace has been made between Germany and France. On the 28th ult., President Thiers informed the National Assembly of the conditions on which peace might be obtained, which were briefly that France must cede one-fifth of Lorraine, including Metz and Thionville, and all of Alsace, except Belfort, and pay an indemnity of five thousand millions of francs. One million this year, and the balance in three years. The German troops will gradually withdraw from French territory as the payments are made. The Committee of Consultation, which accompanied Thiers and Favre to Versailles, made their report, unanimously recommend-

ing the ratification by the assembly of the preliminaries of peace. After a short suspension, in which the president terms were proposed by the deputies from Alsace and Lorraine and some others, and more time asked for deliberation, Thiers energetically appealed to the Assembly to lose no time. It was necessary to act without delay in order to spare Paris from great suffering.

The Assembly also voted the ratification of the preliminary conditions of peace by 246 ayes against 107 nays.

On the 3d inst. the Emperor of Germany sent a dispatch from Versailles to Berlin, announcing that he had ratified the conditions of peace which the French National Assembly had accepted. While the ratification of the Assembly in regard to peace was undecided, Paris was occupied for a few days by a body of 30,000 German troops. The Germans entered unopposed, and found the city silent, deserted and in mourning in that portion which was assigned for their occupation. They immediately after the final signing of the treaty orders were given for the withdrawal of the German troops, and on the fourth not one of them remained in the city. The forts on the left bank of the Seine will be delivered to the French in a few days, as soon as the Germans have completed the removal of their stores and property. The president stated the object of the article in the treaty of peace is to the effect that the contributions of money which have been imposed in various places by the Germans are to be remitted. A Versailles dispatch says, the French indemnity is payable in three instalments, viz: one thousand millions in 1872, two thousand millions in 1873, and three thousand millions in 1873. The interest is only payable on the last instalment, from which the proportion of the debt appertaining to Alsace and Lorraine, and the cost of the railways in eastern France are to be deducted.

The French government has ordered the immediate recall of the military national guard to their homes. The Assembly unanimously voted a resolution deprecating the fall of the Empire, and stigmatizing Napoleon as the author of the misfortunes of France.

The German occupation was highly resented by the citizens as a great indignity, and there were acts of opposition. On the 1st, President Thiers issued a proclamation to the people of Paris, appealing to their patriotism and wisdom for the preservation of order. Famine, he says, compelled the surrender of the forts and obliged the government to open negotiations. They were obliged to obtain the extension of the truce by consenting to a partial occupation of Paris.

The Duke de Broglie has been appointed ambassador from France to England.

A Versailles dispatch of the 5th says: The Second army has commenced its march homeward. The headquarters of the Emperor and von Moltke will be removed from Versailles on the 7th, and Bismarck will soon follow the Emperor.

A Berlin dispatch says, Thiers declines to make a treaty of commerce with Germany, on the ground that it is necessary to restore the equilibrium of the United States, and to restore its equilibrium by high tariffs. The Prussian Cross Gazette of the 5th says, that according to a communication received here from Versailles, the Emperor returns to Berlin in eight days. Frederick Charles has been appointed Commander in Chief of the army of occupation in France, with his headquarters at Mainz.

A Berne dispatch of the 4th says, the Swiss Federal Council has arranged with the French government for the return of Bourbaki's army, and it will commence to move into France on the 8th inst. The transfer of the entire army will take ten days.

The Austrian financial statement for 1870, is more favorable than was expected. The revenue exceeded the amount estimated, and left a cash balance of forty million florins.

The Emperor of Russia, in a letter to the Emperor of Prussia, informs him, that peace had been concluded, and states the terms; also that Prussia remembers that Russia prevented the spread of war. The Czar replied that he shared in the joy felt by his illustrious brother, and hoped for a durable peace.

The British House of Commons has passed the bill authorizing the dissenters in parish churches to be buried without the burial service. Sir Robert Peel stigmatized Lord Lyon's course as ungenerous and cowardly in deserting the British population in Paris during the siege, when he was entreated by the French government to remain. He expelled the courageous Lord Lyons was defended by Gladstone and Enfield.

The Times publishes a special dispatch from its Versailles correspondent, who says the prescribed limits of

France are being rapidly evacuated by the German army. The movement is conducted quietly and with admirable order.

The Emperor goes this week to Ferrieres, and will review the corps during his journey.

Mont Valerien and all other forts will be evacuated on the 7th, Bosen on the 12th, and the left bank of the Seine on the 15th inst.

A corps of 40,000 French soldiers from the provinces are now marching into Paris, where they replace troops of the line and Mobile Guards, who commence to leave the capital on Monday. Arrangements are being made by the officials of the French and German armies which prevent the Germans from encountering the French in their movements both in and out of Paris.

The Emperor Napoleon is hourly expected at Chiselbrunn, which is still the abode of the Eugenie Principess.

Negotiations for a definitive treaty of peace will commence shortly at Brussels. Although the main points are now settled, there are many details still to be adjusted, which may occupy considerable time. The French prisoners in Germany will remain until proper arrangements are made for their return to France.

London, 3d mo. 6th. Consols, 113. U. S. 5-20's of 1870, 100.

Liverpool.—Uplands cotton, 7 1/2; Orleans, 7 1/2. Red winter fall wheat, 11s. 8d. Spring wheat, 10s. 10d. a 11s. 5d. per cental.

UNITED STATES.—The total debt of the United States on the first inst., less amount in the Treasury, was \$2,328,317,960. The debt on the 1st inst. of 1870, was \$2,177,960, during the past month, and \$1,177,919,636 since 3d mo. 1st, 1870; the decrease since 3d mo. 1st, 1869, has been \$204,754,413. Of the total debt \$420,331,443 bears no interest, consisting of demand and legal-tender notes, fractional currency, and gold certificates of deposit. \$2,328,317,960. The debt in Philadelphia last week was 306. There were 54 deaths from consumption; 20 inflammation of the lungs; 18 debility; 12 disease of the heart; 12 inflammation of the brain; 14 old age. The mean temperature of the Second month, per Pennsylvania Hospital records, was 33.95 deg., the highest 34.9, and the lowest 7.50. The amount of rain 3.08 inches. The average of the mean temperature of the Second month for the past eighty-two years, has been 30.79 deg., the highest mean during that entire period occurred in 1857, 41.03 deg., the lowest 24 deg., in 1815, 11.09, 1829, 23. The mean temperature of the winter months of 1870 and 1871, appears to have been 35.58 deg., and the average of the winter temperature for the past eighty-one years 31.50 deg.

The third session of the 41st Congress closed on the 4th inst., at the period fixed by law for the assembling of the 41st Congress. In the Senate the following new Senators came forward and took the oath of office: Anthony, of Rhode Island; Caldwell, of Kansas; Cragin, of New Hampshire; Frelinghuysen, of New Jersey; Ferry, of Michigan; Hitchcock, of Nebraska; Kelley, of Oregon; Logan, of Illinois; Morrell, of Maine; Robertson, of South Carolina; Stevenson, of Kentucky; Sausbury, of Delaware; Cooper, of Tennessee; Wilson, of Massachusetts; Wright, of Iowa; Winans, of Minnesota, and West, of Louisiana.

The new House of Representatives convened, like the Senate, at 10 o'clock, on the adjournment of the 41st Congress, at 2 o'clock, on an independent vote of 243, answered to their names. The house then balloted for Speaker, and James G. Blaine, of Maine, was chosen by a vote of 126 out of 219 cast. After choosing a Clerk and other officers, a concurrent resolution for an adjournment sine die on the 8th inst. was agreed to, and the House adjourned until the 7th inst.

The Indian Appropriation bill, which finally passed both Houses of Congress, contained the following provision: "Hereafter no Indian nation or tribe within the territory of the United States, shall be acknowledged or recognized as an independent nation, or as entitled to treaty stipulations with the United States may contract by treaty: Provided further, That nothing herein contained shall be construed to invalidate or impair the obligation of any treaty heretofore lawfully made and ratified with any such Indian nation or tribe."

The committee on the two houses on the right of the Senate to originate a repeal of the income tax, failed to agree, thus carrying the matter to another Congress. Among the House bills which failed to receive the concurrence of the Senate, were the anti-polygamy bill, an act to prevent polygamy in animals in transit by railroads, &c.; an act in relation to additional bounties; an act to charter the Cincinnati and Southern-Railway and others.

The Markets, &c.—The following were the quotations on the 6th inst. New York.—American gold, 111.

U. S. sizes, 1881, 116; ditto, 1867, 111; ditto, 10 per cent, 109. Superfine, 40c; 36-25 a \$6.70; brands, 77 \$11. No. 1 Chicago spring wheat, \$1 amber western, \$1.65; white southern, \$1.80. ANNUAL MEETING OF THE CONTRIBUTION TO THE ASYLUM.

A Stated Annual Meeting of the "Contribution to the Asylum for the Relief of Persons Deprived of Use of their Reason," will be held on Fourth-day 15th of Third-month 1871, at 3 o'clock, P. M., at Street Meeting-house, Philadelphia.

WILLIAM BRETHERTON, *Clerk*

WESTTOWN BOARDING SCHOOL.

The Summer Session opens on Second-day, 3d month 1st. Parents and others intending to send their children, are requested to make early application to AARON SHARPLESS, Superintendent, (at Street Road P. O., Chester Co., Pa.) or to CHARLES ALLEN, Treasurer, 304 Arch Street, Philadelphia.

WESTTOWN BOARDING SCHOOL.

Wanted a Teacher for the Boys' first mathematics. Application may be made to Thomas Conard, West Grove, Chester Co., Dr. Charles Evans, 702 Race St., Philadelphia Geo. J. Scattergood, 413 Spruce St.

FRIENDS' BOARDING SCHOOL, TUNNERS, NEW YORK.

A Teacher is wanted in this Institution. Application may be made to

Sammuel Morris, Olney P. O., Philadelphia. James B. Bette, 151 North Tenth St., Philadelphia Geo. J. Scattergood, 413 Spruce St., Philad.

WESTTOWN BOARDING SCHOOL.

Wanted, a Friend suitable for the position of G. n. n. Application may be made to Samuel Bette, 151 North Tenth St., Philadelphia Joseph Passmore, Goshenville, Chester Co. Elizabeth H. Evans, 322 Union St., Philad. Martha D. Allen, 228 Pine St.

FRIENDS' BOARDING SCHOOL FOR INFANTS, CHILDREN, TUNNERS, NEW YORK.

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm connected with it. Application may be made to Ebenezer North, Marshallton, Chester Co. Thomas Wistar, Fox Chase P. O., Philadelphia Samuel Morris, Olney P. O., do. Joseph Scattergood, 413 Spruce St., do.

DIED, on the 9th of Eleventh month, 1870, at age, 79 years, Wm. H. B. a member of Upper Spring Monthly and Particular Meeting.

—, at her residence, near Pennsville, Morgan Ohio, on the morning of the 3d of First month, SARAH ANN HOLLINGSWORTH, aged 67 years, a member of the same Monthly and Particular Meeting. Heavenly Father, have pity on the workman thy holy hand and blot out all my sins, and to home to thyself, and be with me in passing through valley of the shadow of death."

—, at Richmond, Indiana, on the 5th inst. about 79 years, Wm. H. B., formerly Editor Irish Friend. He was sincerely and firmly attached to the principles of Friends as professed by our predecessors in the Truth, and died peacefully in it, and in the faith and hopes of the Gospel Saviour whom he endeavored to serve through trials and vicissitudes of time.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XLIV.

SEVENTH-DAY, THIRD MONTH 18, 1871.

NO. 30.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two Dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Single copies, when paid quarterly in advance, five cents.

THE EDITORS OF THE FRIEND:

Having carefully read the Journal of our friend William Evans, it seemed to me there are subjects so fully treated and exemplified in it, that I might do the good cause twice, by such a selection from it as would bring these subjects out more strikingly than they seem to be, as scattered throughout the work. I mean the early influences of the Holy Spirit upon his heart; his moderation in the pursuits of the things of this world, and the implicitness of his obedience to the promptings and guidance of his Divine Master, in his services as a minister. If the parts I have selected meet your approbation, I shall be glad of their insertion in "The Friend."

A CONSTANT READER.

For "The Friend."

The Journal of William Evans.

For the purpose of commemorating the mercy and goodness of God extended to me in my early life, and to encourage others to hold to the visitations and convictions of his Holy Spirit, that through obedience thereto they may enter the kingdom of our Lord Jesus Christ may read and prevail, I have believed it right in my mind, to preserve memorandums of his dealings with me, and to leave them as a testimony to his unfailing goodness and faithfulness to the children of men who love, obey, honor and put their trust in Him alone. Especially that my dear children, should they survive me, may be drawn more and more to dedicate themselves to the God of their fathers, and walking in the Truth all the days of their lives, become instrumental to the divine hand, in holding up to others the purity and spirituality of the religion of our Lord Jesus as He, by his Holy Spirit, revealed it to the holy apostles, and those whom He made ministers and promulgators of it at the rise of our religious Society. I believe that George Fox, Robert Barclay, Isaac Pennington, William Penn, George Whitehead and many others, were divinely prepared and appointed by Christ Jesus, the minister of the sanctuary and true tabernacle which God has pitched and not man, for reviving and actually preaching the same gospel of life and salvation, in its original purity and clear-

ness, which had been much lost sight of through a long night of apostasy. And though the spirit of anti-Christ, and some who are more or less darkened and deluded by it may seek to obscure the spiritual nature of the gospel, as professed from the beginning by Friends, yet a blast will be brought over all such attempts in the Lord's time, and He will raise up from generation to generation, living witnesses of the coming and power of the Lord Jesus in his spiritual appearance in the souls of his children who, as they are faithful in the day of small things to the unfoldings of his Spirit, will be qualified in living faith to call Jesus, Lord and Saviour, both from what they have experienced of his redeeming power in their hearts, and from a true and certain belief of all the doctrines and precepts of the gospel as recorded in the Holy Scriptures."

This begins the instructive account which our friend William Evans has left of his religious experience and his gospel labours. The volume is as interesting as it is instructive, and will hold its place beside the journals of Thomas Story, John Richardson, John Churchman and Thomas Scattergood, as long as the doctrines of our Society endure. It is a large book, and the selections may be of service to those who have not the leisure or opportunity to read the whole.

William Evans was born in Philadelphia, on the 5th of 10th mo. 1787, was blessed with religious and wise parents, who watched over him with unceasing anxiety. He was sent to Westtown Boarding School at the opening of that Institution, and remained there nearly three years. After his return he was apprenticed to the drug business, and thus describes one of his early temptations, "One fine winter evening my master's sleigh and horses having been out, he told the apprentices we might take a ride, and accordingly with one of these young men, we set off, and rode out a few miles to the banks of the Schuylkill, where this young man proposed we should go into a tavern and get something to drink. This was a new proposition to me, upon which I hesitated, having never been accustomed to go to taverns or drink any thing like ardent spirits. We got out of the sleigh, but I did not move from the side of it, and while hesitating, the countenance of my father presented to my view, as though he had suddenly appeared before me, which immediately conveyed the idea of disapprobation, and I gave my voice against going into the tavern, and we accordingly resumed our seats and rode home. This was an evidence of the watchful care of the unslumbering Shepherd of the sheep, in bringing to my mind the conviction, that were my father present, I would not dare to go into such a place, and further shows the importance of the circumspect deportment of parents, before their children, and of the applicability of salutary restraint towards them."

Notwithstanding he had been carefully educated in the principles of the christian religion, "so far as I can remember," says he, "I had never yet had a full sense of my lost condition, and the necessity of an entire change of heart, in order that I might be brought into his favor, and sanctified so as to be fitted for spiritual communion with Him. My father frequently read the Bible to us, as well as other religious books, particularly on First day. One evening when collected for that purpose, I read to the family William Leddra's epistle, written the day before he was executed. It had a very powerful effect on me, tendering my heart in an unusual degree, and bringing me to trembling; under which I was favored with an extraordinary visitation of heavenly love, producing a sense of my sinful impure condition, and fervent desires after holiness—that I might become changed, and hereafter live a life of acceptance with my Heavenly Father. I had never had the same view of myself, nor felt the same willingness and desire to dedicate myself to Him as at that time. The savor of it continued many days. The light of Christ shone clearly into my heart; showing me that many of my habits were contrary to the Divine purity and must be abandoned—that many of my words were light and unsavory, and a guard must be placed at the door of my lips. Love flowed in my heart, towards my gracious Almighty Parent pre-eminently, and then towards all men as creatures of the same all-powerful hand. I desired above all things to be with Jesus, and to know Him to continue with me, and at that time it seemed as if He did condescend to manifest himself in a clear manner, so that his countenance was lovely, and I walked under his guidance and protection, with great delight. It was the baptism of repentance, the day of my espousals—the beginning of a new life; and while favored with these heavenly feelings, I thought nothing would be too hard to part with, in obedience to the will of my Saviour.

"The heavenly visitation which I have described, was like the baptism of love unto repentance, in which I felt confident, like Peter, of adhering closely to the Master, though others might forsake him. He knew when it was proper to withdraw those sensible manifestations of his presence and support under which I was forming such conclusions, and when the dispensation was changed, and no comeliness could be seen in Him or in myself, I soon found that my constancy would be easily shaken. There was a wilderness travel to pass through, in which I was to feel the strength of my evil propensities, and the subtlety and power of Satan as I never yet had witnessed. The change was hard to endure, and though I strove for a time to maintain the ground I had taken, yet being assailed again and again with temptation, and looking at it instead of looking towards Him who alone could preserve me, I let go my faith in

his unfeeling regard, concluded I might as well gratify myself this once, and when I had yielded, distress came upon me. Having cast away my shield I felt like a poor fallen creature, unworthy of Divine notice and not likely to be again favored with it: Shut up in darkness, the tempter wanted over me, and suggested that it was not worth while for me to attempt to walk in the narrow way, that I would not be able to control and resist my passions and inclinations, and therefore might as well continue to indulge them.

"To be thus overcome at the commencement of the warfare, and so soon deprived of those heavenly sensations which I had enjoyed in the presence and company of the Deliverer of the captive soul, filled me with sadness, and I went mourning on my way. Divine displeasure was administered, but in the midst of judgment the Lord remembered mercy, and through the operation of his blessed Spirit, brought me again into tenderness of heart, and I was humbled under a sense of my unworthiness of his condescension and love towards such a poor rebellious creature.

"I was educated in the belief that divine worship was performed in spirit and in truth, and that the qualification for this essential duty was to be waited for in the silence of all flesh. When in meeting I endeavoured to have my mind gathered from all visible things, and at times was favored with the presence of the Shepherd and Bishop of souls, who is in the midst of those who are met together in his name, sometimes tendering my spirit with his goodness, and at others instructing me in those things that pertain to salvation; and I felt it to be a religious duty, diligently to attend all the meetings to which I belonged as they came in course." pp. 13—15.

(To be continued.)

For "The Friend."

Sheep-shearing in Australia.

The chief agricultural interest in the colony of New South Wales, is grazing and the production of wool for export. In 1859 there were 8,162,671 sheep in the colony, and 2,190,976 horned cattle, chiefly owned by large proprietors, whose holdings of land in many cases include hundreds of thousands of acres. On some of the stations as they are called, a hundred thousand sheep are pastured, beside horses and horned cattle. Since 1859, the number of animals pastured has doubtless greatly increased. The shearing is the great event of the year, commencing in the Eighth month, and continued during the Ninth and Tenth, until the commencement of the summer in the Eleventh month, when the increasing dust and abundance of grass seeds makes its further prosecution inexpedient. A late number of *Littell's Living Age* contains an article from the *Cornhill Magazine*, describing the shearing at one of the stations. The writer says: "Let us give a glance at the small army of working men assembled at Anabano, one out of hundreds of stations in the colony of New South Wales, ranging from 100,000 sheep downwards. There are seventy shearers; about fifty washers: including the men connected with the steam-engine, boilers, bricklayers, &c.; ten or twelve boundary-riders, whose duty it is to ride round the large paddocks, seeing that the fences (wire) are all intact, and keeping a general look-out over

the condition of the sheep; three or four overseers; half a dozen young men acquiring a practical knowledge of sheep-farming, or, as it is generally phrased 'colonial experience,' a comprehensive expression enough; a score or two of teamsters, with a couple of hundred horses or bullocks, waiting for the high-piled wool-bales, which are loaded up and sent away as soon as shorn; wool sorters, pickers up, pressers, yardsmen, extra shearers," &c. The payments at this season are heavy. The shearing alone will probably cost £1,700, the washing £400, exclusive of provisions consumed, &c. Carriage of wool £1,500; other hands from £30 to £40 per week, all of which disbursements take place within from eight to twelve weeks after the shears are in the first sheep. All the needful preparations having been made, the writer describes the commencement of the work as follows: "Half an hour after sunrise, Mr. Gordon (the manager) walks quietly into the vast building which contains the sheep and their shearers—called 'the shed' par excellence. Every thing is in perfect cleanliness and order, the floor swept and smooth, with its carefully planed boards of pale yellow aromatic pine. Small tramways, with baskets for the fleeces, run the wool up to the wool-tables, superseding the more general plan of hand-picking. At each side of the shed floor are certain small areas, four or five feet square, such space being found by experience to be sufficient for the postures and gymnastics practised during the shearing of a sheep. Opposite to each square is an aperture, communicating with a long narrow paved yard, outside of the shed. Through this each man pops his sheep when shorn, where it remains in company with others shorn by the same hand, until counted out. This being done by the overseer or manager, supplies a check upon hasty or unskillful work. The body of the wool-shed floored with battens placed half an inch apart, is filled with wooly victims. This enclosure is subdivided into minor pens, of which each fronts the place of two shearers, who catch from it until the pen is empty. When this takes place, a man for the purpose refills it. As there are local advantages, an equitable distribution of places has to be made by lot. On every subdivision stands a shearer, as Mr. Gordon walks, with an air of calm authority, down the long aisle. Seventy men, chiefly in their prime, the flower of the working men of the colony, they are variously gathered. England, Ireland and Scotland are represented in the proportion of one half of the number; the other half is composed of native-born Australians.

"Among these last—of pure Anglo-Saxon or Anglo-Celtic descent—are to be seen some of the finest men, physically considered, the race is capable of producing. Taller than their British-born brethren, with softer voices and more regular features, they inherit the powerful frames and unequalled muscular development of their ancestry. Leading lives chiefly devoted to agricultural labor, they enjoy larger intervals of leisure than is permissible to the laboring classes of Europe. The climate is mild and favorable to health; they have been accustomed from childhood to abundance of the best food; opportunities of intercolonial travel are frequent and common. Hence the Anglo-Australian laborer, without, on the one hand, the sharpened eagerness which distinguishes his Transatlantic cousin, has yet an air of independence and intelligence, combined

with a natural grace of movement, wholly unknown to the peasantry of Britain.

"An idea is prevalent that the Australian are, as a race, physically inferior to the British. It is asserted that they grow too fast, tend to height and slenderness, and do not possess adequate stamina and muscle. The idea is erroneous. The men reared in cities on the seaboard, living sedentary lives in shops, banks or counting-houses, are doubtless more or less pale and slight of form. So are they who live under such conditions all over the world. But those who have followed the plough on the upland farms, or lived a wild life on the stations of the far interior, who have had their fill of wheaten bread and bee steaks since they could walk, are men of vigorous frames, stout of heart and ready of hand.

"It is now about seven o'clock. Mr. Gordon moves forward. As he does so, every man leans towards the open door of the pen in front of which he stands. The bell sounds. With the first stroke each one of the seventy men has sprung upon a sheep; has drawn it out, placed its head across his knee, and is working his shears, as if the 'last man out' was to be flogged, or tarred and feathered at the least. Four minutes—James Steadman who learned last year, has shorn down on one side of his sheep, Jack Holmes and Gundajia Bill are well down the other sides of theirs when William May raises himself with a jerking sigh, and releases his sheep, perfectly clean-shorn from the nose to the heels, through the aperture of his separate enclosure. With the same effort apparently he calls out 'wool and darts upon another sheep.' Drawing the second victim across his knee, he buries a shear point in the long wool of its neck. A moment after a lithe and eager boy has gathered up fleece No. 1, and tossed it into the train basket. He is half way down its side the wool hanging in one fleece like a great glossy mat, before you have done wondering, whether he did really shear the first sheep or whether he had not a ready shorn one in his coat sleeve—like a conjurer.

"By this time Jack Holmes and Gundajia Bill are 'out,' or finished; and the cry 'wool!' seems to run continuously up and down the long aisles of the shed. Now and then the 'refrain' is varied by 'Tar' being shouted instead, when a piece of skin is snipped off as well as the wool. Great healing properties are attributed by the shearers to this substance, and if one of them cuts himself, as occasionally happens, he applies the same remedy. * * Though little time is lost, the men are by no means up to the speed which they will attain in a few days when in full practice and training. Their nerve, muscle, eye, endurance, will be all as to so speak, concert-pitch, and sheep after sheep will be shorn with a precision and celerity marvellous to the unprofessional observer. The unastoried reader may be informed that speed and completeness of denudation are the grand desiderata in shearing the employer thinks principally of the latter the shearer principally of the former. * *

(To be concluded.)

It was the concern of our early Friends that as it was a great cross to them in the beginning of their ministry to speak, it might not become one to be silent, when they had nothing in command to say.—W. E.

ERRATUM.—The date of the Bible mentioned at the beginning of this article, should be been 1537, not 1530.]

For "The Friend,"

of the Author of "A Letter to a Priest of the Church of England," A. D. 1660.

(Concluded from page 226.)

Much matter of high interest could be added, showing the prosperous growth of the settlement, and the primal innocence of the relation between the white men and the red, and the record can be found in old histories, and it is time to bring this article to a close. I am tempted, however, to give the short simple story of the first marriage, from a manuscript at my hand, as an illustration not only to have come to the notice of many readers. The parties were Matthew Champion and Catharine Murfin, two who came in the ship, the "Kent."

In those early times courtship was short. A marriage celebrated with but little ceremony. Matthew expressed himself inclined to marry. Matthew expressed himself inclined to marry. Matthew expressed himself inclined to marry. I know not, however, I have no great objection to thee, I must have courted a little." The preliminaries thus settled, they soon after assembled with Friends, proceeded to the nearest public place, perhaps the first crossway they came and there solemnly declared that they took each other for man and wife, with mutual promises of faith and love, until death should separate them. After the ceremony they returned home to dinner and made a good cheer some fresh fish which they purchased of a party of Indians they met in the path."

This story, if true in all particulars, must be occurred before the arrival of the large meetings in which meetings were early held.

The sons of the grateful Smith of Bramham, induced by the pious prospect of religious freedom after long oppression, "removed—with a migration, Benjamin, who died single in England, to America at various times, from 1697 to 1699. The first to emigrate was John, the eldest, who came over in the ship Kent, the year 1677, being then 20 years of age, was allotted, as owner of one share of property, lot No. 9, in the first survey of Burlington town lots, made in that year by Edward Noble, said lot being on the London Ward side of Main street, where his brother Daniel afterwards built one of the earliest mansions in Burlington, still standing. He came to have come over as a pioneer for the colony, several times making the return voyage to England, and finally dying at sea on a voyage hither, unmarried, in 1699. Daniel, who was also a Proprietor, came over with Joseph and Emanuel in 1691, and was followed in a few years by Samuel, and lastly, Charles."

The value of seven thousand pounds in lands, was paid by the Proprietors of West, or New West Jersey, to the Indians in liquidation of their claims to the land, being, with the debt of £11,500, due by the King, £18,500 in all as the first cost to them, the Province. The final dividend of land allotted to each Proprietary share 35,000 acres; would give for the three shares of Richard Smith and his two sons, 105,000 acres. Their lands were located at various points, from the sonnetong and upper Delaware rivers, the neighborhood of Burlington and the Rancocas and its branches, to the Egg harbor river, on which Daniel Smith had thirty-five tracts.

From the first estimated value of choice Proprietary shares at £350, we get the ratio of one pound sterling for one hundred acres. The value per acre of course increased as the lands were gradually sold off. In 1749 some of the timber land on the Mesconctong sold at £30 per hundred acres.

The descendants of Richard Smith continued, for a full century after the promulgation of the "Concessions" in 1676 to fill some of the most important public offices of the Province. About the outbreak of the Revolutionary war Friends ceased to hold public office, objecting on conscientious grounds to the shedding of human blood, and, many of them, considering the separation from England premature. At that period, Richard Smith of Bramham-hall, county of Burlington, great-grandson of the subject of this paper, having been appointed by the Provincial Congress of New Jersey to represent them there, sat for New Jersey in the first and second Continental Congress; from the latter celebrated body, then about to sign the Declaration of Independence, he resigned in 1776, on account of indisposition, and conscientious objection to war.

Of the close of life of Richard Smith, Joseph Sanson says:

"Having preserved the respectable character of an honest man and a good christian, unblemished, even in the esteem of many who officially persecuted his religious principles, notwithstanding the various difficulties which the open profession of them innocently incurred, he died peacefully, at Bramham, in the year 1688, about the sixty-second year of his age."

The best idea of his character is to be got from the foregoing letter, addressed by him to one of the official persecutors above alluded to, believed to be the same Priest James, of Bramham, through whom he often suffered, and at whose suit his widow was cruelly imprisoned a few months after his death. It breathes a gentle Christian courtesy and love, united with firmness and clearness in doctrine, which to me are very admirable. The refugee spoken of in the last paragraph was probably a Huguenot exile from France, for the English priests of that day could receive and protect these with one hand, while persecuting Friends with the other."

In concluding this sketch with some of the verses of Richard Smith, I do so not on account of any literary merit they possess, but to show how entirely he had received the doctrine of the Inward Light at the early period of A. D. 1650, which is the date affixed, as heretofore stated, to the original. They were written in early manhood, at a period when protracted civil war had reduced literature to a very low ebb, and, as compositions, are fully equal to those of Sternhold and Hopkins, the favorite religious poets and hymn-writers of the day.

The piece is entitled "A Poetical Epistle or Christian Directory, written by Richard Smith, 1650." After describing various states of unconverted minds, and of such as having had some religious experience have followed after false lights, he goes on:—

"Now thou who'er shalt find thyself
In any of these states,
And wouldst gladly life obtain
And be regenerate,
Come I will show thee how my soul
Was brought out of this pit,
And from the filth of sin redeemed'
Among the Babes to sit.

When thus I felt the weight of sin,
And Conscience was opprest,
That hopes of life seemed to fail—
My soul was from her rest—
Then did I to the Lord draw near
And harkened to his Light—
I did incline mine ear to hear
What his Witness brought to sight.

Who answered and said to me;
'Within thee I have set
A true and faithful Counsellor
A Guide unto thy feet—
To wit, the Light within the mind
Which from my Son doth come,
To be a Guide and Lantern bright
Enlightening every room.'
And as this Light of sin convinced,
And evil showed to me—
And as I did obedience yield
Guided by it to be—
So did the Lord's own pow'r appear
From sin to set me free,
And strength to grow from grace to grace
My God did give to me.

His Covenant New he then to me
Did tender on this wise;—
'If thou wilt have no gods but Me,
My glory will despise,
Nor bow to images, form or shape,
But in my power stand still,—
Thou shalt my saving grace receive—
Thy cup with joy I'll fill!

So thou that art not in thy rest,
And wouldst guided be,—
To thee I give this testament
My God hath given me.

And so glory to God in the highest, from
RICHARD SMITH."

About Clocks.—Some way of measuring time must have been known at a very early period in the history of the world; for in the book of Kings, the dial is spoken of, and the shadows going backward and forward ten degrees. It is believed that there was more than one way by which men had knowledge of the passing of the hours. One was by the advancing shadows, from step to step, on the flight of stairs leading up into palaces and other important buildings.

One of the first inventions was the *clepsydra*, or water-clock, which was a contrivance of the Assyrians, and was in use among them as early as the reign of the second Sardanapalus. Clepsydra, or water stealer, it was called, from two words which have that meaning. The instrument was of various materials; sometimes transparent, but generally of brass, and in the shape of a cylinder, holding several gallons. In any case, the principle on which it operated was the same. There was a very small hole, either in the side or bottom, through which the water slowly trickled, or, as the name expresses it, stole away, into another vessel below. In the lower one a cork floated, showing the rise of the water. By calculating how many times a day the water was thus emptied from one to another, they gained a general idea of the time. The Chinese and Egyptians used this; so, also, did the Greeks and Romans; and it is stated that something of the kind was found among the ancient Britons. It seems to have been one of the earliest rude attempts, in many nations, to keep a record of the hours.

The idea of the hour glass must have grown out of this. Instead of two large vessels, there were devised the pear shaped glasses, joined by what may be called the stem ends, and a delicate fine sand was used instead of water. It was the invention of a French monk, and has never been improved upon.

This man recovered the lost art of blowing glass, and then did a second service to the world by inventing the beautiful hour glass. There was a marvellous exactness of calculation about the time which the sand would spend in passing through the slender opening from one bulb into the other. It has always been considered a very accurate time keeper; and it is certainly one of the most curious, as it is one of the prettiest inventions.

Clocks were first used in monasteries. The tower originally meant bell; and the two—clock and bell—in calling them to their devotions and duties, performed the same office. These, however, were tower clocks; not small ones for apartments. One was set up in France in 1374, and created a great excitement, being the wonder of the age. The maker of it was made a nobleman for his service in constructing such an extraordinary piece of workmanship. The first one in England was during the reign of Edward I., and was placed in the tower opposite Westminster Palace. The hour-glass and sun-dial had long been in common use; but this was the first thing which could be called a clock, except the water-clocks, one of which had been brought home from France by Richard Cœur de Lion.

Clocks were, at this period, of so great value, that they were sent as gifts by one sovereign to another, as the most rare and costly things are now.—*Oliver Optic's Mag.*

Befriending Young People.—When John Wesley saw a young man in danger of falling into the snares of evil associates, he did not watch him sharply at a distance, and speak of his shortcomings to others, predicting that he was "on the high road to ruin."

He invited him to his table, and by a genial, affable manner, sought to give him good subjects for thought, or hints for conduct. Advice thus hospitably enforced was very impressive. He would draw out a young man in conversation, and learn what studies he was most proficient in, which were essential to his success, and then assist him to acquire the mastery of them.

Another most valuable way of aiding a young man whom social danger threatened, was to make him acquainted with well-disposed, religious young men, who would lead him into good paths. Then he watched over their future career with a father's interest and tenderness. Thus in a very simple manner he accomplished a vast amount of good, besides preventing a world of evil.

The Christian duty of hospitality is too much neglected by Christians. They lose by inhospitality many precious opportunities of doing good and of getting good. There is nothing that endears the heart of the young and of the stranger more than a warm welcome from those on whom they have no claim. It opens the heart's door wide to receive impressions of good, and fills the memory with great remembrances.

"That woman is a Christian, if ever there was one," said a poor painter boy to me about a kind old lady who had befriended him in his loneliness and poverty. She had given him many a meal when hungry, or called him in her pleasant doorway to receive a pocketful of cakes, and once, when sick, had taken him home and nursed him with a mother's tenderness. The boy is a man now, but the

memory of those little kindnesses will never fade from his heart.

If you wish to be good to the young, prove yourself indeed a generous, loving friend to them.

REJOICING IN HOPE.

Selected.

"Having a desire to depart and be with Christ which is far better." Phil. i. 23.

I long to bathe my tired wing
In crystal founts of heavenly bliss;
I long my Saviour's praise to sing,
And see him as he is.

Ah! when I think of robes of white—
No stain to soil, no blot to dim;
And when I dream of fountains of light,
All—all reflecting Him,

I long to breathe a purer air
Than this gross atmosphere below;
I long—and yet I would not dare
To say, "Lord, let me go!"

Is it not joy on earth to dwell
Where He, the Son of Man, hath dwelt?
Like him to quaff the desert well
And kneel where He hath knelt?

Is it not joy His steps to mark,
And strive to walk where He hath trod,
In places weary, rough, and dark—
Yet hallowed by His God?

Oh fainting heart! take hold of Him
Who fainted not to bear thy load
Thy' thorns seem rude and skies look dim,
He trod a rougher road.

TRIFLES.

Selected.

The griefs that fall to every share,
The heavier sorrows that life brings,
The heart can nerve itself to bear,
Great sorrows are half holy things.

But for the ill each hour must make,
The cares with every day renewed,
It seems scarce worth the while to take
Such little things with fortitude.

And he before whose wakened might
The strongest enemies must fall,
Is overcome by foes so slight,
He scorns to hold them foes at all.

Interesting Figures.—Prof. S. P. Langley, of the Alleghany Observatory, has computed the area of one of the spots lately visible near the centre of the sun's disc, from careful measurements, and found it to exceed 2,300,000 square miles, which is more than ten times the entire area of the earth. In a communication to the *Pittsburg Commercial* he says: "Masses the size of whole continents are utterly changed in shape, or disappear from one day to another. Sometimes the observer watches them, and the whole 'spot' is, to all appearance, slowly rotated by the cyclones which are visibly working there. This is one of the many centres of similar action, not all on the same scale, but baffling the eye by their number and incessant changes of form, which the draftsman labors after in vain, and which even the photographer can but imperfectly render. Our planet is intimately connected with these phenomena. Why magnetic needles move responsively to these great changes in the sun, or why auroras should light up our winter sky at intervals more frequently repeated as this solar action is more violent, are questions which astronomy is now trying to answer. The fact that they do so is certain; the cause is still unknown."

If Christian charity be in your hearts, your whole life may be one continual exercise of it.

Method of Searching for Diamonds.

There is little doubt that diamonds exist in many places as yet unknown, or where their presence is unsuspected. Gold is discovered readily in auriferous regions, even by those who are inexperienced at the work, but the diamond is far less easily detected. It is very difficult for the unpracticed eye to distinguish it in its natural condition from crystals of quartz or topaz. One, therefore, who has no experience in diamond seeking may see, and even handle, such gems without recognizing them or even suspecting their value. It was in consequence of the geological knowledge of Humboldt that the diamond regions of the Ural mountains, in Russia, were first discovered. At his suggestion the gold washers were directed to search for diamonds before they had been found or any suspicion raised of their existence. From that time to the present the finding of diamonds there has become frequent.

In Brazil, where great numbers of diamonds, chiefly of small size, have been discovered, the method of searching for them is to wash the sands of certain rivers in a manner precisely similar to that employed in the gold fields of Australia—namely, by the aid of prospecting pans. A shovel full of earth is thrown into the pan, which is then immersed in water, and gently moved about. The result is that the contents are converted into a kind of thick, muddy slush, from which the stones are picked out by hand.

As the washing goes on the dirt and sand are gradually disposed of, and the pan contains, apparently, only about a pint of the mud. Great caution is now observed, and ultimately there remains only a small quantity of sand. The diamonds and particles of gold if haply they are present, sink, by virtue of their great specific gravity, to the bottom and are selected and removed by the practised eye and hand of the operator. But how shall the gems be detected by one who has had no experience, and who in a jeweller's shop could not separate them from quartz or French paste? The difficulty can only be overcome by testing such stones as may be suspected to be precious. Let these be preserved until the day's washing is over, and then tried by the very sure operation of attempting to cut with their sharp corners, glass, crystal or quartz.

When they are too minute to be held between the finger and thumb, the specimen may be pressed into the end of a stick of hardwood, and run along the surface of a piece of window glass. A diamond will, in such cases, make its mark, and cause, too, a ready fracture of the glass in the line over which it has travelled. Tested in a similar way upon crystal of quartz, the diamond will make such an impression as no one crystal can have upon another. But, a yet more certain and peculiar characteristic of the diamond lies in the form of its crystals. The sapphires and the zircon will readily cut glass and scratch quartz, but they have not the curved edge of the diamond. In small crystals this peculiarity can only be observed by using a magnifying glass, but it is invariably present in the true gem, whether it be large or small.

It is, perhaps, rare to find a diamond with four curvilinear faces, but such a circumstance places its identity beyond the domain of doubt. Another form of diamond is that of the octahedron, or eight-sided solid, with the edge replaced by interrupted narrow convex sur-

Such interrupted, convex, or rounded surfaces are sure indications of genuineness. Diamond breaks or is scratched with difficulty, and hence a test sometimes employed is to place the specimen between two hard surfaces—as a couple of coins, for example—force them together with the hands, a pressure will crush a particle of quartz, the diamond will only indent the metal. As much of practical information for the use of the diamond hunter of the Cape; now, supposing a successful issue to his lots, let us say a word or two as to the mode of estimating the value of diamonds. They are invariably valued by the carat, which is the assayer's grains. The estimate is made according to the number of carats, and multiplied by the result by the price of a single carat. The price, it will thus be seen, increases in a simple proportion weight. The actual price small, rough diamond, fit to be polished, at £2 per carat. One of two carats is worth, therefore, £8; one of four carats is worth £128. The value increases by both color—and water, as it is termed. When diamonds are cut and polished they are given to jewellers as brilliant, rose and black diamonds, depending on the form and color of the artificial faces. Diamond cutters chiefly come in Holland, on wheels of iron and copper, and with the agency of the finest inferior diamonds, known as diamond dust. A set diamond may be tested by placing it on its back. The lustre of a true diamond will not be affected by this operation, the spurious brilliancy of paste imitation will be totally destroyed by it.—*Mezzanino Magazine.*

For "The Friend."

has been for some time much on my mind, to express a little on the cause of the present low state of our religious Society; and give rise to many conflicting opinions, amongst its members. It is very evident from the writings of the early Friends, that we were given to see, and know, the reality of having immediate access to God, by his Spirit; and consequently that any ministry of man, however he might be trained for, or whatever powers of oratory or address he might possess, was an encumbrance to the true knowledge of God, and Spirit. Therefore there was not only ignorance thereto, but very often special indications of such a ministry. We need be surprised that as a consequence they were dreadfully persecuted, and that like the men of Diana of the Ephesians, such persecutors were conspicuous in denouncing those who brought their trade in jeopardy. It was not only that they were brought out to God for themselves, by his spiritual warfare within them, but the Lord so dealt out of his Spirit upon them, that not only sons, but (horror of horrors) daughters, servants and handmaids prophesied, so that gifts were restored, as at the first, for the use of the spiritual house, and the pergoing of the work; also the Saviour's declaration, "Freely ye have received, freely give." George Fox's Journal, p. 501, says, "I and all the preachers for tithes and money must be testified against in the Lord's name and Spirit;" and again, "Therefore in the power of the Lord, maintain the warfare against the beast, and do not put into his mouth lest he cry peace to you: which peace

he must not receive; * * * but 'ye will receive the peace from the Son of peace,' * * * which all the earthly teachers for the earth, made by man, cannot receive or beleave you of."

Moreover, it is positively asserted, that to pray, preach, or to give praise, as well as truly to call Jesus Lord, requires an immediate and special gift of the Spirit, and cannot be performed in man's will at any time. It is evident there has been a false love or charity springing up in the Society; so that creaturely zeal and activity, under very specious appearances (as an angel of Light) have been for a long time undermining our testimonies, and were it not for the hope that when "The enemy shall come in like a flood, the Spirit of the Lord shall lift up a standard against him," there might be some dismay in our ranks. But I believe there is no cause for fear, only for those who desert to the enemy, or refuse on account of a little suffering, to stand up faithfully; or may be willing to make a compromise so to bring a false peace. These have caused to fear; for it had been better for them not to have known the way of truth, than act the part of a Judas; yet the Lord will arise, and through his anointed ones (although they to the wisdom of this world may appear no more fit than the rams' horns for the destruction of the walls of Jericho), make his power known, and the broad walls of Babylon must give way. My object is to enjoin upon such as see, and feel the state of things amongst us, to be faithful, and to be willing to offer themselves even as marks for the enemy; for there always were some to be given up freely. The Saviour gave himself up; the Apostles also, even to death, and the martyrs at the Reformation. Also a noble list of valiants in our Society, as Parnell, Borough, and many noble women; Mary Dyer, as well as others, who yet speak unto us to follow them as they faithfully followed the Saviour. S. C.

Millville, N. Y., Third mo. 5th.

The North German Arctic Expedition.

Amid news of battles, sieges and painful diplomacy, the return of the North German Exploring Expedition to Bremen will scarcely be noticed; and yet its labors have involved conflict with danger and heroic endurance which command admiration, and remind us of the touching narratives of polar adventure written by English pioneers of Arctic discovery two hundred years ago. In May, 1869, the steamer Germania, with the schooner Hansar as a tender, sailed to explore the Arctic Sea, and push as far as possible towards the pole. The Germania, having parted company, wintered in lat. 74° N., on the coast of East Greenland, and sent out sledge parties which travelled up the coast to 77° N., from which it will be understood that an important addition to our geographical knowledge has been made. The ship has recently returned to Bremen, all well.

The same good fortune has not attended the Hansar. After parting company, as above mentioned, she was steered to the northward, in pursuance of instructions, and in endeavoring to force a passage through the ice became beset, and on the 19th of September was completely frozen in, in lat. 73° 6 m. N., long. 19° 5 m. West. This was the beginning of tribulation. The ice accumulated about the vessel, and nipped her so severely that in October

she sank. Provisions, cordage, with other stores, and the boats had been previously taken out and stacked on a huge floe, to which the crew, fourteen persons in all, had escaped. There they built themselves a house with lumps of coal, planks and sails, and so passed the winter; trusting to the southerly drift on which the Arctic ice is slowly borne. They were about twenty miles from the shore; bears and foxes visited them; regular watches and discipline were maintained; and by the end of December they had drifted down to 68°. A few days later, in storm and mist, the floe broke up; their house was destroyed; escape seemed hopeless; five nights they passed in the boats, awaiting the final destruction of the floe, which, from some miles in circumference, had been reduced to about 200 paces. The southerly drift continued. On the 7th of May, 1870, they were down to 61° 12 m.; Cape Farewell could not be far distant; they took to the boats, and, on half rations, battled a way through and over the ice to the shore. On the 13th of June they entered a bay, and found themselves at the Friedrichsthal mission station; and their long and perilous voyage came to an end. The Eskimos of the place were amazed that any one survived such a weary drift upon a field of ice. From the mission station the adventurers went on to Julianshaab, whence they got a passage to Copenhagen, and landed in that port on the 1st of September.

Among this brave party were Dr. Gustave Laube, of the University of Vienna, and Dr. Bachholz, of the University of Griefswalde, who were attached to the party for scientific purposes. The Committee of Management have resolved that a sketch of the adventurous voyage shall be forthwith published, to be speedily followed by a separate narrative, with illustrations, and ultimately by the scientific reports; in which our knowledge of meteorology and of ocean currents will be much increased.—*Athenæum.*

Selected.

Attended our First-day meeting at Rath-anagan; my spirit was tendered and humbled under various considerations, and my soul was exercised and bowed in deep travail; in which state of mind it was clearly seen, (though I was not engaged to express it) that the creation of God in the soul is by the efficacy and work of His blessed Son Christ Jesus, who said by his servant, "Behold I create all things new;" and that he also was the beginning of the creation of God. In the old creation light was first created, and the Almighty "saw that it was good." So in the new creation light first arises in the soul, and shows to man his condition, and the necessity of a change, if ever he becomes new; and not only shows, but helps out of the old state of death, and that by proper gradations. This is the true Light that enlightens every man that comes into the world; and as man is faithful to its discoveries he advances in the work of God, sees more light, which discovers to him his own deformity, and abases self; for the more we have and enjoy of the light of Christ, the more humble we are, the more jealous of our own corrupt nature, and the more zealous to live to the honor of God. And as we keep in a yielding obedience unto the manifestation of this glorious Light, we become new creatures in Christ Jesus, who declared he would create all things new. As

this new state is witnessed, man may properly be said to have dominion over his own corrupt propensities and the evils that are in the world,—having victory only by Christ; and not only over them, but he will keep the blessings of the old creation in their proper places, having dominion over them, subduing the earthly mind which centres and settles too much on earthly objects. But alas! how many are there now, making a high and exalted profession, who are not only led captive by their own lusts and evil habits, but are slaves and in captivity to those things which were given as gifts and blessings for a noble and dignified use, and to be subordinate to man.—*Samuel Neale.*

Japanese Carving.—The Japanese are fond of the grotesque, and this trait of character is shown in many of the small objects they carve in wood and ivory. "Some of them are mythical monsters, with obese forms, and loose rolling balls in their capacious mouths; or contorted writhing dragons, with scaly trunks and heads, which could have been suggested only by the remembrance of some hideous dream. Natural objects, however, are very carefully copied. I have a group of toadstools with the stem and gills exactly as in nature, and a melon with the netted roughness peculiar to the rind of that fruit, most skillfully imitated. A snake which, with head erect, eyes glistening, and tongue protruding, has eaten his way through the melon, is carved with minute accuracy, even to the rendering of the small curved teeth. I have a very neat figure of a Musina, a pretty, fox-like animal, with a bushy tail, of which the Japanese make great pets. She is represented going off to market, standing on her hind legs, with an aquatic plant to protect her head, while she holds another smaller leaf as a fan. On her arm is slung a gourd to serve as a water-bottle, should she be thirsty on her way. The creature's fur in this ivory gem is wonderfully rendered, and the veins of the leaves are sculptured with the most minute accuracy.

"In these clever carvings, scenes from daily life are reproduced with marvellous fidelity and effect. In one of my specimens, two small boys are playing at 'chequers.' One fixes his eyes with a look of anxiety on his *vis-à-vis*, who is about to throw for first move. The other, confident of success, assumes a well-pleased air, though he is obliged to use both hands to hold up the dice box, which is nearly as big as his head. On examining the interior of the dice box, a single die is seen loose within, having all the dots marked with minute accuracy.

"Another figure of very skilful workmanship, one of my choicest examples, represents an old man with a beaming countenance, digging with a mattock into a heap of money, which the sharp nose of his dog has discovered for him. His eager attitude is very expressively rendered, and the carving of his dress is as perfect as it can be—the texture and pattern of his garments being accurately copied from the living model, even to the grass sandals on his feet, and the few decayed teeth in the old man's open mouth. On examining the under surface of the money heap, the different coins of Japan—boo, tempo, cash, and cobang—each with its own distinctive marks, are found to be faithfully en-

graved. The finish of this figure is exquisite.—*Rambles of a Naturalist.*

For "The Friend."

Feeling a strong desire that our testimony to plainness of dress, language and manners, may have the place and importance given them which it is the design of our great and holy Lawgiver they should occupy, I offer you the perusal of the readers of "The Friend," the following passages from the writings of John Barclay and Wm. Lewis. Whilst it is admitted that a strict adherence to these testimonies may be substituted for inward, spiritual cleansing, I believe the Society of Friends cannot cast them aside, without deserting the ground and forsaking the service allotted it in the militant Church.

May the Lord strengthen us to bring all the tithes into his storehouse. Referring to a letter from Princess Elizabeth of the Rhine, to her brother, J. B. writes:—"The Princess knew Barclay to be a Quaker by his hat, and thereupon took occasion to inform herself of all their opinions.

"Neither the Princess, nor Barclay, nor the friends of Barclay in that day, placed any undue value upon singularity of external appearance, merely as such. The costume of the Friends had, before this date, (1676) become peculiar and conspicuous, for its simplicity, in consequence of the extravagance and preposterous fashions generally prevalent. They kept with but very slight variation to the mode of dress in use among sober-minded people, at the time they had their rise in these kingdoms; and considered it one mark of a little and degraded mind, to be frequently or without some sufficient occasion, adopting 'changeable suits of apparel.'" Isai. iii. 22.

It was this view of the subject, which made them non-conformists to the fashion of a passing world, as well as to the manners of those who love it; their close scrutiny into the motives for all their conduct, induced a caution, a jealousy, a precision in these respects, which while wholesome and beneficial, appeared to be consistent with the apostolic injunction, "Be ye holy in all manner of conversation." 1 Peter, i. 15.

Wm. Lewis relates part of his experience previous to joining the Society in 1798 as follows:

"Plainness and simplicity in apparel, manners, and speech also, (to a certain extent), appeared to me from my early convictions to be quite accordant with the precepts and example of our Holy Redeemer; and well knowing that the vanity of my own heart, was that which induced conformity to the world in these respects, whilst in my state of bondage thereto, self-denial in practice extended in some degree to them, in a gradual manner; and here it comes in my way to notice that wide departure from the simplicity which is in Christ, and from the guidance of his most loving, holy spirit, at present so glaring in the outward and visible church; so that in the general, an almost total disregard both of the letter and spirit of the Gospel of Christ, is, with respect to these points, allowed and even defended. Attention to apparel, as being in any way connected with our demeanor before Almighty God, or with the walking before him in humility, righteousness, and holiness, is even ridiculed by many; although it is a subject which one of the holy prophets had a commission from the most High to treat of,

as one of the effects of a deep revolt from God and to denounce impending judgments account thereof.—Isai. iii. Another, an wisdom's children, declares that a man's tire, gait, and excessive laughter show he is. And if we add to this, the plain positive injunctions of the apostles Peter, Paul, which as expressly forbid attention to the adorning of the person in what is, as the eighth commandment prohibits increasing wealth by fraud in anything that is, must we not plainly see that a follower of Christ is called upon to bear by example full testimony against conformity to the spirit of the world, as it works in a vain-glorious desire of significance and respectability in an appearance in fashionable apparel, evident the chief incentive to a much greater attention thereto, than proper decency requires. Respecting plainness of speech, I have to say that to a certain extent, the propriety of was accordant with my judgment—it was but some time elapsed before I felt it necessary to adopt it so fully as Friends do. W. led to close and deep consideration, concerning the ground on which they believe it to differ from others in this respect, was the best of my recollection nearly as follows: After two years seclusion from public place of worship, (except when particularly invited to any), in my hours of retirement, were then many and daily, it forcibly came to my view, that a course so ascetic was accordant either with the spirit of the gospel or the plain injunctions of the Apostles, the practice of believers in any age of Church; brotherly union and fellowship appearing to be of the very essence of that which, breathing good will to all, and loving without dissimulation, naturally cares for spiritual welfare of others, and bears the burdens. Wearing my mind to these considerations, they soon pressed weightily, and thoughts turned to religious fellowship. The first glance that way, the Society Friends appeared to be the only one I could possibly join myself to; but in order to it was seen to be necessary that my judgment and practice should be altogether in conformity with theirs; and excepting language, I were nearly so; but the very idea of a change in this particular, caused such a shrinking, almost dread of mind, as induced an attempt to sift and prove groundless, their arguments in proof of its being a genuine christian testimony against that corruption in speech, which as to the letter I could not deny to be very evident, in that commonly adopted, how I evaded the force of what they advanced the subject, or how soon I passed from that what the Scriptures contained, as applied to the point in question, I cannot now recollect; only, that ultimately, a diligent sense in them concerning the matter, was exclusively resorted to. The first passage that arrested my attention, was the apostolic injunction to be in the use of 'sound speech that can be condemned.' This pressed and pinched some degree at first, but I got from under weight, by reasoning after this manner: Sound! that is surely so, which, proceeding from a heart without rottenness and divested of all deceit, seeks not to leave a false impression on the minds of hearers. But 'hold the form of sound words,' came from the scriptures, authority, and appearing to inculcate, a substantial rectitude of heart, with every other effect of the light of Christ, there is, sh-

forth in its native garb before others, that in the real possession of truth in every appearance of evil must be added from outwardly; this, for a time, lay more weight than the former; but at it appeared to contain nothing that to its force. I came at last to the message to his people through the et Malachi, charging them with such olding as was even robbery in his sight, which was committed by keeping back and offerings." Reflecting upon this, and remembering that in these offerings, anise, &c., were included, things as significant in themselves, when compared the weightier matters of the law, as a of sound words could be to substantial in the inward parts, and yet, that Divine made them of such importance, as to an those who refused compliance with was enjoined respecting them, in the manner noticed, I began to fear that they were right, and that it was my duty, individual, to join them in testimony to the corruptions crept into modern age, and to go back to the primitive city and plainness of speech. A sore of mind now took place, and whilst it, falling in company with a minister-friend from America, a communication his lips was as a seal thereto. He addressed the company, some of whom had read our peculiar testimonies, nearly in manner. "Robbery, Robbery! It is a of no small magnitude with respect to pertaining to man; how great then is pride, when the rights of the Most are invaded, and the creature holds that is due to the Creator! Some of are charged even with this atrocity; and the impudence to query, Whereat an answer was ready, in titles and gs." After this introduction he enlarged the subject. When the company were o separate, he noticed me; asked who &c. On being told my name and a few lars, he parted with me after uttering words, "Well, William, bring all the into the store house." The impression mind was powerful indeed.

On this period (1793) I had a fixed ap- pition that I should fall short of divine gift if the cross was not submitted to, in of language, yet continued shrinking in, and struggling with that which I it, for nearly two years; during time, many prayers, with tears were ut- tered to a gracious God, for guidance in, and for strength to bear all he see meet to lay upon me for the re- of my natural will, and the humiliat- ily soul before him, and in the sight also; until at length, almost dreading less him in terms I feared to use when of to my fellow creatures, in much of spirit I submitted to adopt friends term the plain language; where- her stumbling block was removed out ath."

Indness for dress and music, was one of test follies; and I am bound in grate- acknowledgment, that had it not been for care, advice, and prudent restraint, I have gone great lengths in these fions. Then, in the love of the gospel, most earnestly and affectionately re- d all religious parents to be faithful

in the discharge of their important duties, re- membering they are delegated as care-takers over a very important trust; and happy will it be for those parents who, in the day of righteous inquisition, may stand acquitted in the Divine sight, having done all they could to preserve their offspring in true simplicity, and in the fear of the Lord.—*Ann Crowley.*

At the completion of the Mont Cenis tunnel, the last thin partition of rock in the middle of the tunnel was reserved to be blasted at the formal celebration. But a small hole was made in it, and the workmen on both sides, who had for 13 years and 40 days been toiling their way toward each other, now, for the first time, saw each other's faces through it, shook hands, and, so far as of the same nationality, conversed together. When the mine was fired the lights went out for a distance of about 1,000 yards around the spot. The first to climb over the fragments of rock was the Italian Commandant, Grattoni. There was a general scramble from both sides, and cries of "Viva V. Italia!"

I believed there were those living, who would see the day, though I was neither prophet nor prophet's son, when gifts will be given, to be occupied in the church; by which the Lord's name will be glorified amongst us. Those members who trample on our testi- monies, and despise those who keep to them, will find it a heavy burthen, when laid on a death bed, to have turned any aside from the faithful acknowledgment of them.—*Journal of William Evans.*

Colored children have been admitted by the public school authorities of New Orleans to the public schools, which were heretofore attended by white children only.

THE FRIEND.

THIRD MONTH 18, 1871.

"True Christian Baptism and Communion: by Joseph Phipps."

This short but well argued and conclusive treatise on two of what are considered by most other christian denominations but Friends, binding "ordinances," has just been handsomely printed and issued by the Book Com- mittee of the Meeting for Sufferings. It is a duodecimo of forty-eight pages, and it can hardly fail to interest every one desirous to become acquainted with the true character of these important subjects, who will take the time to peruse it. It is not an uncommon cir- cumstance for other religious professors, to speak of Friends as not being within the Church of Christ, because they do not prac- tise water baptism, or observe the use of bread and wine, commonly called "the Lord's Sup- per." We think all who are willing to give this little work a candid, unprejudiced perusal, will see that the belief of the Society in the spiritual reality of the one true christian baptism and communion, is in accordance with the teaching of Holy Scripture, and therefore that the outward symbol is effete, and its con- tinuance becomes dangerous, as betraying into reliance on the shadow instead of experi- encing the substance.

We hope Friends everywhere will obtain the work, and not only read it themselves, but give it a wide circulation among other christian professors.

It is for sale at Friends' Book Store, 304 Arch St. Price, single copy, 15 cts., \$1.50 per dozen.

We have received a small pamphlet of thirty-five pages, recently published, entitled "Selections from Letters of Thomas Kite to his daughter Susanna Kite, while at West- town Boarding School." Short as these selections are, they abound in excellent and appropriate counsel from a religiously concerned father, who could justly estimate the temptations of youth; and who, being himself well versed in the discipline of the school of Christ, was qualified to point out to the young beginner the first lessons to be learned, and to encourage her to docility and faithfulness in acquiring them.

Written to a child, the language of the letters is appropriate to her age, and yet becoming the importance of the subjects treated on. We think the little book well fitted to be placed in the hands of children, calculated to interest them, and to promote their best interests.

There is a short account given of the last days of this daughter, whose name became by marriage Susanna Shattles.

The work is for sale at Friends' Book Store.

The readers of "The Friend" may have, from time to time, noticed in its columns communications from our friend Yardley Warner, relative to schools for the Freedmen in the neighborhood of Maryville, Tennessee, which he has been for many months engaged in instituting and conducting. We have recently seen testimonials, signed by a large number of men in that neighborhood, who from their callings and position, we suppose must be intelligent and influential, certifying to the excellence and value of the Normal School, in particular, and also of the other schools in different places. He is desirous to raise, by subscription, fifteen hundred dollars, in order that these schools may be continued and thus secure to the Freedmen there the continued benefit of what has cost him so much time and labor.

SUMMARY OF EVENTS.

FOREIGN.—It is stated that the German army remaining in France will extend from the departments of Seine Inferieure to Dijon. This line extends from the channel to the Cote d'Or, and includes twenty provinces. The dismissal of the landwehr from service will make the army of occupation wholly regular. The German prisoners from the ceded provinces are to be released at once; the others at the close of the final treaty.

The French National Assembly after refusing to adjourn to Paris, resolved by the same vote, 407 to 104, to adjourn to Versailles, where preparations have been completed for their accommodation.

Napoleon has addressed a communication to the president of the French Assembly, protesting against the vote by which that body declared that his dynasty had forfeited the throne as unjust and illegal. The Assembly, he says, was created only to make peace, and has exceeded its powers. The foundation of all public right is the plebiscite, and to that he is ready to bow, and to that alone.

On the withdrawal of the Prussians, serious disturbances broke out in Paris, and the National Guard took the position of armed insurrection against the govern- ment. General Paladines has been appointed to the command of the National Guard. He is not popular with the guard because of his acknowledged firmness

and talent. He wishes to reform and reorganize that body. A dispatch of the 11th says: The National Guard have agreed to return the cannon in their possession to the Government, on condition that their organization will not be dissolved, and the continuance of the allowance to each member of the franc and a half per day until war is declared. In accordance with this arrangement, the National Guard have already commenced to park their cannon in the garden of the Luxembourg.

The return of the French soldiers interned in Switzerland has been postponed at the request of the French Government, in consequence of the interruption of the Paris and Lyons railroad. It has however been concluded that they shall all be returned by the 23d inst.

On the 7th inst. the Germans delivered to the Emperor all the forts on the left bank of the Seine. The French Emperor William took the forts and the forts near Versailles on the same day. The Germans were to leave the neighborhood entirely by the 19th inst. Count Bismarck returned to Berlin on the 9th inst.

The report that the ex-Emperor Napoleon is coming to England is premature. It does not appear that he is yet at liberty.

The British House of Commons the education bill has passed by a large majority. The bill permitting marriage to a deceased wife's sister also passed. The London Post learns that the prospect of the settlement of all matters in dispute between the United States and England by the late Mr. Wellington is now becoming promising. There is an evident disposition to treat all places with fairness. Discussions will first take place upon the fisheries and afterward upon the Alabama claims.

The Times announces the following changes in the ministry: George Goschen succeeds Hugh C. P. Childers as first lord of the admiralty; James Stansfeld succeeds Goschen as president of the poor law board; W. E. Baxter succeeds Stansfeld as one of the joint secretaries of the treasury; and Geo. J. Shaw Lefevre, at present secretary for the home department, succeeds Baxter as secretary of the treasury.

A dispatch from Rome says: The Pope has held a consistory in which he delivered an allocution of considerable length. In his address to the cardinals he attacks the motives and acts of the authors of the recent Italian events, and particularly the occupation of Rome. He rebukes the government of Austria, and particularly the bill recently passed by the Italian Parliament. He also laments the occurrence of the Franco-Prussian war, and expresses his gratitude for the devotion to himself of the church of the whole Catholic world.

A Kingston Jamaica dispatch of the 11th inst. says: The United States steamer Tennessee and Nantasket with the members of the San Domingo Commission, arrived here to-day by way of Port au Prince, all well on board of both steamers. The Tennessee will sail in four days for New York, by way of Key West. The performances of the Tennessee have delighted every body. Her officers regard her as one of the strongest ships in the navy. Each Commissioner is preparing a draft of his report, and as yet the separate drafts have not been compared. Upon most points of the resolution of Congress the report of the Commissioners will show a condition of affairs favorable to annexation. According to the report of the *Official* it appears that notwithstanding the difficulty of providing food which the directors of the Jardin des Plantes experienced during the siege of Paris, many of the most valuable animals have been preserved, among them two hippopotami, the rhinoceros, the African elephants, the African elephant, and some of the antelopes.

A Paris dispatch of the 13th says, Versailles has been evacuated by the Germans, and a French garrison installed. A convention for the return of the French prisoners in Germany has been signed at Ferrières. It is to return by the way of the Eastern coast, and the others overland. A portion of the National Guard still hold a number of cannon, refusing to deliver them up to the authorities.

Earl Granville has announced in the House of Lords that the Conference on the Eastern question had been concluded. A treaty has been signed at the Eastern office, abrogating the restriction on the admission of foreign men-of-war into the Dardanelles and Bosphorus. The Porte, in times of peace, may admit into those waters naval vessels of friendly Powers, whenever needed to enforce the treaty of 1856. The Danubian Commission has prolonged its year's term, and the President declares that no Power can relieve itself of the obligations of the treaty without the consent of all the signatories.

A Madrid dispatch of the 11th says: Serious disturbances have taken place in the provinces. At Alcanete an armed mob fired upon the mayor and other civil au-

thorities, and some lives were lost. In the elections the opposition is triumphing. In consequence of the disturbed state of the country, the King's trip to meet the Queen is deferred.

London, 3d mo. 13th. Consols, 91½. U. S. 5-20's of 1862, 91½; of 1867, 90½. Ten-forties, 93. Liverpool—Cotton dull. Uplands, 7d.; Orleans, 7½d. Red wheat, 10s. 9d. A 11s. 2d. per gal.

Shocks of earthquake occurred in the Sandwich Islands on the 19th ult. They were general throughout the group. In Lansi great rocks were hurled down the cliffs, and some of the valleys were rendered more fertile by the debris from the mountains. No lives appear to have been lost.

UNITED STATES.—The destruction of wealth in the slaveholding south by the civil war and emancipation is shown by the annexed figures from the census for 1860, and compared with the annual personal estate, compared with similar statistics for 1860:

	1860.	1870.
Florida,	\$73,101,500	\$40,191,756
Georgia,	648,895,237	219,878,720
Louisiana,	602,118,568	325,712,991
Mississippi,	607,232,911	174,232,911
North Carolina,	358,739,899	162,346,838
Virginia,	793,249,688	371,162,838
West Virginia,		159,485,203

The aggregate decrease in these States is \$1,627,445,355. Had the census been taken in 1865, the total loss would have been much more. About one-third of the years a part of the desolation caused by the rebellion has been repaired. The losses consist in the value of slaves liberated, the destruction of buildings and of live stock, the ruin of banks, railroads and other corporations.

Of the mortality in Philadelphia last week was 310. Of consumption, 58; and convulsions, 22; inflammation of the lungs, 22; old age, 13.

A comparative statement showing the receipts at the internal revenue office from all sources for the first seven months of the fiscal year is from 6th mo. 1870, 1870 to 2d mo. 1st, 1871, gives the aggregate decrease in the receipts as \$7,000,000, which is less than was anticipated from the reduction of taxes. The receipts from customs also show that the diminution from that quarter will be much less than the estimates of the treasury department.

The New York and Pacific railroad has been opened from Duluth to Brainerd, at the crossing of the Mississippi river, a distance of 113 miles. The grading is almost completed to the border of Dakota, making 245 miles in all.

The four cities which have grown most rapidly during the past decade are: Chicago, which has increased its population 175 per cent; Jersey City, 179 per cent; San Francisco, 163 per cent, and Cleveland, 113 per cent. St. Louis ranks fifth in rate of increase, Washington sixth and Detroit seventh.

The resolution for adjournment which passed the House of Representatives, did not meet the approval of the Senate. On the 13th the House passed a resolution placing salt on the free list, 145 to 46. It also passed a joint resolution abolishing the duty on coal, 132 to 57, and placed tea and coffee on the free list, 141 to 49. The net loss accruing to the revenue from these reductions is estimated at \$17,670,000 per annum. It is not supposed the Senate will agree to the proposed changes. The majority in the House of Representatives is opposed to further legislation at the present session, and by a vote of 148 to 46, passed a resolution to adjourn to the 1st of August, but the subject was not considered by the Senate.

The Markets, &c.—The following were the quotations on the 13th inst. *New York*.—American gold, 111½; 111½. U. S. sixes, 1881, 114½; ditto, 5-20's, 1862, 112½; ditto, 1868, 111½; ditto, 10-40's, 5 per cents, 108½. Superfine, 85-25 a \$5.50; extras, 85-75; finer brands, 85-10 a \$9. Ohio and Indiana red wheat, \$1.63 a \$1.65; amber, \$1.70; white, \$1.83 a \$1.90. Rye, \$1.05. Yellow corn, 80 cts. Oats, 62½ a 64 cts. The arrivals and sales of beef cattle at the Avenue Drove-yard reached about 2100 head. The market was dull. Extra sold at a \$1.25 per lb. gross. About 8,000 sheep sold at 5 to 7½ cts. per lb. gross, and 3,000 hogs at \$10 a \$11 per 100 lbs. net, the latter for corn fed. *Chicago*.—No. 2 spring wheat, \$1.24. No. 2 corn, 52½ cts. No. 2 oats, 50 cts. Rye, 90 cts. Barley, 73 a 77 cts. Lard, 12½ a 12½ cts.

St. Louis.—Cotton, 131 cts. Superfine flour, \$5.55. \$5.85. No. 2 red winter wheat, \$1.55; spring wheat, \$1.25 a \$1.37. No. 2 oats, 51 cts. Corn, 60 cts. *W. more*.—White corn, 83 a 85 cts.; yellow, 82 a 84 cts. Oats, 62 a 65 cts. Sugar cured hams, 18 cts. 13½ cts.

An Annual Meeting of the Tract Association of Friends will be held in the Committee-room of Street Meeting-house, on Fourth-day evening, the inst., at 8 o'clock. Friends generally are invited to attend.

RICHARD J. ALLEN, Clk.

The Stated Annual Meeting of the Haverford Association will be held on Second-day, 4th mo. 10th, 1871, at 3 o'clock, P. M., at the Committee-room of Arch Street Meeting-house, in Philadelphia.

PHILIP C. GABBETT, Secretary.

WESTTOWN BOARDING SCHOOL.

The Summer Session opens on Second-day, 1st month 1st. Parents and others intending to send p. to the Institution, are requested to make early application to AMOS SHARPLESS, Superintendent, (adjoining Roscoe P. Co. Obsolete Grounds,) or to GLENN ALLEN, Treasurer, 304 Arch Street, Philadelphia.

FRIENDS' BOARDING SCHOOL, TUNESSA NEW YORK.

A Teacher is wanted in this Institution. Application may be made to Samuel Morris, Olney P. O., Philadelphia James E. Rhoads, Germantown, Geo. J. Scattergood, 413 Spruce St., Philadelphia.

WESTTOWN BOARDING SCHOOL.

Wanted, a Friend suitable for the position of Cook. Application may be made to Samuel Bettle, 154 North 7th St., Philadelphia, or to Elizabeth R. Evans, 322 Union St., Philadelphia, or to Martha D. Allen, 525 Pine St., " "

FRIENDS' BOARDING SCHOOL FOR INFANTS CHILDREN, TUNESSASA, NEW YORK.

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm needed with a few acres of meadow, near Ebenezer West, Marshalltown, Chester Co. Thomas Wistar, Fox Chase P. O., Philadelphia Samuel Morris, Olney P. O., Joseph Scattergood, 413 Spruce Street, do.

FRIENDS' ASYLUM FOR THE INSANE Near Frankford, (Twenty-third Ward,) Philadelphia.

Physician and Superintendent.—JOSUAH H. W. STOTON, M. D.

Applications for the Admission of Patients made to the Superintendent, or to any of the Board Managers.

Married, Second month 16th, 1871, at Friends Meeting-house at Freeport, N. J., Joseph D. DeCout of Camden Co., to STRAN DECOU, daughter of DeCout, of the former place.

DIED, 30th of 12th mo. 1870, at Fall River, IRELAND BUFFINGTON, aged 68 years 2 months days. This dear Friend had a very suffering life of several months, which he bore with a confidence of peaceful close, and which his family and humbly trust was mercifully granted to him writer of this notice had been intimately acquainted with him for a number of years, and knew his efforts to maintain the principles and testimonies of Friends set forth and maintained by the founders of this Society. His home was a place open to Friends abroad, among whom he had an extensive acquaintance. The evening before he died he had a short sleep after said to his wife, "Oh! what sweet happy have enjoyed such happiness I never realized before. Friends, leaving to survivors the comfortable assurance that her end was peace."

—, suddenly on the 6th of 3d mo. 1871, at the residence of her son Joshua, near Winona, Columbia Ohio, CATHERINE COPPOCK, in the 94th year of age, a member of New Garden Monthly Meeting Friends, leaving to survivors the comfortable assurance that her end was peace.

(Continued from page 234.)

had now put my hand to the plough," continued further on, "and hoped never to back again into the condition I was once out a long fight of affliction was passed high, before I was in any good degree light from under the bonds of corruption. Gaining from company tended to keep me off the way of the gross evils which abound in populous cities, yet for want of watchfulness and close obedience to the will of my Heavenly Father, I was often overcome by station which brought great distress upon me."

In my trouble I looked towards Him in whom I had offended, and in mercy He would give me up out of the pit, and put a new thought of thanksgiving into my heart. These thoughts of rejoicing were succeeded by feelings of castrippedness, and instead of keeping faith and patiently waiting for the appearance of my Lord, I was too easily drawn aside by a light and frothy spirit, and received wounds from my enemy. He seemed to give me joy over me and suggested that it was possible for me to overcome, which I was sometimes ready to fear would be the case, through all my combats, the power of sin over me and the strength of my propensities to do evil, gradually diminished. I went to walk into solitary places, either for the purpose of meditation or to bemoan my condition, and one dark night in the skirts of a city, where no sound was heard but the ringing of some dogs, I thought the state of mind bore a strong resemblance to the darkness of the night and the doleful noise of the creatures. When I was thus plunged I endeavored to bear it patiently and steadily, He whose tender mercies are over all works, again appeared in the needful time, healing in his wings, and then I rejoiced in his judgments as well as his mercies, and I was glad to be thankful that I had endured instead of seeking relief in a wrong way.

At one time when I was passing through a mental conflict, an impression was distinctly made upon my mind that at a certain point I should be favored with a renewed visitation. It was a season of great trial in this city, in which I partook very

keenly according to my capacity; and when it had in some measure passed over, a divine visitation was extended to me of the most remarkable character I had yet experienced; in which I saw in the openings of divine light, the power of darkness from which all temptation proceeded, and was also favored to see the power of divine Grace which was over all, and as it is obeyed, would effectually give the victory over all sin to those who unreservedly gave themselves up to it. I never had before such a clear and undoubted sense of the two powers of light and life, and of death and darkness, and my faith was strong and unshaken in the unlimited superiority of the former over the latter. *But instead of hiding it in my own heart and quietly dwelling under its heavenly operation, I spoke of it too freely to my religious companions, desirous that they should see it as clearly as I did, and thereby talked it much away, and failed to partake of the full benefit of the divine visitation as I ought to have done."* pp. 16, 17.

"After having passed through many baptisms and mortifying dispensations in order to reduce the old inhabitants of the land, and also experienced many seasons of divine consolation, wherein I was enabled to pour out my soul before the Lord, and fervently to desire to be made one of his children, and to serve him all the days of my life, it pleased Him to hide his face from me and to withdraw the sensible influence of his blessed Spirit; through which alone we derive living faith, and are enabled savingly to believe in Him. The enemy soon took advantage of this bereaved condition and started the doubt whether Jesus Christ was my Saviour. I remembered that He had declared: 'My sheep hear my voice and they follow me,' and I then began to doubt whether I was one of his sheep; for Satan insinuated that I had never heard his voice. This was a new trial; but when I was so clouded that I could not be certain I had really heard the voice of the true Shepherd, then the Devil raised the doubt, whether Jesus Christ was the Son of God; and without having done anything that I knew of to bring myself into this state, I found I was incapable of really believing in the Saviour of the world. I felt no disposition to deny or reject him, but I could not command that faith in the Lord Jesus Christ which I had heretofore, as I once thought possessed. Great distress and anxiety came upon me. Unwilling to lose my faith, I searched the Holy Scriptures, and diligently read various religious works which I hoped would restore the lost pearl; but it was all in vain. I was utterly unable to regain my faith in Christ, which had been an anchor to my soul in many tossings and tempests. For a long time I was kept, shut up in this condition, until I gave over searching books, or striving to satisfy myself with any argument. I looked up to my Heavenly Father, but all was hid from me, and I wondered how it was,

that I should be unable to believe in the Lord Jesus Christ, who, I had been taught to believe and had never before doubted, was the Saviour; and yet through all, something kept me steadfast and patient; and I never told any one of my suffering condition.

"One evening as I was walking out for meditation, according to my frequent custom, with my mind turned towards the Lord, He whom my soul sought above all things, suddenly came to His temple, and by his Holy Spirit, revived my faith and gave me to see that He alone is the author of that faith which entereth within the veil, and giveth victory over the world, the flesh and the Devil; and that it is not founded merely on what is read, but is really of the operation of God on the heart, I rejoiced exceedingly and gave thanks to Him who is worthy of all praise and honor, and who will not give his glory to another. I could now firmly believe in the Lord Jesus as my Saviour, because of the renewed revelation by the Holy Spirit, giving me that faith in Him—and through mercy I have never since been permitted to feel any doubt respecting his divinity, his mediation, or any of his offices in the redemption and salvation of man. I record this under a sense of my own nothingness, and for the purpose of exalting the glory of his Grace; believing that the foundation of true gospel, saving faith, is the immediate manifestation of the Holy Spirit, and it is this which draws the dedicated soul to Christ, and enables it to believe in Him savingly, to rely upon and to follow Him in the regeneration, as our Redeemer and the Captain of our salvation. This faith works by love, and this love is evidenced and maintained in obedience. No man can be in the true faith unless Jesus Christ dwells in him; and where He rules the fruits and the works of the Spirit will be brought forth; and the faith of such, though it may be tried as gold in the fire, will be renewed from time to time, and give the victory over all the powers of darkness." pp. 23, 24.

Such were the deep provings and baptisms which this devoted disciple underwent in order to be prepared for the service to which the great Master had called Him. They were required to break down his naturally strong will, and to strip him of all dependence on human power to work out the salvation of his soul; and they are baptisms experienced by all true followers of Christ.

In no part of his course in life were the firmness of William Evans' character and his strong sense of duty more evident, than in the conduct of his business; and no comment need be added to his own unflattering account of his trials and difficulties in relation to it.

"When I became of age," says he, "the prospect of commencing business for myself involved me in serious thoughtfulness, but, as it was for my support, I took a house and opened a drug store in a moderate way, in the 12th mo. 1808; but while it was a necessary

duty to provide for my own subsistence, the kingdom of Heaven and the righteousness thereof were in my view, primary to every thing else. I set out with the desire to have the world kept under foot, and to devote myself to the Lord and to whatever service he might call to; at the same time it was my settled conviction, that to provide things honest in the sight of all men is a bounden duty where health permits, and that in the prosecution of business, strict integrity in dealing, and a scrupulous guard against contracting debts without ability to discharge them and to live within the limits of our income, are also duties indispensable to the Christian.

"I had a great fear of bringing any shade or reproach upon the profession of the Truth, or upon the Society to which I belonged; and whenever any business presented, however profitable, which appeared to me to conflict with either, I felt most easy to decline engaging in it. Although my transactions were on a small scale, and consequently did not open the way for the accumulation of riches, which sometimes was humiliating, and produced sensations of dissatisfaction that I was not likely to stand among men as independent as many others, or procure the accommodations which they had, yet I never was involved in any difficulty in timely meeting my engagements, and was always able to provide every comfort in life that I desired. Since that day I have observed some among us who had succeeded in accumulating wealth, plain in their garb and active in religious society, who looked upon those who were in small business with contempt; and at times spoke slightly of their scruples respecting Friends engaging in extensive concerns.

"But the latter have a refuge which cannot be assailed by the pride or superciliousness of man, into which they are often permitted to flee and find safety. Whenever I was subjected to sensations of that kind, retirement to my divine Lord and Master, committing myself and the course I had taken to Him and looking to Him for consolation and the recompense of reward at the end of the race, raised me above these earthly and sordid views, and gave me an authority and dominion over that spirit, of which none could deprive me. Wealth, and the importance arising from it, were nothing to me, and not worthy of comparison with a place in the Lord's house, and the honor and dignity which He clothes his humble, faithful children."

(To be continued.)

For "The Friend."

The Track of the War around Metz.

Through the kindness of an English Friend, we have received a copy of a pamphlet with the above title, which gives many interesting particulars of the sufferings caused by the recent war between France and Germany, as well as of the efforts made by Friends in England to relieve the distresses of the peasantry and others. The author, Jno. Bellows, was one of those engaged in this benevolent work, and the following narrative is condensed from letters written to his wife. These, he says, "were penned under all kinds of difficulties, and without the remotest thought of publishing them." "I carried a sheet of paper in my hat, and whenever there was a spare moment, I took it out and wrote; sometimes at break-

fast, and in the midst of carrying on a conversation; sometimes at our stores, with all sorts of stir and bustle going on around one; and still oftener in the small hours of the night, when I ought to have been in bed and asleep."

"The requisite funds were raised by a subscription in aid of the peasantry and other non-combatant sufferers from the war in France and Germany," which was liberally responded to. The administration of the fund was made a volunteer service. "Every person engaged in it was to pay his own expenses; or, if his means would not allow him to give more than his time gratuitously, his travelling expenses were paid out of a separate fund, privately belonging to the Society of Friends, so as to leave every shilling free from deduction of any kind, and applicable solely to the purchase of food, clothing, seed corn, or other material needed by the peasants. Most of the distribution fell to the lot of men engaged in business, who could not spare many weeks at a time from home; and who therefore replaced each other in relays of about a month each. Hence it happened that the present writer was asked by the London Committee to take his turn with others; and I accordingly started for Metz about four weeks after Bazaine's surrender of that city."

"The following is a copy of the Commission carried by the agents of the War Victims' Fund. A German and also a French translation accompanied the original. "The bearer of this document — is sent out by the Religious Society known in England as the Society of Friends, commonly called Quakers, solely to give relief to the non-combatant sufferers through the present war.

"We, the members of the above-named Society of Friends, believe all War to be contrary to the Will and Spirit of our Heavenly Father, as shown in the New Testament, but moved by Christian love, we desire to alleviate, as far as may be in our power, the misery of non-combatants, irrespective of nationality, remembering that all are children of One Father, and that One Saviour died for all.

"We therefore entreat all to whom the bearer may come to aid him in the fulfilment of his mission."

"Grand Hôtel de Metz, Metz, 11th mo. 29, 1870.

"I got here safe and sound at 9.35 this morning without the smallest hindrance beyond the trains not fitting each other's time, as described in previous letters. No one has ever asked to look at my passport or at my luggage. Indeed the star [a badge worn by the agents, at the request of the authorities,] on my arm seems enough to carry me anywhere. Last night I left Treves at 8.40, after having taken a quiet walk to and fro on the bridge, and enjoyed the tinkling music of the Moselle. At the waiting-room there were three or four officers, two of whom were my fellow-passengers to Metz this morning. Got to Saarbrück soon after eleven o'clock, and went to the Hôtel de la Poste.

"The first station out of Saarbrück was Forbach. I was not thinking of it, when, suddenly looking up, I saw some houses with the windows smashed in, and holes through the walls of the bed-rooms where cannon-shot had passed through. On the side of the railway were several smashes in the stonework, showing the bursting of shells; and then all was as usual till we got to St. Avold, where

the trampled fields and the trees cut through and hanging hither and thither, showed the scene of battle. Passing further on the were graves again and again by the roads — rough and dreary enough — some of the holding pools of water from the sinking in the earth. At Remilly, a number of sheds built of timber, and the place swarmed with soldiers, showed a halting place. A shed was full of men killing pigs; another flour; others of hay, straw, and the like. A mile further on, where the chaussée, or road, ran parallel with the railway, I saw very singular sight, from which Lands might have taken a hint. A soldier with a cloak was marching at a quick step at the head of a flock of 500 or 600 sheep, and others were keeping them in line, while tall foraging officers brought up the ree. Fancy the sheep all running and trotting scattering along, and soldiers with fixed bayonets driving them!

"At Courcelles the line was newly repaired it was cut by Bazaine's men. The vill itself is sadly injured by the war, and on either hand the fields look newly ploughed, not agriculture, but cut and furrowed in every direction by the innumerable marks of the and baggage-wagon wheels and trampling horses.

"Peltre was still worse. It is not possible by any words to convey an idea of a vill all desolate and burnt to red ruins; neither can a picture do it. I could not realize sight before the train had left it behind.

"It is awfully cruel and wicked to serve poor creatures like this! As if many of these wretches tenements were not miserable enough in themselves, but these soldiers must come smash them to ruins. Fancy every hie destroyed, every wall and every roof lying in heaps, every road and path cut and grooved and torn in every direction as if some fiend had done it with his claws, every garden full of weeds or mud, and even the new chaussée so cut up that they have had to brushwood and lay across the middle to the wagons from sinking in. This was Courcelles, and some distance outside of Bazaine's lines. The first thing I saw in was more ruin; then a rotting body of a barn and then, a vast area of trampled clay fith.

"But I must conclude suddenly, — going the dépôt to see about storing some potatoes."

"Rue Poncelet, Metz, 30th 11th mo. 18

"Immediately after posting my note to-day, I was proceeding to our new set when our agent, Lemoine, seeing the bomb on my arm, came up and introduced him to me. He is the only paid man we have, most useful and zealous he is. He is a Belgian — a commercial traveller ruined by the war and we pay him 15 francs a day to cover expenses of every sort. He works in earnest and I went straight off to the goods store with him to see to the unloading of two tons of potatoes from Luxembourg. We had to make our way along a dreadfully filthy road and up to a sort of high plateau, where the dregs of acres of ground are trampled mud — the spot occupied by Bazaine's 60 Army Corps. The scene is frightfully ghastly: fancy a vast area of trampled clay mud, with a few spoiled trees alone left, forty or fifty sparrows flying in despair; the top of one of them to that of another

For "The Friend."

the following selection, though written than two hundred years ago, contains an explicit distinction between the source of charity and righteous judgment, and liberty which savoureth not of the Truth, a willingness is felt it should have a extensive circulation by its appearance "The Friend," if agreeable to the Editors. Dear Friends and brethren,—I have some further in my heart to communicate you, in dear and tender love, and in defence of your preservation out of the snare of an adversary; and that is, to exhort you to dwell in the pure judgment of the Truth, which is a defence upon your glory; and let us bereave you of this, under any pretence whatsoever. But as you come to a true feeling of the life in yourselves, to which alone certain judgment appertaineth, so let this have freedom, and stop it not from judgment that which is at enmity with the life, tends to the hurting of the true plant of

For I have seen a harm hath come to you who have parted with their judgment, so have become unarmed, and the enemy prevailed upon them, under a pretendedness, to permit or suffer such things as hurtful to themselves and others; and which the Lord hath given them judgment discerning in the matter, yet were beguiled of that gift; and so by little and little me beguiled.

O! dear Friends! consider these are perils, times, and it is needful for every one to be in that same eternal light to which, you first turned, that by its righteous judgment ye may be preserved from every thing ourselves that appears contrary to thatious life which you have tasted. When have so done, then take heed that they do not do that by an instrument, but through your watchfulness in the light, could not do without. All beware of that tender tenderness that cries out, be tender, and pray for all, and mind the good in and love all, and judge none, but leave ment to God, &c. I say heed not the sible words of that spirit, which being, to save its own head from a stroke, did bereave you of your judgment which hath given you; and is indeed truly his ment, and is to be administered in his om and power, for the cleansing and keepclear his sanctuary. Such as have no ment in their goings, are they that know the true way of peace, but make them keep paths. He that goeth in them shall know peace."

But some may say, Was not Christ meek lowly? and ought not all to be like unto

it is true, my Friends; but there is a difference between the Seed's suffering, and its rising, and there are times for them both, in it doth please God to permit the hour, power of darkness in the open persecution to exalt itself against his Seed and people persecution, or such like; they are led is spirit to appear in meekness and quietness as a sheep before the persecutor. But what is to suffering bad and perverse spirits, appear under pretence of the Truth, and are out of the Truth, and enemies to its purity, striving to exalt and set up another thing instead of the Truth? Such as the Lord doth require you to use not patience and meekness towards; but if

that will not reclaim them, they must know the judgment of the Truth, and you in it must stand over them; for in this case the day of the exaltation of Christ is come, and God is crowning Truth with dominion over every false spirit, and corrupt practice thereof.

"Therefore, dear Friends, eye the Lord in his goings forth, and as you feel his life in you to witness against any evil and corrupt thing or practice, use plainness, and keep sincerity; and turn not judgment backwards. That which is unwilling to be judged, and cries out, judge none, leave all to God, &c., the same will take upon it both to judge and rule, but not in the wisdom of God. Those that cry out so much for tenderness, and against Truth's judgment, the same are in most danger to be drawn out from the patient suffering in the Spirit of Christ Jesus, where they ought to appear in the most meekness; and to appear rough and wrathful in the striving and fighting nature, and are most apt to be tempted into a spirit of revenge, as hath been seen by sad experience; for they that lose the exercise of that by which all should keep dominion over deceit, they lose that strength by which they should be enabled to suffer all things for the sake of Christ Jesus.

"Dear Friends, in that which keeps out the defiler, and the betrayer, all wait upon the Lord, that you may have your armor on, and be fortified with the strength, with the might, and with the judgment of God. Keep that under in every place, which under pretence of tenderness and forbearance, would make void the testimony of Truth, or make the offence of the cross to cease in anything wherein you have been instructed from the beginning; that the Lord may behold and see judgment established, and be pleased.

"The Lord looked, and there was no judgment, and it displeased him; for thereby deceit got up, with which it is to be kept down."—*Stephen Crisp.*

Light and Digestion.

BY DR. DIO LEWIS, M. D.

Very intimate relations exist between the sun and digestion. Digestion and assimilation become weak and imperfect if the man or animal is not daily exposed to the direct rays of the sun. Mr. P., one of our merchants, came to see me about his stomach. Dyspepsia was written all over his face, was shown in his movements, and heard in his voice. The conversation between us was essentially the following:

Mr. P. "Doctor, if you will excuse a street vulgarity, I am 'played out.' I can't digest, I can't work, I have lost my courage, I fear I must stop."

"Tell me about your diet."

"If you will excuse me, I know that is all right. I have studied the subject, and I know my food is all right."

"How about your exercise?"

"I have a little gymnasium in my store, and exercise an hour or two every day. I sometimes tire myself out with these exercises."

"How about your sleep?"

"Why, Doctor, I go to bed every night with the chickens. At an average, I am always in bed by 9 o'clock, and I rise by 6 o'clock in the morning, take a bath, a plain breakfast, and go to my counting-room. Once in the forenoon and once in the afternoon, I exercise in

my gymnasium half an hour or so, but I am getting worse all the time. Is n't it curious? My wife thinks I must have a cancer in the stomach. Nothing seems to help me. I live the most physiological life, but my digestion grows worse and worse."

"About your counting-room; is that light? Is it sunny?"

"No, that is one nuisance we have in our store. The store is every way pleasant, only that the counting-room is so dark we have to use gas nearly all the time."

"That's it, Mr. P., that explains your cancer."

"Of course you don't mean that; but I suppose it would be better if the counting-room was sunny."

"Why, Mr. P., no plant or animal can digest in the dark. Try it. Plant a potato in your cellar. Now watch it carefully. If there is a little light, that potato will sprout and try to grow. But surround it with the best manure, water it, do the best you can for it, only keep it in the dark, it cannot digest and grow. See how slender and pale it is. Now open a window in another part of the cellar and notice how the poor hungry thing will stretch that way. Or give the stalk a little twist and see how it will lie down. It has no strength to raise itself again. No matter how much of the best food and drink you give it, it can't digest. The process of digestion, the great function of assimilation, can't go on without the sunshine. Why, Sir, with your excellent habits, if your counting-room were in a flood of sunlight, you would be better in a week, and well in a month. Mr. P., did you ever go into the country late in the summer? Of course you have been. Well, did you never notice where grain is growing in orchards that the part under the trees is smaller than that outside and away from the trees? The land is actually richer there. For years the leaves have fallen and decayed, but notwithstanding this, the wheat is only half size and never fills well. Now, what is the difficulty? The sun shines upon it more or less. Yes, that is true, but that under the trees does not receive as much sunshine as that away from them. That which is thus partly in the shade can't digest so well. Why, Sir, if you will move your counting-room up-stairs, in front, and stand where the sun can have a chance at you, even though it is only three or four hours a day, you will begin to digest your beef better within three days. Have you ever noticed that the only grapes that become perfectly ripe and sweet, that the only peaches that take on those beautiful red cheeks, and offer that luscious sweetness, are those that are on the outside, entirely uncovered by the leaves and perfectly exposed to the sun? God's laws are the same in the animal world. It is just as true the only girls with red cheeks and sweet breaths, the only girls who become fully ripe and sweet, are those who baptize themselves freely in God's glorious sunshine. Don't you see a good many pale girls in your store, girls with a bloodless, half-baked sort of face, whose walking, whose voice, whose whole expression is devoid of spirit and force? Those girls are in the green state. Look at their lips and cheeks; they are not half ripe. Send them out in the country, let them throw away their parasols, put on their little jockey hats, and live out in the sunshine three months, and I would give more for one of them in any work requiring soul and spirit, than for a dozen of

Selected.

those pale things that live in the shade. A pale woman! She makes a very good ghost, but not much of a woman."—*From Talks About People's Stomachs.*

For "The Friend"

As an offset to the article that appeared lately in the *Christian Advocate*, in regard to War, the fallacies of which were so entirely refuted in a late number of "The Friend," please find enclosed an editorial taken from the *Public Ledger* of the 8th ultimo, which is very clear and decisive on the same subject. "Can a Christian be a Soldier?" is the title of a tract lately written and issued by that indefatigable and earnest Christian laborer, John Ashworth, of Rochdale, England, and which has already reached the twelfth thousand. The arguments on the negative side of the question are to every unprejudiced mind unanswerable, and coming from a person who has no connection with the Society of Friends, are very interesting as well as encouraging. Some extracts of which may at a future time be forwarded for insertion in "The Friend."

"FRIENDS' PRINCIPLES."

"At a Meeting representing the religious Society of Friends, held in London, the Sixth day of the First mo., 1871, an Address was adopted, which is now in course of circulation. The subject is the present war in Europe. The inconsistency of war and Christianity is put in strong language, fortified by lamentable facts. It is not our purpose to follow the reasoning, nor is it necessary. No doubt the address has been or will be republished in this country. And the general sentiment of the religious teaching of the age concedes the truths which are the basis of 'Friends' testimony' against war.

To oppose to the argument against war the declaration that war is a necessary evil, is to deny the power of Christianity and philanthropy to accomplish their work. And if we qualify the declaration that 'war is necessary,' by the addition of the words 'in the present state of the world,' then the question comes up: 'Is it not this very state of the world that is the new revelation, the religion of peace, is intended to remove?' A practical point, made in the address before us is: 'When difficulties arise between individuals, whether from passion or mistake, these are no longer decided, as of old, by an appeal to physical force, but by law, administered upon principles of general application. Can we doubt that the happiness of the world would be promoted, and a vast mass of misery and ruin be averted, if a similar method were applied to questions arising between nations?'

It is very easy to smile at a proposition like this, as visionary, and, though amiable, impossible. So in the old times, when one feudal chieftain suffered wrong, or fancied that he did, from another, the readiest remedy was a 'raid.' The proposition to submit the quarrel to law, or to arbitration, would have been regarded as in itself unmanly, unchivalric, cowardly and mean. The honor of knight-hood scorned every mode of redress except what lay in the strength and courage of the person wronged or insulted. The 'clans' could 'right their wrongs wherever given.' Nations, with these feudal antecedents, are but clans on a larger scale. And the same spirit of defiance rules monarchs and inspires the representatives of governments of what-

ever form. The old clanish spirit is preserved in national spirit. The reformation which among individuals has substituted law for violence, and public justice for individual retaliation, beginning with the people as citizens, has not reached governments, which are the instruments of the people. There is one code of morality for the man, and another for the nation; a distinction which it would be hard to defend, except with some such convenient formula as 'our country, right or wrong!'

If the principles of the Christian religion are anything better than impossible maxims, there must come a day upon the earth when national disputes as well as individual will be adjusted on other terms than war. The condition of nations to each other at present is analogous to that of society, when each man depended upon his own arm, and the law of retaliation was the rule. In a savage condition of society, to reform social relations seemed an impossibility. But the gospel of peace and justice has accomplished that reformation, impossible as it seemed. And 'Friends' believe that it is equally as competent to prevent, or at least to check murder by wholesale, as to restrain murder and violence in isolated cases.

The solution of the problem then rests upon the education of all civilized nations up to the necessity of some recognized tribunal, council or congress, before which national quarrels may come for adjustment. So far as the doctrines of 'Friends' act on the conscience of individuals, they promote this result. Their best triumph is seen in the admitted fact that 'peace principles' can no longer be regarded as distinctive of any one body of Christians. He who should defend war for itself would now be regarded as the apostle of a strange Christianity. Declarations of war always directly or indirectly include an apologetic defence for taking that course; and such an apology is the confession of the absence of plain justification for war itself. The advocates of war elevate 'military glory,' and the holders of 'peace principles' can hardly have a better answer than in depicting the horrors of warfare, and its inevitable instances of individual ferocity and wrong. No matter how just the principle may be for which war is waged, there is no strength of military discipline which can restrain the passions to which war gives license.

All reformers appear at first to be singular; and 'impossibilities' have never been accomplished except by what the world terms 'one-sided men,' and 'men of one idea.' Admit that war is unavoidable 'in the present state of things,' and then the duty is presented to change that condition. Certainly something has been accomplished toward the 'consummation devoutly to be wished.' We accord all honor to the 'singular' men who devote themselves to presenting in plain terms plain truths against ingenious sophistry. They are 'advanced pickets,' 'skirmishers' in the struggle for peace, and the main body of the great and peaceful army of thinking men is fast closing up. So far as the claims of men as men, whether called citizens or subjects, are recognized, just so far the hope of the cessation of war is encouraged. For, no man will willingly vote destruct on to his property and death to his childrer. A large part of the war delusion and a larger share of the war passion still exist, but the false glory of violence is wearing off, and when things are once

seen in their true light, the claims of peace against war will be properly adjusted."

This year (1819) I was favored to attend our Yearly Meeting at Rhode Island, and was to me a season of deep suffering, and I believe it was to be felt by all the living exercised. O! the great need of keeping strict on the watch, with a single eye to the truth as it is in Jesus, in which only we can be served clear sighted, and be qualified to criminate between truth and error, either the right hand or on the left, and then experience preservation from the snares of subtle enemy. How great is the loss that was sustained, for want of an abiding 'I' in the true fear and counsel of the Holy H of the church, who hath said, "Without ye can do nothing." O what can the wisdom and prudence of man do in promoting Lord's cause on earth—seeing He will found the wisdom of the wise, and bring naught the understanding of the prudent, remains to be jealous of his honor and not give his praise to another. Great is weight that resteth on the burden-bearer this day of declension from primitive purity and simplicity, which so conspicuously stand forth in our worthy forefathers, and so beautifully adorned our high and holy profession. The true burden-bearers, according to sense given me, are but few in number, righteous Father, hold these in thy holy hand, hide them from the wrath of the dragon in the secret of thy pavilion, until the cflowing scourge is past. Preserve, O L! thy righteous seed, through every dispensation, however painful, which thou in thy fathomable wisdom mayest suffer to over them, for the refining and purifying of church and people.—*Sarah Tucker.*

The exportation of food from Ireland England is very large, and parliamentary returns show that in 1870 there were sent to the Irish channel 202,443 head of beef of 460,000 sheep, innumerable swine, and a supply of butter and eggs. By mean steamship companies Liverpool has secured the monopoly of the cattle-carrying trade Dublin, and during 1870 Ireland furnished constant supply of fresh meat to Liverpool and Birkenhead, comprising a population 600,000 residents, as well as 163,032 persons sailed from that port, and the large number of sailors who navigated the 5,958 vessels which entered the Mersey. It is estimated that a population of fully 900,000 souls fed by Ireland.

If trials have shaken us from time to time they ought only to have driven our feet the more firmly into the everlasting rock, till at length we tremble no more but the blast though it strip us of every superfluous, snap our branches in sunder, and thrust to lay us low in the dust.

The Gas Wells.—The gas wells under Pennsylvania, range from 500 to 700 feet depth, and furnish an abundance of fuel to light the city brilliantly. The authorities now propose to sink another near the water-works to the depth of 100 feet, the understanding being that it is 2,000 feet if necessary. This well is to test to determine what lies underneath the city.—*Late Paper.*

and myself standing on the platform, four of Bazaine's National Guards work hard unloading our goods. They are not fellows, glad to earn something. We then 20 centimes a sack for unloading and re-stacking them at the depot. By and by we ask them a few questions about the siege and the siege, when they get into a state of such excitement that we are obliged naturally to call them to attend to their work. They abuse him for a scoundrel and ward; one handsome young fellow, throw-down his sack and acting (like all French- do,) declares he would shoot him if he had the chance. "Aye," said his companion, "Bazaine is a thief and a scoundrel; he sold us, but we were starving, for nothing at all: sentimes for a little bit of bread no bigger than your fist, and salt at such a price that shopkeepers in Metz sold the brine that he had been pickled in, instead of it, by the litre. There was our soup—nothing but water and a little bit of horseflesh in it; and the time that there were stores of all sorts in Metz held by the shopkeepers. Ah, Monsieur, he had only had these potatoes we should have given in!" As these potatoes were, however, never intended for helping either mine or his enemies, we had to remind ourself that we must push on with our work; so at it they went, and soon finished. All time four Prussian sentinels march to and near us.

At 6.30 we went to the Hotel to table. I was rather afraid of horseflesh, but people here laugh at this, saying they have too much of it to care about more now, than horses are too dear to kill now. Certainly it is dear work keeping them alive. Should pay for 7 lbs. hay 1 franc. Fancy names for shoeing a horse! This was, of course, exceptional—just after the capitulation, and in an out-of-the-way spot. T. White had to pay this sum. At another place I wanted his horse shod at a village forge: smith told him he could not do it at any price, as the Prussians had taken every tool he had. "If they had left me even a hammer I could have got on," said he, "but they have snatched all. With a hammer I could have made other tools."

On my arrival at the hotel I found that the Friends were at Metz, or in the district. They have far more work than they can keep with, as, though many fancy when I say villages require inspection, and many of us, regular relief. *Cures, naires*, and all sorts of people, write or come to us every day make arrangements for food, &c., &c.

The circle all round Metz is divided by people into five parts, and the delivery to various villages, &c., takes place one day per day; so that five days a week does the present arrangement is that the *maire conseil* send in a cart with a list of requirements, and we load it and despatch to the usual spots, where they themselves see to distribution. I found the Friends in the act of moving from the Hotel de Metz in consequence of its being unhealthy. Henry J. Allen was just seized with small-pox, and they taken lodgings for him in another part of town, where W. Pollard nurses him until sister of Charity, Protestant or Catholic, be got to look after him. These are the nurses obtainable at present.

The doctor has ordered that we lodge in another part of Metz—a long way from

H. J. A. (That is D. Haack and I.) D. H. has accordingly taken a beautiful suite of rooms at a reasonable rate, and we are lodging at the house of Emile Simon the banker. It is a palace of a place. A regiment of soldiers might march, or even ride on horseback, up the magnificent staircase with banners up! My bedroom is fit for a drawing room, with a splendid oak parqueted floor, so smooth that I get a little mat to stand on opposite the mirror when I dress, to keep my feet from shooting out from under me if I lean on one side!"

"12th mo. 2, 1870.

"The streets of Metz are rather narrow, but the houses are tall and imposing. Just as we turned out of our office with our letters, we came, in a back street, upon some Prussian soldiers hastily loading two wagons piled with bran-new cavalry saddles. After this, we scarcely saw a single soul—not a policeman—not a sentinel—but the bright lamplight, and the clear shining stars above made the place feel anything but lonely. We had got to the last street before the one in which our lodgings are situated, when a dull heavy sound fell on our ear, which, in a few seconds, defined itself into the 'tramp, tramp, tramp,' of a regiment. In another moment a large body of soldiers, just arrived from a march, turned the corner; and then, as if by magic, we were surrounded by a dancing sea of helmets and flashing bayonets. The faces of the men were very honest and pleasing. They were of the 42nd regiment of Landwehr. We paused a moment to see what would take place; when they rapidly divided off into groups of about ten or twelve to every door, and knocked for admittance; the leader of each group holding in his hand the billeting ticket with the number of the house on, &c., &c. The Messins (people of Metz) were in no hurry to open—and, presently, the knocks grew faster and louder, when here and there, high up, a window opened, and an angry woman poked her head out to ask (what she very well knew without asking!) what was wanted. Then followed a hoarse guttural explanation shouted up from half-a-score of fellows at once; more shrill French in answer, (evidently trying to persuade them they were come to the wrong house.) More German. More French. Louder and now thundering bangs at the door, with unmistakable signs that the butt end of the guns would be used if the key wasn't forthcoming, presently produced the required effect; and in a little while the same dead silence reigned in Rue Naxerine as before the arrival of the troops. They are so orderly and well-behaved that last night one hundred of them were quartered in the house with our sick friend Allen; and W. Pumphrey, who slept there, never knew anything about it till this morning!

(To be continued.)

I observe that antiquaries, such as prize skill above profit (as being rather curious than covetous) do prefer the brass coins of the Roman emperors before those in gold and silver; because there is much falseness and forgery daily detected, and more suspected, in gold and silver medals, as being commonly cast and counterfeited, whereas brass coins are presumed upon as true and ancient, because it will not quit cost for any to counterfeit them. What I want in wealth may I have in sincerity. I care not how mean metal my

estate be of, if my soul have the true stamp, really impressed with the unfeigned image of the King of Heaven.—Thomas Fuller.

For "The Friend."

Sheep-shearing in Australia.

(Continued from page 234.)

"Mr. Gordon marches softly up and down, regarding the shearers with a paternal and gratified expression, occasionally hinting at slight improvements of style, or expressing unqualified approval as a sheep is turned out shaven rather than shorn. All goes on well. Nothing is heard but expressions of goodwill and enthusiasm for the general welfare. It is a triumph of the dignity of labor.

"At one o'clock, Mr. Gordon moved on to the bell and sounded it. At the first stroke several men on their way to the pens stopped abruptly and began to put on their coats. One fellow of an alert nature had just finished his sheep and was sharpening his shears, when his eye caught Mr. Gordon's form in proximity to the final bell. With a bound, like a wild-cat, he reached the pen and drew out his sheep a bare second before the first stroke, amidst the laughter and congratulations of his comrades. Another man had his hand on the pen-gate at the same instant, but by the Median law was compelled to return sheepless. He was cheered, but ironically. Those whose sheep were in an unfinished state quietly completed them; the others moving off to their huts, where their board literally smoked with abundance. An hour passed. The meal was concluded; the smoke was over, and the more careful men were back in the shed sharpening their shears by two o'clock. Punctually at that hour the bell repeated its summons. The warm afternoon gradually lengthened its shadows; the shears clicked in tireless monotony; the pens filled and became empty. The wool presses yawned for the mountain of fleeces which filled the bins in front of them, divided into various grades of excellence, and continuously disgorged them, neatly and cubically packed and branded.

"At six o'clock the bell brought the day's work to a close. The sheep of each man were counted in his presence, and noted down with scrupulous care, the record being written out in full and hung up for public inspection in the shed next day. This important ceremony over, master and men, manager, laborers and supernumeraries betook themselves to their separate abodes with such keen avoidance of delay, that in five minutes not a soul was left in or near the great building lately so busy and populous, except the boys who were sweeping up the floor. The silence of ages seems to fall and settle upon it.

"Next morning at a rather earlier hour, every man is at his post. Business is meant decidedly. Now commences the delicate and difficult part of the superintendence, which keeps Mr. Gordon at his post in the shed from daylight to dark, for from eight to ten weeks. During the first day he has formed a sort of gauge of each man's temper and workmanship. For now, and henceforth, the natural bias of each shearer will appear. Some try to shear too fast, and in their haste shear badly. Some are rough and savage with the sheep, which do occasionally kick and become inquiet at critical times; and it must be confessed are provoking enough. Some shear very fairly and handsomely to a superficial eye, but commit the unpardonable offence of

'leaving wool on.' Some are deceitful, shearing carefully when overlooked, but 'racing' and otherwise misbehaving directly the eye of authority is diverted. These and many other tricks and defects require to be noted and abated, quietly but firmly, by the manager of the shed,—firmly, because evil would develop and spread ruinously if not checked; quietly, because immense loss might be incurred by a strike. Shearing differs from other work in this wise; it is work against time, more especially in Riverina. If the wool be not off the backs of the sheep before November, all sorts of drawbacks and destructions supervene. The spear-shaped grass-seeds hasten to bury themselves in the wool, and even in the flesh of the sheep. Dust rises in red clouds from the moistened meadows, so lately green and flower-spangled. From snowy white to an unlovely brown, turn the carefully washed fleeces to the vexation of overseers and depreciation from brokers. All these losses of temper, trouble and money, become inevitable if shearing be protracted, it may be, beyond a given week.

"Hence, as in harvest with a short allowance of fair weather, discipline must be tempered with diplomacy. * * * So our friend Mr. Gordon, wise from many tens of thousands of shorn sheep that have been counted out past his steady eye, criticizes temperately, but watchfully. He reproves sufficiently, and no more, any glaring fault; makes his calculation as to who are really bad shearers, and can be discharged without loss to the commonwealth, or who can shear fairly and can be brought up to a decent average. One division, slow, and good only when slow, have to be watched lest they emulate 'the talent' and so come to grief. Then 'the talent' has to be mildly admonished, from time to time, lest they force the pace, set a bad example, and lure the other men on to 'racing.' This last leads to slovenly shearing, ill-usage of the sheep, and general dissatisfaction. Tact, temper, patience, and firmness are each and all necessary in the man who has the very delicate and important task of superintending a large wool shed."

Sheep shearing will often go on smoothly and successfully for weeks in succession, but not infrequently the work is stopped by stormy and rainy weather, which always causes grumbling and discontent among the shearers, who are paid a certain stipulated price for each fleece, and are anxious to make their earnings as large as possible. On this occasion the men received £1 per 100 sheep shorn, and the best hands could shear from 100 to 130 per day, and do them beautifully, but the great majority fall far short of these numbers, exert themselves as they might.

The writer thus describes operations when at the height of the season. "The unrelaxing energy with which the work was pushed at this stage was exciting and contagious; at or before daylight every soul in the great establishment was up. The boundary riders were always starting off for a twenty or thirty miles ride, and bringing tens of thousands of sheep to the wash pen; at that huge laydary there was splashing and soaking all day, with an army of washers; not a moment is lost from day light till dark, or used for any purpose save the all-engrossing work and needful food. At nine o'clock, P. M., dreamless sleep, given only to those whose physical powers have been taxed to the utmost, and who can

bear without injury the daily tension. The weather now was splendid; not a cloud specked the bright blue sky. The shearers continue to work at the same express-train pace; fifty bales of wool roll every day from the wool presses; as fast as they reach that number they are loaded upon the numerous drays and wagons which have been waiting for weeks. Tall brown men have been cutting up hides for the last fortnight, wherewith to lash the bales securely. It is considered safer practice to load wool as soon as may be; fifty bales represent about a thousand pounds sterling. In a building, however secure, should a fire break out, a few hundred bales are easily burned, but once on the dray there is comparatively little danger from this cause. The driver, responsible to the extent of his freight, generally sleeps under his dray; hence both watchman and insulation are provided."

When at last the wool has all been sent off, silence falls on the plains and waters of Anabonica for the next six months. The woolshed, the wash pen and all the huts connected with them, are lone and voiceless until the season of shearing comes round again.

Original.

LINES TO THE MEMORY OF "A MOTHER IN ISRAEL," MARY D. LEE, Died 11th mo. 25, 1870.

We laid her sleeping where the sunset splendor
She loved so well,

Casts o'er the western slope its radiance tender,
Its wondrous spell,
Of sweetness and of silence—then we turned,
And left her there, with hearts that inly burned;

As two of old who, once, to Emmanus walking,
Found their's a glow
In their rapids listening to a stranger's talking,
Who came to show
How Christ should suffer, and again should rise—
Unlocking for them Love's deep mysteries!—

Save that to us, who see Him not, 'tis given
To know His voice
And looking up, through natural tears, to Heaven,
We still rejoice
As His sustaining words, "Because I live
Ye shall live also," their sweet comfort give.

Oh loving Christ! whose supreme benediction—
"Beloved, come home!"
Has crowned our friend, and placed her where affliction
Can never come,
Nor pain, nor crying; where no storm, or heat
Can mar the perfect day, the peace complete,—

Accept the thanks, from chastened hearts uprising,
For all the years
Through which we saw her deepening life, surprising
Our doubts and fears
By its unsparring growth in grace and peace,
Till from all bonds Thou gavest it glad release.

We thank Thee for Thy life's divine inflowing
Her being through;
For all the ripened strength and sweetness, showing
To every view;
And making music of her daily words
Sweeter than wind-harp's tone, or song of birds.

The Christian's highest path she trod; rejoicing
To do Thy will:
"Trust all things with the Lord!" her low tone, wailing
Such words, is still;
But shall not we, they helped to strengthen, raise
To Thee thanksgiving and the voice of praise!

Praise for the glad, perfected life transplanted
To realms of spring,
Where nought that here its freest growth had scant
Can hinderance bring!
Praise that our friend sat at a centinel—
Woke in Thy likeness, and was satisfied!

S. E. D.

THE HAPPY HOUSE.

Select

"As for me and my House we will serve the Lord
O happy house! where Thou art loved the best,
Dear Friend and Saviour of our race;
Where never comes such welcome honored guest,
Where none can ever fill thy place;
Where every heart goes forth to welcome thee,
Where every ear attends thy word;
Where every lip with blessings greeteth thee,
Where all are waiting on their Lord.

O happy house! where man and wife in heart,
In faith and hope are one,
That neither life nor death can ever part
The holy union here begun;
Where both are sharing one salvation,
And live before the Lord, always,
In gladness or in tribulation,
In happy or in evil days.

O happy house! whose little ones are given
Early to thee, in faith and prayer—
To thee their Friend, who from the heights of heaven
Guard's them with more than mother's care.
O happy house! where little voices
Their glad hosannas love to raise;
And childhood's hissing tongue rejoices
To bring new songs of love and praise.

O happy house! and happy servitude!
Where all alike one Master own,
Whose daily duty in Thy strength pursued,
Is never hard or toilsome known;
Where each one serves thee, meek and lowly,
Whatever thine appointment be,
Till common tasks seem great and holy
When they are done as unto thee.

O happy house! where thou art not forgot
When joy is flowing full and free;
O happy house! where every wound is brought,
Physician, Comforter, to thee;
Until at last, earth's day's work ended,
All meet thee in that home above,
From whence thou comest, where thou hast ascended
Thy heaven of glory and of love!

Iceland Spar.—Iceland or double spar, colorless, perfectly transparent, calcareous substance, and the double refraction which is common to many minerals, can therefore plainly observed in it. When a piece of double spar is laid over a written line, two parallel lines will be seen instead of one. When a ray of light passing through glass is met by surface of water, it breaks or changes its refraction, being simply refracted, but refracted in connection with distribution, or double refraction, as it is termed, is only found to occur in a certain class of minerals, of which Iceland spar is the principal one, it occurs sometimes in large pieces of extraordinary clearness and transparency. C. W. Pajkull, in his "Spar in Iceland," states that perfectly transparent pieces of one to two hundred pounds weight have been found. Such large pieces however, are rarely known. The locality where the double spar is chiefly procurable in the eastern part of Iceland, where it occurs in basaltic rock, which in some places calcined or transformed. It appears on cavities in the mass, on the walls of which has become crystallized. In these cavities is enveloped in red clay, which has to be removed, as well as a thin crust of yellow and nearly opaque calcareous spar, so that we may truly say it has been well set.

Sometimes drops of water were found enclosed within the double spar, which, and other things, proves that the agency of water has had a share in its formation. In Copenhagen there is (or rather was) a perfectly transparent piece of about 170 pounds weight for sale; it was valued at 400 rix-dollars.

THE FRIEND.

THIRD MONTH 25, 1871.

revelations of religious as well as of history, show that there is a strong tendency in the human mind to pass from one to another, and that this can be only controlled and regulated only by the mercifully supplied by Him who knows us in man, and whose love for him is unmeasured.

aided by reason alone, there is no regulation strong enough to prevent the irregular impulses of the will and the appetites, urging into dereliction of principle and regard of consequences, whenever self-interest demands either or both. Hence, it is not brought under the transforming or purifying of the gospel, inwardly revealed, notwithstanding the increase of knowledge and perfectibility said to be attainable by obedience to certain laws inherent in his constitution, man's progress, even in communicating to be christian, is far from being uniform or unbroken. The light of truth not continue uninterrupted to brighter degrees of effulgence; but its lustre is often dimmed by the darkness of pride and passion; and the design of the Almighty to overshadow with the knowledge of the glory of God as the waters cover the sea, is crossed and hindered by man's resolute resistance to terms on which it is to be effected, and propensity to oscillate from one extreme to another, beyond the rectilinear line of

it man, whether in an individual or in a corporate capacity, is not left dependent on his own reason and power alone, to work out proper end of his being, or to perform the duty he should act towards fulfilling the grand intention of his Creator to restore the world from the effects of the fall. To all his gifts and blessings his Father in heaven superadded the unspeakable one of a pure of his own Holy Spirit.

It is more plentiful effusion of the Holy Spirit and its effects, are pointed out by the prophets, as the glorious characteristic of the dispensation. Resulting from, and inextricably connected with the propitiatory sacrifice of Christ on calvary, for the sins of the whole world, it hath appeared unto all bringing salvation through the death and atonement of Jesus, to as many as will listen and obey it. Clearly and emphatically as universal gift of the Light of Christ to every man that cometh into the world, is set forth in the holy Scriptures, and indispensable evidence to his insubstantial and revelations declared to be for partaking of the fullness of the blessing of the gospel, yet the history of the visible church shows, that soon after the birth and purity of the primitive believers become adulterated, and the men arose, excited by the apostle, "speaking perverse things to draw away disciples after them," the cardinal doctrine became obscured, and more and more lost sight of, until anti-christian succeeded in inducing the professing church generally, to ignore or deny its being of the gospel, or that the immediate and public operation of the Spirit in the heart, could be known or to be looked for.

man's fallen nature prompts him to reject and despise this doctrine of the Light within;

"For every one that doeth evil hateth the light, neither cometh to the light, lest his deeds should be reproved." "And this is the condemnation, that light is come into the world, and men loved darkness rather than light, because their deeds were evil." It is much more in accordance with man's unregenerate nature to adopt a scheme that does not require belief in the all searching light of Immanuel in the soul; that rests satisfied with the knowledge of God and his will, obtained through the inspiration of others in olden time, who wrote the Scriptures, and to claim that Christ having perfected the work of man's salvation, we may safely rest our hope of eternal life on accepting as true what those holy men of God have put on record concerning him; trusting that we are saved by the ransom paid on calvary, and cloaking our active and passive disobedience with the active and passive obedience of Christ.

This was very much the accepted belief of the professing Church when George Fox and his fellow laborers were sent forth to preach the gospel of Christ in its completeness and spirituality. George Fox says, "When the Lord God and his Son Jesus Christ sent me forth into the world to preach his everlasting gospel and kingdom, I was glad that I was commanded to turn people to that inward light, Spirit and grace, by which all might know their salvation and their way to God, even that Divine Spirit which would lead them into all truth, and which I infallibly knew would never deceive any." W. Penn, speaking of Friends, says, "Two things are to be considered; the doctrine they taught, and the example they led among all people. I have already touched upon their fundamental principle, which is as the corner stone of their fabric; and indeed, to speak eminently and properly, their characteristic or main distinguishing point or principle, viz.: The Light of Christ within, as God's gift for man's salvation. This, I say, is as the root of the goodly tree of doctrines that grew and branched from it."

Speaking and acting under the teaching and authority of this divine gift, they set it not up in opposition to, or as independent of the Lord Jesus Christ, whose eternal divinity as the Son and sent of the Father, equal with the Father, they fully and reverently acknowledged, as they also did the atonement for sin made by him, his mediatorship for man, and his headship of the Church. "And we own and believe," says G. Fox, "that He was made a sacrifice for sin, who knew no sin, neither was guile found in his mouth; that He was crucified for us without the gates of Jerusalem, and that He was buried and rose again the third day, by the power of his Father for our justification, and that He ascended up into heaven, and now sitteth at the right hand of God." W. Penn says, "We do believe in the birth, life, doctrines, miracles, death, resurrection and ascension of Jesus Christ our Lord, and that He laid down his life for the ungodly, not [for them] to continue so, but that they should deny their wickedness and ungodliness, and live soberly, righteously and godly in this present evil world."

We have seen exemplified at different times in our religious Society, the ill effects of the propensity in the human mind, unless illuminated and restrained by Divine Grace, to pass from one extreme to another. Elias

Hicks leaving the guidance of this Grace, indulged in speculation on subjects above the reach of his finite powers, until he ended in denying the deity and atonement of Christ; and he and his coadjutors led thousands into unitarianism. I. Crewdson incorrectly attributing this "tremendous heresy" to the doctrine held by Friends, of Christ within, or the Light of Christ in the soul of man, put forth his "Beacon," denying an inward, universal and saving light, and leading his followers back to the faith of the professing Church, very much as it was when Friends left it, and testified against its unsoundness and lifelessness. Both of these heresiarchs, finding they could not carry the Society with them, went out, with their adherents, from it. But the Society issued no testimony of disownment against the latter; and according to the testimony of the author of "Geo. Fox, the Friends and Early Baptists," printed in 1868, the heresy was only scotched, not killed. After speaking deplorably of I. Crewdson and his supporters having had to withdraw from the Society, he says, "The main body of the Friends, aided especially by the influence of J. J. Garney, and the most intelligent and philanthropic men of the Society, have subsequently come round, with little exception, to the very views for which their Beacon brethren were obliged to secede." page 37.

Although this author has much opportunity to know that whereof he thus speaks, we know not how far credence may be given to the full scope of his testimony; but there is cumulative evidence to give rise to the fear that it cannot be very far wrong.

There is also cause to fear there is a tendency among many Friends in this country to follow in the same track. Sentiments are publicly inculcated calculated to undermine the Scriptural doctrine of the universal, saving Light, as held by the Society, and which, if carried to their legitimate results, must place their adherents in the same position as the Beaconites. While it is admitted in general terms that the influence of the Holy Spirit is necessary, the idea is held up that this is to be experienced only through the medium of the Scriptures, and that the revelation of God and the saving knowledge of the religion of Christ are through these sacred writings; but the clear and unequivocal testimony of Friends to the necessity for the immediate operation of the Holy Spirit on the soul, from the first initiatory step to the completion of the work of salvation, is by some very much ignored or kept out of view. But let it not be forgotten that one extreme is as far from the right line of truth as the other, and it is equally anti-Scriptural to deny that Jesus Christ—the true Light,—enlightens every man that comes into the world, as it is to deny that he was God manifest in the flesh; and to hold out the notion that man can be brought to the saving knowledge of God, or be made a true believer in Christ by any other means than this light and grace in the heart, is as dangerous and unsound, as it is to assert that Jesus Christ in his outward manifestation was not the Saviour of the world, or that his suffering and death are not the procuring cause of the remission of sins.

SUMMARY OF EVENTS.

FOREIGN.—The advices from Paris are unsatisfactory, many of the national guards appearing determined to retain their cannon and continue resistance to the

government. At midnight on the 17th, a detachment of troops and gendarmes was sent against the insurgents. A number of cannon were removed, and the gendarmes made about four hundred prisoners. In the morning other national guards arrived and released the prisoners. Many of the troops tried to disarm the guards, refused to act, and fraternized with the insurgents. Agitation and uncertainty continued throughout the 18th inst. It is reported that Generals Lecomte and Clement Thomas, the latter formerly commander-in-chief of the national guards, had been captured and shot by the insurgents, after a summary trial. The excited populace of Paris are loud in their clamor against the National Assembly, and demand its immediate dissolution and the election of a new body, which shall meet in Paris. President Thiers has issued another proclamation appealing to the reason and patriotism of the members of Paris. He promises to disarm the government, if really republican, and no friend of the republic should strike at it. The communists who seek to pillage Paris are warned that they will ruin France, and the national guard are entreated to put an end to the condition of anarchy into which they have plunged the capital. The *Ex-Empereur* sent in consequence of the disturbances in Paris the Emperor William has stopped the movement of the German troops.

The Prussians have returned to the French authorities twelve thousand chassport guns, for use in case of need at Paris.

The city of Orleans has been evacuated by the Germans.

The Germans have left Dieppe, and the customs, post, and telegraphs have been re-tored to the control of the French.

The German government has asked information from France whether the decree issued by the late Government of National Defence, for the expulsion of Germans from France, has been cancelled. Favre desires time for consideration, and it has been granted. The Emperor and Crown Prince returned to Berlin on the 17th, and were received with great popular rejoicing. The French troops detained in Belgium are now returning to France, but leave their arms in the hands of the Belgian authorities until after the conclusion of a definitive treaty of peace.

According to the North German *Gazette*, before the close of the war, the number of French prisoners, including the captives of the French army, was 1,000,000, who were compelled to seek refuge in Belgium and Switzerland, and lay down their arms in those countries, amounted to 1,034,000 men, a number without a parallel in any previous war.

A new project of law passed by the government for the reorganization and control of the army has been made public. Under its provisions all Frenchmen are to serve compulsorily for three years in the regulars, and subsequently a similar length of time in the reserves. The law is yet to receive the sanction of the National Assembly.

A convention has been signed restoring railway, postal and telegraph service throughout France. The German army of occupation is now supplied with provisions by the French commissariat and requisitions have ceased.

The severe winter has injured the grain crop in Belgium, and in the greater part it will be necessary to resort to the fields.

The London *Times*, in an article on the labors of the Joint High Commission, anticipates an easy settlement of the fisheries question, but is not sanguine as to an arrangement of the Alabama claims. The *Times* expresses regret at the limited powers held by the commission.

The new army bill meets with strong opposition in the House of Commons, especially the proposed abolition of the system of purchase of commissions in the army. The change is denounced as a mere sop to the democracy. Disarmament is a faulty measure to propose where a great remedy for inefficiency was demanded. He feared eight millions sterling would be insufficient to indemnify the losses by its abolition. The bill was defeated by Gladstone, and passed to a second reading.

The House of Lords assent to a second reading the bill for the abolition of University tests.

Another civil war in Japan is threatened, and the head of the new assault on the Mikado is reported to be the Prince of Satsuma, the most intelligent, powerful and progressive of all the daimios. He has been joined by a number of his princes.

Dispatches of the 19th represent affairs in Paris as gloomy in the extreme, and ominous of further trouble. U. S. Minister Washburne, telegraphed to Washington on the 19th as follows: "The National Guards Com-

mittee is master of Paris. The Departments of the Interior and Justice, and the Prefecture of Police are occupied by the insurgents. Generals Vinoy, Thomas and Lecomte have been surrendered by the troops. The election of Lecomte to-morrow. All the members of the government have gone to Versailles. I follow with the whole Diplomatic Corps." The government seems to be powerless at present against the insurgents, owing to the troops sympathizing with them. General Chanzy was sent to restore order, but like General Thomas and Lecomte soon found himself in the hands of the revolutionary party, and after a short trial was shot, and most of his troops went over to the insurgents. The Central Revolutionary Committee have ordered an election for the 22d inst. in order to institute what they call a *real* republic. A dispatch of the 20th says: The insurgents hold the Hotel de Ville, Hotel de la Paix, Tuileries and Place Vendome. Complete apathy is displayed by the bourgeois, and no resistance is made to the insurgents. The murders of Generals Lecomte and Thomas were perpetrated by order of Ricotti Garibaldi, who directs the insurrection.

The ex-Empereur Napoleon landed at Dover, England, on the afternoon of the 20th. He appeared to be in excellent health, and is reported to have said: "My return to France is only a question of time. Sooner or later she will summon me to save her from incapables, who are now displaying their folly and madness in this city." He is reported to have said: "I have no wish. My pretended deposition was never ratified by the people. There are only two parties in France who possess real strength—republicans and imperialists—but the empire alone is able to conduct France to true and permanent liberty."

London, 24 mo. 20th. Consols, 92. U. S. 5-20's, 1802, 92; ten-forties, five per cent, 89 1/2.

Liverpool.—Uplands colliers, 7 1/4 s. rd.; Orleans, 7 1/4 s. rd.

UNITED STATES.—The subscriptions to the new loan amounted on the 18th inst. to \$15,903,500. On that day \$1,000,000 was entered.

The mortality in Philadelphia last week was 238. Of consumption, 48; convulsions, 16; debility, 15; inflammation of the lungs, 22.

Congress has been doing little since the 4th inst. The House is anxious to adjourn, but the Senate has not yet given its consent. The House has passed a resolution for an investigation into southern affairs by a joint committee, who are to visit and examine the condition of the South at discretion. Senator Sumner has presented an address to the Senate remonstrating against the proposed annexation of the Dominions of the late King of the Two Sicilies, and other papers of note. It alleges that President Baez, for the purposes of accomplishing the annexation, has caused many patriots to be sentenced to death, and has imprisoned many more and imposed a vigorous ostracism; has forced Dominicans to assemble for election and compelled the greatest part of the citizens to vote for annexation; that the majority of the people are opposed to all foreign domination, that the object of Baez is to convert into specie bills against the Republic by their payment to himself; that the annexation of Dominica would result in grave complications and be a violation of international law.

The House passed the joint resolution, passed once before, giving to sailors and marines honorably discharged from the Navy the same rights of naturalization and citizenship acquired by foreigners who have served in the army.

A Kingston, Jamaica, dispatch of the 16th says: The Times says, the San Domingo Commission report, mailed this morning for Key West. Commissioner Wade's report is finished, and he will go to Washington by the most direct route. The other Commissioners will stop at Charleston to write elaborate reports. All have expressed themselves decidedly in favor of annexation. The report of the San Domingo Commission is finished, and they are of opinion that there is a strong sentiment in Jamaica in favor of annexation to the United States.

The proposal to annex West Florida to Alabama is again revived, and it is said that a large majority of the people of both States favor the proposition.

The population of New York is estimated at New York 1,000,000. 1st mo. and 3d mo. 1864, was 9,734, a decrease of 2,935 from the corresponding period in 1870.

The population of St. Louis by the late census is 370,864, and that of Boston 250,526, of whom 87,986 are foreigners.

The Markets, &c.—The following were the quotations on the 20th inst. *New York*.—American gold, 111 1/4; U. S. sizes, 1881, 1155; ditto, 5-20's, 1868, 1111; ditto, 10-40, 5 per cent, 108 1/2. Superfine flour, \$6.15 a

\$6.45; finer brands, \$6.50 a \$11.10. No. 1 Ch spring wheat, \$1.60; amber winter, \$1.72 a \$ white Michigan, \$1.76 a \$1.77. Oats, 64 a 68 State eye, \$1.20. Western mixed corn, 84 a 85 Jersey yellow, 86 cts. Philadelphia—Cotton, 15 cts. for uplands and New Orleans. Cuba sugar, 57 cts. Superfine flour, \$5.50 a \$5.62; finer brands, 1 a \$9.50. Western red wheat, \$1.65 a \$1.70; P. do., \$1.40 a \$1.55. Yellow corn, 84 cts. Oats, 63 cts. The sales of beef cattle were light, reaching 838 head. Prices advanced 1 cent per lb., selling at 9 a 9 1/2 cts; fair to good, 7 a 8 1/2 cts, common 5 1/4 cts; per lb. gross.

RECEIPTS.

Received from a Friend of Smithfield, O., per J. M. Morris, \$10, for the Freedmen.

FRIENDS' SELECT SCHOOL.

Wanted, a well qualified man Friend as teacher of the Boys' School on Cherry street.

Application may be made to

James Whittall, 410 Race St.

James Smedley, 417 Market St.

William Biddle, No. 115 South Seventh St.

Geo. J. Scattergood, 413 Spruce St.

WESTTOWN BOARDING SCHOOL.

A Stated Meeting of the Committee to Superintend the Boarding School at Westtown, will be held Philadelphia, on Sixth-day, the 31st inst., at 1 o'clock, P. M.

The Committee on Instruction and that on Actions, meet in the city on the morning of the same at 10 o'clock.

The Visiting Committee meet at the School on Saturday evening, the 27th inst.

SAMUEL MORRIS, CO.

Third month 20, 1871.

For the accommodation of the Visiting Com. Conventions will be at the Street Road Station Second-day, the 27th inst., to meet the trains that the city at 2:30 and 4:40, P. M.

An Annual Meeting of the Tract Association Friends, will be held in the Committee-room of Street Meeting-house, on Fourth-day evening, the 1st, at 8 o'clock. Friends generally are invited to attend.

RICHARD J. ALLEN, CO.

The Stated Annual Meeting of the Haverford S. Association, will be held on Second-day, 4th 10th, 1871, at 3 o'clock, P. M., at the Committee of Arch Street Meeting-house, in Philadelphia.

PHILIP C. GARRETT, Secy.

WESTTOWN BOARDING SCHOOL.

The Summer Session opens on Second-day, month 1st. Parents and others intending to send to the Institution, are requested to make early application to ABRAHAM SHARPLESS, Superintendent, (at Street Road P. O., Chestnut St., Pa.), or to CHARLES ALLEN, Treasurer, 304 Arch Street, Philadelphia.

FRIENDS' BOARDING SCHOOL, TUNNESS NEW YORK.

A Teacher is wanted in this Institution. Application may be made to

Samuel Morris, Olney P. O., Philadelphia

Joseph P. Rhoads, Germantown.

Joseph J. Scattergood, 413 Spruce St., Philadelphia.

WESTTOWN BOARDING SCHOOL.

Wanted, a Friend suitable for the position of Cook. Application may be made to

Samuel Bettle, 151 North 11th St., Phila.

PHILADELPHIA.

When paid quarterly in advance, five cents.

California.

For "The Friend."

description of "the great natural features characteristics of this foremost and representative State of the Pacific Coast," having been given by S. Bowles in a recently published work entitled, "Our New West," some extracts from it may prove interesting to the readers of "The Friend."

"It is well for us," he says, "to dwell briefly of the great natural features and characteristics of this foremost and representative State of the Pacific Coast, amid whose scenery and beauty we now pass a hurried but most delightful summer month. [Eighth mo. 1868.] In hundred miles long on the ocean,—from 36° to 42°, and representing the space from Boston, S. C., to Boston, Mass., on the Atlantic Coast; near two hundred miles in length; with two great ranges of mountains rising through its length, meeting and dividing both in the north and in the south, lying in the centre for a wide plain-like valley or basin, and protecting uncounted mountain valleys in closer embrace; peaks running up to fifteen thousand feet of height,—resting on a level with the sea, one indeed being; what wonder that it offers all climates, varieties of soil and production, all phases of nature, all elements of wealth! The Coast Range and the Sierra Nevada are one in the north, become two through the central portion of the State, and mark and make its peculiar features, and again become one in the south,—still again in Oregon to part, and at one on a lesser scale to that State, in the State of California, the gift of the Sacramento River."

"This great central valley, or Sacramento basin, is about four hundred miles long and wide. It is nearly down to the sea level, is drained by two great rivers, the Sacramento coming down from the north, and the Joaquin coming up from the south, meeting in the centre and flowing out together, wide, delaying bays, through the Coast Range to the ocean. These main rivers draw waters from numerous streams coming from the Sierra Nevada Mountains, which, peculiarly that the Coast Range repeats, nearly all their overflow of water to western slopes. As the Coast Mountains contribute little water to the Sacramento

Basin, sending all their streams directly to the ocean, so the Sierra's are sparing of their gifts to the consuming desert lands of Nevada, and endow the interior of California with the bulk of their hoarded treasures of rain and snow. The Sacramento Basin is occasionally broken by terraces, and beautiful with frequent oak groves, but generally is a level, treeless valley, with a deep, rich, alluvial soil, especially favorable for the smaller grains. In the north, the valley is studded with lonely peaks or Buttes rising two thousand feet above the dead level around.

"The Coast Mountains average only about half the height of the Sierra's; are more broken and irregular in line, and offer numerous valleys, strikingly picturesque in shape and surroundings, and abundantly rich with grass and trees,—the beautiful burr oak, with graceful, elm-like branches, distinguishing them,—and a soil for general culture. The wealth and beauty of the State lie very largely in these coast valleys. The hills about are for the most part bare of trees, but are beautiful in rounded outlines; though along the crests of many, and in the close cañons of nearly all, are beautiful gifts of forest,—oaks and pines predominating, but the laurel, the cypress, and the madrona alternating with their strange beauty. The redwood finds its home in the coast hills, also; a fine-grained, light soft wood, white and red in color, much used for building purposes, belonging to the general cedar family; and closely akin to the peculiarly *big trees* of the Sierra Nevada Mountains. The madrona is an open growth evergreen tree, of the laurel species, with oval leaves, pea-green beneath and dark and shining above, and a smooth bark that peels off every year, and when new is greenish yellow, and when mature a bright red. This and the manzanita bush are two of the more striking peculiarities of the forest country of California to the visitor from the Eastern States. In bark and fruit, they bear a resemblance to each other, though one is a tree and the other a shrub; and while the birds are fond of the berries of the madrona, the bears and the Indians live on those of the manzanita.

"The forests of the Sierra Nevada are more various and abundant. There is a wide variety of oaks and pines and firs and cypresses and cedars, varying in character and size from the first faint foot-hills to the highest mountain tops. The sugar pines are, excepting of course the distinctive mammoth trees, the larger and more remarkable of them all, and are distinguished by huge cones like ornamental tassels hanging all over their tops. Not infrequently these trees are three hundred feet high and eight or ten feet in diameter, and they furnish the finest timber of the Pacific coast region. Some of the firs are also remarkable for size and beauty. The Rocky Mountains do not compare with the Sierras in the variety and majesty of their forest wealth; and the richness of the Alleghanies

is poverty by the side of the Pacific States mountains in this respect. Fine timber grows as high as nine thousand and ten thousand feet in the Sierras.

"California is distinguished, also, for the wealth of water in reserve in her lakes, not only in and on the mountains, but under and around them. The Coast Range furnishes a few of these; but the Sierras offer at least two hundred in a distance of four hundred miles. Nearly all are bright, pure, fresh waters; the reservoirs of melting snows; the sources of rivers wearing deep cañons in their eager course to the Sacramento and San Joaquin; the feeders of ditches that the miners have laid to their banks of gold, and that, outlasting this use, will minister to orchards and vineyards and gardens, and thus heal their former wounds of nature; some sunk deep in rocky chasms; some enriching a wide tender meadow, a rich summer home, and a safe winter retreat for game, for stock and for Indians; some no bigger than the petty tarns of the English hills, while others would float a navy, and can mimic the commotion of the sea." The north-eastern section of California is part of an especially grand lake country, destined perhaps to be the most distinguished in this respect of any portion of America, but now almost unknown. It extends over into southern and eastern Oregon, and includes part of northern Nevada and western Idaho. A portion of its waters flow down into the Sacramento; other lakes are the sources of the Klamath river, running through southern Oregon and northern California to the Pacific; others seek the Willamette; many pour east into the Snake, and more directly north into the Columbia; while still another portion of its lakes are the reservoirs of the rivers flowing east from the Sierra Nevada into the Great Basin, and have no outlet. Here, in a region bordering upon and chiefly north of the Great Interior Basin, a section of country from three hundred to five hundred miles square, is a perfect network of mountains, rivers, lakes and deserts, the home of several powerful Indian tribes, and across which a branch railroad from the main line in the Humboldt Valley is likely to be speedily built to the Willamette Valley in Oregon. Then its wealth of nature, especially its wealth of lakes, will be revealed, and the claim for it, by the few who have traversed its unsettled wilds, of the name of the District of the Lakes, will be vindicated.

"Turning to the ocean, California is generously, even curiously, endowed with fine, open harbors and inland bays. They can float in perfect safety a world's commerce. There are along her coast four similar large inland bays, with entrances of from half a mile to a mile each, and of lengths varying from twelve to fifty miles. The best is that of San Francisco, which is eight miles broad and fifty long, and opens out farther inland into two other bays, one ten miles each way, and the other

four miles by eight, and through which are received the grand flow of the rivers of the Sacramento Basin; the whole having an outlet into the ocean, only a mile in width, but deep and well-guarded; while all this wide wealth of inland sea is protected from the ocean by a peninsula of high-rolling sand-hills six to fifteen miles in breadth. On the inner head of this peninsula, like an oriole balancing over the edge of his long, pocket nest below, stands San Francisco, looking down her far-stretching bay, looking around through the Golden Gate crack in the rocks, to the ocean, looking up, with wide, open eyes, over the grand expanse of waters that float down from the interior, and meeting the tides of the ocean, delay and spread about in very wantonness of space. Humboldt Bay, near the northern end of the State, and San Diego, near the southern, are the best of the similar bays; they are indeed miniature reproductions of that of San Francisco; and the three, in place and in character, seem like a providential promise of the grand commercial future of the State. That of San Diego lies on the line of the Southern Pacific Railroad, and will be its direct ocean terminus. Humboldt Bay is the centre of a rich lumber region, already greatly developed, and a railroad through the coast valleys will soon connect it with San Francisco.

"The distinctive feature of the climate of California is dryness. It represents if it does not lead all our new west in this peculiarity. Out of the Sierra Nevada Mountains, the fall of rain in all parts of the State is less than half the average of that in the States on the Atlantic coast. It amounts in San Francisco and Sacramento to about twenty-one inches a year against forty or fifty in New England and New York. Then it all comes between November and June; practically there is no rain in California through six months of the year; and for those six months, at least nineteen out of every twenty days are days of clear sunshine; while for the other six months, or rainy season, at least half the days are pleasant. Absolutely no rain falls at Sacramento in the three summer months; while San Francisco is only able to report the thirtieth of an inch as the average of many years. Thunder and lightning storms are almost unknown in California. The rainfall increases, however, as we ascend the slopes of the Sierras, and the excessive water supply from the rain and snow upon these mountains, compensates in some degree for the scant fall of the valleys and coast lines, and keeps the streams full the year through. Sixty feet of snow fell in one winter on the crest of the mountains near the railroad line; and the rainfall of the Sierras in the season of 1867-8, amounted to one hundred inches. There are exceptional years in the fall of the rain in the lower and western parts of the State; thus in 1861-2, when there was a great flood, there were forty-five inches of rain at San Francisco in the four winter months; and at the same time nearly one hundred inches in the foot-hills of the mountains, and, reducing snow to rain, over one hundred inches on the crest of the mountains. By contrast, some winters have passed without rain, and for eighteen months at one time the valley and coast regions received no moisture. But that was before the present settlement and organization of the State."

The Journal of William Evans.

(Continued from page 242.)

"1809. Business opening very slowly in the following spring, I felt concerned lest it should not prove adequate to my necessities, and one day sitting in the store seriously and solitarily contemplating my prospects, my gracious Master condescended to show me, that if I was faithful to his requirements, I should never want food nor raiment. The language and impression were so clear, humbling my heart before Him, that I believed his word and thereby proved that that faith of which He is the author, is the substance of things hoped for, the evidence of things not seen; my mind firmly and peacefully rested in it, as much as it would have done in an independent estate, although no change in the business very soon occurred.

"On the 11th of 12th month, 1811, I was married to Deborah, daughter of Aaron and Abigail Musgrave. Some time before, she had been brought under the convicting power of Truth, with several other young persons who attended our meeting, and was strengthened to exchange a life of gaiety and mirth for one of simplicity and humble walking with her divine Lord and Master, and was then received a member among Friends. Our engagement was not entered upon without the requisite deliberation, and strong desire to be preserved from taking such an important step, unless accompanied with a sense of divine approbation. This was graciously afforded by Him whom we desired to obey in all things; and although many years were not allowed for our earthly pilgrimage together, yet the few were passed in much sweetness of fellowship, and their termination was a bitter cup to the survivor.

"Being now settled in life, my time was necessarily occupied with the various duties pertaining to a proper provision for a family; which were attended to in union with that dedication to the will of my Heavenly Father, and to the various services of religious society, which I felt of indispensable obligation and connected with a growth in the life of religion. I was not without seasons of close trial and humiliation, all which were needed to humble my proud and volatile spirit; and had I maintained more faithfully the watch, I should have made more progress in the christian warfare, and attained a deeper and firmer establishment in religious weight and solidity." pp. 24-26.

"1813. In consequence of the war with England, business was much depressed, and having the expenses of a family to meet, which it seemed improbable, if the difficulties continued, the little I had to do, would be sufficient for, I became so dissatisfied that I resolved to make some change. A relative who was a dealer in dry goods, wanting a partner, I concluded to join him as soon as the war was brought to a close, and made arrangements to borrow a sum of money, which with that employed by him, was deemed a sufficient capital. The prospect of the connection, and engaging in a business that looked likely to be profitable, was animating and pleasant; and from the feelings of my mind, I thought I had given the subject ample consideration. We entered upon some of the preparatory steps, which brought us frequently together, and to converse upon the business and the manner of conducting it. As I was led into

For "The Friend."

a knowledge of the course pursued in this line, scruples occasionally arose in my mind which I attributed to fear produced by novelty of my situation. Selling articles which I should not be easy to wear, or recommend others to wear, presented some apprehensions of difficulty, but I concluded these might be dispensed with, and the business still be laudable; or perhaps when I became fully gaged these feelings would wear off. I arose the thought of entering into a business which I did not fully understand, and the condition in which I should find myself, were partner removed by death. This circumstance I hoped would not occur, and I endeavored to suppress my apprehensions with belief that experience would soon render familiar with my new employment. In desire to open the way for our united future operations, my relative told me that besides the amount of our capital, which I borrowed, it would be necessary to purchase on credit, large quantities of certain articles the payment for which would be provided by the returns of our sales. This was a further insight of the responsibilities we were about to take upon us, and which raised fresh doubts and fears.

"My present business being small and that I understood, was managed with ease. It required little capital, and involved me no engagements that I did not hold me to meet; so that I was free from anxiety that account, and at liberty to attend, unumbered, to any of the appointments of Society, or any impression of duty to go to a meeting that I might have. When I trusted my present situation, for I had yet given up the drug business, with the ject before me, and recollected that I never been accustomed to the anxiety which often attends large commercial concerns began to feel stronger doubts of the safety making so great a change. These doubts increased; and one day sitting in our religious meeting, it plainly appeared to me, though the mind may be able to comprehend, yet beyond its capacity it cannot. If all its energies are enlisted in the care of the world, and their pressure is as great as it is capable of bearing, the all important work of religion must be neglected. This applied to me must inevitably be my case. My talents and talents would be wholly engrossed, a must abandon all prospect of usefulness in religious society, for the servitude of a man the world. It seemed if I pursued the prospect of the proposed change of business, I should be lost to religious society and to work of religion in my own heart.

"These views brought me to a full stop, was afraid to risk my everlasting salvation for the sake of worldly emolument, and withstanding the mortification, I determined it was best to inform my proposed partner in a proper manner, that I could not proceed, and also of the cause; which was a trial to him as well as to myself, though no such had been taken that would involve him in difficulty. After having come to this conclusion, and my concern for his disappointment had subsided, I felt relieved of a great burden, and then resolved that as long as I could make a living by the business I was brought up to, I would not abandon it for any other but labor after contentment in such thing, my Heavenly Father granted to me. I looked forward with renewed peace and satisfaction

to path and the business before me, though I, remembering that the earth is the Lord's and the cattle on a thousand hills, and in his inscrutable wisdom and kindness, dispense what He knows we need.

My relative died in less than three years, the very great losses produced by a fall-market, proved in the end, that I had ped from a load of anxiety and almost triable embarrassment. Indeed being alone in a business I was in no wise fitted it is probable it would have proved my ruin. It is good to trust in the Lord and to feel the secret intimations of his blessed fit; for I believe it was nothing less than merciful superintending care that snatched from the thraldom I was preparing for self." pp. 29-31.

"That deep instruction does this unvarnished narrative convey! How many, alas! have laboured in deep contrition their neglect of his obedience to which saved William from the thraldom of the world, for the vice of the militant Church!

(To be continued.)

For "The Friend."

The Track of the War around Metz.

(Continued from page 213.)

We were called at six by Baptiste, our *de chambre*, who brought us a basin of each, which with a *Brioche* (bun with butter baked in it) made our breakfast, seven o'clock we were at the office; where agon was loading bread, for me to leave the road to Briey. As soon as we were in the country, we came on Bazaine's spinning ground. It occupies a belt of pers two miles wide, all round Metz. The men are doing their best to purify the sea—have buried nearly all the horses, high here and there I saw a rotting carcase one, and in spite of the frost, there was a smell like a slaughter-house. This was doubtless from the killing of so many horses—1000 or 40,000! 500 were slaughtered every day during the siege. A mile or two off, on the left, Forts St. Quentin and Plappeville lie a beautiful line against the sky. The river is just such a hill as Robin's Wood at Worcester. We stopped a moment to enter of the hats of Bazaine's soldiers. It was a lot of branches of trees, well interwoven, plastered with mud. I could not stand light in it; and it was about half the size of our back-kitchen! There are not many such—but thousands of rings and squares cut where the tents stood. It takes miles, miles, and miles of camp for an army of 100,000 men and 40,000 horses, with all their arms, and wagons, and stores! Formerly, the ground was the site of handsome villas and country seats—now, though some houses standing, the gardens are utterly decayed. I only knew one part *had* been a den by the box borders which have saved all the tramping, and remain, a little gleam of green, in the middle of a wilderness frozen mud!

It was not long before I reached St. Privat. What a sight! Up on this bleak and desolate plain there seemed to be ploughed land; I drew nearer I found it was trampled by thousands of footmarks, and furrowed deep with wheels of cannon. It began to snow; the mud was frozen hard, and I rode into the night. A row of black starting ruins, roofless, windowless, and doorless, met my view.

There were other houses; but these were the first. Picture, on this cold, bitter winter's day, some little children standing huddled together in a doorway, through which the wind blew hard—and, all above, the open sky! Their tiny faces blue and pinched with cold; and a blank, mournful look cast at me as I passed. They neither begged, nor thought of begging—they had not yet learnt the way. I gave them one look and turned away; for I could not bear the sight. At St. Privat the wagon was waiting for me; and I left ten leagues with the Maire, as well as a promise to return with flour to-day. I now rode on to St. Maire aux Chenes, where I found the Maire (Mayor's house) so banged about by cannon that I feared to stand on the doorstep, lest a piece of the stone cornice, three stories up, should come crashing down on me. The Maire ill in bed. Schoolmaster doing his duties for him. Went to schoolmaster, and found the schoolmaster of next village there, too. Both nice respectable men, but moneyless. Left bread with them for the village.

"On this plain, that I could see for miles on every hand, fourteen thousand men lie buried, who all fell on the 18th of 8th month! At the village of Auboune, which lies in the valley below the plain, I found the Maire, a *propriétaire*. He was really a superior farmer; evidently had possessed property and education; a stout, fine-looking man, like our neighbors."

"I gave him my card, and asked a few questions, then proposed to leave, on my return six sacks of flour for the village, and a blanket or two for his own present use, the Prussians having seized every thing, even dragging the bed-clothes off, and taking them away. The furniture smashed—all the earthenware, except a few plates, clean gone."

"Presently, as it was already noon or after, I recollected the imprudent thing I had done in leaving my own food at St. Privat; and I begged he would give me something to eat. His wife instantly get before me some white bread, with many apologies for not being able to give me anything better with it. After jotting down some figures, I turned again to the blankets for his own use; when, suddenly, he burst into tears at the degradation of receiving charity. In my broken French I begged him not to think it charity—but simple help on our part—assuring him of the deep interest felt in England for their lot, telling him of Fox Brothers' gift, in one lot, of 1200 blankets, and 2000 yards of serge; and, finally, how some of us had left our own homes to come and help the distribution of the stores to them. With a voice broken by loud sobs, he took hold of my hand and wrung it, saying, 'Ah, if ever you are in the same state of misery we'll come over and help you in our turn.' I leaned down on the table in silence for a while—for I was thoroughly overpowered: recollect, the description I give is only a shadow of a small part of what I had seen and heard that morning. This over, we came to business: should I leave the things at once or not? At first he said 'Yes.' Then, reconsidering, he added, 'No, do not give us anything. They will come and take it all away—all,' and opening his desk (almost the only bit of furniture left, except the table and three or four chairs,) he handed me the Prussian requisition demanding 30 blankets that very day! This I will show a specimen of when I get home. This village had Prussians quartered in it at the time we were talking; and

he said a battalion of chasseurs was not half-an-hour distant, coming from Briey; he had just heard so. I sent on the wagons (an empty one following the one with the bread) and my horse, I followed on foot. I should say a few leaves were left with the Maire for present use, and he is to send into Metz for flour next week, when things may be easier."

"12th mo. 3d, 11 A. M.

"We are already very much driven with work,—Maires and Curés of villages coming in at all hours, and all needing talking to and questioning. So Emilia Bunsen, who speaks three languages perfectly, attends to the letters and books, while we are unpacking bales or seeing to the despatch of potatoes and flour.

"I am a little tired with my yesterday's out; but hearty, and strong as a lion for more work. The fresher mountain air does one good. I came over expecting all sorts of hardships. There are next to none; and as to personal danger in moving about among the soldiers, there is not one atom more than in going from Charcham to Gloucester! A child might travel through the entire German army, without once fearing any kind of insult. For these poor fellows—conquering Germans—sit down by the side of the people they are quartered upon, and weep with them very bitter tears, when they begin to talk of home in far-off fatherland, and tell with touching simplicity of their wives and little ones, whom they will probably never see again! They will stand in a line to take turns to clasp a little baby in their arms, and kiss it!

"It is now 12. We have unpacked heaps of blankets in the courtyard. It is snowing fast. I have next to attend a meeting of the Agricultural Committee of the *Arrondissement de Metz*, where we are to talk over the most important thing of all—seeds and sowing for next year's harvest."

"Metz, 12th mo. 4, 1870.

"Perhaps I had better take up my narrative where I ended in my last—which was, if I remember aright, at my arrival at Briey with the two wagons. As we purposed giving some portion to the townspeople of Briey, I asked to see the Maire. I was shown at once into the council room, where all the *conseillers municipaux* were assembled, with anxious and sorrowful faces, to debate as to the means of meeting the requisition made that very evening by the Prussians. They handed me the documents; and certainly the demand was crushing. This was only for one day; the Maire declared every day brought in further requisitions. One item was 1500 lbs. of coffee, and another 2430 litres of brandy! There were not such quantities in the whole town, for Briey has less than 2000 inhabitants. It was nearly seven o'clock when everything was arranged for loading; and the wagoner proposed his waiting for the morning, as it would be too far to return to Metz. I left the horse to be brought on to St. Privat next day with the carts; and, as it was bright moonlight, I started to walk alone to this village, which might be some eight miles off. The valley was very beautiful, and it was a relief to be by myself for a while after the strange and touching scenes I had witnessed since morning. After a time, however, I began to feel a little tired; and seeing a covered wagon coming behind me, driven by German soldiers, I halted them in French,—but to no purpose.

I next managed to ask them in German if there was any one inside who spoke English. There was. 'I am an Englishman, and tired of walking. Can you give me a lift?' They instantly pulled up, and I clambered in amongst them, stumbling over knapsacks and needle guns; and jammed myself in between two of them. There were five altogether, and I was in the * * * * * wagon. My interpreter, however, would not keep on with his English;—they very good-naturedly said things in German over slowly, that I might get hold of the meaning. I got down at Ste. Marie aux Chenes, and called on the Curé, to tell him of my intention of going on to St. Privat to sleep—having made up my mind to lie upon straw if necessary, so as to get a better idea of what it really would be to live there. But the Curé would not hear of it. He dragged me in with a warm grasp of the hand, and insisted that I should go no further that night. I had eaten nothing since early morning except the bit of dry bread at Auboue, and was now ready for the supper that was soon set before me. When it was over, we sat over the fire for more than an hour, and I heard the most thrilling and touching things I had ever listened to. The Curé told me of the coming up of the innumerable hosts of men on the morning of the battle; and of the terror of the poor villagers, who all, three hundred in number, flocked to his house as to a common refuge. At 10 A. M. the awful roar of the cannon began, and bombshells came bursting on every hand, mingled with shrieks and cries of the wounded, who were falling in the streets and gardens by multitudes, and whom the ambulance men began bringing into every room, where the blood soon streamed in pools. He had to rush to and fro, pumping them in water to quench their raging thirst; and in five hours he had handed them one hundred and fifty bucketsful! The people had to clear out of the cellars where they were sheltering, and the Germans rushed in, mad with thirst, banging in the heads of the wine casks with the butt ends of their guns! The powder smoke grew so dense that it was hard to stay in the lower part of the house. The cannon kept up one continual stunning round of thunder, and the shrieks, and cries and yells of three hundred thousand men,* engaged in destroying one another, kept on till four o'clock in the afternoon, when the tide rolled onward to St. Privat, and left this part of the plain covered for miles with the wounded and the dead, and the wreck of broken carriages and carts, and every variety of arms. One poor man was carried into the Curé's house, and laid down in the room we were now sitting in, with ten inches of broken bayonet driven in at one side of his forehead and out at the other, while a second wound, following the first, from a bullet, had blown both his eyes out, and they were hanging on his cheeks!

* The German army numbered 200,000 foot and 25,000 horse, with 500 guns; the French army, 120,000 foot and 10,000 horse, with 250 guns. This was the great and final day of the battle of Gravelotte, and is called by the French 'La bataille du dix-huit,' (i. e., 18th Mo. 1870). There were forty thousand wounded and killed, altogether. The King of Prussia's Guards, generally known as the 'White Cuirassiers of Bismarck,' were so entirely destroyed in this battle that Count Palikao reported to the French Chambers that not one had escaped. This was not quite correct, but nearly so: for out of 7000 men, only 74 left the field unwounded. The Germans call Ste. Marie aux Chenes 'The Grave of the Guards.'

He lived, shrieking, for an hour or two, and was then carried out dead, to make way for some one else. Eighteen hours passed away before many of the wounded were attended to; and some of them lying in their gore were run over by wheels of guns, trampled by men and horses, torn by bursting shells and shot. Four different wounds were often received by one man! One poor fellow, with his lower jaw torn half off and hanging, dragged the Curé to him with both hands in his death struggle, while the latter bent over him and poured a tiny drop of wine into the shapeless mass of gore, as the 'sacrament'! At first he could hardly stand against the shivering of horror that passed through him at such sights; but being gifted with strong health and energy, he got over this, and labored all day long, from early morning till far into the night, for six whole weeks, among the dying and the dead. He had 5,800 wounded to visit in this one little parish! Then followed a flood of anecdotes from him as to the various other events that followed the actual combat, of which I have only room for two or three:—'A Captain who lay here many weeks,' wounded, told the Curé that he had fought side by side with a friend to whom he was closely attached, and who had been a professed infidel. At night, in the darkness, when the struggle was over, as the Captain lay bleeding on the field, he heard his friend saying, in a voice that was slowly failing—'O God that these sufferings may be an expiation for my sins'—and then he was silent. His spirit had fled. The Captain, who had himself been an infidel, was so impressed by this that he declared he would never more deny the reality of the life to come.

'Another Captain, a Prussian, told him he had fought at Düppel and Sadowa, and in many other bloody battles; but that the worst he had ever seen before was but child's play in comparison with this furious and deadly fight of Gravelotte.

(To be continued.)

NOT KNOWING.

I know not what will befall me! God hangs a mist o'er my eyes;
And o'er each step of my onward path He makes new scenes to rise;
And every joy He sends me, comes as a sweet and glad surprise.

I see not a step before me as I tread the days of the year;
But the past is still in God's keeping, the future His mercy shall clear,
And what looks dark in the distance, may brighten as I draw near.

For perhaps the dreaded future has less bitter than I think;
The Lord may sweeten the water, before I stoop to drink;
Or, if Marah must be Marah, He will stand beside its brink.

It may be He has waiting for the coming of my feet
Some gift of such rare blessedness, some joy so strangely sweet,
That my lips can only tremble with the thanks I cannot speak.

Oh, restless, blissful ignorance! 'Tis blessed not to know!
It keeps me quiet in those arms which will not let me go,
And hushes my soul to rest on the bosom which loves me so.

And so I go on not knowing! I would not if I might;
I would rather walk in the dark with God, than go alone in the light;
I would rather walk with Him by faith, than walk alone by sight.

My heart shrinks back from trials which the future disclose,
Yet I never had a sorrow but what the dear Lord of So I send the coming tears back with the whispering word, "He knows!"

ENDURANCE.

"If thou faint in the day of adversity thy strength shall. Prov. xxiv. 10.

Faint not beneath thy burthen, though it seem
Too heavy for thee, and thy strength is small,
Though the fierce raging of the noon tide beam
On thy defenceless head untempered fall.

Though sad and heart sick with the weight of woe
That to the earth would crush thee—journey
What though it be with falling steps and slow
Thou wilt forget the toil when rest is won.

Nay! murmur not, because no kindred heart
May share thy burthen with thee—but alone
Still struggle bravely on, though all depart;
Is it not said that, "each must bear his own?"

All have not equally the power to bless;
And of the many, few could cheer our lot;
For "the heart knoweth its own bitterness,
And with its joy a stranger meddeth not."

Then be not faithless, though thy soul be dark
Is not thy Master's seal upon thy brow?
Oh! has his presence saved thy sinking bark,
And thinkest thou He will forsake thee now!

Hath he not bid thee cast him off His care,
Saying he careth for thee? Then arise!
And on thy path, if trod in faith and prayer,
The thorns shall turn to flowers of Paradise.

For "The Friend"

Journey in North China.

Alexander Williamson, who as agent of "National Bible Society of Scotland," penetrated into the interior of China, and minutely with the natives, has published during the past year a valuable work on this title. The earlier chapters give a description of the great natural advantages of this remarkable country, and while adding the moral defects and other drawbacks to its prosperity, the author seems impressed with a more hopeful view of the mentalities, and power of adaptation of the people of an improved future with them, than writers whom we have met with.

"China proper extends from about the 35th to the 41st parallel of north latitude, and 97th to the 122nd of east longitude. It comprises an area of 1,300,000 square miles nearly 832,000,000 of square acres. Within these limits are embraced every variety of soil and climate. There are tracts of campaign country like France and Belgium, swampy districts like Holland; and mountainous regions like Switzerland. Advancing within the tropic of Cancer three degrees extending northwards towards Mongolia including every degree of altitude from sea-level to the perpetual snow-line, and every variety of conformation of hill and valley and water—it yields everything that can be desired for the sustenance, comfort and luxury of man. Its mineral resources are very great, surpassing those of Europe, Australia, and rivaling those of the West Indies of America. Professor Ansted, in his official catalogue of the Great Exhibition of 1851, gives the area of the coal-fields of Great Britain at 12,000 square miles, and that of the United States of America at 130,000 square miles, whereas that of the North of China—not to speak of South China or West China—is estimated by W. S. Kingsmill,

3,000 square miles. Iron-ore and iron, of various descriptions, are found in every province, in many places in great abundance, and what is most noteworthy, black magnetic ore—the finest ore in the world—is the kind in common use, so much that the Chinese seldom work any other manufacture of iron. Copper, lead, tin, zinc, and gold are plentiful, scarcely a district of China being without one or other of these. The water communication is extremely well distributed—in this respect superior to most countries, and surpassed by

the mental capacities of the people are of inferior order. Their administrative powers are remarkable. Sir Frederick Bruce is reported to have said that "Chinese states are equal to any he ever met in any part of Europe." This may, or may not be certain it is, they hold their own with British diplomatists. Chinese merchants successfully with our own in all departments of trade; in fact are gaining ground on us. Their literati are equal to any intellectual task Europeans can set before them; Chinamen have carried off, in fair and competition, high honors in British and American universities. The number of high-books mastered by not a few is quite astonishing. The common people are shrewd, talking, and indomitable; and the more they travel among them the more have we been impressed with their mental promise, energy, and love of order.

Here, then, we have all the elements needful for success and dominion; no end of coal-mines, abundance of iron for machinery, facility for cheap and rapid communication, capacity to govern, brains to hands to work, and a will to put every thing in motion, subservient to their own interests.

Now, when we consider that the soil is as rich and fertile as ever; that the mineral resources are not only of North China, but of the South—*equally great*—and are *entirely untouched*; when we add the various mineral and mineral wealth of Manchuria, Korea, the extent of the population, the energy and enterprise of the people as attested by a consecutive history of four millenniums, and the general character of the race, does not see that the Chinese nation is destined to rise and dominate the whole of the Eastern Asia?

The Chinese have always been the imperial power in the Far East; and they are as able as we to exercise dominion, and *will assuredly*

It is true that at present they are in a deplorable condition. Their old principles of government are disregarded; the maxims of their classics utterly ignored by the policy of their rulers; rapacity and corruption pervade every department of the State, even to a far greater degree than formerly imagined.

Superstition clouds the finest intellects, as we have repeatedly witnessed; a low and ignominious spirit has crept into the homes even of the highest classes; squalor and filth are often to be seen beneath the grand silks and colored dresses of the wealthy; opium is dealing at the vitals of the Empire, and deluging thousands of its most promising sons. Worst of all, there is no truth in the empire. Falseness and chicanery are their chief and their weapons. Scheming has been

reduced to a science; deceit and lying placed upon the pedestal of ability and cleverness. The common people know not when they may be pounced upon by their own protectors; and so a paralyzing sense of insecurity pervades the country throughout its whole extent.

"There are, in addition to the preceding facts, certain formidable barriers in the way of European intercourse, and the introduction of action of foreign ideas.

"First among these barriers stands the position and pretensions of the Emperor. This is the backbone of Chinese exclusiveness. He claims to be the representative of God upon earth; the source of law, office, power, honor and emolument; the possessor of the soil; the owner of all the resources and wealth of the country; and entitled to the services of all the males between the years of sixteen and sixty. '*Kia kuin*,' '*solitary prince*.' He recognizes no equal upon earth, and scorns the very idea of being placed on a footing of equality with any royal family. The usual apothegm is, 'There cannot be two suns in the heavens, or two (Whang-ti) Emperors in the world.'

"This assumption is no modern invention. It is one of the most elemental ideas of the Chinese system. It has lived through many revolutions, and gathered strength by the triumphs of four thousand years. It is supported by tens of thousands of men distinguished for ability and a certain culture of intellect, and is proclaimed in all quarters of the Empire by a three-hundred-million-tongued voice.

"This most exclusive claim stands before us as firmly as it did centuries ago. Witness the Imperial edicts,—the reference made by the late Emperor to the President of the United States, viz., that 'the idea of his equality was a subject to be relegated to the regions of laughter; and, above all, the conduct of the Chinese Government in reference to the visit of H. R. H. Prince Alfred to Peking, in the autumn of 1869. But this is a most serious obstacle, for it is clear that so long as the Emperor of China claims to be superior to the Queen of Great Britain or other European sovereigns, and the mandarins refuse to acknowledge the full equality and authority of our plenipotentiaries and consuls, there never can be satisfactory or amicable relations with them.

"Besides the theocratic assumption of the Emperor, another most formidable obstacle to the progress of China is to be found in the ignorance, conceit, and superciliousness of the people. They are bad enough at the ports, despite of all they see and hear; but the lack of knowledge there is nothing in comparison with the gross ignorance and absurd ideas entertained of foreigners which characterize the Chinese of the interior. None but those who have travelled inland and mingled freely with the people can have an idea of the extent and depth of this darkness. The great masses—the nation, not the sprinkling of people on the coast—look upon us as a different species of beings. In some places they call us '*devils*,' not in impertinence, but in genuine ignorance of our origin and character; so much so, that they often use this term with complimentary prefixes, as *e. g.*, their practice of calling a friend of ours '*Kwhe tze ta jen*,'—*i. e.*, 'His Excellency the Devil.' Moreover, they often use this epithet in our courts of justice. In other places they look

upon us as a race of fierce men not quite up to the mark in mental powers. Many a time have foreigners been provoked by Chinamen coming up to them, patting them on the shoulder, and caressing them just as we would a huge Newfoundland dog or a semi-tamed lion. Nor is this all. They appear in many districts to look upon us as a species of fools. Often have I observed Chinamen address myself and others just as mendacious nursery-maids address children, as if we were incapable of seeing through their barefaced lies and shallow deceit.

"Moreover, they still look upon their country as sacred soil. The common name for it among themselves is the '*Middle Kingdom*;' and this is propagated by their maps, which represent China as occupying four-fifths of the earth, and foreign nations as forming a narrow fringe on the outside."

(To be continued.)

Self Love and Pleading Self.

The following observations are taken from one of Jane Taylor's essays.

"FOR EVEN CHRIST PLEASED NOT HIMSELF."

Our Great Redeemer "left us in all things an example that we should follow his steps." It is therefore an excuse that will avail nothing to say, that he set too perfect a pattern for such erring creatures to copy. They who do not aim to copy it are not of his fold. There are many of the Saviour's actions, indeed, that it is not very difficult to imitate; we may visit the sick, feed the hungry, instruct the ignorant, and after all have little or nothing of the mind of Christ. They alone who act from similar motives, who, in some humble degree, imitate his spirit, are his true followers; and they only will ever be called his "good and faithful servants."

Now, of all that we read of the character of our Lord, there is no part so rarely or so imperfectly copied as that which the text describes. That Jesus pleased not himself, is evident throughout his whole course of conduct. Pity for men, and zeal for God, influenced all his actions: and never did he, for a moment, lose sight of either of these objects, in order to consult his own honor or ease. When, after hours of midnight prayer, he lay down to sleep in the vessel that was overtaken with the storm, it was not that he was inattentive to the fears of his disciples, but that he knew it would furnish a fresh occasion of displaying to them his power and goodness in their deliverance. When, being wearied with his journey, he sat on the well, his gracious intention in resting there was, that he might invite the poor woman who came to draw water, to partake of the living stream which he had to bestow. Whether he labored or rested, fasted, or made one of a feast, he was ever alike intent upon the same objects, influenced by the same motives: "He pleased not himself."

Now, it is only by earnestly imploring the influence of his Spirit, by "abiding in him," that we can hope to imitate him here. The first dictate of our fallen nature is to please ourselves, and this, too, at the expense of others; that is, of whoever may chance to stand between us and our desires. Young persons cannot be aware (for even old persons are not) of the depths of selfishness that lie undiscovered in the darkness of their hearts. Disinterested actions are indeed talked of; but how few of them can bear the scrutiny

even of human penetration! how few, then, that of Him "who knows what is in man!" We set out from our childhood upon a principle directly opposite to that which the Scriptures enjoins. To please ourselves is the grand object, even from the baby that snatches the toy from its infant brother, to the man who aims to be richer, or greater, or more esteemed than his neighbor. Through all the stages of life, through all the gradations of society, this self pleasing is so evident, and is, at the same time, so painfully felt within by every one acquainted with his own heart, that the whole world seems to present, to the observing eye, one disgraceful scramble: every one aiming, at whatever price, to aggrandize, to please himself. For, although good breeding in one rank, good nature in another, and the restraints of law in the lowest, check the open violence of the struggle, yet it is evident enough that the contest is incessantly carried on.

From such a spectacle how refreshing is it to turn the eye towards Him of whom alone it may emphatically be said "he pleased not himself!" And what a consoling consideration it is, that there is a way of escape even to us, from this tyranny of the selfish passions; yes, in every age a little company has walked this earth, who, although not perfectly freed from the love of self, has yet been delivered from its dominion: they have attained unto the unfeigned love of their neighbor; and their highest ambition has been to have this testimony, that "they pleased God." * *

"Let every one please his neighbor," instead of pleasing himself!—what a world would this be, if there were anything approaching to an universal attention to this rule. Let us enumerate a few of the changes that would occur in civilized and christianized society, if such an alteration were to take place. It is too obvious to mention, that crimes which outrage the common laws of the community would then cease; we therefore confine the inquiry to those inconsistencies of conduct which are considered of a more creditable order.

It is evident that, as one immediate consequence of the case we have supposed, there would be an end to all *strife*, public or domestic; no contentions about *my right and yours*; no petty disputings in families, for privilege and preference, if each sought to please the other, and cared not to please himself.

Again: the excess of luxury, and the pride of life would be no more seen. When persons give rich entertainments, when they decorate their houses and their persons to the extent of their means, these things are done to show their neighbors, and to please themselves.

Another very happy consequence that would immediately follow, would be the cessation of every description of scandal and evil speaking, from open censoriousness to the most private gossiping. An ill-natured tale may indeed be told to please one neighbor, but then it must be always at the expense of another; and people please themselves, also, exceedingly, by expatiating on others' faults because it seems to set off their own virtues. No, not one ill-natured suggestion, not one sarcastic remark, would be uttered, even in the domestic circle, if persons really wished to please their neighbors rather than themselves.

Once more, there would then be no ostentation, no self seeking in doing good. A person who simply desires his neighbor's benefit,

would be as content that another should have the credit of promoting it as himself. We should have more work and less noise; more business and less bustle. There would then be no more disputes and jealousies, and envyings and emulations about management and precedent. Alas! that some of, apparently, the most praiseworthy actions, should be traced to the odious principle of self pleasing. Is there not reason to fear that among the instructors of the ignorant, the helpers of the poor; among the most conspicuous patrons of benevolent societies, from the highest to the lowest of them; individuals might be found, who are as truly self pleasers as any that could be selected from the haunts of worldly pleasure.

But, in one word, if the supposed change were actually to take place, earth would at once be heaven. Yes, and heaven is begun in every heart, in which the process of extirpating the selfish passions is in progress. Such have already, in a measure, "entered into rest." That ceaseless disquietude which agitates the minds of those who are seeking, as their grand object, their own gratification, has subsided; and they possess, according to the degree of their attainment, that peace which the Lord left to his followers.

Let us diligently examine our hearts by this test: is it our grand aim and spring of action to please ourselves, or to please God, and to fulfil the law of love to our neighbor? Let our good works, as well as our suspicious or bad ones, be brought to the scrutiny; and if our hearts condemn us in this matter, let us very seriously remember, that "if any one have not the spirit of Christ he is none of his."

Those who, through divine grace, have gained any conquest over their self love, may be stimulated to fresh victories by the great example of Jesus. "Even Christ pleased not himself," although he had all the springs of pure felicity at his command. He, who was tempted in all points, like themselves; yet, so far was he from yielding in any instance, that he voluntarily submitted to fatigue, poverty, reproach, and endured inconceivable anguish. Though he was rich, yet for our sakes he became poor, that we through his poverty might be rich.

Primitive Salt Works in California.—The February number of the Overland Monthly says: "The great salt making establishment in Alameda, east of and bordering the bay of San Francisco, dates from 1862, though limited work has been done there before. The first inquiry in establishing works is to find or create a shallow basin, connecting with the tide, and having a clay bottom that is not porous. These basins average eight acres each, and usually consist of three that are connected—the outer, the pickle, and the salt pond proper. The latter is filled by a wooden force pump, worked by a wind mill. Until August the work is limited to furnishing the brine. Then comes the scraping period, heaping the salt of the inner pond into the hundred pound heaps, and drawing it by a cheap tramway to the firm land.

Six Chinamen will scrape an eight-acre basin in three weeks, and will usually collect two hundred and fifty tons. The operation can be repeated four or five times a year. The salt is carried to a rude warehouse, and placed in 160-pound sacks. Better works have been created, and more care is paid at

the best, their crop commanding \$15 to per ton; to 88 to \$12 for ordinary. The firm from San Francisco, twenty-five miles away does much damage when the wind blows towards the ponds. The shipment is chiefly steamers, at \$1.25 and \$1.50 per ton. The total cost is \$4,950 per 1000 tons; the receipts are \$10,000. The work is healthy, the climate favorable, so that great expansion of the industry is anticipated.—*Record.*

On my way falling in company with Bro Jordan, we had a freedom to propose a ring to the Anabaptists at Middletown which they readily consented, and we had a profitable opportunity with them in a meeting-house, and on the same evening meeting at the house of Hugh Harshbarger which several Baptists came; this was a favor, and I hope of service; it was concluded by R. J. in solemn prayer and thanksgiving to the Lord, who is worthy for and ever! Just as the meeting broke I felt myself poor and inwardly weak to as a degree as ever I had done, and I ran towards my said friend, I saw he was in same condition, for it seemed as if we hardly strength to stand; but a query of dear Lord's, came suddenly into my mind ministered relief, viz: Who hath troubled me? Whereupon leaning toward my companion, I repeated it to him, being my fault it was as much for his help as my own. I understood the meaning instantly with further explanation, and was thereby alleviated. Perhaps some who may here peruse these lines, may think this too bold a mortal man to mention, but having a degree of experience known, that when healing virtue of Truth from the holy Pictian of souls has flowed through an humble servant, to the relief of some of the infirm poor amongst the people, who have followed physicians of no value, and spent all their living thereby, and no cure wrought, not standing virtue has gone through their instruments or conducts, they have felt inwardly weak for a time, that in humble abasement of soul they might be taught to acknowledge that the kingdom, power, and glory do long to Him alone, who is God over all, forever and ever.—*Life of John Churchman*

Consumption of Coal.—If the consumption of coal goes on increasing as it has done the last sixty years it will outstrip all reasonable calculation; it has, over all the world that time increased nearly tenfold, an increase of population and national wealth has been proportionally large among nations which consume most coal. The increase for this consumption appears a geometrical progression; that is, in place of increasing regularly, say 25 per cent. ten years, it becomes 50, 100, 200, 400, 800, in successive decades. This is not so greatly wondered at, when we consider that we have by no means reached that of the world's progress when every thing has been considered finished. On the contrary have only just made a beginning in mining the earth's surface, so as to render it abode for men of higher aspirations, merely living to eat. Our lines of rail are yet to be increased; we have only the beginning of railroad transportation well as of steam navigation. Steam-pl

come the rule, steam-pumping for water in large towns and for sewage.

Hull has calculated that there is still in mind, at less than 4,000 feet depth (the at mining maximum) an amount of 83,000,000 tons. This would be enough for years, if the yearly consumption, and constant production, did not increase in so great a ratio. But if this increase goes on as done during the last sixty years (and it is no reason to suppose why it should this amount is scarcely sufficient for one hundred years, or three generations. The feature is, however, that Mr. Hull adds calculation the remark, "No one is so bold to suppose that we shall ever get to lepth."—*Manufacturer and Builder.*

ou must hold communion with God, or will die. Thou must walk with God, tan will walk with thee. Thou must in grace or thou wilt lost it.

THE FRIEND.

FOURTH MONTH 1, 1871.

think that no unprejudiced person who nainted with the history of the rise and ess of the Society of Friends, can escape onviction, that it bears convincing evi- of their having been the work of the eient and omnipotent Head of the true h. Other religions professors are limit that Friends have done well in dis- ing the many rites and ceremonies long sed in the professing church, yet, if ll, they can hardly fail to admit that, as ety, they have borne a consistent testi- to the spirituality of the new covenant isation, and the purity and simplicity of uths of the gospel; maintaining that the on of Christ demands submission to his in the soul, and is exemplified by holi- a life and conversation, by redemption the maxims and manners of the world, evotion to the cause of truth and right- ness.

ough the spiritual life and power that so eminently manifested in the early of this people, were somewhat dimmed next succeeding generation, and may e risen to the same remarkable bright- oughout the Society, since that day, rough the condescending mercy of the nbering Shepherd of Israel, there has e been preserved a living remnant est us, who have held the truth in its and completeness; commending it, not y by a confession of the lips, but by a ent example; and showing the power illness by their preservation from the evils around them, by their faithfulness porting the testimonies of the gospel, y their moderation and integrity in ot of their outward callings, and their mingling with the men of the world. y generation, as it comes on the stage on, has a work assigned it in the exten- e the Redeemer's kingdom, for the per- e of which, each individual of it is or less responsible. No one among s, as a part of the militant church, who e the quickening virtue of Divine Grace e made alive from the dead, and earn- e the pursuit of those things which be-

long to the soul's peace, and consequently eeply solicitous for the support and spread of the truth as held by Friends, but must often look over those parts of the Society with hich he is acquainted, with anxious desire for the growth in Christ of his fellow ebers, and earnest longings that by a practical application of the fundamental doctrine of the indwelling of the Holy Spirit, they may come to a saving knowledge of vital, experimental religion.

Though we may thankfully believe there are many up and down, whose daily concern it is to be kept under "the law of the spirit of life in Christ Jesus" which makes "free from the law of sin and death," we ought not to shut our eyes to the fact, that within our borders there is not a little of our high profession, unaccompanied by evidences of that change of heart and conduct which is the fruit of being born of the Spirit. There is, in some, the acknowledgment of a sound orthodox belief, without a practical exemplification of that true faith which works by love to the purifying of the heart, and which commends the religion of Christ to others by the christian virtues shown in the every day transactions of life. While in others, who appear to think they have attained a state of acceptance and experience, there is performance of various outward exercises but without the infallible signs of the washing of regeneration, and with a lack of the evidences of those crucifying baptisms which attend a true disciple of Christ.

That the doctrines of the gospel, the observance of which more particularly characterize Friends, are very imperfectly comprehended by some in membership, as well as others without, is often manifest; and consequently we sometimes hear opinions publicly promulgated, as being those of Friends, which, as a body, they never held; and this we may hope, in some cases, not with an intention of misrepresenting them, but because those expressing these opinions know no better. By this means persons within, and probably many more without our pale, are led into error, and sometimes form a low estimate of the excellency of the religion the Society holds.

How is a remedy to be applied in this state of things, so that our beloved Society may be restored to a state of health and soundness? The obstacles to be removed spring from the selfishness, the prejudices and the blinding delusions innate to man's heart. Whatever then, may be the estimate made by some, of the value of First-day schools, Bible classes, or stated formal prayer meetings, they can hardly hope that any or all of these will prove adequate to the change required. Nor can the introduction of any new doctrine in the place of those ever held by Friends, offer a reasonable ground to hope for a revival of primitive purity, consistency and righteous zeal. We must rely on the same power and guidance that raised up the Society in the beginning, and has preserved in every generation a seed to serve Him, who is a jealous God, and will not give his glory to another, nor his praise to graven images.

This power and guidance, which are the same to-day and as accessible now as ever they were, were and are bestowed through obedience to the Light of Christ, or Divine Grace manifested in the heart; which not only brings salvation to man individually, but keeps the church subservient to the will of its glorified

Head, and clothes it with dignity and authority. It is this that transforms man from a state of nature to a state of acceptance by his Creator. It is only by the work of the Holy Spirit that man can be convinced of sin, brought to see his need of a Saviour, come to that Saviour who died for him, experience true repentance, and receive saving faith in the Lamb of God that taketh away the sin of the world. And it is only by the renewings of the Holy Spirit that the work of regeneration, when once begun, can be maintained and carried on, until the will of the creature is brought into entire conformity with that of his Creator and Saviour, and he thus be made meet for an inheritance with the saints in light.

As men submit to this heart-changing work, bearing with patience the pangs of the new birth, they are made members of Christ's militant church, and having become acquainted with his voice in themselves, they follow his bidding in the work He assigns them, and the voice of a stranger they will not follow. He bestows his gifts on such as these for the edification of the church, and clothes them with the spirit of judgment when they sit in judgment, and with strength to turn the battle to the gate.

Here, then, is the means and the only means for producing a reformation in the Society, and as it must operate on every member individually, every one may engage in it, and thus help forward the good work. It is a work which cannot be done one for another, and no one can perform it deceitfully. If, then, in looking at the state of our portion of the visible church, we are often ready to exclaim, as the prophet of old, "How is the gold become dim! how is the most fine gold changed! the stones of the sanctuary are poured out in the top of every street," let us humbly confess that it is because, as a people, we have forsaken the love of our espousals, and often disregarded the indispensable necessity of waiting for and obeying the gift of Divine Grace, the Light of Christ within. And if we are really solicitous for the removal of the many deficiencies and a return to original purity and brightness, let each member show in practice that he understands the import, and strives to act in accordance with the often quoted and more often unheeded declaration of the Saviour of man and Head of the church, "Without me ye can do nothing."

We have been requested to state, that subscriptions towards raising the fifteen hundred dollars for keeping up the schools in Tennessee, established by Yardley Warner, may be paid to John C. Allen, Forrest Building, No. 119 S. Fourth street, or to Jacob Smedley, Jr., 304 Arch street.

SUMMARY OF EVENTS.

FOREIGN.—Paris continued to be a scene of anarchy and confusion up to the 26th ult. The people, as well as the national guards, are divided in sentiment, and a party of order has been organized, but it does not seem strong enough to put down the insurgents. The government at Versailles is reluctant to employ force against the insurrection, and indeed has not the requisite military force at command. On the 24th it was announced in the British House of Lords that the English ambassador, Lord Lyons, was confident of the early restoration of order in Paris. General Chanzy was not executed by the insurgents, but was so maltreated by them that he was sent to the hospital; after the detention of a few days he was released. One of the demands of the insurgents is that the National Assembly shall sit in

Paris, and they threaten that the national guards will march to Versailles and disperse the Assembly if it is not convened in Paris at an early day. The Assembly has about 47,000 armed men assembled for its protection. The billion in the Bank of France has been removed to Versailles, and all unissued notes destroyed. A proclamation of the Emperor, approved by the Assembly and issued by Thiers, after reciting the occurrences in Paris and calmly reviewing the situation, closes as follows: "France repudiates the movement. Do not fear our weakness. We are your sole representatives, and will maintain our trust, and make no compromise with the enemy."

The insurgent journals declare their willingness to treat with the Versailles government on the following conditions. The election of a communal council by the people of Paris; the re-organization of the National Guard, coupled with power of self election and removal of officers, and suppression of the prefecture of police of Paris.

The Central Committee who direct the insurgents state that they organized in the first place on account of reliable information that Thiers was co-operating with Bismarck for the overthrow of the Republic, and that their object was to prevent the Emperor from going to Paris, free elections, and the abolishment of payment of rent during the siege. They desire also to form a thorough republic, and make education general and compulsory. On the 26th a municipal election was held in Paris under the auspices of the revolutionary party.

The National Assembly has voted a resolution to give public funerals to Generals Lecomte and Clement Thomas, who were murdered by the insurgents, and providing for the adoption of their children by the State. In the Assembly, Jules Favre read a letter from Count Bismarck, who says: "Events in Paris do not indicate the execution of the convention entered into with the German commander, which forbids any approach to the lines before the forts occupied by the Germans."

Bismarck claims a restoration within twenty-four hours of the telegraph lines leading to Paris, which has been destroyed, or Paris will be treated as an enemy; and should there be any more proceedings in violation of the preliminaries of peace, the fire of the forts will be opened on the city.

Favre stated that he had replied to Bismarck that the condition of Paris was such as to give no ground for hope that it would be repressed. If there was delay in its suppression it was because the government was hopeful of avoiding bloodshed. The government had no means of repairing the telegraph, but would ask its reinstatement of the mayors of the arrondissements through which it passed. The principal officers of the late Imperial army have returned to France from imprisonment in Germany, and are, without exception, retiring from the military service.

The German Parliament was opened on the 21st, at Berlin, by the Emperor William, who delivered a speech for the throne. The Emperor had a hard time of it in imposing in its simplicity. The emperor manifested deep emotion during his speech, which was delivered from the marble throne once occupied by Charlemagne. The emperor congratulated the German Parliament and people on the unity of Germany, and the security of her frontiers, objects which she had striven so long to attain. He says: The amount to be contributed by each State toward the current expenses of the Empire demands legal settlement, and sanction is to be given to separate laws for Bavaria which will be introduced. The war indemnity will be disposed of, with your approval, in conformity with the requirements of the Empire. The just claims of the Empire, on account of the expenses of the war, will be laid before you as soon as possible. The position of the recovered territories renders necessary special legislation, which will be speedily brought to your attention. Pensions for soldiers and support for widows and orphans of the war are to be provided for, and measures to these ends should be made to apply to the whole Empire, for all fought with equal devotion and deserve equal honor and reward. May the establishment of the German Empire be a promise of future greatness. The Emperor has completed his 47th year, and is in excellent health.

In the British House of Commons a resolution to the effect that the army and navy can be made efficient without any increase in expenditure beyond the ordinary estimates, was rejected by a large majority, as was also another limiting the proposed increase of the army to 100,000 men.

On the 22d ult. the Princess Louise was married to the Marquis of Lorne. There were general rejoicings

and celebrations throughout the United Kingdom, and many marriages were solemnized simultaneously in different parts of England. This marriage has attracted more attention from its being the first instance in which one of Queen Victoria's children has been married to a subject.

The result of the elections to the Spanish Cortes is as follows: Chamber of Deputies—Carlists, 50; republicans, 45; moderates, 15; Montpensierists, 13; ministerialists, 20. Senate—132 ministerialists, and 19 opposition members.

The king of Portugal has congratulated King Amadeus on his queen upon their peaceable accession to the throne.

Dispatches of the 27th give no ground to hope that the troubles in Paris were near a satisfactory adjustment. The elections on the 26th passed off quietly, and resulted in a heavy communist majority. The candidates of the Central Republican Committee were elected in all but three of the arrondissements. The majority of the electors refused to vote. The Minister of War has called for volunteers from each of the departments, to be forwarded to Versailles immediately. It is believed the capital will be removed to Tours, and that the Emperor will be obliged to flee to Belgium. The Prussian outposts have been advanced to Vincennes. The revolutionary party have control of Lyons, according to the Paris Official Journal of the insurgents.

On the 27th, Napoleon visited Windsor Castle and remained an hour with Queen Victoria and her family. An article in the *Standard* says: "Lord Stanley, in the House of Lords the bill legalizing the marriage of a deceased wife's sister, which had previously passed the House of Commons, came up for final disposition. After a long debate the bill was rejected."

A Berlin dispatch of the 27th says, a bill will be introduced in the Federal Parliament for the incorporation of Alsace and Lorraine into the German Empire of the Emperor. It provides that the German constitution will be enforced as the law of the land, from the first day of the year 1873.

London, 3d mo. 27th. Consols, 92½; U. S. 10-40's, 87.

Liverpool.—Uplands cotton, 7½d.; Orleans, 7½d.

Breadstuffs dull. California wheat, 11s. 10d. per 100 lbs.

UNITED STATES.—On the 23d ult., the President sent a special message to Congress in which he says: "A condition of affairs now exists in some of the States of the Union rendering life and property insecure, and the public tranquility and the collection of the revenue dangerous. That the power to correct these evils is beyond the control of the State authorities I do not doubt. That the power of the Executive of the United States, acting within the limits of existing laws, is sufficient for present emergencies, is not clear. Therefore I urgently recommend such legislation as the emergency of Congress shall effectually secure life, liberty, and property in all parts of the United States."

A Charleston dispatch of the 26th says: The United States steamer Tennessee, with the San Domingo Commissioners on board, arrived off the bar at daylight this morning. The Commissioners on board, except the scientific corps, came ashore, and started at once for Washington, where they will arrive to-morrow night at 9 o'clock. The Tennessee left at once for New York direct. The President will soon transmit their report to Congress, but it is not his intention to recommend any such legislation as the President desires its contents to be read by the people in order that they may form, with the official data before them, judgment of the question involved, before action shall be taken during the next session of Congress.

The Joint High Commission continues its conferences in Washington. Their meetings, it is reported, have been uniformly pleasant, all the members acting on the belief that a failure now to adjust the pending questions would leave them in a more unfavorable position than before the commission met. The subject of the fisheries was first taken up, but the other questions have also been discussed.

The aggregate subscriptions to the new 5¢ cent. loan amounted on the 27th ult. to over 14,000,000.

The interments in Philadelphia last week numbered 315. Deaths from consumption, 49; infestation of the lungs, 18; old age, 13.

The census of the United States last presented shows that in the purely cotton States there is an increase since 1860 of 66,000 negroes, or 8½ per cent.; in the partially cotton States of North Carolina and Tennessee, an increase of 14,000 or 3½ per cent.; and in the non-cotton States, a decrease of 34,000, or 5½ per cent. The negroes have gone south of the Potomac, from Maryland, Virginia and Kentucky, toward the Gulf States.

On the 27th, Charles Sumner delivered a speech he

had been long preparing, to a crowded Senate chamber. The speech occupied over an hour in its delivery. It is a strong arraignment of the President's policy in the whole San Domingo question. He contended that the action of the executive was contrary to international law and the constitution.

The Markets, &c.—The following were the quotations on the 27th ult. New York.—American gold, U. S. sixes, 188½, 115½; ditto, 10-40, 108½. Sup. flour, \$6.10 to \$6.55; finer brands, \$6.70 to \$11.10. V. Genesee wheat, \$2.02; white California, \$1.80; a western, \$1.70. Oats, 65 to 70 cts. Yellow corn (Rhinecliff)—Cott., 15½ to 15 cts. for options. New Orleans. Superfine flour, \$5.25 to \$3.75; brands, \$6 to \$9.50. No. 1 spring wheat, \$1.63; and Indiana red wheat, \$1.69 to \$1.70. Yellow 8½ cent cts. Clover-seed, 10 to 10½ cts. Timothy, \$1.82 cts. Beef cattle were in fair demand, 1859 head arrived sold at 9 to 9½ cts. for steers, 7 to 8½ cts. for fat to 4 and 4½ cts. per lb. gross for common. About 100 sheep sold at 6½ a 8½ cts. per lb. gross, and 2500 head \$10 to \$11.25 per 100 lbs. net. Chicago.—No. 2 wheat, \$1.24. No. 2 corn, 51½ cts. Oats, 47½ to 49 cts. No. 1 white wheat, 78 to 79 cts. Lard, 11½ cts. No. 1 white, 10½ cts. No. 2 white, 82; Ohio and Ind. \$1.55 to \$1.62. Yellow corn, 80 cts.; white, 82 to 83 cts. Oats, 63 to 65 cts.

The Stated Annual Meeting of the Haverford S. M. Association, will be held on Second-day, 4th mo. 27th, at 10 o'clock, at No. 41, at the Centennial of Arch Street Meeting-house in Philadelphia.

PHILIP C. GARRETT, *Secretary*.

FRIENDS' SELECT SCHOOL.

Wanted, a well qualified man Friend as teacher the Boys' School on Cherry street.

Application may be made to Mrs. J. C. Wall, Race St.

James Smedley, 47 Market St.
William Biddle, No. 15 South Seventh St.
Geo. J. Scattergood, 413 Spruce St.

WESTTOWN BOARDING SCHOOL.

The Summer Session opens on Second-day, 10th mo. 1st, at 10 o'clock, at the Centennial to the Institution, are requested to make early application to AARON SHARPLESS, Superintendent, (at Street Road P. O., Chester Co., Pa.) or to CHARLES ALLEN, Treasurer, 304 Arch Street, Philadelphia.

FRIENDS' BOARDING SCHOOL, TUNESSA, NEW YORK.

A Teacher is wanted in this Institution. Application may be made to

Samuel Morris, Olney P. O., Philadelphia
James E. Rhoads, Germantown,
Geo. J. Scattergood, 413 Spruce St., Philad.

WESTTOWN BOARDING SCHOOL.

Wanted, a Friend suitable for the position of G. ness. Application may be made to

Samuel Bettle, 151 North Tenth St., Phila
Joseph Passmore, Goshenville, Chester Co.
Elizabeth B. Evans, 322 Union St., Philad.
Martha D. Allen, 628 Pine St.

FRIENDS' BOARDING SCHOOL FOR INFANTS, CHILDREN, TUNESSA, NEW YORK.

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm connected with it. Application may be made to

Ebenezer Wirt, Marshallton, Chester Co.
Thomas Wistar, Fox Chase P. O., Philad.
Samuel Morris, Olney P. O., do
Joseph Scattergood, 413 Spruce Street, do.

FRIENDS' ASYLUM FOR THE INSANE Near Frankford, (Twenty-third Ward), Philadelphia.

Physician and Superintendent—JOSHUA H. W. NOTON, M. D.

Applications for the Admission of Patients in connection with the Superintendent, or any of the Board Managers.

DIED, on the 2d of 12th mo. 1870, SARAH, wife the late Abraham Haines, aged near 86 years, a member of the Monthly Meeting of Friends of Philadelphia, on the 1st of 3d month, 1871, at his residence in Falls Mount, Bucks Co., Pa. Mrs. Cresswell, esteemed member and elder of Falls Mount Monthly Meeting of Friends, in the 74th year of his age.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

NO. 116 NORTH FOURTH STREET, UP STAIRS,
PHILADELPHIA.

Age, when paid quarterly in advance, five cents.

California.

For "The Friend."

(Continued from page 259.)

The tendency of the climate appears to be towards greater evenness, if not to an increase of moisture. The researches of Professor Whitney indicate that at one time the climate all the Pacific region was as moist as it now is; that snow fell in the summer on the mountains, as it rarely or never does in this region then producing and feeding glaciers, that dryness of the climate at present forbids that, in that, in fact, the now desert valleys of the Great Interior Basin of Utah and Nevada are, in the wet langsyne, vast inland seas! The surrounding mountains, now utterly bare and forest life, would then naturally have been clothed with the thickest and largest of trees. The contrast of present facts with this theory of the past is almost too great for the imagination to comprehend. What mighty means attended the revolution?

Of course, with such extent of territory and such varieties and contrasts of elevation, degrees of temperature, at every season of the year, are offered in California. The general facts are that the winters are warmer than the summers cooler than in the same latitudes and elevations at the East. The nights, even of the hottest days of summer, are always cool, whether in mountain or valley, and it is very rare that a double blanket is not necessary as bed covering in any part of the State. The summer sun is very fierce, even in the hills, but the atmosphere is so dry, and always in such brisk motion, that the heat is much less oppressive than the same degree of temperature in a moister climate than stiller air; while the nights are restoring and recompensing.

Along the coast, and especially at San Francisco, the ocean winds temper the summer heat and the winter cold most remarkably. The climate of San Francisco is almost idiosyncrasy; it is probably the mildest, — it is, freest from excess of heat or cold, — and most even of any place in the world. The average temperature for the year is 54°; the driest month is January, which averages 49°; the warmest September, which averages 58°; while the other months range between these extremes. Snow rarely falls, water as rarely

freezes, in the Pacific metropolis during the winter, which is usually the more equable and pleasant season of the year there. The ocean wind and mist pour in sharply in the summer afternoons, and, after a struggle with the dry atmosphere, which resists the attack bravely for a long time, they generally gain a partial victory, and make a frequently disagreeable evening. Such a contrast as 97° at noon and 46° in the evening has been known in San Francisco in July; but the usual range in July and August is from 50° to 70°. Woolen clothing of about the same warmth is needed constantly in that city, and no matter how warm the summer morning may be, the stranger should never be tempted out for the day without his overcoat. For robust, vigorous bodies, there is not so favorable a climate as that of that city; it preserves health and keeps up the tone and strength of system, and secures more working days in the year than that of any other town in America or the world; but to a weak constitution, and for a quiet, sedentary life, it is too cold. The men like it better than the women do. The doctors say it is the easiest place to keep well, but the hardest to get well in; and they usually order their invalids into the country.

But it is not difficult, as we have suggested, to find any shade of climate at short notice in California; by moving from one place to another, we may be in perpetual summer, or constant winter. The southern coast of California is softer than South Carolina; the Colorado desert country in south-eastern California is warmer than New Orleans; many a shaded spot upon the coast is an improvement over southern France or Italy; and the Sandwich Islands, which California holds to be a half dependency, offer a climate to which all our tender invalids will soon be hastening,—the thermometer at Honolulu rising neither to 80° nor falling to 70° in any month of the year. The great Sacramento Basin escapes the San Francisco fogs and sea breezes, and is four degrees colder in winter, and 16° to 20° warmer in summer. The summer days are often quite hot there; 100° is not an uncommon report from the thermometers in the shade; but the cool nights are invariable. And would we have the tonic of frost, the high Sierras will give us fresh ice nearly every morning the summer through. A railroad of two hundred miles, running south-easterly from San Francisco, through Stockton, Sonora, the Mariposa, Big Trees, the Yosemite Valley, and reaching the tops of the Sierras at ten to twelve thousand feet, would offer any tolerable degree of heat and cold on every summer's day.

But the evenness of the climate between the mountains and the sea in California, and the indescribable inspiration of the air, are the great features of life there, and the great elements in its health. There is a steady tone in the atmosphere. It invites to labor, and makes it possible. Horses can travel more

miles in a day than at the East; and men and women feel impelled to an unusual activity.

It is too early yet to determine the permanent influences of the climate of the Pacific coast upon the race. The fast and rough life of the present generation there is not sure basis for calculation. But the indications are that the human stock will be improved both in physical and nervous qualities. The children are stout and lusty. The climate invites and permits with impunity such a large open air life, that it could hardly be otherwise. There is great freedom from lung difficulties; but the weakness of the country is in nervous affections.

The best season for seeing the coast mountains, valleys, and Sierra foot-hills of California is the early spring, from February to June. Then the rains are dwindling away to meet the summer's drouth, and vegetation of all sorts comes into its freshest, richest life, and then, according to all testimony, is the most charming season for the stranger. All these August-bare and russet hills, these dead and drear plains, are then alive with vigorous green, disputed, shaded and glorified with all the rival and richer colors. The wild flowers of California fairly carpet all the uncultivated ground. No June prairie of Illinois, no garden of eastern culture can rival them. For luxuriance, for variety and depth and height of color, for complete occupation of the hills and the plains, all agree that there is nothing like it to be seen any where else in nature. Then, too, the trees are clean and fresh; the live oak groves are enriched to brilliant gardens by the flowers and grass below; and the pine and fir forests hold majestic yet tender watch over all the various new life of the woods. But in these spring months of fresher nature, before the sun sears and the dust begrimes, the interesting regions of the higher Sierras are denied us; and most pleasure travellers will visit California in mid-summer, from June to September. Then the paths to the Big Tree groves, to the Yosemite Valley, and to the lakes on the mountain tops, are open and inviting; and as the flowers and grass and trees of those regions are at that season condensing their spring and summer growth, we shall find there some compensation for the decayed nature of the lower regions of the State.

While the novelties of climate, the strange and wonderful variety of surface and form in nature, the combination of the beautiful and the anomalous, the fascinating and the repulsive, that California everywhere presents, arouse every enthusiasm and excite every interest, it is to the student of science that she seems the most original and proves the most engaging. He finds here not only revolutions in forms and facts, but revolutions in theory, and sees that he must begin anew to observe and recreate the science of the world's history. There are evidences of glaciers that surpassed those of Switzerland; there are proofs of vol-

canic revolutions that utterly changed the form of the continent, and the nature of vegetable and animal life upon it; where those mountains now rise were once grand rivers; out of their depths have been dug the bones of a gigantic race that lived farther back in the ages than human life was ever before known, or perhaps suspected by the most audacious theorists; the State has diluvial deposits fifteen hundred feet deep, and granitic mountains twelve to fifteen thousand feet high, and others of lava and slate and metamorphic rock of nearly equal height; silent craters are open upon many of her highest peaks; where Switzerland has one mountain thirteen thousand feet high, California has a hundred; she has a waterfall fifteen times as high as Niagara; she has lakes so thin that a sheet of paper will sink in their waters; others so voracious that they will consume a man, body, boots, and breeches, within thirty days; she has inexhaustible mines of gold, quicksilver and copper; she has dreary deserts with poisonous waters, where life fairs; she has plains and valleys that will grow more wheat and vegetables than any other equal space in the whole nation; in short, here nature is as boundless in its fecundity and variety, as it is strange and startling in its forms.

"The future of a State, of such various and boundless gifts; so favorably located with reference to the world's commerce; so inviting to enterprise, so encouraging to labor, can hardly be measured by any imagination. She has now a population of half a million, of whom nearly one-third are held by her commercial city. In twenty years, the whole extent of her life, she has both developed and subdued gold-mining, outgrown its vicissitudes and conquered its dangers; created an agriculture hardly second to that of any State in the Union, and twice the value of her mines; and organized manufactures and commerce that are each of equal value with her mineral productions. The world never witnessed elsewhere such growth in all the elements of wealth and power and social and political order.

"Active now at all points, and increasing rapidly in wealth and population, California is fast perfecting wide-reaching railroad connections, both within and without the State. Besides the main Pacific railroad, that stretches across her central borders, from Nevada to the ocean, a distance of nearly three hundred miles, she has an eighty mile line due south from San Francisco, the beginning of the Southern Pacific Road; a second short track from San Francisco Bay to Sacramento, and thence on north into the Sacramento Basin, reaching out towards Oregon; several short roads into the rich valleys among the coast mountains and into the foot-hills of the Sierra Nevada, all tributary to both Sacramento and San Francisco; in total, at least six hundred, perhaps seven hundred miles of railroad will be laid and in use within the State before the year 1869 closes. Very soon all her central sections will be thus bound to her political and commercial capitals; and but two or three years at the most can pass before her remotest south and her remotest north,—her tropic and her arctic regions, the orange groves of Los Angeles and the snows of Shasta,—will be brought within a day's ride of her temperate central life. Five years ago, her railroads were less than one hundred miles in all; and ten years ago the only winter communi-

cation California had with Nevada was by a single express messenger, who traveled on foot with snow-shoes, and whose claims for pay for the service are not yet settled!"

(To be continued.)

For "The Friend."

The Journal of William Evans.

(Continued from page 251.)

He kept through life the resolutions he had now formed. Twenty-four years afterwards he writes: "In the course of my short pilgrimage, being now in the fiftieth year of my age, I have encountered some difficulties, and passed through seasons of deep discouragement on various accounts. On commencing business for myself, I fully believed that my life and my talents should be devoted to the service of my Heavenly Father. Though it was necessary to make suitable provision for myself, and for those who might be dependent on me, yet in my view this was secondary to the main object of serving Him; and through the aid of his blessed Spirit, taking part in the interests and concerns of his church and people. Very early I had the promise that if I devoted myself to his service, I should never want food or raiment. But though I fully believed the certainty of the promise, and have never since been permitted to doubt its fulfillment, yet when things in the outward have worn a gloomy aspect, and my business was very small, and an increasing family looking to me for their daily supplies, my faith at times has been closely proved. This has had a very humbling effect; and while I have been weaned from the desire after outward things, both riches and temporal enjoyments, it has tended to bring me many times, in a prostrated state of mind to his footstool, and to lay all before Him, and to ask for the continuance of his countenance and mercy towards me, a poor unworthy creature before Him. Herein I have experienced the renewed exertings of his unmerited regard; the load under which my mind has been laboring, was, for the present, removed; and ability was received to feel with and for the afflicted, and to hold forth to them the language of consolation, in their secret and bitter conflicts. Under the discipline of the cross of Christ, I have been convinced that much too great a part of the time, and of the energies of body and mind, are absorbed in the pursuit of worldly things. A great part of mankind miss of the true enjoyments of the provisions of a beneficent Providence, even after they gain them, for want of living to Him, and not to themselves. They are kept either in a constant hurried frame of mind, confused, or in doubt, what to lay hold of to obtain happiness, or they settle down in the love of money; hoarding it and husbanding it, out of a sordid attachment to it. They are in bonds; unable to enjoy, or to see in what true enjoyment consists. The work of religion is either overlooked, rarely attended to, or postponed to a future day, when they think it will suit their inclination and convenience. I am convinced that it is in our power, as we live in obedience to the Divine will, to find time for all our duties, social and religious. Even the poor, with common industry; as their desires and expenses are circumscribed by the Divine will, may through His blessing, procure sufficient food and raiment, and when it is proper to leave their outward business, in order to perform their religious duties, they may confide

in his superintending providence over the affairs, and their families, so that they shall not suffer from their faithfulness. How simple and how few are the wants of such! They do not envy the rich, nor covet their possessions. 'Their delight is in the law of the Lord, and therein they meditate day and night. They eat their bread with gladness and singleness of heart. Their labors and their rest are sweet; and as they seek first the kingdom of God and the righteousness thereof, all the things necessary to their accommodation shall be added. Here the devoted follower of Christ experiences the right use of his time and talents, and the true enjoyment of the various blessings which his Heavenly Father provides and bestows upon him. As time as the energies of body and mind, are washed away, he is growing in grace, and in the knowledge of those things which pertain to life and salvation; he is laying up treasure in heaven where his heart centres; and he becomes more and more established upon that Rock, again which death, hell and the grave, cannot prevail.'" pp. 177-179.

How charming is this Divine philosophy, sweeter than any pastoral, and kindling the obscure abode on earth with the light of the Day-spring from on high!

The last entry in his diary relating to the subject, is dated in 1848, after his visit to North Carolina, and it shows his continual watchfulness and dependence on his Divine guide.

"Soon after my return, a young man who had been in my employ several years, left me to commence business for himself. This was not necessary for me to confine myself much my store. I had several others of assistants but could not feel easy in my own mind to employ any of them, there being something in their appearance, and in the feeling I had respecting them, which deterred me from taking them. Under these circumstances, seemed at times let down to the bottom of the mountains; there being little to console from without, and the spring much shut within. But I waded along and the Lord gave me some tokens of his continued mercy and the word of command to tell it to others. Some of our evening meetings were solid and encouraging. In due time the way satisfactorily opened to employ a person who served his apprenticeship in the same store I did. His age and stability, and his knowledge of business, made it easy for me to leave, who necessarily absent on appointments, or as religious engagement; which I esteem a favor from the hand of my heavenly Caretaker as Protector. It appeared to me there was evidence in it of providential regard.'" p. 41

It is interesting to know that this person although not a member of our Society, was grandson of that eminent elder in his day John Hoskins, of Burlington. William Evans realized the fulfilment of the promise he received in youth, and was enabled in his old age to retire from the care of business with moderate but to him an ample competency.

No part of this valuable journal is more instructive than that which discloses the secret trials and provings of William Evans in his preparation for the call to the ministry, as the humility and self-distrust which accompanied his performance of its duties. His natural temperament was cheerful and content, and too sincere and honest to wish to appear unto men to fast, so that few even

personal friends knew the depth of his misery, or were prepared to find the valiant opinion of the faith maintaining so constant life-long a struggle with the frailties of nature, and so penetrated with the sense of his inability of himself for any good work as, at this volume shows to have been cases.

The following entry in his journal bears the date of the 9th mo. 9th, 1817: "At different times he course of my life, I have apprehended that at some period I should be engaged in a life-long laboring in the great cause of Truth, and the attention of others, through its restraining power, from darkness to light, from the power of Satan unto God. Clear distinct openings have been made upon my mind in a very impressive manner, in relation to the standing and qualification of a minister. It has appeared to me necessary that through the humbling power of the baptism of the cross, his will should be reduced and a state of childlike dependence on the Leader of Israel, in a good degree attained, that he may be prepared to be used as an instrument through whom the Lord would send to speak to his people.

For several months past the time appeared to me drawing nigh for me to make more fully the concern that had been shut up in my own breast. I had many impressive openings which seemed nearly ripe for communicating, but remembering the awfulness and importance of the work, I kept back. Sometimes I rejoiced after meeting in believing that I was Divine impressions, and sometimes I was concerned that by putting off too long, I might get into the habit of slighting them, and I was looking for satisfactory evidence of the origin of the concern. But He who shows how to deal with his children did not forsake me, but furnished with a fresh opening this morning in our Fourth-day meeting, heretofore I was preparing to set aside, for further confirmation, when I was beloved I was engaged to call upon some to be faithful—that no sign should be given but that the prophet Jonah, who for his disobedience was permitted to descend into deep suffering and anguish. This seemed so clearly applicable, that, recollecting I had passed through many night seasons, and feeling after she sat down the fresh arising of the concern, I stood and with an audible voice said, "God is our strength, in Him will we put our trust. They that trust in the Lord shall never be confounded, but they shall be as Mount Zion, that shall not be removed. Christ Jesus remains to the eternal rock and foundation; blessed be all they that are built upon Him." My mind was preserved in calmness throughout the day, free from doubt of the propriety of proceeding in the weighty and solemn work. My dear friend Thomas Kite, called down at a store to see me, and though he said but a few words, secretly desiring that preservation and proper nourishment might be afforded by Him who alone can give them." 46, 47.

(To be continued.)

perceive there is in the world a good nature, falsely so called, as being nothing else than a facile and flexible disposition; wax for any impression. What others are so bold to brag, they are so bashful as not to deny.

Such osiers can never make beams to bear stress in church and state. If this be good nature, let me always be a clown; if this be good-fellowship let me always be a churl. Give me to set a sturdy porter before my soul, who may not equally open to every comer. I cannot conceive how he can be a friend to any who is a friend to all, and the worst foe to himself.—Thomas Fuller.

For "The Friend."

The Track of the War around Metz.

(Continued from page 252.)

"A Lieutenant-General of the Prussian army came to the Curé, after the battle, to help him find the grave of his son. He was an old man, with snow-white hair. After a search they came on two of his son's brother officers, with an unknown Captain lying between them. The poor old man bent down over the spot, and then turned round and looked the Curé full in the face. 'It must be here that my son lies buried, Monsieur le Curé: will you see that his grave is kept in order? I am a widower—my wife is dead—and there lies my only son! He was but 19 years old; and now I must go away and seek death myself.' There was a moment of silence,—and then the starred and decorated Lieutenant-General buried his face in both hands, and burst into loud and heartrending sobs; and turning away, he strode off alone over the plain. The Curé never saw him more!

"When bedtime came, I was shown to my room, where, wearied out with the mental strain of the day, I soon fell asleep.

"In the morning I got up before eight, and we breakfasted quickly, as my host had to go off to conduct the service in a little village called Saint Aul, and he wanted first to show me some of the graves, &c. It was a hard ringing frost. We went out at the back door, where the garden was trampled to rubbish, and the vine trailing on the ground, it having been dragged down by the soldiers to get the ripe grapes. Passing through a gap in the wall, and then another gap or two, we came to a second garden, where a very long trench, like a newly-dug potato bed, showed the grave of I think 70 odd of those who had fallen in the battle. In four or five places on it there were little pits, perhaps six inches deep, where the earth had been freshly turned up. 'What are those?' said I. 'Ah, Monsieur! *que de misère!*—a pig has got through the gap there, and been rooting on the grave!' I leaned over and looked closer. The frost had spread a delicate lacework of crystals over the facings of uniforms thus laid bare. There were the bosoms of four of the dead! The whole bed was strewn with chloride of lime. From point to point on the plain around there were many such graves. Most of them had a small wooden cross at the head, hastily made from a couple of barrel staves, or pieces of a box, and coarsely marked in blacklead pencil.

"We went over the fields to St. Ail, where we called on the Instituteur, or Schoolmaster, a handsome and cheerful young fellow, whose house is entirely gutted. Three or four of the doors had been taken off their hinges to carry wounded men on, and never returned! It is a bleak spot, and the wind whistles through the house in all directions. We have this day sent him a suit of clothes, and the same for three other schoolmasters, none of whom have received their salaries for five

months, or have any other clothes than those in which they stand up.

"I took leave of the Curé, and with the schoolmaster made my way to Montois. This village lies rather off the field of battle; but it was heavily quartered on by Prussian cavalry, and is sadly drained of means. The Maire is a respectable young farmer, who is determined to do all he can to help himself. Directly Metz capitulated, horses were sold off cheap, and he bought seven for 200 francs, to get his ploughing done. His wife, a sensible woman, took the precaution to leave all her furniture, cupboards, &c., unknocked, and thereby saved them from being smashed. In the other houses, here and at Roncourt, the doors are smashed in, clocks broken to bits, and the wreck strewn about the floor in every direction. The Maire's wife is a German, and the men quartered on them used to like to talk with her in their own tongue. 'Are you married, Madame?' (not knowing whether she might be his wife or his sister.) 'Yes.' 'So am I,—and I have three little children *young, far away!*' And then, burying their faces in their hands, they would sink down on a chair and burst into tears, crying loud and bitterly at the thought of that home they might never see again. Many of them did this. 'Ah,' said the Maire to me, with many a cloquence, his eye glistening wet as he spoke, 'Ah, I couldn't help thinking when I saw them, that if King William and that Bismarck want to crush us into the dust, they may do it—because they call us their enemies; but why should they punish their own people so cruelly as this?'

"Passing from the Maire's house, we went to the Curé's—a white-haired old man, who told a sad tale of the destruction of all his things except his books. Ten lamps were knocked to pieces on purpose; the drawing-room cupboards were prised open with the bayonet; terrible filth had been left on the floor; in one corner was a mattress with a dark stain of blood on it, perhaps a foot square; and in the garden the vine lay, trailing on the ground, and the beds trampled to ruin. Laying my commission on the table before him, I asked him to read it. He did so in a low voice, and when he came to the part about all war being contrary to the will of our Heavenly Father, he sobbed audibly several times before he could finish it, confessing it was the very truth.

"From here we went to Roncourt, picking up scraps of wreck on the fields as we passed. At this village the Maire was not in. His sister got me two eggs, cooked them in hot ashes, and served them up with dry bread. They were exceedingly good. Cupboards were dashed to pieces, and every bit of crockery, every kettle, every knife and fork and spoon had been taken away to the camp in the fields—*i. e.*, of the army besieging Metz. They cannot use flour at this moment, for the simple reason that they have no utensil of any sort in which to knead it, and so they have to go all the way to Briey to buy bread.

"From Roncourt we went to St. Privat, and called on the Curé, and with him to the Maire. The wagon had just left a good store of flour; and as I had the evening before left my bag of eatables, &c., I opened it and gave away every morsel. The Curé I entrusted with the beef, forgetting it was fast day. We have been everywhere careful not to throw the distribution too much into the hands of

the Cures,—though in their capacity of councillors of the municipality (which some of them are) they have a share.

"But this Maire of St. Privat is an exceptional specimen of his class. He tried all sorts of dodges to deceive me, and gave the Cure-broad hints not to let me know that some of the villagers might get work in the spring."

"12th mo. 6th, noon.

"Work crowds in upon us so fast and thick that it is only by snatches I can write, or by taking time which I ought to spend in bed! We have hosts of people coming to us, of every sort, and lose hours in talking and explanations. I have just been with a deputation from Switzerland to ask Count Donnersmarch for free entry of goods and other privileges, which will doubtless be granted. Presently Thomas Whitwell and Samuel Gurney are going to see the Bishop, to explain to him that we cannot give him any money to help re-build the burnt convent of Petre. Here is a Roman Catholic Bishop (a Prince of the Bourbon family) backing up a letter from a convent soliciting aid of the Society of Friends. Next we have a host of people with their special private claims—clothes gone, houses burnt down, cattle taken away; and next a lot of carts coming in to be loaded from the different *communes*, with flour, potatoes, and clothing. Several tons have been given away to-day, and quantities of clothes."

"La Grange Mercier, près Metz,

12th mo. 6th, 1870, (near midnight.)

"The scenes shift and change before my eyes with a rapidity so bewildering, that I foresee one almost certain result will be this—I shall only be able to look back on the whole, when I am fairly back again in dear old England, and at the dearest spot in England, as a strange and incomprehensible dream. But in order to keep my narrative succinct, I must go back to last 6th day morning, when I had walked to St. Privat. This saddest of all sad sights I have yet seen, was the centre of the most terrible destruction. In a new garden there are the graves of superior officers, with the helmets, &c., left on them, and flowers laid on some—the inevitable chloride of lime on others. It was here that the Cure of Ste. Marie aux Chenes tells me the rush of the French, with bayonets fixed, was received by the Germans with loud shrieks of anguish and mortal despair even before they were close to each other. The Cure of the Paroisse gave me a description of what took place in his 'église,' which was filled with wounded, when two or three shells crashed through the roof, and burst among the already bleeding and moaning sufferers, tearing them anew, and killing many on the spot; as well as finally setting fire to the building, which is now a staring and blackened ruin. I have brought with me a fragment of the molten bells of the village as a souvenir.—It was now afternoon. The wagons had left their load of flour and potatoes, and had passed on to Amanvillers, whither I followed them on horseback. I could not find the Maire of the latter village, but only the Cure—a very superior man, evidently learned, but much broken and humbled by the terrible affliction that has fallen on them. Only his bookcase, a table, and one or two chairs remained of all his furniture. The rest had been burnt because it was so terribly slopped and soaked with blood from the wounded that it could not be used! Here in

the corner of one little drawing room a captain had been laid, with both his arms torn off by a shell—the blood running in streams on the floor, from the stumps. The surgeons had not instruments enough to work with, and they literally performed an amputation on this poor miserable captain with a *butcher's knife!* He died soon after in most cruel torment. Every floor in the house was covered with blood and gore like a slaughter-house, and the stairs were dripping with it; and all this while shells were bursting in the street, where a long row of houses was on fire, the flames crackling and roaring, and the roofs falling, amid the other terrible sounds of the battle. *What is the use of publishing such books as 'Hedley Vicars' and 'Life of Havelock' to prove that the work of a soldier is compatible with Christianity?* No one on earth would believe such a thing who saw and heard what I did in this miserable village. If people will fight why should they add to the crime by false arguments to show there is no sin in it? This was a cold evening; but the Cure walked down the half-ruined street with me to the end of the village, and kept me in earnest conversation at the last; acknowledging the hand of Providence in the chastisement of which he had been a partaker. I rode home the rest of the way by moonlight—some 14 kilometers, partly over high ground, still strewn for miles on every hand with the debris of battle—i. e., here and there a knapsack or a helmet on a broken piece of tent pole, or cut brushwood that tents had been built on. Drawing nearer to Metz, I passed down a lovely ravine between woods, like those I have previously described; and got into town in time for late table d'hôte.

(To be continued.)

For "The Friend."

Close of the Session at Westtown.

Westtown Boarding School is an institution in which Friends, especially of Philadelphia Yearly Meeting, are so widely and deeply interested, that some account of the closing exercises of the Winter Session may be acceptable to many of our readers.

The examination occupied all of Third and Fourth days, and the afternoon of Fifth-day, (3d mo. 28th to 30th,) and was attended by the usual deputation from the committee who have charge of the Institution. On the first day of this intellectual feast, the operations were carried on in five rooms simultaneously, on the subsequent days but four were occupied. This gave opportunity for a pretty thorough inspection into the progress of the pupils; and as care was taken to preserve notes of every recitation, a comparison of these at the close, enabled the committee to form a satisfactory and reliable estimate of the efficiency of the instruction, and the results accomplished.

In looking at the bright and intelligent faces of the children, and watching the animation with which they solved the problems and answered the questions which were to test their knowledge and skill, one's sympathies could not fail to be warmly aroused; and thus we were led to share in the joy which enlivened the face when a puzzling question in mental arithmetic was fairly unravelled, the correct result obtained, and the process explained. Occasionally the youthful brain would become entangled in a complex problem, or geometric demonstration, and then the de-

sire would arise to give a little help, a meek hint, which might turn the thoughts from barren angles and lines among which the mind was hunting for the missing link in the demonstration, to those parts of the figure where the secret was hidden. It was a source of much interest to watch the mental operations so beautifully exhibited in the efforts and incidents which marked the different parts of the exhibition.

On Third-day evening was held a meeting of the boys' literary society, to which the teachers and the older students belong. This has been in operation, with very little interruption since the fall of 1836—more than 25 years—and has doubtless been very useful, promoting intellectual activity, leading to research and observation, and binding together teacher and scholar in a bond of common interest. The meetings are presided over by its own officers, and the business conducted in a formal and regular manner. On this occasion, all the scholars and teachers of both sexes and the committee were present, at the literary entertainment provided for the evening was quite attractive, and very creditable to those on whom the labor fell. One oratorical and one poetical selection were recited with considerable energy and effect; but the other declamations were all original, and evinced care in preparation, and some of them a skill and force in delivery for which we were prepared, and which was very satisfactory. The subjects selected were: The Need of Action; A Generation of Gleaners; Ancients Egypt; The Republic; The Wilds of Africa; Invention; The Indians, and The Hungarians.

The proceedings of the society are somewhat varied. The exercises in each alternate meeting are similar to those which we witnessed. Once in four weeks a debate is held and one meeting in four is appropriated to reading a report on Natural History and the pages of the "Cabinet," a collection of essays and articles written by the members, of which many volumes, the result of years' labor are now deposited among the archives of the society. We picked up the volume for 1870. It was a neatly written and bound book of 442 pages. Besides a series of editorials, contained illustrated biographical sketches distinguished persons, such as Murchison, Webster, Cobden, J. Stuart Mill, Alexander Humboldt and George Peabody. The record of a horseback ride among the mountains of Pennsylvania, performed during the fall vacation, was continued through five numbers. Another author favored his auditors with four articles describing his travels, under the title "Four hundred and three mile letters." Miscellaneous articles took a wide range. Poetry and prose, scientific and descriptive pieces were mingled in the pages of the volume though the descriptive were most numerous.

On Fourth-day evening, a corresponding society, belonging to the girls and women teachers, was held—to which also the same company was invited, almost completely filling the lecture room. The business was conducted in the same methodical manner, as the previous occasion, and it was somewhat amusing to note the hearty unanimity with which the *ayes* were uttered when the President put several motions to vote. They did not come scattering along, one after another, but the responses were prompt, decided and chorus, reminding one of the skillful man in which the same girls had exhibited their

s of reading and reciting in concert. tatory address welcomed the audience, the close a valedictory bid them fare. Recitations and original essays were read. One of the most interesting portions of the exercise was a written discussion on two of the girls on the relative value and importance of science and history. The state of science first advanced its claims, opposing party, while admitting their advance, proceeded to show that without observation by history of the knowledge and discoveries, modern improvements not have been made. To this there replies and counter replies. The whole dealt an amount of thought and research, still in argument which pleased the audience, and confirmed the impressions which serious examinations had given of the richness and solidity of the training our children receive at Westtown.

mingling with the interesting groups, with them in solemn silence in their prayers, or listening to the precious passages of Scripture as they flowed from the lips of our comparatively untainted with the taints of the world, the desire arose that the power of Divine Grace might be about and protect these dear children, at they might be so wise as to obey its precepts and thus be prepared to be useful in the church and world, and finally be made part of that glorious and happy future awaits all those who love the Lord in truth. The springing up of such feelings in our minds, explained how it was that Friends sitting on the committee, could cheerfully forego their homes and their own business, and so much of valuable time, and earnest labor for the benefit of those entrusted to their care. If such a religious conduct could continue and prevail among them, it would be one of the strongest proofs that the favor of God still rests upon the institution, and that the prediction of Thomas Scudder is still being verified, "This is a plan which the Lord will bless."

Original for "The Friend."

LIFE'S CHANGES.

Oh, restless world, be still!
 Stop again the swift-revolving wheel!
 Let my feet rest on thee once more
 As I gather in the quiet hours,
 And their freshness on life's drooping flowers,
 My spirit's urn refill.

Oh! for the calm it craves!
 Still hour amid this "wandering range—
 The great whirlpool of unceasing change,
 No vortex where the soul may stay
 And not e'en on the dashing of the spray
 From off the outer waves?

Must the great rush go on,
 Or forever on its foaming tide
 Carry, ressing spirits, till they glide
 To the unknown harbor spread before
 The billows break on the eternal shore,
 Where life and death are one?

The spring may bloom again,
 Or can we ken with her fragrant breath
 The blossoms of our household wreath—
 The voices in the choir of home
 And with love and tenderness will come
 To mingle in life's strain.

The heart grows old so soon,
 On the freshness that its opening gave,
 And, like the chill, and shadow, of the grave—
 The encircling with its cumbering shroud,
 The world around us like a cloud,
 We weary ere the noon.

But, though our hearts may cry
 For rest, and peace to come with healing balm,
 Do we indeed desire a brooding calm?
 Would we that brighter, happier days should last,
 And be again as in the golden past,
 Until earth's glories die?

Ah! 'tis not ours to know
 The secret springs that move the soul of man,
 The hidden purposes of the Maker's plan:
 We feel the thrilling of the magic thread
 That binds us to the mysteries of the dead
 But follow not their flow.

In the world's great design,
 'Tis change alone that gives existence power—
 Still water stagnates—from the growing flower,
 Unto the systems that revolve in space
 'Tis one wide, universal law whose trace
 Is of a Hand Divine.

And thus the world within
 Must move in endless progress toward its goal,
 The final home of the immortal soul:
 Our strength of being gathers on the way,
 Our natures deepen, widen, as the day

With cloud and storm grows dim.

And could the past return,
 'T would wear no more the dawn morning glow—
 The founts of gladness dry as they flow—
 Our needs expand—desire is higher-toned—
 The fires of buried, by-gone joys alone
 On memory's altar burn.

Thus pass life's changes on,
 All that we are, or have been, soon will seem
 The dim and gliding phantom of a dream,
 And Time itself the vapor of an hour,
 The drop that sparkles on the sunlit flower,
 And while we gaze is gone.

Oh! could we hear aright,
 The overtures of our Father's Hand,
 And know each change to lasting good rebound—
 Might but the fading of each pictured scroll,
 Fix on th' immortal canvass of the soul
 The hues forever bright;

Then Hope would soar above,
 And bathe her pinions in ethereal light,
 And crown her brow with Heaven's stars of night,
 That in the dark with added lustre stand,
 While Faith would sit with meekly folded hand
 In patient trust and love;

Believing that once more
 The voice we long with aching heart to hear
 Will break in angel music on the ear,
 And the departed from our household band,
 In the green pastures of the spirit-land,
 Be ours forevermore.

For "The Friend."

A "Topographical and Historical Description of Boston," recently published "at the request of the City councils," contains among other references to the Society of Friends in that city, a somewhat detailed history of the meeting houses and graveyard occupied by Friends there, some extracts from which may be of interest to the readers of "The Friend."

"The cemetery that belonged to the Society of Friends, and which was called the Quaker Burying Ground, was the fourth in point of antiquity in Boston. This religious sect, although it has never been very numerous in Boston, yet had, very early in the history of New England, a respectable number of firm and conscientious adherents in the metropolis, the first of whom made their appearance in 1656, about twelve years after the rise of the denomination in Leicestershire, England. The first who came to Boston were imprisoned immediately on their arrival, and at the earliest opportunity were sent back to Barbadoes and England, whence they came. For many years this people were subjected to the most humiliating treatment, and to punish-

ments of the greatest severity. Some had one of their ears cut off, some their tongues bored with hot irons, and others were publicly executed by hanging. This barbarity will forever cast a stigma upon the administration of Governor Endicott, who as John Hull, the mint master, tells us, 'had very faithfully endeavored the suppression of a pestilent generation, the troublers of or peace, civil and ecclesiastick.' The persecution of this sect, however, excited in some a sympathy; on the execution of the Quakers in 1659, one of the persons in attendance, Edward Warton,* a person of considerable consequence, became so affected that he soon afterwards was converted to the Quaker doctrines, and was subsequently one of the most influential and enthusiastic of their number.

"During the Colonial government of Massachusetts, the Society of Friends had no regular place of worship, although meetings for religious worship were held as frequently as the defenceless condition of the Society would allow, the earliest of which any account has been preserved being on the 4th of May, 1664, about ten months previous to Governor Endicott's decease. On the adoption of the Provincial Charter, which passed the seals on the 7th of October, 1691, and which was brought to Boston on the 14th of May, 1692, by Governor William Phips, the Society was placed nearer on an equality with the other sects of Christians; and was so much relieved from oppression, that its principal men set themselves about providing a permanent place of worship.

"The first lot was obtained by William Mumford, a Friend of Boston, and a building was erected on it about the year 1694. It was a part of the 'Brattle close or pasture,' and the 'estate now covered with the building at the corner of Brattle street and Brattle square, called the "Quincy House." This lot and house were disposed of in 1709, another location having been obtained for the use of the Society."

"The second venture of the Society was the purchase of the Congress street estate, so well remembered by many persons now living. Here was established the first Quaker burying ground in 1709." "The estate was held by trustees or overseers until 1823, when several persons of Lynn, Danvers and Salem, as overseers of the Salem Monthly Meeting, conveyed the estate to Dr. Edward H. Robbins, and the Society styled the Yearly Meeting of Friends for New England, released all right to the same."

"The lot was situated in Leverett's Lane (now called Congress Street) opposite Lindall street, and by the original deed of conveyance, measured about fifty feet in front sixty in the rear, and one hundred and forty on the north. In the course of little over a century the length of the lot shrunk nearly thirty feet by the widening of Congress street and other causes.

"On the front part of the estate, the Quakers, in 1709 erected their meeting house, to take the place of that in Brattle square, which they left the same year. The new building was of brick, covering a space thirty feet by thirty-five, and setting back sufficiently to allow of a high wooden fence in front, the large gate of which was seldom opened between the years 1709 and 1808, except for a portion of the small monthly meetings of the brethren,

* This should be Warton, Ed.

which were held alternately within its walls, and at Salem and Lynn, and now and then for a burial. By the great fire which occurred in 1760, this building was much injured, but was repaired the same year. The meetings having been discontinued in the year 1808, the building became of very little use, and the Society, in 1825, sold it for the value of the material, the whole edifice bringing only \$160, and it was soon taken down."

"The rear part of the lot appears to have been used for burial purposes from the time of the purchase in 1709 until 1815, although the interments were of very unfrequent occurrence. On the 15th of May, 1825, the following order was passed by the Board of Aldermen, on the petition of Estes Newhall of Lynn, and others: 'Ordered, that the petitioners be permitted to take up all the remains of the dead from the burial ground in Congress Street, commonly called the Quaker Burying Ground, and to re-inter them in their burying ground in Lynn; the same to be done under the direction of the superintendent of burial grounds.' This duty was performed between the 28th of June and 7th of July of the same year, and the remains of 72 adults and of 39 children were removed to Lynn."

"Soon after the sale of the Quaker lot in Congress street, the Yearly Meeting of Friends for New England purchased another estate in Milton place, bounded about sixty feet easterly on the place, about thirty-nine in the rear, and a little over eighty in depth. Upon this the Friends erected a substantial brick building, with a stone front, measuring about thirty-nine by seventy-five feet, where they occasionally held meetings; but it being of very little use to the Society, it was sold at auction, and on the 30th of May, 1866, the Quakers ceased to be owners of a meeting house in Boston."

From "The London Press."

The Quakers.

The spirit of the age, which is silently but surely affecting all the life of the time, has not passed by the Society of Friends. Even the most zealous lovers of simplicity and truth that have ever been, cannot now claim exemption from the charge of false doctrine, heresy, and schism. Desiring union as much as most earnest men, they are so differing amongst themselves, that until they are one, they can hardly expect that their prayers will be answered for all the earth to be of one language when Divine things have to be spoken of. Loving simplicity in all things—dress, speech, worship, and social habits—they are, nevertheless, conforming to fashions which their forefathers deemed worldly, and re-nounced as sinful. Loving a pure doctrine and believing in the power of silence and the direction of the indwelling Spirit, they are now given to speaking and to obedience to spirits which have never been tried.

In the City now you seldom meet, so far as dress at least is concerned, the sturdy, non-conforming old Quaker of forty years ago. Now and then you will meet the broad-brim and high collar, but very seldom. Where are the pretty Quakeresses, in rich but quaint attire, who used to make Bishopgate in May so attractive, and in whose low musical voices there was such a thrill of deep feeling? There are few to be met with except amongst the

older members of the Society of Friends. You meet gentlemen in society who have dropped the "thee" and "thou," as they have dropped their antique and characteristic attire. You will meet young Quakers in white waistcoats, lavender, and patent leathers. You will meet young Quakeresses still modestly dressed, but gaily too; and you say to yourself, there is no stability amongst mortal men and fashions.

Old Quakers grieve over the spirit of change that is creeping in amongst them, and sigh for the days of old in which silence and simplicity wrought such wonders. Speaking with one the other day, who was faithful to the old language, he said, "Thou wilt perhaps live to see the day when the Quakers will be as those around them. They are beginning to love speaking, and no longer to enjoy silence. The time was when a silent meeting was the most precious of all things; but now it seems to be understood that somebody must speak whether moved by the Spirit or not. Thou wilt see great changes amongst us, friend, if thy life is spared."

Perhaps; indeed we are already seeing our old friend's words being verified. And it is a grief to us that such should be the case. We are conservative enough to wish that certain institutions and societies—and among them the Society of Friends—should victoriously resist the touch of time. We would not for any consideration have the old meeting houses in Bishopsgate and elsewhere modernized. In days when no bonnets are worn, and when fashion inflicts, as its penalty, unlimited earache and neuralgia, we view the Quaker bonnet as a sermon to the time. In days when apparently it is a matter of so much difficulty for people to say plainly what they mean, what should we do without certain amongst us who are honest enough simply to say, "Yes, yes; nay, nay."

We never enjoy ourselves more thoroughly than in a true Quakers' meeting, either in Bishopsgate, Stoke Newington, or elsewhere. If you want to see a crowded meeting, of course you must attend in May, when Friends from all parts of the country come up like the tribes of old to hear what has been done during the past year, and to counsel and encourage each other in respect to new efforts. If you want a quiet meeting, and one not numerously attended, go any Sunday morning to Bishopsgate. You will never have any singing; you may never have either readings, prayer, or sermon. But really there is so much preaching now-a-days that the secret silence of the mind forms an agreeable and a most valuable contrast. And that silence frequently does more than speech in affecting the heart and conscience. A Friend some time ago told a minister of our acquaintance, who has the charge of one of the largest congregations in London, a little incident which to us was full of significance. It happened, he said, that one morning a gentleman attended Meeting who was not a member of the society. He had strolled in as a mere matter of curiosity to see how his neighbours worshipped. It also happened that the meeting that morning was a silent one; there was not a word spoken from first to last. This was anything but pleasant to the visitor. What his life had been during the week, what his character in the sight of God, what his thoughts and feelings were during those hours of solemn silence, were things known

only to himself and his Maker. But at close of the meeting, he said, somewhat sardonically, "I have never been so miserably my life. I will never come here again."

"Now," said the Friend to the minister, who he related the story, "What do you think of that?"

"Think of it?" was the earnest response. "If I could produce a result like that, make men 'remember God and be troubled' I would sit down in my pulpit, Sunday, Sunday, and never speak a word!"

Another friend of ours once attended a Quakers' meeting, in which, although it was but one verse of Scripture quoted in space of two hours, he said he derived a real enjoyment than in listening to the eloquent discourse he had ever heard. There had been silence for some time, when a credible man rose and said, in quiet tones, there not a balm in Gilead? Is there a physician there?" The words were spoken in an ascending key, and something after the manner of a chant. There was silence nearly an hour, when a venerable woman, if the question had just been asked, and the tone in which it had been asked was lingering in her mind, responded in a desecrating key. "Yes, there is a balm in Gilead; there is a physician there." These were only words spoken that morning, and in thoughts and reflections to which they arise they formed the best sermon to our friend had ever listened.

As the rule, however, you will hardly be at Bishopsgate meeting without plenty of speech, and sometimes it will be irritating rather than soothing. It seems to us that those outsiders creep in who have compared to say something, and whose word not spring out of the hallowed worship of hour. The words of such persons disturb quiet of the time, and you are very glad they sit down. Very pleasant it is to be Quakeress, without an atom of self-consciousness, declare simply what is passing within her heart. In low, musical tones, she make known to you what she has heard secret. As she proceeds she will become animated, and finally all she says will be to a chant of her own composition. If voice is good, this is pleasant for a time; if her spirit is "enlarged," and she does know when to make an end of speaking, it becomes monotonous, and the man proverb occurs to you as it has often carried in the course of the morning, "Spoken is silver, silence is golden."

For "The Friend."

Journey in North China.

(Continued from page 253.)

"Their system of ancestral worship, affecting the people in a different way from the former, is not less a tremendous barrier to progress. In the first place, it is, a plausible, a most unequivocal form of idolatry; not idolatry in the letter, for there no idols used in this worship, but in the spirit. They meet, salute, worship, and obey the spirits of their ancestors in most profoundly religious way of which nature is capable. It is the most thought-collected, and reverential act of their life. This system has a most deleterious effect on Chinese society. It is the great cause of betrothals on the part of parents; a fruitful source of female degradation, misery and

Further, it is the cause of polygamy, its attendant evils. The Chinese canar the thought of having no posterity, and the sacrifices, and so they often have many wives as they can afford to do. Again, it supplies the reason why men never emigrate as families; only male members of the family in any leaving their native place, and that temporarily, with the purpose and aim to return home as soon as they have acquired of the foreigner's money.

This question is now assuming very important aspects. Multitudes of Chinese are flocking to Australia and the East Indian Archipelago, and yet greater numbers to the United States of America. Additional steamships are being placed on this latter line, and the rate of emigration is rising most rapidly. Many emigrants are all males—with the exception of a few ruined females, not one in the aggregate. The Americans are being driven into a ferment as to how to deal with these Chinese immigrants. They say, "If we brought their wives with them it would be a grievance, but as they are all work-people, they underbid us in every department of labor, as well as indulge in every vice, and carry all their savings with them out of our country to enrich another." There is yet another obstacle, the 'Fung' of China. This is related to the former, and is sufficiently distinct to demand a special notice.

It is a modern superstition, not recorded in their classics, and indeed, is denied in the sacred edicts of their famous kings Kang-hi; and in this way can be traced with great power. But it has a firm hold on the people in all places and classes. I may, just in a word, say, in principle it is this: that all genial influences come from the south, and those of an evil deadening character from the north. They think that these influences proceed in as straight a line as possible, and that if any high building be raised, it will divert the current from the places due to it, and so injure the inhabitants in its line immediately beyond. On this they imagine that cuttings in hills, rough graveyards would awaken the invisible fraternity and produce most serious consequences. For the same reason they think that high towers, telegraph-railway cuttings and signals would drive the good spirits to turn aside in all directions, and so throw everything into con-

fusion. Another great hindrance to the advancement of China is the opium traffic. Foreigners in China, of almost all classes and nations, now agree in condemning this. Even merchants are becoming ashamed and are leaving it to Jews and Parsees. We see that it is injuring the country in all its departments, and seriously affecting the health of the population. Unfortunately it created a most powerful prejudice against the best minds in the country; for more intelligent and virtuous and patriotic men, is the more indignant is he at the option of nations implicated in the trade seeking to introduce new forces into his countrymen.

The last obstacle to which I shall refer has already been hinted at, viz., the absence of moral uprightiness and honour. This is a appalling void, and, unfortunately, it

meets one in all classes and professions of the people. I do not refer to money matters, for, as a rule, they stand well in this respect, inasmuch as they know that, unless they fulfilled their business engagements, they would soon cease to have any business at all. I refer to general matters, and for illustrations may point to every page of our intercourse with them.

"Such are the chief barriers in the path of true progress, and the elevation of the people of China. The question is—how are they to be removed?"

(To be continued.)

For "The Friend."

A Titbit for Quakers.

Having noticed divers times some articles in "The Friend" adverting to plainness of speech, apparel and deportment, endeavoring to enforce these requisitions on Friends, showing that compliance in these things is cheerfully given by faithful upright Friends, and that they esteem them of much importance, while a non-conformance in these matters by any of our Society shows sure marks of retrogression: I have thought it good to myself to call the attention of Friends to the use of plain speech. And first, I do not think Friends have any plain speech, such as cannot be condemned, amongst them at this day. There is not one sentence of scripture language coined in such garb as Friends use, and which they are so zealous to uphold; neither is there one grammar extant, I believe, which renders the proper singular speech in the form Friends have it at this day. I take this aphorism to be true: "That which thou condemnest in another be free from thyself." Now we will see how Friends stand in this light. In Friends' discipline (1819) I read: "In our address, also, we are bound to differ from the world in several respects; such as our using the singular number to a single person," &c. "Our conduct in these respects is supported by the practices mentioned in holy writ, as well as by the simplicity and reasonableness of it." And again, "The origin of applying the plural number to an individual is to be traced to vanity and pride. Besides this consideration, our practice of using the singular number to a single person, is both more correct and conspicuous, to say nothing of its consistency with that form of sound words recommended by Paul to Timothy." All of the above I fully unite with, but how many Friends dare say that their "conduct in these respects is supported by the practices mentioned in holy writ," and that it is more correct than the use of you to a single person. I deny that Friends keep the form of sound words which Paul recommended to Timothy. For my part I would as leave hear them use you to a single person, as to hear them use "thee" at all times, correctly or incorrectly. They do not fulfil the injunction contained in Micah, "Bring all the tithes into the storehouse." And yet they are so presumptuous as to believe they do. What need is there that Friends should endeavor to uphold the third query in the discipline, especially that part which relates to plainness of speech. It sounds like hypocrisy to hear them answer, "Friends are careful by example and precept to educate their children and those under their care, in plainness of speech," &c. When George Fox was sent forth by the Head of the church, he was commanded to speak the language of thou

and thee to all alike, without respect to any one. I believe if an individual should come amongst Friends, but should still use the incongruous language of you to a single individual, he would be as exemplary as Friends are who are in the practice of using thee, indiscriminately and incorrectly as they now do. If Friends deem it important to use that kind of speech which is found in holy writ, they should do so correctly, and they need a reform in this matter, or else it would be better to abstain from it altogether.

Guernsey county, Ohio.

THE FRIEND.

FOURTH MONTH 8, 1871.

Our readers will find on page 262 an article, not long since published in the London Press, which to us is both saddening and suggestive. It is well for us sometimes to look at ourselves as others see us. In the present case, if we would profit by the remarks of a disinterested observer, we must embrace in our reflections not only the recollection of times and things that are passed, but the character of the changes that have crowded into their place, and which while sadly and deeply felt by the "remnant" still loving the original principles and practices of Friends, are also thrusting themselves upon the observation, and often calling forth the regret of other religious professors. Would that the changes were only in outward forms,—closely interwoven as many of those are with the health and prosperity of our Society,—but the fruit, as it ripens, shows that it is the product of a spirit that admits of close conformity to the world, and is incompatible with the self-denial which must accompany the regeneration, that Quakerism requires. If the Society should regard these various changes as improvements, it will of course glory in them, and not desire to return to that which it has discarded; but on those whose eyes are opened to see their origin and natural results, how sorrowfully does the truth of the proverb press, "Bad getting is quicker and easier than getting rid of." As the article referred to is long, we present but part of it to our readers.

The writer of the communication under the head of "Titbit for Quakers," will fail, we fear, to commend the truthfulness of some of his observations, by the censorious spirit manifested in connection therewith, while arraigning all those who use the pronoun *Thee* ungrammatically. While we regret that this departure from correct speaking has become such a general habit among Friends, it must not be overlooked that our testimony to the use of the singular number when speaking to one person, rests not merely on its being more grammatical, but because the use of the plural number in such case, like complimentary titles and gestures, was adopted for the purpose of flattery and to gratify the pride of man. *Thee*, though improperly substituted for *Thou*, can hardly be employed for that purpose. The awkwardness of *thee* as it is commonly used, is apparent to all, while the softness and beauty of *thou*, used grammatically, ought to commend its universal adoption in conversation. Both *thee* and *thou*, in their respective places, are in accordance

with the simplicity and truth which the gospel enjoins, and custom cannot destroy the obligation on Friends to adhere to their use.

The practice of using *thee*, in the second person, is said to have arisen from the manner in which *that* was pronounced in the North of England, where Friends were numerous; as though it was spelled *thee*, which gradually degenerated into *thee*.

In this day of intellectual culture, the ungrammatical and very inelegant use of *thee*, ought to be banished from among us.

SUMMARY OF EVENTS.

FOREIGN.—The anarchy and confusion which have prevailed in Paris since the Germans evacuated that city still continue. On the 30th ult. the Central Committee of the revolutionary party remitted its powers to the recently elected Communal Council, and a proclamation announcing the fact was at once issued. A decree was also made public forbidding conscription, stating that no force except the National Guards will be introduced into Paris, and ordering all able-bodied male citizens to belong to the National Guards. Another decree remits lodger rents from 10th mo. 1870, to 4th mo. 1871, and says rents to be paid shall be reckoned by months. The sale of all news articles is suspended. Another decree orders all public officials, on pain of dismissal, to disregard the orders emanating from the Versailles government. It has also been decreed that education shall be gratuitous, compulsory, and entirely secular. All documents from the Versailles authorities are forbidden circulation in Paris. Business is generally suspended and many of the inhabitants are deserting the city; about 150,000 persons left it in ten days. The cry of the mob is "Death to the rich! death to the landowners! death to the priests!" Many obnoxious persons have already been arrested, and it is feared that a guillotine will soon be erected. The present government intend issue assignats to meet their immediate necessities. The party of order still hold the Bank of France. The bank, however, to save itself from being plundered, has advanced 3,000,000 francs to the insurgents.

A London dispatch of the 2d says, Bismarck has informed Thiers that unless the indemnity is paid before the 15th inst., eighty thousand Germans will enter Paris, suppress the revolution, and remain until the money is all paid.

The Versailles government has charged General Clinchamps with the organization of the loyal troops. Their telegraphs to the prefects of the departments, that Lyons, St. Etienne, Creuzot, Toulouse and Perpignan are quiet. Marseilles has recognized the general government. The Assembly continued its sittings undisturbed by the commotion in Paris.

The army of the Versailles government has occupied St. Cloud and the line of the Seine. The fortress of Mont Valerian is also held by loyal troops. The insurgents appear to have made a movement towards Versailles on the first inst., which was checked by the forces of the Assembly. Reinforcements of troops were arriving at Versailles, and are established as they arrive. All unreliable troops are sent home. On the late municipal election in Paris, it appears that out of 330,000 registered voters only 130,000 voted. The red flag is displayed every where, and measures are being taken to disarm all the National Guards who adhere to the Assembly. Before General Chanzy was released he was asked to promise that he would not fight except against foreigners.

The Prussians are concentrating near Paris, and will remain there until order is restored. The German official newspapers explicitly deny that any encouragement has been given to the insurgent Parisians by the German government or the German commanders in France.

A Strasburg dispatch says that Bismarck has written to the Chamber of Commerce of that city, that Germany will compensate the inhabitants of Alsace and Lorraine at the same rate that was accorded to the people of the provinces when they were annexed under similar circumstances to France.

A Berlin dispatch says the *Kreuz Zeitung* (Cross Gazette) of to-day announces that the proposals of the French government to Germany for an increase of the number of French troops in Paris, in consequence of the disturbances there, has not been agreed to. The German government has also promised, in case of the spread of the disturbances beyond Paris, to place the departments occupied by the German troops in a state

of siege, according to the French laws. The number and disposition of the German troops in France will not yet be changed. The Germans will not interfere in the strife between the Assembly and the Emperor, and the interests of Germany are endangered by it. A convention has been signed modifying the preliminaries of peace, by granting a delay in the payment of the 500,000,000 francs due from France to Germany on the first inst.

In the British House of Commons it was moved that the government should urge Prussia to moderate the terms of peace she required of France. It was stated that the indemnity exacted for the expenses of the war was equal to one-sixth of the entire capital of France. The motion was resisted by Gladstone and it was withdrawn. The friends of that motion were wrong as regarded the immediate cause of the war, and Germany was right.

Cardinal Antonelli has resigned the office of Secretary of State in the Papal Cabinet.

Cable dispatches of the 3d inst. state that Marshal Fabien has been appointed commander-in-chief of the French army. A Paris dispatch of that date says, that the commune has issued a proclamation couched in the following language, "Attacked by the Versailles government, we have a mission to protect the city, and count upon the aid of the citizens."

On the 3d inst. several battalions of National Guards, with twenty guns, went out in the morning to Sevres and Meudon, and had an artillery fight with the Versailles troops. Reinforcements were sent out to the nationals, who advanced their batteries.

The Paris Commune has issued a decree arraigning Thiers, Fieard, Duffaux, and Pothier before a tribunal of the people, and ordering their property to be seized.

Another decree announces the separation of church and state, and abolishes the national property.

The dispatches report that the seventy-fourth regiment of the line came to Paris on the 1st inst. and fraternized with the nationals.

Queen Victoria visited Napoleon at Chiselhurst on the 3d inst.

London, 4th mo. 3d. Consols, 92½. U. S. 5-20's of 1868, 92.

Liverpool.—Uplands cotton, 7½ a 7½d.; Orleans, 7½.

UNITED STATES.—The reduction of the public debt in the Third month was \$11,011,260. On the first inst. it amounted, less cash in the Treasury, to \$2,309,697,596.

The explorations for a ship canal at Darien, are reported to have brought into knowledge a new route that is but twenty-two miles long, and that will not need more than 150 feet cutting in the deepest places.

The interments in Philadelphia last week numbered 261, which is 55 less than in the corresponding week of 1870. The average temperature of the past month has been about 48.7 deg. the highest during the month was 73 deg., and the lowest 34 deg. The past month is said to have been warmer than any Third month since 1790. The average of the mean temperature of the month referred to for the past 82 years, has been 39.2 degrees. The rain fall of the last month was 5.9 inch.

The population of some of the States by the late census is as follows: Pennsylvania, 3,519,601; Ohio, 2,662,323; Illinois, 2,539,638; Missouri, 1,717,258; Indiana, 1,673,941; Massachusetts, 1,457,354; Kentucky, 1,321,001; Virginia, 1,224,947; Georgia, 1,195,977; North Carolina, 1,107,222; Maryland, 743,000; Wisconsin, 1,055,107; New Jersey, 905,794; Mississippi, 834,170; Louisiana, 726,927; Maine, 626,463; Minnesota, 435,511; New Hampshire, 318,390; West Virginia, 424,032; Rhode Island, 217,351; Florida, 187,751; Delaware, 125,015.

The subscriptions to the new loan amounted on the first inst. to \$50,015,050.

It is stated that the Joint High Commission have suspended their sessions until the British Commissioners can procure instructions. They have been unable to get beyond the fisheries question, Canada being unwilling to concede any thing on that point.

The port entries at New York for the last week were \$11,830,286, as against \$5,882,712 for the corresponding week last year. The exports of domestic produce were \$4,441,092. The gold values of the import entries of foreign merchandise at New York during the week ending on the 4th mo. 1st, 1871, were \$238,669,774 mo. as against \$1,870,400 mo. for the corresponding week last year, which is \$50,368,228 more than in the corresponding nine months of the previous year. The currency value of the exports from New York during the same period amounted to \$189,131,202, beside an export of \$55,523,683 in gold and silver.

'The Markets, &c.—The following were the quotations on the 3d inst. New York.—American gold, 110½. U. S. sixes, 1881, 110½; ditto, 5-20's, 1867, 110½, 10-40, 5 & 20's, 100. Superfine flour, 4 \$6.50; finer brands, \$6.75 to \$10.50. Whites 1st, Amber, \$1.90 a 2.00; amber western, \$1.65 a \$1.6 2 Chicago spring, \$1.60. West Canada barley, Oats, 67 a 72 cts. Western mixed corn, 80 a 81 yellow, 83 a 84 cts. Philadelphia.—Cotton, 15½; blue, 16; uplands, 16 a 16 1/2 cts. Superfine \$5.50; finer brands, \$5.60 a \$9.50. Western red, \$1.64 a \$1.68; amber, \$1.68 a \$1.70. Rye, Yellow corn, 81 a 82 cts. Oats, 67 a 68 cts. C. seed, 91 a 10 cts. Timothy, 86. Sales of 965; beef cattle, extra at 9 a 9½ cts, for fair to good, 7½, and common 4½ a 6½ cts, per lb. gross. 10,000 sheep sold at 6 a 6½ cts a wool, and 5 a per lb. gross for shaired. Corn fed hogs sold at \$1.50 per 100 lbs. net. Chicago.—Spring extra \$5.50 a \$6.50. No. 2 wheat, \$1.284. No. 2 cor. cts. No. 2 oats, 49 cts. Barley, 82 a 84 cts. La. at \$11 cts. Cincinnati.—Red wheat, \$1.33 a \$1.48. 52 a 53 1/2. Barley, 90 cts.

INDIAN AID ASSOCIATION.

The Annual Meeting of the "Indian Aid Assoc. of Philadelphia Yearly Meeting" will be held at Street Meeting-house, Philadelphia, Fourth month at 7.30, P. M. Friends generally are invited to attend.

RICHARD CADBURY, O.

WANTED.

A Teacher for the Boys' Arithmetical School, Westtown. Apply to

Joseph Scattergood, 413 Spruce St.

Charles J. Allen, 528 Pine St.

Joseph Walton, 726 Buttonwood St.

FRIENDS FREEDMEN'S ASSOCIATION.—The annual meeting of the "Friends' Association of Philadelphia and its vicinity, for the relief of C. Freedmen," will be held at the Arch Street Meeting-house, in this city, on Second-day evening, 17th at 7 o'clock.

All Friends interested in the relief and slave the Freedmen are invited to be present.

JOHN B. GARRETT, Secy.

Philada. 4th month, 1871.

FRIENDS' SELECT SCHOOL.

Wanted, a well qualified man Friend as teacher of the Select School on Cherry street.

Application may be made to

James Whitall, 410 Race St.

James Smedley, 417 Market St.

William Biddle, No. 15 South Seventh

Geo. J. Scattergood, 413 Spruce St.

WESTTOWN BOARDING SCHOOL.

The Summer Session opens on Second-day month 1st. Parents and others intending to send to the Institution, are requested to make early application to AARON SHARPLESS, Superintendent, (4 Spruce Road P. O., Chester Co., Pa.) or to CHARLES ALLEN, Treasurer, 304 Arch Street, Philadelphia.

FRIENDS' BOARDING SCHOOL, TUNES NEW YORK.

A Teacher is wanted in this Institution. Application may be made to

Samuel Morris, Olney P. O., Philadelphia

James E. Rhoads, Germantown,

Geo. J. Scattergood, 413 Spruce St., Phila.

WESTTOWN BOARDING SCHOOL.

Wanted, a Friend on suitable for position of

ness. Application may be made to

Samuel Bettle, 151 North Tenth St., Phila.

Joseph Passmore, Goshenville, Chester Co.

Elizabeth R. Evans, 322 Union St., Phila.

Martha D. Allen, 528 Pine St.,

FRIENDS' ASYLUM FOR THE INSA

Near Frankford, (Twenty-third Ward,) Philada. Physician and Superintendent.—JOSHUA H. VINGTON, M. D.

Applications for the Admission of Patients may be made to the Superintendent, or to any of the Managers.

MARRIED, at Friends' Meeting at Chesterfield gun country, Ohio, on the 23d of 3d mo. 1871.

HUGHES, M. D., son of Isaac and Sarah Hu-

AMANDA J. WOOD, daughter of Caleb and Lydia

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

OL. XLIV.

SEVENTH-DAY, FOURTH MONTH 15, 1871.

NO. 34.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two Dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

NO. 116 NORTH FOURTH STREET, UP STAIRS,
PHILADELPHIA.

When paid quarterly in advance, five cents.

Journey in North China.
For "The Friend."

(Concluded from page 263.)

Foreign commerce is exercising a powerful influence upon China. Representatives of every nation under heaven are found in British and American, French and Dutchmen and Danes, Norwegians, Swedes, Spaniards, Portuguese, and Italian, Jews and Parsees, and others—men of all talents and professions—all keenly watching every opening, pressing in at every opportunity, and eagerly introducing foreign manufactures by every possible way into the country. And the British nation is deeply interested to her intelligent and enterprising merchants who thus open up new and wide fields for our manufactures, and so help greatly to provide employment for the working classes of our country.

Among the moral forces in China, an important place must be given to the Chinese papers. Several enterprising Europeans have established newspapers in Chinese at Hong-kong and Shanghai. They are published weekly, and are slowly but surely winning their way. They are read pretty extensively on the coast by merchants and managers; and now and then—if not regularly—our knowledge they find entrance to the interior at the capital. Their influence is powerful, and we wish them all success.

Missionary missions were established in China as early as 1551. They were re-established by Ricci in 1581, and strengthened and extended by his colleagues and successors; and there are numerous communities of faith in the provinces and dependencies of China.

We look upon their work as an element of good in China. With all their paraphernalia, there is reason to believe that they are the great cardinal truths of our common religion, and not infrequently have I been led to find Christ and His atonement set as the great basis of a sinner's hope. In every aspect they are preparing the way for our religion, and no doubt their work will all be utilized and absorbed in the march of Christian progress.

In this connection I shall take the liberty of stating what has been done by Protestant

missionaries, and that mainly since 1850. And here I need not speak of the translation of the Scriptures and the numerous religious works which they have given to the Chinese; or of the dictionaries and grammars in common use, which, without a single exception, have been the work of the missionaries: I refer only to works of a strictly scientific character. Dr. Hobson has given them works on Physiology; on the Principles and Practice of Surgery; on the Practice of Medicine and Materia Medica; on the Diseases of Children; on the Elements of Chemistry and Natural Philosophy. Mr. Wylie has given them the whole of *Euclid*; De Morgan's *Algebra*, in thirteen books; Loomis' *Analytical Geometry and Differential and Integral Calculus*, in eighteen books; a work on Arithmetic and Logarithms; Herschel's *Astronomy* (large edition), in eighteen books, and also the first part of Newton's *Principia*, which is now in process of completion. Mr. Edkins has translated Whewell's *Mechanics*, and given them many other contributions on science and western literature. Mr. Muirhead has produced a work on English history and another on universal geography. Dr. Bridgman has published a finely illustrated work on the United States of America. Dr. W. P. Martin has translated Wheaton's *International Law*, and just published an elaborately illustrated work, in three large volumes, on Chemistry and Natural Philosophy. Other missionaries have given them works on Electro-telegraphy, Botany, and elementary treatises on almost every subject of Western science. And, what is very important, the greater number of these works have been reprinted *verbatim* by native gentlemen, and some have also been reproduced in Japan by the Japanese; thus vouching not only for the adaptedness of the works, but also for the literary attainments of the authors.

"Such is a brief sketch of some of the leading forces at work in China. They are making their influence more powerfully felt every day, and we cannot arrest their march. We may, if we please, spend time in discussing whether it is right or wrong to force ourselves and our opinions on the Chinese; but the question is practically settled; and the recent light thrown upon the mineral resources of the country and its dependencies, and the establishment of that grand line of steamers between San Francisco and China, preclude the faintest shadow of a possibility of renewed isolation. We may as well think of keeping the tide from flowing, or the sun from rising, as foreigners from pressing into China; and, indeed, it is a tide of enlightenment, directed by Providence.

"The Chinese are not naturally an anti-progressive people. They are peculiarly amenable to reason, have no caste, and no powerful religious bias. Their history shows that they have adopted every manifest improvement which has presented itself for these many cen-

turies. At the commencement of the Christian era they adopted the decimal system of notation introduced by the Buddhists, and changed their ancient custom of writing figures from top to bottom, for the Indian custom of from left to right. Every dynasty has improved the calendar according to the increased light obtained from Western astronomers. This holds particularly true of the present epoch. When the Tartars obtained possession of Peking the native mathematicians and astronomers hastened to present the new governors with the ancient calendar "*fully revised and corrected.*" An eclipse was near at hand. The Emperor commanded a competition. The calculations of the Roman Catholic, Father Schall, alone were correct, and thereon he was appointed president of the Board of Astronomy.

"In the seventeenth century, the Emperor, Kang-hi, adopted moveable copper types for printing his *magnum opus*, an illustrated encyclopedia of 10,000 books, in 300 volumes; and to this day moveable types are used for printing the daily *Peking Gazette*, only they are of wood. Chinese farmers in the south and north almost simultaneously naturalized the cotton-plant; the former had it from Batavia, the latter from Bokhara. The northern people have universally adopted Indian corn, or maize, as also the potato, from Central Asia. Tobacco was introduced by the Manchu dynasty, and opium, alas! by foreign merchants.

"The same disposition prevails at the present moment in a marked manner among certain prominent literary men. The translation of Herschel's great work on Astronomy has been well received, and its teaching will doubtless prevail. Tsun-kwo-fan, the great mandarin who has been so prominently before the European public of late years, has republished all the works of Euclid, consisting of the first six books translated by Matthew Ricci, and the remaining nine recently translated by Mr. Wylie. Li-hung-chang, the famous general of world-wide celebrity, has republished Whewell's *Mechanics*, translated by Mr. Edkins, with a large supplement upon Hydrostatics and Conic Sections, taken from the almanac which used to be issued yearly by that gentleman. The father of Yeh, the former viceroy of Canton, and the hero of the late Canton troubles, has republished the works on medicine, natural philosophy, and astronomy, given to the Chinese by Dr. Hobson. Tsun-kwo-fan's brother, Tsun-kwo-chein, formerly governor of Che-kiang province, has likewise published all the works of the native mathematician, Li, who has been so much indebted to the Protestant missionaries, and who has this spring been called to Peking by the Emperor, and appointed professor of mathematics in the new Anglo-Chinese college at the capital.

"Again, although the present Chinese Ministry are opposed to the introduction of railways, telegraphs, and foreign machinery for

mining operations, yet they have eagerly adopted whatever appears conducive to their own interests. Within the last few years they have established arsenals at various places; at Tientsin, in Nan-kin, at Shanghai, and at Foochow. They have nearly finished an extensive powder-manufactory at Tientsin, and are building gun-boats at Shanghai and Foochow. They are also drilling their troops, even in the interior, in foreign fashion; and are now arranging a system of gun-boats for the coast. They have built two or three light-houses, and contemplate many more. They have also established some schools for elementary instruction in these departments. In order to carry out these works in as thorough a manner as they possibly can, they have employed a staff of skilled Europeans for each locality and each department, at very high salaries. The consequence is, that these various establishments are conducted with great vigor, and they are turning out ordnance artillery and ammunition of very superior character. Nor is this all. Recent advices from China inform me that the Chinese Government have also employed several gentlemen for the translation of books, but unfortunately these books are for the most part to aid them in carrying on their warlike preparations in the several departments just alluded to. "They are chiefly text-books for the use of students, and embrace works on engineering in all its branches, metallurgy, the manufacture of arms, ammunition, naval architecture, chemistry, geology, mathematics, navigation, military and naval tactics, translation of the Admiralty's charts and sailing directions for the Chinese coast," &c. Foreign manufactures of all kinds are every year meeting with a wider market, and not only are sailing ships, but steamers also, increasingly chartered by native merchants. These proceedings are hopeful, inasmuch as they evince a sense of their deficiencies in the Chinese mind.

"Nor have they been insensible to the influence of Western philanthropy. Hospitals, indeed, existed in the *Sung dynasty*, between A. D. 960 and 1278, and perhaps earlier; but there can be no question that such institutions received an immense impulse from the Roman Catholic Missions. After their advent in China, under the pressure of their example, and from the Ming dynasty onwards, founding hospitals and hospitals for the sick and aged, societies for providing coffins and food for the poor, have been established in a large proportion of their great cities. Schools, and sometimes free schools, have been founded by Imperial command in all directions. Kang-hi, about the beginning of the last century, issued an order to Governors of Provinces and others, commanding the establishment of founding and other hospitals in all large cities. Yoong-Ching, somewhere about 1730, ordered the erection of free schools and country colleges. A similar order was issued by the present Emperor in 1866, and some private gentlemen on the coast are now instituting girls' schools in imitation of the Foreign Missionary establishments. Vaccination has been carried from Canton to Peking, where there are now four or five establishments for the supply of the virus. It has been adopted by many of the natives at all the ports, and in Shan-tung it is spreading rapidly throughout the province, propagated by native doctors. They have also adopted fire-engines, and in some places life-boats.

"In reference to religious matters we have abundant evidence of their openness to conviction. The Buddhist religion is a foreign importation. The Hai-ping revolution, which shook the Empire to its very centre and in the first portion of its history promised so fair, originated in the perusal of a foreign tract and was fed from the Old Testament Scriptures. This for ever sets aside the idea of the unimpressibility and immobility of the Chinese mind.

"As far as I can judge, China is now on the eve of a new and grander career than she has ever yet known. There may be overturnings, convulsions, much evil and misery; these would be but birth-throes. This is the way of Providence: whose path is frequently through evil to good. The end, however, is not doubtful. This great Empire will yet form a part of that glorious Kosmos to which we all look forward."

The Journal of William Evans.

(Continued from page 265.)

The following entries will be of interest to all. 1819. 1st mo. 10th. There is a material difference between what we call good thoughts, and being brought to sit under the teachings of Christ in our own hearts, when assembled for divine worship. His words are spirit and they are life to the soul; but the wanderings of the mind in contemplating religious truths without the influence of his spirit, must end in barrenness and poverty. Hence it is our chief business to labor to get to a state of humble waiting before Him, that we may be instructed by the gracious words that still proceed from Him in his spiritual appearance in the heart.

"5th mo. 2d. It is a great favor to be redeemed from all outward and human dependence, and to have the mind brought simply and singly to wait upon God. In a state of reverent silence before Him, He is at times pleased to manifest himself by the diffusion of his light and love, and the soul being clothed with gratitude to the Author of all its sure mercies, is enabled to worship as in his presence, and to offer up thanksgivings and praise to his great name. Herein is experienced the communion of saints as at his table, a partial participation of the body and blood of Christ. The soul is nourished and strengthened not only by the living virtue flowing immediately from the Head, but is edified by that strength which every joint supplieth, by the effectual working of the measure of Grace in every part of the body. These views opened before me this morning, but for want of coming to a state of humble patient waiting, I did not fully realize them in my own experience. Latterly this has been nothing new—but perhaps the period is not far distant, when I shall be again restored to a more steady and sensible enjoyment of this blessed communion so essential to our spiritual life, and the successful maintenance of the Christian warfare. Oh! the necessity of keeping the faith in times of stripping and desertion. Without it we shall be overcome by temptation, rather than be made conquerors.

"6th mo. 11th. After a state of silence for several months, on 4th day the 9th, I again apprehended myself called upon to communicate some matter which was opened before me. Like many other presentations, I had doubts whether it was designed for others,

and nearly concluded I should leave the meeting in silence; but after attaining a state of resignation either to speak or be silent, doubt was removed, and I was enabled to say what came before me, with calmness and degree of innocent boldness. I make the memoranda for my own use at a future period of life, should it be prolonged, that on look back I may see how I have progressed from one time to another.

"There are many lessons to be learned silence as well as in speaking, and brought into a state of childlike docility; obedience to the leadings of our heavenly Shepherd, seems to be the principal end of the dispensations of his wisdom. The hangings of man must be laid low, and the soul exalted in that heart which is prepared to be acceptably engaged in his service. A state of deep humility and patient waiting upon Him, we become prepared to discern motions of His Spirit, and in simplicity yield compliance therewith. There is as much need to learn to be still and to know the true, forward disposition of the human mind reduced to subjection, as there is to experience a willingness wrought to perform. Lord's will when it is manifested. He is wise Master Builder, and if we abide upon his preparing hand, He will fashion us into vessels and instruments for his use." pp. 52

Again, p. 54, "Vessels must be emptied for they are prepared to be filled; and only emptied, but cleansed. This is especially the case with the vessels of the *Lo house*."

"11th mo. 5th. I attended the meeting Springfield yesterday, where I was impressed with the belief it was right to communicate some matter which opened before me; but sitting down, an enquiry was raised in mind, whether I had not better have been silent. I could not perceive any necessity that convinced me I had erred, and there concluded the sensation of desertion was for me, though not pleasant to the creature, it is an humbling, mortifying work; but it is preserved in the Lord's hand, not run without his commandment, nor lagging behind our guide, it will be evidence; and He sees proper He will give enough; and work in his, and that as we faithfully submit to him in all things, He will perfect it to praise—at least this is my sincere hope and belief." p. 55.

6th mo. 11th, 1820, he writes: "For want of keeping the word of the Lord's part how are many warning themselves sparks of their own kindling, and thereby only reaping their reward of poverty and row, but bringing into discredit the precious, and the dignified office of a Gospel minister, in which they profess themselves have a part. Neither the most extensive gift, nor those of the largest experience have any thing of their own to communicate, which can really profit the people. All reverently wait upon Him, without which they can do nothing, and it is only as opens the spring and causes it afresh to the least or the greatest, are authorized qualified to attempt to minister to the souls of others."

"12th mo. 24th. In our meeting last day, the 24th, I felt an intimation to give which after a time of shrinking was given to. It was such a trial as I had never before experienced. I was favored to get thro

gh under such feelings of great unworthiness and deep mortification, that afterwards ought if the elders were to inform me were now satisfied I had no part in the story, it would be sufficient to induce me to refrain hereafter from appearing in that manner.

Although very little sense of Divine grace seemed to accompany my mind in the performance of what I believed was the Master's requiring, I have not felt any thing like penitence, but a desire to be more steadily attached to his service, that in childlike simplicity I may comply with his commands, never foolish the work may appear in the eyes of worldly wisdom—this must all be mortal and laid in the dust." p. 62.

1821, 5th mo. 10th. In our meeting on the morning the 6th, a number of instructions passed before my mind, in relation to the fearful condition which those will be in who have been living as without God in the world, when He rises up to judgment; also regarding the fallacy of cherishing a disposition or practice, opposed to the purity and self-denial of Christ; to which added applicable His declaration, "Every man which my Heavenly Father hath not elected, shall be rooted up." As has been the case before, these openings disappeared out leaving much impression, and a time resting with floating thoughts, in order to get to a place of steady waiting ensued. Towards the latter part of the meeting that session again came up, producing the sense of duty to communicate it, accompanied by the reluctance to engage in the awful task. I endeavored to wait for the perturbation to subside, that if anything was said, might be with proper deliberation; and in the word seemed to be in my mouth, I did up and repeated the above expression, my Saviour, with some little addition; but waited in expectation that further matter should be furnished, as it had been at other times, to my admiration the prospect died away, with all ability to say a word. A declaration of the Most High, respecting his own character presented, but fearing to say any thing as in his name, without feeling his authority, and thus be liable to the charge, "Who hath required this at thy hand?" I omitted it, and stood silent for some little time, and then closed with a short observation in reference to the passage I had recited, sat down. I felt quite calm, and though not seeing how I had missed my way, concluded the affair had laid me open to criticism, and perhaps just censure; but I believed best to submit quietly to all the consequences, not doubting that if I labored to appear near to Him whom I desired to serve, it would prove useful in the end.

When an opportunity occurred, I made enquiry of my beloved parents, whether I did not think I had missed in some way? father in a tender manner replied, it was not to dwell too much upon it; what I said was not unsond, and it was our duty to endeavor to keep near to the gift, and in obedience to yield to its requirements. He had said in his services that to begin low and gradually to rise as the opening strengthened, was the safest. This led me to apprehend I had been too loudly and strongly, from a degree of excitement, and that might have been the cause of the closing of the opening if there was no other. How necessary it is for all to have been in measure cleansed by His

sanctifying word, carefully to guard against the subtlety of the enemy in all his presentations, lest they thereby become wounded; and in the day when they should have on their armor to engage in the Lord's cause, they may find He is not with them as He was wont to be in seasons of greater tenderness, and more faithful obedience to his will." pp. 64, 65.

For "The Friend."

The Track of the War around Metz.

(Continued from page 266.)

"7th day, morning, helping to unpack the goods, or rather to get the cases upstairs at the stores; for the arrangement of the 7,000 articles of apparel they contained we left to the women Friends, who did it better by far than we should, even if we had had the time. S. G. was in the thick of it, in shirt sleeves and a woman's apron; and nobody idled a moment.

"On seventh day two lieutenants of the Prussian 55th Regiment of Lancers, who sat at table d'hôte, near us, joined in our conversation. They were very nice men; one of them from Upper Silesia, close to the borders of Russia, where he has left a wife and one little child the same age as Max. They begged us to go over to a little village called St. Remy—four miles out on the Thionville road, to see especially to the case of a poor old woman on whom they had been quartered, and in whom they took a very kind interest; one of them having driven over, with a doctor, to see if he could help her when she was ill. Four of us (Wm. Pumphrey, Elizabeth Barclay, Richard Allen and myself) walked over in the afternoon of 1st day, and found a frightful scene of devastation—village burnt and people living in little huts rigged up in the ruins. Old 'Marie Remy' was removed, however, to a village further on; and as I was stiff and tired with my horse exercise of two days before, I excused myself from accompanying the rest of the party any further, but remained alone in the village till they came back. I crept through some of the ruins, into a tiny den where a father, mother, and two little boys all slept in one bed! No one at home but one boy: rest gone to bury his aunt. Boy came out to pick me up an unburied bomb-shell, but could not find it for the snow. It was excessively cold weather; my beard frozen like a mass of iron wire. 'Was there anyone killed here?' said I. 'Mais oui!' said the little boy—an innocent little lad of ten years, 'Here's one!' and suiting the action to the word he scraped the snow away with his toe, then with a stick, and exposed at the side of a little mound of earth the tip of the elbow of a corpse. This body had not been laid in a grave. It had fallen by some gooseberry bushes, and a few shovelfuls of earth only were thrown over it. 'Voilà le sang!' said the child—and then turned away to show me another wreck and ruin.

"On 2nd day morning we had work at the stores, and in the afternoon Wm. Pumphrey and I walked to Petre, one of the burnt villages, four miles out. It was indeed a very miserable sight—only 12 houses left out of 100. The people are living in little dens fitted up in the blackened ruins. Two châteaux have been burnt adjoining the village. One is Mercy le Haut, the property of Vicomte du Côtisquet, whose son was my guide last night, and the other the Château de Petre:

a place as large as Painswick House, in the midst of new-planned pleasure grounds, and with a model farm, and work-peoples' cottages annexed. It is bran new—the workmen had only finished the furnishing a fortnight before the Prussians came and burnt it all down to rubbish."

"10, Rue Poncelet, 12th mo. 9th, 1870, (evening.)

"Our round to-day was a heavy one; 25 kilometres through Woippy, Saulny, Plesnois, Norry le Veneur, and Bellevue. The latter place: six houses burnt, and floors removed bodily from the houses to make barricades with—all the windows and doors gone, from several others. The people are crushed with the misery this entails—some go and sleep in other villages, others huddle together in the few rooms still left. A shoemaker we visited said that Prussian soldiers had burnt the only useful leaves of his account book ('registre.') This wanton act of cruelty had prevented him from getting in the little money due to him, and he could not even buy new tools to start with! He looked very miserable and starved, but his two little children were fat and well.

"I hope to-morrow to get some more visits done. We shall thus get an exact report of the present state of the whole district, which is not half so bad as it was; cutting off non-necessitous cases, will relieve those whose real wants are pressing, all the more effectually. Of course, human nature is the same in North-eastern France as it is anywhere out of the Garden of Eden; and we get a good deal of selfishness and deception to contend with. On the whole, however, the people are simple-hearted sort of folk, who would compare with our own peasantry in every point without losing ground."

"10, Rue Poncelet, Metz, 12th mo. 12th, 1870.

"We have been over two of the hospitals full of French wounded soldiers, and had long and interesting chats with them. They have all sorts of injuries. One lying at Samuel Gurney's house received five bullets at the same instant in different parts of his body. The balls do not generally lodge in the wound, as formerly, but travel all along the bones in a most extraordinary way—sometimes running up the arm, passing in at the chest, and out at the back! One poor fellow was brought here on the 9th from that great night sortie from Paris. He belonged to General Ducrot's corps, and was only 22 years of age. Shot through the leg; fell on a turnip field; lay for three days and nights untended in the midst of that horribly cold weather. His right leg is frozen dead to the knee—his left to his ankle; and his fingers also. He got nothing to eat or drink. Tried to gnaw a turnip, but could not get his teeth into it. He was picked up at last, and brought here—the dirt never washed from his face."

"* One of the Dutch surgeons gave me an account of the French Ambulance in the Jardin Dufiers, which was grossly neglected. Out of 42 amputations only two cases survived. In another case, out of 12 amputations not one lived. The funds were stolen by the chief, who sergeant surgeon and two aides. The dressings were only done once in four days. The Dutch hospitals were exceedingly well managed—quiet, airy, and clean, and presided over by exceedingly nice men. Even here, however, there were some mournful sights. One poor young man was at the point of death. His eye was already fast closing, and his face white and rigid, with a melancholy stamp, I shall never forget! Talk of glory

"The day I came to Metz, they were removing a temporary railway that had been made from the station into the town, for bringing in three hundred and twenty goods vans, to form a typhus fever hospital in the great square opposite the *Caserne Eugénie*.

10, Rue Poncelet,
Metz, 12th mo. 13th, 1870.

"All day yesterday and to-day my lot has lain at the office, and in Metz itself. It is more prosey and matter-of-fact work than visiting the villages, but quite as necessary, if not even more so. We send out about five tons of flour and potatoes daily, besides clothing and blankets; and this means a good deal of writing and talking I can assure thee. C. E. has driven two of our women friends over to a village east of Metz this afternoon, called * * * *; but they came back without giving a single article, as in this instance there was no sufficient ground for helping the people. They called on a gentleman named— who was a captain in the French Army, wounded in one of the battles here—taken into the Prussian ambulance as a prisoner: crept out after dark: was supposed to have died and therefore thrown out, and his name entered on the Prussian return as 'dead.' This enabled him to slip back home to his chateau, where he received our friends to-day with great politeness and cheerfulness though he had not a morsel of bread to offer them: every room in his mansion being spoiled with filth; every article of furniture, except one solitary piano, smashed: all the marble top tables shivered to fragments, chairs and tables and book-cases burnt, books torn up, title-deeds scattered about the grounds for waste paper. He has borrowed a couple of chairs, a bowl or two, a spoon and knife, &c., from some of his poor neighbors, to begin house-keeping again! Our two friends Thomas Whitwell and W. Pumphrey, have, as I have already said, returned safe and sound from Bitsche. Their adventures in getting into, and out of the beleaguered city were really more like a story of the middle ages than anything else. Even with the positive orders of the Prussian Governor here, they had no easy matter to get past the lines—being led round through the woods, and the deep snow, for miles, to hide from their sight the German batteries, of which they never even saw a single gun. Finally they got into the town, and found 90 houses burnt and 100 battered to bits by bombshells, out of 360! The people living in places fitted up in the ruins. The citadel is cut in the solid-sandstone rock, and is at the height of 150 feet above the town, utterly impregnable to all the batteries in existence. Eleven days and nights the German guns poured their iron storm into the town, and then, finding it useless, they ceased. From the citadel everything could be seen for miles; of course two strangers wending their way to the town, over the snow, and with the consent of the besiegers, was enough to excite the suspicion of the French Commandant. He sent down a messenger to bring them up into the citadel. They produced their papers—the Commandant read their commission—was delighted with it—signed and stamped a pass for their free passage about the town, where they found very great distress. We

are not allowed openly to send food in to them; * * * * At half-past 4 p. m. their errand was done, and they prepared to leave. The frozen draw-bridge was swung—it would go down! and finally they had to scramble down into the frozen moat, scale the wall on the opposite side, and set out for the Prussian lines in the midst of a driving snow. Suddenly they were hailed by two sentinels, and challenged for the pass-word. They gave ' * * * * and their guide ' * * * This would not do—with a shout they were ordered back. The guide, taking advantage of the blinding snow, led them through a sinuous path in the woods and at last got clear of all. William Pumphrey had one or two falls on the ice—and once the whole three fell together! W. P. is much knocked up with fatigue and pleurisy. His time is close upon up for returning."

(To be continued.)

WHAT IS HOME.

Home's not merely four square walls,
Though hung with pictures nicely gilded;
Home is where affection calls,
Filled with shrines the heart hath builded.
Home! go watch the faithful dove,
Sailing 'neath the heaven above us;
Home is where we've one to love,
Home is where there's one to love us.
Home's not merely roof and room;
Home needs something to endear it;
Home is where the heart can bloom—
Where there's some kind heart to cheer it?
What is home with none to meet,
None to welcome, none to greet us?
Home is sweet, and only sweet,
Where there's one we love to meet us.

Selected.

THE FIRST SUNRISE.

There was no sun, but there was light,
The bonds of darkness rending;
There was no earth, but shores of night
With seas of day were blending;
And o'er the world, without a sound,
In grand eternal silence bled,
The dim-lit flood extending.
God spake the word: up rose the earth,
The waters round it clinging;
And with glad water at its birth
The highest heavens were ringing;
Through all the world, as if we went out,
The sons of God for joy did shout,
The morning stars were singing.
There fell a silence from on high,
And a husband the wondrous story:
God spake; and sunrise dawned the sky,
And smote the mountains hoary:
Then burst from Heaven a mighty song;
The sons of God, so bright and strong,
Gave unto Him the glory!

Sunday Magazine.

For "The Friend."

California.

(Continued from page 258.)

"San Francisco,—'Friscoe' or 'the Bay,' as the miners in the mountains and over in Nevada familiarly call their pet city by the sea,—holds a first place in all the life of the Pacific Coast. Capital and commerce centre here; it is the social focus and the intellectual inspiration, not only of California, but of Nevada, Oregon and Idaho as well; an annual visit here is the one bright spot in the miner's desolate life; and scold they ever so much at its pretensions and its absorbing influences, all the people west of the Rocky Mountains feel a peculiar personal pride in San Francisco, and look forward to no greater indulgence in life than to come hither.

"Why this fascination, it is not so easy to see or say. The town sprawls roughly on the coarse sand-hills that the ocean has rolled and blown up, and is still rolling and blowing up, from out its waters. The business streets are chiefly on made land under the hills by the bay. Up and out from these, streets roll on irregular grades over the hills to the homes of the population. The engineers, having begun wrongly on the American straight line and square system of lay-out the city, are tagging away at these with tireless energy, to reduce the street grade that man and horse can ascend and descend without double collar and breechblock; but there is work in it for many a generation to come. They might have better accepted the situation at the first, made a true engineer and architect in chief, and leveled the hills with their streets and buildings instead of undertaking to go up and through them. Such a flank attack would have been much more successful and economical, and given them a vastly more picturesque city. Boston had the advantage of cow-pats to establish its streets by; but no stray cow ever visited these virgin sand-hills of San Francisco, as innocent of verdure as a baby's sorrow or vice. Many of the streets up over the hills are so steep that it is impossible to drive upon them; and where, in the progress of shovel and cart, they are cut down we shall see houses perched up a hundred feet or more in the air on the ancient grades nature.

"Wherever the hill-sides and tops are tened with houses or pavements, or twice daily sluiced with water, there the foundations are measurably secure, and the deed the purchaser means something; but all elsewhere, all the open lots and unpaved parks are still undergoing the changing and creating process. The daily winds from the near ocean sweep the soil in one place and deposit in another in great masses, like drifts of sand. We shall often find a suburban street blocked up with fresh sand; the owner of vacant lots needs certainly to pay them the chance anyway, that between one noon and another, and his neighbor will have changed properties to an indefinite depth. Incidental to this, of course, are clouds of sand and dust through all the residence and open parts of the city, making large market for soap, clothes-brushes, and putting neat housekeepers quite in despair for their furniture. Naturally enough, there is a looseness on the subject of cleanliness that would shock your fashionable New England housewives.

"But then, as compensation, the winds give health—keeping the town fresh and clean, and the hills offer wide visions of bay, river, and islands and sister hills,—away and in, with varying life of shipping, manufactures, and agriculture; and, hanging over all, a sky of azure with broad heraldic Oceanward is Lone Mountain Cemetery, covering one of the hills with its scrawny, running, live oak shrub trees, and its monuments, conspicuous among which are erections to those martyrs to both West and Eastern civilization and progress,—Iverick, the mechanic and senator, James K. Williams, the editor, and Baker, the sold Here is the old mission quarter, there soldiers' camp, yonder, by the water, a bristling fort, again the conspicuous and g

of war. What are iron cross, and legion of honor, of Imperial Crown? This is the work, these are the reward of it. Had better wear a convict's chain than either of them."

Orphan Asylum, monument of the tenacious devotion of the women of the city; to the left of that still, the two Jewishatories, each with its appropriate and liberal burial chapel. No other American holds in its very centre such sweeping vistas of itself and its neighborhood; and every man must make sure to secure them from the most points within and around the city; and are in themselves revelations of the Pacific Coast Empire, certainly of San Francisco's security as its metropolis.

When the little yards around the dwellings are prosperous, even of those of moderate size, are made rich with all the verdure of the greenhouse, with only the cost of a daily ring. The most delicate of evergreens; of every grade and hue; fuchsias vigorous and high as lilac bushes; nasturtiums ringing over fences and up house-walls; climbing vines of delicate quality, unknown in the East; geraniums and salvias, pansies, fuchsias, and all the kindred summer flower of New York and New England, grow glossed under these skies throughout the year—the same in December and January as in June and August,—with a richness and a senseness that are rarely attained by any other culture in the East. The public ducts furnish water, though at considerable expense, and pipes convey and spread it to spray all over yard and garden. The result is, every man's door-yard in the city is an eastern conservatory; and little hummocks smile out of this city of sand-hills, just, as green as and as yellow, and as red as purple, as gayest of gardens can make

of San Francisco weather, as has been intimated, is altogether original; you cannot palm off Thomas's almanac on the weather here,—calculated for Boston, but equally applicable to any other meridian,—in this

There is nothing like it, either here on the Pacific coast, or elsewhere. The anomaly is very much because the town is concentered 'in the draft.' While elsewhere, along the Coast Hills uninterrupted break ready north-west breeze from the ocean in summer, here they open just enough to catch at the waters of the Sacramento River an Francisco Bay, and let in like a tide cape steam the ocean breeze and mists. In winter comes, the wind changes to east, and blows to softer scale, and becomes showers,—for then comes the rain,—the sky is clearer and the air balmy than in winter. Thus the people of San Francisco of their winters, and apologize for their winters; and invalids need to flee away from in the latter season. The ladies wear in July and August; and many a day of August visit did it feel as if the weather coming down upon us with a snow-storm. A hundred anomalies and contrasts force themselves upon the observant visitor in the dress, social and intellectual life of San Francisco. Some of the finest qualities are combined with others that are both shabby and ugly. There is sharp, full development of material powers and excellences; wealth, intellectual quality and force; a recklessness rioting with the elements of prosperity; dash, a certain chivalric honor, combined with carelessness of word, of integrity, consequence; a sort of gambling, speculatore-jockeying morality,—born of the temptations of mining, its sudden heights,

its equally surprising depths, and the eager haste to be rich.

(To be continued.)

For "The Friend."

Answer to the Fifth Query.

"Poor Friends' necessities are duly inspected, and they assisted in such business as they are capable of; their children freely partake of learning to fit them for business"—sometimes it is said "No poor children amongst us." However safe these answers may be in a certain point of view, there is room for thoughtful consideration on some of its bearings. Liberal bequests to some of our schools have and do encourage many weary parents to lengthen out a little longer the time for instruction to the children who must needs prepare and enter upon duties in some field of labor, for that which belongs to this present time. At this day of striving and struggling for self-dependence, but few may come to the notice (of those who may not care to see) as poor and destitute. Yet how many, as they are about leaving school, whose opportunity for gathering a certain kind of knowledge has been limited, would be glad to receive what their surroundings seem to deny, and might be greatly benefited and assisted by consulting even a record where wants for an apprentice or helping hands for different services were stated, where they might see such an opening as their ability and choice would desire. The young need, most of all, assistance where and how to seek suitably. The starting point from the retired childhood's home to the busy world without, is of great importance. Many, as young D. Wheeler of old, early feel that the perplexities attending it, a first wrong step, make another one easy; and though few that stray may go so far in the crooked path as this Friend did; yet many take steps not easily retraced in after life, and become satisfied in some measure, with the places they occupy, though stopping short of what they might have attained to.

The eye of my mind is turned towards a worthy man, appointed to an high station in another religious society, who, in expressing his views in their business assemblies, stated how in many things the bias of his early education at Westtown clings to him. Occasionally he may be seen taking his seat where he was a member by birthright, a stranger; but with this feeling in his heart, "my people! I love to sit down with them still." Many years ago this was a precious boy, gentle and serious. His father, a land speculator, failed in his business and neglected altogether attending our meetings. The boy, following the example of his departed mother, still went; but he had early to seek a calling; he looked toward his own, not knowing who to address quietly, without exposing the parents' inability or influence to direct him. He soon found a business in a large mercantile house in a still larger city of temptation. A few times he sought the place for worship of his own people, sometimes by invitation going to others, where a little acquaintance was more easily made. He married early with one of these, and was offered an honorable situation which he has ever filled with dignity. That boy, as many at the present time, with capability of mind and solid character, was not thought of as being among the poor; but he needed what might serve as a channel for ob-

taining an occupation more agreeable to the feelings than what the Public Ledger afforded.

No place is free from the tempter's wiles, none so distant or unlikely but the still small voice may follow; and they who happily become acquainted with this will have a helper above all others; will desire less and have less need for that which may be extended from their fellow man: for the efforts of these may slumber and sleep, or their car grow heavy and not hear. But there is a period before this true knowledge is attained, in which a little more christian care from that portion of the body which has received His command (with the power also from Him to bestow) "feed my lambs." This care might prove, through His blessing, a true help to many to come to understand the principles of our profession, and early bias of opinion ripen with the years to a living experience.

The child that has listened to the praiseworthy answers to the query quoted at the commencing of these lines, may naturally look, in the hour of his future need, for at least the help of influence, rather than seek where a poor child feels not so sensibly the appellation given. As we have opportunity, said the Apostle, "Let us do good to all men, especially unto them who are of the household of faith."

Hadst thou never seen a grandire,
With his eyes aglow with joy,
Bring to mind some act of kindness
Extended to him when a boy;
Or relate some slight or coldness,
With a brow all clouded, when
He said, they were too thoughtless
To remember boys made men.

For "The Friend."

Are Meetings for Discipline Attended?

On page 674 of Wm. Evans's Journal, he says: "The Quarterly Meeting convened next day. I was silent in both meetings. It was distressing to see so many young people leaving the house, as the partitions were closing; and some of the members not returning for some time, even after a messenger had been sent to desire them to come in. It is discouraging that so little effect seemed to follow the affectionate labors bestowed upon them by exercised servants and ministers of the Gospel of Christ."

It has been an increasing concern upon my mind of late, that overseers and other concerned Friends, may not relax their efforts to endeavor to check this growing evil; and even some that are members in this day, take the privilege of absenting altogether from meetings for Discipline, who are generally at our meetings for worship, but leave when about to transact the weighty affairs of the church.

Coal Creek, Iowa, 2d mo. 21st, 1871.

For "The Friend."

True Religion a Spiritual Work and Worship.

To inward waiting upon God, for the times of refreshing from his life-giving presence, were our forefathers eminently turned, and to this do we look for a continuance, or return, of the divine favor witnessed by them, in being redeemed from every outward or human dependence, in the worship and work of the Lord; which we believe to be eminently inward and spiritual, and in the will, time and measure of the Head of the church.

"Man is fallen from God, and by all the imaginations that can enter into his heart, and

by all the means he can use, or courses he can run, cannot," says Isaac Pennington, "return back to God again, or so much as desire it."

"All professions of God and Christ upon the earth, all knowledge and beliefs whatsoever, with all practices and duties and ordinances of worship, *save only such* as proceed from, and are held in the pure life, are but as so many fig-leaves, or deceitful plasters, which may skin over the wound, but cannot truly heal it."

"The living seed of eternal life, which God hath hid in man, underneath his earth, hath in it the living virtue, which *alone* can heal man, and restore him to God." This inward, hidden, spiritual seed of the kingdom, we profess to believe that God alone can raise into dominion in our hearts, as He is waited upon in the silence of all fleshly thoughts and reasonings. "There is," says he, "no salvation but by the true knowledge of Christ, who saves by the new covenant written in the heart, which the Spirit of God alone can write. Therefore the first step in religion, is to know how to meet with God's Spirit, which is, as a convicer of sin, by his light shining in the conscience; the believing in which is the true way to life eternal, uniting the soul to God, and opening the springs of life to it."

This testimony to the true and saving knowledge, which is spiritual and experimental, is supported by that of scripture, which declares, that "this is life eternal, to know thee the only true God and Jesus Christ whom thou hast sent;" and no mere literal acquirement, or outside observance, can form an availing substitute, however nearly it may come in appearance to the heavenly gift and work of the Holy Spirit.

In regard to prayer, says Pennington, "he that utters a word beyond the sense that God begets in his spirit, takes God's name in vain, and provokes him to jealousy against his soul. 'God is in heaven, thou art on earth, therefore let thy words be few!' The few words which the Spirit speaks, or the few still, soft, gentle breathings which the Spirit begets, are pleasing to God and profitable to the soul; but the many words which man's wisdom affects hurt the precious life, and thicken the veil of death over the soul; keeping that part alive which separates from God; which part must die, ere the soul can live."

Much the same may be said regarding the ministry, and religious teachings and conversation. The practice which is obtaining currency, with many amongst us, to familiarize like others the use of the sacred name, is felt, by those who dare not join in it, as very much lessening the weight of their remarks and services, and lowering the majesty and dignity of Omnipotence to a level with earthly rank and power. In scripture many are the substitutes, such as are now used by the truly reverential.

Of the experimental and saving knowledge of Christ, says Pennington, "this same Word of eternal life, and no other, which took the body of flesh upon Him, is also manifested, and dwelleth in the hearts of his saints; who, as they receive Him in the faith which is of Him, dwells in them richly, manifesting in the vessel the treasures of his divine wisdom and knowledge. Now, *this* is the precious knowledge of Christ indeed; and *this* is it every one is to wait for; to find a measure of the same life, the fullness whereof dwells in Him bodily, dwelling in our mortal bodies, and

making us like unto Him, in spirit, nature and conversation."

In observing the springing up of spiritual worship in his day, "he foretells a day in which it will be as honorable to wait for the movements of the Spirit, and to worship alone therein, as it is now reproachful." Is this day, we may ask, yet to come, or has it come and passed away, that we now see so much of human invention and machinery in the professed worship and service of God; so much of a dependence upon human wisdom and knowledge for ability to perform religious duties, exalting these above that which comes to the heart by the little, despised witness for Truth, in "the still small voice" of the Holy Spirit?

If we are ever to witness a return to that experience of divine favor, so *eminently* crowned with the fruit of the Spirit in earlier times, it must be by a return, a *practical* return, to our ancient faith in the doctrine and practice of spiritual worship in the silence of all flesh; of waiting upon God for a renewal of qualification for every fresh service in his church, wherein alone He is honored in the services of any; for his works alone can praise Him; and no graven image thereof will be accepted of Him, however specious this may appear to human sight and understanding; for, as it is written, He "will not give his glory to another, nor his praise to graven images." "The letter" (the mere outside, literal knowledge) "killeth, it is the Spirit that giveth life." And, while the wages of the exercise of this is death, "the gift of God (the life and power of the Holy Spirit) is eternal life." Wherefore, let us seek to have all our offerings seasoned with the heavenly savor; that we may become a holy priesthood unto God, serving and honoring him by doing his bidding, and that alone.

The righteous have nothing to fear, for the foundation of God standeth sure, having this seal, the Lord knoweth them that are His, and in consonance with this language is the ancient promise through the mouth of His prophet, of His peculiar care and regard for His vineyard (the Church). "I the Lord do keep it; I will water it every moment: lest any hurt it. I will keep it night and day." And the lip of truth has declared, "Therefore whosoever heareth these sayings of mine and doeth them, I will liken him unto a wise man which built his house upon a rock, and the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell not, for it was founded upon a Rock." Therefore, beloved Friends, let us seek to build upon this sure Foundation, for are not the rains descending upon our poor, proved Society? are not different winds of doctrine blowing and beating upon the Church? and are not Lo heres and Lo theres sounding within our camp? of which the Head of the Church warned us, saying "Go ye not therefore after them." Let us seek as the apostle advised "to know our calling, and therein abide" for this is the only safe place for those who are doing the Lord's work. While guarding and repairing the wall which the enemy has encroached upon, we must not be moved or drawn aside by any stratagem or device, but like Nehemiah, keep to the pointings of the Divine finger in all our movements, for herein only is our safety.

For "The Friend."

The Universal Pronouncing Dictionary, Biography and Mythology, by L. Tho. A. M., M. D., Philadelphia. J. B. Lippincott & Co., 2 vols., royal 8vo. pp. 2345.

This work, which the author's friends have long anxiously expecting, has now for several weeks found the public, and satisfies the hopes founded on his known industry, his habitual exactness and extensive search. The introduction is a disquisition on powers of the letters in the various European and Asiatic languages, of great value and interest to the philological student. It should be in the hands of every teacher of general literature, and every scholar, for there are surer marks of a cultivated, accomplished man, trained in the usages of good society, in the correct pronunciation of proper names and foreign languages. Dr. Thomas has earned for himself a high reputation by his labors in this department of literature, and is rightly regarded as one of the highest living authorities in pronunciation.

As a universal biographical dictionary, far more complete than any work of the sort, with which I am acquainted, Dr. Thomas has evidently been taken to omit name entitled to be recorded, and to accurately the date of the birth and death, country, and the claims to be remembered of the individual. The minute critic will doubt soon find omissions, which he will regard as faults in the absence of more serious errors.

As a whole the book is remarkable for candor and liberality of its opinions, for dispassionate estimate of men on opposite sides in religion and politics, while the one always sustains the cause of sound Christianity and social order. He has given it space to the lives of the most important figures in history and literature, and to more elaborate biographical sketches, are recently models of the kind. He has known how to estimate the perspective of his subjects, and to give objects not as they look to us who are near by, but as they appear at a greater distance.

The part devoted to mythology is a useful and interesting addition to the common of a biographical dictionary, and is all most readers will require on that subject.

The *specialty* of Dr. Thomas' book adopt an affected word much used now as is oriental biography and mythology, here he treads on ground which he has made his own by extensive travel and research. The articles on Confucius and Gautama, Brahmanism and Buddhism, will establish reputation as a sound orientalist.

The introduction has the following ground and well earned tribute to his chief assistant: "To Mr. William Jacobs, our almost constant collaborator for more than ten years, our acknowledgments are pre-eminently due for conscientious fidelity, no less than for his tireless diligence and well directed research which must be ascribed in no small measure whatever of accuracy or thoroughness, work may possess. To his pen we owe only a multitude of the minor notices, but inconsiderable number of the more important articles, among which may be mentioned those on Cicero, Milton, Newton, La Fayette, Hamilton (Alexander), and Napoleon II." At the close of each biographical notice a reference to the writings of the individual

books in which more may be learned than in any other. The Dictionary will form in a full and complete department for a library, and well deserves a place in every family collection.

For "The Friend."

"Is the Hour Observed?"

It is very curious before the minds of our Friends, to be answered in a meeting cap at three Monthly Meetings, three Quarterly Meetings, and at the Yearly Meeting; with very few exceptions the answer as to our meetings for worship is, that the hour is "well observed." This is as it should be, and the question may well be asked, why is it not equally true of the sittings of the Yearly Meeting, for it is a singular fact the punctuality for which Friends have long had reputation, is less observed by both the young at these meetings, than at any other.

It may not always be practicable for a Friend to reach the meeting-house at the appointed time, and it is better to be late than to be absent at all; but if the late comers were those who could not be punctual, the number would be very few. The practice of some people remaining outside of a meeting after the hour for gathering has arrived, and being prevented by the timely care of others, and these should be careful to set examples themselves, and thus the quiet sittings would be less disturbed, and the answer might truly be made as to the Yearly Meeting, that the hour is well observed.

THE FRIEND.

FOURTH MONTH 15, 1871.

It is the benign influence of the gospel which every one whose heart is thoroughly purified with its spirit, that while continually engaged in the light of Christ against the influence of evil in himself, the Christian is prompted, when clothed with the robe of supplication, to pour forth his fervent prayers that every one who is afar off may be brought nigh by the blood of the everlasting covenant, and every one that is nigh may be still nearer to the perfect example of the crucified and risen Saviour.

These are the individual members of the Church who strive to dwell in this lowly, contrite and prayerful state, when assembled together to discuss its affairs, its glorified Head to re-assert their spiritual strength, and by the aid of His spirit, makes them quick in discerning and defeating the wiles of the Evil One, and furnishes them with wisdom and strength to exalt his truth over all, and to labor for the healing of that which is sick, the binding up of that which is loosed, and bringing back that which has been driven away. As a people, Friends need more of this deep, fervent exercise before the Lord; a more practical and individuality, of the greatness and solemnity of the work of regeneration and sanctification, and as a church of the responsibility of their position, and the absolute need of Divine direction and aid in all their efforts to promote the cause of truth and righteousness.

Never was there a time when surrounding circumstances made it more important for our religious Society to adhere closely to its distinguishing doctrine of the immediate revelation and guidance of the Holy Spirit; never when the members individually had more need for the exercise of that faith concerning things which are beyond sight; a faith which is not a mere belief in the source and revelation of the truth made known,—which belief makes the devils tremble,—but is a credence inseparably connected with the love of God shed abroad in the heart, communicating the ability to obey, and act in accordance with the evidence of things not seen. This faith is accompanied with self-renunciation, and true humility leads to correcting our own errors. As this is associated with Christian charity, the two while cherishing tenderness for those seen to be doing wrong, will not rest satisfied, as the Lord opens the way for it, without an effort to reclaim them from the evil of their course.

If our hearts are imbued as they ought to be, with a proper sense of the importance to the whole Christian church, of the doctrines and testimonies, the support of which has more or less distinguished the Society of Friends, we will feel the responsibility to maintain them in their purity and integrity. While rejoicing that the faithfulness of those who have gone before us has had a well marked influence in commending those doctrines and testimonies to other professors, who have learned and are still learning to place a higher estimate on their value, we would be incited thereby not to relax in their support, but to labor after an increasingly impressive exhibit of their verity and good fruits, by godly lives consistent therewith, and an unceasing care on the part of the church to extend words of cheer and a helping hand to those who are struggling under discouragement in efforts to live up to them.

Fears, from a sense of our weakness and insufficiency for any good word or work, and trembling lest the ark of the testimony may fall into the hands of the uncircumcised, are not signs of unpreparedness for engaging in the work assigned us, nor evidence that we are shut out from the unfailing Source of spiritual strength and wisdom. There is instruction in that which the Apostle Paul tells us as the course he pursued. "Forgetting those things which are behind, and reaching forth unto those things which are before, I press towards the mark for the prize of the high calling of God in Christ Jesus." There is but one way in which this can be accomplished. By laying the burdens and sorrows of the past on the arm of Almighty Goodness, taking up the cross, despising the shame, and following Christ in the way of regeneration. But let us not deceive ourselves; this cannot be done unless we are deeply humbled under a sense of our imperfections and incapacity to help ourselves, and thus are prepared to lay hold of the inexhaustible might of Him who is willing to be our deliverer. If we allow ourselves to be deluded into a belief that we have attained a state in which we are safe, and cannot be drawn out of it, we will naturally relax in watching unto prayer, and thus may glide imperceptibly into error, and while dreaming that we are in the sacred enclosure of Christ's fold, be submitting to the spirit of the world, and adding to the guilt of sin.

Although temptations and sources of trial

change with the varying circumstances which surround us, the principles of the religion of Christ are immutable. In endeavoring to support these principles, we may think that our trials are peculiar, and that some strange thing has happened to us, and among Friends, this may in some respects be true. But those trials perhaps are no harder to bear than were those our fathers had to endure, and they certainly should be met and overcome in the same way as they were enabled to come off victorious. The dependence of all must be upon that "wisdom which is from above," and the promise is sure. Lo! I am with you always even unto the end of the world.

We commend to our readers the following, addressed to Friends by William Penn, at a time when they were suffering great trial.

"You know, my brethren, in whom you have believed, and have good experience of his power and faithfulness. Call to mind his noble acts and valiant deeds, his great salvation in all ages; how sure, how willing and how able He hath been to deliver our ancestors; and you know He is the same at this day. Trust therefore forever, for "He is greater than that is in you than he that is in the world." And I know assuredly that all these things shall work together for good to them that keep in the faith, the royal faith, the victorious faith, that faith that stands all trials, and surmounts all temptations, and through patient suffering, triumphs over rage, darkness and the grave. It is this exceeding precious faith that makes the good Christian, the good man, that keeps man's conscience void of offence towards God and all men; and as we keep it, of right may we say, "The Lord is our light, whom should we fear? The Lord is the strength of our life, of whom shall we be afraid?"

There appears to be a persisting effort made to collect the fine, imposed by the Legislature, on the citizens of Philadelphia between the ages of twenty-one and forty-five years, who refuse to meet and drill with the militia.

Though the fine is small in amount, yet as it is extorted from Friends as a penalty for not doing that which they cannot conscientiously perform, its payment would violate their testimony to liberty of conscience, and against war, or any connection with or countenance of military affairs, as much as though it was larger.

Some of our members may, without due consideration, have paid this fine, but if so, we believe the number is very few, and the report untrue, that others have allowed their friends to pay for them. It is of great importance that all who are liable, should meekly but resolutely refuse its payment, and in no wise compromise the righteous testimony of the religion of Christ to his peaceable kingdom and government.

The following are extracts from the Discipline of the Yearly Meeting of Friends held in Philadelphia:

"Friends are exhorted faithfully to adhere to our ancient testimony against wars and fighting, and in no way to unite with any in warlike measures, either offensive or defensive; that by the inoffensiveness of our conduct we may convincingly demonstrate ourselves to be real subjects of the Messiah's peaceful reign, and be instrumental in the promotion thereof, towards its completion; when,

The Hoosac Tunnel.

is, one of the most extraordinary engineering labors ever projected in this country, undertaken with the view of forming a direct railway connection, and one more to the State of Massachusetts, between Hudson river and Boston, than that afforded by the principal route hitherto existing (Boston and Albany Railroad). The Tunnel—if carried to a successful culmination of this, the untiring energy and persevering talent of the Messrs. Shanly, the chief superintendents of the enterprise, show the strongest grounds for belief—will for its western terminus the city of Troy, will be about ten miles shorter between point and Boston than the existing route; in respect to gradients, the tunnel line have greatly the advantage over the existing line, in having no inclines exceeding forty feet in the mile, against gradients of from ninety to ninety feet on the other.

The railways of which the tunnel is designed to be the connecting link, are already completed up to the mountains on either side. At the present time and until the completion of the tunnel, stages are in requisition to carry passengers over "the Hoosacs," to complete the connection on either side. The westerly end of the tunnel is at North Adams, fifty miles distant from Troy, and the easterly one at the valley of Deerfield river, 136 miles from Boston.

The Hoosac Mountain, through the ribs of which the tunnel is being pierced, is, at its highest point along the line, 2508 feet above the sea, and the two portals a trifle over 760 feet above the same. Lithologically, it consists, throughout, of mica schist, the westerly displaying for half a mile or less a fault somewhat altered granite, beyond which is a very hard quartzite is encountered another half mile or more, which has not been fully penetrated. The east end works upwards of 8000 feet inwards, and the westerly end downwards, and the mica schist, occasional veins of quartz being met with. At the "central shaft," which is located nearly midway between the two ends, and is 1030 feet deep, the workings are through the same material.

The tunnel is designed for a double line of rails; its length, when completed, will be 25,031 feet; its width is 24 feet; height in centre, 20 feet; and it is graded from each end to the centre 6 inches in the 100 feet, ascending from either end.

The mountain has already been penetrated: From the east side, 8200 feet.
From the west side, 5820 "
And at "central shaft," 200 "
Showing a total progress in the work of 14,220 "
And leaving still to be accomplished, 10,811 feet.

The daily progress averages at present 15 feet, which it is anticipated will be increased to 18 feet when machine drills have been introduced into the central workings; this, we understand, will take place in about two months.

The system of working varies with the locality. At the east end, where the greatest advance has been made, the work is more simple than at the west end or at the centre. Here (east) the rock is run out by an engine and train of cars, and disposed of in the valley of the Deerfield river. At the east end two operations are going forward. Nearly one-half mile from the portal inwards is in bad ground, requiring to be arched with brick, the progress of which is necessarily slow, and the appliances for this work taking up the whole space of the tunnel, the rock from the solid workings farther in cannot be run out through the portal. This unlucky state of affairs necessitated the taking of the "bad ground" in the rear, by sinking a shaft, called the "west shaft," 318 feet deep, through which all the rock from the western workings, behind the portion requiring arching with brick, is hoisted. This is effected by a double lift, worked by steam power, one bringing to the surface a car loaded with rock, the other taking an empty car to the bottom. This alternate process goes on with great regularity, a car of rock emerging at the surface every 2½ minutes.

Nearly midway between the ends of this tunnel, and in a deep depression of the mountain, another shaft has been sunk. Its depth is 1030 feet, its shape oval, and dimensions 27 by 15 feet. This is termed the "central shaft," and has recently been completed, and the work of driving the tunnel east and west therefrom commenced. The method of hoisting the rock here is identical with that at the "west shaft," the machinery is, however, more powerful, and considerable pumping is required to keep the bottom workings free of water.

The drilling is chiefly done by the machine known as the "Burleigh Rock Drill," worked by compressed air, the air compressors being also of the Burleigh Rock Drill Company's make, the drills working either horizontally or vertically, as occasion requires. The material is taken out, full tunnel width, with the

aid of eight of these machines, mounted horizontally on two carriages, which are run back—by the drills still in place—far enough to be out of harm's way during the operation of blasting, which is performed twice in each "shift" of eight hours. Of the drills it may be mentioned that each weighs about 340 pounds, and under a pressure of 60 pounds to the square inch will make upwards of 200 strokes per minute, drilling a hole 1¼ inches in diameter.

The air power for the drills is obtained through the agency of water power at the east end, and with the aid of steam at the other two points. It is compressed to give a pressure of 65 pounds on the square inch, and is conveyed to the point where it is needed through cast iron pipes, 8 inches in diameter, which are fitted with air-tight joints.

At the east end the work of compressing the air is carried on upwards of 9000 feet from the point where the drills are in operation, the difference in pressure at the working points being only two pounds per square inch compared with that recorded without the tunnel. The exhaust from the drills furnishes a goodly supply of fresh air to the workmen, and the atmosphere of the workings, now 8000 feet from the outer world, is perfectly endurable.

The blasting is principally accomplished by means of nitro-glycerine, manufactured on the place, by G. M. Mowbray, an experienced chemist. This material, which must be handled with the most intelligent caution, is allowed only in the hands of those who are adepts in its use, and who are employed especially for that purpose. Though its cost is ten times that of blasting powder, it is nevertheless found advantageous to employ it in certain portions of the works. In the nitro-glycerine blast, the number of holes simultaneously charged varies from ten to fifteen, their depth is usually 60 to 72 inches where the hole is horizontal, where it is vertical, the glycerine charge is put down 10 feet and upwards. These figures will, of course, vary with the nature of the rock and other conditions.

The labor employed in the work is chiefly of the kind termed "skilled labor," the underground workers being, for the most part, regularly bred miners (a large proportion of them being of the very best and most intelligent class of Cornish miners.) There are also a large number of Irishmen employed underground, who are highly prized; while of the French Canadians, who are well represented, it is said their aptitude for learning has already made excellent miners of many of them. The overground men employed are chiefly mechanics and American. The employees number about 900, men and boys.

The work is carried on day and night (except Sunday); the twenty-four hours being divided into three working days or shifts of eight hours each.

Such, in brief, is an outline of the nature and present status of this most important work, the rapid and satisfactory progress of which reflects eminent credit upon its talented superintendents.—*Journal of the Franklin Institute.*

The Journal of William Evans.

(Continued from page 267.)

In the 2d month, 1822, nearly four years after his first appearance in the ministry, he was acknowledged as a member of the meeting of ministers and elders. In relation to this, he observes: "The ministry of the Gospel is a deep and weighty work. Many baptisms and mortifications are often necessary, to prepare the creature to minister altogether from the gift and unreservedly to attribute the praise and the power to Him, from whom alone it is derived and to whom it belongs. These dispensations are ungrateful to our natural feelings. Abasement and insufficiency in ourselves, manifested to the view of others, seem the opposite of that ability with which the creature delights to be furnished, and which the great Head of the church, at times, graciously affords, but for wise purposes, also sees proper to withhold in a great degree, even when a necessity is imposed to stand forth in the work. In such case it is difficult to see the right stepping stones; and if we do not abide under the cross, we may utter what He does not give; which confuses the mind, exposes our impotence and fails to profit the people. I think this was my own case, in some measure, about two weeks back. It had an humbling effect, producing conviction of my utter incapacity for the work, only as the Lord is pleased renewedly to endow with fresh qualification and matter for the service." p. 68.

In the course of the same year (1822) he attended a meeting for worship of which he writes: "In the course of the meeting there seemed to me much want of a real sensibility on the important object for which we had convened. The minds of some seemed outward and destitute of that travail and exercise of spirit which must be maintained in order to experience the arising of Divine life and virtue in themselves. As these thoughts and sensations continued with me much of the time, I believed it right to stand up, and as it might be opened before me, express the views we hold of the nature of Divine worship and the requisite preparation for its right performance. There was something of the openings of Divine life experienced; but not keeping sufficiently low, I got, as I apprehended afterward, a little from the gift, and expressed a sentence or two which, though sound, wanted the savor of life; and on sitting down I was apprehensive that very little baptizing influence had accompanied my testimony.

"I was almost a stranger in the meeting, having but seldom attended it, and felt mortified and concerned lest I was instrumental in ministering to a state of death, painful to those who are preserved alive in the Truth. On returning home and reflecting on what had passed, I gave way to the suggestions of the Evil-one to such degree that I became carried away with his insinuations. My pride was mortified with the belief, that those at meeting must have seen my inability for the work, and I concluded it was evident I was unfit for the ministry. Under such distress

and fear lest I might be drawn from the true foundation, my secret petitions, through an interval of tenderness, were put up, that He, who only could preserve from falling, would be round about and still keep the swellings of temptation from overpowering me. I hope the instruction conveyed under this occurrence will not be soon forgotten. The repetition of such is very undesirable in the unmortified pride of man, and doubtless would be less frequent, if we dwelt in the valley of humility, keeping a watch over that tendency in us to be exalted by the favors conferred; not to feel our pride, but for the honor of His great name, who immediately bestows them, and for the advancement of his cause in the earth.

"About a week afterwards I met a beloved elderly Friend, and told him of the distress I had passed through, from the apprehension that my appearance at their meeting was not accompanied with the savor of life, as gospel ministry ought to be. He was very tender of me and gave me to understand that it had not given him any uneasiness. So I hoped that in part my distress had been produced through the buffetings of Satan." pp. 70, 71.

These extracts illustrate the character of William Evans, and of the discipline he was undergoing to fit him for the eminent place in the church for which the Great Master designed him. Of a confident and ardent disposition, he needed more than many others, the chastisements of the Father's love to bring down and keep in subjection that self-reliant nature. What a life-long struggle it was—how completely the victory was gained, and how all the powers and affections of the man were won over and given up to the service of his Divine Master, this volume amply proves.

These published journals of our experienced Friends are a great support and consolation to the thoughtful religious mind. They are each a fresh proof, varying with the character and circumstances of the individual, of that great cardinal truth of christianity, namely, the revelation and guidance of the Holy Spirit. They prove the felt presence of that Comforter which was promised by the Redeemer, which was to guide his disciples into all truth, which was to teach them all things, and bring all things to their remembrance. This volume is one of the most valuable additions to their number which has been made in our times. It is worthy of the best days of the Society, for the entire dependence which it shows him to have maintained through life in the renewed manifestations of the Holy Spirit to prepare him for service in the ministry and the church. William Evans never ceased to realize this necessity, and obeyed the Divine intimation in childlike simplicity. In 1853, then 66 years old, he writes thus:

"11th mo. 7th. For many days I have been shut up, and all ability to preach the gospel has been withdrawn, as though I should never more be called into the work. I have been almost destitute of any sense of the quickening power; and I saw that no former openings or favors would give the least ability or authority to put forth a hand in this solemn and weighty work. I have endeavored to keep inward and looking to the Lord, though I could not see or feel Him present; yet I believed it was the only place of safety, and the right way to be profited by these stripping dispensations. None know the feelings of destitution, produced by the absence of the Beloved of souls, but those who have been

bound to Him in the everlasting covenant and can be satisfied with nothing but the will which He gives, and the fresh arisings of Sun of Righteousness with healing in wings. Here is exercised and known faith and the patience of the saints. As they are steadily kept these dispensations put man from all confidence in his own wisdom and strength, and bring him to see that he has nothing; and that nothing but the re-visitatation and putting forth of the blessed compassionate Saviour, can ever qualify the work of the ministry; or any other religious service in the church." pp. 589, 590.

"12th mo. 7th. Was at the Arch St Meeting, which was held in as deep silence I have almost ever known; though there was a large number of children present. I contemplating my own imperfections, felt unworthy to be employed in the Lord's work; yet was a little comforted in the belief, that the condescending mercy and goodness of the everlasting Shepherd, were round about and hovering over us. It is as necessary to keep silence when it is the Lord's will to speak under his authority. There were children present who should be taught solemn silence, the nature of spiritual worship, as well as by vocal testimony." p. 591.

"So in the 5th mo. 1855, he writes: "I know anything of the nature of the gospel ministry, it is that only which is opened the soul by the great Minister of the sanctuary and which He authorizes to be given to the people as it is given to us; and the desire of it is to gather souls to Christ. Elders to receive the gift of spiritual discernment and to aid and counsel ministers, under the Lord's direction." p. 621.

"The trials of this day are hard to bear but if they drive us more and more to the Master, and keep out a light spirit and deen in the blessed Truth, so that our exan will be effectual to draw others to the love it, they will be great blessings to us and us for greater service in the Lord's church and vineyard. We have depended much one another, instead of relying upon the I alone for guidance, wisdom and strength; He has been taking from us fathers and mothers, and permitting the spirit of separatio get in, by which many Friends have been alienated from each other. The unity of Spirit being greatly lost, the strength w it gives is much withdrawn. There is no by which the strength of the church ca restored, but by the members coming bac the first principle of individually waiting u the Lord, and seeking to receive from the spirit of prayer, that He would retur us and show us our real condition; what would have us to come out of, and the l and holy way He would have us to walk His mercies are the same from generatio generation; and when we are rightly hum and brought back, He will condescend as to our low estate and lift us up and pu ce of praise into our mouths; and the child will be enabled to join in thanksgiving praise to his great and ever adorable nar p. 622.

In the 74th year of his age his excel and valuable wife was suddenly removed death. "To me," says he, "the breakin tie that made us one flesh, and in which were affectionately united in the one Sp and fellowship of the pure gospel of Ch was a deeply affecting and unexpected ev

though deeply afflicted, the Lord was faithful in sustaining my poor soul above billows; and enabling me to look to Him for support and preservation, now my most faithful companion, and cheerful experienced seller and comforter was taken away in ordering of his inscrutable wisdom. No who has not had such a valuable and united help-meet, through many spirituals, can be sensible of the loss I sustained the depth of affliction into which I have plunged by the removal of my dear wife. Was a mother in Israel; a cherisher of the free in the early buddings of the fruits of Spirit, in their tender minds; and an engaging and strengthener of the weary travelling burdens for Zion's sake, and the port and spreading of the Redeemer's love of truth and righteousness in the earth, or my Society; and also she came into my company, among those of other religious opinions." p. 684.

He did not recover from this shock. The agonies of age began to press heavily upon him—he lost his eye sight, but was preserved the last in sweet humility and dependence in his Divine Master. He survived his wife but five years, and his last thoughts were that heavenly kingdom for an entrance into which his whole life had been a preparation. In the last few days he conversed but little; his mind appearing to be fixed in the contemplation of the change that awaited him, and in being fervently engaged to be ready when the summons came.

(To be continued.)

For "The Friend."

The Track of the War around Metz.

(Concluded from page 268.)

"Metz, le 12th mo. 13th, 1870.

* * * I dread producing any false statement in what I write. If the condition be burnt villages is supposed to apply to whole district, *nothing can be more erroneous*. Many a village in some beautiful dell, on the side of a vine-covered hill, shows no mark of the war; and then a few miles off we see one that is utterly ruined—where people have no roof over their heads, and present aid but what we bring them. Some days it is nothing but hard matter business, and contending with deceits all sorts; and on others one seems in the midst of a whole people in tears, and so surrounded by death that all this life seems but a momentary dream. One evening last week particular I went out with a young Frenchman to a chateau in the country. It was wing hard,—the leaden gloom of the sky the sense of mighty suffering that weighed the land—the ruin by fire, and the desolation by the sword—pressed heavily on my mind. We were wending our way over the cleared by Bazaiva, where the very beds the flower gardens marked the sites of villas longer in existence. In one garden in the midst of this wall-less, house-less desolation, re is the solitary statue of an angel seated on a pedestal, left as if in irony to mourn over all. Right in front of his bowed head are fortifications of Metz,—and behind him a wilderness, in which his marble beauty is only relief. Yonder, under the guns of fort Queulen, was a village spire, from hence, to heighten the melancholy surroundings, rolled the musical but mournful toll of bell for a funeral. I felt so overwhelmed

by all this that I could not help thinking that much more of it would take away from one the very wish ever to be happy again.

"In the morning one gets up cheerful and bright, notwithstanding it all. Every day brings its own new strength and freshness,—but before its sun has set there is almost certain to come something which touches the same chord of sadness. One day for instance I was waiting at the Prefecture to see Count Donnersmarck, when a lady came in, dressed in deep mourning, and introduced herself to the secretary as Madame L C—. She had a son who was an officer, a prisoner of war in Germany, and he had attempted to escape, thereby rendering himself liable to punishment, the extent or nature of which she could not tell, but which, with a mother's anxiety, she pictured in the darkest colors. *Could she have a pass to go and see him?* The secretary was very kind in his manner to her; but he did not appear able to promise what she asked. He would write and ascertain all about her son. At the same time he reminded her that the latter must have broken his parole, and had therefore forfeited his position as a gentleman, and in fact had deserved the degradation which he must now expect, of being treated as a common soldier. In a low voice, scarcely audible for sobbing, she pleaded so hard and touchingly for him that every one in the room was moved by it. She evidently knew of no other plea for him but his extreme youth. 'O, Monsieur—he is but a boy—he is only sixteen years of age when he left the college of St. Cyr to take part in the war—by and bye he will be older and less thoughtless! O he is but a boy!' And then her tears came so thick and fast that she could not speak, except at intervals.

"On last Sixth-day, Henry Mennel and I started for a long round on the hills, and through the deep snow, through Saulny, Plesnois, Norroy, &c. My shoes were slippery, and we sought out a little shop—a nail-maker's, near the Thionville gate, where for two sous we got some 'clous,' which H. M. hammered into my soles, in the fashion of shoeing a horse,—to my no small comfort and security since. While this was being done, the poor woman who had waited on us (her husband working at his forge in a back room) asked if we knew anything of the French army. We did not—we were 'Anglais.' Ah well,—her son had been forced to serve—the only son she had; he had gone westward from Metz early on in the war, and she had never heard one syllable of him since. And then she covered her face with her cheek apron, and burst into a long low crying of miserable despair, which I shall never forget. Here was one drop only in the vast and unfathomable tide of grief that war has rolled over the land—one single case out of a multitude innumerable as the sand on the seashore—and to which no stores of ours—no mountain of gold—can ever bring one atom of comfort—one ray of hope.

"Night after night we have sat down to dinner amid a dazzling company of officers, covered with stars and iron crosses and ribbons of knighthood; but when we turn from them for one brief instant to the poor nail-maker's wife, an inexpressible feeling of sadness comes with the reflection that these idle toys are their reward for giving her a broken heart. Small wonder, with such suffering on every hand, that our commission is every-

where read with a feeling that in time of peace would be impossible. It has been sighed over—sobbed over—wept over; and I hope to treasure up the document, that others may read the same simple and touching words that have been listened to so eagerly by soldiers and peasants, by curés and country gentlemen, and nuns, and even children."

"Metz, 12th mo. 14th, 1870.

"Among the persons calling, was a lady whose husband owns considerable property near Gravelotte. One of his chateaux, called Ay, was made into an ambulance by the Germans. They kept one room for an amputating room; and as they never took the trouble to bury the arms and legs that were cut off, but stacked them in this room, the whole mass, and the blood, has been rotting there until it is impossible to approach the place! A fever is raging all round Ay.

"Metz, 15th, 12th mo. 1870.

"To-day have been to Peltre again, where the agent of the lime quarries gave me a most vivid account of the burning of the village. At half-past six at night a large body of soldiers (Prussian 55th regiment) marched in—divided themselves into parties of four to each house—pushed the door open—drove everybody into the street—even the sick poor dragged out of bed, dressed in haste, and sent going. Then they placed faggots of wood and bundles of straw at every door, and stood still, match and box in hand, each man ready to strike. Suddenly the long piercing blast of a trumpet rang through the street, and the whole village was lighted up from end to end, at the same instant of time, with a blaze. Every soldier had set fire to his faggot, and nearly every house was soon a mass of roaring flames, and crashing beams, and falling roofs!

"The time is nearly up for my return, and up to now I have been favored with strong health. On either hand of us are friends smitten down with sickness. First, Henry J. Allen, seized with small pox the day before I came; next, Daniel Haack, a week ago—same complaint; third, Henry Allen's sister, who came all the way from Ireland to nurse him, is now dangerously ill of small pox; fourth, poor Richard Allen, who, with his nephew still in bed, and his niece in danger of her life, has fallen ill of erysipelas, till at this moment he is absolutely blind with it!

"It is painful, but unavoidable, that several of us are entirely cut off from communication with the 'malades.' I feel especially for poor R. Allen, aged, sick, unable to speak the language, and surrounded by none but foreigners. It is just to the latter, however, to say they show every kindness in their power. Last 3rd day, or 4th, (I forget which), when I lay in bed most of the day to get rid of a cold, three of the servants came into my room together to offer to get me anything I wished to have. They are good honest folk too, for this very morning — (who is now on his way home) left his money belt, loaded with gold, in the bed, and went out into the town, forgetting all about it. I had occasion to go back to the house to fetch something, when I found Bernard (the *valet de chambre*) and two motherly-looking women in earnest conference. 'Look here,' said that worthy, 'your friend (the tall one) has left his purse in his bed. We had some thought of dividing it between us; but since it is full of a parcel

of foreign rubbish that we don't know how to count, we have made up our minds to return it. You'll find it in the drawer of his bed-table!" And the whole three laughed good-temperedly as I went away to his room to secure it.

"The incident I have next to relate is one which was so discreditably to one or two of us, and especially to myself, that I should prefer to pass it over in silence, but that its non-mention would leave the *ensemble* of the narrative an untruthful one.

"The reader has been told in the preface to these pages how it was that we were obliged to relay each other at short intervals, so that from first to last a good many different delegates had been engaged in the distribution at Metz and the examination of the surrounding villages. Now several of us were possessed with that love for collecting curiosities for which Englishmen are said to be especially marked; and from time to time, as we moved about over the fields of battle or through ruined houses, we picked up all sorts of incongruous things, such as pieces of uniform, helmets, bits of glass from chapel windows, bits of charred wood, scraps of bomb-shell, broken stone, &c. If we had stopped at this point, all would have been well. Such articles have a certain interest, sad though it may be, from their association with the scenes we had witnessed during our stay in the war-ruined district. But without reflecting on the gross inconsistency of what we were doing, some of us went a step farther, and collected actual weapons of war. This was in itself a serious offence against the Prussian military orders, although we were not aware of it; and the end of it was that one of our number was seized and thrown into prison; a search was made on our premises for arms, which resulted in our 'relics' being taken away. We were, however, well known to the Préfet, Count Henckel-Donnersmarck, to whom we immediately appealed; and although an offence against the military law, of which we were technically guilty, was not within his jurisdiction, he at once explained to General Lowenfeld, the military governor of Metz, who and what we were. The General was a kindly tempered man, though a strict disciplinarian, and after two days and nights of imprisonment, he released our friend, and stopped all further action against us. Both he and the Préfet were indeed highly amused at our scrape, for they knew as well as the reader that we had no intention whatever of using weapons except as curiosities pure and simple. It was a case in which we ought to have avoided the very appearance of evil; and by not doing so we narrowly risked compromising the testimony of the Society of Friends against bearing arms, in addition to having such a season for reflection in the interior of a German fortress as would have sent us back at the end of the war sadder and wiser men.

"And now comes the closing chapter in the eventful month I spent at Metz. The time was up for my return to England, and Thomas Whitwell, who had been one of our earliest workers, found his home affairs compelled him to leave also. It was arranged that we should meet at the station at five o'clock on the afternoon of the 21st, and travel together as far as Saarbrück or Trèves. I was at the station with our luggage, when T. W. came almost at the last moment to say he had been

to take leave of the Allens, and that Ellen was dying so rapidly that no hope was entertained of her surviving till the morning. Of course we instantly returned to the town, as we could not leave our friends at such a moment as this. We left our luggage at Rue Poncelet, and repaired to the Hôtel de Metz, where we should see Dr. Webb and Dr. Wyman. Scarcely had we seated ourselves at table when a messenger came in to say that Ellen Allen had passed away.

"There were other incidents that might interest the reader, but I have no heart to tell them. Often when alone these memories of Metz fill me with a gloom I cannot describe. When I used to read in newspapers, before going there, the figures giving the killed and wounded after a battle, they were mere statistics and nothing more. Now they are no longer so. Manly and sorrowful faces rise before me of some who have fallen victims in the struggle, and give a startling reality to the words—*Whoso hateth his brother is a murderer.*" Of the material ruin of the war no enduring effect will remain. The burnt-down houses may be rebuilt,—the devastated fields, now that England gives her help, will soon be re-sown. I only see the torment and sorrow and death it has everywhere left in its track—the poor miserable man shrieking, writing in a pool of his own blood—the white-haired old general at Gravelotte, bending with a broken heart over the grave of his child—the nailmaker's wife in the Thionville road, crying in a despair more bitter than death, as she turns her face to the wall when her son is mentioned—her only son, from whom she is never to hear one parting word, and never to receive even the most sombre souvenir. And when I remember that many hundred thousand homes like theirs have no more hope of happiness until all this generation has gone down to the grave, I get a dim and vague sense of a suffering to which no language can give utterance. The mirage that men call military glory, vanishes, and nothing is left of the war but its cold and mournful reality—long deep rivers of blood, and deep silent rivers of tears."

I have observed that deviating from this path of plainness, which Truth leads into, and making departures in dress, opens the way to intimate connexion with young people out of our Society, or libertines in it; and so leads further and further from a due subjection to Christ's kingdom and government, often making them forget and lose the good which they formerly professed, and consequently, draws them along into the utmost danger. Whereas, adhering to the truth and its plain path, opens the way for safer and more profitable and edifying connexions, as I often have, to my solid, inward satisfaction, which I hope I shall never forget.—*James Gough.*

Christ is a perfect physician and is able to work a perfect cure on the heart that believeth in Him, and *waiteth upon Him.* Did Christ cure perfectly outwardly in the days of his flesh; and shall He not perfectly inwardly in the days of his Spirit? Yes, certainly. The lame, the deaf, the dumb, the lepers, waiting upon Him in the way of his covenant, shall be cured by Him as perfectly inwardly, as ever others were outwardly.—*Isaac Pennington.*

BE TRUE AND FAITHFUL.

Speak thou the truth. Let others fence,
And trim their words for pay;
In pleasant sunshine of pretence
Let others bask their day.

Guard thou the fact; though clouds of night
Down on thy watch-tower stop;
Though thou shouldst see thine heart's delight
Borne from thee by their swoop.

Face thou the wind. Though safer seem
In shelter to abide;
We were not made to sit and dream:
The safe must first be tried.

Where God hath set His thorns about,
Cry not, "The way is plain";
His path within for those without
Is paved with toil and pain.

One fragment of His blessed Word,
Into thy spirit burned,
Is better than the whole, half-heard,
And by thine interest turned.

Show thou thy light. If conscience gleam,
Set not thy bushel down;
The smallest spark may send his beam
O'er hamlet, tower, and town.

We, woe, to him on safety bent,
Who creeps to grasp his youth,
Failing to grasp his life's intent,
Because he fears the truth.

Be true to every inmost thought
And as thy thought, thy speech;
What thou hast not by suffering bought,
Presume thou not to teach.

Hold on, hold on—thou hast the rock,
The foes are on the sand;
The first world-tempest's ruthless shock
Scatters their shifting strand.

While each wild gust the mist shall clear
We now see darkly through,
And justified at last appear
The true, in Him that's True.

Henry Alford

"There's not a heath however rude,
But hath some little flower,
To brighten up its solitude,
And scent the evening hour.

There's not a heart, however cast
By grief and sorrow down,
But hath some memory of the past,
To love and call its own."

For "The Friend

California.

(Continued from page 269.)

"Men of mediocre quality are no better in San Francisco than in older cities' States. Ten or fifteen years of stern chafe after fortune, among the mines and mountains and against the new nature of that orig country, has developed men here with a various and toughening experience in all temporalities of life, and a wider resource fighting all sorts of 'tigers,' than you easily find among the present generation of the Eastern States. Nearly all the mer means in California to-day have held long various struggles with fortune, failing on twice or thrice, and making wide wreck, buckling on the armor again and again, trying the contest over and over. So I throughout the Pacific Coast States; I hardly met an old emigrant of '49 and who has not told me of vicissitudes of fortune of personal trials, and hard work for bread and life, that, half-dreamed of before emigrating, he would never have dared to encounter and which no experience of persons in a position in life in the East can parallel.

consequence partly of all this training, partly of the great interests and the wide scope to be dealt with, the men we find at the head of the great enterprises of the Pacific have great business power,—a wide reach, reach, a boldness, a sagacity, a vim, can hardly be matched anywhere in the London and New York and Boston.

Irish men of more philosophies and sciences—men who have studied business as science as well as practised it as a trade,—here in San Francisco are the men of intuitions and more daring natures; cannot tell you why they do so and so, who will do it with a force that commands success. Illustrations of such men and bold and comprehensive operations may be seen in the Bank of California,—the financing of the Pacific States, with five millions of capital,—the California and Oregon navigation companies, controlling the navigation of these two States, the woolen mills and machine-shops of San Francisco, the Wells-Fargo Express and Stage Company, in the mining companies, especially the Comstock lode, in the Central Railroad Company, even in the large of the interior valleys, and in the wheat and fruit regions of the valley.

San Francisco is too, is audacious and original, and somewhat difficult of characterization, is a representative town of the Pacific West. It holds in chaos as yet all sorts of elements, the very best, and the very worst, of all. There is much of New York, much of St. Louis and Chicago, and a deal that is original and local; a born separation from the centres of our best civilization; of the dominating material and masculinism of all life in San Francisco of comparative lack of homes and family influences; of the considerable European and Asiatic elements mingling in settled civilization.

San Francisco is a city of many of the materials of life,—the abundance of hotels and restaurants, in facilities of inter-communication,—San Francisco California already set many an example to other communities. The hotels of the city are the equals of the very best of the Atlantic States; the restaurants the superior. The clean habit of living in lodgings and eating meals at restaurants is very much in vogue in San Francisco, and has stimulated character and equalized the prices of the hotels.

San Francisco is a city of many of the materials of life's convenience are organized in this city is the Wells and Fargo Express Company. It is our Eastern express company. It extends to every village, almost every mining camp in all these Pacific States and territories. It anticipates, almost sedes, the government in carrying letters, it does errands of every sort and to every place; it exchanges gold and greenbacks; it and sells gold and silver in the rough; it is as all the principal stage lines of the interior; it brings to market all the productions of gold and silver mines; and, in brief, is a ready companion of civilization, the friend and universal agent of the pioneer, his errand-boy, and banker. In the carrying business, this company has proven how, even in a new country, it is practicable for the government to abandon the post-office business without any very great inconvenience to the people. For years, it carried many more

letters on the Pacific coast than the government did; for, though it first paid the government postage, on every one, and then added its own charges, the certainty and promptness of its carriage and delivery, together with its appearance on the ground before the representatives of the post-office, made this department of its agency very much in favor with the public. At all its offices are letters received and delivered as in a government post-office, and in a single year the number of letters going through the hands of the express company was high upon three millions. In this and in many other ways, the express agency of the Pacific coast is far in advance, in usefulness, of that of the East.

"The food markets of San Francisco will certainly be a delight, perhaps a surprise, to the stranger. In supply, in variety, and in perfection of quality, the results of the various climates, and the fruitful waters and soils of the State, and the markets of no other city approach them. Here are spring, summer and fall vegetables of every kind, all the time, and of the largest size and healthiest growth; here strawberries may be bought twelve months in the year; here, for months in succession, are grapes of many varieties from two to twelve cents a pound; black Hamburgs, Muscats and Sweetwaters at the higher price; here are apples from Northern California and Oregon, pears, figs, peaches, apricots, nectarines, plums, and blackberries from the neighboring valleys, oranges, lemons, limes and bananas from the southern countries, all in the fullest perfection of form and ripeness, and at moderate prices by the pound—for fruits and vegetables are uniformly sold by weight; then, too, here is flour at half Eastern prices; and salmon throughout the year at ten to twenty cents a pound, with smelts, soles, herrings, cod, bass, shrimps, every treasure of the sea; while the variety of game is unequalled, and meats of all kinds are at least as cheap, and often cheaper, than in New England and Middle State towns.

The materials for living are in as rich supply, indeed, as the art of their preparation is perfected; and it will not take the thrifty mind long to calculate that, so far as food is concerned, a family can be supported more cheaply in San Francisco than in New York or Boston. The prices quoted are of course specie,—for the Pacific States have persistently refused greenbacks and bank-bills; but wages and profits are also in specie, and are higher, generally, than currency wages and profits in Eastern cities. But the fastidious Yankee, who never forgets his home, or his mother's pies and preserves, insists that the quality of the fruit and vegetables is below that of the productions of the orchards and gardens of the Middle States and New England,—that there is just a lower flavor and delicacy in them; a sacrifice of piquancy and richness to perfection of shape and bulk.

"It is not easy to draw any very exact comparisons between wages and profits, and the expenses of living, in San Francisco and in the Eastern cities. Prices are fickle now everywhere; and a comparison true to-day would be false to-morrow by reason of changes in the value of money, always going on at the present time, and always impending. Food is certainly much cheaper, on the whole, in San Francisco than in corresponding cities of the East; and wages and profits are as undoubtedly higher. But there is a rapid ten-

dency to equalization; and the difference in favor of the Pacific Coast will gradually but speedily fade away. At present the gold or silver dollar buys perhaps twenty per cent. more in San Francisco than the paper dollar in New York, and can be got with say twenty per cent. less labor. But, on the other hand, there is less settled economy here than there. The free and easy, reckless extravagance of early California times is not wholly outgrown.

* * * Large profits are generally demanded by the traders; nothing is sold for less than 'two bits' (twenty-five cents); and a fifty-cent piece is the lowest coin that it respects to carry, or throw to the man that waters your horse. At the best hotels, the Occidental and Cosmopolitan, the price is three dollars a day in gold, which is cheaper than the four dollars and a half currency charged by the fashionable hotels of Boston and New York. There is no coin in use less than a dime (ten cents); one of these answers as 'a bit'; two of them will pass for two 'bits,' or twenty-five cents. Rents and real estate are both high and advancing, and are probably above those of any Eastern city save New York.

"The business portions of the city are handsome and substantial, with brick and stone. There are a few distinctively fine structures, as the Bank of California, and the Halls of the Mercantile and Young Men's Christian Associations. Several churches are also attractive for size and architectural pretensions. But the earthquakes, to which the city and the coast are always exposed, and which within a few years have frequently visited them, admonish the citizens to build strong and low, even for business purposes; and, while the greater abundance and less price of lumber for a building material, lead them more to detached and wooden dwellings than is common in large cities. Brick tenement blocks are comparatively rare. Most of the homes are separate cottages, large and pretentious with the few, small and neat and simple with the many. The wide reach of sand hills and intervening valleys, that make up the peninsula on which the city is located; encourages this independent, spreading habit of building; and the extent of the street railroads of the city, about twenty-seven miles in all, shows what a large area has already been covered by its population.

"We shall be of a very indifferent sort of persons, and have no friends, to escape, during the first week of a visit to San Francisco, an invitation to drive out to the Cliff House for breakfast and a sight of the sea-lions. This is the one special pet dissipation of the city. And, indeed, it is a very pleasant, exhilarating excursion. A drive of five or six miles, along a hard-made road over the intervening sand hills brings us out to the broad Pacific, rolling in and out,—wide as waters be. We strain our eyes for Sandwich Islands and China,—they are right before us; no object intervenes, and we feel that we ought to see them. Just at the right, around the corner, is the Golden Gate; and vessels are passing in and out the Bay. A rare cliff rock piles us beyond the sands, within the Ocean; and a fine hotel on its very edge offers every hospitality,—at a price. Out upon half a dozen fragmentary rocks, like solid castles moored in the Ocean below and before, are the seals and pelicans. The rocks are covered and alive with them. Crawling up from the water, awkwardly and blunderingly like a

babe at its first creeping, they spread themselves in the sun all over the rocks, twenty and thirty feet high sometimes, and lie there as if comatose; anon raising the head to look about and utter a rough, wide-sounding bark; often two or three, provoked by a fresh quarter on their territory, get into combat, and strike and bite languidly at one another, barking and grumbling meanwhile like long-lunged dogs; and again, tired of discord or weary of felicity, they plunge, with more of a spring than they do anything else, back into the deep sea. An opera-glass brings them close to us upon the hotel piazza, and there is a singular fascination in sitting and watching their performances. They are of all sizes, from fifty pounds weight up to two hundred and three hundred. Sea gulls and pelicans, the latter huge and awkward in flight as turkeys, dispute possession of the rocks; resting in great flocks, or with load flaps flying around and around, overlooking the water for passing food.

(To be continued.)

For "The Friend."

Biographical Sketches, &c., of Friends.

In perusing the lives of some of our eminent and honored predecessors, as recorded in the valuable though unpretentious volume with the above title, lately issued by the Tract Association of Friends of Philadelphia, the assuring words of the Psalmist seemed to apply with peculiar force, "The righteous shall be in everlasting remembrance."

In this day of change, outward knowledge and worldly mindedness, it will no doubt prove of great advantage for all of us—especially the young or careless—frequently to recur to the lives of precious fathers and mothers in Israel, who, no longer with us to guide, to counsel or direct, have bequeathed to us by the purity, holiness and dedication of well-spent lives in the service of their Divine Master, a priceless legacy.

In honoring the memory of these dear departed ones, we do not desire to exalt the creature, but through them the cleansing, sanctifying power of Divine Grace, by which they were enabled as instruments in the hand of our Heavenly Father to shine forth in the midst of spiritual darkness, turning many into the paths of righteousness, and proclaiming to all, by their consistent walk and conversation, that truly their "life was hid with Christ in God."

It is in vain that any attempt to underrate their piety, zeal, or self-denying devotion to the cause of their blessed Master; we cannot rob them of the precious inheritance they have obtained through faithful obedience. We may rest assured we shall deceive ourselves by endeavoring to find out some other path than they trod, to lead us to the kingdom. The smiles or the deceptive influences of the world may allure us into a false rest or security, but here we can find no real peace or safety; if we truly desire to be the children of God, we must look within, and there, by the light of Truth, try the foundation on which we are building, and then reverently and prayerfully seeking to be led and guided by the Spirit of light and of grace, we shall come to know the blessed import of these words, "follow us as we have endeavored to follow Christ." J. B.

Richmond, Indiana, 4th mo. 6th, 1851.

For "The Friend."

A Snow Storm in New Zealand.

The flourishing English colonies in New Zealand, lie in latitudes nearly corresponding with those of the United State in the northern hemisphere, and the middle island is said to have a fine climate, closely resembling that of the southern counties of England. Violent thunder storms however are frequent, and, on some rare occasions, snow falls in prodigious quantities. *Chamber's Journal* gives some extracts from a recent publication entitled "Station Life in New Zealand, by Lady Barker," from which the following is taken:—"The chief agricultural interest in New Zealand, as well as in Australia, is grazing and the production of wool, and the business appears to be pursued in much the same manner in all the British colonies. The holdings which are called 'Stations,' are generally large tracts, on each of which 50,000 or more sheep are kept. It was at one of these the writer resided for some years and she found New Zealand life in general pleasant enough. On one occasion, however, she had a most trying and distressing experience, which is thus related:—

"Towards the end of July, 1867, the weather was very wet and cold, but cleared up in the last few days. All the stores at the Station were at the lowest ebb, and, after waiting a day or two, to allow the roads to dry, the dray was despatched to Christchurch for provisions, (a distance of sixty-five miles) and Lady Barker was left alone, her husband also having gone to Christchurch, but arranging to send a friend to escort her to the town on the following day, as he should be obliged to remain for a week. The lambing season was only just terminated on the runs; thousands of lambs were skipping about; their condition was most satisfactory, and the prospects of the colonists were flourishing. On the 29th, there was a 'sou' wester'; but no change was made in their plans, and Lady Barker was left alone. 'My mind,' she says, 'was disturbed by secret uneasiness about the possibility of the dray being detained by wet weather, and the dense mist seemed pressing everything down to the ground. I was so restless and miserable, I did not know what was the matter with me. I wandered from window to window, and still the same unusual sight met my eyes; a long procession of ewes and lambs, all travelling steadily down from the hills towards the large flat in front of the house; the bleating was incessant, and added to the intense melancholy of the whole affair. When Mr. V. came at one o'clock, he said that in the other ranges the sheep were drifting before the cold rain and mist in the same manner. Our only anxiety arose from the certainty that the dray would be delayed at least a day, perhaps two; this was a dreadful idea. For some time we had been economizing our resources, to make them last, and we knew there was absolutely nothing at the home station, nor at our nearest neighbor's, for they had sent to borrow tea and sugar from us. At dusk, two gentlemen rode up, not knowing F. was from home and asked if they might remain for the night. They put up their horses, and housed their valuable sheep-dogs in a barn full of clean straw, and we all tried to spend a cheerful evening; but every one confessed to the same extraordinary depression of spirits that I felt."

This was the beginning of a period of terror,

suffering, and loss, which needed all the n and resignation at the writer's comm The next morning the snow was falling t fine and fast; no sheep were visible, an tense silence prevailed. There was very mutton in the house, no oatmeal, no e cocoa, and no sheep were visible, an of food, and very small fire only coul allowed. Towards night she fancied garden fence looked strangely dwarfed no one was alarmed. "Snow now lies in Zealand." Next morning it was fou deep, still falling heavily and steadily i dense clouds; the cows were not to b the fowl-house and pig-styes had entire appeared; every scrap of wool was covered up; both the verandas were in sable, and the only door which could be ed was that of the back kitchen. The miasma was in the following cond Water, and we had some picnic biscuits it. For dinner we had the last tin of sard the last pot of apricot jam, and a tin of fed biscuits. There were six people t food every day, and nothing to feed them. Thursday's breakfast was a discovered cr dry bread, and our dinner rice and salt last rice in the store room." The snow unceasingly, only one window in the afforded light; every box was broken up used for fuel. On Friday the eatables all consumed, and the women servants in terrified despair. Of the sheep no was to be seen, the dogs kennels could n got at. On Saturday the cows were f and dragged within the enclosure, and four hours severe toil, a little oats straw dug out for them. No nothing more but one bottle of whiskey, and all were ed and frozen. On Sunday the rain cam heavily, and in time so far washed the away that the men contrived to tear off shingles of the roof of the fowl-house, a cure some aged hens, mere skeletons a week's starvation; and also to pick a rail from the stock yard fence which them an hour's firing, and enabled the make a kind of stew of the hens. After meal every one went to bed again, for scarce. On Monday the rain pa cleared the roof and the tops of the wind some hay was procured with incredi for the starving animals, and some mor were killed. The wind shifted and th prisoned party began to have a little b saving some of the thousands of sheep lambs which they now knew were l under the smooth white winding sheet night the gale roared, and on Tuesda pig-sty was reached, and one of its m who had been perfectly snug all the tim slaughtered, so that the fear of starvat at an end. On Wednesday they saw th and the men succeeded in digging out the and then Lady Barker insisted on acce nying them to the summit of a neigh hill, in order to ascertain the fate of the. This must be told in her own words, a ble and simple account of one the most ble calamities which ever befel New Ze where it appears this fearful snow stor there is foretold by the Maori (natives), t there is no record among their traditi any similar disaster.

"As soon as we got to the top, th glance showed us a small dusky patch to the edge of one of the deepest and

at the bottom of the paddock. Expedient eyes saw that they were sheep, but they had not the shape of animals at all, quite near enough to see distinctly, and the gentlemen exchange looks of surprise, and they said some low words from which I gathered that they feared the worst. We went down to the flat, we took a careful look around, and made out a patch, dark by comparison with the some two hundred yards lower down creek, but apparently in the water. On the other side of the little bill the snow seemed to have drifted even more deeply, for the narrow valley which lay there presented, as we could see, one smooth, level snow.

As soon as we got near the spot we observed, we found we were walking on a sheep, embedded in the snow, one over her; but, at all events, their misery had over some time. It was more horrible the drowning huddled up 'mob,' which made the dusky patch we had noticed the hill."

The exertions made by the whole party, and the suspense and pity they felt, the small of their exhausting labor produced, form a striking picture. In the case of the second flock all the sheep were dead, but a few were saved among the first. On an island formed at the head of the creek, where water swept with such fury around a rock as to wash the snow and sheep all away, I saw at some little distance they began to cumulate in a heap, Lady Barker had ninety-two ewes in one spot, but did not wait to count the lambs.

The total loss was half their flock and 75 per cent. of their lambs. When they had read the news of the fearful snow storm in other parts of the country, they found that the distant back country rangers had not done so severely than they had, for they took shelter under high river banks, and the tragedy of the creeks was enacted on a larger scale; or they drifted along before the first day's gale, until they came to a fence, and there they were soon covered and trampled each other to death. Not a sheep were sheep, but cattle, found dead in the snow, and the fences on the plains.

This tragic occurrence says *Chamber's Journal* is the sole drawback to the best, pleasant and most encouraging narrative of collocation to be found among the abundant literature of emigration.

Selected.

our religious acts or duties must be performed in the name of Jesus, in his power and strength. If this was waited for by active agents would be done to appearance, but was done, would be done to more effect; and would bless his own work. Not thousands, nor ten thousands of rivers of life, nor a great appearance of doing, and of God, Lord, Lord; but doing and suffering the will of God. This mysterious work is depending on man's wisdom and activity. I keep my feet from sliding in slippery places—grant the power, mercy and love to the little me, that I may move with it, and with it. Is Thy Seed under suffering—is on low amongst men? Grant ability to us in sincerity, where Thou art, there let servant be, even if it is in suffering and pain.—*Thomas Scattergood.*

Selected for "The Friend."

Under a sorrowful sense of the growth and spreading of some disagreeable things in the church, in this time of liberty and rest from persecution, which we have long enjoyed, I cannot well any longer forbear, but hereby lay before you one of those grievous disorders, humbly craving your renewed endeavors that the same, if possible, may be remedied.

The afflicting particular now before me, is one of those creeping weeds, rising in the summer-time of ease, which although not ranked amongst immoralities, yet, nevertheless, is very ignominious and noxious to our Society, viz: dullness and sleeping in our religious meetings; which reproach would be removed from amongst us, if all the professors of Truth did observe and practise the faithful advice of the apostle to the primitive believers: "I beseech you, therefore, by the mercies of God, that ye present your bodies a living sacrifice, holy and acceptable unto God, which is your reasonable service; and be not conformed to this world, but be ye transformed by the renewing of your mind, that you may prove what is that good, and acceptable, and perfect will of God." By which moving entreaty and exhortation we may understand, that in the right performance of divine worship unto Almighty God, we should endeavor so to appear before him, in such a living and reverent concern, as that even our very bodies may be as living and holy oblations to him. But alas! alas! it is too obvious, dullness, slumbering and sleeping prevail over too many, even when assembled on account of performing worship to the Lord, to the great reproach of our Society and holy profession, and particularly to the persons overtaken with this weakness, which is so very inconsistent with the spirituality of gospel worship professed by us.

This grievous fault causes no small affliction to the faithful amongst us, and doubtless is an occasion of stumbling to sober enquirers, if they see such heaviness and dullness amongst us, who have justly disused set forms of worship, and sit in silence, under pretence of waiting for the moving and operating of the Spirit of truth, in which alone the Father is acceptably worshipped. If they observe several overcome with the dark spirit of slumber, may they not make their remarks on such unbecoming weakness. And doth it not render us and our silent meetings contemptible? May not the tender enquirers justly charge us with absurd inconsistency? And may not the frothy and airy make it the subject of ridicule? But oh! dear Friends, that is not the worst; for our gracious God, who hath expressly said, I will be sanctified by them that come nigh me, is dishonored by such poor dull souls, and they also deprive themselves of that spiritual benefit and divine goodness, which accrues to the true and living worshippers. Neither the bodies nor the spirits of such poor creatures, who have contracted that odious habit of sleeping in meetings, whilst under that dark cloud, are either living, holy, or acceptable sacrifices, not being transformed by the renewing of their minds; but being dull, dark and drowsy, are not in a capacity of knowing what is that good, and acceptable, and perfect will of God, much less of doing it.

Wherefore, my dear Friends, I beseech you in the bowels of Christ, that you would exert yourselves in the wisdom of truth, to prevent

this indecent frailty and disorder; for although the most effectual way of amending this and all other disorders is, that every one come to and witness the real work and power of the all-sufficient grace and spirit of God; yet instrumental means, discreetly used, may be of singular service. And I hope it will become the care and concern of this meeting, to give reasonable and suitable advice to Monthly and Particular Meetings, to entreat, exhort, and rebuke such on whom a negligent, lukewarm disposition of mind prevails, that they do watch and war against sleeping in meetings of divine worship. Oh! that such may be roused up to a sense, how they dishonor themselves and the truth they make profession of, and in watchfulness and prayer sit before the Lord in a living frame of mind, waiting for the comfortable, enlivening influences of the Holy Spirit, and not be again overcome with the evil now spoken of; which is the fervent desire and prayer of your exercised friend and brother

DAVID HALL.

The Compass Plant.—The first mention of the so-called "polarity" of the compass plant, *Silphium laciniatum*, was made in communications addressed to the National Institute, by General Benj. Alvord, then Brevet Major, U. S. A., in 1842; although the fact was well known to many hunters and others.

General Alvord's first conjecture, that the leaves might have taken up so much iron as to become magnetic, having been negatived by analysis, he suggested that the resinous matter, of which the plant was full, and from which it was sometimes called resin weed, might have some agency in producing electrical currents.

As to its geographical distribution, he stated that it extended from Texas on the south, to Iowa on the north, and from Southern Michigan on the east, to three or four hundred miles west of Missouri and Arkansas; its chief habitat being rich prairie land.

Dr Gray, thought "that the hypothesis of electrical currents was hardly probable, as resin was a non-conductor of electricity; but that the polarity was due to the fact that the leaves were inclined to be vertical, and the direction of their edges north and south was the one in which their faces would obtain an equal amount of sunlight."

Charles E. Bessey, of the Iowa State Agricultural School, says: "We have the curious 'compass plant,' *S. laciniatum*, growing in great abundance throughout all this region. The polarity of its leaves is very marked. Use is made of it by the settlers, when lost on the prairies in dark nights. By feeling the direction of the leaves, they easily get their bearings."

From the record of these observers, there can be little doubt that the leaves on the prairies do assume a meridional bearing; and the cause assigned for this by Dr. Gray, is undoubtedly the correct one, viz.: that both sides of the leaf are equally sensitive. It is well known that the two sides of a leaf usually differ in structure, that the number of stomata, or breathing holes, is much greater on the under than the upper surface; and that the tissue of the upper is denser than that of the lower stratum. As the two surfaces of the leaf of *S. laciniatum* appears something alike, Dr. Gray suggested that it would be well to examine the leaf microscopically, in order to see if it corresponded with ordinary leaves

in the above respects, or with truly vertical leaves, the two surfaces of which are usually similar, or nearly so. Such an examination was accordingly made, when it appeared that both surfaces of the leaves presented the same number of stomata; while the leaves of other species of *Silphium*, in which no tendency to assume a north and south position is shown, exhibited great difference in the stomata of their surfaces. The magnifying power used was about four hundred diameters.

The observations here recorded appear to show that the meridional position of the edges of the leaf is to be explained by the structure of the two surfaces, which, being identical, at least in the important respect of the number of the stomata, seek an equal exposure to the light; the mean position of equal exposure, in northern latitudes, being that in which the edges are presented north and south, the latter to the maximum, the former to the minimum of illumination.—*W. F. Whitney, in American Naturalist.*

My mind is often led to visit, mentally, many parts of our fold, as a people, and earnestly do I desire that our tender lambs may not be induced to gather where there is not safety; and to pray that the arms of the Good Shepherd may be extended, and open to them for their preservation.—*S. L. G.*

The sun is health, and disease flies before its presence. Open wide your portals for its beneficence presents. Bring your sick into the influence of its beams. Let its rays enter every sick-room, away with curtains and blinds, and let the king of glory enter with healing on his wings. The sun-cure is worth all the water-cures and earth-cures and all the pathies united.—*A. K. Gardner, M. D.*

Neglect nothing. The most trivial action may be performed to ourselves, or performed to God.

THE FRIEND.

FOURTH MONTH 22, 1871.

SUMMARY OF EVENTS.

FOREIGN.—The state of affairs in Paris and its neighborhood has not improved. The communists still rule the city, and appear at present to be too strong for the government, though it is expected that authority will finally be established and order restored. Hostilities have been kept up, but the government does not appear to have attempted any further important military operations. A dispatch of the 16th, of the New York *World* says: "Desperate fighting, resulting in victories for the commune, is reported. Five consecutive attacks were made on Fort Vanvres, and were repulsed with great slaughter. The losses of the government troops were dreadful. At Neuilly the combat is fierce, but the communists gain ground steadily." Dispatches to the *Tribune* also say that the fighting at Neuilly has been very severe. The government forces still hold the bridges at that place. On the other hand Versailles dispatches of the same dates declare that no important military events whatever had occurred recently. The insurgents make much noise and waste ammunition by firing from the forts held by them, during the night. The bill giving municipal rights to Paris has been adopted by the National Assembly. On the 13th delegates from the party of conciliation returned to Paris after having had an interview with the President of the Republic at Versailles. The conditions of peace proposed to them by Thiers were, that the insurgents should first lay down their arms, and then municipal franchises would be granted to the city.

The British consul at Paris has warned all Englishmen to leave the city.

The plate seized by the Paris authorities is being converted into specie. The sacking of public buildings by mobs of men and women continues. Paris is cut off from all communication with the outer world, and no messenger can leave without a pass signed by General Dombrowski, the commander of the communal forces. The sale of horse flesh has been resumed, and there are other indications that the supply of food is gradually failing. The women of Paris have been invited to form a national organization for the defence of the city.

The official journal of Berlin says, that Germany will only interfere in the affairs of France when it shall become necessary for the collection of the money due to herself. Favre, in a speech to the National Assembly, said that the Emperor had expressed sympathy for the government of Versailles, as the only legitimate government of France. He also stated that the German administrator in France, General Fabricé, had declined the overtures made to him by the Commune, which he believed most shortly succumb to the power of the government.

The President of Hayti, since the departure of the San Domingo Commissioners, has received addresses, numerously signed, from every town and village of the republic, protesting the attachment of the Haytiens to their nationality and a determination to maintain their independence against intrusion, from whatever quarter, and in whatever manner it may show itself. The addresses breathe the same sentiments against annexation.

Cable dispatches of the 17th show that the situation at Paris was still unchanged. The government troops attacked the Communist's position at Vanvres on the morning of the 15th. The attack was sudden, and took the insurgents by surprise, but they soon rallied, and after a sanguinary contest in which many lives were sacrificed, compelled the government forces to retire. Several times during the day the fight was renewed, but the insurgents remained masters of the position. At Neuilly and other points there has been very little struggle without any decided advantage on either side, though the government forces are believed to have suffered the most. The insurgents are under the strictest discipline, and in the late engagements have taken several thousand prisoners, a number of manufacturers have been arrested by order of the government for keeping their workshops open, and thereby preventing nationals in their employ from joining the army.

A dispatch from Versailles says, the government gives Paris twenty-four hours to surrender. One from Neuilly in reply treats the demand with contempt. A Communist decree provides for methodical requisition upon the inhabitants of Paris, street by street.

London, 4th mo. 17th. Consols, 93½. U. S. 5-20's of 1862, 90½; ten-forties, 5 per cents, 89¼.

Liverpool.—Uplands cotton, 7½ a 7½d.; Orleans, 7½ a 7½d.

UNITED STATES.—The following is a statement of the expenditures of the government for the quarter ending Third month 31st, 1871:

Civil and Miscellaneous,	\$15,921,311 51
War,	7,892,800 33
Indians,	4,448,943 96
Pensions,	1,081,290 44
Interest on Public Debt,	7,737,856 42
	36,332,558 76

Total, \$73,414,761 42

Arrangements for an armistice between Spain and the Pacific republics of South America have been concluded and signed at the Department of State, Washington. The conditions are: First, That the armistice cannot come to an end, unless notification to that effect be given three years before hostilities may be resumed. This is contingent on peace.

Second, Trade to be resumed at once between the belligerents, as well as neutrals.

Third, Negotiations for a formal peace are to be begun next week.

The United States Senate, after a prolonged debate, has passed the bill for the suppression of lawless outrage in the South, by a vote of 95 to 24, with amendments that will return it to the House for concurrence. The House, by a vote of 99 to 98, has passed the Senate bill repealing the enactment that each new Congress must convene on the 4th of Third month. The law now in force, that Congress shall assemble in the Twelfth month as formerly.

The latest advices indicate that the last cotton crop will reach 4,000,000 bales.

The interments in Philadelphia last week numbered 277. Of consumption, 63; inflammation of the lungs, 29; old age, 14.

The subscriptions to the new five per cent. U. S. United States annots on the 15th inst. to 760,400.

The Markets, &c.—The following were the quot on the 17th inst. *New York*—American gold, U. S. sixes, 1881, 117; ditto, 5-20's, 1862, 113½; 10-40, 109¼; Superfine flour, \$6.20 a \$6.40; brands, \$6.50 a \$10.00. No. 2 Chicago spring v \$1.57 a \$1.60; amber western, \$1.63 a \$1.65; Genesee, \$1.62 a \$1.87. *Philadelphia*.—Superfine, \$5.25 a \$6.75; finer brands, \$6 a \$9.25. Western wheat, \$1.83 a \$1.85; white, \$1.75 a \$1.85. No. 2 corn, 77 a 78 cts.; western mixed, 72 a 74 cts. Of 68 cts. The receipts of beef cattle number one Choice sold at 81 a 9 cts.; fair to good, 7 a 8 cts; common 4 a 64 cts. per lb. gross. Sheep sold at 3 cts. for clipped, and bought at 7 a 8 cts. per lb. Corn fed hogs \$3 a \$3 per 100 lbs. No. 1 Oats, 37 a 38 cts.; No. 1 corn, 53 a 54 cts.; No. 2, 52 cts. Oats, 48 cts. Lard, 10½ a 10½ cts. *St. J.*—Cotton, 13½ a 14 cts. Spring wheat, \$1.27 a \$1.29 Mixed corn, 47 cts. Oats, 7½ a 80 cts.

RECEIPTS.

Received from members of Goshen Monthly ing, \$90, for the Freedmen, per Isaac Hall.

WANTED,

A Teacher for the Boys' Arithmetical School, Westtown. Apply to

Joseph Scattergood, 413 Spruce St.
Charles J. Allen, 525 Pine St.
Joseph Walton, 728 Buttenwood.

FRIENDS' SELECT SCHOOL.

Wanted, a well qualified man Friend as teach the Boys' School on Cherry street.

Application may be made to
James Whital, 40 Race St.
James Smedley, 417 Market St.
William Biddle, No. 15 South Seventh St.
Geo. J. Scattergood, 413 Spruce St.

WESTTOWN BOARDING SCHOOL.

The Summer Session opens on Second-day, month 1st. Parents and others intending to send to the Institution, are requested to make early application to AARON SHARPLESS, Superintendent, (at Street Road P. O., Chester Co., Pa.) or to CHASE ALLEN, Treasurer, 304 Arch Street, Philadelphia.

FRIENDS' BOARDING SCHOOL, TUNESSA NEW YORK.

A Teacher is wanted in this Institution. Application may be made to
Samuel Morris, Olney P. O., Philadelphia
James E. Rhoads, Germantown.
Geo. J. Scattergood, 413 Spruce St., Philadelphia.

WESTTOWN BOARDING SCHOOL.

Wanted, a Friend suitable for the position of G. n. Application may be made to
Samuel Bettle, 151 North Tenth St., Phila
Joseph Passmore, Goshenville, Chester Co
Elizabeth B. Evans, 322 Union St., Philad
Martha D. Allen, 528 Pine St.,

FRIENDS' BOARDING SCHOOL, FOR IN CHILDREN, TUNESSA, NEW YORK

A suitable Friend and his wife are wanted to charge with this Institution, and manage the Farm need with it. Application may be made to
Ebenezer Worth, Marshalltown, Chester Co.
Thomas Wistar, Fox Chase P. O., Philad
Samuel Morris, Olney P. O., do
Joseph Scattergood, 413 Spruce Street, do

FRIENDS' ASYLUM FOR THE INSAN Near Frankford, (Twenty-third Ward), Philadelphia

gaman's Process of Cutting Hard Substances.

BY COLEMAN SELLERS.

low to cut or carve, mechanically, hard substances, such as stone, glass or hard metals, an expeditious, accurate and economical manner, has always engaged the attention of inventors. At the present time, the rapidly decreasing cost of manual labor makes improvements in this direction more needful. The discovery and utilization of opaque crys- talyzed carbon, cheaper than transparent diamonds, but perhaps equally durable, has gone far in this direction. Now, B. C. Tilgh- man, of Philadelphia, comes forward, and shows that a jet of quartz sand thrown against a block of solid corundum will bore a hole through it $1\frac{1}{2}$ inches in diameter, $\frac{1}{2}$ inch deep, in five minutes, and this with a velocity obtain- able, by the use of steam as the propelling power, at a pressure of 300 pounds per square inch—a remarkable result, when we consider that corundum is next to and but little in- ferior to the diamond in hardness.

At the stated meeting of the Franklin In- stitute, held 2d mo. 15th, 1871, the Resident Secretary, Dr. W. H. Wahl, introduced this invention, illustrating his description of it by actually cutting or polishing the surface of a plate of glass by a sand blast of very moderate intensity. Various examples of hard substances cut, polished and carved into pipes, were displayed. In the discussion which followed the presentation of this very remarkable discovery, Robert Briggs, in his interesting remarks on the subject, took occasion to say that it had been long remarked that window glass, exposed to the wind driven dry, near the sea shore, soon loses its polish, and he cited some other well known examples of erosion of surface when exposed to a con- tinued stream of moving particles. When we think of the many such examples, and con- sider that engineers have had continually to take provision against this well known cut- ting effect, it seems surprising that it should not have been turned to some good account before this.

Dr. C. T.'s attention seems first to have been directed towards cutting stone, or hard metal, a jet of sand impelled by escaping steam

under high pressure. His early experiments were, I believe, with very high pressure, but as he progressed in the knowledge of results obtainable with various velocities, a great use for this process seemed to develop itself in sand driven by moderate air blasts, and applied to grinding or depolishing glass for ornamental purposes.

For grinding glass he uses a common rotary fan, 30 inches in diameter, making about 1500 revolutions per minute, which gives a blast of air of the pressure of about 4 inches of water, through a vertical tube, 2 feet high by 60 inches long, and 1 inch wide.

Into the top of this tube the sand is fed, and falling into the air current and acquiring velocity from it, is dashed down against the sheets of glass, which are slowly moved across, about 1 inch below the end of the tube. About 10 or 15 seconds exposure to the sand blast is sufficient to completely grind or polish the surface of ordinary glass; so that sheets of it carried on endless belts may be passed under this 1-inch wide sand shower at the rate of 5 inches forward movement per minute. In the machine in use for this purpose the spent sand is reconveyed to the upper hopper by elevators, and the dust made by the sand blast (which might otherwise be a source of annoyance to the workmen) is drawn back into the fan, and thence passes with the wind into the blast ton, and again mingles with the shower of sand upon the glass.

By covering parts of the glass surface by a stencil or pattern of any tough or elastic material, such as paper, lace, caoutchouc, or oil paint, designs of any kind may be engraved.

There is a kind of colored glass made by having a thin stratum of colored glass melted or "flashed" on one side of an ordinary sheet of clear glass. If a stencil of sufficient toughness is placed on the colored side, and ex- posed to the sand blast, the pattern can be cut through the colored stratum in from about 4 to 20 minutes, according to its thickness.

The theoretical velocity of a current of air of the pressure of 4 inches of water, he calculates, is (neglecting friction) about 135 feet per second; and the actual velocity of the sand is doubtless much less.

If a current of air of less velocity is used, say about 1 inch of water, very delicate materials, such as the green leaves of the fern, will resist a stream of fine sand long enough to allow their outlines to be engraved on glass. By graduating the time of exposure with sufficient nicety, so as to allow the thin parts of the leaves to be partly cut through by the sand, while the thicker central ribs and their branches still resist, the effect of a shaded en- graving may be produced.

The grinding of such a hard substance as glass by an agent which is resisted by such a fragile material as a green leaf, seems at first rather singular. The probable explanation is, that each grain of sand which strikes with its sharp angle on the glass pulverizes an in-

finesimal portion which is blown away as dust, while the grains which strike the leaf rebound from its soft elastic surface.

The film of bichromated gelatin, used as a photographic negative, may be sufficiently thick to allow a picture to be engraved on glass by fine sand, driven by a gentle blast of air.

For cutting stone the inventor uses steam as the impelling jet; the higher the pressure, the greater is the velocity imparted to the sand, and the more rapid its cutting effect.

In using steam of about 100 pounds pressure, the sand is introduced by a central iron tube, about $\frac{3}{8}$ -inch bore, while the steam is made to issue from an annular passage surrounding the sand tube.

A certain amount of suction of air is thus produced, which draws the sand through the sand tube into the steam jet, and both are then driven together through a tube about 6 inches long, in which the steam imparts its velocity to the sand, and finally strike on the stone, which is held about an inch distant from the end of the tube.

At the spot struck a red light is visible, as if the stone was red hot, though really it is below 212° Fah. The light is probably caused by the breaking up of the crystals of the sand and stone.

The cutting effect is greatest when free escape is allowed for the spent sand and steam. In making a hole of diameter but slightly greater than that of the steam jet, the re- bounding steam and sand greatly interfere with and lessen the efficiency of the jet.

Under favorable conditions, using steam which he estimated as equal to about $1\frac{1}{2}$ horse- power, at a pressure of about 125 pounds, the cutting effect per minute was about $1\frac{1}{2}$ cubic inches of granite, or 3 cubic inches of marble, or 10 cubic inches of soft brown sand stone.

By means of flexible or jointed connecting tubes, the blast pipe is made movable in any direction; grooves and mouldings of almost any shape can thus be made, or by means of stencil plates, letters or ornaments can be cut either in relief or intaglio, with great rapidity in the hardest stone.

At a high velocity, quartz sand will cut substances much harder than itself, as before stated. With a steam jet of 300 pounds pressure, a hole $1\frac{1}{2}$ inches in diameter was cut through a piece of corundum, $\frac{1}{2}$ inch thick, in 25 minutes.

A hole $1\frac{1}{2}$ inch long and $\frac{1}{2}$ inch wide was cut through a hard steel file $\frac{1}{2}$ inch thick, in 10 minutes, with a jet of 100 pounds steam.

A stream of small lead shot, driven by 50 pounds steam, wore a small hole in a piece of hard quartz; the shot were found to be only very slightly flattened by the blow, showing their velocity to have been moderate.

Among the curious examples of glass cut by this sand blast was shown a piece of ordi- nary window glass, which, having been par- tially protected by a covering of wire gauze,

had been cut entirely through, thus producing a glass sieve, with openings of about $\frac{1}{16}$ th of an inch, the intervening glass meshes being only $\frac{1}{16}$ th of an inch wide. This seems to have been produced more as a curiosity than for any practical purpose. Should such a sheet of perforated glass be required, it is questionable if it could be produced from a solid sheet by any other method.

A microscopic examination of the sheet glass depolished by this process shows a succession of pits formed by the blows of the impinging grains of sand, and looks more uniform than do surfaces ground by any rubbing process.

This steam sand jet has already been introduced to clean cast iron hollow ware previous to tinning the interior. Heretofore the interior surface has been turned, it having been found necessary to remove a thin shaving in a lathe to obtain a clean surface. The surface is cleaned more rapidly by the sand blast, and even more perfectly, because it penetrates into any holes or depressions which the turning tool could not reach. It is also probable that the sand striking the particles of plum-bago, which separate the particles of metallic iron in ordinary gray cast iron, will remove them, and thus expose a continuous metallic surface to take the tin.

In this relation I might note, that about twenty-five years ago, some experiments were made in Cincinnati, at the establishment of Miles Greenwood, by my brother, George Escal Sellers, with a view to making tinned hollow ware of ordinary gray iron. He made a machine for scouring the inside of the pots and kettles with sand and water; afterwards the still wet, scoured surfaces passed into the chloride of zinc solution, and thence into the molten metal, and were uniformly tinned. For some reason, the process was not continued, and now it is only recorded as an abandoned invention, never before made public. The wet sand grinding could not in this case, have been so efficient as Tilghman's sand blast. To speculate on the various uses to which this process may be applied, would not serve any good end, and would take up too much space. With this discovery we can hardly help recurring to the works of the ancients, and wondering if some such process could have aided the workers in the stone age, or could have been used in carving the Egyptian hieroglyphics. It has been noted by those familiar with the cutting or dressing of stone, that some materials, such as granite, is very much injured, or "stunned," by the blows of the cutting tool, and after being hand dressed a thickness of perhaps from $\frac{1}{8}$ th inch to $\frac{1}{4}$ th inch has to be ground away, to produce a solid uniform surface. By this sand cutting process the surface is not injured, is not "stunned," and is ready for polishing at once.

One curious fact connected with its use is, that when a surface to be cut in intaglio or otherwise is partially protected by templates of metal, these templates curl up under the blows of the sand, so that paper patterns are really more durable than patterns cut from brass. Sheet steel, cut into shape and then hardened, will also curl up under the blows of the fine particles of sand, unless protected by sheets of yielding material. Fine lace will protect glass during the depolishing process, and leave its designs in polished lines on a ground surface.—*Journal of the Franklin Institute.*

For "The Friend."

The Journal of William Evans.

(Continued from page 275.)

The active service of William Evans in the church, was in times of great trial and suffering because of the departure of many from the ancient faith of the gospel, now on one hand and now on another. The *half-truths* which each dissenting party adopted, regarding them as the *whole truth*, made them accuse the faithful ministers of the word of unreasonableness in enforcing the portions which were denied or undervalued. And thus it happened that the very men who were first charged with unduly valuing the redemption by Christ and the scriptures of Truth, were afterwards arraigned, whilst still maintaining in its purity our ancient faith, as having lapsed into the first heresy. It is because of the steady light which it casts on this subject, that the journal of William Evans will owe its chief value to future generations, as defining the true position of our Society in these relations. From first to last his ministry was the preaching of the life, death, resurrection and Divinity of Jesus Christ, of Nazareth, the atonement made by Him for the sins of mankind, and his spiritual appearance in the heart, convicting us of sin, and bringing us to repentance and to faith in Him as our Mediator and Intercessor with the Father, and as the Author and Finisher of our Faith. Nowhere can be found fuller evidence that this is the accepted and living faith of Friends, than exists in almost every page of this excellent work, which cannot fail to become a standard of reference for the instruction and consolation of our members.

Scattered throughout the Journal of William Evans, there are numerous incidents and sketches concerning his personal friends—tried and valuable members of the Society—a selection from which will form a fitting close to this notice.

The following extract of a letter from his father, written to William and his brother Joseph* when they were at Westtown, the former not being thirteenth years old, shows the religious care exercised over his children by that wise elder.

* Philadelphia, 21st of 9th mo. 1800.

"Dear children,—Feeling desirous at all times you may do well, I cannot but endeavor to revive in your remembrance, the necessity of attending with all diligence to the small, gentle intimations and reproofs of the Holy Spirit of Truth in your own minds. Keep near to its blessed instructions at all times, and it will preserve in every season of trial and difficulty, and as an inexhaustible fountain, sustain your little minds when depressed with anxious thoughts or discouraging fears. This is the alone way to happiness here or blessedness hereafter. For in obedience to this light in our minds, we are brought to love the Lord our most gracious Redeemer above all, and by Him are regarded as his children, which is treasure indeed, that raises the spirit above earthly pleasures, to a sense of the unspeakable comforts in the regions of immortal bliss. Here, in this state, the fear

* When the above was written, this brother also has passed away; his innocent and exemplary life having been prolonged to the advanced age of nearly eighty-two.

"Yet why
For ripe fruit seasonably gathered,
Should frail survivors heave a sigh?"

of death is taken away, because we know it in the presence of the Lord there is life, as we are kept near Him, nothing can be as. Now my dear children let me earnestly entreat you, to mind the reproofs which you feel for doing wrong; this is the Spirit of Truth I have been speaking of, and as you carefully attend to it, it will lead into all truth—you will fear to offend by a repetition those things, for which you have been proved. It penetrates through every covering, and no dissimulation can possibly escape its all-searching power. Whenever through unwatchfulness you have given way to temptation, and by the merciful calls of this teacher you become sensible of it, retire alone and endeavor to get your minds drawn free from every outward thing, to a reverential wait upon your Holy Creator for a renewal of light and grace upon you, that you may be strengthened to resist the enemy of all good in his future attempts; and be sure to avoid those things that have thus beguiled you, brought distress upon the tender mind; for this watchful state your minds will often tendered, and at times sincere petitions ascend for preservation and support in a world of vanity and trouble." pp. 10, 11.

The love and reverence of the child matured into close friendship in manhood, and father and the son stood beside each other the life-long defenders of our ancient faith through the stormy period in which their was cast. The father died in a good old age surrounded by his children, and full of serene and quiet faith in the mercies of his Redeemer. "During the first three days of his confinement," says his son, "his mind appeared to be under exercise, and though as was usual with him, he said little of his own exercise I believe he was introduced into a very pleasing view of himself and made deeply sensible of the frailties which pertain to man; that it is only through Divine mercy, that we have done the will of God, that we accepted at last. He became settled in his confidence; being gathered and centred to sure foundation, Christ Jesus, the hope of saints' glory. He endured with patience infirmities produced by advanced age; disease; alluded with much serenity to approaching close; and the peacefulness, heavenly settlement which were felt, gave evidence that his eye was firmly fixed on eternal recompense laid up in store for those who follow the Lamb of God, whithersoever He leadeth. He retained the use of his faculties to the last, and expired without struggle or the change of a feature. To children it was a solemn and affecting event and to the Society in which he has long stood as a faithful watchman, his removal will be felt as a blank that cannot soon be filled. He was favored with a clear, sound and discerning mind; and soon detecting the special appearances of the enemy, he raised his voice with unwavering firmness against them; though he often incurred the censure of superficial professors, and of those who sought the honor of men, yet he kept his ground and very generally proved that his judgment was correct. He was faithful in waiting for the arising of the power of Truth in our religious assemblies, both for worship and discipline. It was his delight and life to feed both in himself and in the services of others and when he was sensible of it, it was his authority for his own movements and satisfaction.

respecting others, however simple and earned they might be." p. 211.

The childhood and youth of William Evans, seen under the guidance of his excellent elders, brought him acquainted with nearly the most eminent Friends of the day, and he describes his early recollections of some, own to most now living, only by tradition. During my apprenticeship there was a body of substantial ministers and elders, meeting to our Yearly Meeting; and as I progressed, though slowly and often in a struggling way, in religious experience, my conversation strengthened to attend meetings for discipline as well as for worship. These large assemblies where there was such a concentration of gifts, talents and religious gifts, were very interesting, especially when concerned for the welfare and encouragement of the young members took hold of them. George Dillwyn who reminded me of the beloved disciple that leaned on Jesus' bosom, forgot those who were in difficulty and needed help, and he was at times very instructive in his application of doctrine to the different states and growths, and very cheering to the youthful disciple. The gravity with which they sat in those assemblies and the meekness with which many of them delivered their sentiments were impressive on young minds, and tended to inspire a love for the religion which produced such men, and such gifts, and for the beauty and the dignity of church and its concerns. Eli Yarnall was remarkable for the inwardness of his spirit, great caution in speaking, and the peculiar sweetness of his countenance, reminding me of Stephen, of whom it is said that all who beheld him 'saw his face as it had been the face of an angel.'

Our Quarterly Meeting was held at the North house, in Key's alley. A large number of ministers belonged to it; and during my thirty Ann Alexander paid a religious visit to this country, whose gospel labors were evinced from a living spring. At one of these meetings she foretold in a very impressive manner the reduction of the ministers, and scarcity of spiritual food instrumentally manifested. I concluded then to treasure her prediction for the purpose of ascertaining what dependence could be placed on it, it has since been fully and strikingly realized. A number in that station were in a few years removed by death, others have been away, several joined with the separation which took place in 1827, and very few of our Quarterly Meeting have since been added up.

William Savery, a minister much beloved, very decided in his public testimony to divinity and various offices of our Lord is Christ, died during my apprenticeship, attended the Market Street Meeting on the evening of the 25th of the 12th mo., when he died, appearing to be in a declining state of health, and which I believe was the last time he appeared in the ministry in a public meeting. What made the opportunity more precious was his pallid countenance and text with which he rose, 'Abraham saw day and was glad,' and which he uttered with a heavenly spirit and solemn tone of voice. This was the subject which of all things lay near his heart—and he was an intelligible advocate for the truths and importance of Christianity.

(To be continued.)

Increased Longevity.

G. M. Beard, M. D., in the *College Courant*, has collected statistics relating to longevity in different countries at different periods. His most important deductions given below are especially interesting.

Figures show that all classes live fifty per cent. longer under the modern civilization of England and the United States than the most favored brain-working classes lived under the Roman civilization. In all nations the higher classes live longer than the humble.

Increase of longevity is shown by comparison not only of ancient and modern times, but also the earlier with the later stages of our modern civilization. Thus in Geneva, where vital statistics have been carefully kept for nearly four centuries, the expectation of life

In the 16th century was	21.21 years.
" 17th "	" 25.67 "
" 18th "	" 33.62 "
from 1814 to 1833	" 40.68 "

This comparison shows an increase of almost one hundred per cent. in three centuries. In England and Wales mortality has diminished two-fifths in a single century—from 1720 to 1820.

Comparing cities alone we find even greater increase. The rate of mortality in Dublin at the beginning of the eighteenth century was 1 in 22 of the population. In the middle of the nineteenth century, 1 in 38 of the population.

The rate of mortality in Boston

In 1776 was	1 in 28 of the population.
In 1864	" 37 "

The rate of mortality in Boston from

1728 to 1752 was	1 in 21.65 of the population.
1846 " 1865	" 42.08 "

A decrease of about fifty per cent. in one century; similar decrease has been observed in Paris and London.

Statistics would seem to show that brain-work is *per se* favorable to health and longevity. This is, however, by no means the only cause of this increase of longevity. We should take into consideration various other causes that are associated with and flow from increased mental activity of nations. Among these may be mentioned:

1. *Increased Comforts.*—Civilization gives us better food and drink, better homes and clothing, better surroundings every way than barbarism. Fruits and grains have improved in quality, and animals used as food have increased in size—and withal there has been great progress in the art of cookery.

2. *Diminished hours of labor, with better reward.*—Excessive muscular labor is more injurious than excessive mental labor, especially when it is ill paid and pursued under depressing circumstances. Machines have benefitted hard labor some.

3. *Improved Morals.*—Intemperance and licentiousness, the two great foes of the human race, have both diminished with the advance of civilization. In the middle ages, and even half a century since, licentiousness was not a disgrace even in the highest circles of England.

4. *Advance of Sanitary and Medical Science.*—The types of disease have changed, and some forms have passed away. The plague which in the seventeenth century destroyed thousands every year, and the "black death," which destroyed 25,000 in 1348 and 1349, are now unknown. Small-pox is but 1-10, measles

1-5, fevers 1-4, and consumption a little more than 1-2 as fatal now as in the seventeenth century. Nervous diseases have lately increased in severity and variety, but they are much less fatal than fevers and epidemics. Mortality of infants, which was once fearful, has diminished an enormous per cent. Meanwhile hygiene and medical science, in all its branches, has rapidly advanced, and every weak witness greater success in our methods of preventing and treating disease.

For "The Friend."

After referring to the many snares and temptations with which the youth are surrounded, and the hurtful tendency of an indulgence in them, David Hall says: "There is another snare, very prevalent in these our sorrowful times, especially of late, viz: the contracting of marriages with persons of different persuasion in point of religion, whereby many have laid a foundation for lasting repentance; divine providence signally manifesting His displeasure against such unhappy and disagreeable matches. For in their very nature and tendency, they bring trouble into society; sorrow upon good parents; anguish upon the party immediately concerned; much confusion, manifold perplexities and inconveniences into families; and lastly, an almost irreparable loss to their offspring, in relation to their religious education. Therefore, dearly beloved, duly observe our dear Lord's excellent precept, 'Watch and pray that ye enter not into temptation.' And that of the wise man, 'If sinners entice thee, consent thou not,' for as saith the apostle, 'evil communications corrupt good manners.' Moreover, ye fathers, be good way-marks to the young people; and ye, beloved young people, be good patterns to the children; and ye, tender children, who have in some degree happily known the Father, be ye good examples in word and action to those dear little babes and lambs in the flock, who as yet have known little or nothing of the touches of the love of the Father in their hearts; that so each superior and more experienced rank may say to the inferior, 'follow ye us as we follow Christ.'"

An Arctic Aurora.

Among the few pleasures which reward the traveller for the hardships and dangers of life in the far north, there are none which are brighter or longer remembered than the magnificent auroral displays which occasionally illumine the darkness of the long polar night, and light up with a celestial glory the whole blue vault of heaven. No other natural phenomenon is so grand, so mysterious, so terrible in its unearthly splendor as this. On the 26th of February, [1866], while we were yet all living at Anadrysk, there occurred one of the grandest displays of the Arctic Aurora which had been observed there for more than fifty years, and which exhibited such unusual and extraordinary brilliancy that even the natives were astonished. It was a cold, dark, but clear winter's night, and the sky in the earlier part of the evening showed no signs of the magnificent illumination which was already being prepared. A few streamers wavered now and then in the North, and a faint radiance like that of the rising moon, shone above the dark belt of shrubbery which bordered the river; but this was a common occurrence, and it excited no notice or remark. Late in

the evening *** as we emerged into the open air, there burst suddenly upon our startled eyes the grandest exhibition of vivid dazzling light and color of which the mind can conceive. The whole universe seemed to be on fire. A broad arch of brilliant prismatic colors spanned the heavens from east to west like a gigantic rainbow, with a long fringe of crimson and yellow streamers stretching up from its convex edge to the very zenith. At short intervals of one or two seconds, wide, luminous bands, parallel with the arch, rose suddenly out of the northern horizon and swept with a swift, steady majesty across the whole heavens, like long breakers of phosphorescent light rolling in from some limitless ocean of space.

Every portion of the vast arch was momentarily wavering, trembling, and changing color, and the brilliant streamers which fringed its edge swept back and forth in great curves, like the fiery sword of the angel at the gate of Eden. In a moment the vast auroral rainbow, with all its wavering streamers, began to move slowly up toward the zenith, and a second arch of equal brilliancy formed directly under it, shooting up another long serried line of slender colored lances toward the North star. ** Every instant the display increased in unearthly grandeur. The luminous bands revolved swiftly, like the spokes of a great wheel of light across the heavens; the streamers hurried back and forth with swift, tremulous motion from the end of the arches to the centre, and now and then a great wave of crimson would surge up from the north and fairly deluge the whole sky with color, tinging the white snowy earth far and wide with its rosy reflection. But as the words of the prophecy, "And the heavens shall be turned into blood" formed themselves upon my lips, the crimson suddenly vanished, and a lighting flash of vivid orange startled us with its wide, all-pervading glare, which extended even to the southern horizon, as if the whole volume of the atmosphere had suddenly taken fire. I even held my breath for a moment, as I listened for the tremendous crash of thunder which it seemed to me must follow this sudden burst of vivid light; but in heaven or earth there was not a sound to break the calm silence of night, save the hastily-muttered prayers of the frightened native at my side, as he crossed himself and knecled. *** The rapid alternations of crimson, blue, green, and yellow in the sky were reflected so vividly from the white surface of the snow, that the whole world seemed now steeped in blood, and now quivering in an atmosphere of pale, ghastly green, through which shone the unspeakable glories of the mighty crimson and yellow arches. But the end was not yet. As we watched with upturned faces the swift ebb and flow of these great celestial tides of colored light, the last seal of the glorious revelation was suddenly broken, and both arches were simultaneously shivered into a thousand parallel perpendicular bars, every one of which displayed in regular order, from top to bottom, the seven primary colors of the solar spectrum. From horizon to horizon there now stretched two vast curving bridges of colored bars, across which we almost expected to see, passing and repassing, the bright inhabitants of another world. Amid cries of astonishment and exclamations of "God have mercy" from the startled natives, these innumerable bars began to move, with a swift, dancing motion,

back and forth along the whole extent of both arches, passing each other from side to side with such bewildering rapidity, that the eye was lost in the attempt to follow them. The whole concave of heaven seemed transformed into one great revolving kaleidoscope of shattered rainbows. Never had I even dreamed of such an aurora as *this*, and I am not ashamed to confess that its magnificence at that moment overawed and frightened me. The whole sky, from zenith to horizon, was "one mottled mantling sea of color and fire, crimson and purple, and scarlet and green, for which there are no words in language, and no ideas in the mind—things which can only be conceived while they are visible." The "signs and portents" in the heavens were grand enough to herald the destruction of a world; flashes of rich quivering color, covering half the sky for an instant, and then vanishing like summer lightning; brilliant green streamers shooting swiftly but silently up across the zenith; thousands of variegated bars sweeping past each other in two magnificent arches, and great luminous waves rolling on from the inter-planetary spaces, and breaking in long lines of radiant glory upon the shallow atmosphere of a darkened world. With the separation of the two arches into component bars it reached its utmost magnificence, and from that time its supernatural beauty slowly but steadily faded. The first arch broke up, and soon after it the second; the flashes of color appeared less and less frequently; the luminous bands ceased to revolve across the zenith; and in an hour nothing remained on the dark, starry heavens to remind us of the aurora, except a few faint Magellan clouds of luminous vapor.

A Moment at a time.—It is said by a celebrated modern writer, "take care of the minutes, and the hours will take care of themselves." This is an admirable hint; and might be very seasonably recollected when we begin to be "weary in well doing" from the thought of having a great deal to do. The present is all we have to manage; the past is irrecoverable; the future is uncertain; nor is it fair to burden one moment with the weight of the next. Sufficient unto the moment is the trouble thereof. If we had to walk a hundred miles, we still need set but one step at a time, and this process continued, would infallibly bring us to our journey's end. Fatigue generally begins and is always increased by calculating in a minute the exertions of hours.

Thus, in looking forward to future life, let us recollect that we have not to sustain all its toil, to endure all its sufferings, or encounter all its crosses at once. One moment comes laden with its own little burden, then flies, and is succeeded by another no heavier than the last; if one could be sustained, so can another, and another.

Even in looking forward to a single day, the spirit may sometimes faint from an anticipation of all the duties, the labors, the trials to temper and patience that may be expected. Now this is unjustly laying the burden of many thousand moments upon one. Let any one resolve to do right now, leaving then to do as it can, and if he were to live to the age of Methuselah, he would never err. But the common error is, to resolve to act right to-morrow or next time, but now, just this once, we must go on the same as ever.

It seems easier to do right to-morrow than

to-day, merely because we forget that what to-morrow comes, then will be now. Thus it passes, with many, in resolutions for the future which the present never fulfils.

It is not thus with those, who "by patient continuance in well doing, seek for glory, honor, and immortality;" day by day, minute by minute, they execute; the appointed task to which the requisite measure of time and strength is proportioned; and thus, having worked while it was called day, they at length rest from their labors, and their "works follow them."

Let us then, "whatever our hands find do, do it with all our might, recollecting that now is the proper and the accepted time." *Jane Taylor.*

"Fear ye not, stand still, and see the salvation of the Lord."

Should darkness o'er thy path be cast,
And day be sunless as the night,
Then do not faintly tell thou hast,
At even time it shall be light.

What though it seems so late deferred,
The vision will not always stay,
Nor is the prayer he calls unheeded
Of him who still goes on to pray.

Art thou oppressed by arm of power,
Loaded with insult and with wrong?
Remember, in that trust, how true
To whom the vengeance does belong.

"Repent," says the Lord, "is mine;
I will avenge, and I repay;"
Then to his hand let cause resign,
Whose time is best as well as way.

What though ungodly men are found
In troops against thee to continue;
If in his cause thy heart be sound
The battle is the Lord's, not thine.

Does envy seek, with slanderous tongue,
To wound thy peace, thy name to blot?
Remember, he that trusts the Lord,
That God his servant has forgot.

Through Him who makes evens to speak,
And *works* by undiscovered ways,
The truth shall yet as morning break,
Thy judgment as the noontide blaze.

What foe shall much disturb his peace
Whose soul in patience is possessed?
When will his hope and comfort cease
Which comes by quietness and rest?

Thus where command is given to wait,
A promise ever seal'd the word,
And they who stand shall, soon or late,
See the salvation of the Lord.

For "The Friend"

"Old Books and Old Worthies revived."

A late article having contained some account of an ancient Bible, and of a mart supposed to have belonged to the same family as Richard Smith of Bramham, it has been thought some additional particulars on the heads might be interesting to the readers of "The Friend." The book is what is called by Dr. Krauth and bibliographers generally the "Rogers-Tyndale" or Tyndale-Rogers Bible, from its being the fruit of the combined labors, in translating, of the martyrs Tyndal, and Rogers. "All the editor says an excellent authority, "of the Rogers Tyndale are very rare." Ours is the edit of Raynalde and Hyll, a reprint in 1549, the original of 1537. The following gene description is taken partly from Lownd Bibliographical Manual, and partly from book itself.

It is printed throughout in the Gothic

letter type, and though Lowndes finds with the type and printing, to me it is in the language of a friend, "clear and throughout; well printed." The title, and in red and black ink, reads:—

By Beble, which is all the Holy Scriptures in which are contained the Olde and New Testament, truly and purely translated into English by Thomas Matthewe. (This name of Thomas Matthewe, shall presently see, was a feigned one.) now Imprinted in the yeare of our 1549."

aye, I. Hearken to, ye heavens, and earth, give care; For the Lord Speaketh. Printed at London by Thomas Raynald and William Hyll, dwelling in Paule's church-yard."

It is surrounded by a wood cut in nine parts of them scripture scenes, and the representing the king, (Henry VIII), turning the Bible to the care of priests before. Copious "prologues" to the Reader, and notes, are interspersed, and at the beginning of the Bible the dates of original print are repeated at length. "Pa. reads, "So that thou shalt not neede to be awed for any bygges by nyghte, nor for woe that flyeth by daye." From this text it is sometimes called the "Bug-bible. Jer. viii. latter part, is thus given: "The harvest is gone, the summer hath an end, and we are not helped. I am sore vexed, of the hurte of my people; I am heavily grieved, for there is no more Treake at hand, and there is no physician yt. can heale the hurte of my people."

John Tindal, (commonly called Tyndale, and signed his name as above), furnished the translation of the New Testament in this and the old Miles Coverdale supplied the books of Moses. The rest of the work was chiefly that of John Rogers, a "protomartyr" of Queen Mary's reign. Translators concealed their identity by the pseudonym of Thomas Matthewe, to be seen by the following extracts from "Monuments of the Church." Of Tindal, that he was bred up from a child at Magdalen College, Oxford University, and had great learning in the dead languages as well in Scripture. Embracing reformed from the writings of Erasmus, he condescended in disputations the most prominent priests of the day, and awoke such enmity among them that his life was in danger from their machinations. After being in vain from a powerful patron that position which was necessary to him in his work of translating the Bible, he fled to Holland, and thence passed into Saxony, "he had conference with Luther and learned men in those quarters" on his design. He then returned to the Netherlands and established himself at Antwerp, he finished and printed, in 1527, his Testament in English, which was soon translated in his native country. He next translated the five books of Moses, but on attempting to carry his work by sea to Ham- burg to confer with Miles or "Sir Myles" Sale, then dwelling in Germany, a learned and zealous Reformer, who had formerly an Augustine friar of the monastery church-warden near Bamsted, Essex, not far from London, he suffered shipwreck and the loss of his manuscript. Coverdale and he set on at once set about making a new

translation of the Pentateuch, which they finished in 1529, at the house of Dame Margaret Van Emmerson in Hamburg. Tindal then returned to Antwerp for the better convenience of disseminating his translations, and his books having been condemned by the Roman authorities, he was in 1536 seized by emissaries of the German Emperor's government, and suffered death by fire at Filford, near Antwerp. His last words were, "Lord, open the king of England's eyes."

John Rogers, like Tindal, was brought up in an University, that of Cambridge. He was "chosen by the Merchants Adventurers to be their Chaplain at Antwerp in Brabant, whom he served to their good contentation many years. It chanced him there to fall in company with that worthy servant and minister of God, William Tindal, and with Miles Coverdale, which both for the hatred they bare to Popish superstition and idolatry, and love to true religion, had forsaken their native country. In conferring with them on the Scriptures, he came to great knowledge in the Gospel of God, insomuch that he cast off the heavy yoke of Popery, perceiving it to be impure and filthy idolatry, and joynd himself with them two in that painful and most profitable labor of translating the Bible into the English tongue, which is Intituled 'The Translation of Thomas Matthewe.'"

The combined translation, under the pseudonym of Matthewe, was printed as we have seen in 1537, and reprinted by Raynald and Hyll, in Rogers' lifetime, in 1549.

Rogers having "cast off the yoke" of Popery now felt himself at liberty to disregard the Popish vow of celibacy, "thinking an ill vow well broken." He accordingly married, and soon after went to Wittenberg in Saxony, where he conferred with Luther." Having acquired the German or "High Dutch" language, he was placed "in charge of a congregation," and continued to preach there many years. On the "banishment of Popery" by Edward the Sixth, he returned to England and was made "Prebend of St. Paul's Cathedral." On the accession of Queen Mary, he was examined before the "bloody Bishop" Bonner, (or Boner as Fox spells the name), on 1st mo. 22d, 1555, condemned, and burnt 2d mo. 4th, same year. In the interim before his execution, he was cruelly refused intercourse with his family, and hence probably the popular ascription to him of the touching "Exhortation to his children" which Fox (who, writing in the contiguous period of Elizabeth, was in a position to know), enrolls among the poems of Robert Smith, his fellow-sufferer in the same year, 1555. Rogers was the first, or proto-martyr under Queen Mary.

Intimately associated with the men who in England and Germany were thus busy in the work of Reformation and the publication of the Scriptures in the vernacular, we find Simon Smith the father of Robert and Richard Smith. He was a "Master of Arts of Gunwell Hall, Cambridge University," a priest, and curate of Hadham, Hertfordshire, twenty-eight miles from London, under the patronage thereof, Thomas Patmore. From the examination before John Stokesley, then Bishop of London, of this Thomas Patmore in 1530, it appears that he, (Patmore), "went to Wittenberg and conferred with Luther, Oecolampadius, Pomeranus, Melancthon," &c., and with "the Englishmen abiding there;" (doubtless Rogers and Coverdale). On his return he

officiated at the marriage of his Curate Simon Smith, with Joan Bendor. For this breach of Popish discipline he was long afterwards arrested and examined before Stokesley, and through weakness, as Fox says, giving way to fear of martyrdom, admitted his "errors," but was nevertheless contumacious to perpetual imprisonment in the Lollard's Tower. He was however released by Edward Sixth on his accession, and the weakness of abjuration being condoned, was restored to his benefice.

(To be continued.)

[The following article taken from "The Independent" has been sent for insertion in The Friend, and although there are a few expressions in it which we cannot altogether approve, yet it contains so much that is valuable, we give it to our readers without alteration.]—Eus.

Home Influences.

A great deal is said and done in these times with a view to improve the efficiency of our Sunday-Schools. All such efforts are praiseworthy and a blessing to the church at large. But in the manifestation of this commendable interest for the young, one thing seems to be too much ignored, and that is parental influence in Christian homes. For one, I am not unmindful of the difficulties in the way of the successful spiritual training of children, nor am I ignorant that the best efforts of pious parents seem sometimes in vain. So it is not in a spirit of fault-finding, but of love, that I plead with those whose relations to the young are the most intimate and endearing.

Making all allowance for the natural perversity of the human heart and the hindrances to religious culture, we do discredit to the blessed Gospel if we think that all is done that can be in bringing up children in the nurture and admonition of the Lord. In the first place, it must be remembered that the child's nature is open to moral influences, even before it can distinguish right from wrong. Words, gestures, looks, the very spirit of the household have due weight on its plastic mind, as the sunlight and dews affect the growth of tender vegetation. All the time that he seems incapable of receiving instruction of a spiritual character he is unconsciously affected by the impressions of realities about him, which inevitably go to shape his life. He drinks in the influences of home as the plant drinks nourishment from the sun and soil. Those looks, that language, that quality of character that is nearest and most predominant go with certain aim to his soul. And so it comes that many who do not intend to harm their children, who wish, indeed, to throw around them, after awhile, the safeguards of religion, are educating them when they are most plastic, most unconsciously influenced, in a manner that may be fatal to their virtuous development. A portion of their own harshness, fretfulness, impatience of the yoke of Christ, irreflexions and repinings go off, as it were, into the unformed yet open nature of the child. If he breathes the air of domestic infelicity, of vulgarity, of untruthfulness, of irreligiousness of any kind, he will get to some extent this quality of soul. So rare is inattention to the child, in the erroneous impression that he is receiving no injury, is often the occasion of serious if not incurable harm.

But, further still, when the understanding is sufficiently developed to distinguish right

and wrong, in many cases the good intentions of parents are frustrated by their display of a disposition and temper contrary to the simplicity of the Gospel. The first conceptions of goodness that children have are those of character. They cannot reason on abstract truth, cannot separate qualities from objects with which they are associated, cannot perceive the force of dogmatic teaching, without the illustration of personal traits. The meaning of redemption, the nature of God, the elements of Heaven are vague and obscure to them, unless connected, in some way, with what is apparent to the senses. So, besides oral instruction, what is essential to promoting their moral culture and for inspiring their youthful interest in divine things is the sight and presence of *goodness*—holiness, which, after all, is the chief treasure set forth for attainment in the glorious Gospel. They get, at first, their only correct idea of Heaven by an experience of that spirit of love in the household, which wraps them in its tender care. They begin to understand the character of the Heavenly Father by the providence, the kindness, the generosity, the steadfast witness of the earthly one. Unconsciously almost they reason on the deep things of the Christian life.

You, perchance, they know to be a member, and hence a representative of that church which you teach them Christ established, and into which you were baptized. Now, if you in the family, are habitually morose, fretful, luxurious; if they hear you day after day speak evil of your neighbour, grumble at your fortune, and expatiate on coveted place and riches; if they see that you are grudging toward the successful, untouched by the pathetic sorrows of the wretched, neglectful of prayer and the word of God, seeking most of all to get an advantage, and prizing what is vain and ephemeral as of great price, what must be their conception of that religion which is pressed upon them by teachers and ministers and which they suppose you illustrate? What confidence will they place in the Christian profession? What notions will they attach to the names of graces which they have a right to expect you to evince, from your connection with the Church of Christ? If religion does not make the household brighter; if it does not restrain the violent temper; if it does not express patience, sympathy, purity, charity; if, in a word, it does not impart something winning and attractive to character, will it be greatly commended in their esteem? And what can avail the most accurate exposition of Scripture, or the most earnest exhortations to duty? Whatever the verbal lesson may be, the child is receiving its *practical* illustrations from you. The abstract principle it may not be old enough to understand; but the *illustration* is clear and convincing in the demonstration of a life. It comes too with all the force of a parent or instructor's age, experience, authority. It is the most impressive of lessons. And, O, how many, it is to be feared, teach one thing with their lips and another in the fearful impressiveness of their lives—neutralizing the most benign precepts and misinterpreting the blessed Gospel by their severity or sensuality, till the child, perchance, ceases to listen to instruction, and, confused and discouraged, imagines there is no profit in the Divine service, or that it is all a sham.

But another cause of detriment to the

spiritual nurture of the young may be mentioned. There are many worthy Christian people, whose apprehension of the largeness and scope of the Gospel is small and partial. To them religion consists chiefly in a round of tedious devotional exercises; in hard, dogmatic views; and in an austere way of regarding human life. Salvation to them is wholly in another state of being. Christianity, as they represent it, is a thing of burdens and mortifications. It throws no glory into life; lifts nothing up into fadeless beauty and immortal joy; offers little that is attractive and inspiring to the heart.

In such an atmosphere God seems not Father, but a being awfully regal, arbitrary, and terrible. His service is associated with something dreary, depressing and grievous. Now let the child grow up with the feeling that its innocent enjoyment in what is pleasant is offensive to the Most High; that God is not very gracious to the little ones; that a long period must elapse, during which the flesh must have mastery over the spirit, before the Saviour will be gracious; and that his discipleship closes the door upon all that is interesting on earth—and it need be no matter of wonder if he blindly fight against God, and run to ways of disobedience.

The children have a right to all the blessings of redemption. The Holy Spirit is given to them; and they, in their childlike way, can be as acceptable in the divine sight as those of maturer years. Let them be taught to feel, with their unfolding capacities, that the good earthly father dimly shows the perfect goodness of the Heavenly Father; that sweeter and more precious than the mother's love is the love of Jesus, who died for them; that all within them which is affectionate and truthful and appreciative of what is pure and Holy, is of the Blessed Spirit, and that they are helped and guided aright as in the strength of their loving Lord which they strive to be like Him.

THE FRIEND.

FOURTH MONTH 29, 1871.

PHILADELPHIA YEARLY MEETING.

This Yearly Meeting of Friends met in the usual place on Second-day, the 17th inst.; its Meeting of Ministers and Elders having had its first sitting on the 15th inst. The meeting was as large as at any time for many years past, there being a large number of young people in attendance. An impressive solemnity covered the assembly soon after it had convened, under which, after sitting some time, the Clerk opened the meeting.

Of the representatives from the eight Quarterly Meetings, six were absent; prevented attending the meeting by sickness of themselves or in their families.

The Clerk having proposed reading the Minutes of the Meeting for Sufferings—the business usually attended to in that sitting—a member asked that the certificates of Isaac Robson, from England, be first read, and several expressing a similar desire to hear them, and others objecting, the propriety of reading such documents in the Yearly Meeting, under present circumstances, was calmly and freely discussed throughout the whole morning sitting. The ground taken by those in favor of the reading was, that the discipline

of the Yearly Meeting required it; that it due to the meetings granting and to individuals holding such credentials, to them read; and that the failure of the sup meeting to comply with the letter of the discipline was a bad example to its subordinate branches and their individual members. The other hand it was alleged that the Yearly Meeting had practically suspended the exercise of the discipline that requires the reading of such documents, by not reading them for the last ten years; that if the credentials of Friends present were read, the practice of reading all such papers must follow, and were those sometimes coming among us, could not properly be so far recognized ministers in unity with Friends; and that the present State of the Society it was to keep to the course pursued for the last years. Those differing in sentiment expressed themselves generally with moderation, seemed more desirous to preserve unity among the members than to insist on carrying out their own views. Two or three indulgent remarks disparaging to the standing of the Yearly Meeting. It is easy to see and to feel that this state of things could not exist in a healthy condition of the Society, and that causes great distress to the members. It must not be forgotten or ignored, that difficulties have their origin in causes which Philadelphia Yearly Meeting is not accountable, but which it clearly detected pointed out years ago; earnestly entreated London Yearly Meeting, whence they originated, to arrest their operation while it was readily done, and predicting that just evils as are now patent throughout the Society, would ensue, were they allowed to out their legitimate effects. Philadelphia Yearly Meeting is suffering from the causes which she has striven earnestly but vainly to correct, and the attempts to fasten blame on her because of the troubles produced by those causes, is futile and ungenerous. Some other Yearly Meetings their effect seen in departures from the doctrines and testimonies of Friends. The certificates not read, and the meeting adjourned after reading of a minute directing the Representatives to convene at the rise of the meeting and to agree on Friends to serve the meeting as clerk and assistant clerk for the ensuing year.

On the opening of the meeting in the morning, report was made from the Representatives proposing Joseph Scattergood for Clerk and Clarkson Sheppard for assistant. Friend reporting saying, he had rarely if known a more general expression of sympathy among the representatives with such a nomination. An appellant from the judgment a Monthly Meeting, confirmed by a Quarterly Meeting, disowning him for having subscribed to the rite of water baptism, and part of bread and wine as the Lord's supper invited into the meeting, and a com appointed to hear and decide the case.

The minutes of the Meeting for Sufferings for the past year were read, their proceeds approved, and they encouraged to continue to seek for divine wisdom and strength to do them rightly to perform their various duties especially in the support and spread of doctrines and testimonies of the gospel as given by Friends. The report of the Book Committee, contained in those minutes, was especially interesting, showing an increasing

for the approved writings of Friends, by among our own members, but among professors, and that a larger number heretofore had been sold at the Book or gratuitously distributed. The report is a considerable expression of interest in the work, and the desire that Friends might live to its importance, and embrace the opportunities thus to disseminate the truths and testimonies of the gospels as every day of the Society. Mention was made of publication of a cheap edition of "Barabbas," and of "True Christian Baptism and Communion," by I. Phipps.

The committee was appointed to settle the treasurer's account for the past year, and to see the sum to be raised for the use of the meeting during the present. After having read a Memorial respecting our late valued member David Cope, a minister, was read.

Third-day the whole of the morning and a great part of that in the afternoon occupied with the consideration of the reports of the subordinate meetings and members exhibited in the answers to the queries.

During this engagement much business was covered the assembly, and many resolutions were passed. The members spoke weightily and pertinently to the important subjects presented for consideration. There was evident a lively interest in the concern for the right ordering of the affairs of the church, and for the preservation of the members in a life and conversation consistent with the profession they make of the world.

At this was finished, a proposition from members of Rahway and Plainfield Meetings, to be joined to Westbury Quarterly Meeting, and of New York Yearly Meeting, and of Burlington Quarterly Meeting, was before the meeting, and after some time, was referred to a committee composed of three out of each Quarterly Meeting, who more deliberately examined and considered the committee to report when presented to the meeting.

At the morning sitting of Fourth-day, the reports sent up by the respective Quarterly Meetings relative to the use of spirituous liquors as a drink, were first read; and that the members of four Quarterly Meetings and those of eight Monthly Meetings, and the other Quarterly Meetings, were clear of partaking of this dangerous beverage. In thirteen Monthly Meetings there were forty-six individuals who, during the past year had used spirituous liquor as a beverage, and two had given it to others. The subject took strong hold of the minds of the members, and much was said to incite Friends to abstain from and affectionate labor with those who are not yet complied with the earnest exhortation of the Yearly Meeting, that no members should tamper with this pernicious practice, or bring reproach upon our Society by indulging in its use, however small.

The Monthly Meetings were advised to appoint committees early, in order that Christian labor might be extended throughout the year, if necessary, to persuade the members of this concern to abstain altogether from a sensual gratification that can

do them no good, and may result in great loss and degradation.

From the reports on School Education it appeared there are 1067 children of suitable age to go to school within the limits of the Yearly Meeting. Of these 747 have been attending schools taught by members of our religious Society, and generally under the oversight of committees of Friends. Of the 293 who are receiving education from others than members, 204 are at the Public District Schools. Twenty-one, from various causes, have not been at school during the past year, and of six no report is made. A strong desire was manifested that, as much as possible, Friends should place their children in schools under the care of teachers in membership with us, and see that their principles and morals are properly guarded. The subordinate meetings were directed to make the usual inquiry and forward reports of the number of children suitable to go to school, and how they are disposed of in this respect.

In the afternoon an highly interesting report from the committee having charge of the civilization and improvement of the tribe of the Indians, which has long been under the care of this Yearly Meeting, was read, showing the continued efforts of the committee to assist the objects of their concern in various ways. The Boarding School at Tunessaugus has been kept in active operation, from twenty to twenty-three children having received education therein during the past year. Improvements have been made in the buildings on the farm, adding to the comfort and convenience of those occupying them. An effort has been made by the committee to secure to the descendants of Corn Planter a tract of land, formerly belonging to him, in the State of Pennsylvania, by inducing them to petition the Legislature to pass an Act dividing it among them, and providing that it shall not be aliened or devised to others than the descendants of that celebrated Chief, or some other of the members of the Seneca nation. There are now more than twenty schools on the Reservations, nine of which were conducted by Indians during the past year, and 1026 children were taught in the schools, the daily average in attendance being 551. Most of these schools receive aid from the State of New York. There was much interest manifested in this benevolent concern, and the committee was encouraged to persevere in their labors to assist and advise these poor natives, and to endeavour to bring them under the influence of Christian civilization. The annual report of the committee having the oversight of the Boarding School at Westtown represented that institution to be in a favorable condition. The average number of pupils during the two sessions in the past year had been two hundred, and although the average cost of each pupil was nearly twenty dollars more than the annual charge for board and tuition, the balance in favor of the Institution was \$3,132.74. The dairy barn has been completed by the erection of ample sheds around the yard: the whole expense being \$6,723.16, all, but a balance of \$91.72, having been paid by voluntary contributions. The committee request the co-operation of parents and guardians sending children to the school, in their endeavours to maintain the testimonies of the Society to plainness of speech, behaviour and apparel, and in carrying out the concern of the Yearly Meeting to

educate the children in a manner consistent with the profession we make.

This report and that of the Indian Committee were directed to be published with the extracts.

Meetings for Divine worship were held on Fifth-day morning. In the afternoon sitting the report of the committee on the treasurer's account was read and approved. Some unsettled business having been produced in the afternoon sittings by several Friends leaving the meeting towards its close, in order to return to their homes by the public conveyances, the propriety of changing the times of meeting and adjourning had been repeatedly spoken of, and it was now concluded to refer the subject to the consideration of a joint committee of men and women Friends, to report their judgment thereon next year.

After a season of solemn silence the meeting concluded; to meet again at the usual time and place next year.

Although the Yearly Meeting was not a time of abounding, and the way did not open for entering on any new measures for the edification of the subordinate meetings and members, or for the promotion of the cause of Truth, yet there were seasons when the blessed Head of the church condescended to manifest his presence in the midst, warming the hearts of many with gratitude for the extension of his preserving power, and bowing their spirits under religious exercise for their own right-keeping, and for the removal of those things which obstruct the prevalence of love and unity throughout the Society. We believe it was felt that the Lord alone can work deliverance for his people, heal all breaches, and restore right paths to dwell in.

SUMMARY OF EVENTS.

FOREIGN.—The contest between the government established by the French Assembly and that of the Paris Communists continues without any indications of an early termination. In Paris, notwithstanding much anarchy and disorder, there seems to be enough concert of action to frustrate all the hostile attempts of the government forces. In a report made by General Cluserot on the 21st inst., he claims to have repulsed the Versailles army at all points. Other accounts declare the fighting was murderous, and say the village of Courcelles, on the right bank of the Seine, near Neuilly, is filled with wounded. On the 22d an armistice was concluded for the burial of the dead, and to allow the inhabitants of Neuilly, Clichy, and other towns under bombardment, to remove to places of safety.

A Paris dispatch of the 22d says, the representatives of the commerce and industry of the capital are about to make a fresh attempt at conciliation, and will go to Versailles for that purpose. The army of the Communists are strongly fortifying the towns of Sevres, Courbevois, and Asnieres, and the Communists are erecting defensive works at Neuilly, Le Vallois, and Villers.

The Times correspondent at Versailles says, it is reported that the Prussians will surrender the forts still held by them to the Versailles troops on the 23d inst. Paris, it is believed, will shortly be isolated, and all communication with the surrounding country cut off. A company of aeronauts is being formed in Paris. All citizens under fifty-five years of age are obliged to serve in the Communal army.

General Ducrot has arrived at Versailles with twenty thousand men of the late Imperial army.

General Donbrowski, commander of the insurgent forces, has disappeared.

The municipal council of Havre has deputed three members to mediate between Paris and Versailles.

Some portions of Paris have suffered severely by the bombardment, and the Arc de Triumphe has been destroyed by it. The roads leading from Paris are filled with fugitives from the unhappy city. All the places of public worship are closed, and nearly all of them have been pillaged. The priests are made to make their appearance are insulted and thrown into prison.

The insurgents recently made large requisitions in the St. Denis Faubourg, arresting priests and plundering the churches. General von Pape sent troops to protect the people and recover the property. He also sent a message to the Committee, which they had suspended again, the forts in possession of the Germans would open fire. "My instructions," he said, "are to be very strict with the insurgents, and to give the government all facilities."

A Daily News special dispatch from Paris says the Commune has been advanced cash to the amount of 3,000,000 francs paid by the Bank of France for unsold bonds of the city of Paris.

Another attempt has been made at Marseilles to overthrow the government and introduce the Commune, but it has failed. The insurgents have been arrested, and a large quantity of ammunition which they had concealed in a ruined castle, has been seized.

The Austrian Reichstrath has, by a resolution, demanded of the government the introduction of the promised bill in relation to Church and State.

A Madrid dispatch of the 23d says, Deputy Castellar announces that he will introduce a motion in the Cortes demanding the dethronement of the King Amadeus. He had in a previous speech spoken in strong terms of condemnation of the House of Savoy.

The British Chancellor of the Exchequer stated, when introducing the annual budget in the House of Commons, that £2,000,000 more than £100,000,000 had millions in excess of the estimates. The cost of the army was half a million more than had been expected, but that of the civil service was nearly a million less. The total excess from all sources, it is expected, will not exceed £65,000,000, while the total of expenditure may reach £7,000,000. In order to supply the expected deficiency, he proposed to impose further duties on legacies and successions, a tax on matches, and to restore some taxes which had been removed. In a note on one of the items the ministry had a majority of 157. An excited discussion took place in the House of Commons on the bill to amend the game laws. It was rejected by a large majority. A resolution was introduced for the discontinuance of the telegraph and postal service on the first-day of the week. It was opposed by Gladstone on the ground that it would deprive a large number of people of employment. The declaration of Paris, in 1856, was intended to establish the principle that a neutral flag covers an enemy's goods, came up for discussion. Several members argued in favor of the withdrawal of England from the agreement, and advocated the resumption of the right of search. Gladstone and others insisted that the declaration was binding, and its revocation was not to be thought of.

Berlin dates to the 24th. The German Parliament has passed the loan bill. Bismarck stated in parliament that, although the French should pay the first instalment of the indemnity immediately, the forts north and east of Paris would not be evacuated until a final treaty of peace was concluded. The negotiations at Brussels made slow progress, the French trying to better the conditions, but Germany was inflexible. The Paris revolt entailed sacrifices on Germany, but she would not meddle with the internal affairs of France.

Verailles, 24th. The President Thiers has given a reception to the deputation from the Masonic lodges of Paris, who asked, on behalf of the people of the capital, for an armistice. In reply to their request, Thiers said that General L'Almirault had the power to grant a truce whenever it should become necessary for the Commune could never be recognized by the government.

London, 4th mo. 24th. Consols, 93. U. S. sixes of 1862, 90; 1867, 92; do. ten-forties, 89½.

Liverpool—Lombard, 7½ d. 7½ d.

UPPER HOUSE.—Both Houses of Congress finally adjourned on the 20th. The bill to restrain outrages in the Southern States and enforce the provisions of the Fourteenth amendment to the Constitution, finally passed both Houses. The Fourteenth amendment is in these words: "All persons born or naturalized in the United States and subject to the jurisdiction thereof, are citizens of the United States. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty or property, without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws."

The President, by proclamation, has convened the United States Senate in executive session to meet on the 10th of Fifth month.

The official returns and count of the Connecticut election show a poll of 94,950 votes, against 98,947 in 1869,

90,575 in 1869, and 87,413 in 1870. There were 17 scattering votes. English had 47,492, and Jewell 47,450; giving English, Democrat, 29 majority.

The interments in Philadelphia last week numbered 288. There were 43 deaths from consumption, 18 inflammation of the lungs, 14 marasmus, and 19 old age.

Over three thousand men are now employed in making the Northern Pacific Railroad, and the track is being laid at the rate of one mile per day.

The Government and the Commission have substantially agreed upon a settlement of all the disputed points, and as soon as a favorable response is received from the British government, the agreements will be reduced to treaty or convention form.

The subscriptions to the new 5 per cent loan of the United States amounted on the 20th to \$17,000,000. The Louisville dispatch of the 24th says: The crevasse which occurred in the levee of the Mississippi river at Bonnet Carro point, above New Orleans, some days ago, has been gradually increasing in extent until it is now entirely beyond control. It was last evening six hundred and fifty feet wide and eighteen feet deep.

A New Orleans dispatch says a continuous sheet of water extends from here to Lake Pontchartrain, and for many miles above and below. This disaster is great and remarkable, but is beyond the reach of remedy at present.

Markets, &c.—The following were the quotations on the 24th inst. New York—American gold, 1104 1/10; U. S. sixes, 1881, 116½; ditto, 5-20's, 1168, 112½; ditto, 10-40, 1091. Superfine flour, \$5.90 & \$6.20; finer brands, \$6.50 & \$10.50. White Michigan wheat, \$1.75; amber, \$1.80; No. 1 Chicago spring, \$1.35. State rye, \$1.20 & 1.32; ditto, 14½ cts. Oats, 10½ cts. Rye, \$1.20. Western mixed corn, 73 & 74 cts.; yellow, 75 cts.; southern white, 83 & 84 cts. Carolina rice, 81 & 91 cts. Havana sugar, 91 & 101 cts. Philadelphia—Cotton, 14½ & 15 cts. for uplands and New Orleans. Cuba sugar, 81 & 91 cts. Superfine flour, \$5.25 & \$5.75; finer brands, \$6 & \$12.75 & \$1.70. By \$1.05. Western mixed corn, 71 & 72 cts.; yellow, 74 cts. Ohio oats, 63 & 66 cts. Canada barley, \$1.18. Lard, 11½ & 12 cts. Clover-seed, 9½ & 10 cts. Timothy, 55 & 56. Flaxseed, 24½. The receipts of beef cattle at the Avenue Drovers' market, 2185 head of cow and calves, 1200. Hogs to good, 1200. And commo 4 & 6 cts. per lb. gross. About 10,000 sheep sold at 74 & 81 cts. for woolled, and 5 & 6½ cts. for clipped. Hogs sold at \$9 & \$9.75 per 100 lbs. net for corn fed. St. Louis.—No. 3 spring wheat, \$1.42; medium to choice, \$1.45 & \$1.57. Mixed corn, 48 & 50 cts. Oats, 49 & 51 cts. Rye, \$1.20. Bye, \$1.20. Lard, 11 & 11½ cts. Chicago—Spring extra flour, \$6.25 & \$6.75. Spring wheat, \$1.25. No. 2 corn, 52 cts. Oats, 47½ cts. Rye, 82 cts. Barley, 87½ cts. Lard, 104 cts. Cincinnati.—Middling cotton, 14 cts. Red wheat, \$1.33 & \$1.35. Corn, 57 cts. Oats, 54 & 56 cts.

WESTWOOD BOARDING SCHOOL.

The Summer Session of the School will commence on Sunday, the 1st of Fifth month.

Pupils who have been regularly entered and who go by the cars from Philadelphia, can obtain tickets at the depot of the West Chester and Philadelphia Railroad, commencing on the 1st of Fifth month. Pupils arriving by their names to the Ticket-agent there, who is furnished with a list of the pupils for that purpose. In such case the passage, including the stage fare from the Railroad Station, will be charged at the School, to be paid for with the other incidental charges at the close of the term. Baggage will be at the rate of the full part of the Station on Second and Third days, the 1st and 2d of Fifth month, to meet the trains that leave Philadelphia at 7:25 and 10 A. M., and 2:30 P. M.

Baggage may be left either at Thirty-first and Chestnut streets or at No. 5 North 18th St. If left at the latter place, it will be under the charge of Hibberd Alexander & Son, who will convey it thence to Thirty-first and Chestnut at a charge of 10 cents per trunk, to be paid to them. Those who prefer can have their baggage sent for to any place in the built-up part of the City, by sending word to the day previous (through the post-office or otherwise) to H. Alexander & Son, No. 5 North 18th St. His charge in such case for taking baggage to Thirty-first and Chestnut streets, will be 25 cents per trunk. For the same charge he will also collect for the trunk, if preferred. Trunks and boxes are left at his office No. 5 North Eighteenth street. Baggage put under his care, if properly marked, will not require any attention from the owners, either at the West Philadelphia depot, or at the Street Road Station, but will be forwarded direct to the School. It may not

always go on the same train as the owner, but on the same day, provided the notice to H. Al & Son reaches them in time.

During the Session, passengers for the Sch met at the Street Road Station, on the arrival of the first train from the City, every day except Fin and small packages for the pupils, if left at 11 o'clock. School Street will be closed for every Sixth-day at 12 o'clock, and the expense in their hills.

Fourth month 21st, 1871.

FRIENDS' SELECT SCHOOL.

Wanted, a well qualified man Friend as the Boys' School on Cherry street.

Apply to the Managers of the above School, at James Whittall, 410 Race St. James Smalley, 47 Market St. William Bidde, No. 15 South Seventh Geo. J. Scattergood, 413 Spruce Street.

FRIENDS' BOARDING SCHOOL FOR 13 CHILDREN, TUNESSASA, NEW YORK.

A suitable Friend and his wife are wanted to charge the school, and manage the Factory with it. Application may be made to Ebenezer Worth, Marshallton, Chester C. Thomas Wistar, Fox Chase P. O., Philadelphia Samuel Morris, Olney P. O., Joseph Scattergood, 413 Spruce Street, Geo. J.

DIED, 11th of Third month, 1871, WILLIS B. a member of Greenleaf's Monthly Meeting, of Ohio, aged nearly 75 years. After a short sickness peacefully passed away, we humbly trust, to a home with the just of all ages. He always upheld doctrines and testimonies promulgated by our Friends, and it grieved him that any who clasp the same should depart therefrom, though in a very small matter. For over forty-six years he had been the home of the poor and outcast, and the poor slave, who was feeling for his freedom door was open by day or night to help them away, to feed or clothe them, or point the way should take.

At the morning of the 14th of Fourth 1871, ELEANOR W., wife of Edward Maris, M. the 36th year of her age, a member of Phila Monthly Meeting. Being made sensible of the tions of Divine grace very early in life, desired in her heart that they might never depart. This was mercifully granted. And although she possessed of a humble mind and an amiable disposition and being diligent in attending to her varied duty who is faithful, was pleased to dispense from time, seasons of strippedness and baptism.

patiently abode under these dispensations, a still deeper humility and self-denial became apparent that when her last sickness came, she gave a that the work was done, and peace and quiet covering of her spirit. "To him that orde conversion aright will I show the salvation of God," on the 21st of Fourth month, 1871, at the residence of her mother, in Chester township, Co. Pa. SARAH A. MARIS, aged 43 years, a member of Chester Preparative Meeting.

On the evening of the 17th of Fourth at the residence of her parents, John and Mary TOWN, LAVINA, wife of Mahlon Bedell, in the 2d of her age, a member of Philadelphia Monthly as well Particular Meeting. From early life she meek and forgiving spirit, which endeared a large circle of friends. For a considerable time previous to her death she manifested a great desire her sins to have gone beforehand to judgment, and she was a member of the Philadelphia Monthly and her sufferings of a protracted illness with Christian resignation, and though it was a great trial up her dear companion, yet she was enabled to do all, and say "Thy will be done." She gave suitable advice to her relatives and friends, and she was prepared for the change, and to just of all generations.

WILLIAM H. PILE, PRINTER, No. 422 Wall Street.

SEVENTH-DAY, FIFTH MONTH 6, 1871.

NO. 37.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Five cents, when paid quarterly in advance, five cents.

For "The Friend"

The Ruins of Palenque.

A French traveller, Arthur Morelet, in a lately published translation of "Travels in Central America," gives us a description of some of these remarkable structures, some of which may be of general interest. Though more fully described by Stephens, Squier, and other previous explorers, it is comparatively seldom that the secluded region in which they stand is traversed by intelligent explorers whose observations are given to the public, and but little consequently continues to be known of the extent and purpose of those aboriginal constructions which these ruins form but a small portion. Already there were indications of the ruins being near at hand, but the density of the forest concealed them from our view. As we ascended a steep elevation covered with debris, and found ourselves at the portal of a vast edifice, which we had not even perceived a few seconds before. It was the principal front of the building called the Palace, a gallery of eighty yards in length, lined by massive pillars, opened before the walls, singularly enough, inclined inward each other from the architrave, forming an acute angle, the point of which, seven feet from the ground, was truncated by a final horizontal layer of stones. This original mode of construction, which discloses the principle of the arch, was not wanting in grandeur or beauty of design, although the architect could not understand the science of curves, and was not short, so to speak, on the verge of discovery. Firmly built on a pyramidal foundation twenty feet in height, this palace was surmounted by a quadrangular tower of five stories, distinguished from each other by many lines of cornice. With the first of its outlines, I was overcome by a feeling of surprise and admiration, which riveted me to the spot. There was no tradition connected with this monument; nothing to excite its origin! It was there, standing in the bosom of solitude, in all the majesty of many ages. From the entrance, where we stopped to survey it, we directed our eyes to an inner court full of gigantic idols, concealed by wild vegetation. The rest of the edifice was hidden in the depths of the

forest, and it was impossible to judge precisely of its size and shape. A short distance to the north of the palace, grouped on isolated eminences, are other monuments, equally remarkable for the solidity of their construction, the stern simplicity of their architecture, and the mystery which enshrouds their primitive purposes. Bushes and creeping plants spread over them a mantle of verdure; and enormous trees grow on them, exciting surprise that they are able to sustain the weight. The table land, besides, for a considerable distance around, is covered with ruins, which have been only partially explored.

It would be superfluous to give a description of these monuments of Palenque, above all, of the Palace, a vast parallelogram, very complicated in its arrangements, which covers an area of three thousand eight hundred and forty square yards.

There exist in several places in Yucatan substantial indications of early civilization quite as remarkable as those of Palenque. Why then have the latter been singled out as the only ones worthy the attention of the inquiring and scientific world? It is because the monuments of Yucatan are not enveloped in mystery, while those of Palenque appeal to the imagination, instead of to the remembrance. The imposing grandeur of these ruins; the majesty of the forests surrounding them; the almost sullen silence of the Indians, and the absence of all traditions, have induced a supposition that they are of great antiquity. It is known that this region was uninhabited as long ago as when Cortez traversed it, on his march against Honduras.

But admitting that in the year 1524, these ruins existed nearly in their present condition in the forests of Chiapa, it by no means follows that a fabulous age and origin should be ascribed to them. When first discovered, Yucatan was a flourishing and populous country, abounding with public edifices built of hewn stones laid in mortar, the extent and beauty of which greatly impressed the Spaniards. Besides the testimony of contemporaneous historians, we have that of the soldiers of Grijalva, who, in their enthusiastic admiration, called the country after their native land, which they fancied it resembled. These public edifices no longer exist; war, fanaticism, and political feuds have all combined to destroy them; but their remains are still scattered over the whole extent of the peninsula, from the island of Cozumel to the frontiers of Peten and Tabasco. They are evidently the remains of the same structures which arrested the attention of the conquerors, and the number of which, according to Herrera, 'was frightful to contemplate.' Now, it can easily be demonstrated, by comparing the ruins of Yucatan with those of Palenque, that the monuments of which they are the remains, were of the same general style of architecture, and constructed on the same principles, and in conformity with the same rules of art. The

plans of them all, their pyramidal bases, the absence of arched roofs, the use of stucco and painting in their decoration, the bas-reliefs sculptured on their walls, and the resemblance between their hieroglyphical symbols, indicate, even in their minutest details, a conformity of ideas, and taste, the expression of which may have varied according to the time and place, without, however, losing their primitive and eminently national character.

The analogy can no longer be denied between these ruins and the monuments of Mexico which tradition attributes to the Toltecs. These comparisons, which I have not space to prosecute in detail, show the action and preponderance of a common race over the whole territory lying between Cape Catoche and the Mexican table land.

The question of origin thus decided, we are next enabled to form some conjectures as to the antiquity of Palenque. We find that the Toltecs, in the middle of the seventh century, were in possession of Anahuac, where civilization peaceably developed itself. Later, about the year 1052, they abandoned this region and emigrated in a south-easterly direction—that is to say, into the provinces of Oaxaca and Chiapa. It is easy enough, therefore, to arrive at the conclusion that Palenque was founded at this time, and was consequently contemporaneous with *Mitla*.

If the undisputed analogy be considered which exists between the ancient monuments of Mexico and the ruins of Palenque, and between the latter and those of Yucatan, and if we consider also the geographical position of these ruins, spread over the line of Toltec emigration, and bearing evidences of antiquity the more marked, because they are less distant from the original point of departure—if all this be considered, it will doubtless be granted that these different works were from the hands of the same people who successively built Tula, Mitla, Palenque, Mayapan, and all the edifices now in ruins on this peninsula. The Indians of Yucatan, the Mayas, could have had no other ancestors. This presumption is strengthened by the ancient manners of the people, whose gentleness of character and whose religion remained long unchanged, even under the influence of the Aztecs. Moreover, the Toltec race is not extinct in Guatemala, where it constitutes, in the mountainous regions, a proud, but nevertheless, laborious and industrious population, which glories in its ancient origin.

The site of Palenque was admirably chosen. From those heights, now covered with impenetrable undergrowth, but which were formerly crowned with edifices of primitive magnificence, the eye traverses a plain comprising an infinite succession of forests and savannas, and extending far away to the distant shore of Catasaja. Its prince, from the tower of his palace, could overlook the whole city and its environs as far as the horizon. He could keep watch over the movements of an enemy, or

survey the course of public prosperity around him. Who can doubt that these solitudes once echoed with all the sounds of busy life; that these ruined temples once witnessed the pomps and ceremonies of sacrifices; that these steps were once crowded with fantastically-costumed warriors, such as we see portrayed on the bas-reliefs which have survived them, as well as by courtiers and by beauties, powerful and celebrated;—who can doubt, in a word, that these domains, which have now returned under the sway of nature, once pulsed with the living tide of an indigenous civilization? Let us beware, however, of an exaggerating enthusiasm, and let us not overestimate the skill of the architects of the monuments of Palenque! It is difficult to believe that a people, ignorant of the arts of analyzing sound, and reproducing it by writing, who did not understand the use of iron, who possessed neither flocks nor beasts of burden—it is difficult, I say, to believe that such a people could ever have attained a degree of culture at all comparable with modern civilization."

For "The Friend."

The Journal of William Evans.

(Continued from page 283.)

"Rebecca Jones, a minister and mother in Israel, who had paid a religious visit to Friends in England, and was highly esteemed by her contemporaries, for religious experience, a sound judgment and spiritual discernment, resided in this city, and her house was frequented by Ministers and Elders, and the younger members coming under the love of Truth, who sought the benefit of her counsel and instructive conversation. Her circumstances were limited—at one time she kept a school for the small children—and sold some books and articles of dress worn by females of plain habit. Among others who visited her compact habitation in Brooke's court, I was one who found the way there after being brought under religious concern. She treated her young friends in a kind and affable manner, and yet with christian dignity and gravity; sometimes entertaining them with anecdotes of her early religious life, or her travels, particularly in Europe; having in view the object of drawing them into a love for the Truth, and strengthening their desires and resolutions to persevere in the good way in which they had commenced walking. She told me that when quite a young woman, after the power of Truth had taken hold of her heart, and brought her to seek for those things which belong to the everlasting welfare of the immortal soul, she was introduced to the house of Daniel Stanton, then one of the principal ministers in this city. It was a place of resort for the young converts of that time, and deriving much help from the society of that valuable man, she then concluded, if she ever became a housekeeper, her house should be open to the visits of persons seeking after heavenly treasure. Her conclusions were realized to the comfort of many. In a little religious communication one evening to a young Friend and myself, she gave us the excellent advice which had been given to her in early experience, 'Keep near to Truth and the friends of Truth, and the Truth will keep you.' My uncle Thomas Scattergood's residence was a house of similar resort, where the mourner found a deeply sympathizing friend, and the young soldier one who had large ex-

perience in the trials of the spiritual warfare, and who seized the opportunity of cheering him on to victory. Sometimes when I have visited him and would silently sit without doing any thing to prompt him to conversation—for he passed much time in meditation and communion with the Lord—he would brighten up and enter into the subject which he knew, had taken hold of my mind, and relate portions of his own experience and travels—or of the openings of Truth in his mind, relative to the great cause of universal righteousness and the events passing in Christendom. He was not only remarkable for the gift of the ministry of the gospel of life and salvation, but also for the spirit of prophecy, with which he was at times clearly endowed, and under which he often foretold coming events; being a man who lived in the Spirit and walked in the Spirit, and to whom the Lord condescended to make known his secrets relating to the spiritual condition of others, and of his works among the children of men. I loved him much, and he manifested his love and interest for me, like a tender father in the Truth." pp. 18-20.

There are interesting notices, from time to time, of the decease and character of Friends to whom he was attached, and who kept their places in the church. A few are selected: on the 7th of 5th mo. 1846, he writes, "This morning I received intelligence of the death of that deep and extraordinarily gifted minister and servant of Christ, Ann Jones, of Stockport, England. She visited this country about the period of the separation in 1827-8, and was a sharp threshing instrument in the hand of the Lord, against the spirit of infidelity then making fearful inroads upon many under the name of Friends, who knew very little of their principles, or of the sanctifying power of Divine Grace, ruling in their hearts. Her controversy was with the leaders and principles, who were working in the dark, to draw away ignorant and unwary members, into the mazes of unbelief, and into contempt for the unyielding advocates of Christ's gospel, and his authority in the church. She was one of the most fearless soldiers in the Lamb's army, and by His wisdom and strength, was often instrumental in discomfiting the enemies of Christ; while she infused courage and firmness into the hearts of the little flock in different places, on whose shoulders rested with weight, the support of the principles and discipline of the Society. When she informed the Yearly Meeting of Ministers and Elders, that she felt liberated to return home, William Jackson of West Grove, expressed his unity with her, and said she had come amongst us in the same power and spirit, with which Samuel Fothergill visited this country, whom he had heard in the ministry.

"Thus one after another of the Lord's anointed servants are gathered to their everlasting rest in Christ; which is felt to be a great trial in this day of scattering and of rebellion against the law and the testimony; the number of valiant and unflinching soldiers seeming to be few in every place. But the Lord is strong and mighty and in his time will give the victory to his tribulated people, who hold fast their integrity to Him; trusting in his mercy and power, and not in their own understanding." pp. 382-3.

On the 17th of the 7th mo. 1849, being at the sea-shore with his brother Thomas, who was an invalid, he says, "I have passed some

of the time here in reading the letters of the extraordinary woman, the late Sarah Lyell Grubb. She was an instrument peculiarly prepared by the Lord Almighty, to uphold and spread the doctrines and testimonies of the Christian religion, as promulgated by George Fox, R. Barclay and other Friends of the rise of our religious Society. The reliance of some among Friends upon human talent without waiting upon the Lord, to receive from Him ability and authority for every good word and work, occasioned her suffering and anxiety; especially in relation to its effect on the true welfare of the Society and the blessed cause given it to uphold. This exercise she appears to have labored much alone for several years; but when called upon to advocate the cause of her Divine Master, she was plain and thorough in her testimony; especially against all the efforts used by some to change the faith of Friends often expressing the belief that such would time be scattered; and that a righteous soul would be preserved, that shall again flourish p. 445.

Among the most eminent ministers of the Gospel who visited this country a few years before the separation of 1827, was Willm. Forster, Jr., of Tottenham, England. He was present at the trying Yearly Meeting of 1818 when the extracts from our early Friend writings, prepared by the Meeting for Sufferings, were read. "After the reading of minutes of the Meeting for Sufferings, a valuable, judicious Friend rose and said he more than a liberty to express his entire un- with the proceedings of that meeting, and wished their encouragement. Immediately after him a member said, that in regard that 'creed, or confession of faith,' he thought it right to say, 'who hath required this your hands?' This was the signal for opposition; and those extracts from the writ- of George Fox, Robert Barclay, Wm. Pe- R. Claridge, and William Sewell, con- taining the most solemn and important truths of the Christian's faith, mostly expressed scripture terms, were denounced by so wild, inexperienced persons, as inconsistent with reason, revelation, and the Holy Scriptures. It broke out and spread, like a flame among light rubbish. Many unbecom- expressions were used, both in relation to the doctrine, and the Meeting for Suffering. It soon appeared that much confusion was hand, and the meeting adjourned till n- o'clock the next morning. Nearly three ho- were then spent in discussing a proposition expunge those extracts from the Meeting Sufferings' minutes. Another person propo- that a committee be appointed to exam- and report their judgment of the proceedi- of that meeting; A preacher residing in t- city, joined with this, and further recom- mended they should be instructed to consi- the constitution of that body. He thought radical change was wanting; the memb- should hold their office for three years, f- ive be chosen out of each Quarterly Meeti- Another thought the two subjects should kept distinct, and urged the expunging of extracts and postponing the other to a fut- uring.

"During this scene of confusion, and an ampled torrent of abuse, and invidious re- lation upon the Meeting for Sufferings, members of that meeting remained unmov- and patiently bore the unbecoming cond-

any without making a single retort. The clerk was several times directed to make a note, directing the obnoxious record to be changed, and one proposed that if he preferred in deferring to do it, another Friend should be named to take his place.

At length my father rose, and gave a statement of the institution of that meeting and its operations. He mentioned that publication of our religious principles had been repeatedly made by it, in various ways, denied the truth of those insinuations of the clergy, that the extracts were drawn from Barclay, Penn and other books, reprinted and owned by our Society, &c. remarks appeared to have an effect on the meeting, and the clerk stated that he was the agent of the meeting, and had been endeavoring to discover what was the mind of the meeting, but from so many propositions and opposite opinions, he was unable to decide, therefore, would suggest that a minute be made directing the Meeting for Sufferings to publish the Extracts. This was agreed to by some of the leading opponents, others more violent, openly rejected it, seemed determined to be satisfied with a short of an obliteration. The clerk's proposal, however, at length prevailed; but he remarked, that allowing it to remain on the minutes, was acknowledging the doctrine of the Yearly Meeting.

This circumstance was altogether a new exercise to some of us, but it was considered to be favored with calmness and freedom from all irritation. Indeed, it seemed like being preserved from the strif of the law, and hid in the secret of the tabernacle of the Most High. The remaining sittings of the meeting were generally more satisfactory; though often attended by a paining of the presence of false brethren, dear friend William Forster, Jr., from London, in the closing sitting, was engaged in fervent supplication; for the extending of regard towards the Lord's tribulated ones; and the meeting closed soon after, or a covering of most solemn and impressiveness."

(To be continued.)

What Has It Done for You?"—The other an infidel was lecturing in a village in the north of England; and at the close, he challenged discussion. Who should accept the challenge but an old, bent woman, in the antiquest attire, who went up to the lecturer, and said, "Sir, I have a question to ask you." "Well, my good woman, what is it?" "Ten years ago," she said, "I was left a widow, with eight children utterly unprovided for, and nothing to call my own but this strength. By its direction, and looking to God for strength, I have been enabled to feed my own and my family. I am now tottering to the grave; but I am perfectly happy, because I look forward to a life of immortality with my friends in heaven. That's what my religion has done for me. What has your way of thinking done for you?" "Well, my good lady," replied the lecturer, "I don't want to disturb your comfort; but—" "Oh! but that's not the question," interposed the woman; "keep to the point, sir. What has your way of thinking done for you?" The infidel endeavored to make the matter again; the feeling of the meeting gave vent in uproarious applause, and he was to go away discomfited by an old woman,

For "The Friend."

"Old Books and Old Worthies revived."

(Continued from page 285.)

We will now follow Simon Smith, who after his marriage to Joan Bennor, continued to "minister in his Cure" for a short time, and then departed for Europe. After a considerable period spent there, he returned to England and was received by his friend Patmore at the Bell tavern in London. This meeting with Smith was the immediate cause of the arrest of Patmore, above mentioned. Smith himself escaped the hands of the officers at that time, and maintained his family by trade as a "Mercer," attending Fairs in the country towns around London. He was at last apprehended, and being examined by Stokesley, in 1531, on the charge of heresy, it was found that "they could fasten no other crime of heresy upon him but only his marriage;" by which it appears he had not at that time fully embraced the Reformed religion; but from the strictness of the inquiry into his dealings at the Fairs and the wares sold by him there, it is evident he was suspected, and probably with justice, of disseminating the Tindal-Rogers Bible. He was however obliged to "abjure" and do penance, and seems to have died soon after. In the next year, 1532, the "widow Joan Smith," with her four children, Robert, Richard, Margaret, and Elizabeth, was brought before Stokesley and compelled to abjure. This Robert and Richard, then minors living at Bumstead, within the jurisdiction of the metropolitan bishop, were probably the same Robert and Richard who twenty-three years after, in 1555, suffered martyrdom under Bonner, then Bishop of London.

The former of these confessors was a man of cultivated intelligence, of lofty courage and moral worth. My account of him shall be verbatim from Fox.

"Robert Smith was brought unto Newgate the first of November, in the first and second year of the King and Queen," (Philip and Mary) "by John Mathew, yeoman of the guard of the Queen's side, by the commandment of the Council. This Smith first gave himself unto service in the house of Sir Thomas Smith, Knight;" (this Sir Thomas Smith was of the Norfolk Smith family, and as Robert was a sort of page there, it is possible there was some relation between them) "being then Provost of Eaton," (Eton College); "from thence he" (R.S.) "was preferred to Windsor, having there in the Colledge a Clerkship of ten pounds a year," (equivalent to \$600 or \$700 now, owing to the change of values in three centuries. This clerkship was probably a religious office.) "Of stature he was small and slender, active about many things, but chiefly delighting in the art of painting, which many times, rather for his mind's sake than for any living or lucre, he did practise and exercise. In religion he was fervent, after he had once tasted the truth, when he was much confirmed by the preachings and readings of one Master Turner, of Windsor, and others. Whereupon, at the coming of Queen Mary, he was deprived of his clerkship by her Visitors, and not long after he was apprehended and brought to examination before Boner, as here followeth written and testified with his own hand."

His excellent mental and moral traits come out to advantage in his answers to the examiners, by which they were often silenced or confounded. Of these however I will only

select one, as throwing some light on his early history. He having in the course of these replications spoken of auricular confession as an underhand means to priestly plunder, the Bishop retorted—

"(Bonor.) Why how art thou able to prove that confession is a pickpurse matter? art thou not ashamed so to say?"

"(Smith.) I speak by experience. For I have both heard and seen the fruits of the same. For first it hath been, we see, a bewrayer of King's secrets, and the secrets of other men's consciences; who being delivered, and glad to be discharged of their sins, have given to priests great sums of money to absolve them and sing Masses for their souls' health.

"And for ensample, I began to bring in a Pageant, that by report was played at Saint Thomas of Acre's, and where I was sometime a child waiting on a gentleman of Norfolk, which being bound in conscience through the persuasion of his priest, gave away a great sum of his goods, and forgave unto Master Gresham a great sum of money, and to another as much; the priest had for his part a sum, and the house" (monastery) "had an annuity to keep him; and the which thing being done, when his brother heard, he came down to London, and after declaration made to the Council how by the subtily of the priest he had robbed his wife and children, recovered a great part again to the value of two or three hundred pounds of Master Gresham and his other friend, but what he gave to the house could not be recovered."

The "Pageants," "Pomps," "Mysteries" or "Miracle-plays" of that period were, as remarked by a late able critic in the "Penny Monthly," the originals from which the Elizabethan Drama and Masque, and even such religious Epics as Milton's Paradise Lost, were derived by a kind of genealogical descent. They were dramatic representations of the great events of Scriptural history, composed generally by members of the Romish clergy, and expressly designed for the instruction of the unlettered classes, for whom learning and the Bible were treasures almost beyond reach, if not indeed purposely withheld, in the main outlines of that history. Their authors, as afterwards in the masques, were at the same time superintendents of the costume and scenic details, so that large and various artistic talent was required in the "bringer-in" of such a pageant; and to have produced one while still a minor indicates a precocious genius on the part of Robert Smith, who seems to have left St. Thomas d'Acre before the production of his play. As is well-known to most readers, one of these miracle-plays is still kept up at Ober-Ammergau in Germany.

The gentleman whose confidence was so abused by the priest, was, of course, the patron of our subject, Sir Thomas Smith, of Norfolk, aforesaid.

The examination occupies many folio pages of Fox's work, who remarks at the close:—"Thus hast thou, good reader, not only to note but also to follow in this man a singular example of christian fortitude, which so manfully and valiantly did stand in the defence of his Master's cause. And as thou seest him here boldly stand in examination before the Bishops and Doctors, so was he no less comfortable also in the prison among his fellows. Which also is to be observed no less in his other prisonfellows, who being there together

cast in an outward house within Newgate, had godly conference with themselves, with daily praying and public reading, which they to their great comfort used in that house together, amongst whom this foresaid Smith was chief doer. Whose industry was always solicitous not only for those of his own company, but also his diligence was careful for other prisoners, whom he ceased not to dehort and dissuade from their old accustomed iniquities, and many he converted unto his religion. Divers letters he wrote there in prison to sundry his friends, partly in metre and partly in prose."

Of those in metre, an affecting exhortation commonly attributed to John Rogers, is ascribed by Fox to Robert Smith; parts of which I extract as follows:

"The Exhortation of Robert Smith unto his children, commonly set out in the name of Mr. Rogers.

"Give ear my children, to my words, whom God hath dearly bought,

Lay up my law within your hearts and print it in your thought;

For I your father have foreseen the frail and fiftly way

Which flesh and blood would follow fain, even to their own decay; * * *

For flesh doth flourish like a flower, and grow up like a grass, And is consumed in an hour; as it is brought to pass In me the image of your years, your treasure and your trust,

Whom ye do see before your face dissolved into dust. For as you see your father's flesh converted into clay, Even so shall ye, my children dear, consume and wear away.

The sun and moon, and eke the stars, that serve the day and night, The earth, and every earthly thing, shall be consumed quite.

And all the worship that is wrought, that hath been heard or seen, Shall clean consume and come to nought, as it had never been.

Therefore, that ye may follow me, your father and your friend, And enter into that same life that never shall have end,

I leave you here a little book, for you to look upon, That ye may see your father's face when I am dead and gone—

Who for the hope of heavenly things, while he did here remain, Gave over all his golden years in prison and in pain,—

Where I among mine iron hands, enclosed in the dark,— Not many days before my death, did dedicate this work

To you, mine heirs of earthly things which I have left behind, That ye may read, and understand, and keep it in your mind—

That, as ye have been heirs of that which once shall wear away, Even so, ye may possess the part that never shall decay;—

In following of your father's foot in truth, and eke in love,

That ye may also be his heirs, for evermore, above."

California.

For "The Friend."

(Continued from page 278.)

"In affairs of public morals, and education, and religion, there is much activity in San Francisco; a high attachment is already reached; and a healthy progress in the right direction is visibly constant. The New England elements are clearly dominant here and through the whole Pacific Coast region; softened in many of their old Puritanic notions and habits,—conforming themselves to the

freer life of a new country with a cosmopolitan population, but still preserving their best qualities of decency, of order, of justice, of constant progress upward in morality and virtue.

"The population of San Francisco is now (1868) about one hundred and fifty thousand, which is nearly one-third that of the whole State. Commerce and manufactures are the great interests of the town; and the growth of both is now very rapid. Already the third, San Francisco will speedily rank as the second commercial city of the Republic; and about forty ocean steamers go and come in her waters,—to China and Japan, Mexico, Sandwich Islands, Oregon, British Columbia, and Panama; and over three thousand sailing vessels entered her Bay in 1868. Most of the latter are employed in the coast trade for lumber, coal and grain; but the importation of merchandise from Europe and the Atlantic States, and the exportation of wheat and wool in return, have employed a large fleet of first-class ships."

After a statement of the foreign and domestic imports and exports of 1868, with "some other statistics of the business done in San Francisco," and of the extent and variety of her manufactures, and also his conceptions of her "grand future;" our author leaves the city, and proceeds on some country excursions into Southern California: of which he writes:

"Far away in the south of California, where the tropical fruits grow so luxuriantly, and where the Spanish-Mexican life still holds sway, though rapidly yielding to the tide of American influences, are most interesting regions for the traveller. San Diego, Los Angeles, San Bernardino, Santa Barbara, and the valleys and hills about, are full of natural beauty and wealth; of immense flocks, of wide vineyards, of orange and lemon groves, of grand wheat and barley fields; and no one can be said to have fully seen California who has not visited them, taken in a sense of their vast capacities, and studied the mingling Spanish and American civilizations there planted. But the general characteristics of climate and scenery are the same as in the more central regions of the State; intervening are less interesting and still more laggard counties; and few mere summer visitors will care to go so far from San Francisco, until the railroad, now pushing rapidly down into and through all this southern coast section of the State, to meet and bring north the Southern Pacific Railroad as it comes across the continent, is completed.

"That which is most interesting to be seen in California, out of the Sierra Nevadas, lies in the counties around and adjoining San Francisco Bay, north and south. These are the present garden of the State; here the best and the most of its rural populations, its largest and finest vineyards, its most fruitful orchards, its most remunerative wheat fields; here, too, the best of that charmingly close union of hill and valley, of grove and open plain, of mountains crowned and cañons filled with forests, and mountains naked in every part, that so wonderfully characterize the Coast Range region of California.

"The long summer drought and the sharp summer sun had made everything dry, dusty and brown; except the sprawling evergreen oaks, looking in the distance like huge apple trees, there was absolutely nothing green for the eye to rest upon, outside the vineyards

and orchards and irrigated gardens; and unless the wind blows against the traveller, clouded at this season, he is almost constantly enshroued in dust. But taking the always fresh breeze aright, everything is pure and sweet and an open ride over these hills and through these valleys, within fifty miles of San Francisco, is exhilarating.

"Directly across the Bay, seven miles from San Francisco, and connected by hourly steamboats, lies Oakland, the principal suburb town. A great oak grove of fifteen hundred acres was its location, now well covered with pleasant cottage homes for seven thousand people, away from the cold summer breeze of the city. Here are the favorite schools of the young, the embryo but ambitious State University, the asylum for the deaf and dumb and blind, and here the first cotton mill on the Pacific Coast began its work. Ranges the coast mountain hills radiate out from town, and protect choice orchards and gardens for the city markets.

"Below the city, along the Bay, another string of charming suburban towns, S. Mateo, Redwood City, Santa Clara, and San Jose, occupy fertile valleys, and stretch into forested nooks among the hills that keep off the sea breeze. A ride around the Bay down one side and up the other, a hundred miles in all, offers most recompensing experiences. Railroads already cover most of the journey, which is better made more leisurely in carriages, however, so as to linger in some of the grand orchards and gardens, the wealth and taste have developed, observed in detail the rich gifts that agriculture has brought to this country, and visit the mission churches and homes, and eat figs and peaches and pears and plums from their own grand gardens of the last century.

"There are several of these old mission establishments around San Francisco Bay, a many others in Southern California. They were the outposts of the Spanish and Catholic civilization in Mexico, planted one hundred and more years ago, among the Indians of California. Soldiers and priests carried the banners of the sword and the cross together and made short and sharp work of converting a feeble race of savages, who became the simple slaves of their new masters, and went away under the influences of a christianity without compassion, and a civilization without conscience. The construction of the quaint old churches and long capacious dwellings, built slowly up of clay and stones, with wood or nails, was performed by the Indians under the lead of their Spanish masters, while the savages themselves, more wretched than in their original condition, were crowded into miserable adjacent huts. The cultivation of the soil, and the variety of food that resulted, were the only real gifts bestowed upon the natives; such converts as soldier and priest united to confer, could hardly have been a blessing. But the capacities of the country for fruits and grapes were thus first developed by these missionary pioneers. * * * * *

"The season was over, and nature was rest in all these valleys; the oaks occasionally made parks in the open plains; or the orchard and gardens presented green, oasis-like spots in the landscape; but for the most part, the ground was yellow with the stubble of grain, or brown with the dry grass, that lay ungathered, and rich feed still for cat-

se. And yet, form and color and sky abundant recompense; and we yield the fascinations of a new nature; for, all the reasonings of experience and on, here were quick and exhilarating about rain for many months, without without green grass or bright flowers, and fresh rivers.

onger and more varied excursion was o the counties north of San Francisco, in the Petaluma, Santa Rosa, Russian Napa and Sonoma Valleys, to see the ay, or famous boiling springs, and the ds. There is more variety of scenery region than directly around the Bay; is all thickly strewn with pleasant, g villages, whose prosperity is the out- of the soil. We went by steamboat the northern branches of the Bay, up a creek to Petaluma, and then took for the rest of the trip of three days. t and most bountiful of these coast valleys that we visited, was that of the River, distinguished for its kindness New England crop of Indian corn, and some grouse, the *bonne bouche* of the and's dinner in town, and grand with pen fields of grain, as beautiful with oak groves, the hills about guarding a from the entrance of rough winds, ming the whole in a picture of impos- ity.

prise the second morning found us g along a rough road over the moun- the special object of the excursion. e drive of the morning was the more able feature. We supposed the Plains aras had exhausted possibilities for us respect. But they were both beaten and for bold daring and brilliant excu- er driver that morning must take the of the world, I verily believe. The dis- was twelve miles, up and down steep rough enclosed pastures; the vehicle a wagon, the passengers six, the horses and gay, and changed once; and the our landlord over night and owner of ute. For several miles the road lay

The Hog's Back," the crest of a moun- at ran away from the point or edge, e sides of a roof, several thousand feet ravines below; so narrow that, pressed and widened as much as possible, it was over ten or twelve feet wide, and in ace but seven feet; and winding about the crest of the hill ran;—and yet we went his narrow causeway on the full gallop. ter going up and down several moun- holding rare views of valleys and ravines baks, under the shadows and mists of morning, we came to a point overlook- e Geysers. Far below in the valley, ld see the hot steam pouring out of the l; and wide was the waste around. The t was almost perpendicular; the road owo sixteen hundred feet in the two o the hotel, and it had thirty-five sharp in its course. "Look at your watch," he driver" as he started on the steep ; crack, crack went the whip over the of the leaders, as the sharp corners came at, and they plunged with seeming reck- ahead,—and in nine minutes and a half were pulled up at the bottom, and we breath. Going back, the team was an and a quarter in the same passage.

We wondered at [the driver] for his us and rapid driving down such a steep

road, he said, "Oh, there's no danger or difficulty in it,—all it needs is to keep your head cool, and the leaders out of the way." But nevertheless I was convinced it not only does require a quick and cool brain, but a ready and strong and experienced hand."

(To be continued.)

NATURE'S WORSHIP.

BY J. C. WHITTIER.

Selected.

The harp at Nature's advent strung
Has never ceased to play;
The song the stars of morning sung
Has never died away.

And prayer is made, and praise is given,
By all things near and far;
The ocean looketh up to heaven
And mirrors every star.

Its waves are kneeling on the strand,
As kneels the human knee,
Their white locks bowing to the sand,—
The priesthood of the sea!

They pour their glittering treasures forth,
Their gifts of pearls they bring,
And all the listening hills of earth
Take up the song they sing.

The green earth sends her incense up
From many a mountain shrine;
From folded leaf and dewy cup
She pours her sacred wine.

The mist above the morning hills
Rise white as wings of prayer!
The altar-curtains of the hills
Are sunset's purple air.

The winds with hymns of praise are loud,
Or low with sounds of pain;
The thunder organ of the cloud,
The dropping tears of rain.

With drooping beads and branches crossed,
The twilight frets grieve,
Or speaks with tongues of Pentecost
From all its sunlit leaves.

The blue sky is the temple arch,
Its transept earth and air,
The music of its starry march
The chorus of a prayer.

So Nature keeps the reverent frame
With which her years began,
And all her signs and voices shame
The prayerless heart of man.

Selected.

If we knew the cares and crosses,
If we knew our neighbor's way,
If we knew the little losses
Sorely given, so often chide him
Who we then so devoutly claim
For his lack of thrift and gain,
Leaving on his heart a shadow,
Leaving on our life a stain.

Let us reach into our bosoms,
For the key to other's lives,
And with love toward erring nature,
Cherish good that still survives;
So that when our disrobed spirits
Soar to realms of light again,
We may say, "Dear Father, judge us"
As we judge our fellow men.

Divers in the last stage of life are removed from laboring in the spiritual harvest, who, I have no doubt, have gathered fruit to life eternal, and thus their works follow them. Now we look for preparation and qualification in the rising generation, and those of some maturity of age; that *they also*, may "reap and receive wages," even such satisfying reward, while employed by the Great Husbandman in the whitened fields. The operation of that Power, that can fit for service, has been known (blessed be the Lord); may this be abode with, and fully submitted to.—S. G.

Communicated for "The Friend."

Tennessee Freedmen's Schools.

Satisfactory arrangements have been made for putting these schools under the care of a Committee of Friends of Indiana Yearly Meeting, who have in charge other Freedmen's Schools in the South. Very encouraging accounts continue to be received. The supervision to be as heretofore. See circulars by mail. Funds or remittances for this concern should be marked or noted as such; and sent to either of the under named:

Jacob Smedley, 304 Arch St., Philadelphia.

Alice Lewis, 109 N. Tenth St. "

Thomas Kite, Cincinnati, Ohio.

Isaac P. Evans, Richmond, Indiana.

Joseph Dickinson, Richmond, Indiana.

Pettit & Braden, Indianapolis. "

J. L. Pickard, Supt. Public Instruction, Chicago, Illinois.

Jeremiah A. Grinnell, Maryville, Tenn.

Y. W.

The supplies and supervision bestowed by a few Friends of Philadelphia Yearly Meeting, to our colored school in this place, and to eight other schools in East Tennessee, have proved of great value in arousing the energies of our people, and in giving practical aims to their efforts on education and self-support. We therefore desire that this timely help (which we hereby thankfully acknowledge) may be continued and increased. Untold good could be accomplished in this way. It is a sad truth that unless such work is done before them—work which not only shows them their needs, but what they can do—our race seen destined to remain in ignorance many long years. Most of these schools are in poor districts where ignorance and apathy predominate. Nothing will arouse them so much as the kind of work which has been done; and we implore God's richest blessing on those who have promoted it, and may still do so.

We have been moved from a sense of necessity, to make this appeal, on behalf of our famishing race.

We are, your most grateful friends,
Jacob Henry, H. L. Canseler,
W. B. Scott, Sr., W. S. McTeer,

Trustees of the Maryville Colored School.

Effects of Exposure to Increased Atmospheric Pressure.

Most people, says a scientific Journal, are aware that certain disagreeable sensations are experienced by the inmates of a diving bell, during its descent, even to a few feet below the surface of the water, but the opportunity seldom occurs to note the effects produced by a descent to so great a depth that the pressure amounts to four atmospheres, or no less than 60 lbs. on the square inch. Yet exposure to this pressure has been experienced by the workmen engaged in laying the foundations of the St. Louis bridge over the Mississippi, and Dr. John Green has published the results of some observations he has recently made. It was found necessary to use considerable precautions in admitting the workers into the chamber containing the condensed air; an intermediate chamber or lock was therefore constructed, into which the condensed air could be admitted gradually, occupying, for the higher degrees of pressure, from five to ten minutes. The exit was through the same lock, and occupied the same time. The in-

creased oxidizing power of the condensed air was shown by the rapid wasting and guttering of the candles, which burned with a streaming, smoking flame, and, when blown out, rekindled spontaneously from the glowing wick. During the later stages of the work, the men could only work for an hour at a time, and a remarkable form of palsy was prevalent, from which nearly a dozen men died. The first effects of the gradually increasing pressure in the lock, were a distinct sensation of pressure upon the tympanic membranes of both ears, which, however, was immediately relieved by swallowing, or by inflating the ears from within. The respirations and cardiac movements remained unaltered until exertion was made, when they quickly became accelerated. It was found to be impossible to whistle. The ticking of a watch was heard with great distinctness. On leaving the chamber a strong sensation of cold was experienced, and catarrhs were frequent among the men. The condensed air escaped from the tympanum through the Eustachian tube in a series of puffs. Too sudden exposure to the condensed air in one instance caused rupture of the membrana tympani, and too sudden removal of the pressure, in the same person caused spitting of blood.

Selected.

I always had a love to the Bible, and to reading therein, from my childhood, yet did not truly understand, nor experience those doctrines essential to salvation, nor the new covenant dispensation, until my mind was turned to the light of Christ, the living eternal Word, the entrance whereof giveth light and understanding to the simple. Yet I do confess, it was some advantage to me frequently to read the Holy Scriptures when I was ignorant, and did not understand the great and excellent things therein testified of. For when the Lord had livingly in some measure opened my understanding in the Holy Scriptures, by my often reading the same before, having the better remembrance thereof, it was a help and advantage to my secret meditations, when a lively sense and comfort of the Scriptures was in measure given me by the Spirit, and thereby I was the more induced to the serious reading and consideration of what I read in the Holy Scriptures, and the comfort thereof made known by the Holy Spirit enlightening the understanding. All the promises of God, which are yea and amen in Christ Jesus, being truly comfortable when applied by the same Spirit, for that will make no wrong application thereof; that Spirit will never apply peace to the wicked, nor to persons living in their sins, nor tell the unjust that they are just, or righteous in God's sight. It is through faith which is in Christ, that the Holy Scriptures are said to make the man of God, "Wise unto salvation, and profitable to him, for doctrine, reproof, admonition and instruction in righteousness, that he may be perfect and thoroughly furnished in every good word and work." Doubtless Paul esteemed Timothy's knowing the Holy Scriptures from a child, to be some advantage and help to him, but it was principally through faith, which is in Christ Jesus.

These things considered, I would not have christian parents remiss in educating, and causing their children to read the Holy Scriptures, but to induce them to learn and frequently to read therein, (the Bible). It may

be of real advantage, and profitable to them, when they come to have their understandings enlightened, and to know the truth as it is in Christ Jesus. I have sometimes observed children in reading the Bible, have been affected with the good things they have read, from a secret belief of them, which hath had such impression that they have been induced to a more serious consideration thereof, when the Lord has opened their understandings in some measure, by the light of his grace in them.—George Whitehead.

Condensed Milk.—Condensed milk, as now known to trade and customers, consists of milk from which only water has been taken, and to which nothing but sugar has been added, the product being of the consistency of honey, and by dilution in water convertible to milk itself, somewhat sweetened: condensed milk prepared under the Borden system readily dissolves in cold water.

By 1861, four or five factories were in operation, capable of producing in the aggregate, perhaps 5,000 tins of one pound each per day. About this time Mr. Borden put upon the market for city use what he calls "Plain Condensed Milk." This is prepared in the same way as the other, except that no sugar is added, and it is not hermetically sealed. It will remain sound from one to two weeks, and is so pure and so convenient, as well as economical, that it is stated that now more than one-third of the milk used in New York City is of this kind. With the end of the war and the dissolution of the armies, the demand for sugared condensed milk fell off, and the manufacturers, who had been stimulated to too great a production, turned their attention to this "Plain Condensed Milk." It would be well if enterprise and capital and philanthropy could be enlisted in supplying London with this form of milk to the extent that New York and other American cities are now supplied with it. We have no means of estimating the present extent of the manufacture of condensed milk in the United States. For this we must wait for the returns of the census of 1870. However, we know that the capacity of the eight or ten factories, on the Hudson, in Connecticut, Pennsylvania, and Illinois, is not less than 500 cases of four dozen pound tins per day, equal to 8,500,000 pounds per annum. It may be stated that one pound of the condensed is equivalent to four or five pounds of crude milk.

The exports from the United States of condensed milk (combined with sugar) during the twelve months ending September 30th, 1870, amounted to a declared Custom House valuation of \$200,000. In the year 1869 it was exported to England from New York to the value of upwards of \$80,000. The bulk of the remainder exported from New York was sent to South America, Australia, India, and China, while that sent to London and Liverpool was mainly held in bond, and sent eventually to the British Colonies or disposed of as ship's stores.—*Late Paper.*

We have heard it said that an individual arguing with a Friend against silent meetings, and the impossibility of enduring them, declared, "that silent meetings would kill the devil." That, said the Friend, is just what we want.

Selected for "The Fr

I leave it as an observation, that I seldom, if ever, seen any stand, and arrive any considerable degree of usefulness in church, whose foundation has not been d laid in afflictions and exercises; whereby are crucified with Christ, and shall there rise with him to glory and honor, in the sent as well as in a future state. But i my afflictions and deep baptisms, the s herd of Israel was with me, and pre and supported my spirit to the honor o own name, to whom alone I could attr the praise. For in those allotted days year of tribulation, very little instrum help was afforded me: my lot being ca quarter, where there were none near who capable of giving me much assistance o counsel, not having trodden in the same I sometimes thought my case was h from some of the Lord's servants, who concerned to visit the heritage; or else they were in part restrained from minist to it; my tongue was much sealed in sil for my exercises were incommunicable. this I saw to be of excellent use, as the tray might have led to a dependence o servants, which ever brings weakness have been productive of confusion, th my imparting my case to such as wer skilful to minister to it, and who never might have advised therein. I have s to be profitable and necessary for such i in a state of infancy in religion, to dwell their exercises; leaning simply on that alone which is able to carry through t and until the mind has acquired a de judgment to distinguish clearly who is Lord's side, to be very cautious to whom communicate them; lest they be wou discovering those, whom they have c for their friends, to be enemies to the c Christ.

Yet when the Lord directs, in tim great strait, to advise with some experi servant, it will undoubtedly be advanta; and a steady sympathizing friend is a strength and blessing, when it is affor divine wisdom. CATHARINE PAY

The Bereaved Mother.

The following affecting story was in America not long since, with tot simplicity, by the bereaved mother h an emigrant from the old world. Duril recital the expression of her fine intell face, her fast-flowing tears, attested a we all admit—that warm hearts and sympathies may exist where the refine of polished life are wanting.

"The steerage of our ship was cr with passengers of all ages, and bef had been long at sea a malignant c broke out among the children on board. after another sickened and died, and eac in its turn wrapped in its narrow shrou committed to the deep, with no requie the bursting sigh of a fond mother, a obsequies but the tears of fathers and b and pining spectators.

"As they suddenly plunged into the se the blue waves closed over them, I e my own babe more strongly to my h and prayed that heaven might spare m child. But this was not to be. It sic and day by day, I saw that its life was e and the work of death begun. On J

THE FRIEND.

FIFTH MONTH 6, 1871.

it died, and to avoid the necessity of what was once so beautiful, and still so given to gorge the monsters of the deep, sealed its death from all around me. To suspicion I gave evasive answers to those inquired after it, and folded it in my arms and sang to it, as if my babe was only sleeping for an hour, when the cold long night bath was on it. A weary day and night passed away, and the Sabbath came. Others, I wore my neatest dress, and put a smiling face; but no! it was a heavy burden for I felt my heart breaking. On the day the death of the child could not be concealed; but, from regard to my friends, the captain had it enclosed in a rude box, and promised to keep it two days for me, if in that time we should make land. The coffin was placed in the boat at the stern, and through the long hours of the night I watched it—a dark speck on the water, which might shut it from my sight for ever. It was then I thought of my dear friends home, and my native land and the friends I had left behind me, and longed to mingle my tears with theirs. By night I laid the coffin of my babe, and by day I sailed for the land—raising my heart in prayer to Him who holds the winds in his hands, that they might waft us swiftly onward. On the third morning, just as the sun had risen, the fog lifted, and showed us the green shores of New Brunswick. The ship was hailed; and then the Captain, with a few men, came on board, making the coffin with them. I was not permitted to go, but from the deck of the ship I could see them as they dug the grave, the thick shades of the forest trees, on the banks of a sweet glade, which sloped down to the water, and in my heart I blessed them, and prayed that God would reward their kindness to the living and the dead. When I returned on board, the Captain came to me and said: 'My good woman, the place of your son is buried is Greenville, on the coast of New Brunswick. I will write it on a piece of paper, that you may know where the main lies.'

I thanked him for his care, but told him my record was already written on my heart, and could remain there till my blessed boy should meet in a brighter and happier home.

A benefactor always retains some affection for the person whom he has benefited. Content of ingratitude succeeds in uttering this kindly feeling on the part of the benefactor.

It is a beautiful arrangement of Nature, which we ought to say, of Providence. The benefactor, just in proportion as he has done good lovingly, has his "exceeding great reward" in an increase of lovingness; for there is a doubt that it is a far happier, and, may we say, a more divine thing, to love than to be loved.—A. Helps.

It is a precious thing to be made kind and tender, and loving toward all the children. Our own growth in the love of Truth is much promoted by it, and I believe that it may be my experience, and may be kept in the lowly valley, where the cooling waters of Shiloh's stream run and spread life and greenness on all sides.—Thomas Evans.

The Christian believer who watches the signs of the times, with loving desire to see evidences of the spread of the influence of the gospel over the actions of his fellow men, whether in their individual capacity or as a community, can draw but little consolation from the accounts given by the public press of events daily occurring in different parts of our widely extended country. We believe there is hardly a number of any one of our popular newspapers, that does not contain the record of crimes of the most aggravated or revolting character, perpetrated as well in the midst of what are considered highly cultivated communities, as in border sections, where the population is of a more heterogeneous description, feeling but little respect for the restraints of law or the obligations of religion. Robberies the most daring as to time and place, often of enormous sums; embezzlements or defalcations of thousands, and sometimes of hundreds of thousands of dollars, with other frauds often perpetrated by men holding places of trust and confidence; the most nefarious and unblushing gambling in stocks and public securities, openly practised, defended and screened by process of law, among those who claim a high social position because of their wealth and style of living; arson, murders and suicides, these make up the staple of sensational news in most of our daily journals.

It is true that our country stretches far and wide, and traversed, as it is, in all directions with electric wires, the accounts of all such deplorable events are flashed from one end of it to the other, east, west, north and south, and in a few hours concentrate at the principal depots for collecting such recitals, to be served up for the perusal of all who will read. But although this may in some measure account for the great number of grievous crimes thus continually brought before the public eye, it does not weaken the conviction resting on the minds of the thoughtful and concerned, that iniquity shows out in more than usual proportions; and crime has become so common and shameless as to indicate that some unusually active cause must have been at work, loosening the hold of correct principles on the conduct of the people, and reconciling them to dereliction and contempt of moral law. That cause must have been coextensive with the whole community, influencing, more or less, all classes, and familiarizing many among them with the impious belief, that under certain circumstances the Decalogue loses its authority.

That potent, all pervading cause, we believe to have been the late civil war. It is needless here to go into any exposition of the manner in which the whole system of war and its practical teachings, destroy the sanctity of human life, familiarize those engaged in it with murder, overturn all law intended to protect property, encourage theft, and eradicate, from the minds of thousands, the distinction between right and wrong, between meum and tuum. Even those who argue that war is necessary and therefore right, do not deny that such are among its constant and wide spread effects. During our civil

strife, for four years, there were hundreds of thousands drawn from all parts of our country, taking lessons in this school of vice, and practising with eclat, on a large scale, acts of a similar character, to those which are now held up before the public as the most atrocious of crimes. Is it any wonder that many of the most apt scholars are bent on continuing in private life, the course their country took so much pains to educate them to carry on towards their fellow countrymen arrayed against them.

The poison thus disseminated, shows its demoralizing effect, not merely by the swollen criminal calendars of the land; it is to be discerned in the low moral tone that pervades political affairs, and crops out in the legislative bodies of both the State and general government. If we may believe the representations of those who from their position ought to know, or if we may judge from the lavish appropriations of money or franchises to parties which show no rightful claim to either, we cannot avoid the conclusion that men are elected as legislators who are willing to be approached and bargained with for their votes and influence.

During the war vast sums of money were profusely disbursed by the Government to officers and contractors, by which many rapidly accumulated large fortunes. It is now well known that peculation of the public funds was not an uncommon occurrence. Greed of wealth and toleration of doubtful modes for obtaining it were thus created, and stimulated by instances of frequent occurrence, where men suddenly emerged from comparative penury into a life of luxury and display, which required large pecuniary resources to support. The glittering prizes displayed, excited and spread a gambling spirit. Perilous speculation took the place, with many, of the labor and routine of regular business, under the hope that chance might obtain success, or if failure followed, condemnation would be received from those only who had to bear the loss. As the moral tone of the community was thus debauched, it became easy, especially where military service constituted the strongest claim to civic or legislative offices, so to manage elections that not a few men, of loose morals and tainted characters, should be selected as representatives of the people; who carried into the councils of the country their proneness to secure their own emolument by complicity with schemes designed to rob the public purse. This deplorable state of political morals, and the debasing effects of party feeling, made more virulent than ever by the unbridled lust of power and place, engendered by the war, are spoken of and commented on so flippantly by the daily press, that the public seems to have learned to look upon them as a matter of course, and apparently has lost the sensitiveness to the right and the true, which would rouse them to a sense of the necessity to make a total change, in order to stop the downward course.

The question, What will be the final result of this social and political demoralization on our civil institutions and our boasted free government, should it go on unchecked? becomes an alarming one, if we may read the answer to it in the scenes of anarchy and blood now presented in the French Republic. We have not alluded to the intemperance, profanity and disregard of the sanctity of the

marriage covenant, which add largely to the fearful sum of vice and immorality boldly obtruding itself on public notice. All these, with the other phases of depravity, are the same elements, more developed and intensified, that make up that soething mass of irreligion, unbridled passion, corruption and utter disregard of law or right, which has brought such punishment throughout the fair fields of France, and is still enacting the shocking tragedies which are desolating Paris and its environs.

Will we as a people take warning, in time, to avert a similar scourge? Will our rulers learn wisdom from the acknowledgment extorted from some of the advocates of the late war, that the gigantic debt bequeathed by it, grinding as it is on honest industry and enterprise, does but little in crippling the energies and undermining the institutions of the country, compared with the demoralization the war introduced into classes before comparatively uncorrupted, and the disregard of common honesty, equity and truth it has stimulated into shameless publicity among others? Alas! we fear not, and we must take comfort from the declaration of the Apostle, that where sin abounds, grace does much more abound, and the hope that the secret working of this all powerful means of salvation, will continue to rescue and preserve entire, not only to save the masses from entire corruption and destruction, but to spread the government of the Prince of Peace.

SUMMARY OF EVENTS.

FOREIGN.—The struggle between the Paris Communists and the French Assembly has, apparently, been protracted by the military weakness on both sides. The Assembly continues its sittings at Versailles, and manifests no disposition to treat with the insurgents, who still have fortified positions outside the walls. One of these is at Neuilly, on the west side of Paris, and has been the scene of much bloodshed between the contending parties. On the 25th ult. there was an armistice of eight hours for the burial of the dead, and to allow such of the inhabitants as desirably to remain as wished to escape from the bombardment. Many of them being too poor to remove, chose to remain in the disputed territory. Others went into Paris, and a committee of the Commune endeavored to make provision for the homeless and destitute, for which purpose all the vacant apartments have been requisitioned. The streets of St. Louis, Yverness and Montrouge, have been subjected to bombardment by the government forces, and reduced to a dilapidated condition. According to Versailles dispatches, the strength of the insurgent forces is daily decreasing from the incessant fire and fatigue to which they are subjected.

A decree issued by General Cluseret divides the army of the Commune into two corps, one for external and the other for the internal defence of Paris. General Dombrowski commands the former and General Coclin the latter. Another decree of General Cluseret gives to the officers of the National Guard be furnished with regular commissions.

A Versailles dispatch of the 30th says: Thiers granted an interview to the delegates from the Mayors of Paris, who arrived here last night. He told them the government desired to see an end of the civil war, but France could not capitulate in the presence of armed insurrection. He referred them to the Commune for a restoration of order within the city, of which it had usurped control. Provisions are growing scarce in Paris, though supplies are still received by one line of railroad. It is said that also will be cut off in a few days.

The Commune has levied heavy contributions on all the railroads leading into Paris, and the demands have been complied with except by the western railroad, which, will, it is stated, be sequestered.

The official statement of the losses of the Communists up to the 27th ult., sums up 9,000 men killed and wounded, and 3,000 prisoners.

Thiers, in a speech to the Assembly, intimated that he should only remain President so long as military order should be maintained. He insisted on the necessity of acting in the defence of law and order, that they wished to conciliate, but also to save liberty from despotism and unbridled license. The insurgents, he stated, are isolated, and all France are with the government and the Assembly in their efforts to combine unity with liberty.

It is reported to have been decided by the natives of Alsace and Lorraine, now resident in Paris, shall be exempted from military service, and the Commune agrees to grant the required exemption on the production of a certificate of birth. It is also reported that the Archbishop of Paris has been set at liberty in consequence of an intimation from Bisson.

In the British House of Commons, Gladstone announced that the proposition to impose a tax on matches and to increase the duties on legacies and successions would be withdrawn, to reconcile the opposition to the remaining recommendations of the budget, and that an addition of 20s. on the pound to the income tax would be substituted.

Disraeli, notwithstanding the concession of the government, made an unsparing attack on the budget.

A member of the House submitted a motion in favor of the reservation of a part of Epping forest, near London, for a public park. The motion was opposed by the Ministers because the property belonged to the crown. It was argued that the public were the owners of the ground, and not the crown. Upon a division there was a majority of 101 against the government. On the 1st inst. the House passed a resolve adverse to any further extension of the present park.

Advices from Peking state that the imperial government has made a demand upon the foreign ambassadors that the schools for the education of females be abolished; that teaching to the male subjects of the empire of all doctrines opposed to those of Confucius be forbidden; that all quarrels should be considered Chinese subjects; and that no women will be permitted access to the empire in that capacity. The ambassadors were also notified that the attendance of women upon religious services is one occasion of the recent massacre of foreigners, and that though those events cannot but be deplored by the imperial government, compensation for their commission is absolutely refused.

Paris dispatches of the first inst. state that a deputation of the Masonic lodges of the city had returned from an unsuccessful mission to Versailles, where they met with a cold reception. Thiers expressed the opinion that no amicable arrangement with the Paris Commune is impossible.

A dispatch says: The firing last night was fearful, and apparently utterly reckless as to the damage inflicted on the city. Nothing to compare with it has occurred since the commencement of the civil war. The city is generally excited and alarmed. Groups of frightened people are collected in almost every street and avenue, discussing the alarming state of affairs.

General Cluseret has been dismissed from the office of Minister of War by the Commune. He was also arrested and was soon set at liberty.

It is reported that the majority of the voters in France, have resulted in the choice of conservative Republicans.

Liverpool, 5th mo. 1st.—Uplands cotton, 7½d.; Orleans, 7½d.

UNITED STATES.—Miscellaneous.—James M. Mason, ex-United States Senator from Virginia, and Minister to England, under the moderate government, died at his residence, near Alexandria, Va., on the 29th ult. He was in the 73d year of his age.

The interments in Philadelphia last week numbered 269. There were 44 deaths from consumption, 14 of heart disease, 21 of fevers, 13 inflammation of the lungs, and 18 of age.

On the 29th ult. the Bonnet Carre crevasse, near New Orleans, had formed an opening in the levee 1200 feet wide. The country has been deluged for a great distance, and an incalculable amount of damage done. It is impossible to close the crevasse at present, but a large force is employed to prevent further damage to the levee.

The increase of the capital of the national banks since the passage of the act of 1870, authorizing fifty-four millions additional national bank circulation, has been \$1,689,790, and the increase of national bank circulation of the same period is \$1,207,600. The same official statement shows that Chicago has 298,877 inhabitants, of whom 154,420 are natives of this country, and 144,557 of foreign birth.

The public debt on the 1st inst., less amount in the Treasury, was \$2,303,573,943, decrease during the past month \$26,124,053.

The products of Wisconsin for the year ending 6th

mo. 1st, 1870, were in round numbers 23,300,000 lb. of wheat; 14,800,000 bushels of corn; 19,800,000 lb. of hay; 1,900 bushels of rye. Wool, potatoes and cheese were also produced in large quantities.

The majority of the Justices of the Supreme have decided that the act of Congress, known as legal tender act, is constitutional as to contracts before its passage, and that it is also valid as applied to transactions since its passage. The Chief Justice and three of his associates dissent from the majority of the Court upon both propositions, holding that the tender act is repugnant to the constitution, and that this important decision, it is said, has instantaneous upon its contracts involving great amount have awaited its publication.

The Markets, &c.—The following were the quotations on the 1st inst. New York.—American gold, U. S. sixes, 1881, 117; ditto, 5-20's, 1868, 113½; 10-40, 5 per cents, 109½. Superfine flour, \$5.50 a finer brand, 56 a \$10.40, the last being the price of the best St. Louis. No. 2 springing wheat, \$1.52; amber western, 1.55; white Michigan, Canada barley, \$1.10. Oats, 65 a 68 cts. Yellow 82 cts.; white southern, 84 cts.; western mixed, 81 cts. Philadelphia.—Cotton, 15 a 15½ cts. for up and down Orleans. Supers fine flour, \$5.25 a finer brands, \$5.50 a 10. "pensylvania" rye, \$1.41; Ohio, 1.55; Indiana, 1.60. Rye, \$1.15. Western mixed corn, 74 a 75 cts.; yellow wheat, 82 cts. Oats, 62 a 65 cts. Lard, 11½ a 12 cts. cattle market dull and prices lower, choice sold 4½ cts; fair to good, 63 a 65 cts., and common 4 per lb. Hogs, \$5.00 a 5.60. Corn, 50 a 52 cts. for white, and 5 a 6½ cts. per lb. gross, for C corn fed hogs sold at \$8.25 a \$9. per 100 lb. Chicago.—Spring extra flour, \$5.62 a \$6.50. Wheat, \$1.24, Oats, 47½ cts. Rye, 82 a 83 cts. \$100. No. 2 red winter wheat, 1.55; Iowa spring 1.30 a 1.35. Mixed corn, 47½ a 50 cts. Oats, 51 cts. Cincinnati.—Family flour, \$6.10 a Wheat, \$1.34 a 1.37. Corn, 57 cts. Baltic Choice red wheat, \$1.70 a 1.90; Ohio and I. 1.57 a 1.60. Yellow corn, 75 a 77 cts.; V. mixed, 72 a 74 cts. Oats, 66 a 68 cts. Lard, 11

FRIENDS' BOARDING SCHOOL, TUNES NEW YORK.
A Teacher is wanted in this Institution. Application may be made to Samuel Miller, Olney P. O., Philadelphia; E. Rhoads, Germantown, Pa.; Geo. J. Scattergood, 413 Spruce St., Phila.

FRIENDS' SELECT SCHOOL.

Wanted, a well qualified man Friend as to the Boys' School on Cherry street.

Application may be made to James Whitall, 410 Race St. James Smedley, 417 Market St. William Biddle, No. 15 South Seventh Geo. J. Scattergood, 413 Spruce St.

FRIENDS' BOARDING SCHOOL FOR CHILDREN, TUNESSANA, NEW YORK.

A suitable Friend and his wife are wanted charge of this Institution, and manage the Pauper School. Application may be made to Ebenezer Smith, 100 North Chester St. Thomas Wistar, Fox Chase P. O., Philadelphia. Samuel Olney, P. O., Philadelphia. Joseph Scattergood, 413 Spruce Street.

FRIENDS' ASYLUM FOR THE INSANE Near Frankford, (Twenty-third Ward), Philad.

Physician and Superintendent.—JOSHUA H. NOTON, M. D.
Applications for the Admission of Patients made to the Superintendent, or to any of the Managers.

DIED, on the evening of the 10th of Third JOHN HOYLE, an esteemed member of Smithfield Meeting of Friends, Ohio, in the 85th his age. He bore a suffering illness with patience, remaining entirely sensible to the friends are comforted in believing that he is at peace.

On the 3d of Fourth mo. 1871, ELIZABETH of John M. Sharpless, in the 53d year of her member of Chester Monthly Meeting, Penna.

On the 21st ult. ABIGAIL WRIGHT, years, a member of the Southern District Meeting.

For "The Friend."

(Continued from page 293.)

The Geysers are exhausted in a couple of days. They are certainly a curiosity, a marvel, but there is no element of beauty; there is nothing to be studied, to grow into or upon.

We had seen something similar, though not so extensive, in Nevada; and like a three-headed calf, or the Siamese twins, or any other grotesque, once seeing is satisfactory for a time. They are a sort of grand natural freak, a shop in disorder. In a little ravine, churning off from the valley, is their principal theatre. The ground is white and yellow and gray, porous and rotten, with long high heat. The air is also hot and sultry to an unpleasant degree. All along the bottom of the ravine and up its sides, the water seems hollow and full of boiling water, frequent little cracks and pin holes it finds its way out; and out of these it bubbles and emits steam like so many tiny tea-kettles at high pressure.

In one place the earth yawns wide, and a 'Witches' Caldron,' several feet in diameter and spouts a black,inky water, hot as to boil an egg instantly, and capable of reducing a human body to pulp in a very short time. The water is thrown up four to five feet in height, and the general effect is that of boiling. The 'Witches' Caldron' reproduced a dozen times in miniature,—a little pool for cooking your breakfast dinner, if they were only in your kitchen back yard. Farther up you follow a puff-blow, exactly like that of a steamboat in progress, and you come to two fitful volumes of steam struggling out of tiny holes, but mounting high and spreading wide in their heat. You grow faint with the heat and smells; your feet seem burning; and the air is loaded with a mixture of salts, sulphur, iron, magnesia, soda, ammonia, all the minerals and compounds of a doctor's shop. You feel as if the ground might any moment open. You lose all appetite for the breakfast dinner, trout and grouse, that awaits your return to the hotel. So you struggle out of the ravine, every step among tiny volumes of steam, and over bubbling pools of water, and refresh yourself among the trees on

the mountain side beyond. Then, not to omit any sight, you go back through two other ravines, where the same phenomena are repeated, though less extensively. All around by the hot pools and escape valves are delicate and beautiful little crystals of sulphur, and soda; and other distinct elements of the combustibles below, taking substance again on the surface.

"All this wonder-working is going on day and night, year after year, answering to-day exactly to the descriptions of yesterday, and five years ago. Most of the waters are black as ink, and some as thick; others are quite light and transparent. Near by, too, are springs of cool water; some as cold as these are hot, almost. The phenomena carries its own explanation; the chemist will reproduce for you the same thing, on a small scale, by mixing sulphuric acid and cold water, and the other unkindred elements that have here, in nature's laboratory, chanced to get together. Volcanic action is also most probably connected with some of these demonstrations.

"There must be utility in these waters for the cure of rheumatism and other blood and skin diseases. The Indians have long used some of the pools in this way, with results that seem like fables. One of the pools has a fame for eyes; and, with chemical examination and scientific application, doubtless large benefits might be reasonably assured among invalids from a resort to these waters. At present there is only a rough little bathing-house, collecting the waters from the ravine; and the visitors to the valley, save for curiosity, are but few. It is a wild, unredeemed spot, all around the Geysers; beautiful with deep forests, a mountain stream, and clear air. Game, too, abounds; deer and grouse and trout seem plentier than in any region we have visited. There is a comfortable hotel; but otherwise this valley is uninhabited. The entire region for two miles in length and half a mile in breadth, including all the springs, is owned by one man, who offers it for sale.

"Back on the route of our morning ride, we soon turned off into the neighboring valley of Napa, celebrated for its agricultural beauty and productiveness, and also for its Calistoga and Warm Springs, charmingly located, the one in the plain and the other close among the mountains, beautifully embowered in vines and forests, and both serving as fashionable summer resorts for the San Franciscans. The water is sulphurous; the bathing delicious, softening the skin to the texture of a babe's; the country every way charming; but we found both establishments, though with spacious head-quarters and numerous family cottages, almost deserted of people. A railroad now connects these Springs with San Francisco; and their use and popularity will increase and be permanent. In the attractions of nature and the appointments of art for the comfort of strangers, they are more like some of those charming country 'baths'

in Germany than anything we have in the Eastern States.

"Past farms and orchards, through parks of evergreen oak, we stopped at the village of Napa, twin and rival to Petaluma, and from here, crossing another spur of the Coast Range, we entered still another beautiful and fertile valley, that of Sonoma. There we lingered most of a day, among the vineyards, in wine cellars, upon grand estates like those of English noblemen or German princes. But we did not find the wines very inviting; they partook of the general character of the Rhine wines and the Ohio Catawba, but were rougher, harsh and heady,—needing apparently both some improvement in culture and manufacture and time for softening. As doctors are said never to take their own medicines, the true Californian is slow to drink his own wine. He prefers to import from France, and to export to the East; and probably both kinds are improved by the voyages. More French wines are drunk in California twice over, than by the same population in any part of the East.

"From Sonoma, over another hill, to our steamboat of three days before, and by that back in a few hours to the city. These few days seemed long, they had been so rich in novelty and knowledge, in beauty of landscape, in acquaintanceship with the best riches of California. These valleys are, indeed, hor agricultural jewels, and should be held as prouder possessions by the State than her gold mines. The small grains, fruits and vegetables are their common, chief productions; and the yields are enormous, while culture and care are comparatively light. No part of California is more readily accessible to the stranger; and none more abundantly repays a visit than this. But our longest and most recompensing excursion in California was to the Yo Semite Valley and the Big Tree Groves in the Sierra Nevada Mountains.

"The Yo Semite! You cannot portray it by word of mouth or pen. As well reproduce castle or cathedral by a stolen piece, or broken column, as this assemblage of natural beauty and wonder by photograph or painting. The overpowering sense of the sublime, of awful desolation, of transcending marvellousness and unexpectedness, that swept over us, as we reined our horses sharply out of green forests, and stood upon the high jutting rock that overlooked this rolling, upheaving sea of granite mountains, holding far down its rough lap this vale of beauty, of meadow and grove and river,—such tide of feeling, such stoppage of ordinary emotions comes at rare intervals in any life. It was Niagara, magnified. All that was mortal shrank back, all that was immortal swept to the front and bent down in awe. We sat till the rich elements of beauty came out of the majesty and the desolation, and then, eager to get nearer, pressed tired horses down the steep, rough path into the valley.

"And here we wandered and wondered for four days. Under sunshine and shadow; by rich mellow moonlight; by stars opening double wide their eager eyes; through a peculiar August haze, delicate, glowing, creamy, yet hardly perceptible as a distinct element,—the New England Indian summer haze doubly refined,—by morning and evening twilight, across camp-fires, up from beds upon the ground through all the watches of the night, have we seen this, the great natural wonder of our western world. Indeed, it is not too much to say that no so limited space in all the known world offers such majestic and impressive beauty. Niagara alone divides honors with it in America. Only the whole of Switzerland can surpass it,—no one scene in all the Alps can match this so vividly before me now in the things that mark the memory and impress all the senses for beauty and for sublimity.

"The one distinguishing feature of the Yosemite is a double wall of perpendicular granite, rising from half a mile to a mile in height, and inclosing a valley not more than half a mile in width on the average, and from six to eight miles in length. It is a fissure, a chasm, rather than a valley, in solid rock mountains; there is not breadth enough in it at many points for even one of its walls to lie down; and yet it offers all the fertility, all the beauties of a rich valley. There is meadow with thick grass; there are groves of pine and oak, the former exquisite in form and majestic in size, rising often to one hundred and fifty and even two hundred feet in height; there are thickets of willow and birch, baytrees and dogwood, and various flowering shrubs; primrose and cowslip and golden rod and violet and painted cup, more delicate than Eastern skies can welcome, made gay garden of all the vacant fields in August; the aroma of mint, of pine and fir, of flower, loaded the air; the fern family find a familiar home everywhere; and winding in and out among all flows the Merced River, so pure and transparent that you can hardly tell where the air leaves off and the water begins, rolling rapidly over polished stones or soft sands, or staying in wide, deep pools that invite the bather and the boat, and holding trout only less rich and dainty than the brook trout of New England. The soil, the trees, the shrubs, the grasses and the flowers of this little valley are much the same in general character and variety as those of the valleys of New England; but they are richer in development and greater in number. They borrow of the mountain fecundity and sweetness; and they are fed by occasional summer rains as those of other California valleys rarely are."

(To be continued.)

"Our worship," says Isaac Penington, "is a deep exercise of our spirits before the Lord, which does not consist in an exercising of the natural part or natural mind, either to hear or speak words, or in praying according to what we of ourselves can apprehend or comprehend concerning our needs; but we wait, in the silence of the fleshy part (or minds) to hear with the new ear what God shall please to speak inwardly in our own hearts, or outwardly through others, who speak with the new tongue, which He unlooseth and teacheth to speak, and we pray in the Spirit, and with the new understanding, as God pleaseth to

quicken, draw forth, and open our hearts towards himself."—*I. Penington.*

"Old Books and Old Worthies revived."

(Continued from page 294.)

From lines addressed to his brother, (Richard), I take the following. After advice adapted to that brother's own case, he bequeaths to him the care of the wife and children so soon to be bereft of their natural guardian, in these words:—

"And to my woful wife and widow desolate,
Whom I do leave behind in such a simple state,
And compassed with tears and mournings many one,
Be thou her staying staff when I am dead and gone!
My mouth may not express the dolours of my mind,
Nor yet my heaviness to leave her here behind;
But as thou art my bone, my brother, and my blood,
So let her have thy heart if I may do her good.
I took her from the world and made her like the cross,
But if she hold her own she shall not suffer loss,
For where she had before a man unto her make
That by the force of fire was strangled at a stake,
Now shall she have a King, to be her helping hand,
To whom pertain all things that are within the land,
And eke my daughter dear, whom I bequeath to thee:
To be brought up in fear and learn the A B C,
That she may grow in grace and ruled by the rod,
To learn and lead her life within the fear of God;
And always have in mind, thy brother being dead,
That thou art left behind a father in my stead!
And thou! my brother dear and eke my mother's son,
Come forth out of all fear and do as I have done!
And God shall be thy guide and give thee such increase.

"In the flames of fire thou shalt have perfect peace
In joy and rest, and past, out of all pain,
Where we shall meet with mirth and never part again.

If thou wilt do my daughter good,
Be mindful of thy brother's blood!"

A heavy cross, indeed, was that by which the martyr's crown was won! How faithfully Richard Smith followed in the steps of his brother, we shall discover in the sequel.

From the prose letters I select—

"A Sententious letter of Robert Smith to Anne Smith, his wife.

"Seek first to love God, dear wife, with your whole heart, and then shall it be easie to love your neighbour.

"Be friendly to all creatures, and especially to your own soul.

"Be always an enemy to the Devil and the world, but especially to your own flesh.

"In hearing of good things joyn the ears of your head and heart together.

"Seek unity and quietness with all men, but specially with your conscience, for he will not easily be intrated.

"Love all men, but especially your enemies.

"Hate the sins that are past, but especially those to come.

"Be as ready to further your enemy, as he is to hinder you, that ye may be the child of God.

"Defile not that which Christ has cleansed, lest his blood be laid to your charge.

"Remember that God hath charged in your tongue with the teeth and lips, that it might speak under correction.

"Be ready at all times to look to your brother's eye, but especially in your own eye. For he that warneth another of that he himself is faulty, doth give his neighbour the clear wine, and keepeth the dregs to himself.

"Beware of riches and worldly honour, for without understanding, prayer and fasting, it is a snare; and also poverty; all which are like to consuming fire, of which if a man take a little, it will warm him, but if he take too

much it will consume him. For it is hard a man to carry fire in his bosom and no be burnt.

"Show mercy unto the saints for Chr sake, and Christ shall reward you for saints' sake. Among all other prisoners your own soul, for it is inclosed in a peril prison.

"If ye will love God, hate evil, and ye shall obtain the reward of well doing.

"Thus fare you well good Anne. Have heartily commended unto all that love Lord unfeignedly. I beseech you, have in your prayer while I am living, and I assured the Lord will accept it. Bring up children and yours in the fear of God, then shall I not fail but receive you together in the everlasting Kingdom of God which go unto. Your husband,

ROBERT SMITH

"If ye will meet with me again,
Forsake not Christ for any pain."

From another letter—

"Content thyself, with patience,
With Christ to bear the cross of pain,
Who can and will thee recompense
A thousand fold with joys again.
Let nothing cause thy heart to quail!
Launch out thy boat, hale up thy sail,
Put from the shore!
And be thou sure thou shalt attain
Unto the port that shall remain
For evermore."

Some of the proverbial expressions in above "Sententious letter," seem to me words of a place with the best religious aptitudes.

The testimony so faithfully borne by Robert Smith against auricular confession, and the above letter), prayer for the dead, is from our observation in this day, when promiscuous Episcopalians are laboring to prove that fathers of their church favored those practices.

Of the closing scene, Fox says:

"The foresaid Robert Smith, the valiant and constant martyr of Christ, thus republished as ye have heard, with the fortitude of God's Spirit, was condemned at London Boney their Bishop, the 12th day of July, suffered at Uxbridge the 8th day of August, who, as he had been a comfortable instrument of God before to all them that were in prison with him, so now also being at the stake did no less comfort the people there standing about him, willing them to think well of cause, and not to doubt but that his dying in that quarrel, should rise again to 'And,' said he, 'I doubt not but God will give you some token thereof.' At length, he being well nigh half burnt and all black with clustered together as in a lump like a ball of coal, all men thinking him for dead, suddenly rose upright before the people, lifting up stumps of his arms and clapping the same together, declaring a rejoicing heart unto it and so bending down again and hanging in the fire, slept in the Lord, and ended mortal life."

Five of the companions of Robert Smith in imprisonment were burned about the same time with himself, and three others died of hardship in the Lollards' Tower in that year (1555). At about the same or a shortly subsequent period, Richard Smith died in same place and under similar circumstances as appears from Fox, who, speaking of period between that year and 1553, says under the heading, "Richard Smith died prisoner through cruel handling."

* "Consider their like practices upon us before mentioned in this history, as amongst other, upon Richard Smith, who died through their cruel imprisonment. Touching him, when a godly woman came to Dr. y to have leave that she might bury him, asked her if he had any straw or blood in mouth; but what he meant thereby I leave the judgment of the godly wise." Thus, through mysterious violence suffered he dark and dreadful dungeons of that tomb, the Lollards' Tower, perished surviving son of Simon and Joan Smith, brother so touchingly adured by the tyr Robert.

S.

For "The Friend."

A Country Ramble.

ow delightful is the freshness and verdure early summer, bringing with it the longing upend "in wood paths the voluptuousness." Having a favorable opportunity to this pleasure, I wandered alone down a lane, leading from a pleasant country to a meadow bordered by a wood. As I approached a large hickory tree that stood in the lane, the mellow chorus of voices from a pair of red-winged black-birds fell sweetly on my ear. Among them were a few robins, that listeners to the song, who, on my approach, flew to a distant tree, with the vigor-flight that belongs to them. A small stream of water crossed the path, draining adjacent low grounds, and revealing the presence of iron in the strata beneath, by the abundant deposit of rust which covered its sides and bottom, and the vegetable growth clothed them. I was somewhat surprised, early in the season to observe, darting over the surface, the slender bodied, long legged water spider, which walks on the water, as do animals do on the solid ground. Its gift is distributed by its six feet to as many feet on the water, and is so small that it is enough to break the tenacity with which particles are held together, and thus it is raised and moves on the surface with a freedom and security, which are the admiration of all thoughtful beholders. Each foot casts a slight depression on the surface, when the sun is shining, casts a peculiar and beautiful shadow of corresponding size on the ground below.

The path ended in the meadow, which had formerly been considered an irreclaimable almost worthless swamp, covered with trees as are found in wet ground. Forty years it was the favorite breeding place of an extensive colony of herons. The former owner became tired of his feathered neighbor whom he thought injurious to his timber, declared war against them. An attack was made on their fortress from two sides at once, and the result was a sad destruction of herons. The traditional reports of the heron vary from 30 to 50. The modern systems of draining, with the use of tile judiciously laid, has converted the heron swamp into arable land, and this season the plough overturned the sod for the first time properly since the creation of man, and ere long noble corn will wave where once was an insalubrious morass.

leaving the meadow, I entered a cart path leading through the woods. A delicious fragrance arrested my attention, and I found the path thickly bordered with the small blue violet, wasting "its sweetness on the

desert air." Soon I came to a clump of pine trees, whose aromatic odor invited the passer by to stop, and having found a smooth cedar rail, I rested there, and gave myself up to the impressions and thoughts which came unbidden. Save the gentle murmur of the wind through the pine tree tops, there was but little audible sound, except the loud cawing of the crows, who flew to and fro from a neighboring part of the forest, seeming earnestly engaged on important business. They rendered the quiet which prevailed more conspicuous by contrast, and brought to mind the language of Cowper—

"Sounds inharmonious in themselves and harsh,
Yet heard in scenes where peace forever reigns,
And only there, please highly for their sake."

The noble lines of Milton were revived—

"These are thy glorious works, Parent of good,
Almighty, that thine this universal frame,
Thus wondrous fair; thyself how wondrous then!"

To the mind which has been closely bent to the necessary business and duties of life, there is a pleasure and refreshment in thus occasionally stealing away from its usual cares, and bringing ourselves into contact with nature. But however much we may enjoy it, the feeling soon presents itself, that this is not our rest. The aspirations of an immortal spirit are not to be satisfied with these sights, sounds and feelings, though they are among the allowable and useful recreations given us by our Beneficent Father. We need for our full enjoyment, that precious sense of Divine Goodness which the contrite soul is often favored with, that heavenly peace which flows into the humbled heart, when in selfishness it wonders that it should be so favored.

For "The Friend."

The Journal of William Evans.

(Continued from page 291.)

"5th mo. 3d. The Quarterly Meeting for Discipline got through the little business which came before it with general harmony; our friend William Forster, Jr., having much acceptable and appropriate service amongst us.

"7th. Feeling much sympathy with our beloved friend William Forster, Jr., in the trying path in which he is led amongst us, and his way being increasingly discouraging, I was inclined to meet him at Cropwell and spend a day or two in his company; as he was about leaving the city with the prospect of being absent many months. Accordingly, in company with our worthy friend Richard Jordan, I attended that meeting in which they were both engaged in public labor. In the afternoon we rode to Moorestown, and were at the Monthly Meeting there next day. William was much opened into the state of the meeting, and upon several important doctrinal points. Richard Jordan also, in a forcible manner, labored to show the condescension of the Redeemer, and the danger those were in, who were crucifying Him afresh, counting the blood of the covenant an unholy thing, and doing despite to the Spirit of Grace. I believe we all left the meeting with heavy hearts from the fear that many had been beguiled, and were in jeopardy of becoming bewildered in the mazes of uncertain speculation, by following their own unmortified wills, instead of living under the daily operation of the cross of Christ." pp. 77-80.

Thirty years afterwards William Forster again visited this country, in the course of an embassy from the London Yearly Meeting, to present to the governments of Europe and the United States, a remonstrance on the subject of slavery and the slave trade. He was taken sick at a small inn in Tennessee, where he died after an illness of several weeks. This melancholy end of a great and good man, so far removed from his native home, deeply affected William Evans, and is thus noticed in the journal.

"1854, 2d mo. 6th. At the close of the (Quarterly) Meeting I was informed of the decease of our friend William Forster, of England, in Tennessee, at a house of entertainment about twelve miles from Knoxville. He had been sick from four to five weeks, and his life terminated on the 27th of last month. The death of such a Friend, so far from his native home, among people not Friends, and where probably many things necessary to make him comfortable could not be procured, after having been engaged more than fifty years in the service of the cause of religion, has very much affected me. But if we are prepared to be carried by angels, into the realms of ineffable bliss, it matters little what becomes of the tabernacle of clay. Yet such are the tender feelings of near connections and friends, they would desire to have every comfort extended to body and mind in the last conflict, that it would be in their power to bestow; and thus the sufferer might be spared the peculiar trial and anxiety he would be likely to feel under these circumstances of far separation from his near and dear relations. But the Lord can support, and make up every deficiency. He was buried, we have been informed, in the graveyard at Newberry, belonging to Friends." pp. 597-8.

William Evans performed several long journeys—not always without peril—in the course of his ministry. In five of these, namely, his first and last visits to North Carolina; in one to Virginia, in one to Ohio, and in another to Indiana he was accompanied by Henry Cope, who was an elder in the same Monthly Meeting with himself. He was William Evans' junior by six years; he had early known the yoke and discipline of the cross; and was remarkable from his youth upwards for his calm inflexibility in what he deemed right, for the gravity of his demeanor and his self-control; qualities which admirably fitted him for a companion and counsellor in this arduous service. He was the son of an eminent merchant, was brought up in his father's counting-house and made himself thoroughly master of its concerns. One of his favorite sea captains, told the writer of this that he was the completest merchant he knew. The confidence reposed in him by the mercantile community, and the places of trust he filled or was solicited to take, showed that the honors and distinctions of the world were within his reach. But he had chosen that better part, the humble self-denying path of the disciple of Christ. His great concern in life was to be found at the post of duty, fulfilling his part as a just and upright man, and walking humbly with his God. Exemplary in his domestic relations, prudent and sagacious in business, his life was prosperous and serene. In stormy times he maintained the faith without flinching, as a burden-bearer in the church he became one of its firmest pillars, and in his age he passed quietly away with little bodily suf-

fering. A favorite relative, who was much with him in his last illness, has recorded some of the scenes in that sick chamber, which ought not to be forgotten. On the 31st of the 7th mo. 1865, five weeks before his death, he said, "The approach of death is a very solemn thing. It is a thing I have not been unfamiliar with, during the severe illnesses I have known; yet now at last I seem stripped of every thing except dependence on the Lord's mercy." For nearly an hour and a half he continued an almost uninterrupted series of remarks over a wide field of christian truth. When he retired to his bed, his mind still full, he spoke of having been greatly favored in early life; through his whole life indeed, but that some of his strongest convictions, as to holiness of life, had been made at eight years of age. "Not," he added, "that I was more favored than others probably, in this respect, but I was favored with a desire to give more heed to these convictions than many are." After speaking of his desires to be found strictly upright, he added, "yet a man has nothing—noting to trust to but the mercy of God"—"when the bodily powers are enfeebled, the mental may be also; there may be no strong sense of spiritual ability, yet if a little sense is granted of the everlasting arms being around and underneath, that will sustain." His mind appeared to be so filled with these subjects that not seldom after an absence of some hours from his bedside, he resumed the conversation almost as if no break had occurred. Several times he roused as if from sleep, repeating some text and adding some commentary. On one such occasion he said, "Mary and Martha with their brother Lazarus, appear to have been humble people. There is no mention of either father, mother, wife or child. They do not appear to have done anything of note, or to have been of much account in the world, yet" (and here his voice trembled with emotion) "the Lord noticed them and loved them."

At the close of a long and interesting conversation he remarked, "These various passages, and others, show that God never left himself without a witness in all ages of the world. Christ was known spiritually to the righteous under the various dispensations, and though we have the privilege of the most glorious one, there never was a time when the light of Christ was not known, if men would but give heed to its teachings." After one of these conversations he said, "I seem to speak as if I were a teacher, but I say nothing that I have not been taught myself." Referring one day to the especial discipline allotted to him in early manhood, he spoke of his deep interest in scientific and intellectual pursuits generally; that it was a pleasure to him to be a student; but that at one time he found these pursuits must be laid aside, and that he was required to limit his reading to the Bible. He prayed very earnestly to be spared this heavy cross, but he found no peace till he yielded to it. For eighteen months or two years his reading was confined to the Scriptures and one or two Friends' books, after which he felt at liberty to extend it in other directions. He believed this restriction had been of great value to him, as by it his religious views became so thoroughly settled, that never afterwards was he tempted to deviate from the truth then manifested to him.

The relative who made these notes adds,

"Let me here state the profound impression made on me by what I witnessed in that dying chamber. The unwavering faith, the cheerful hope, the living trust in the mercy of God, through our Lord Jesus Christ, combined with a deep humility and tenderness of spirit that could hardly be surpassed, evidenced as nothing else could, the thoroughness of the work of the Holy Spirit in his heart."

Sudden Breaking-up of Ice.

A letter from Canada, in *Nature* for June 23d, 1870, gives some curious facts regarding the sudden breaking-up of ice covering lakes and rivers. The ice on our inland lakes is generally two or three feet thick. As the spring advances, an inch or two may be melted away from the lower surface, and somewhat more from the upper one, but the thickness is not materially reduced until its final disappearance. The first sign of the approaching break-up is that the ice becomes dry, from the prismatic structure having commenced to show itself, allowing the surface water to percolate through the interstices: it is then said to be honey-combed. In this state the lower layers of transparent ice are still solid, though if you cut out a block the prismatic structure is very evident; but the upper portion which has been formed from a mixture of snow and water, readily breaks up under your feet into little granules of ice. The next stage is that the ice becomes black, showing that it is soaked as it were, with water; and if at this time there is any open water, as where a river falls into a lake and wind enough to produce a swell, the whole surface of the ice may be observed to undulate. If the ice now breaks up prematurely with a high wind, it becomes a mass of specula of ice which have not reached the melting point, and which I have seen accumulated to the depth of six or seven feet against the edge of the ice which has not yet broken up. But if there is no wind the whole surface of the lake may appear an unbroken sheet of black ice, still a couple of feet thick, till, in an astonishing short time, sometimes not more than a few minutes it disappears as if by magic. So sudden is this disappearance that the ice is popularly believed to sink.

I once had a good opportunity of noticing this sudden disappearance. I had built on the ice during the winter a pier of logs filled with stones, and when the spring came it settled down to the bottom carrying with it a large cake of ice. When the lake had opened, I went round the pier in my canoe to see if it had settled evenly. There, at the bottom, in six or seven feet of water, lay the cake of ice it had carried down, with the chips made in building the pier still imbedded in it; and, as I looked, blocks would break off of a foot or more in thickness, and rise to the surface and almost instantly disappear. The true explanation of the prismatic structure appears to me to be the lines of air-bubbles. These are visible in all ice before any thaw has commenced, and in the process of freezing they seem to be found in vertical lines. When the thaw occurs these lines of bubbles form the centres, as it were, from which it penetrates in every direction through the mass.

He is a freeman whom the Truth makes free, and all are slaves beside.

"Without controversy great is the mystery of godliness: God was manifest in the flesh, justified in the spirit, seen of angels, preached unto the Gentiles, believed on in the world, received up into glory." Now this mystery of godliness being a great mystery, without controversy, it is best for professors of christianity to keep out of controversies as far as they can, and shun perverse disputemen of corrupt minds, with all their unlearned and unprofitable questions; and rather to be in their minds to the light of Christ—to the simplicity in him and watch thereunderstand this great mystery of godliness both with respect to God manifest in the flesh, and justified in the spirit.

The manifestation and power of Christ the flesh was excellent in him, and there his most precious precepts and doctrines wonderful works and miracles, his blessings and sufferings, he declared and showed forth the holy design of christianity. Truly sensible of his being justified in spirit, very precious, and arises from a true, spiritual living knowledge and experience of Christ, and not after the flesh, or any false knowledge of him; for, as wisdom is justly commended and praised for her children the fruits thereof in them, so Christ is justly and exalted in spirit, in his faithful followers his holy generation and children.—G. Whitehead.

Matter in the Air.—At the Royal Irish Academy, Dublin, Dr. Sigerson has given an interesting lecture on *Microscopic Appearances obtained from Special Atmospheric* which, as was to be expected, he explained in examining the air of factories, workshops, he found the atmosphere charged with particles according to the nature of the trade carried on. In an ironery he found carbon, ash, and iron, the being in the form of translucent hollow one-two-thousandth of an inch diameter the air of a shirt factory, filaments of and cotton and minute eggs were found and in places where grain is thrashed converted, the floating dust is fibrous starchy, mingled with vegetable spores according to Dr. Sigerson, the dust of a saw-mill is more hurtful than any, and as rains should be taken to get rid of it at a of the grinding-mills of Sheffield. In t of type-foundries and printing-offices, many exists; stables show hair and animal matters; and the air of dissection rooms is described as particularly horrible. All this is very disagreeable to think of while it manifests that we should be careful to purify the air we breathe, it teaches that nature has given us a respiratory apparatus endowed with a large amount of protecting function.

The very beginning of Christ's mission in the Spirit and power of God, where redeems out of the spirit and power of Satan and to this men are to be turned, if the witness salvation by Jesus Christ; even the light and power of God's Holy Spirit which breaks the darkness and stirs the kingdom of Satan in the heart.—1

'Tis greatly wise to talk with our hours, and ask them what report they to Heaven.

THE BURIAL OF MOSES.

and he buried him in a valley in the land of Moab, against Bethpeor, but no man knoweth of his sepulchre into this day."—Deut. xxxiv. 6.

By Neho's lonely mountain,
On this side Jordan's wave,
In a vale in the land of Moab,
There lies a lonely grave;
And no man dug that sepulchre,
And no man saw it o'er,
For the angel of God upturned the sod
And laid the dead man there.

That was the grandest funeral
That ever passed on earth;
But no man heard the trampling
Or saw the train go forth.
Noiselessly as the daylight
Comes when the night is done,
And the crimson streak on ocean's cheek
Grows into the great sun;—

Noiselessly as the spring-time
Her crown of verdure weaves,
And all the hills on all the hills
Open their thousand leaves,—
So, without sound of music
Or voice of them that wept,
Sleently down from the mountain crown
The great procession swept.

Perchance the bald old eagle
On gray Bethpeor's height,
Out of his rocky eyry
Looked on the wondrous sight.
Perchance the lion stalking
Still shuns that hallowed spot,
For beast and bird have seen and heard
That which man knoweth not.

But when the warrior dieth,
His comrades in the war
With arms reversed and muffled drum
Follow the funeral car.
They show the banners taken,
They tell his battles won,
And after him lead his masterless steed,
While peals the miniate gun.

Amid the noblest of the land
Men lay the sage to rest,
And give the hard an honored place
With costly mantle dressed;
In the great minster transept,
Where lights like glories fall,
And the choir sings and the organ rings,
Along the emblazoned wall.

This was the bravest warrior
That ever buckled sword;
This the most gifted poet
That ever breathed a word;
And never earth's philosopher
Traced with his golden pen,
On the deathless page truth half so sage]
As he wrote down for men.

And had he not high honor,
The hillside for his pall;
To lie in state while the angels wait
With stars for tapers tall;
And the dark rock pines, like tossing plumes,
Over his hier to wave;
And God's own hand, in that lonely land,
To lay him in the grave.

In that deep grave, without a name,
Whence his uncoined fail
Shall break again—most wondrous thought—
Before the judgment day,
And stand with glory wrapped around,
On the hillside he no more shall
Speak of strife that won our life
And with the incarnate Son of God.

O lonely tomb in Moab's land,
O dark Bethpeor's hill,
Speak to these curious hearts of ours,
And teach them to be still,
God hath his mysteries of grace—
Whays that we cannot tell;
He hides them deep, like the secret sleep
Of him he loved so well.

For "The Friend,"

John Ruttly.

In the year 1756, John Ruttly published a little work entitled "The Liberty of the Spirit and of the Flesh Distinguished," designed to bring into view the degeneracy from the simplicity of their forefathers which was then spreading among Friends. As many practices and sentiments are now pleaded for in conformity with the changes constantly occurring in the world, I have made some selections from the work which appear to me to be equally applicable to the present times, and may stimulate to faithful perseverance those who still venerate the Christian principles and example of the ancient Friends, and desire to be found following them as they followed Christ.

"That there is a gross and palpable declension among the present generation of the people called *Quakers*, from the spirit and practices of their predecessors, is abundantly manifest. Nor indeed to those who know how to trace effects from their causes, is this at all to be wondered at, these transgressions being no other than the genuine productions of the native soil, the heart of man, that hath not been subjected to the discipline of the holy cross.

To dare to oppose the modish inroad of the follies and extravagancies of the times, requires a fortitude not born with us, but such as must be acquired by no small share of spiritual industry, and indeed a power more than human.

It must be owned, that a mere conformity to the traditions of the elders in exterior matters, is far from entitling any man to the kingdom of heaven, and so is every thing short of *regeneration*, according to our Lord's doctrine; besides a 'Non-conformity to this world, we must be transformed by the renewing of our mind,' agreeable to the precept of the apostle.

It was not, however, the policy of this world, or a mere principle of parsimony that led them into these things, but a clear illumination of mind, by which they saw the vanity, folly, and wickedness of the world in many of its practices, and therefore conscientiously declined them, and as now at length, through the persevering constancy of the faithful, the prejudices of the people are in a great measure overcome, and many sober persons of other societies begin to be convinced of the reasonableness of many of our practices, and even to recommend them as most consistent with the strictest justice and prudence, the present reigning degeneracy of those who are yet called by our name, becomes very unseasonable, and, like the conduct of the spies of old, who brought up an evil report of the land of Canaan, tends to discourage the progress of the reformation, or the spreading of that light and truth which, through the favour of providence, hath dawned among us.

That purity and simplicity of manners, consisting in the renunciation of the superfluities and vanities of the world, by which our elders were, and the faithful still are, distinguished, was no affected singularity, nor was it any other than the result of a conformity to the doctrine and precepts of Christ and his apostles, and perfectly agreeable to the idea given us in the New Testament, of the estimate proper to be made of the state of man in this world as a transient habitation, a stage of probation and preparation for a better and happier state, as appears from the following texts:

'Lay not up for yourselves treasures upon earth, &c. 'Take no thought what ye shall eat, and what ye shall drink, or wherewithal ye shall be clothed (for after all these things do the gentiles seek), but seek ye first the kingdom of God, and his righteousness, and all these things shall be added unto you.' We have no continuing city here, but seek one to come.' And 'To me,' says the apostle Paul, 'to live is Christ, and to die is gain, and I am in a strait betwixt two, having a desire to depart, and be with Christ which is far better; nevertheless, to abide in the flesh is more needful for you.' And Christians are represented as 'pilgrims, strangers and sojourners here.' And Christ said, 'How can ye believe who receive honour one of another, and seek not the honour that cometh from God only?' And the apostle James, 'That the friendship of the world is enmity with God,' and 'whosoever will be a friend of the world, is the enemy of God.'

Hence it is evident, that all such who would, in earnest, copy after the primitive pattern, ought to renounce the surfacing cares, superfluous profits, vain pleasures and honours of this world.

It must be owned, that the course of this world is not steered according to such maxims, and that among the professors of Christianity there are but few who are found in the exercise of a self denial perfectly consistent herewith; and the distinction which our Lord himself made between the *children of this world*, and the *children of light*, holds good to this day.

It is well known that this people did ever from the beginning conscientiously decline the use of the customary recreations and pastimes of the age, and condemn the vain pomps and superfluities of the world in eating, drinking, apparel, furniture, and even in trading, as unbefitting the character of a people called of God out of the corruptions of the world, and to shine as lights to the conviction of a degenerate age of professed Christians.

As to points of honour and liberty, upon which some men seem to value themselves, for my part, I know of no greater honour to a man than to maintain an uniform, consistent character in the conduct agreeable to his profession; on the other hand, to profess and behave as a Christian freeman in some respects, and put on the evident badges of slavery in others, is a character ridiculous in itself, to which may not be unfitly be applied the comparison wherby the prophet represented the state of Ephraim, viz. 'Ephraim be hath mixed himself among the people: Ephraim is a cake not turned,' viz. *partly raw, and partly baked.*

Our faithful elders bravely asserted, and steadily maintained their Christian right and liberty of declining many of those customs of the world, which were, and are, destructive both of health and wealth; and moreover, by their steady perseverance, have rendered the path so easy to us their successors, that very little hardship now attends a strict and faithful adherence to their wholesome traditions; so that if any of us be now deprived of our rights and liberties in these respects, it must betray an extraordinary degree of cowardice and folly, even that whilst liberty is offered, we should prefer slavery; and the mark of infamy which, under the law, was set upon such as chose a state of outward slavery, when liberty was offered them, viz. 'That their masters should bore their ears through with

an awl, and they should serve them for ever," is a fit representation not only of the reproach due to, but of the dreadful entailment of perpetual spiritual slavery on, those who persist in refusing Christian liberty when offered to them.

Upon the whole, as an uniform, consistent, faithful conduct, agreeable to our peculiar profession, tends to preserve us out of the corruptions of the world, and to distinguish us as 'A city set on a hill that could not be hid,' on the contrary, the tendency of the conduct of the modern liberties, so called, is, to dissolve and destroy all distinctions peculiar to this Society, to pull down the hedge, and destroy the fence of Christian discipline, by which we should be preserved, as a garden enclosed, from many noxious things, to which others are exposed, to blend and confound our language and manners with those of the world, and why? The moving cause is clear, viz. to ingratiate themselves with, and render themselves acceptable to, the world, (and indeed such are as much children of this world as others,) according to the saying of our Lord to his disciples: 'If ye were of the world, the world would love its own, but because ye are not of the world, but I have chosen you out of the world, therefore the world hateth you.'

Now, therefore, O ye degenerate children, and despisers of your own mercies, ponder the path of your feet, even your back-slidings from the footsteps of your forefathers, and turn about in due time, and consider what befell a people formerly, who, when they 'knew God, glorified him not as God, neither were thankful, but became vain in their imaginations, and their foolish heart was darkened, professing themselves to be wise, they became fools,' &c., whom God 'gave up to uncleanness, through the lusts of their own hearts.' I say, turn about now in due time, lest a like dreadful desertion should also attend you, and a fate analogous to that of those who were called the children of the kingdom formerly, viz. that they should be cast out whilst others should come 'from the east, and west, and should sit down with Abraham, and Isaac, and Jacob, in the kingdom of Heaven.'

I earnestly wish that such of the rich and great into whose hands this address may come, may in an especial manner be favoured with a feeling sense of the justness of the admonitions herein contained, because as to the splendor and gaiety of living, and, indeed, in most cases, these are the fashion-makers, whom the meaner people blindly follow, and therefore are doubly guilty, as being not only captives themselves, but leading others into the same state."

Scientific Seraps.

Cutting Glass with Steel.—The cutting of glass with steel has been demonstrated to be possible, provided its point is ground into the form of a common glazier's diamond. But while hard steel of this form will cut glass, it is difficult to bring a steel point to the required shape, and it also soon wears out and becomes worthless, until reground. Many efforts have been made to make a tool of steel that would compete at least approximately with the real diamond for this purpose. It has been discovered that a small cylindrical point of steel, when made to rotate upon glass in such a manner that its longitudinal axis shall make an angle of 45 degrees with the surface of the

glass, approaches in effect so nearly to that of the real diamond that it is a very cheap and effective substitute.

Newest Coloring Matters.—A lecture has been given by W. H. Perkin, at the Royal Institution, "On the Newest Coloring Matters." Among the many interesting facts then put forward was the discovery of a beautiful blue color, by a German chemist, on treating rosoline with sulphuric acid. Unfortunately, it was not a "fast color." A dyer made many trials therewith, in the hope of turning it to account, but all in vain. He happened to mention his difficulty to a photographer, who, knowing that hyposulphite of sodium would fix a photograph, recommended the dyer to try that. The trial was made; when mixed with the hyposulphite, the bine became a beautiful green, and, better still, a "fast color." This was the origin of that brilliant dye commonly known as "Night green," because of its remaining unmixable green in appearance when seen by artificial light. Let it be remembered that nearly all the new colors are extracted in some way from coal tar; that the first was discovered not more than 13 years ago, and that the annual value now manufactured is 1,250,000 pounds, and it will be seen that in the industry created by these new products there is an admirable example of the results of scientific investigation. The best of it is that the field is inexhaustible; for many years to come it will yield a rich harvest of discoveries.

The Ocean Telegraph.—Expert operators are able to transmit from 15 to 20 words per minute through the Atlantic cable. The velocity with which a current or impulse will pass through the cable has been ascertained to be between 7,000 and 8,000 miles per second; the former being the velocity when the earth forms a part of the circuit, and the latter when it does not.

Water-proofing Walls.—One of the most recent of the many uses to which Frederick Ransome's process of manufacturing artificial stone has been applied, is in protecting the outer walls of buildings, so as to enable them to resist the action of the weather by making them water-proof. Through well-built and substantial walls, moisture will make its way, and the ordinary type of dwelling-houses is very pervious to wind driven rain. We recently noticed what F. Ransome is doing in preserving stone, and his system of water-proofing is only an application of the same process.

The external surfaces of the walls to be protected are first washed with a silicate of soda or solution of flint, which is applied again and again, until the bricks are saturated, and the silicate ceases to be absorbed. The strength of the solution is regulated by the character of the bricks upon which it is to be applied, a heavier mixture being used upon porous walls, and a lighter one on those of denser texture. After the silicate has become thoroughly absorbed, and none is visible upon the surface, a solution of chloride of calcium is applied, which, immediately combining with the silicate of soda, forms a perfectly insoluble compound, which completely fills up all the interstices in the brick or stone, without in any way altering its original appearance. By this operation the wall is rendered perfectly watertight, and, as the pores of the bricks are thoroughly filled for a considerable depth from the surface with the insoluble compound,

which is entirely unaffected by atmospheric influences, no subsequent process is necessary.

Already F. Ransome has successfully applied this process to a large number of things, several of which were previously uninhabitable from the constant damp and a lengthened experience has proved it is not only thoroughly effective; but, the comparative insignificance of its cost, and the fact that renewals are not required, the system recommends its general adoption in preference to all methods of water-proofing.

New Property of Gun-Cotton.—Some experiments made at the Woolwich Arsenal, London, encourage the hope that cotton can be successfully used as a most constructive agent. A palisade was built of timbers a foot thick, firmly fixed in ground, and supported in the rear by strusses. Discs of gun-cotton were placed along the face of the palisade about 4 inches above the ground, and were fired by a battery in the usual way. The effect may be described as wonderful. The palisade was blown away amid a deafening report, as massive timbers offered no more resistance on one side of the gun-cotton than the other. The discs required fixing; merely lay them on is insufficient. Blocks of iron and stone can be shivered into fragments by firing a disc laid on them. In future sieges, if some desperate fellow but get to the gate or a thin part of the wall and hang on a few discs of gun-cotton, breach can be made by firing with a gas current from a long distance.—*Annual Scientific Discovery.*

For "THE F

Candor. Our Late Yearly Meeting.

"There is an unhappy propensity, even good men, to a selfish, narrow, censorious of mind; and the best are more under the power of prejudice than they are aware of; and candor among the professors of the same gospel, is too visible in the present day. A truly candid person will acknowledge what is right and excellent in those whom he may be obliged to differ; he will not charge the faults or extravagance of few upon a whole party or denomination; he thinks it his duty to point out the errors of any persons, he will not to them such consequences of their tenets as they expressly disavow; he will not fully misrepresent or aggravate the takes, or make them offenders for a word which will keep in view the distinction between those things which are fundamental and essential to the Christian life, and those of which a difference of sentiment may often be obtained among true believers that the arm of the Lord might be revived that candor which the apostle strongly enforces, both by precept and plea. Then the strong would bear the infirmities of the weak."

The above extracts on Candor have suggested by a part of what occurred last Yearly Meeting. Some of the remarks made there could but remind of the words of the dear Saviour to two of His disciples, that they would have commanded fire to come down from heaven to consume some who know not what manner of spirit ye are before speaking in such meetings, as

here, we could commend those to be adorned with our own poor souls to the Lord's love and mercy and blessing, it would surely be the tendency so to conciliate our hearts in kindness and pity, that what might be regarded as the melting character of the vine love as thus defined by Isaac Pennington: "How kind is it even in its interpretations and charges concerning miscarriages! It is not of him whom it reproves; it never punishes, it never provokes; it never rebukes, it never carries a rod of anger and power of conviction with it. It is the nature of God; this, in the vessel used to receive and bring it forth in is the power of enmity is not able to stand against it, but falls before, and is overcome by it." words of David, concerning his son Absalom, to Joab are well worthy of our deep consideration on these occasions, lest we prostrate and turn back those whom we should have loved or edified: "Deal gently with him for my sake." Another injunction of Holy Scripture should also claim our serious thoughts: "See that thou hurt not the oil and the anointing." In whatever degree we are under the influence of self, or a merely creaturely principle, we shall be in danger of doing this; perhaps we are more often under such an influence than we are aware, and actually do this for a zeal which we may think is tending to godliness. The tree is known by its fruits. And "only that which comes down from God."

What was said about "the name of the Lord," and vocal offerings in prayer, perhaps do not need enough consider that truth may be with or without words; and not out of feigned lips. He who calleth for an offering, and who alone can enable us to pray as they ought, is a God that seeth the heart, and looketh at the heart. There is not that a godly number of those as on the occasion alluded to, knew as was at times to have their souls poured out in humble, fervent supplication to the Lord for spirits for his help and blessing, can in measure witness to what is desecrating the ancient Jewish ceremony, that though they were not continuing, yet the fire never went out on the altar: and also that which the dear Lord has left us: "My time is not yet come, but my time is always ready." How careful we be in this indispensable christianity of not going before our Guide; of not guilty of presumptuous sins like Saul (1st Sam. 12), who said, "I forced myself, and offered a burnt offering;" of going, unbidden, the calves of our lips; running in, or proclaiming the name of the Lord, when the Lord has not sent us, surely if we do thus, the formal oblation bring no glory to God; do no good to fellow-creatures; nor secure any true to our own minds. "The Lord seeth man seeth." "The Lord is a God of knowledge, and by him actions are weighed."

And I never again have an opportunity of seeing thee, I now do it with great sincerity, in my belief, that the inward revelation will of God to man by the operation of His Holy Spirit, is the only ground of having our understandings opened, fully to see into the mystery of the revelation of love of God, in and through Jesus

Christ our Lord. It is only by a due submission to this inwardly revealed will, that we can perceive and feel the advantage and efficacy of the sacrifice of our dear Redeemer on Calvary's mount, where I believe he tasted death for every man; and where he bowed his holy head and said "it is finished," every human soul was placed in a salvable condition. And although in his inscrutable wisdom the outward knowledge of the gospel has been withheld from millions of his fellow men, yet in every clime "those that fear him and work righteousness will be accepted of him," notwithstanding the accumulated disadvantages under which they have laboured.—George Wither.

THE FRIEND.

FIFTH MONTH 13, 1871.]

"Indices, historical and rational to a revision of the Scriptures."

A work with the above title has recently been put before the public by David Newport, who claims to be "A member of the Society of Friends," and who has dedicated it "to the Society of Friends."

The kind of revision he says he desires, is to be in accordance with science and reason, to meet the demands of the times. But his object appears to be, so far as his effort can accomplish it, to undermine all belief in the authenticity of the Scriptures as we now have them; to induce his readers to believe that much of what are called the four Gospels, and parts of the Epistles, are cunningly devised fables, compiled by different persons in different ages; to destroy belief in the deity of Christ; who he represents as having been "transformed into our Lord and Saviour Jesus Christ," "in order to satisfy the cravings for new gods," in Greece, "we had been but recently worshippers at the shrines of the heathen divinities" (page 88) and to induce whoever he can persuade thereto to reject, what he is pleased to call the "narrow, unphilosophical, untenable and uncharitable creed" of "evangelical christianity." (page 217.)

So far as we have looked through the book we have discovered nothing new in the data, nor does it differ, in any important respect, from the oft refuted reasoning of deistical writers. With the painful feelings called forth by witnessing such labored attempts to bring the Son and Sent of the Father to the level of a mere man, and to destroy the faith and hope of the christian, there is mingled commiseration for any one who thus allows himself to be made an instrument so to darken and bewilder others as may possibly mislead them to eternal destruction. Surely if such would acquaint themselves with the lives and deaths of those who have engaged in the same cause before them, the teachings of the past might convince that all such attempts to invalidate the truth of the Holy Scriptures, and destroy the christian faith as set forth therein—so signally established and realized as they have been in the experience of every true disciple of Christ from one age to another—is worse than vain, it is like "running upon the thick bosses of the Almighty's bucklers." How unhappy have been the lives of many who have used the talents conferred on them,

in this unrighteous cause, and how awful their situation when death found them either in stupid indifference or agonized despair! The humble, confiding christian who has been favored, through the operation of the Holy Spirit on his soul, to lay hold of Christ Jesus, as his Redeemer and Saviour, knows that flesh and blood has not thus revealed Him unto him, but his reconciled and loving Father in heaven, and all the sneers, the cavils and arguments of the sceptic, move him not; nor has he fear that their assaults on christianity will succeed, for he remembers that his Master and Lord has said, upon this Rock, (himself,) I will build my church, and the gates of hell shall not prevail against it.

We have felt it a duty to notice this work, in order to say, that though the author may assume the name, he is not a Friend, nor is the Society of Friends in any way responsible for the anti-christian sentiments he seeks to promulgate.

By the language used we suppose he is in membership with those who separated from Friends in 1827—8. We are loath to believe that there are not many among them who will repudiate the opinions published in this work, but so long as their Society adheres to the "dogma" so often uttered by Elias Hicks that "belief is no virtue and unbelief no crime," they will have to share in the responsibility of all such unitarian productions of its members, whether preached or put forth by the press. It is to that Society (commonly called Hicksites, to distinguish them from Friends,) that the author alludes in the following. "But I hear some reader exclaiming, Handle not in so irreverent a manner the 'Word of God.' I reply that it must be kept in mind that this book is dedicated to a religious Society, who do not believe in infallible books nor in infallible men! we believe, not in an external but in an Internal Word, that in the language of scripture is 'the word that is nigh thee, even in thy mouth, and in thy heart.' (page 73.) The Society of Friends, though they give not the title "Word of God" to the Scriptures, and know there are inaccuracies in the English translation, yet believe them to have been written by holy men of God as they were moved by the Holy Ghost, and to contain all the essential doctrines of christianity, and that the Word which was in the beginning, which was with God and was God, took flesh in "that holy thing" which was born of the Virgin Mary, and dwelt among men; and that he, Jesus Christ, was infallible, for in Him the Godhead dwelt bodily; and that He is the author of eternal salvation to all those who have living faith in Him. Were a member among Friends to promulgate opinions contrary to these, or such as the author of "Indices" has put forth, and he could not be reclaimed, he would be disowned from the Society.

In the work there are short extracts taken from the writings of several of the early Friends, all of which are misrepresentations so far as they are brought forward to induce the reader to suppose that they held similar views with the author on the subjects treated of, views which those christian men would have condemned and loathed.

We have received a copy of each of the small works mentioned in the following explanatory printed communication from their

author, which we prefer giving to our readers in place of any observations of our own.

THE BIBLE AS A WHOLE.

The common proverb, "Familiarity breeds contempt," can obviously be true only of superficial observers and livers, whose tastes incline them to observe or to imagine contemptible things or qualities. To a true sagacity and a manly aspiration, familiarity will be a sure road to reverence in anything at all deserving of reverence. In the too frequent absence, however, of those noble traits, any enforced or solicited familiarity with even the best of persons or things must obviously be fraught with dangers which need at least to be provided for. Unpalatable truths must not be allowed to be trodden under foot, merely because unpalatable.

The testimony of the ages incline reverence for the Bible as a whole. The progress of science in our time has revealed the fact that the merely intellectual interpretation of its contents in past times has been more or less erroneous. As a consequence, it becomes an interesting duty of all lovers of established truth, and of all seekers of progress in truth, to explore how far these misinterpretations may be traced to the mere limitations of the human intellect, with the closely allied limitations of human language, at those earlier stages of progress in the universal truth of matter, mind, and spirit.

It has been the purpose of the writer of an allegorical effusion entitled "Aspects of Humanity," published by J. B. Lippincott & Co., and of two series of essays collectively styled "Windfalls" and "Sober Thoughts on Staple Themes," published by Claxton, Remsen & Haffelfinger, to vindicate, as he apprehends it, has not been elsewhere vindicated, the truth of the practical teachings of the Bible as a whole. There are indeed only incidental allusions to those teachings in detail; but in so alluding, the obligation has been recognized of seizing or seeking in all cases the spiritual aspect or import of the inspired utterance, and of distinguishing between its perfection and fulness, and the imperfection and limitation of the forms of thought and language. So only, obviously, can both thought and language retain that modified validity, which is all that, in any human interpretation and exposition, they can claim.

The writer has not hoped to escape—he has written rather with the view of indicating the impossibility of escaping—the confusion of subject and object in those last analyses of knowledge and experience, in which it becomes necessary to speak of power as a thing, of motion as a fact, and of life as an idea. He has sought, not to remove the ground of mystery, but simply to trace therein the firm foundations of the eternal principle of order.

Philadelphia, 5th mo. 1871.

SUMMARY OF EVENTS.

FOREIGN.—On the 6th and 7th inst. conferences were held at Frankfurt, between Bismarck and Baron Von Arnim, on the part of Germany, and Jules Favre and others representing the government of France. They alleged that the payment by France of the contribution in accordance with the preliminaries of peace was impossible, and asked for concessions, offering as an equivalent the prolongation of the commercial treaty and advantageous arrangements with the eastern railways. They also desired such modifications of the treaty as would aid in the suppression of the Paris revolt, viz., the possession of Forts Charenton, Nogent, Rosny and Noisy by the Versailles forces; also the restoration of

some of the captured arms and munitions, and a prompt return of all prisoners of war. It is understood that an agreement was reached on the main points, and that it will be submitted to the French Assembly and the German Emperor for ratification. Pending the conference the latter telegraphed to Bismarck, saying: "While strictly adhering to the preliminary treaty, I will nevertheless demand at possible facilities for a complete understanding. I am willing to fully discuss the means for an early suppression of anarchy and for the establishment of a legal government in France."

President Thiers, in a proclamation to the people of Paris, says the Germans declare they will not recede until the war unless the insurrection is at once suppressed. He requests the citizens to reunite and open the gates. The work of cannon will then cease, and tranquility and abundance take their place. The promise of amnesty and due provision for the poor, are also held out to induce submission.

Versailles dispatches intimate that if the Germans should again take and hold the capital, the restoration of the Imperial government may be apprehended. The contest around Paris between the forces of the Commune and those of the government have continued without marked results, though the latter appear to be slowly gaining ground. Scarcely any engagements have taken place since Saturday, and the Communists have lost many men killed, wounded or captured. At one time they abandoned Fort d'Issy, but subsequently rallied and retook it.

General Cluseret has been removed, and the control of the entire Communist army has been given to Gen. Rossel. General Dombrowski and others have subordinate commands. The military abilities of General Rossel are said to be much above those of Cluseret.

Provisions are scarce in Paris, but limited supplies still arrive by the northern railway. The Communist railway companies have all paid the sums demanded of them, and 1,680,000 francs have been received by the Commune from that source. Hereafter weekly payments will be required.

The Prussians having demanded the strict execution of the terms of capitulation, the Paris Commune has attempted to reduce the garrison in Fort Vincennes. It is now held by only a small force.

Several agents of the Paris Commune have visited London with authority to enter into contracts for the purchase of provisions for the city, but as they proposed to pay in thirty days, the dealers declined to contract with them.

A London dispatch says, that the Emperor Napoleon declared on the first inst. that he would not return to France, nor listen to any proposition for his return. It was however rumored in London on the 8th, that he had gone to France secretly, relying upon the disaffection in the army for support in an attempt to regain the throne. The imperialists are said to be very active in the rural districts of France.

On the 6th inst., a sortie was made from Paris in the direction of Issy. The insurgents were repulsed with severe loss and fled to Paris. The misunderstanding between the Sultan of Turkey and the Khedive of Egypt has been entirely removed. The Sultan has sent an embassy to Berlin to congratulate the Emperor William upon his accession to the throne of Germany.

Advices from Buenos Ayres to 4th mo. 12th, state that the cholera is suffering frightfully from the ravages of yellow fever. The deaths had increased to seven hundred per day.

Earl Granville announced in the British House of Lords, that the government had received official dispatches confirming the safety of Dr. Livingston, and that the understanding between the Sultan of Turkey and the Khedive of Egypt has been entirely removed. The Sultan has sent an embassy to Berlin to congratulate the Emperor William upon his accession to the throne of Germany.

After much contention over the ministerial budget in the House of Commons, it was finally carried by a majority of 46. The bill enfranchising women, gave rise to a spirited debate in the House, and was rejected on the second reading by a majority of 69. Jacob Bright, Lord John Manners, Professor Playfair, and others, advocated the measure, and it was opposed by Gladstone, Bouverie, and Barington. The House then discussed the bill for the new army regulation bill continuing the discussion in the House of Commons. The proposed abolition of the purchase of commissions is strongly condemned by some of the military members. Cardwell, secretary of state for war, denied that the changes proposed by the bill would subject the army to any loss of position or status since the introduction of the measure had brought full prices.

London, 5th mo. 8th. Consols, 93½. U. S. si. 1862, 90¼; of 1867, 92½; do. ten-forties, 89¼.

Liverpool.—Uplands cotton, 7½ d. 8½; Or 7½ d. 7½ d.

UNITED STATES.—According to a Washington dispatch, the Joint High Commission came to an agreement at a meeting held on the 6th inst., treaty was signed. It has next to receive the sanction of the President and Senate.

The revised census of California gives a population of 560,223. The number of inhabitants in 1850 was 99,077, and in 1860, 379,994.

The internments in Philadelphia last week numbered 248. There were 34 deaths from consumption, 248 disease, 15 inflammation of the lungs, 8 of 9 and old age. The mean temperature of the month by the Pennsylvania Hospital record was, the highest during the month, 85.50 deg., and lowest 88 deg. The amount of rain for the month inches. The highest mean temperature for the past years, occurred last month: the average in that period, for the Fourth month, was 61.56 deg. The lowest mean occurred in 1794, 44 deg.

The President has assented to a proclamation calling attention to the recent act of Congress to "enforce provisions of the Fourteenth Amendment to the Constitution of the United States, and for other purposes." He declares his reluctance to call into exercise the extraordinary powers conferred on him by it, but that he will not hesitate to do so when securing to all citizens the peaceful enjoyment of rights guaranteed to them by the Constitution and the laws of the United States.

The estimated loss to the Louisiana sugar crop the Bonnet Creek crevasse, is more than 30,000 heads, or thirty million pounds.

The immigration into Kansas and Nebraska this season is very large. At Quincy, Illinois, 7,000 emigrants cross weekly for all points.

The weather at San Francisco is warm and dry market is supplied with strawberries in such profusion that they are sold by retail at from four to six cents per bushel.

The Markets, &c.—The following were the quotations on the 8th inst. New York.—American gold, 111 U. S. sales, 1881, 117; ditto, 5-20's, 1868, 113 10-40, 5 per cents, 108 ½. Superfine flour, 55.00 finer brands, 56 a 50.00. Amber western fine, 3.55 a 3.60; No. 2 Chicago spring, 81.50. Butcher's 81.00. Oats, 65 a 69 cts. Western mix 78 a 80 cts.; yellow, 81 cts. Philadelphia.—Cot 1 15½ cts. for uplands and New Orleans. 8 flour, 55.25 a 55.75; finer brands, 86 a 87.75. Red wheat, 41.51; western, 41.55 a 41.60. Corn, 63 78 cts.; No. 2 cts. Bacon, 85s, 11½ a 12½ cts. Beef, 8 a 9 cts. Timothy, 55 a 56. Flaxseed, \$2.10. About 2,000 head of beef cattle were on Avenue Drive-yard. Extra at 8 a 8½ cts.; fair 6 a 7½ cts., and common 4 a 6 cts. per lb. Woolled sheep sold at 15 a 8 cts. per lb. Corn fed hogs, 88 a 90 lbs. net. Chicago.—No. 2 wheat, 1.26 54½ cts. Oats, 48 cts. Rye, 89½ cts. Earle Cincinnati.—Family flour, 76.50. Red wheat 1.40. Oats, 52 a 55 cts. Barley, 81.15. Lat. Cotton, 44 a 44½ cts.

FRIENDS' BOARDING SCHOOL FOR THE CHILDREN, TUNESSA, NEW YORK.

A suitable Friend and his wife are wanted charge of this Institution, and manage the F. nected with it. Application may be made to Ebenezer Worth, Marshallton, Chester County, Pa.; or to Wm. H. West, 50 N. E. Phila. Samuel Morris, Olney P. O., Joseph Scattergood, 413 Spruce Street.

FRIENDS' ASYLUM FOR THE INSANE. Near Frankford, (Twenty-third Ward,) Philadelphia. Physician and Superintendent.—JOSHUA H. NIXON, M. D.

Applications for the Admission of Patients made to the Superintendent, or to any of the Managers.

For "The Friend."

(Continued from page 298.)

Now imagine,—can you?—rising up, sheer sharp, on each side of this line of fertile top, irregularly-flowing and variously-lyred walls of granite rock, thrice as high as the Connecticut valley's Mounts Tom and Yoke, twice as high as Berkshire's Grays, and quite as high as New Hampshire's Mt Washington. The color of the rocky dity varies. A grayish drab or yellow is dominant shade, warm and soft. In large s, it whitens out; and again it is dark and colored as if by long exposure to rain and y shades are thrown into sharp contrast single wall. More varied and exquisite are the shapes into which the rocks are own. The one great conspicuous object the valley is a massive, two-sided wall, ding out into and over the meadow, yelsh-gray in color, and rising up into space, roken, square, perpendicular, for full three-eters of a mile. It bears in Spanish and an, the name of the Great Jehovah; and easy to believe that it was an object of ship by the barbarians, as it is not diffi- for civilization to recognize the Infinite t, and impossible not to feel awed and tled in its presence.

In other places these mountain walls of t take similar and only less majestic shapes; le as frequently they assume more fantas- and poetical forms. Here and there are nd massive domes, as perfect in shape as on's State-house dome, and bigger than entire of a dozen State-houses. The high- rock of the valley is a perfect half-dome, sharp and square in the middle, and ris- near a mile or five thousand feet,—as high mount Washington is above the level of sea,—over the little lake which perfectly rors its majestic form at its foot. Perfect im- mists take their places in the wall; then e pyramids come in families, and mount y, one after and above the other, as 'The e Brothers.' 'The Cathedral Rocks' and e Cathedral Spires' unite the great im- siveness, the beauty and the fantastic is of the Gothic architecture. From their

shape and color alike, it is easy to imagine, in looking upon them, that you are under the ruins of an old Gothic Cathedral, to which those of Cologne and Milan are but baby-houses.

"The most common form of the rocks is a slightly sloping bare wall, lying in long, dizzy sweeps, sometimes horizontal, sometimes perpendicular, and stretching up and up so high as to cheat the valley out of hours of sunshine every day. Here huge arches are carved on the face; there long, narrow shelves run mid-way, along which and in every available crevice, great pines sprout and grow, yet appearing like shrubs against the broad height of the wall; again, the rock lies in thick folds, one upon another, like the hide of the rhinoceros; occasional columns stand out as if sculptured upon the surface; sometimes it juts out at the top over the valley like the brim of a hat; and then it recedes and sharpens to a cone. Many of the various shapes and shades of color in the surface of these massive walls of rock, come from the peeling off of great masses of the granite. Frost and ice get into the weak crevices, and blast out huge slices or fragments, that fall in boulders, from the size of a great house down to that of an apple, into the valley below.

"Over the sides of the walls pour streams of water out of narrower valleys still above; and yet higher and farther away, rise to twelve and thirteen thousand feet the culminating peaks of the Sierra Nevadas, with ever visible fields of melting snows. All forms and shapes and colors of majesty and beauty cluster around this narrow spot.

"The Water Falls of the valley, though a lesser incident in all its attractions, offer much that is marvellous and beautiful. Our August visit was, however, at the season of their feeblest power. It is in May and June, when their fountains are freshest, that they appear at their best, and assume their proper place in the grand panorama of beauty and sublimity. In the main portion of the valley, the Bridal Veil is the first conspicuous fall,—now a dainty rivulet starting over a precipice nine hundred feet high, but nearly all lost at once in delicate spray that sways and scatters in the light breeze, and fastens upon the wall, as sign of its being and its beauty, the fabled rainbow of promise. The name of this fall is well chosen; it is type of the delicate gauze, floating and illusory, by which brides delight to hide their blushes and give mystery to their charms. Farther up, before the hotel, you see the Yo Semite Fall, perhaps twice the size in volume of the Bridal Veil, but distinguished for its height,—the greatest height of any water-fall yet discovered in the world. It is broken about two-thirds the way down its high wall of rock by projecting masses of the mountain, giving it several hundred feet of cataract passage; but counting its whole fall from top to bottom, it is two thousand six hundred feet in height, which is only fif-

teen times as high as Niagara Falls! Now, it was a mere silvery ribbon of spray, shooting down its long passage in delicate rockets of whitened foam. Earlier in the season, when ten times the volume of water pours down, it must, indeed, be a feature of fascinating, wonderful beauty.

"The valley above this point separates into three narrow cañons, and these are soon walked in by the uprising rocks. At the end of one of these, the main branch of the river falls from its upper fountains over two walls, one four hundred feet high and the other six hundred, at points half a mile apart. The lower and lesser fall is called the Vernal, and pours down its whole height without a break, and forms at the base a most exquisite circular rainbow, one of the rarest phenomena in all nature. The upper fall bears the name of Nevada, breaks as it comes over its crest into a grand blossom of spray, and strikes, about half way down its six hundred feet, the obtruding wall, which thence offers just sufficient slope to keep the water and carry it in chasing, circling lines of foam to the bottom. This is the fall of falls,—there is no rival to it here in exquisite, various, fascinating beauty; and Switzerland, which abounds in waterfalls of like type, holds none of such peculiar charms. Not a drop of the rich stream of water but is white in its whole passage,—it is one sheet, rather one grand lace-work of spray from beginning to end. As it sweeps down its plane of rock, each drop all distinct, all alive, there is nothing of human art that you can compare it with but innumerable snow-white point-lace collars and capes; as much more delicate and beautiful and perfect, however, as Nature ever is than Art. For half the distance between the two falls, the river runs swift over a solid plane of granite, clean and smooth as ice, as if Neptune was on a grand sliding-down-hill frolic.

"The excursion to this head of the chasm from the stopping-place below is through narrow defiles, over fallen rocks, up the sides of precipices, and over perpendicular walls by ladders, for a total distance of about four miles, and is the most difficult and fatiguing one that confronts the visitor; but both in the beauty of its water-falls, and the new and rare shapes of rock scenery that it offers, it is most richly compensating, and never should be omitted.

"The name that has attached to this beautiful valley is both unique and euphonious. It rolls off the tongue most liquidly when you get the mastery of its pronunciation. Most strangers render it Yo Semite, or Yo-Sem-ite; but the true style is Yo Sem-i-te. It is Indian for Grizzly Bear, and probably was also the name of a noted chief, who reigned over the Indians in this, their favorite retreat, and from this chief comes the application of the name to the locality and its marvellous scenery. The foot of white man never trod its limits,—the eye of white man never looked

upon its sublime wonders till 1851, when he came here in pursuit of the Indians, with whom the settlers were then at war. The red men had boasted that their retreat was secure; that they had one spot which their enemies could never penetrate; and here they would gather in and enjoy their spoils unmolested. But to the white man's revenge was now added the stimulus of curiosity; and hither he found his way, and, coming to kill and exterminate, he has staid, and will forever henceforth stay, to wonder and worship.

"The journey from San Francisco to this sublime charm in California scenery is at present long and tedious. The Yo Semite Valley lies about a hundred and fifty miles southeast of the city, in a direct line, far up among the Sierra Nevada Mountains. Stockton, at the foot of the San Joaquin Valley, is the real point of departure for the valley, and from here the distance varies from a hundred to a hundred and forty miles, according to the route traveled. Stockton is a hundred and twenty miles from San Francisco, by water,—an evening and night steamboat ride; but the Pacific Railroad passes through it on the way from Sacramento to San Francisco, and by the cars it is but a three or four hours ride from either of those places. At present, the best route on from Stockton is the longest, and by way of Mariposa. A day's stage ride up the San Joaquin Valley,—a broad and rich area, now greatly given up to wheat-growing, and dry and dusty to suffocating degree in summer,—leaves the traveller at Bear Valley or Mariposa for the night. * * *

"It is twenty-five miles now to the Grand Valley; and taking our lunch along, we shall ride it comfortably in a single day, and find hotel accommodations at night within the valley. The day's ride takes us as high as eight thousand feet above the sea level, treats us to the finest forest and meadow scenery of the Sierras, and drops us down by a very precipitous trail to the scenes that have invited and will so richly compensate us. The valley itself is about four thousand feet above the sea level; the mountain walls rising up from it range from two thousand to five thousand feet higher, or from six thousand to nine thousand feet high, while on beyond the crests of the great range add three to five thousand feet to these. It is not at all necessary that visitors should bring camping and cooking outfits with them; hotels and ranches are scattered along either route with sufficient frequency to give all essential accommodations; but, if they do, they will reap great satisfaction in the independence that follows. With plenty of blankets, a safe, dry and comfortable bed is ever at hand, and the limit of the day's journey is always your own choice. All the distinctive features of the valley may be seen in three days; indeed, its great beauties lie at once and together before the eye; we nearly see the end from the beginning; and the valley closes up so sharply, both above and below, that it is easier to get in and out by scaling the walls than by following the stream. But memorable in one's life is the week spent under the rocks and by the side of the waters of the Yo Semite."

(To be concluded.)

"If there be faith and the Spirit, they are sufficient to the Kingdom of God, without any outward ceremonies whatsoever."

Selected for "The Friend,"
Manchester, 10th mo. 26th, 1786.

My dear Friend,—I am obliged to thee for the particular account of the state of the church in —, though alas! it is a very poor one; and I am afraid such is the case too generally amongst us every where. Why it is so, the cause is as obvious as are the effects; the people have forsaken the Lord, and gone after other gods; and therefore it is that the Lord's heritage is become desolate, and "the daughter of Sion covered with a cloud." Yet, however discouraging the present situation of things may appear; however affecting the prevailing desolation, so that the standard-bearers may be ready to faint, and like poor Elijah may be ready to think and conclude that they only are left, and their lives also are in danger, I do believe there is not only left a seven thousand amongst us, "all the knees" of whom "have not bowed to Baal," and every mouth of whom "hath not kissed him;" but I do believe the Lord, in unfailing mercy, is bringing His work again upon the wheel, and that he will yet more and more effectually revive it, as "in the midst of the years." So that I would not have us to be discouraged. I believe the Lord would not have us be discouraged, neither grow weary, nor faint in our minds; but rather let the hands that hang down be lifted up, and the feeble knees confirmed; for the Lord is remembering Sion; He will rebuild her waste places, so that she shall yet become the "perfection of beauty, and the joy of the whole earth." "Therefore rejoice ye with Jerusalem, and be glad with her, all ye that love her, rejoice for joy with her, all ye that mourn for her, that ye may suck and be satisfied with the breasts of her consolation, that ye may milk out and be delighted with the abundance of her glory."

"The cause is not ours, "if thou dost well shall thou not be accepted?" Let others do what they will, let them choose and worship what gods they please, "as for me and my house, we will serve the Lord." Let us thus consider and resolve. What! though many are offended in Christ, and draw back from following Him. Shall we also go away? God forbid this should ever be the case with any that have known Him, and that with Him are the rewards of eternal life.

Oh that we might be encouraged to persevere in faithfulness under every permitted dispensation, whether to ourselves or to the church of Christ? Leaving the effects and consequences of things to Him, who hath the control of times and seasons, let us be resigned to our various allotments, and not murmur at the cup which the Father hath given us. Remember, we are but servants and stewards, that it will be enough for us if we be found faithful. What! though that part of the vineyard be unpleasant to labor in; though there be not many mighty works to be done, because of unbelief, though the fields should not be white unto harvest, but rather the fallow ground want ploughing up, that the thorns and briars may be consumed; nay, though none should believe our report, and "though Israel be not gathered," those who have been careful to abide in their lot, who have been attentive to the voice of the true Shepherd, and given the people warning from Him, "shall be glorious in the eyes of the Lord, and their God shall be their strength."

I wish thee to let — see this; I may acknowledge he has been much in my mind

whilst I have been writing; for, though he personally a stranger to me, yet my heart is filled with earnest prayer for his preservation in the right way of the Lord; "thou neither things present, nor things to come nor height, nor depth," may ever be able to beguile him of his reward, or frustrate in a measure, the gracious intentions of the mighty concerning him.

I wish for thee, my dear friend, careful reverent attention, and humble obedience every manifestation of duty; and that here thou mayest increase in true riches.

I am thy affectionate friend,
JOHN THORP

From the "Leisure Hour

Punctuality and Integrity.

In the memoirs of Sampson Wilder, a well known American merchant, the following personal anecdotes are recorded. S. Wilder during a long period resided in Paris, where he was the leader in many Christian philanthropic enterprises. He began his commercial career as clerk in a fine silk & dry goods store in Charlestown, Mass. —

MY FIRST START IN BUSINESS.

I had completed the term of my clerkship or as it was called in those days, apprenticeship, in the respectable mercantile house Colonel Henley, in Charlestown, whose wife was a sister of the great merchant prince that day, Thomas Russell, and was also sister-in-law of the distinguished merchant, John Codman.

Having enjoyed the great advantage of being personally known to these distinguished families, and being then engaged in wind up the concerns of my late employers, preparatory to commencing business on my own account, an old country customer called our store one morning, and after having made a selection of several articles which we had on hand, and wishing, in order to complete his assortment, half a bale of Rusduck, which we had not, I told him that might calculate upon having it at the time was to call for the other articles, which I was at one o'clock.

I soon left for Boston, in order to obtain the article wanted. Having purchased it, I met meeting with the truckman who usually transported at noon the merchandise that was ready to be taken over to Charlestown, engaged a young man with a wheelbarrow to take over the bale of duck. After accomplishing my other business, I proceeded my return home. On reaching Back Street leading to Charlestown Bridge, I perceived the young man sitting upon the wheelbarrow quite overpowered by the tremendous heat of the day, and unable to proceed any further.

Having promised the goods at one o'clock and it being already half-past twelve, and time to be lost, I immediately seized the wheelbarrow, dressed as I was in Nank-sun small-clothes, with silk stockings, white M-selles vest, a striped gingham coat, and white fur hat.

Thus I was propelling along the wheelbarrow when overtaken by a rich merchant, Charlestown, Mr. Codman. He was on horseback. "What," said he, "Mr. Wilder, truckman?" "Why," said I, "sir, I had promised these goods to be ready for a customer at one o'clock at our store, and am determined not to disappoint him, and to

ing man being quite overcome by the intense heat, it only remained for me to assume place." "Good, good!" said Mr. Codman, I rode on over the bridge and called at his errand-law's at our store. Said he, "I witnessed a scene just now, in coming over the bridge, which afforded me much satisfaction, requiring nothing less than observing your head stick with a wheelbarrow loaded with a very package, which it seems he had promised a customer of yours to be delivered at one o'clock, and it now wants but twenty minutes. Understand," said he, "that that young man about commencing business for himself, I may say to him on his arrival, that such my approval of the energy of character which he has displayed in not hesitating to feel the barrow himself rather than disappoint a customer, that when he commences business my name is at his service for thirty thousand dollars, so long as he does not ensue for others."

He immediately mounted his horse on his errand, when he again met me on Charles-street Square, still propelling the wheelbarrow. Good, good!" said he again, and continued route.

On reaching the store, I found the customer there with his other goods packed, and only waiting for the duck, which arrived just in time to be loaded on the team with the other goods. Although very much heated from exertion and exposure in the sun, the duck was not a little allayed on being told of estimate with which Mr. Codman had redeemed me from this transaction, and the misuses which he had made in my behalf.

A few months after, I commenced business on my own account, and although ever availed myself of the facilities offered Mr. Codman, yet he consigned to me, a month after, a cargo of Russia sheeting, pers, and ducks, which I shortly disposed on commission, which amounted to upwards of three thousand dollars, with the proceeds of which he was so well satisfied, that it was to or three similar consignments during the first year of my business, and which amounted in the aggregate to a gain of over a thousand dollars.

INTRODUCTION TO MY FUTURE FATHER-IN-LAW.

The first and the last time, as far as my recollection serves me, that I ever enjoyed the privilege and satisfaction of being personally known or speaking to my late respected father-in-law, as he afterwards proved to be, was the good providence of God, was as follows: During the period of my clerkship in the office of Colonel Henley, I one day presented a cheque of \$1,000 to a bank in Boston, of which Mr. Joseph Barrell was the cashier. I received from the paying teller two banknotes of \$500 each. On reaching our store in Charlestown, I opened the portmanteau with a view to proceed to the counting-room to deposit the money, when I perceived that I had three bills of \$500 each, instead of two. The bills being new, had adhered together, in consequence of which the teller, it seems, did not detect them inadvertently. I at once announced the fact to my employer, who conferred with me in the propriety of immediately returning to the bank with a view to rectify the mistake.

On reaching the bank, I at once said to the cashier that I had discovered a mistake in the money which he had paid me shortly before

on the cheque which I had presented for that purpose. Said he, "Sir, you should have discovered the mistake before leaving the bank, as we rectify no mistakes after the persons receiving the money pass the threshold of your door."

At the same time opening my portmanteau, I found to my great alarm that the \$500 bill which I had placed in it was gone. I at once, without saying another word, left the bank for our counting-room, when, opening my portmanteau, which had two sides just alike, behold, there was the \$500 bill safe and sound.

I immediately returned a third time to the bank; on reaching which the teller exclaimed, "Well, sir, come again? Shall I say to you that we rectify no mistakes here after the person receiving the money shall have passed the threshold of your door?" "Well," said I, "sir, I am determined not to leave this bank until the mistake is rectified." The teller then left me to stand in the middle of the floor, and went on paying several persons who presented cheques at his desk.

After allowing me to stand for some time, the cashier, Mr. Barrell, happened to pass near the paying teller, and asked him what that young man was waiting for who had been standing so long on the floor. "Why," said the teller, "he pretends that I made a mistake in paying him some money an hour or two ago, and seems not disposed to take no for an answer, when I tell him that we rectify no mistakes."

On hearing this, the cashier, Mr. Barrell, approached me very courteously, and said, "Young man, you perhaps are not aware that the rules of our institution forbid the teller to rectify any mistakes, pretended or otherwise, which are discovered after the persons receiving the money shall have left the premises." I replied, "Your teller has already announced to me that fact; but allow me to say, sir, that there is a mistake, and that justice demands that I should not leave the bank until the said mistake be rectified; and I shall persist in this determination, sir, whatever be your rules and regulations."

Speaking with rather an elevated voice, as I had become rather excited, it drew from his seat the president of the institution, and his loud discussion seemed to attract the attention of several of the clerks, who fixed their eyes upon the place where I was standing. The teller then, in answering the president's question, said I had become quite obstreperous, and evinced a disposition not to conform to the regulations of the institution. So, for the time being, I was left alone.

When the business of the bank was about to close for the day, the very gentlemanly cashier, with that suavity of manner which characterised all his movements, again approached me, and said, "Young man, have a little patience, until the doors of the bank are closed, when the teller shall add up his accounts, and we will investigate and ascertain, if possible, if any mistake can be discovered." I then made answer that, "Seeing a disposition on the part of the officers of the bank to render justice, I will not trouble the teller to have recourse to his cash account in order to investigate the matter." I then took from my portmanteau the \$500 bill, handing it to the cashier, and told him it had adhered to the two other bills, all of which were evidently of a new issue, and how I had discovered it, as heretofore stated.

"What," said he, may be your name, young man?" Said I, "Names are of no consequence; my name, however, is Wilder." "Mr. Wilder," said he, "walk behind the counter, and take a seat, and allow me to introduce you to the president." "You will excuse me, sir," said I, "as I have been here so long; our engagements oblige me to return forthwith to my store."

The president, cashier, and teller then consulting aside for a moment, the latter approached me as I was leaving the bank, and tendered me the acceptance of a fifty-dollar bill, which of course I declined, expressing a wish that in future they might not be so ready to decline rectifying a mistake.

I little imagined at the time that the cashier herein mentioned was the honored father of her who in after years constituted the charm, the delight, and joy of my life.

For "The Friend."

Flowers.

Who does not love flowers! those little gems that the Creator has scattered so profusely over this beautiful earth, in such endless variety of forms, color, texture and flavor! And as the attractive part of the flower is not essential to the reproduction of the plant, it seems as though they were intended to refresh and regale the senses. The more we examine and study them, the more we shall find to notice and admire. I love to cultivate them, and mark the successive stages of their growth, from the tiny seed to the perfect flower and fruit; and to many persons it is a health-giving employment. But it appears to me the love and the care of flowers should be kept within proper bounds, and not occupy too much of our time and thoughts to the exclusion of more important objects and employments. Like other "lawful things," may they not occupy an "unlawful position" within or without. A nosegay or vase of flowers is a pretty sight, but is it right to spend too much time, or to be too precise in arranging them? Will they not look as beautiful put together in a more natural and speedy way, more as they grow, and savor less of misspent time? Let a sense of the value and the feebleness of this influence here as elsewhere, and let us endeavor to keep them in their proper places. I once felt much hurt to see in the bonnet of a young Friend at meeting, a blossom from a plant I had given her, believing it to be out of place in a meeting for Divine worship, and improper as a personal adornment anywhere.

In the coffins of our dear deceased friends they are especially out of place; for there, too, they abstract the mind from the great object that should then especially occupy its attention; and is it not an innovation on that simplicity of attire which the principles of the Society of Friends ever leads us to practise, and from which we should not depart while living, nor in arraying the perishable clay for its final resting place, where "all superfluity does but rob the poor, and ornaments seem mockery." It may be well to look around and enquire from whence we obtained this idea, as well as of some other practices which seem to be creeping in amongst us, of which we read no account in the writings of Friends, but which, I fear, may prove like "the little foxes that spoil the tender vine," the noble vine of old fashioned Quakerism; gradually leading us into the spirit and ways of the

world, its forms and customs out of which we are still called to come as much as in the early days of the Society.

Much is said and written, and justly so, against indulging in the *light and trifling reading* that so much abounds; but I have thought perhaps the *distinctive features* of our loved Society were being lost sight of or changed *more* by the reading of what might be termed religious literature. The publications of other societies, the books and periodicals, and in much of the poetry so widely spread: works circulating more or less, because so *cheap*, in almost every household, being freely read, because "they contain much good," often without comment or explanation from the older members of the family. Can they fail to exert an influence over us? Without wishing to disparage these writings, which may be true to the principles their authors profess whilst widely differing from *ours*, we may notice in these publications generally, the common use of the plural language—in some cases even scripture quotations *changed* to it;—the heathen appellations for the days of the week, and months of the year; the Bible called "the Word of God," set times for, and forms of prayer recommended; singing and music as a matter of course; the decoration of corpses and coffins, and even graves with flowers or other ornaments; the custom of wearing "mourning," or being particular to dress in black to attend funerals; new year's, Christmas, and birth-day gifts and celebrations, social, bridal and other parties, &c., &c., and many other customs and ways of the world, into which there is danger of Friends becoming ensnared before they are aware of it. Is it any wonder that the susceptible minds of the dear children and youth often receive a bias in favor of such things, and soon yield willing assent thereto, scarcely able to see any inconsistency in them; and even some older Friends, who have known better days, first enduring, then trying to justify, then yielding to the popular current. Whilst we are rightly watchful of the ingress of unsound doctrines and sentiments from our own members, are there not now in the book-cases and on the tables of many Friends, books and papers whose teachings if followed would as surely lead out of Society? Let us then have a watch over this avenue; and may parents, teachers and concerned Friends be more diligent, to bring to view, and explain, in a pleasant way, to the rising generation, the distinctive features of our loved Society, to show them wherein we differ from others, and thus *early* instil a knowledge and a love of the principles of Friends, which would doubtless make a good impression on many plastic and tender minds, and would fortify them against the attacks of the spirit of the world, which must assail them in various quarters; in the books they read, the company they are often unavoidably thrown into, and in their own wayward hearts.

In some neighborhoods, I fear there is not enough mingling together of the older and younger Friends, not enough sympathy of feeling and freedom between them, whereby both may suffer loss in many ways. May the dear young people endeavor to draw nearer to their elder Friends; love their company, lean upon their judgment, and follow their advice, by which I am sure their happiness will be greatly enhanced, and they may be helped to grow up as "plants of renown," prepared to fill the fast thinning ranks

of our loved Society; and as the dear aged and elder Friends find the shades of evening stealing on, may they more and more feel the necessity and the pleasure of drawing the children as with a cord of love, and by the manifestation of true interest in their welfare, lead them on, both by precept and example, to a love of knowledge and virtue; that so, by the blessing of Him who alone can *water*, and prosper our feeble endeavors to do right, all may grow up together a family of love, as was the Society of Friends at its rise. To these principles and practices still let us cleave, without abatement or addition, not fearing the world's dread laugh, but looking for the recompense at the end of the race—the *crowns* that can only be gained by bearing the *cross*.

Ohio, 5th mo. 1871.

A SUMMER SCENE.

BY G. H. BARNES.

My city friend, come lean with me
On this gray rock, o'ergrown with vines—
Below our feet the clover leaf,
Behind us Delaware's kingly pines—

And we will scan a rustic view,
Unwrought by painter's pencil-play;
And, though it homely seem to you,
It may please your eye for a passing day.

My picture's Summer, bright and fair;
Summer, of rural mould and mien!
Of blooming flowers and orchards rare,
And singing birds and meadows green;

Of brooks that ramble still and slow
Through velvet valleys, 'neath the trees;
Of shadows waltzing to and fro,
To the wind-harp's witching melodies.

Look down upon yon interval,
Where emerald wavelets seem to pass
From knoll to knoll, from swale to swale,
Across the mimic sea of grass.

The handsome bobolink sways and swings
On the tiger-lily's regal crest;
His dusky partner folds her wings
Above the broodings of her nest.

Blue swallows swiftly scan the plane
Of dappled, far-outreaching sky;
And the Quaker-coated stable-wren
Hops in and out their merry.

The elder hedges by the road
Ring to the cat-bird's elish notes;
And golden-finches there unload
For us their song-o'erburdened throats.

Little squirrels run on zig-zag tracks,
Or, boldly poised on post or stake,
Wave their gray banners o'er their backs,
And laugh till the orchard-echoes wack.

High o'er the hill-tops, circling round,
The bird-hawk spreads her pirate sail,
Ear down to catch the twittering sound
Of sparrows in the hazel dale.

There's not a nook nor dewy dell,
Nor shady copse, on this bright morn,
But echoes to the blue-bird's bell,
Or the yellow-hammer's hunting-horn.

List! where the amorous zephyrs play
Love with the tresses of the trees,
How Robin pours his joys lay
On the slow current of the breeze.

But sweeter far than dulcet strains
Of scented gales or singing birds
Come childhood's happy-toned refrains,
So lightly set to blithesome words.

See yonder! on the dusty street,
That quivers in the July sun,
A score of little school-bound feet,
Naked, between the tire-tracks run.

A noisy troop of lads are they,
And rosy, merry, gleesome girls—
Kings, in their barefoot sovereignty!
Queens, with a coronet of curls!

Their kingdom is the fair domain
Of fresh affection, trust, and truth;
They'll never rule the same again,
Once past the boundaries of youth.

Below this granite balustrade,
O'er which we gaze down wooded banks,
The Onleont winds its silver braid
Between the alders' tasseled ranks.

There, haunch-deep in a slumbering pool,
The soft-eyed, white-horned heifers stand,
Content their heated throats to cool
And drive away the gad-fly band.

Beyond the rivulet's thither side,
The corn-blades shine on the level plain;
And down the mead, with sweeping stride,
The mowers swing their scythes amain.

And over all, on vine and pine,
Rock, river, mead, and men below,
The sunlight, scintillating as wine,
Enkindles now its rosete glow.

The eye is sometimes even cloyed
With woman's beauty; but we gaze
With pleasure undimmed, unloyed,
On the sweet light of Summer days.

And hang whatever scenes you will,
Dear friend, upon your gilded walls,
Few more than this your heart can thrill!
None for a purer worship calls.

Has the Pulpit Done Its Duty.

When it is considered, therefore, that hundreds of thousands of preachers are every week, and have been through a long succession of ages, speaking to millions and millions of people, we do not hesitate to say, that the pulpit in every place and in every age its existence, done its duty, war, in Christendom, at least, and thus, perhaps, in all the world besides, had existed only as a foul blot upon the history of the past. The pulpit has been in part, recreant to its trust. Millions whose lips should have echoed the strains the angels' song, making the earth vocal with the note of peace thus proclaimed—*we* should have been employed in extinguishing the flames of war, and tramping out the fire of their smouldering ashes—have instead this, too often fanned the languid spark, a exasperated the passions that have filled earth with carnage and misery. Too oft the soldier's coat, if not literally, yet in spirit has been thrown over the preacher's gown. To me it always has appeared to be one the most affecting and revolting spectacles earth, to see Christianity dragged to a drumhead to consecrate the yet unstain banners, and made to seek the benedictions the God of peace upon the symbol of slaughter. It is however *only* the work of its ministers, while Christianity stands by blushing and weeping over the deeds which are done in her name. Doubtless these men are conscientious in this sanction given to error;—is it conscientiously wrong is one of the most dangerous aberrations from what is right. Where, Sir—in what page of its own record—does Christianity sanction war as it is cried on in modern warfare? Is it in the angels' song at the birth of Christ, "Gloria God in the highest, and on earth peace, good will toward men?" Is it in the benediction promised by our divine Lord on the penitentiary makers? Is it in his command to love our enemies, and when smitten on one cheek,

without resistance or revenge, the other offender? Is it in the apostle's injunction to suffer wrong than in a litigious to seek redress, even before a civil trial? Is it, in short, in the whole genius of Christianity? Is it not strange, if Christianity should have been eighteen centuries delivering its lessons in our world, that men should be so ignorant of its nature and duties as to need to be told that it is not to the spirit of war? Is it this profanity to hostility on the part of so many profess it, that has alienated so many hearts, and fostered the infidelity of the age, often are we met with the taunt that infidelity has been as deeply involved in the cruel practice as the Pagan and Mahomedan nations. We deplore the fact, but by the inference that it is sanctioned in the New Testament.—From a speech delivered in Exeter Hall, England, by J. Angell

the death in India caused by Serpents.—Astonishment has been often expressed at the great destruction of human life in India by the ravages of tigers, wolves and other beasts; and equally strange and sad destruction caused by venomous reptiles, compared with Europeans, the native inhabitants of India are a feeble and apathetic and seem to place a low estimate on the value of life. Superstitious fears also, in many cases deter them from destroying tigers, and other animals, &c., even when the opportunity offers itself without danger. "The *St. Patrick's* *Review* and *the Pall Mall Gazette*, "is evidently wandering as much as ever he was in Ireland, in the year 1869 no fewer than 11,416 persons in the Bengal Presidency died from the effects of snake bite. The return giving information has been carefully compiled, and the merely sick and wounded have been omitted, as well as those sudden deaths, which in India are often attributed to snake bites. In our hearts to property unduly eager for inheritance. Such a mortality from the cause is sufficiently startling to an Englishman; but the more surprising fact is that this destruction of human life is repeated year by year, and no efficacious means are adopted to check its ravages."

Selected.

my cry, my soul's breathing, my inarticulate travail, my watching and praying have been, "O Lord, preserve and keep thy holy fear, in humility, in the sense of power; that I may never depart from my covenant; that I may dishonour thy Truth, or our holy profession." And hitherto the Lord has helped me in my spiritual journey and race towards thee. I ascribe the glory and praise only to thee who giveth power to the faint, and to the mighty He increaseth strength; and in my weak estate, hath manifested thy Salvation and strength come from thee who is the God of our Salvation, that the meek ones may sing of his Salvation; thy judgments and mercies, and ascribe them to our God, and to the Lamb that taketh Him upon the throne, in glory and thy favour.—G. Whitehead.

the sweet streams of water farest meadows; the bird that flutters least, is longest on wing.

The Germination of Seeds and Growth of Plants.

Seeds kept absolutely dry, do not germinate. If kept from contact with the air, they remain sound indefinitely. In order to the successful germination of seeds, they must be abundantly supplied with moisture, heat, and air. Light is necessary to the development of the plant, but it retards if it does not altogether prevent germination. During the process of germination, seeds absorb oxygen, and give off carbonic acid—that is, a portion of the seed is oxidized, and the process of oxidation produces heat. Light produces a contrary effect, it deoxidizes the carbonic acid, or resolves it into its primary elements—carbon and oxygen.

The amount of heat required to germinate seeds, varies with the kind. Wheat, rye, and most of the grasses germinate at a lower temperature, than oats, barley, flax, and Indian corn. Many of the exotic vegetables cultivated in our gardens, require much heat and moisture to induce germination, and hence, it is usual to start them in hot-beds. They gradually however, become more hardy, and germinate more kindly after becoming partially acclimated. So plants taken from a cold climate to a warm one, change their constitution somewhat, and after many years if taken back to a colder climate, they will be found to have lost some of their hardness.

In the process of germination, seeds also actually give off heat, so much so sometimes, if placed in masses, as in malting, as to sensibly affect the air. The heating of grain when wet, and laid in piles, is a phenomenon familiar to many. The moisture and heat being right, the grain sprouts, heat is germinated, and the transformation of starch or gum, to sugar is effected, by its combination with acid, for during germination, acetic acid and a peculiar substance—diastase—is formed which has the power of converting starch into sugar. Sugar contains carbon, and carbon is necessary to the plant. This had been previously stored up in the seed to support it until it can push forth its plumule and radical—the first rising above ground, and the latter pushing its way below. The first to form leaves, and the latter to draw nourishment held in solution by the moisture of the earth.

The embryo plant is contained in the seed, and may be easily seen by dissection under the microscope. The primary leaves of many seeds, as the leguminous peas, beans, &c., are formed of the two lobes of the seed itself. These rise immediately above ground. In other cases—as in wheat—the seed remains below ground, and is gradually absorbed, just as the seed-leaves of beans are partially absorbed above ground. The sugar, however, cannot be converted into woody fibre until after the appearance of the true leaves; hence all plants while in the seed-leaf are very succulent. The sugar, by losing some atoms of the elements of water, is converted into woody fibre. Sugar is composed of carbon .12, oxygen .12, hydrogen .12. It becomes woody fibre by losing four atoms of oxygen and four of hydrogen. In the laboratory, nitric acid has the effect to change starch to woody fibre, and since nitrogen exists largely in the air, it is perhaps the effect of the nitrogen which causes sugar to be converted into woody fibre, and it is well known that the effect of dilute acid upon starch is to promote the formation of sugar.

These, therefore, are some of the more im-

portant processes in the transformation and germination of the seed until it has reached the surface of the earth, and put forth its true leaves. From this time forth it enters a new existence, and must depend upon the conditions present in the air and earth for its sustenance and growth. If they are present, the plant increases, matures, becomes an herb, a plant or a tree. If the proper conditions are not present it becomes enfeebled, lingers, and perhaps dies outright. It is the province of the progressive farmer to supply these conditions, so far as he may be able. Many of them are within his reach. He can attend to the drainage of his land, so that the soil does not become saturated with water, for when so saturated air cannot enter, and without air the seed must perish. Without sufficient heat the seed will not germinate. Drained soils are warmer than undrained ones, and without being wet they are always moist. If the soil does not contain water in a free state it will contain air. This air is being constantly decomposed, and in the act of decomposition it gives up its heat to the soil, and heat is one of the necessary conditions of growth.

After the root has put forth, it is necessary that in this early stage of growth, it should come directly in contact with soil in a finely comminuted state, that it may directly draw its nourishment therefrom. If the soil is lumpy and cloddy, it is possible that not more than one tenth of the soil is really available to the plant, and consequently it must suffer, perhaps die. But if the cultivator has honestly done his part, so far as common sense and reason may dictate; and above all, if he has been careful to read such works bearing upon his profession as he may be able to procure, and apply this knowledge by the light of reason, he need not fear but that Providence will grant him increase in the season thereof.

For "The Friend."

Religious Reformation in Spain.

In the days of Luther and his fellow reformers, Spain partook in the movement, which at that time agitated much of the continent of Europe, and many of her inhabitants became prepared to renounce the errors which had gradually crept into the Roman Catholic Church. This return towards the original principles of Christianity, was checked by the bigotry of the Spanish government, which consigned to the tender mercies of the Inquisition such of its subjects as avowed their dissent from any of the Papal doctrines or decrees. In that intolerant age, Spain seemed pre-eminently intolerant. In no other country were so many thousands burnt at the stake, or subjected to other punishments on the charge of heresy. The reform appeared to be crushed out by these severe measures, and a state of spiritual darkness settled over that unhappy country. At that time she was one of the most powerful nations of Europe, but she has since then gradually sunk in the scale of importance, till the caustic language of Edmund Burke truly described her helplessness, when he spoke of Spain as a whale stranded on the coasts of Europe.

A curious illustration of the extent to which the *Autos-de-fe* of Philip II. and other Spanish sovereigns were celebrated, has recently come to light at Madrid. It had been determined to erect some buildings on a vacant space to the north-west of the city, which in olden times had been the burning ground of the

Inquisition. In finding suitable foundations, the workmen made a deep cutting through the soil and rubbish which had been accumulating for many generations. They came upon a subterraneous mound of human remains. The dust was black and shining as if steeped in oil, and formed a horizontal layer or bed, which stood out in the broad open trench from the white gravelly soil on which it rested, and with which it was covered over. It was largely mixed with calcined bones, with skulls having tufts of hair in some instances adhering to them, and jaw-bones with human teeth, and bits of charcoal. I. A. Wylie, who travelled in Spain in 1869, and from whose work our information is chiefly derived, visited this spot, and describes the dark stratum as resembling a coal seam, and extending about 100 yards in length. It abounded in bones, and in bits of burnt wood, the remains of the faggots used in the execution of those condemned as heretics.

For a century past the power of the Papal clergy has been weakening in Spain. The increase of education, and the intercourse with other nations, where greater freedom of religious belief existed, would naturally produce this result. The introduction and spread of the Bible has no doubt contributed materially to the spread of sound sentiment, and the loosening of the chains of the ecclesiastical authority. The Bible and Missionary Societies of Great Britain were chiefly instrumental in introducing to Spanish readers, Bibles and other religious books of a Protestant character. This was a work of much difficulty owing to the vigilant opposition of the priests and the government; but the demand that arose for the works supplied a strong stimulus to the skill and courage of the importers, and the number of copies circulated was very large. How these efforts were regarded by the ecclesiastical authorities may be seen from the charge published by the Bishop of Cadiz, in which he mentions his "profound grief," that "the Protestant Bible Societies, and associations for the distribution of bad books are redoubling their efforts for inculcating our Catholic Spain with the venom of their errors and destructive doctrines." An address of the priest in the same year, appeals to the "government of her Majesty," for the exercise of all the rigor of the law against those who "had infested Catholic Seville with Bibles and other pernicious books."

One of these earnest laborers had distributed 60,000 copies with his own hand. Another who penetrated the wild fastnesses of the Sierras Nevada and Morena, says that he lived among the hardy mountaineers for months at a time, devoting every spare moment to copying the Gospels, and some of Paul's Epistles, upon large sheets of paper, which have been again exactly copied and extensively circulated. "From Seville I carried five Bibles, all I could procure, to as many influential men who lived in these out-of-the-way districts; and they have lent them about, till I believe nearly every book in the whole Bible has been copied and received." Since the revolution of 1868, all restrictions on the free circulation of the Scriptures have been removed, and by the new constitution of Spain, bearing date 1st of 6th mo. 1869, the public and private exercise of all forms of worship is guaranteed.

In the first eight months of 1869, one society circulated 335 copies of the Bible, 7,289

New Testaments, 41,749 portions of Scripture, and 69,831 tracts.

During the years immediately preceding the revolution, a little band of Spanish refugees, driven from home by persecution, had found an asylum in Gibraltar. In 1868 they concluded to form themselves into a church or congregation. About five months afterwards the success of the political revolution opened the way for their return to their native country. General Prim halted a day at the little town of Algeiras, opposite Gibraltar. A deputation from the infant reformed church of Spain called on him, and informed him that they belonged to those who were persecuted by the late government as being bad religionists. "Then I have to tell you," replied Prim, "that you may enter Spain with the Bible under your arm." They availed themselves of the door thus set open before them, and meetings were soon established in many of the more important towns of Spain. These have been largely attended, and many hundreds have joined in communion with the reformers. Several newspapers are now published which advocate the principles of reform, and their articles are often copied into the political journals.

The following account furnishes us with an illustration of the state of feeling which exists in Spain. In the fair held at Barcelona during Christmas week, the agent of the National Bible Society of Scotland opened a tent for the sale of the Scriptures. This roused the indignation of some clerical officials, who did all in their power to excite a riot among the people. The current of public opinion is indicated in the following extract from a daily paper published in the town, whose editor says: "In the public plaza of the town there has been erected a pretty tent, from which there are sold Bibles and other Protestant books, at an excessively low price. Yesterday afternoon some fanatical scoundrels caused a perfect scandal by presuming to interfere with the sale." The results of the excitement thus aroused is described as follows by the agent: "Our receipts, chiefly in copper, were 2800 reals, or about thirty pounds, and our grief was that we were sold out before 8 o'clock at night. As it was Christmas-eve we should have continued till morning, the people turning out at midnight. I cannot tell you the exact number sold. The boxes sent from Madrid were taken at once to the fair—I had no time to count their contents. Our house was ransacked for anything in the form of books or tracts or gospels. Anything would have sold, and just at the busiest moment we had to stop for want of stock. Counting all, 50,000 must be under the number."

Selected.

Nothing authorizes a man to speak to the weighty matters of the church, but the putting forth of the blessed Head of the church. There must be a proper exercise to prepare to speak in the humble spirit and authority of Truth. If this ground is not kept, our religious meetings will become mere debating associations; and learning, wit and worldly influence will finally govern and decide; and thus the character of a church of Christ will be lost.—*Journal of Wm. Evans.*

"If we will not move in the Light while we have the light, it may be withdrawn, and leave us in darkness and sorrow."

The Glowworm.—Nothing is more remarkable in the contemplation of God's work of creation than the minute care which He plays, and the numerous contrivances which He employs in the construction and well-being of even the meanest of His creatures. The insect world opens to our view a vast field of investigation, as varied as inexhaustible, and is calculated to fill our mind with admiring wonder at the wisdom which has furnished each specific organ adapted to its wants, and to the perfection it is designed to fill. The tiny glowworm, with its little lamp shining in gloom of twilight, is not a mere dot or point of luminous matter. Within the body of the beetle there is placed a most beautiful and curious apparatus, like one of our most highly finished lamps, and the light with which it is supplied can be lighted or extinguished at will as occasion requires. To a very necessary arrangement, as, by phosphenic light under a temporary eclipse, the glowworm is enabled to elude the notice of its enemies, and thus to avoid the pursuit of its enemies.

Although a poet has told us that "fiery light their tapers at the fiery glowworm's eyes," patient investigation has found out the illuminating power possessed by these insects is contained in two little bags filled with a soft yellow luminous substance placed in the abdomen. These bags or sacs have a transparent outer covering or envelope resembling a cap in shape, and the surface of this cap is traversed with a network of little hexagons which are convex above and concave below, the centre hexagon being larger than those at the sides. Each of these hexagons is furnished with a hair that is moved backwards or forwards, and it is supposed that the use of these hairs is to prevent the admission of dust. The simplicity of respiration will, it is thought, enable the glowworm to increase or diminish the light. There is a communication between the sacs we have described, and the lungs of the insect, by means of a small orifice placed on the side of the former. When this orifice is closed the light is immediately extinguished and reappears when it is opened. The power of increasing light possessed by the glowworm is also thought to depend on quickened respiration, as it shines brightest when the insect's motions are most energetic, and consequently when the act of breathing is rapid. When not giving light, the luminous substance we have described, which is contained in the little sacs, can be absorbed by the insect.

We have spoken of the glowworm as a insect, which it is in reality, and not, as some suppose, a caterpillar. The latter is the larva of the butterfly, whereas the glowworm is a winged beetle. The female glowworm secretes a greater amount of illuminating matter than that belonging to male beetles.—*Malley.*

Words cannot set forth what He is, but will ever remain to be, towards those who trust in Him, and hope in His mercy; and still endeavor through all that may befall them—through all weaknesses, temptations, and exercises, to strive with true heart to serve the God of their lives.—*John Barclay.*

Chinese Insurance Companies.
Chinese Empire is a nation of insurance companies. Every kind of organization has for its object the security of property and the equal distribution of individual wealth fostered there, and receives the moral sanction of the entire community. Their systems seek the perfection and the stability characterize the insurance organizations of America; but they are nevertheless founded upon the same great principle, of relieving one another's burdens, and impermanence the same purpose. They include each other's lives, and the lives of each family. They guarantee large crops in or vegetables, and many times warrant certain income from fishing, hunting, or whatever else the member's occupation may be. In some localities these organizations, like "trade unions," bind themselves to keep the initiated in employment or the time he is idle.

These insurance companies are very common to the most general are those which insure the Chinamen against any misfortune, and regard to its cause or character. Insurance companies are all mutual associations, not extending, in any case beyond the limits of the presiding officer's acquaintance. They meet at regular intervals, and at these meetings all the misfortunes or losses of members are reported and discussed, and all claims for relief which are declared to be just and legal are ordered paid, and assessment made upon the members alike to defray the expenses. In case a man's crops are ruined, and he is taken sick, the company comes out and works his farm. If property is insured against theft, and robbers are lurking in the vicinity, the whole community is organized as an improvised military company for protection.

There are many men who get their dependence upon the popular will, and no capital to make them permanent. Government laws to compel a stability would not otherwise be maintained. The benefits of this insurance are never very great; and while it instils in the mind a brotherly interest in each other's affairs, and creates a desire to see every one in prosperous circumstances, it also teaches the people love peace and sustain all governmental measures which have for their object the greater security of person and property. Were it not for these associations, their existence is dependent upon political stability, the government of China would have fallen to pieces. Similar to the old associations, the first of which are reported to have been formed three thousand years ago, are the "Bural Insurance Companies" which are associations that guarantee emigrating Coolie a burial in the sacred China should he chance to die abroad. Probably one of the most active assurance organizations in the world is that at Hong Kong which guarantees the return of the emigrant to China when Chinamen die in California or in other parts of the United States, and the first and only Chinese company has its regular rates in the payment of claims, and which assumes a certain risk of loss. Without these insurance organizations few Coolies would ever have voluntarily to cross the ocean, and many would have come without a "policy" many

have sold a girl or a boy, and in some instances a wife, to secure the coveted insurance.—*R. H. Conwell.*

"If we are called upon to advocate a cause ever righteous and glorious, should we hold back because iniquity abounds, and the abomination of desolation is seen standing where it ought not? Would not that look like coldness of love?"

THE FRIEND.

FIFTH MONTH 20, 1871.

To those who are accustomed to self-examination, and to watch the processes and changes going on in their intellectual being, it is evident that man is a little world within himself, in which his thoughts, his feelings, his principles and habits act their several parts, either in harmony or antagonism with each other, and with his surroundings. If he has just views of the position he occupies in the creation, a little lower than the angels—and of his relations as an accountable and immortal being, he feels that a weighty responsibility rests upon him for the right ordering of this microcosm, under the guidance and aid of Him who has thus created him; to whom he owes all that he is and all that he has, and to whom he is finally to render a strict account. In the performance of this important and laborious duty, though he may receive ideas and impressions from others, they cannot be made responsible for his thoughts, words and actions; neither can they fully understand what is going on within him. "For what man knoweth the things of a man save the spirit of man which is in him." The character, therefore, which he forms and exhibits to the world, is not the creature of mere circumstances, and yet his experience teaches him that much depends on his associations, his domestic and social relations; and that these, with other external objects, operate on him differently in successive stages of life.

It may be a disputed point whether time is in itself, an active agent in producing changes in material things, but certain it is that great changes are brought about in, if not by, the progress of time; perhaps not less marked in our perceptions and the trains of thought arising from them than in most other things. Those who have passed the summit of the hill of life, and are descending with, what appears to them, accelerated speed, to the narrow house appointed for all the living, find changes coming over them both as to the light in which they view men and things, as well as the effect produced on them by the opinions of others, or the passing events of the day. The wear and tear of the battle of life have made inroads on the physical organization, especially on the delicate mechanism employed for the senses, and these together with the mental faculties which they serve, lose, in measure, their former keen susceptibility to impressions from without, and those that are made are less vivid and deep-toned. Long participation in the things of life has partially blunted the relish for them, so that they cease to afford that fresh and exhilarating enjoyment once derived from their pursuit or possession. A similar change seems to take place in, what may be called, the moral atmosphere

in which we move, more or less affecting the light in which we view things around us; differently defining their shapes, and sensibly modifying their coloring. This necessarily must have a corresponding effect on our estimate of the characters and actions of those with whom we are brought into contact, and on the emotions they awaken within us; so that while society and outward circumstances take on altered lights and shadows, the mind and heart deals with them differently in thought and feeling.

Keeping these truths in view, how necessary is it that as old age steals upon us, we be constantly upon the watch lest the changes indicated are allowed to have an undue influence on the opinions we form, or the sentiments we express; for unless the heart is kept soft and warm by divine love, and the understanding quick of discernment in the fear of the Lord, the feelings will become harder, the temper rougher, and our judgment of others more uncharitable. If the beauty and graces which ever attend religion appear peculiarly lovely when exhibited in the freshness and bloom of youth, their absence amid the querulousness and waning powers of old age, strikes us as more pitiable and appalling.

It may be truly said that, in one sense, there is a degree of artificiality in the character which every one exhibits to the world. While its object in the irreligious is to display commendable traits, and feelings which they do not possess, making them guilty of hypocrisy, its existence in the good is the result of the formation, more or less complete, of a new man, grafted on their original fallen nature. In both, the traits assumed or developed are such as the individual believes are best adapted to secure the interests he has most at heart; the one the fleeting concerns of this world, the other the realities of that which is to come. But the difference between merely acting a character, and being truly that which we appear, is rendered more observable as the weight of years brings on infirmity. The good man, disciplined and trained by his Father in heaven, who has adopted him as his child, grows more and more to resemble Him of whom the whole family in heaven and earth is named; his path shines more and more to the perfect day; but the true lineaments of the dissembler show themselves more repulsively as time loses the hold that the exterior coating has had on his conduct, and the underlying deformity is more freely exposed to view: so that of both the lines of the poet is descriptive—

"The soul's dark cottage, battered and decayed,
Lets in new lights through chinks that time has made."

We are all fast growing older, and most are hoping, if not expecting, to attain old age. Every hour should be employed in so regulating the motives and feelings which prompt our conduct, that the lapse of time will but add to the peace secured in our own breast, and contribute to that of our fellow men. There is nothing can so clothe our advancing years with dignity and honor, as submission to the transforming power of Divine Grace. This smoothes down all asperities, removes all sourness, casts out the spirit of retaliation that has crimsoned the history of man since the fall, and instead thereof enables to breathe unfeignedly for forgiveness of our trespasses, even as we forgive those who trespass against us; and thus it imbues our thoughts, words and actions with that divine charity which not

only endeavors to all around us, but makes meet for companionship with the saints in light.

We cannot more forcibly set forth the spirit we would desire our readers to aim at and attain, than by quoting the following from that meek and loving christian, I. Pennington.

"Let all strive to excel in tenderness, and in long suffering, and to be kept out of hard and evil thoughts one of another; and from harsh interpretations concerning any thing relating to one another:—Oh! this is unworthy to be found in an Israelite towards an Egyptian, and exceeding shameful and inexcusable in one brother towards another. How many weaknesses doth the Lord pass by in us! how ready was He to interpret every thing well concerning his disciples, that might bear a good interpretation! when they had all been scattered from him upon his death, He did not afterwards upbraid them; but sweetly gathered them again. O, dear Friends, have we received the same life of sweetness? let us bring forth the same sweet fruits, being ready to excuse, and ready to receive what may tend to the excuse of another in any doubtful case, and where there is any evil manifest, wait,—Oh, wait to overcome it with good; Oh, let us not spend the strength of our spirits in crying out of one another because of evil, but watch and wait where the mercy and healing virtue will please to arise. O Lord my God, when thou hast shown the wants of Israel in any kind sufficiently (whether in the general or in the particular), bring forth the supply thereof from thy fullness, so ordering in thy own eternal wisdom, that all may be ashamed and abased before thee, and thy name be praised in and over all."

SUMMARY OF EVENTS.

FOREIGN.—On the 13th inst., Jules Favre communicated to the French Assembly the treaty of peace with Germany, negotiated at Frankfurt by the majority of the terms occasioned much emotion among the members. In the German Parliament on the 12th, Bismarck gave the particulars of his recent visit to Frankfurt, to confer with the French embassy. He said if the object sought had not been accomplished the Germans would have taken possession of Paris, and demanded the withdrawal of the Versailles forces behind the Loire. The treaty which was concluded hastens the payment of the war indemnity to Germany. Half a milliard of it (500,000,000 francs) is to be paid by France thirty days after the entry of the Versailles army into Paris, and a milliard more before the end of this year. Then only will the Germans evacuate the forts now held by them near Paris.

The efforts of the French government to put down the Paris revolt are continued. After a prolonged struggle Fort Issy was taken by the Versailles forces. Fort Vanvres has also been captured by them, but the garrison escaped by a sallyman passage to Fort Montreuil. Clamart, which had been previously captured, became so unhealthy from the presence of great numbers of unburied bodies, the victims of many engagements, that the Versailles troops were obliged to evacuate the place. These, and other military operations, show that the government forces are closing in around Paris. The south, south-west and west of the city are, however, more especially threatened.

Although dissensions prevail in Paris, the insurgents continue sufficiently united to form a strong and determined resistance to the authority of the Assembly. The Commune has made a demand upon the Bank of France for ten millions of francs. Under orders from the Commune the bank was searched for arms, but none were discovered.

On the 13th the insurgents attempted a sortie from Port Dauphine. The head of the column was allowed to advance a little, when suddenly twenty-eight shells were thrown among them, the burst of which caused the death of many, and the flight of the others.

The houses of Thiers and Favre, in Paris, are being

turned down by order of the Commune, and the furniture of the Tuilleries, Elysee and Louvre has been sold at a low price to Volodine and Veron. It has not yet been thrown down as directed by the Commune. At a recent meeting of the Commune it was denuded that the Deputies from Paris to the French Assembly should resign immediately, upon pain of outlawry or death.

The Archbishop of Paris is held in close confinement in a small prison cell. U. S. Minister, Ashburne, made application and was permitted to visit him, but applied to General Cluseret for his liberation, but the general did not dare to act against the public feeling. It was alleged that the Archbishop is held by the Paris authorities solely as a hostage.

The proposed London dispatch the treaty of peace, as modified at Frankfurt, negates the commercial treaty between France and Germany, and gives to the Germans the control of the railways in the ceded territory in consideration of a deduction from the war indemnity of 329,000,000 francs.

The latest news from Algeria is more favorable for the French. The Arab insurgents had been defeated, and their leader, Mokrana, killed.

Buenos Ayres dates of the 14th ult. say, that business in that city is entirely suspended, and the place to a great extent deserted. The custom-house and all the banks were closed. The ravages of yellow fever continue, and apparently only ceased when there were no more victims.

John Frederick William Herschel, the distinguished astronomer, died in England on the 12th inst., aged eighty-one years.

In the British House of Commons the government bill requiring and regulating the registration of voters, carried by only sixteen majority.

A steamer left the Thames on the 12th, to attempt the repair of the broken Atlantic cable.

A bill has been introduced in the House of Lords, providing for the confederation of the Leeward Islands in the West Indies. Earl Russell has given notice of a bill to meet an address to the Queen, and also sanctioning the ratification of the "Alabama" treaty, in case the arbitrators are bound by rules or conditions other than the law of nations and English municipal laws existing during the civil war in the United States, when the alleged depredations upon American commerce were committed.

The regulation bill was further discussed in the House of Commons on the 15th. The opponents of the measure were violent in their denunciations of the bill, it however passed by a majority of 65.

A Berlin dispatch gives some further particulars of the treaty of peace negotiated at Frankfurt. The French Government claims that ships captured during the war, or refund their value in cases where the vessels have been sold. The navigation treaty of 1862 is to be maintained. All duties are abolished in Alsace for six months.

Paris dispatches of the 15th express the opinion that the fall of the Commune is near at hand. It is stated that a wide spread conspiracy exists in Paris for the overthrow of the insurgent government. The gardens of the Luxembourg are closed to the public, and occupied by a military force in anticipation of a rising on the part of the populace.

London, 5th mo. 15th. Consols, 93½. U. S. 5-20's, 1862, 100; 10-40's, ten-forties, 92½.

Liverpool.—Uplands cotton, 7½d.; Orleans, 5-2d.

UNITED STATES.—On the 10th the U. States Senate convened in Executive session, and the treaty prepared by the Joint High Commission was laid before it. After reading, the subject was referred to the Committee of Foreign Relations. According to the proposed treaty the Alabama claims are to be estimated by a board of five arbitrators sitting at Geneva. If they award specific damages, the government is to distribute it; if general, assessors are to be appointed. The law of neutral obligations is written down almost identically as was claimed by this country. An ordinary commission sitting at Washington will have charge of other war reclamations. The sea-fisheries are made common, with a concession for American fishermen to land on Canadian territory, and another board will determine the value, if any, of this concession. The reciprocal free navigation of all waters is stipulated, and free trade is provided for overland, and free trade for two years' notice by either party. On the 15th the treaty was favorably reported to the Senate by the chairman of the Committee on Foreign Relations. It is stated that amendments will be proposed by several Senators who object to some portions of the proposed settlement.

Philadelphia.—Mortality last week 238. Of consp-

tion, 39; old age, 9. The number of pupils in attendance at the public schools of the city at the close of this year was 82,891, having increased 1,606 from 79,743 being in the month of March last, 1859. The school expenses of the year were \$1,197,90.

The receipts of the government for the quarter ending 3d mo. 31st last, from customs, internal revenue, public lands and miscellaneous sources, were \$1,401,000. The expenditures for the same period were \$7,701, being a deficit of \$6,300,000. The redemption of loans and Treasury notes, and \$800,000 in the purchase of U. S. bonds.

By the late census the entire population of New York 42,491, including 3,146 Chinese. Louis 726,915 inhabitants, more than half of whom are of the aggregate number of colored people in the States and Territories is about 4,857,000, being crease of 9.35 per cent. since 1860.

The subscriptions to the new U. S. 5 per cent. amounting on the 13th inst. to \$64,447,050.

The territorial government of the District of Columbia was inaugurated on the 15th, and Frederick Lasz was elected President of the upper branch.

A Liverpool order, by telegraph, for 5,000 bush wheat was recently received at Chicago, and the filled on the same day. The dispatch was sent Liverpool at 11 A. M., and by 4.30 P. M. the grain moving towards its destination.

The Market.—The following were the quotations on the 15th inst. U. S.—American gold, 111½. U. S. sixes, 1881, 117½; ditto, 1868, 113½, 10-40, 5 per cents, 109½. Superfine flour, \$5.30 a flour barrels, \$6 a \$10.25. No. 2 Chicago spring, \$1.55; amber winter, \$1.58 a \$1.61; white Mt. and Canada, \$1.65 a \$1.68. Western oats, 65 cts, 68 cts. Eye, \$1.20. Western mixed corn, 78 a yellow, 79 a 81 cts. Uplands cotton, 16½; Orleans, **Philadelphia.**—Superfine flour, \$5.25 a extra, 5-75 a 86; finer barrels, \$6.20 a \$8.50. W. red wheat, \$1.57 a \$1.59; amber, \$1.63. Eye, \$1.20. Yellow corn, 78 a 79 cts.; western mixed, 78 a 81 cts. Uplands cotton, 16½; Orleans, **Lard,** 11½ 11½ cts. Timothy seed, 8 a 86. Arrivals and sales of beef cattle at the Avenue 1 yard reached about 1,800 head. Choice sold 4 cts.; fair to good, 6½ a 7 cts., and common 5 a per lb. gross. About 10,000 sheep sold at 7 a 10 cts. Hogs, for woolled, and 5 a 6½ cts. for d Hogs were small and prices low. Choice of corn, \$7.50 per 100 lbs. net. **Chicago.**—Spring wheat, Corn, 94½ cts. Oats, 49½ cts. Rye, 90 cts. Bar. Lard, 10½ cts. **St. Louis.**—Family flour, \$3 88; superfine, \$5.25 a \$5.00. Iowa spring wheat a 10 cts. 51½. No. 2 winter rye, \$1.65. Corn, 49 a 50 cts. **Chicago.**—Family flour, \$3 86-75. Amber wheat, \$1.42 a \$1.45. Corn, 1 Lard, 11 cts. Cotton, 15½ cts.

INSTITUTE FOR COLORED YOUTH

The Annual Meeting of "The Institute for Colored Youth" will be held in the Committee-room of Street Meeting-house, Philadelphia, on Third-mo. 30th, 1871, at 3.30 p. m.

RICHARD CADBURY, C.

FRIENDS' BOARDING SCHOOL FOR INFANTS, CHILDREN, TENNESSEE, NEW YORK

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm attached to it. Application may be made to Ebenezer W. Cook, Marshallton, Chester Co., Thomas Wistar, Fox Chase, P. O., Philadelphia, Samuel Morris, Olney P. O., and Joseph Scattergood, 413 Spruce Street, Philad.

FRIENDS' ASYLUM FOR THE INSANE Near Frankford, (Twenty-third Ward) Philadelphia

Physician and Superintendent—JOSIAH H. W. STORRS, M. D.

Applications for the Admission of Patients are made to the Superintendent, or to any of the Board Managers.

MARRIED, at Friends' Meeting, Rahway, N. J. Fifth day, the 4th inst., HUGH D. VAIL, to Miss L. daughter of the late Benjamin Vail.

DIED, on the 22d of First month, 1871, ELIZA WILLETS, in the 65th year of her age, a mem Muncy Monthly Meeting, Penna.

WILLIAM H. PALE, PRINTER. No. 422 WALNUT STREET.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

DL. XLIV.

SEVENTH-DAY, FIFTH MONTH 27, 1871.

NO. 40.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two Dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

NO. 116 NORTH FIFTH STREET, UP STAIRS,

PHILADELPHIA.

When paid quarterly in advance, five cents.

From "Good Health."

Animals as Fellow-Boarders.

P. J. Von Beneden recently read a paper to the Belgian Academy on what he called the *common-tableism* of animals, denoting the habits of creatures who may be boarded together, but whose association is distinct from that of victim and parasite. Every fish, he says, is a living and moving body, on which a fauna is developed of special interest. When a smaller animal aims to profit by the fins of one larger itself, accompanies it in its chase, and snags up spoils which the larger one disdains and, we see none of the motives which characterize parasitism. Even when one repousses the other, it frequently does not break the term which is applied to it. It is rare to find loyal companions by the side of voracious hosts, rendering service in return for hospitality they receive. The parasites take it as his business to live at the expense of another; the associate is simply a companion. When a whale is covered with barnacles, who can say that these Cirripedes are parasites? They merely ask of their companion a lodging-place, and they are more dependent upon him than coachmen or railway passengers: they feed themselves on their journey. Leeches behave differently: temporarily attached to the sides of their host, they suck his blood, and after their meal, that they may conveniently digest it. They are not deemed parasites, because they leave their host during intervals between their meals; but this is a mere opinion, for they are true parasites, and the barnacles are true companions. There are many animals living in common relation to each other is not well adapted, and it will not be uninteresting to see at these, and endeavor to form a notion of the ties that unite them. We do not mean to speak of those associations which are known as flocks and troops, composed of individuals of the same species united for defence or attack, of different sexes, neuters, workers, &c., which belong to the same family, and whose members bring together their strength, their intelligence—I might say, their will, and become fellow-boarders, living on

terms of perfect equality; although it is not uncommon to see the strong use up the weak, or the evil-disposed slip in amongst peaceful communities.

Amongst fellow-boarders we see some that preserve all their independence, and who, at the least cause of discontent, break the connection, and seek their fortunes elsewhere. They are recognized by their apparatus for fishing and travelling, which they never put aside. Others instal themselves upon their neighbors, throw away all their travelling-gear, make themselves comfortable by a change of toilet, and renounce forever their independent life. Their lot is fixed to the creature that carries them. They are permanent fellow-boarders.

Let us consider first—

FREE FELLOW-BOARDERS.

We find free fellow-boarders in different classes of the animal kingdom. Sometimes they sit on the back of a neighbor; sometimes they go in at his mouth, and follow the route of his food; and sometimes they take refuge under his cloak. An interesting instance belonging to this first category is afforded by the graceful fish, the *Donzella*, which makes its abode in the body of a *Holothuric*. The *Donzella* is elongated like an eel, and so compressed that it has been compared to a sword. It is found in different seas with precisely the same habits. The fish lodges in the digestive cavity of its companion, and, without regard for the hospitality it receives, takes its share of everything that enters. It makes use of a generous acquaintance, who can collect food better than itself. The *Holothuric*, or sea-cucumber, are excellent fishers, and we often find in them, side by side with the *Donzella*, who are probably gluttons, prawns and pearls, who come for their part of the spoil. My friend C. Semper has seen sea-cucumbers in the Philippines who were not bad imitations of an hotel furnished with a *table d'hôte*.

In the Indian seas a fish is found known as *Oxylepis lambricoidea*, modestly lodged under a star-fish, and taking advantage of its fishing powers. In Brazil, a Siluroid, of the genus *Platystoma*, a clever fisherman, thanks to his numerous lines, lodges very small fish, which were for a long time supposed to be its young. It was thought the female kept her young in her mouth, as the marsupials keep their infants in a pouch; but it is now known that they are adults and completely developed, but, instead of living by their own labors, they prefer to lodge in the mouth of a good-natured neighbor, and take tithes of the food that comes in. We see that in the animal kingdom it is not always the big which make use of the little.

Dr. Bleeker, an able naturalist who has rendered good service to science, makes us acquainted with an association of a still more remarkable character—that of a Crustacean who makes use of a fish—the black *Stromate* of the Indian seas lodges in its mouth a *Cy-*

pridula, who, if not well adapted for catching his prey in a free state, is perfectly organized for swallowing what comes to him in this position. In the China seas Dr. Collingwood found an anemone not less than two feet in diameter, in whose interior lively little fish resided, the name of which he did not know; and without quitting our shores we may observe an elegant jelly-fish (*Chrysaora isocela*)? sheltering many young ead (*Caranus trachurus*), which surprise us by swimming out from the body of their host. It is, however, amongst the Crustaceans that we shall find the most remarkable examples of free fellow-boarders. The Crustaceans comprise lobsters, crabs, cray-fish, and legions of small animals who act as the sanitary police of the shores, and purify their waters of organic matters which would otherwise corrupt them. They are not like the insects, variegated and glittering in color; but their forms are robust and diverse, and they often please by some special attraction. Amongst these Crustacean free-boarders one of the most interesting, though one of the least, is that tiny crab, the pea-crab, which lives in mussel-shells, and has been wrongfully accused of injuring the quality of their host as food. The ancients, who knew the pea-crab of pinna, thought that the mollusks having no eyes were glad to avail themselves of the good sight of the crabs. These, like other Crustaceans of the same rank, carry on each side the carapace, at the end of a movable support, a charming little globe, furnished with hundreds of eyes, which they can direct, as an astronomer turns his telescope, to any part of the firmament. What cannot be doubted is, that the little intruders live on good terms with the mussels, and if the latter supply a convenient and safe lodging, they on their side profit largely by the morsels which fall from the claws of their guests, who are well placed and well provided with prey-catching apparatus. Slightly seated in their living house at the bottom of the sea, they possess a movable lair which the mussel carries about, and they can choose the best moment for attack, and fall upon the enemy unawares.

An association of a different kind, and the nature of which is difficult to appreciate, is that of a little crab, the turtle crab of Brown, found in the open sea on the carapace of sea-turtles, and sometimes on sea-weed (*Jucus*). The sight of this crab is said to have given confidence to Columbus eighteen days before his discovery of the new world.

Amongst all the cases of companionship none are more remarkable than those of the soldier, or hermit crabs, so abundant on our coasts. These creatures, as it is well known, are decapod Crustaceans, somewhat resembling miniature lobsters, who make their abode in deserted shells, and change both their skin and their dwelling as they increase in size. The young ones are contented with very small habitations. The shells they in-

habit are derelicts they find at the bottom of the sea, and in which they conceal their weakness and personal disadvantages with obstinate persistence. These creatures have too soft an abdomen to confront the dangers they encounter in their incessant wars, and the shells in which they thrust themselves supply at once lodgings and shields. Armed thus from head to foot the soldier crab marches proudly against his enemies, and fears no danger, because he has a secure retreat. But this soldier, or hermit crab, is not alone in his dwelling. He is not an anchorite like those dwelling in air, for by his side a worm is commonly installed as fellow-boarder with him, forming one of the most remarkable associations which is known. The companion worm is elongated like all the Nereids, and its supple undulating body is armed along its sides with bundles of lances, pikes, and daggers, the wounds from which are very dangerous. The crab, ensconced in his borrowed armor, and flanked by his terrible scolyte, attacks all he finds before him, and knows no reverse. Thus around his domain we observe a prosperity not seen elsewhere, and on his shell there usually flourishes a whole colony of *Hydractinia* blooming like a flower-bed, and inside we often find *Peltogaster*, *Lyriope*, and other Crustaceans who convert it into a true pandemonium.

(To be concluded.)

Selected for "The Friend."

"So teach us to number our days, that we may apply our hearts unto wisdom." Psalm cx. 12.

It is remarkable that David puts up this petition immediately after he had been accurately calculating the usual date of human life. "The days of our years," he says, "are three score and ten; and if by reason of strength they be four score years," &c. This fact being so clearly ascertained, and so universally admitted, what need can there be to ask assistance in making so simple a calculation? There is no one so ignorant or so sanguine as to entertain a hope of greatly exceeding the appointed term of life: what then is the meaning of this prayer?

It is very true that nothing is more easy than to count over the number of our days; nor is it very difficult, at particular seasons, to admit a serious thought concerning their rapid flight and certain termination. But it is also true, and universal experience proves it to be so, that there is nothing more difficult than habitually to realize the brevity of life; that is, of our own life; or to retain a lively and influential impression of the certainty of death. That we are not naturally much impressed with it, is, indeed, one of the most striking proofs of our fallen and deranged condition. A strange insensibility on this subject is not even confined to the young. Elderly and aged persons, whose minds are not deeply engaged with the things of God, often appear to forget the short step that there must be between them and death, and betray as much interest in the concerns of this life, as if they had never numbered their days at all. So far, then, from this petition being unnecessary, one of the first things we have need to pray for is a lively perception and recollection of our mortality. "So teach us to number our days." Were this concise prayer but universally adopted, and earnestly pleaded, there would be an end to all thoughtlessness, all frivolity, all earthliness of mind; and the

world, instead of displaying a scene of ceaseless bustle, strife and dissipation, would only exhibit a multitude of strangers and pilgrims, pressing on, with anxious solicitude, and yet with cheerful hope to other regions.

That it is not sufficient barely to know the date of human life, is also evident from the many mistakes and illusions which exist respecting it; and to which the young, more especially, are exposed. In surveying a course of years, youthful vision views them in false perspective, which adds exceedingly to their apparent extent; and although every step they advance tends to correct this, and to render the line more natural and just, yet, it is not till long after youth is past, that we can measure our years with any accuracy. Then life begins to appear as it is; and we exclaim, "Behold thou hast made my days as a hand's breadth, and my years are nothing before thee." At this period, if the mind be alive to its eternal interests, we set out, as it were, with a quickened pace, and feel in some degree the necessity of having "the loins girt, and our lamps burning."

But to the young, days and years not only appear longer than they really are, but they are prone to entertain delusive ideas with regard to what may be accomplished in them. Early in life it seems as though there were an abundance of time to spare; and whatever is to be done, whether in qualifying themselves for this world or the next, they cannot see the necessity of doing it with all their might; since life, long life, is all before them. Now, there is no greater or more fatal mistake, than that of supposing that any period of life is, strictly speaking, a period of leisure. There are, indeed, times for rest, and for relaxation, but there is no time or season given us for loitering; nor can we ever do so without danger and loss. Every season has its appropriate business; and is all required for the fulfilment of important and indispensable duties. If, therefore, the proper business of childhood is delayed till that of youth should commence, and if the acquisitions suitable to youth are deferred till they infringe upon the engagements of maturity, a portion of our lives is wasted irrecoverably, and the loss will be felt throughout life. * * *

A still more dangerous delusion in the survey of life, is calculating too confidently upon our own being prolonged to the utmost date. Because some attain to three score years and ten, and some even totter a few paces further, we readily conclude, or at least sanguinely hope, that we shall be included in that small minority. * * *

How suitable, then, how necessary is the language of the Psalmist! Since, without help and influence from above, we, like the rest of mankind, must inevitably fall into the common delusion in attempting to number our days.

But it is not merely that we may acquire an habitual and apprehensive conviction of the brevity of life, that we should make this request. The important end to be answered by it, "that we may apply our hearts unto wisdom," and this means something more than applying ourselves to the outward forms and duties of religion. It means more than profession; and more than that sort of attention and application which does not at all interfere with worldly pleasures and interests. That which the Scriptures call wisdom, always implies a deep conviction of the value

of the soul; of the necessity of salvation; a consequent earnestness and diligence in curing it. Under such impressions we are unfortunately that we may receive our *fit*, and behold with that truth and clear which is peculiar to spiritual discernment, limits of our mortal career, as well as great concern which we have to transcend the course of it.

Then standing, as it were on an eminence of thought, we shall take a just and undisturbed survey of the path of life. In the bustle, the distractions, the close atmosphere of earthly engagements, we look backward and onward, and measure short passage that is conducting ourself and our generation to eternity. Such a wholly different from a vague and general knowledge of our mortality, is given those who earnestly ask for a serious mind and the result of it will be more earnest sires, and more determined resolutions, the short path which lies before us made direct through the narrow way that leads to life. Then shall we indeed strive to be at the straight gate: seeking to do so by means of fervent, importunate prayer.

Requests like these are sometimes answered in a manner unthought of by the persons who urge them. Those whose hearts still cling to life and earthly happiness, and who are prone to make sanguine calculations of their future years, are often taught how to number their days by the means of affliction. God took some of the springs of life: health is blasted and then with a distinctness and vivid unknown before, we see that "the days of years are few and evil." "It is good to be afflicted" when such purposes are answered by our trials. Our heavenly Father knows what means to use in granting on requests for spiritual wisdom; and what most effectually disperse the illusion and security of our minds. Whatever these may be, instead of shrinking from them, interest is diligently to improve them.

There are many who think little of flight of time on ordinary occasions, who give a serious thought to this solemn sal at the close of a year, on a birth-day, or the event of the death of any of their friends. But the experience even of a child will show how transient and ineffective such impressions are, in themselves. Often "a fleeting ho scarcely past" before they are completely effaced, and worldly things eagerly recede the mind. Let a recollection of the inefficacy of former impressions, deeply convince a reader who may have been the subject them, of the absolute necessity of the Holy Spirit to render such thoughts living and influential. If David found the efficacy of prayer in order that he might number days to purpose, surely it must be the same with us. Let us then all join with deep seriousness in this petition; accompanied with a sincere purpose of heart, henceforward to be our hearts to true wisdom.—*Jane Taylor*

Fossil Forest in California.

Prof. O. C. Marsh, of Yale College, communicates to the *American Journal of Science* an article on the above subject, from which following is extracted.

During the visit of the Yale College scientific party to the Pacific Coast, in October last, several members of the expedition including the writer, while on their way

Francisco to the "Geysers," took occasion to examine a locality, a few miles from the city, where a number of fossil trunks of trees recently been discovered.

The locality is situated on a high rocky ridge in Napa county, California, about five miles southwest of Calistoga Hot Springs, and about ten miles south of the summit of Mt. St. Helena. The existence in this locality of several petrified trunks of trees was first made public by Charles H. Denison, of San Francisco, who visited the spot in July and soon after gave a short account of his discovery in the San Francisco Bulletin. A careful examination of the locality where the petrified prostrate trunks had been discovered, made it evident that those now on the surface had all been weathered out of the volcanic tuffs and sandstones, which form the top of this part of the mountain ridge. All the large silicified trees were, indeed, substantially found in the vicinity, projecting from the side of a steep bluff, which had par- tially escaped denudation. Portions of nearly a hundred distinct trees, scattered over an area of three or four miles in extent, were found in the vicinity; and the information we received from hunters and others, familiar with the surrounding country, renders it more than probable that the same beds, containing simi- larly silicified wood, extend over a much greater area.

The fossil trees washing out of this volcanic region were most of great size, and appeared to be very largely related to some of the modern forest of the Pacific coast, especially the gigantic sequoias. One of the prostrate trunks discovered during our explorations was only slightly exposed above the surface, dipping at an angle of about 10° to the northward. The accessible portion, evidently but a small fragment of the original tree, measured sixty-three feet in length, and, although denuded of its bark and very much weathered, was over a foot in diameter near its smaller end, and high summit, about a quarter of a mile from this point, two other large trunks were found, one about five feet in diameter, and east and west, with thirty feet of its length above the surface. The other rested on this, dipping with the strata to the north. The exposed fragments of this tree indicated that the tree when standing was not have been less than twelve feet in diameter. These two trees had apparently not far from where they were imbedded, their bark was well preserved, both on the trunks and on the small branches, and some fragments of which were lying near other trees were found, nearly or quite to these in size; and all those examined displayed a very large general growth for the age of the trees.

The trees discovered were prostrate, and, out of them, after their petrification, had broken transversely into several sections. The ends of the trunks had portions of their bark still attached, and some were evidently decayed internally, and worms entered their entombment. All the fossil wood was silicified, probably by means of saline waters containing silica in solution, a natural result of volcanic action, especially when occurring in connection with igneous rocks, as was evidently the case in the present instance.

The trees, closely examined, appear to be of the same species, and in their external characters,

especially in the bark, mode of branching, and general habit of growth, most nearly resemble the modern redwoods, still flourishing in the same region.

Report of the Proceedings of the Tract Association of Friends, for the year 1871.

The Managers report, that there have been printed during the year ending Second month 28th, 1871, 76,095 Tracts, 6,568 Almanacs for 1871; 1,000 Juvenile Books; 2,000 "Sermon on the Mount," 2,000 "Selections from the Proverbs of Solomon," and 2,150 "Biographical Sketches and Anecdotes of Members of the Society of Friends."

There have been taken from the Depository during the same period 89,807 Tracts, 4,628 Almanacs, 1,560 Juvenile Books, 194 Select Readers, 1,961 "Sermon on the Mount," 821 "Selections from the Proverbs of Solomon," 34 "Spiritual Progress of M— R—," 17 "Mary Dudley and Daughters," 20 "Sarah Grubb," 60 "Divine Protection, &c.," 32 Select Extracts, and 1,252 "Biographical Sketches," &c.

There were on hand Second month 28th, 1870, 183,300 Tracts; there have since been printed 76,095, and there have been taken from the Depository 89,807, leaving a balance on hand Second month 28th, 1871, of 174,588.

Those taken gratuitously have been intended for distribution as follows:

At Schools, among the Poor, in Prisons and generally in the City,	6,779
On Railroads, in the Mining Regions, and elsewhere in this State,	17,335
In Massachusetts,	1,298
In New York,	2,657
In New Jersey,	4,925
In Delaware,	438
In Maryland,	2,820
In Washington, D. C.,	950
In Virginia,	1,240
In West Virginia,	1,380
In North Carolina,	676
In South Carolina,	100
In Tennessee,	1,790
In Georgia,	125
In Alabama,	480
Among the Freedmen and generally in the Southern States,	2,340
In Ohio,	3,932
In Indiana,	517
In Michigan,	113
In Iowa,	1,530
In Missouri,	244
In Kansas,	1,187
In the Western States generally,	720
Along the railroad routes in different States, on shipboard and places not particularly designated,	26,161
Making a total gratuitous distribution of	79,737
There have been sold,	10,070
Making the total number taken from Depository,	89,807

The Moral Almanac for 1871, has been published in the usual style, and selections made for that of 1872.

Encouraged by the large circulation given to our issue of the "Sermon on the Mount," we have selected a number of Solomon's Proverbs and had them printed in a little book uniform with the Sermon. Their simplicity,

clearness and general application, make them well adapted for distribution amongst children, the freedmen at the South, and in the community at large.

One tract has been added to the series—being the 115th. It is entitled "Samuel Fothergill," and exemplifies the power of Divine Grace in bringing back one who had widely wandered from the path of peace, and anointing him for extended and peculiar service in the cause of his Master.

But the most extensive labor of the year has been the preparation and publication of a duodecimo volume of more than four hundred pages, entitled "Biographical Sketches and Anecdotes of Friends." It is chiefly compiled from a series of essays that appeared a number of years since in "The Friend" of this City, and comprises short accounts of eighteen American Friends, interspersed with a number of anecdotes and incidents recalled by the text, or in illustration of the principles of the Society. The subject has been receiving some consideration for several years past; the difficulty of satisfactorily arranging the matter and the needful expense being the principal causes of delay. To meet the latter, it would become necessary to borrow a considerable sum of money, which, if the book should not prove a success, it might be difficult for us to repay. A careful investigation finally resulted in the belief that the experiment would not be an unsafe one. It was estimated that one edition of one thousand copies might be printed and sold at a low price, so as to clear the cost of the stereotype plates. This was accordingly done; our expectation was realized, and in eight weeks the entire edition was exhausted. A second issue has since been printed, and is now being disposed of.

These evidences of the satisfaction of Friends, and the disposition that has been manifested to aid us in our efforts, have been encouraging to the Board of Managers. Yet it is important to remember that the ignorant, the erring, and the poor, are more especially the classes which the "Tract Association of Friends" was designed to benefit. Our field of labor is large, and much good has been accomplished. A few words or sentences have often arrested the attention, and been the means of arousing the indifferent, or checking them in a course of evil, or turning them from it. Let us then be increasingly watchful for suitable opportunities of spreading where they are needed, the wholesome sentiments with which our publications are replete.

On behalf of the Board of Managers,
SAMUEL ALLEN, Clerk.
Philadelphia, Third month 9th, 1871.

OFFICERS OF THE ASSOCIATION.

The following Friends were appointed to fill the respective offices of the Association for the ensuing year:—

Clerk,—Edward Maria.

Treasurer,—Elton B. Gifford.

Managers,—John C. Allen, Edward Richie, Horatio C. Wood, Charles J. Allen, William Kinsey, Samuel Allen, Mark Balderston, Joseph S. Elkinton, George J. Scattergood, Jacob W. Fry, John S. Stokes, Samuel Emlen, Clarkson Sheppard, Richard J. Allen, John W. Biddle.

The Annual Meeting is held in the Arch Street Meeting-house, on the last Fourth-day in the Third month, at eight o'clock in the evening.

Little Things.—In the management of the temper, on which our own comfort as well as that of all around us so much depends, nothing effective will be done but by a watchful attention to *little things*. The temper is oftener ruffled by slight provocations than by great and serious injuries. Now if because they are slight we think it not worth while to resist them, if we suffer a cloud to pass over the brow, on every such occasion, the result will be (for such occasions are of daily occurrence) that by little and little these clouds will gather and rest there. A morose or a fretful temper will be fixed upon us; and all power of self-government lost. If, on the contrary, a resolute determination had been made at first, not to yield to these small and frequent irritations, this effort, continued day after day, would soon have strengthened into a good habit; rendering it not only pleasant but easy, ever after to exercise forbearance, and to give the "soft answer that turneth away wrath."

It is in small things that brotherly kindness and charity chiefly consist. Little attentions, trifling, but perpetual acts of self-denial; a minute consultation of the wants and wishes, tastes and tempers of others; an imperceptible delicacy in avoiding what will give pain; these are the small things that diffuse peace and love wherever they are exercised, and which outweigh a thousand acts of showy heroism. That which requires the greatest effort is the greatest charity; and it is beyond comparison a greater exertion to keep a daily and hourly watch and restraint upon ourselves for the sake of others, than to summon our whole stock of forbearance or benevolence once or twice in our lives, in order to perform some deed of munificence, or to forgive a great injury. "Take up your cross *daily*," our Lord says: it is but a light one indeed, but shall we on that account despise it? * * *

There can be no appearance more hopeful and promising in childhood and youth, than

a tenderness of conscience respecting small things; a child who is never known to plead excuses for what is known to be wrong by saying "it is not a little one?" who resists an improper thought, forbids a hasty word, who fears the slightest deviation from the truth, bids fair to rise, by gradual, but certain steps, to true excellence.

But whatever may be our view of the subject, it is certain that God does not, in any sense, condemn *small things*. He looks at motives more than at actions; at thoughts more than at words; and by these we shall be judged.

And let us be thankful that "He does not despise the day of small things;" the bruised reed, the smoking flax, the grain of mustard seed, the little leaven; over these small beginnings He watches with patient and gracious care, till by little and little they attain to perfection.—*Jane Taylor*.

JESUS, SAVIOUR, PILOT ME.

Jesus, Saviour, pilot me
Over life's tempestuous sea;
Unknown waves before me roll;
Hiding rock and treacherous shoal;
Chart and compass came from Thee:
Jesus, Saviour, pilot me.

When the Apostles' fragile bark
Struggled with the billows dark,
On the stormy Galilee,
Thou didst walk upon the sea;
And when they beheld Thy form,
Safe they glided through the storm.

Though the sea be smooth and bright,
Sparkling with the stars of night,
And my ship's path be ablaze
With the light of halcyon days,
Still, I know my need of Thee;
Jesus, Saviour, pilot me.

When the darkling heavens frown,
And the wrathful winds come down,
And the fierce waves, tossed on high,
Lash themselves against the sky,
Jesus, Saviour, pilot me
Over life's tempestuous sea.

As a mother stills her child
Thou canst hush the ocean wild;
Boisterous waves obey Thy will;
When Thou sayest to them "Be still,"
Wondrous Sovereign of the Sea,
Jesus, Saviour, pilot me.

When at last I near the shore,
And the fearful breakers roar
'Twixt me and the peaceful rest,
Then, while leaning on Thy breast,
May I hear Thee say to me,
'Fear not, I will pilot thee?'

THE CELESTIAL SABBATH.

The golden palace of my God,
Towering above the clouds, I see,
Beyond the cherub's bright abode,
Higher than angel's thoughts can be.
How can I in these courts appear,
Without a wedding garment on?
Conduct me, thou Life-giver, there,
Conduct me to thy glorious throne,
And clothe me with thy robes of light,
And lead me through sin's darkness night,
My Saviour and my God.

VESUVIUS.

The following interesting account of an eruption of Vesuvius, which occurred during the early part of the Fourth month of this year, is taken from the *Boston Journal*. The writer, F. L. Capen, had ventured an opinion that an eruption would take place about the time that this took place, from his observations of meteorological and other phenomena:

"This was, by far, the most thrilling eventful night of my life. My interest in volcano had been raised to enthusiasm by outbreak of its torrent of lava on the evening of the 3d inst., against the opinion of experienced residents. . . . During a late walk on the magnificent road, the Corso Vittoria Emanuele, which overlooks the finest city and the most charming scenery I ever beheld, on the evening of the 8th, a succession of violent explosions from the crater, distance being about twelve miles. . . . Reports were frequent on the morning of the 9th, and in the afternoon a party of us started for the scene: we reached the stream of lava before sunset, and the summit before dark. We had a close view of the new crater, at foot of the new cone, which, having no a mulation of ejected matter, i. e., no concretion and ashes, shows clearly how it is first formed. A thick bed of solid rock so to have been rent by the pent-up forces, and forced upward into a vertical position, like the jaws of a monster—broad at base and tapering at the top. Three or four of these vast rocks form the chimney, through which pour volumes of steam and smouldering flames and lava with great violence as if from a mighty conflagration under dense pressure below. Our party was hindered to descend, as the night drew on; but I was satisfied, and, being on the ground, I resolved to stay till morning; and I was well repaid for my trouble and privation. It was impossible to do justice to such a subject in a brief sketch. There are really three separate throats so to speak, from the depths below, quite distinct in their mode of action. Two are the main crater at the summit, and on a level with the new one above named, which is the north base of the great summit, or cone, and whose action I have described. The middle throat or register is the only one which was violent in its action, and through which, at longer or shorter intervals, it is terrific. After brief periods of rest it bursts forth again, with a tremendous explosion sudden and intense as that of the heated cannon, but many, many times vaster and grander, as if a magazine of powder or a quantity of glycerine had suddenly been ignited far in the deep bowels of the earth. Sometimes, one, oftener several reports, came in succession. Sometimes the first was low and soft, but often the second and third reports followed with increasing rapidity and violence and with much greater intensity than the first. At all the explosions of this opening immense volleys of glowing stones and red-hot diamonds were thrown to the height of from one to two hundred feet, spreading into magnificent jets of great brilliancy, many of these stones some of large size, falling outside the crater and rolling down the cone in glowing torrents to its base. Sometimes the explosions were preceded by subterranean rumbling down in the deep caverns of the mountain accompanied by a trembling of the solid floor to its very base.

"The action of the third spout or register was wholly different from the other two. There was no violent explosion, as of powder, as in the case of that just described, though, like that, its delivery was fitful, bursting out at intervals, and never uniform and continuous and unexplosive, like the first. It described new crater outside the cone, and flowed was a copious compressed volcano

and flame, as from a well-fired furnace, with no noise, except that of the constant glow of the flame. The third register made at blowing noise, like an immense fuse, very much like the noise of an ascending of immense proportions. It threw out jets of black smoke and great bouquets of cinders, but with much less violence in its companion, as if the opening much larger—so much larger in proportion to its discharge as to divert it of all violence. I should regard this as the end nearly spent crater."

For "The Friend."

Memoirs of Mildred Batcliff.

Presenting the accompanying memoirs of Mildred Batcliff, the compiler has taken the liberty to make a few slight alterations, where, for clearness and perspicuity, they seemed needful, in any wise altering the sense of the original manuscript. The simplicity and originality of the memoranda, and their religious savor, will, it is believed, commend them to very many readers as a Friend."

Mildred Batcliff, the daughter of John and Elizabeth Morris, was born in Virginia the 6th of Eleventh month, 1773. She was the first child, and although not favored with school instruction, was an apt scholar, deriving from the conversation of those with whom she associated. Her parents at the time of her birth were Episcopallians, but after they joined the Baptists, and her father being zealous in his new profession, she was admitted as a preacher among that people, having abundant opportunity of preaching as a professed minister of the Gospel, and of attending meetings for public worship. Her parents were no doubt pious men, and her mother, perhaps, more devoted, so, as she was by nature active, diligent and susceptible, Satan laid many snares for her feet, adapted to her disposition, and opened by-ways in which he often permitted her to wander from the paths of truth. Yet her Heavenly Father through the intercession of her good, raised long-remembered and heavenly things in her and sent instruction to her in dreams at night. One of these dreams she thus related, many years afterwards, whilst on a recent visit in Philadelphia.

My father's house in Virginia, there was a large tobacco field which was not worth cultivating, and which we used to call the 'old field.' When I was a little above nine years of age, (I could not remember more, for I sat upon the floor while my father and mother my dream,) I dreamed that I saw the old field full of people; in the middle of it there was a hole about as large as this room [a comfortable sized chamber] could be if it were round; and from this hole flames of fire were ascending. After I awoke I saw the old enemy come out of the hole and take hold of one of the people, and then he and I went headlong into the abyss, and he boiled up over him. Then he took me and served him in the same way.

My father is proper to state that our late friend, Nathan Kite, had partly prepared the memoirs of Mildred Batcliff for the press. Which addition to other more manifest and important labors, has also considerably abridged the labor of those whose hands they have now been committed.

Thus he went on. It was remarked that he always took those that came nearest to him; but the rest of the multitude seemed to take no notice that one by one their companions were taken away. After awhile, as I gazed in astonishment, I perceived that there was but one beside myself left; and that one was presently taken too. Then the old adversary looked round, and seeing me, made directly for me. Frightened awfully, I turned to run; and I heard a voice say distinctly, 'As long as you strive to run from him, he will have no power over you.' It said you to me then, for it always speaks to us in a language we can understand. The part of the old field I had to run through, was a kind of quagmire, and my feet sunk in; and I suffered as much as any poor mortal could suffer in a dream. About a yard before me a flame seemed to rise from the ground; and I thought surely when I get there I shall be burned up; but still I determined to go on; and as soon as I got to where it first appeared, it was a yard further ahead; so it continued until I got out of the field. When I reached the road, which was a level, beautiful piece of ground, I began to go faster and faster; and presently I flew; and the old enemy was left far behind. Then I slackened my pace, and was trying to raise a song of thanksgiving in my heart for my deliverance, and proceeded slowly along. Suddenly I heard the same voice say, 'Look behind you!' I cast my eye over my shoulder, and there I saw the old adversary with both claws open ready to grasp me. Again I sprang forward and ran, and soon I flew, and did not slack until I got home. I did not stop at the porch; for it was no place of safety; but as soon as I got within the door, all fear was taken away, and I turned round and looked the old adversary in the face, and said, 'Satan, I am not afraid of you now, for I am in my Father's house.' He dropped a scowl upon me and went away."

Mildred continued her narrative thus—a sequel which unfolds her own view and interpretation of the dream:—"Many years after, when distant from Friends, and in a lonely state, this dream was all opened to my understanding. The people in the old field were the world; one by one their companions passed to punishment, but they heeded it not. The toilsome way I had to pass through, was in getting among Friends. But I was instructed that even here the enemy would clutch me if I was off my guard.

When about ten years of age Mildred dreamed that her mother, to whom she was devotedly attached, would soon die. The dream made a very painful impression on the mind of the young girl, and she did little else for a time but watch her mother as she moved about their house with tears in her eyes, and anguish in her heart. The mother noticing the unusual behavior and deep sadness of her daughter, demanded the cause. Mildred related her dream. The mother tenderly yet strongly chid her, and commanded her not to let this matter rest on her mind. In a short time after, her mother fell sick and was soon removed by death. Notwithstanding the previous warning received, and the exhortation and command of her mother, Mildred grieved immoderately. She was absorbed in grief, and the intensity of her feelings seemed likely to be attended with serious disadvantage to her, when her Heavenly Father, whom she was then trying to serve, was

pleased in a dream to comfort as well as instruct her. She dreamed that her mother came to her, and after reproving her for her excess of sorrow, told her "That she was now as happy as Heaven could make her." This dream revived the spirit of the child, and once more the light of joy illumined her earthly path. In after life she sometimes spoke of visitations of mercy given to the believer through dreams, and said she thought she had received much instruction from them.

Mildred on one occasion, under an apprehension of its being a duty required of her by her dear Saviour, commenced an account of her life, to leave as she says "some hints of the tenderness of a gracious God even from my childhood."

After mentioning that her parents were Episcopallians, and that according to the custom of that sect, they had her baptized (as they called sprinkling with water) when an infant, she says, they soon after joined the Baptists. She then continues her account thus: "As I grew in years, the Divine Spirit frequently was with me as a teacher not to be removed into a corner, though I did not then know what it was that reproved me when I did wrong and comforted me when I did that which is right. By little and little I was brought to feel the exceeding sinfulness of sin. By the same Divine Truth, the vain fashions of the world were made burdensome, and forbidden fruit to me. All this, and more I have seen since were the leadings of that Truth which changeth not. By it I was led out of many things which my people were in the practice of. At length some of them began to reflect on my foolish notions, as they might deem them, because I could no longer go with them in the changeable fashions of this world. This I was enabled to bear, and becoming mercifully favored to deepen in the root of religious exercise, I not only believed in my heart in the Lord Jesus, but was enabled to confess with my lips that He was the beloved of my soul. Thus confessing him, I was received into membership with the Baptists, and was baptized by immersion before I was fifteen years of age."

Her mind was fairly awakened to see the sinfulness of sin; she wished to be obedient to her dear Saviour, and she found herself uneasy not only with gross sins, but with following the world so far as to change her dress according to its changeable fashions. Her way was impeded by the censures of such, as making a profession of religion, were yet unacquainted with the cross of Christ. She yet persevered, and having great love and attachment to the Baptists, and not having yet been enlightened to see beyond the shadow of the substance, she joined them by public confession and immersion in water. The Holy Spirit which had led safely through many inward conflicts, and had opened many truths to her understanding, still continued with her, and urged her onward into more spirituality, to nearer and nearer approaches towards her Heavenly Father's house, which Satan cannot enter.

She says, "I was a zealous Baptist. My father and a number of my near connections were ministers among them, and I was warmly united to that people." Soon after her admission amongst them her father died, her mother as we have seen, having been removed from works to rewards some time before him. Not long after the death of her father, she was

married to Harrison Ratcliff, a young man, who although brought up among Friends, was light, volatile, and not a true helpmate for one seeking the kingdom of heaven more than earthly pleasures or treasures. The marriage took place 2nd month 21st, 1787, Mildred being but fifteen years and three months old. Their residence was in Campbell county, [figures not intelligible] miles from Lynchburg.

(To be continued.)

California.

(Continued from page 206.)

"The valley, together with the Mariposa Grove of Big Trees on the road to it, were some years since wisely voted by Congress to the State of California, on condition of their preservation for public use. They have been put in charge of a Commission, with a local agent to protect the trees from destruction and the limited lands from misuse; and the purpose of these officers is to improve the access to these great natural attractions, and furnish every facility to the visitors for seeing all their interesting features at the least cost of labor, time and money. The idea is a noble one, and, though somewhat obstructed temporarily by the claim of several squatters in the valley to nearly all its available lands, we cannot doubt it will in time be fully realized. It is a pity that other great natural objects of interest and points of attraction for travellers in our country could not be similarly rescued from subjection to speculating purposes, or destruction by settlement. If Niagara Falls, for instance, and a fifty miles square of the Adirondacks in New York, and a similar area of Maine lake and forest, could be thus preserved for public use, what a blessing it would be to all visitors, what an honor to the nation!"

"On the whole, June is the best month for this excursion. It is early spring among the mountains then, and there may be an occasional snow-drift in the path; but nature is at its freshest, and, above all, the water-falls in the valley are then in their fullest force and beauty. Besides those we have mentioned, others at that season trickle in bright beauty over the high rock walls of the valley; and the Bridal Veil, the Yo Semite, the Vernal and the Nevada are vastly more impressive and beautiful than later in the summer. There is a rapid falling off in the amount of water flowing in these streams after May or June. Clouds are rare visitors to California's sky in any part of the summer; and the deep haze that may be found in many famous paintings of Yo Semite scenery is an addition of the artist's, not a gift of nature. In later summer there is a thin, soft haze, hardly perceptible, and only just tempering the clear, sharp sunlight that is the characteristic of California's atmosphere. But the photographs do more exact justice to this than the painters have."

"How was this curious freak of Nature formed? is a question that every visitor at least will ask. It is a puzzle to the imagination, and baffles even the scientific student. Professor Whitney, of the State Survey, discusses the question elaborately in his admirable volume upon the Yo Semite, the Big Trees and the High Sierras, which, with its maps, should be the companion of every one who visits these regions. He rejects, as impossible, the idea of water having worn it out;

or that it was the work of a glacier; or that it was split open by a convulsion of nature; but concludes, as the only practical supposition, that the bottom dropped out! There is no other way of accounting for what is gone but that it is sunk below. It is not called down stream; it does not remain in the valley,—there would be no valley if it did; there are but comparatively small deposits of rock in the valley under the walls,—no more than the waste, by frost and ice and water, of a few generations at the most; and, indeed, there seems no other supposition that meets the mystery than that the missing rocks are swallowed up below. It would appear, too, as if the chasm had not been filled up to its present point, and that originally, and until within a comparatively recent period, the whole valley was a grand, deep lake. This is a peculiar theory; it applies but rarely to the strange forms of nature scattered over the earth's surface; but the Yo Semite is a peculiar phenomenon,—it justifies, it, indeed, demands a peculiar explanation, and no other fits it so reasonably as this.

"In connexion with this excursion, the visitor to California should, if possible, take another week to mount the High Sierras above and around the Yo Semite Valley. In their grand majesty and sublimity, they are nowhere else more representative or more easy to reach, than at this point. Few persons have as yet visited this region for pleasure; but the search for mines or for the wild sheep of the mountains has made the paths familiar to many people in the neighborhood; and Professor Whitney's enthusiastic description of the views to be obtained, in the circuit, not only into the valley of the Yo Semite, but over and along the crest of the Sierras,—here reaching to twelve and thirteen thousand feet high;—great masses of rock varying with great fields of snow, relieved with dark and deep lakes, and patches of meadow and forest, furnishing the near, and the distant ranges of the Interior Basin, with their vast desert valleys, the remote landscape,—all will kindle the curiosity of the traveller, and lead many to follow out the trails and the suggestions his book lays down.

"This upper mountain excursion carries us to the head waters of the streams that pour over the Yo Semite walls; it brings us to the shores of beautiful Lake Tenaya; by a detour of a few miles it will lead us to another Yo Semite valley on the Tuolumne river, called the Hetch-Hetchy valley, which but for its grander rival would have a world-wide fame, and will yet be a favorite resort of Sierra pleasure travel; it exhibits to us the scene of former glaciers, that must have been eight hundred and a thousand feet thick with ice and snow, and a mile and a half wide; it lifts us to the top of representative peaks as Hoffman and Dana, whence the world seems to start away from our feet,—so central and vast the view; it will lead us, if we choose to branch off from our circuit, on down the eastern slope of the range to Mono Lake, a large sheet of water, dense, sluggish, bitter, acid and corrosive, forbidding all life within, consuming all life from without,—the bodies of a party of Indians who jumped into these death waters to escape their pursuers, being thoroughly decomposed, with all their clothing, in a few weeks,—an outpost warning, indeed, against the Desert and Death's Valley beyond; and which we may return with delight to fresher

waters, and stand over the grand Nevada F of the Yo Semite, and see the Little Yo Semite a continuation in miniature of the valley, have so admired; then pass under the shadow of Mount Starr King, one of the grandest the outlying peaks of the valley; next go to the top of the Sentinel Dome, whence get the finest views into and of the valley and especially of its highest column, the H Dome; and now finish our circuit by reaching the main Mariposa trail. This scenery of the Upper Sierras is of a type of its own, as distinctive as that of the Swiss Alps, as that the parks and mountains of Colorado, as that of the Yo Semite itself below; unlike either but entitled to rank with them all in the place among the grand Nature of the world. In the two elements of sublimity and grandeur, it probably surpasses all the other while it lacks the beauty and variety that gives them a tenderer hold upon human sympathy. The Rocky Mountains are vast p of broken stone; these upper Sierras are g smooth castellated peaks or rounded dome solid granite, sometimes unbroken and scarred almost for thousands of feet, but of made up of vast concentric layers of r reaching from a broad base to conical pic peaks, like cathedral spires, and to the eye most toppling in their dizzy height.

For "The Friend."

Life of Cesar Malan.

Henri Abraham Cesar Malan, who was born at Geneva 7th mo. 17th, 1787, and ceased at the same place 5th mo. 8th, 1817, was a man whose time and talents were mainly devoted to the promotion of religion among his fellow men. Though we are compelled to differ from him in some of the suits which he arrived at, by the application of his intellectual powers to the investigation of spiritual mysteries, yet we can still appreciate the energy and earnestness with which he pursued the great object of his life, and his sincere and practical piety which he manifested. His sentiments were those of the celebrated John Calvin, and like him, he adopted the doctrines of predestination. Dwell upon such texts as these: "By grace ye are saved, through faith," "Without me ye can do nothing," &c.,—texts which are indeed precious treasure to the humble Christian; he deduced from them conclusions inconsistent with other portions of scripture, and with the experience of the work of salvation, yet sincere followers of Christ have ever passed through. It is said of Calvin himself, near the end of life, he made use of some expressions which indicated a doubt as to the correctness of principles he had long adhered to, though at the same time he said, seemed to him logical conclusions from passages of scripture on which he had founded. While it is an interesting employment to trace in the lives of those of other denominations, who were evidently disciples of the common Redeemer, those fruits of the Spirit which evidence that they have been engrained into the true vine, and have drawn sustenance therefrom, yet there is an excessive fullness of satisfaction which one receives in perusing the records of many of our members of our own Society, such as Wm. Penn, William Edmundson, Joseph Pike, Richardson, Jno. Woolman, Daniel Webb, and many others, who, receiving the truth

implicity and devotedness of heart, were preferred from fashioning it so as to suit their own intellectual bias and mental powers.

The Malan family were descended from the Valdenses of the Piedmontese valleys, and several of the race suffered in the persecutions which befel that branch of the church. Pierre Malan, the great grandfather of Cesar, settled in Geneva in 1722, having fled from his residence after the martyrdom of his sister. Cesar's character and mind were early developed, and his son, who narrates the story of his life, says: "His mother often told us how he had read to her the story of Gethsemane, as he sat on a little footstool at her feet, when he was only three years and a half old." His kind disposition was shown by any little incidents narrated by the same parent—one of which was as follows: "It was during a severe winter, and in days when our circumstances were far from affluent, when your father was about seven years old, that I made him a present, one day, of a pair of warm woollen gloves. A morning or two afterwards, on his return from school, I found that he was not wearing them, and, instead of questioning, elicited the explanation that he had given them to a poor boy with chilled hands. 'You see, mamma,' said, 'I can put my hands into my coat sleeves—his coat was not warm like mine.'" My grandmother commended her boy for what he had done, telling him, however, at the same time, that he must not expect another pair, "though," she added, as she told the story, "I often suffered that winter at sight of his poor little frost-bitten hands, and, independent of the cost to me of replacing the gloves, which I could ill afford, it was of paramount importance that he should learn by experience that those only can have the privilege and pleasure of giving who give at the cost of personal sacrifice."

Having received a liberal education, he was appointed one of the teachers in the College of Geneva, in 1809, and filled that position with great success for nine years, when he removed on account of the religious position he assumed, somewhat at variance with established church of Geneva. The remainder of his life was given up principally to efforts to promote the spiritual welfare of his. This he endeavored to effect by preaching, by writing, in which he was very industrious, both in prose and poetry, (having behind him more than 1000 hymns;) and by conversation with others. For this line of service he seemed to possess considerable ability and had a high value of its importance, saying "that a single conversation is often as efficacious than many sermons." In illustration of this trait in his character, his son describes a pedestrian tour among the Alps, about the year 1840.

His father wished to revisit with us the picturesque gorges, north of the Jura, which he explored in his youth, and remembered with enthusiasm ever since. Taking the road from Geneva to Lausanne, we went on to Yverdon, no opportunity being missed of proclaiming the gospel. On the banks of the Neuchâtel I remember well sketching seated in the bow of the boat, with a young man at his side, to whom he was speaking about his soul. His New Testament in his hand, while a mountaineer, leaning at the gunwale, let his pipe go out as he addressed to him.

"A few days after, we climbed, one glorious evening, the road ascending from Bienna, and following the torrent of the Suze. Reaching the inn at Sonceboz, my father, as he unhooked his knapsack, said to the landlady that he intended having evening prayers with us after supper, and that if she and her household liked to come they would be welcome. 'We don't require that sort of thing here,' she replied, apparently very much pressed with business, adding one or two expressions of impatience. Thereupon my father forthwith resumed knapsack and staff, saying to me, as he did so, 'Do you feel up to another hour's walking?' little heeding the amazement of our would-be hostess, who was anxious to detain us. 'Come, boys, I cannot pass the night under a roof where there is no desire for prayer, and no fear of God.'

"A few minutes afterwards, as we were following the road leading from Sonceboz through pine woods to the defile of Pierre Pertuis, we came up to some wagons laden with planks, which were going in our direction. My father called to me, and pointing out a tall young man who was driving the first of them, gave me a tract, asking me to hand it to him from him. The driver thanked me very politely, and I rejoined my travelling companion, who had stopped for a moment to admire a particular part of the landscape. In a few moments, however, the man to whom I had given the tract, and who had set to work to read it aloud to his mates, came up to me, and asked me to request my father to explain to them a few things in it which they could not understand. My father joined the men, and we left them coming on slowly after us, and keeping alongside of the wagons. Shortly afterwards, when they had rejoined us, I overheard him, as he stretched out his hand to the man who had read the tract, inviting him and his companions to our evening worship at Tavannes. They promised to come, and kept their word. 'Was it not the Lord who drew us away from Sonceboz?' he asked me when we were by ourselves.

THE FRIEND.

FIFTH MONTH 27, 1871.

The Journal of John Woolman, with an introduction by John G. Whittier.

A copy of the above work has been handed to us, and we have read the introduction with much interest. As the Journal has long been a standard work among Friends in this country, and some years ago was stereotyped and is kept for sale or distribution at their bookstore in this city, we doubt not it is well known to our readers. It is an interesting circumstance that it has been brought before the public in the style in which this edition is got up by one so well and so favorably known as an author, as J. G. Whittier, and that it should come from the press of J. R. Osgood & Co., Boston, Mass.: We may hope that this excellent work will thus be introduced to the favorable notice of many who, perhaps, would otherwise never think of looking into it.

The introduction, which contains high eulogiums on John Woolman and his writings, by several distinguished persons, gives a brief account of the abolition of slavery in the

Society of Friends, and the emancipation of the slaves held by many of its members, as well as some notice of the christian principles and their resulting effects, so beautifully set forth in the pages of the journal. The style in which it is written is simple and elegant, and we think it is well calculated to induce its readers to enter on the perusal of the other contents of the book, with minds better prepared to relish and properly estimate the truths treated on in it. We regret however, that in one or two places, language is used, which, we fear, may convey to many erroneous impressions, such as the author may not intend. Thus on page 14, after speaking of B. Lay and his doings, he says, "Such was the irrepressible prophet who troubled the

Israel of Slaveholding Quakerism, clinging like a rough chestnut-bur to the skirts of its respectability, and settling like a pertinacious gad-fly on the sore places of its conscience." So far from B. Lay thus goading the Society, the fact was that his eccentricities and, in some respects, his inconsistencies, neutralized any influence he might otherwise have had, and his invectives and upbraiding, attracted little attention from Friends. If the words we have italicised are intended as a slur on the Friends of that period, it should be recollected that although all Friends did not at first see the iniquity of slavery, nor the Society find itself called on to condemn it until some years after its establishment, when many had obtained a right of membership by birth, we may charitably believe the members had been, in that respect, like the primitive disciples, to whom our Lord said, "I have yet many things to say unto you, but ye cannot bear them now." But the light of Christ shining in their hearts was bringing some here and others there, to a more just sense of the wrongs inflicted on the poor blacks by withholding from them their liberty; and it was evidently obedience to this further discovery of what was required of them that brought the church under concern on account of the slavery existing within it, and secured the success of its labor to procure emancipation.

Though John Woolman was a remarkably qualified and very devoted laborer in this good work, it would be an error to suppose he was more zealous or a more indefatigable worker in the cause than others of his brethren, several of whom had long been concerned on account of the slavery of the blacks, and warmly espoused their right to freedom.

We heartily unite with what is said on page 42, *et seq*: relative to the opposition of "a narrow sectarianism" to the spirit of the gospel; the emptiness of mere forms of faith and creeds, and the winning power of that love with which Christ always clothes his true-hearted disciples. Yet we rise from the perusal of the expressive and well turned sentences, with a feeling that while the enunciation of the telling truths applicable to the rigid sectary has the true ring, there is a tone mingled therewith that jars with approval of any creed or form of faith, as though they were inimical to christian charity, or inseparably linked with narrowness and bigotry. The record of the sacred truths promulgated by Christ and his apostles, embody a creed or form of faith, and even those who are enlightened by a measure of the same Spirit that inspired its writers, must employ "words, names and titles" to express the understanding given them of the texts, not as

"empty husks" but as caskets made precious by the treasure they are intended to preserve. The Journal of J. Woolman shows that he knew full well that what a man truly believes is intimately connected with what he is, and that he himself was bound by a creed, which, while it confined not his christian love within the pale of his own society, but prompted him to embrace all in "the oneness of humanity," would not permit him to approve any departure from it as being in accordance with "right reason."

The different denominations of christian professors which have given place to the chilling spirit of sectarianism, thinking and acting as though they and no others are possessors of the truth, are certainly blameworthy, and christianity suffers for their uncharitableness and asperity. But it is cause of rejoicing to see that this spirit, which once employed fire and fagot as the finishing argument for orthodox, under the delusion of doing God service, continues, as the pure doctrines and spirit of the gospel are more widely diffused, to grow weaker year by year. In this reaction, as in others, there is danger of oscillating to the other extreme, and under an erroneous and opprobrious use of the terms "dogmas" and "creeds," denying the need to hold to any clearly defined expression of gospel truths.

With these observations, intended to guard against inferences which we think may be drawn from a few expressions not sufficiently guarded, rather than sentiments designed to be inculcated by the author, we commend the work to the patronage of our readers.

SUMMARY OF EVENTS.

FOREIGN.—During the week preceding the 21st inst. the sanguinary contest around Paris continued with undecisive results, but on the afternoon of that day, a portion of the government forces effected an entrance into the capital. The St. Clouds, after having been bitterly fought by cannon, the Prussians rushed in. The commander of General Douai was the first to enter, when they took up a position inside, and awaited the arrival of reinforcements which it was expected would soon arrive. According to a Paris dispatch of the evening of the 21st, the Versailles forces entered the city at four o'clock in the afternoon, and the contest was effected simultaneously at the gate of St. Cloud, and the gate Montorgue. An elaborate system of street barricades has been constructed by the insurgents, and behind these they may yet offer determined resistance, but it is not doubted they will eventually be overpowered.

Paris dispatches of the 20th state that the Central Committee is again the principal power in Paris, and is acting in concert with the committee of public safety. The journals of the Commune declare that the insurgent positions are every where strong; that their organization has improved, and that in the future they will be greatly strengthened. The minority party in the Commune and military commission have been replaced by communists of a more radical type. The church of Notre Dame des Victories has been sacked, and is now occupied by insurgent troops. The only general outside the walls at that time, was Douai in the Bois de Boulogne, and Mablewski, who was making a stand at Gentilly.

The long threatened destruction of the Colonne Vendome was finally accomplished on the evening of the 16th, and in presence of a vast multitude of spectators. The engineer having completed his arrangements for its overthrow, the dispatch says: Suddenly, to the surprise of the spectators, the vast column moved and swayed. It next swept magnificently down and burst into fragments as it struck the earth. It fell lengthwise in the Rue de la Paix, exactly on the manure couch prepared for it, splintering the soil, heavy stones falling while a thick cloud of dust and bronze and powdered masonry rose in the air. The crowd gave tremendous shouts of "Vive le commune!" and the hands played the "Marseillaise." When the dust cleared away there lay the glorious column shattered in pieces. Its bronze and masonry, in two masses, fell together in the middle,

and the statue of the emperor severed itself from one end of the column, with the head knocked off.

The crowd rushed forward to collect the fragments as relics, and the guards were unable to resist the rush. The orators commenced their speeches, indulging in all sorts of extravagant language. The statue of the emperor was treated as if it were the emperor himself. The national guards spat upon the face of the Emperor, and the ceremonies were concluded the crowd dispersed, and the soldiers moved off waving the red flag, and giving expression to their joy by continual shouting. This column, which was regarded as one of the ornaments of Paris, was erected by the first Napoleon to commemorate the victories of the French armies in the battles of Austerlitz and Jena, which the circular shaft was covered, were made of cannon taken from various countries; for which purpose about 1200 pieces were required. The column was 136 feet in height. Several persons were injured by its fall. Some of the citizens of Paris offered to pay the Commune one million and a half of francs to have the column, but it was answered that Justice decreed its downfall.

A terrific explosion occurred on the evening of the 17th, in the eastern portion of Paris. A powder magazine and cartridge factory by some means took fire, and the consequent explosion caused the destruction of several houses, and numbered several hundred persons, chiefly women and children.

The Versailles Assembly has adopted the entire treaty signed at Frankfort between France and Germany.

Further dispatches from Paris and Versailles, on the 22d inst., fully confirm the advices of the previous day. Marshal MacMahon, on being apprized of the success which attended General Douai's advance, gave orders for a general movement of troops along the whole line. The three gates converging on Point du Jour quarter were found deserted, and no resistance was met with. The main force, under the Arc de Triomphe were carried by assault, and the communists fell back to a formidable line of barricades extending across the Rue de Rivoli to the centre of the Place de la Concorde. They were routed from there also, and subsequently rallied at Montmartre and the Bois de Vincennes. Much serious fighting took place here, but on the whole the resistance was feeble than was anticipated. About 80,000 of the Versailles troops were in the city, and occupied about three fourths of it. Gen. L'Admiral telegraphed to Versailles that every thing was satisfactory, and all the insurgent fighting might continue several hours, the city was absolutely won. Many of the insurgent leaders had been taken, and there were some awful massacres. The Prussian outposts, near Paris, had received strict orders to drive back all insurgents attempting to pass their lines. Rochefort, it is stated, has escaped to Brussels.

The German Parliament has adopted the second clause of the Alsace and Lorraine bill, which declares those provinces incorporated forever in the German Empire. Some of the discussions of the German Parliament have been stormy. The Liberals are vehement in their rights, and speak their minds plainly and with energy.

The Italian Chamber of Deputies has adopted a bill making provision for compensation to the city of Florence for the transfer of the capital to Rome.

The weather in Great Britain is very cold, and last week was the coldest in Scotland and the north of England. In the House of Commons a bill placing certain restrictions upon the sale of liquors, was discussed and rejected by 82 majority.

The stipulations contained in the treaty of Washington on the fisheries, have united the Canadian provinces in their opposition to it. The Legislature of New Brunswick passed resolutions condemning the treaty, without a dissenting voice.

There was an animated discussion in the British House of Lords on the 22d, over the treaty with this country, and some things were said against it on general grounds of its character. Lord Granville declined to promise that the government would not ratify it before the 12th proximo, and Earl Grey defended this ratification as part of the royal prerogative. Earl Granville stated that an official copy of the treaty will be submitted on the next day.

U. S. 5-20's. 1862, 903; of 1867, 224; ten-forties, 5 cents, 89.

Liverpool.—Uplands cotton, 7 1/4 d.; Orleans, 7 3/4 d. Breadstuffs declining. The weather was favorable for the growing crops.

UNITED STATES.—The Senate is engaged in consideration of the treaty with Great Britain. The interests in Philadelphia last week numbered

254, including 30 deaths from consumption, 14 of them, 13 deaths, 16 heart disease, 19 influenza, of the lungs, and 12 old age.

The official reports of the military authorities in Arizona on the late massacre of Apache Indian Camp Grant, are published by order of the Interior Department. The charges against the late commander, in their reiteration, and were entitled the protection of the United States as prisoners of and that of the whole number killed only eight men, all the others being women and children.

On the 22d inst., the Secretary of the Interior Commissioner of Indian Affairs, in a conference at Washburn, Oregon, with Indian chiefs, delegates from the Pahos, Cheyennes and other western tribes. The Indians complained, as usual, of the continual encroachments upon their territory, the building of railroads. They do not know where this is to end, or what they can call the Secretary Delano made a short speech to the delegation. He told them that the United States earnestly desired peace and friendship with all the tribes, and thought the best way to do it was that the Indians should learn civilization as possible. We cannot stop this clearing of land, building of cities and railroads all over the country. The Great Spirit has decreed it, and it must go on. We want all the Indians to come and learn our habits. The Indians who are willing to live like us and peace with us we will assist. To do this we have a great country, about 350 miles wide and 500 long, expressly reserved for them, and we want them there to form a government of their own.

The interpreter explained the distances mentioned by the Secretary in miles as many days' journey. The Secretary told them that as fast as the tribes would go there and commence agriculture, the government would give them tools, and send them to form a government of their own.

The interpreter explained the distances mentioned by the Secretary in miles as many days' journey. The Secretary told them that as fast as the tribes would go there and commence agriculture, the government would give them tools, and send them to form a government of their own.

PHILADELPHIA.

Single Copies, when paid quarterly in advance, five cents.

For "The Friend."

Memoirs of Mildred Ratcliff.

(Continued from page 218.)

Harrison Ratcliff attended, at least at times, meeting of Friends in the neighborhood of his residence, and Mildred sometimes accompanied him. She had once before her marriage been at a meeting, but appears to have derived no satisfaction therefrom. She says of Friends, "Going sometimes with my husband to their silent meetings, I sat among them, wondering at such a manner of holding religious meeting, it being to me as lost time,—time that I might have improved at my own meeting. Truly a silent meeting was all I wished to me." So they are, and so they will and must be, to those whose views are toward, and who need the melody of tone or voice of words to raise their minds to Him, so according to the declaration of His Beloved Son, is a spirit, and must be worshipped in spirit and in truth. But the sincere seeker of truth, can hardly fail eventually to understand the beauty and excellence of waiting for the Lord in meetings for a renewal of strength. Mildred says, "I had not gone to any of these meetings, before in secret prayer my spirit bowed before Him that seeth in secret, greatly desiring that as He alone had the power, he would show me whether there was any sense in such meetings. Wading the deeps I went on for a few years, sometimes at Friends' meetings, sometimes at the pious' meetings. Whilst sitting in one of the latter, I received strength to give up the slaves left me by my parents. On account of these slaves I had suffered much in mind that my sleep went from me. Being of a delicate constitution, I saw no way that I could get along without the help of those slaves. No one knew but Him who seeth in secret, through what I passed on their account, until as I was sitting in a Baptist meeting, I was enabled to give up that uncertain dependence, and cast all my care on the Lord. He gave me His promise in secret that this dependence on Him should not fail, but should continue while life continued. At this my spirit was said, it is enough. Truly my dependence did then flow as a river. After meeting, I went home rejoicing in that Mighty

Power through which I had obtained strength to give up the thing called for. I can truly say I have never for a moment regretted in any strait giving them up. At that time I had not read a page in a Friend's book that I remember. But after this, my mind being prepared, I picked up John Woolman's journal, and said in my heart I will look in this book to see if there is any sense in anything a Quaker can write. Before I had read many pages, my spirit was broken and my heart contrited under an impression that the want of sense was in me, and not in the Quakers. I was blinded with tears and had to shut the book. Yet from time to time, and little by little, being anxious to see the contents, I read it through as secretly as possible. Truly I had not got half through, before I thought I saw the beauty of holiness shine in his remarks, brighter than I ever saw the sun shine the clearest day. What he said on the subject of oppression answered to the exercise through which I had passed on the same subject, as face answereth to face in a glass.

"Although now in a good degree convinced of the principles Friends profess, yet there was something in me that felt abhorrence at the idea of ever being called a Quaker, notwithstanding the fervent desire of my soul day and night to become a humble follower of the Lord Jesus Christ, in whom I did believe according to the Scriptures. I continued going to the Baptist meeting and Friends by turns, until when I got to their (Baptist) meeting-house door, it seemed to me I felt a hand, though invisible, clap me on my right shoulder, and with it I heard the language, in secret, yet plain and intelligible, 'Thou hast no business here.' I did not know what to make of it. Though startled, I went in and took my seat; but my peace was broken so that I could not enjoy the meeting. I went to the Baptist meeting again and again, and as often as I did so, felt the same invisible hand, when reaching the door, with increasing power, clap me on my right shoulder, and heard the same language, 'Thou hast no business here.' My poor mind was all in confusion. I had a great life in singing, but I had no pleasure in it in those meetings. I had not then felt any concern about singing or compliments not being right. Such was the state of my mind I did not know what to do. My distress increased so when I went to the Baptist meeting, that I gave it up, and went to no meeting for a time. On First-day I would read Friends' books. My peace sometimes was great whilst at home reading, notwithstanding my stubborn determination not to be called a Quaker. Oh the matchless mercy, the long-suffering of the good Shepherd who laid down his life for the sheep, was marvellously manifested in waiting for a poor nothing like me."

About the year 1793, Mildred Ratcliff found strength given her from on high, enabling her to bear the prospect of the ridicule and con-

tempt she must endure if she joined the Quakers. She made application to be united to that people, and being received amongst them, she experienced for a time great inward comfort and quiet. The difficulties she had anticipated from outward opposition, did not prove so great as she expected, although the contempt manifested by the looks and manners of her relations, if not expressed in words, must have been trying to her feelings.

Mildred and her husband near this time appear, from a passage in a letter of one of her sisters, to have removed to the neighborhood of Lynchburg. She was a member of South River Monthly Meeting. Her husband continued unconnected with any religious society, but probably went with her to Friends' meeting at least on First-days.

After a few years, great conflict of mind again became her portion, under a persuasion that the Lord was calling and preparing her publicly to advocate his cause.

Henry Hull, a valuable minister from Stamford, Dutchess county, in the State of New York, being on a religious visit in Virginia, attended a First-day meeting at South River, on the 4th of the Eighth month, 1799. Mildred Ratcliff was at the meeting; and as Henry remained several days in the neighborhood, she on Second-day, the 5th, paid him a visit. He thus describes the occurrence:—

"One morning as I sat alone in the parlor of a Friend's house, I saw a woman ride up to the door, on which I stepped out and assisted her to dismount. She came in, and as we were sitting facing each other at opposite sides of the room, the descendings of Heavenly good soon spread over our minds; and I believe neither of us spoke for half an hour, but continued sitting in profound silence. My mind was dipped into feeling with her, and I fully believed she was a chosen handmaid of the Lord, and laboring under deep discouragement at the prospect of becoming a public advocate for the precious cause of the Beloved of her soul. Our mental eye I believe was mutually directed to Him who seeth in secret, and no man can shut, and shutoff, and no man openeth; and when He is pleased to create the fruit of the lips, blessed are they that obey; but at present my lips seemed sealed.

"After some time thus spent, we engaged in pleasant conversation, and I found she had been at meeting the day before, and had now come to have some of our company. My mind seemed so interested for her, that I went to visit her at her own house. Her husband not being a Friend, and of a very volatile disposition, no way opened for me to communicate my feelings to her vocally; but I did so fully and clearly in a letter I wrote to her a few days afterwards, to which she replied, acknowledging that I was favored with a clear view of the tried state of her mind."

The following is a copy of the letter sent by Henry Hull to Mildred Ratcliff.

Goose Creek, 8th mo. 19th, 1799.

Beloved friend Mildred Ratcliff,—I received thy acceptable letter yesterday, but being at a meeting in the evening, and having a letter to write to my dear wife, I have hardly time to acknowledge the receipt thereof. We set out for Kentucky this morning. If I live to return, I shall endeavor to give thee some account of our journey. In the mean time, my dear friend, I hope we shall be preserved, feeling sensible of the blessings received in being brought to the knowledge of the Truth. I shall not be disappointed if thou hast to tell unto others what the Lord has done for thee. If so, oh be faithful! Thou wilt find it a great work, and very humbling at times to the creature. But if thou moves in the counsel of the Most High, His Spirit and power will support thee, and thou wilt know the right time out of the willings and runnings, or activity of the creature. Then thou wilt know thy peace truly to flow as a river. Tell me, beloved in the Lord, am I altogether mistaken? Thou mayst use freedom, for I had not been in thy company many minutes, before I found thee to be a sister in the Truth. My love in the life of our Lord, runs freely towards thee. If I am mistaken, I may take more care for time to come. My love to thy husband; and myself in flowings not to be described fully in this way.

I remain thy friend and brother,

HENRY HULL.

The above language: "Thou wilt find it a great work, and very humbling at times to the creature," from the pen of that well instructed scribe, Henry Hull, in respect to the exercise of the ministry, is no doubt the experience of all, the greatest as well as the least, who under the weight of the "woe," and the constraining power of the cross of Christ, feel that their peace and salvation consist in their being resigned and faithful in telling to others what the Lord has done for their souls. The more this effort, however feeble, to exalt and magnify His kingdom and power in the earth, is done in the cross to our natural wills, the less is the danger that it will prove our snare. For if, as we are told, all the motions of the life are forward to the corrupt part, then the fleshly, forward mind is not so likely to be set up by, or glory in, as the Apostle Paul tells the Corinthians, "I was with you in weakness, and in fear, and in much trembling. And my speech and my preaching was not with enticing words of man's wisdom, but in demonstration of the Spirit and of power: that your faith should not stand in the wisdom of men, but in the power of God." Again, near the end of the same chapter he writes: "Which things also we speak, not in the words which man's wisdom teacheth, but which the Holy Ghost teacheth; comparing spiritual things with spiritual. But the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him; neither can he know them, because they are spiritually discerned." Does not this clearly call for submission to the regenerating power of the Redeemer's grace, and His thoroughly cleansing baptism, in order that "the natural man" with all his dross, and tin, and reprobate silver, the unchanged and unrenewed child of the first Adam, to whom the things of the Spirit of God are foolishness, with whatever "enticing words of man's wisdom" he may display or

possess, may be burned up or laid in the dust; and the power which is of God alone exalted to the praise and glory of His ever-excellent Name? This Henry Hull had no doubt in much self-abasement proved to be "a great work, and very humbling at times to the creature." It is likewise consonant with the requisitions of the Saviour in apostolic times, viz: "Behold I send the promise of my Father upon you; but tarry ye in the city of Jerusalem, until ye be endued with power from on high." May all wait for this indispensable anointing in inwardness, and watchfulness, and deep prostration of soul before the unchangeable "I Am" of His people. Whose power, while it can alone sustain and preserve on the living foundation, is at the same time equal to all their need; being conveyed in the unfulfilling promise, "My grace is sufficient for thee: for my strength is made perfect in weakness."

(To be continued.)

From "Good Health."

Animals as Fellow-Boarders.

(Concluded from page 314.)

On the English coast is another soldier crab, who has for his principal fellow-boarder a sea-anemone. This connection is remarkable on many accounts, and especially for the good understanding which subsists between the crab and his attendant. Lieut.-Colonel Stuart Wortley has not hesitated to pry into the domestic life of these creatures, and this is what he says about them. The hermit crab never fails to offer the best morsels of his captures to his neighbor, and frequently inquires during the journey if he is hungry. But it is when the crab has to change his house that his care and attention are redoubled. He assists the anemone to move with all the address of which he is capable, and if the proposed new house does not suit him another is selected, that the Adamsia may be fully satisfied.

More than a hundred species of soldier crabs, scattered through all seas, are known, and all lead the same sort of life.

Another sort of companionship is noticed amongst crabs of the genus *Dromia* (Squinado), which are of moderate size, and instead of lodging in a cell, dress themselves up from their early youth with a living colony of polyps, who grow with their growth. This colony has for its usual basis a live *Aleyonium* (Mermaid's Finger, or Cow pap), which covers the carapace and adapts itself as it develops to the inequalities of the cephalo-thorax, so that it seems an integral portion of the crab. *Sertularia* and *Coryne* grow in abundance upon the *Aleyonium*, mixed with sea-weeds, and the Squinado, masked by the living burden which he bears like Atlas on his shoulders, marches sedately to the capture of his prey. Concealed in the bush of a virgin forest, he has no fear of attracting the attention of an enemy. There are many mysteries to bring to light concerning the inoffensive population which the Squinado carries whenever he has blood to shed.

FIXED FELLOW BOARDERS.

The fellow-boarders of which we have been speaking, preserve their full and entire independence at all periods of their lives, and as they only undergo ordinary changes in form, their true nature has rarely been understood. By the side of these we see others who are only free during their young days, and when

the epoch of puberty approaches they make choice of a host, throw off all their travelling appendages, including their eyes, change the clothes, and become completely dependant upon the animal that carries them. O the, again, only renounce their independence for a time, and preserve even during their sequestration their proper form and their organs locomotion. The most interesting of the fixed fellow-boarders are evidently the barnacle which cover the skin of whales. They are like all the others, free during their infancy, but for motives of their own, they locate themselves on the head or the back of these great Cetaceans, which they never quit when on settled. That which is of especial importance to these companionship is that each whorl lodges particular species, so that the fellow boarding Crustaceans are like a flag of nationality, and the equipment causes the ship to be recognized. The great northern whale *M. tectus*, which our hardy and patient neighbors discovered on seeking a passage to India in the East, a species which never quits the ice does not carry barnacles. It is this whale that was already known to Iceland fishermen of the twelfth century. These intrepid whalers distinguished between a northern whale without calcareous adhesions, and southern whale with them. This last is the celebrated whale of the temperate region, the "North-Kaper," which the Basques hunted from the tenth century in the Channel, and which at a later period they chased as far as Iceland.

From the time of the ancients a fish is known, whose position was not well made out until our day, and which seems to belong to the category of fellow-boarders. It is the *Echinus*, or Remora, an animal found in the Mediterranean and other seas, attached to the bodies of large fish, especially sharks, by means of an apparatus for adhesion situated on its head. It has sometimes been confounded with the pilot fish. It is a fellow-boarder, but, contrary to those just mentioned, does free itself when it pleases, and seek a new host. It lives by its captures during its voyage. The Remora has always attracted the attention of observers. In the eyes of the ancients a singular being, no matter of what sort, must have some peculiar action upon animal economy, and could not fail to enter into the composition of divers therapeutic preparations. Pliny pretends that the Remora served to compose poisons capable of extinguishing the fires of love.

The sailors now, as of old, are convinced that if one of these little fish adheres to a ship it arrests its course.

That which is not doubtful is that these inhabitants of the coast of Mozambique turn to account the Remora's faculty of attaching itself to animals, for they put a ring in its tail, to which they attach a line, and let it in the sea and stick to what prey it may find. Thus Remora-fishing is the counterpart of hawk-ging.

There are likewise fellow-boarders, which in their early growth place themselves near the protection of a complaisant neighbor, and are then transported to their destination. These do not lose the characteristics of their youth. Among them are the young of the Caligus; for, according to the observation of M. Hesse, of Brest, these Crustaceans order to reach the fish they are destined to attach themselves to a parent or a friend,

the aid of an appendix of the cephalo-thorax, and are rowed to their residence.

At the bottom of ponds and rivers there are Rotifers and Infusoria which attach themselves to Crustaceans and insects, and travel like the Cirripeds of the whales. There thus exist fellow-boarders of the two categories in the lower ranks of aquatic animals.

We shall finish by remarking, that in all combinations between individuals of different sexes, as between those of different species, we always find the object attained, the conservation of the individual and the conservation of the species. These phenomena evidently depend on the secret ordinance of Providence, and the life of the humblest worm hangs from the same thread as that of the greatest mammal. A breath suffices for their creation and their annihilation. God holds the chains of all their existences, and conducts them to their end. It is for us to observe the laws, and to guess in generalizing them the ways by which they are regulated. And if we have need of an hypothesis to guide us through the dark places, do not let us assign it the importance of a scientific conquest, for this hypothesis is only a beacon to guide us on our route.

For "The Friend."

Life of Cesar Malan.

(Continued from page 319.)

"The next morning we started at the dawn of day. After having walked for about two hours, we went to a village inn to have some coffee. Whilst we were waiting for it, my father noticed that the young woman in attendance stopped from time to time to put her apron to her eyes. 'You seem to be in trouble?' he asked. 'Alas, sir, only a few days ago I lost my poor husband, and of course I am very unhappy.' Making room for her beside him on the form, 'Come here, my poor woman,' he said, 'let me speak to you of the comforting promises of the gospel.' He had not got far when his companion interrupted him by asking if she might go and fetch her friend Jeanette. 'She will be delighted to see you,' she explained, 'she too speaks to me very often of these good things.' She returned with a young peasant, and we sat my father alone with them.

"A moment afterwards, he beckoned to us through the window to go with him to visit another's father, who was lying ill, close by. We were conducted to a little wooden house, and into a large room, at the end of which, at the window, lay a white-haired old man. 'Father,' said she, 'I have brought you a minister of the gospel.' 'God be praised,' said the invalid, as my father seated himself beside him; soon discovering in him signs of piety and touching piety. In the conversation which followed, he asked him how he had arrived at a knowledge of his Saviour. 'In this bed,' he replied, 'where I have lain many years; and through reading a book written by a Mr. Malan of Geneva. Ah! I had not been aged and infirm, I should long ago have gone there to see him. Look here, sir, I cannot think how earnestly I have contemplated the Lord that I might see him before long.' For a long time, he thought He would grant my desire, but I'm afraid I shall have to give it up.' I stole a glance at my father, who was sitting silently looking at his hands. 'What is the name of the book you refer to?' I suddenly inquired as he raised his head.

'Stay,' was the reply, 'here it is, it's always by me; and he drew from under his pillow a well-worn copy of one of the earliest editions of my father's hymns, and handed it to my father.

"'Listen, brother,' said my father; 'these young gentlemen and I have just come from Geneva.' 'You have come from Geneva? then perhaps you have seen M. Malan?' 'Certainly I have; we all know him well; and I can assure you, that if he were here he would remind you that he has only been a feeble and imperfect instrument of good to you; and he would speak to you above all, not of himself a poor sinner as you are, but of the eternal grace and perfection of our blessed Lord.' The conversation lasted a few moments longer; my father prayed; then, when we had sung together one of the hymns which Jeanette knew, he prepared to leave, telling her that he was to preach the next day, Sunday, at Môtiers. When he had got to the door, however, he stopped, and returning once more to the bed where the old man was lying with folded hands, said to him, with emotion, 'My father, God himself to whom you will so soon depart, has granted your prayer. I am Malan of Geneva; your brother in the faith of our blessed Saviour.'

"The poor old man, fixing his streaming eyes upon him in a long and ardent gaze, and slowly raising his trembling hands, exclaimed, 'Bless me, bless me before I die! You, whom I have so long prayed God to send to me, bless me now that I have the joy of seeing you!' Falling on his knees at the bedside, my father replied, in tones which betrayed his deep feeling, 'You ought rather to bless me, for you are old enough to be my father. But all blessing comes from God alone; let us once more ask it of Him together.' And, folding in his arms the lowly brother whom he felt he should never see again till they met in the better country, he invoked upon him 'the peace which Jesus gives' and we left the hamlet.

"The next morning he preached at Môtiers, and in the afternoon at the village of Grandval. To the former place came Jeanette, with her friend, and quite a crowd from their village, a distance of more than three leagues, to hear the foreign minister.

"An incident which occurred the day after the sermon at Môtiers may serve to illustrate the easy and affectionate manner with which my father was in the habit of addressing the first person whom he might chance to meet. As he stood behind me watching while I was sketching some rocks at the opening of an abrupt gorge, a tall old man passed us on his way. 'I said to my father,—why, I cannot tell,—I feel as if that man was a pious Christian.' 'Nothing easier than to find out,' he replied; and quickly turning to the stranger, said smilingly, 'Will you take my hand, sir, if I offer it?' 'Eh, sir,' said the old man, removing his hat, 'you do me a great honor.' 'And what if it were in the name of the Lord Jesus that I offer it?' 'Then give me both your hands, my beloved brother,' he exclaimed. 'A long conversation followed between them, and we saw him frequently afterwards in a neighboring village, and found that he was well known through all the country side for his gentle and active piety.

"A letter to my mother, dated Heidelberg, 9th Sept. 1849, contains the following:—

"The country is overrun with Prussian

soldiery, and two captains and an Israelite have been my fellow-travellers the whole day. They talked a great deal, all the way along, of their campaign of Baden, and they noticed here and there the battle-fields, redoubts, burnt dwellings, &c. I held my tongue. At length, after about three hours of it, when they had warmed up a little in their description, I said to the Israelite, 'Tell them from me that in heaven there will be no more war.' He did so; upon which one of the captains remarked to me, 'Yes, yes; but if there were Baden men there, there would be no peace.' 'There, there will be neither Baden nor Prussian,' was the reply, 'but children of peace—the saved!'

"A deep silence succeeded the military storm. Then I said to the Jew, 'Tell them the Lord Jesus calls Himself the Prince of Peace.' Again he complied, very seriously; whereupon the captain next to me turned round and said, in an undertone, 'If we were lovers of order, there would be no more war.' 'Rather,' said I, 'if we were Christians. But it is not so; we kill one another, though we are men, and of the same blood.' He sighed, and pressed my hand. Thenceforth the conversation was quieter, and when we parted, we wished one another a pleasant journey."

"The labors of C. Malan were not confined to his own country, but between the years 1822 and 1856, he repeatedly visited England, France, Holland and Belgium. The last of these missionary visits was in 1856, to the Vaudois Valley, in Piedmont. His increasing age and infirmities after this, confined him to the near vicinity of his home. Of his own preaching, he thus remarks: 'At the commencement of my ministry I often attributed to the Holy Spirit's operation, impressions produced only by persuasive human language. More than once has I had to note of that time, that I was building with hay and stubble. For many years, however, I have learnt that not every religious emotion comes from above. I know that the Holy Spirit alone gives life. I try to discern his whisper within, and to follow Him, as I repeat His teachings.'

"In his own family C. Malan was greatly beloved. His versatile talents and acquisitions enabled him to direct the course of his children's education, and to provide many ways of interesting and instructing them. In bringing up his family he endeavored to implant in them rules of action which might be of constant use to them in after life. One of these was to do every thing as in the presence of their Heavenly Father. "Shun, in your companionship, your amusements, your pursuits, your readings, everything on which you cannot heartily implore the divine blessing."

"The last few years of his life were passed in comparative isolation, and in feeble health. His son remarks that he had to submit "to that general desertion by which it pleases God that the evening of His beloved ones should be accompanied after their day of action and energy is over, and by means of which, in His wisdom and love, He is wont to ripen for glory those strong and generous spirits whom He had at one time appointed to be head over their brethren." His daughter thus describes him at this period of life. "Like Abraham sitting at the door of his tent, and contemplating, in protracted and sublime meditation, the divine promises, so did this

calm, peaceful old man, sit in his chair, and hold silent communion with his God. How often we found him,—with clasped hands and uplifted eyes,—apparently plunged into the invisible world; his expression calm, gentle, and serious."

For some time before his death, he was confined to his bed with paralysis of the limbs, and suffered severely. When some reference was made to this, he replied, "I do not suffer a moment too much. I say not that God allows it no, no; but God ordains it. It is that that gives one real consolation." His son having asked him if he felt any distress of mind or doubt, he replied: "No, I am not alone. No, there are no clouds over my sky." The nearer he approached his end, the more silent he became; and in the silence of sleep he peacefully passed away.

As a specimen of his poetry, we subjoin the

HYMN OF JOHN HUSS IN PRISON.

Jesu, Son of God most High,
See me in this dungeon drear;
For Thy glorious name I lie
Fetter bound, a captive, here,
Vengeance this of foes of Thine,
Dooming me till death to pine:
Yet, O Saviour King, for Thee
Sweet is suffering to me!

In my life was never cause,
Thou, for need of savage ire;
For the rigor of Thy laws,
For their baptism of fire;
Love of Thee was all my sin—
All they sought without, within;
Yet, O Saviour King, for Thee
Sweet is suffering to me!

When I told them from Thy word,
How Thy cross atonement made—
How Thy "precious blood" outpoured,
All redemption's price hath paid—
Curses haled me loving warning,
Hated by men Thy message scorning;
Yet, O Saviour King, for Thee
Sweet is worst reproach to me!

When I spoke of all Thy grace,
Of salvation perfected,
Of a pardon for the race—
They but heaped upon my head,
(Scowling, with contempt irate),
Insult fierce and withering hate;
Yet, O Saviour King, to me
Sweet is all, endured for Thee!

Thus this body, faint and frail—
Far removed from gleam of day—
Pangs of cruel thirst assail,
Pangs of hunger waste away;
And the eyes and clanking chain
Drag me down to deeper pain;
Yet, O Saviour King, for Thee
Bright the dungeon is to me!

Now I wait their crowning deed;
Soon their vengeance will be o'er;
Death, the captive exile speed,
Swiftly to a painless shore!
Upward borne on wings of flame,
For the honor of Thy name!
O Lord Jesu, Saviour King,
Whisper of my heart to me—
Can Thy service suffering bring?
Is it death to die for Thee?

"All that will live godly in Christ Jesus, shall suffer persecution." Even the adverse opinions of our most intimate friends are sometimes to be borne, though they inflict great trial upon us; yet it is our duty to keep firm to what is right, and in due time, our opponents will be convinced and brought to unite with us. The apostle declared that, "If I yet pleased men I should not be the servant of Christ." W. E.

California.

(Continued from page 313.)

"Entering the Yo Semite region by the Mariposa road, it is best to go back by the Coulterville track. Thus new scenes are spread before the traveller, and all the various beauty and wonder of the California mountains are impressed upon his mind. On the Coulterville road is Bowers' Cave, a great hole in the rock, one hundred and thirty-three feet long, eighty-six wide and one hundred and nine deep, and opening out below into recesses that may be followed to a considerable distance. A large pool of water is at the bottom, and three maple trees starting below send their tops into the open world above. The bottom of the cave can be reached by steps, and a boat offers a ride upon its subterranean waters.

"Included in the Yo Semite excursion, as already indicated, will naturally be a visit to one or more of the Big Tree Groves of California. No other one of the natural curiosities of the Pacific States has become so notorious as these trees. They were discovered in 1852, and their fame ran rapidly over the world, accompanied with greatly exaggerated statements as to their size and age. The first sight of them is therefore generally disappointing; they are not so big, generally, as has been reported; and they do not seem to be as big as they are. In no case do these mammoth trees make an exclusive forest of their own; but they have been found scattered among the other trees of the mountain forests at some eight different places along the sides of the Sierras, at elevations of from four thousand to seven thousand feet, and within a distance of one hundred and fifty miles south of the centre of the State. None have ever been found out of this line; and the only trees to which they bear any close resemblance are the Redwood of the Coast Mountains. Both are peculiarly California trees, and one is confined exclusively to the coast and the other to the Sierra Mountains. They bear the common name of the Sequoia, in honor of the celebrated Cherokee Indian who made an alphabet and a language for his tribe; but the Big Trees proper add the distinguishing title of *Gigantea*. The Redwood frequently makes up an exclusive forest of its own, and some of its individual trees are fifty feet in circumference and two hundred and seventy-five feet high; so that it even challenges attention and divides glory with the *Gigantea* itself. One Redwood stump is reported, indeed, as having a diameter of thirty-eight feet, and, having been burnt out, it held thirty-three pack mules at one time, which is as large a story as can be told of any one of the Big Trees proper.

"The Calaveras Grove of Big Trees is the most northerly of the series, was the first discovered, and by itself is the most readily visited. But the Mariposa Grove or collection is the one selected by Congress and the State for public use, and, lying near the favorite road to the Yo Semite Valley, is likely to prove the most popular hereafter. Besides, it is the most numerous, and some of its trees are larger than any in the Calaveras collection. The height of the larger trees in both groves ranges from two hundred and thirty to three hundred and twenty-five feet, and the circumference of their trunks from thirty to one hundred feet. The Mariposa Grove, located, as noted, only four or five miles from

Clark's Rancho, holds about six hundred trees, one hundred and twenty-five of which are over forty feet in circumference each, a several from ninety to one hundred feet each. "The Grizzly Giant" is far from being so common as many others, it is ninety-three feet in circumference, and at ninety feet above the ground sends out a branch which is six feet in diameter, or as large as the biggest tree known in any of the Eastern forests.

"But these mammoth trees are quite unimpressive for their beauty as their big tree. The bark is an exquisitely light and delicate cinnamon color, fluted up and down the length, straight, slowly-tapering trunk, like Corinthian columns in architecture; the top, resting like a cap upon a high, bare mast, is a perfect cone; and the evergreen leaves wear a bright light shade by which the tree can be distinguished from afar in the forest. The wood is a deep, rich red in color, and otherwise makes the similarity of the Big Trees to the Redwoods of the coast, but it is of even finer grain than the flesh of their lesser kindred, and both that and the bark, the latter sometimes as much as twenty inches thick, are light and delicate, that the winds and snow of the winter make frequent wrecks of the tops and upper branches. Many of the largest of these trees are, therefore, shorn of their beautiful cones. One or two of the largest of the grove we visited are wholly blown down, and we rode on horseback through the trunk of an old one that had been burned out. Many more of the noblest specimens are seared by fires that have been wantonly built about their trunks, or swept through the forests by accident. The trunk of one huge tree burned into half a dozen little apartments, making capital provision for a game of hide and seek by children.

"Wild calculations have been made of the ages of the larger of these trees; but one of the oldest in the Calaveras Grove being cut down and the rings of its wood counted, its age proved to be thirteen hundred years; probably none now upon the ground date back farther than the Christian Era. They begin with our modern civilization; they were just sprouting when the Star of Bethlehem rose and stood for a sign of its birth; they have been ripening in beauty and power through these nineteen centuries; certainly they are chief among the natural curiosities and marvels of Western America, of the known world; and though not to be compared, in impressions they make and the emotions they arouse, to the great rock scenery of the Yosemite, which inevitably carries the spectator up to the Infinite Creator and Father of all they do stand for all that has been claimed for them in wonderful greatness and majestic beauty."

The cup of life is mingled with the bitter as well as the sweet; and were it not so, we should be ready to forget that this is not the place of our rest, that we are but pilgrims and strangers here below, and ought to be diligent in seeking another and a better country, of unrestrained bliss, where joy unspeakable and unnumbered of glory is the eternal portion of those who "having come through much tribulation, have washed their garments and made them white in the blood of the Lamb." Oh! animals of consideration! Is not this worth a world of trials and fight of affliction to obtain?—S. J.

Lawrence, Kansas, 5th mo. 22d, 1871.

to the Editors of "The Friend":
 Dear Friends,—It will be painfully interesting to many of your readers to receive the following account, written by agent Isaac T. Osage, of a barbarous assault by white men on a peaceable party of unarmed Osage Indians. These Osages have only recently settled in the Indian Territory, having left their reservation in Kansas because white men, in violation of law, had settled upon their lands, and in many instances had actually driven them from their houses and little huts. The Government arranged for the sale of their reservation at one dollar and a quarter acre, and for the purchase, out of the proceeds thereof, of a new home in the Indian Territory just west of the 96th meridian and north of the Arkansas river. Agent Gibson devoted himself with remarkable energy and singleness of purpose to the interests of the Indians, and in the face of difficulties of most formidable character—such as no one can properly appreciate except those who have been eye-witnesses of them. We trust the occurrence related below may not be permitted to damp his ardor in a noble cause, to interrupt the exercise of his influence in favor of peace and goodwill upon those whom he is placed in charge.

No-pa-wal-la, Chief of the Little Osages, some of his head men, ten in number, left their village on the 13th inst. to visit one of the border towns of Kansas, for the purpose of trading their robes and furs. Their village is about eight miles south of the Kansas boundary. When about two miles upon their way, they were met by seventeen border white men, armed with guns and revolvers, who demanded the return of a horse which, they said, had been stolen by some of the Osages. The chief assured them that his braves at the village would find the horse for them if he was in their herds. The white men, after consultation, presented their arms and ordered the Indians to dismount. Some of them obeyed their attempts to escape. The whites fired upon the Indians who made no return whatever, they being unarmed. The chief was slightly wounded in the shoulder, and his men were severely if not fatally killed, and another was pursued to the river killed. Upon the arrival of some of the whites at the village, great excitement ensued, and seventy-five warriors set out in pursuit of the whites and overtook them before they reached the State line. They refused to return and to deliver the ponies and robes of which they had robbed the Indians, and were fired upon them, killing one and capturing two, and also capturing five horses. The leader of the marauders made their boast and spread the false report that the Indians were engaged in a general slaughter of the whites and children of the border. A delegation of the settlers on the border have subsequently returned a pony carried away by the above thieves and murderers, and they (the settlers) seemed anxious to do all they could to restore friendly relations with them. The latter, in council, have decided to turn the prisoners and the captured robes, and appear disposed to be at peace with the whites, if let alone."

Agent Gibson expresses the opinion, that if the Government will protect these Indians from the incursions of bad white men, and prevent the introduction of whiskey

amongst them, "their civilization will be rendered easy, certain and pleasurable to the Agent and his co-laborers;" but that without such paternal care on the part of the Government, it will be utterly impossible to control or to civilize them. A frequent repetition of such outrages will inevitably so irritate and incense them as to provoke a hatred of white people, and of the religion and civilization which they consider the white man to represent.

The Cheyennes, Arapahoos, and Wichitas, have responded to the invitation of the Government, to send a delegation of chiefs to Washington; but the Kiowas and Comanches declined. The last mentioned tribes are the most restless and hostile of any within the limits of the Central Superintendency, and it is deeply to be regretted that they did not concur in a measure which seemed likely to promote peace.

The General Council of the Indian Territory is to reassemble at Okmulgee, on the 5th of next month.

Truly your friend,

W. M. NICHOLSON.

[In reply to the query accompanying the above letter, we may say, it will give us pleasure to lay such items of information before our readers.—Eds.]

NOT KNOWING.

I know not what shall befall me,
 God hangs a mist o'er my eyes,
 And each step in my onward path
 He makes new scenes to rise,
 And every joy he sends me
 Comes as a sweet surprise.

I see not a step before me,
 As I tread in another year,
 But the dust is still in God's keeping,
 The future his mercy shall clear,
 And what looks dark in the distance,
 May brighten as I draw near.

For perhaps the dreaded future
 Has less bitter than I think;
 The Lord may sweeten the waters
 Before I stoop to drink;
 Or if Marah must be Marah,
 He will stand beside its brink.

* * * * *
 Oh, restful, blissful ignorance!
 'Tis blessed not to know,
 It keeps me still in those arms
 Which will not let me go,
 And hushes my soul to rest
 In the bosom that loved me so!

So I go on—not knowing:
 I would not if I might,
 Rather walking with God in the dark
 Than going alone in the light;
 Rather walking with him by faith
 Than walking alone by sight.

My heart shrinks back from trials
 Which the future may disclose,
 Yet I never had a sorrow
 But what the future wisely chose;
 So I send the coming tears back,
 With the whispered word—"He knows!"

There are some who keep with each other in spirit, through all the overturnings to be met with; but where do they stand, and where is their shelter? Is not the Rock of Ages the sufficiency of such in all their exigencies? Yea, that which remaineth because it cannot be shaken, is a "hiding place in the day of trouble; a covert from heat and from storm, as the shadow of a great rock in a weary land; and also as rivers of waters in a dry place.—S. L. G.

At Home with the Pythons.

The python of Natal grows to a very large size, and as in the *Field* newspaper various inquiries were made some time back as to the measured size of various snakes, I take this opportunity of recording the dimensions of some of the pythons I shot. The measurements were made immediately after death, and when consequently the skin had neither stretched nor contracted. The largest python was twenty-one feet six inches in length, and measured twenty-seven inches round the body. It was of a beautiful olive and yellow color, spotted with yellow and black spots, having a gloss on its skin similar to that seen on a ripe plum. Another python that I killed measured sixteen feet, and was twenty-six inches in circumference.

The weight of these creatures could only be roughly judged of; but a fair estimate of their weight can be made from the following description: A rietbok, that weighed ninety-five pounds, I could lift off the ground and place on my pony's back, but the python which was only sixteen feet long I could not raise from the ground more than a few feet, and even then a great part of the creature was upon the ground. Thus, if I were to give a guess at the weight of such a snake, I should say it was two hundred pounds at least.

The python as well as the boa-constrictors destroy animals by crushing them in their folds; these snakes have no poisonous teeth as have several smaller snakes, and are not therefore dangerous to man; at least, they are not so if he is armed and on the alert. Still, there is no doubt that if one of these giant pythons once coiled itself round a man's body, the man would very soon be so squeezed as to be suffocated, though the snake is, I believe, disinclined to attack a man.

The first python I ever saw in its native home was a very large one. I was riding over some down-land about six miles west of the bay of Natal. Seeing the long grass moving in a suspicious manner, I rode towards it, and just caught sight of an enormous serpent gliding into an immense hole. This hole had been made by an ant-bear, or a porcupine, and was big enough to have allowed a man to crawl into it. I did not fire, as the snake's head was not visible, and a dead shot was therefore impossible. Shortly after I met a Caffre, who informed me that this snake was his enemy, as it had killed and swallowed a calf of his about ten days previously. Upon hearing this intelligence, I informed the Caffre of the snake's locality, and he intimated his intention of watching for his enemy.

Two days afterwards I was riding in the vicinity of the snake's residence, when I heard a Caffre shouting from a distance. Upon riding up to the man, I found him smiling and very proud the reason for which was that on the ground was an enormous python pinned down by about a half a dozen assagies, and to all appearance dead.

Upon pacing the length of this snake, I found it eight good paces, so that I estimated the length at about twenty-three feet.

The Caffre gave the following history of the capture of the monster:

From sunrise in the morning until sunset on the day after my visit to his district, he had watched the snake's hole, but saw nothing of it. On the following morning he again examined the snake's hole, and saw at once

that it had moved out during the night. Now a Caffre can follow any creature by sight just as a dog can by scent, and so the Caffre followed the trail of the serpent, and soon noticed that the monster was gliding toward the grazing ground of his cattle, most likely with the intention of eating more veal. This idea added speed to the Caffre's feet, and he soon came within sight of the python, as it was slowly advancing towards its prey.

As soon as the creature knew it was pursued, it made away towards some reeds and marsh, but the Caffre boldly pursued it, and when within a few yards of it, hurled one of his sharp assagies at the monster. A Caffre is a very good shot with a spear, and on this occasion he transfixed the python with his first shot. One assagy, however, merely stopped the snake, but did not entirely disable it. The creature turned and showed a determination to attack its pursuer, but several other assagies having been driven into the snake, it was soon helpless, and was then pinned down to the ground in the manner I had seen it.

Some time after this first adventure with a python, I had a very close interview with the largest I ever killed. Happening to be out shooting, and in search of buck, about six miles from Natal Bay, I was riding with a friend and attended by a dog. This dog was of the pointer breed, and was very fond of turning a buck out of cover. The country over which we were riding was like an English park, in which were small patches of brushwood about the size of a comfortable dining-room. At one of these patches of bush my dog stopped, and commenced acting in a very unusual manner. He pointed at the bush, then wagged his tail as he looked round at me, then drew back as though afraid, and so on. I at once knew that some strange game was in the bush, and I suspected that it was either a leopard or a porcupine; so, dismounting from my horse, I ran to the bush ready for a shot, my friend doing the same. On looking cautiously into the bush, my friend started back, exclaiming, "It is an enormous serpent!" At the same instant I saw the heavy, thick body of the python slowly gliding towards my dog. Raising my gun, I sent a charge of shot into the snake's body, and jumped back so as to avoid any attempt of the creature to spring at me. Having loaded the empty barrel, I approached with great caution, holding my gun ready, and peeping among the leaves and branches to catch sight of my enemy. It was well I did use caution, for the instant I moved the branches the serpent lunged forward, making a dart at my face as rapidly as a cat springs on a mouse, his enormous jaws open and extended wide enough to have taken my head in them. I was just beyond the monster's reach, or he would have pulled me down on the ground, and probably have crushed me before my friend could have cut or shot him. Before, however, another dart could be made at me, I sent a charge of shot into the python's head, which at once killed it. On dragging out, with considerable difficulty, this serpent from the bushes, I was surprised at the beauty of its coloring and its enormous size. The size at first is deceptive; when an animal is seen at first on the ground, among trees and bushes, it looks small, but when it is handled or seen near, it looks far more formidable. So was it with this python. At first I fancied

it was little more than twelve or fourteen feet in length, and that probably I could have dragged it along the ground, or knocked its head against a tree if it had attacked me; but when I found that two of us could scarcely drag it along the ground, and that, whilst as big round as a man's thigh, it was twenty-one feet in length, I realized what a formidable monster it was, and how poor a chance a man would have if he once allowed a serpent of this size to coil round him.

I believe the largest snake I ever saw was in the forests on the coast eastward of Natal. This snake was moving through the forest apparently in search of food, but it seemed rather lazy, and was gliding along scarcely as fast as a child could walk. I was sitting down in the bush with my hunting Caffre, when our attention was drawn to the snake by the noise it made among the leaves and broken branches. Caffres have great fear of any animal with which they are not thoroughly familiar, and this man informed me that the snake was a dead man poisonous one, and very fierce also. As, however, I recognized the python at once, I knew it was not poisonous, and so determined to follow and watch it, to see what it was about. I had no fear of being attacked by it, for I was armed with a double-barrelled gun, with which I could have shot the serpent. So I placed myself in its path, and waited its approach.

The creature came gliding along slowly, and apparently unconscious of my presence, until within a few yards of me. It then evidently had reached its home, for it gradually disappeared into a large hole, coil after coil passing into the mysterious retreat, until at length nothing was manifest but the tail of the serpent. From the estimation which I made at the time, I believe this snake was fully twenty-five feet in length.

Near the hole into which this python had glided there was a quantity of sand, over which the creature had passed. On this sand the trail or spoor was clearly marked, so that I at once examined this, in order to get my eye accustomed to the spoor of a large snake, and also to be able to judge in future what the size of snakes must be in order to leave certain marks. From the information thus gained I was enabled to form a very correct judgment of the size of snakes when I saw their traces, and on one occasion was astonished to see, on the banks of a stream near Natal, traces which could have been left only by a gigantic serpent.

This serpent, I believe, must have been above thirty feet long; and my belief was strengthened when I had communicated with an old Caffre, whose kraal was near. This man asserted that the snake had killed and eaten a half-grown cow, and that it was so long that its head was on one side of the stream before the tail had entered the water on the other side. On examining the stream where the snake had crossed, it was evident that, if this report were true, the snake must have been above thirty feet in length.

The python, as well as other snakes that destroy animals by crushing, are very formidable to monkeys and baboons. These snakes climb trees with great ease, and when hidden among the foliage cannot readily be seen. Thus a monkey, skipping from branch to branch, suddenly alights on a python, is seized with the rapidity of a tiger's spring, is held by the powerful jaws, and instantly fold-

ed over and over again by coils of the creature's body, and crushed to death in a second of time.—A. W. Drayson.—
Words for the Young.

For "The Fri

"Bear Ye One Another's Burdens!"

If all were to make an honest endeavour this injunction of the apostle, how full a sum would be added to human happiness! Let us each one ponder the matter, as much as may be, lay it home for himself, and earnest practice. Too often are the feelings of sensitive minds unnecessarily wounded in social intercourse, by what is called "boorishness." How much gratification has been afforded by the sentiments contained in Editorial of No. 39, present volume of "The Friend," it is hard to estimate; but no doubt it was very grateful to the feelings of many, particularly the spirit of the extract from Isaac Pennington; and we heartily wishes for himself and for all of that we may become more and more imbued with it. Perhaps few persons of our times was more careful in what may be called the "minor matters of the law," than was late much valued friend James Emten. This was such an air of meekness and gentleness in all his movements, as to render mere presence acceptable, and there are many examples of the same kind yet existing among us; no doubt, by their very walk and conversation an encouragement and strength to many. The following letter from J. interesting in connection with the subject written to one who was several years junior.

"5th mo. 24th, 1836.
"Dear Friend,—I think my last note commenced with two headings, the one being 'Esteemed Friend,' and the other 'Dear Friend.' As I omitted to remove the first, as was my intention, I have the best to explain what might be understood. After commencing as I did writing a line or two, I remembered that was not my customary way of addressing thee, and that I had better change it, which I did. The first is my common way of addressing business and other ordinary letters, but when I am writing to my own relatives, or to those whom I esteem as brethren in the higher relationship, I commonly use of the last salutation—and this is because I always feel a care not to depart from truth even in small matters. I have regarded thee as * * * and as such, I felt that love and sympathy for thee would justify me in using the language of truth, and also in making this frank appeal for the circumstance referred to.

Thy well wishing friend,
JAS. EXML

India Cashmere Shawls.—The first manufactured in India were made of cashmere, but for many years the wool from Cashmere goat has only been used. The animals are natives of Thibet, and attempt to raise them elsewhere have been fruitless. For several centuries the people of Thibet guarded the secret of making these shawls, and the government forbade them to sell them to foreigners. The goat's hair is long and silky, quite straight and of a fine shade. It is sent from Thibet to Cash-

stance of one month's journey. It is threaded with a mixture composed principally of flour, and when perfectly white, care is spun into threads and dyed of various tints, embracing all their shades and tints, dyes used excel anything of the kind in peculiar richness and durability. The best wool is from the inner coat of the goat, is only used in the manufacture of the elegant and costly garments.

The process of weaving is exceedingly slow quite novel in its execution. A single yard is composed of many pieces; each one oven separately. Their sizes vary; the largest one, about an eighth of an inch, and the smallest one not over a half square yard. A weaver does not employ ten weavers five to make, has from five hundred to two thousand pieces in it. The warp is placed in frames; the patterns are drawn out on paper, and the colored yarns wound on small spools, which are held in the hollow of the hands. It requires as many yarns in the work as there are colors in the pattern, which are secured on the warp with small pins (sort of ten needles). The right side is the under upon the frame, and is not seen by the weaver until the pattern is finished. An inch of piece is considered a good day's work, and is very compact, and the pieces are seldomly joined together that it is impossible to discover how the threads are woven as one. The shawl is without seam.—*Ed.*

For "The Friend."

It is pleasant to meet with such evidences, afforded by the following extracts from Scotch correspondence of one of our best papers, of the attention of other reformed bodies than our own being awakened to the supreme importance of that life of holiness, without which all other religious attainments will avail little. For as our author says, "It is not by an outward show, but by an inward virtue and a real life received from Christ and held in it, that those who are saved, are saved."

CHRISTIANITY THE RECTIFIER OF POLITICS.—Not to speak of the eternal world, it is to free Christianity that is to rectify the politics of nations. While a good civilization is exceedingly desirable, it is completely useless, however excellent in itself, if it is not set down in circumstances to be suited to its harmonious working. A people may be exquisitely constructed; but made to tell the hour with the unextinguishable; but if you set it down in a land instead of allowing it to work in air, under it entirely useless. So is it with the mechanism of a civil government; it may be so good, or ever so near to your ideal of perfection; but you find it useful or useless, or for much or good for nothing, according to the moral element in which you set it down.

They who work your civil machine to do so heartily as to mar its working; or they for whom it is wrought so intractable, so unruled, so depraved, the sooner it is removed, and a ruler more pure put in its place, so much the better you have to do with them. Now, the Scots in Scotland believe that what is to be done is not merely the employment of additional missionaries, or the intensifying of their utterances, or greater intellectual attainments; but a higher spirituality. They long

to see Christians exhibiting the softening power of Christ's grace by a sweet, gentle, Christ-like temper,—preaching by their conduct,—bearing on the secret atmosphere of a holy life the subtle germs of Christ's truth into the hearts of all around them. It is by knowing and loving and resembling the living, loving Jesus, that Christians can construct a satisfactory argument for their faith,—an argument more convincing and more powerful than any that could be written with pen and ink. The religion of Jesus flows directly from heaven,—must be free, and must be far more extensively diffused through our towns and villages. The aim of Baptists, accordingly, is to imbibe the spirit of the Bible, and diffuse the spirit of the Bible, and bring out the spirit of the Bible in their homes, and from their homes to all the relations, more local or more extended, which bind them up into nationality. This is the antidote to the moral corruption in the midst of us. God has provided it, and all experience, sweet or bitter, is found to unite in attesting its efficacy."

Central America.

BY MORELET.

Sharks.—We found in Campeche a passable inn. Its fare was the best which the country afforded; but, on the very first day, my suspicions were aroused as to the nature of a certain dish which occupied a conspicuous place on the table, and which the cook said was the flesh of the *cazon*. Further than this, he was not inclined to be communicative. The same afternoon, however, as I strolled along the beach, I observed a fisherman towing behind his boat some variety of sea monster which I almost instinctively connected with the suspicious dish at the inn. "Pray tell me," I inquired, "what fishes are those?" The man looked up in astonishment, and when I reiterated the question, replied, "Why, don't you see that they are *cazones*?" "Hold, my friend," I interrupted, "your *cazones* are veritable sharks!" But my fisherman was in no degree surprised at the announcement; he only shrugged his shoulders, ejaculated "*como no?*"—why not?—and went on with his work. I was not long in finding out that sharks of all kinds and colors constitute a prime article of food in Campeche, where they are eaten fresh and salt, roast, fried, and stewed, in all forms and on all occasions. And to avoid exciting alarm or shocking a prejudice which strangers may have in regard to them, the word *liburon*, which is the true Spanish for shark, has been banished from the gastronomic vocabulary of the good people of Campeche! I subsequently visited the public square, and there, among the fruits and fowls and vegetables offered for sale by long files of Indian women seated on the ground, I still found the inevitable *cazon*, the monarch of the market! He should be emblazoned on the arms of the city.

Ticks.—The forests too, are full of a variety of ticks (*Lodes*) called *garrapatas*, which bury their heads and claws under the skin so deeply as to render their removal impossible, without leaving some portion of their body behind to fester and fester in the flesh. On their native bushes they are thin and meagre in the extreme, not nearly as thick as a grain of flax seed, but when they fasten themselves on men or animals, they soon fill themselves up with blood, and become round as a bead, with only

little projections in the place of feet, and another scarcely perceptible projection indicating their mouth. Then they are helpless as drunken gluttons, and fall an easy prey to the first barn-yard fowl that comes along. They can not endure tobacco, and if the exposed parts of the person be washed with an infusion of the plant, their attacks may pretty certainly be prevented. Alcohol has nearly the same effect in keeping them off, or in detaching them after they have fastened on the body.

Subterranean Reservoirs.—Except within narrow limits, Yucatan is dry and sterile; so much so that the aborigines were obliged to profit by the cavernous nature of the country for their supply of water, which, disappearing rapidly from the surface, was collected in vast subterranean reservoirs called *senotes*. Without this natural and providential provision, the country would have been uninhabitable. The *senotes*, however, are not always wholly natural. Many have been vastly extended, if indeed they were not entirely excavated by man. That of *Bolonchén*, for example, astonishes us with its vastness, and the great extent and complication of its galleries. The Spaniards have in no respect equalled the great public works of utility of their predecessors.

Labor.—Labor doubtless is a hard condition of our existence; nevertheless love of family, ambition, and the desire to secure an independence, triumph over the natural repugnance with which it inspires us, to such a degree as to invest even the most fatiguing toil with a qualified charm. It is only in Spanish America that men are to be found so rich in their poverty as to be above the knowledge of want. Nothing can stimulate them to an accumulation beyond what is necessary to meet their barest necessities. Their happiness consists in repose; their ambition is limited to obtain sufficient for daily subsistence; and as to their families—they leave them in the hands of Providence, and consider themselves relieved from all further responsibility!

City of Carmen.—In an architectural point of view, the city of Carmen presents no striking feature. As stone is not to be found there, building materials are obtained from the neighboring forests. The roofs are generally thatched, though they are occasionally tiled with flat stones taken from the ballast of ships. On the banks of the Lagoon, where the houses are huddled closely together, these rustic roofs do not appear to great advantage; but outside of the commercial centre, in more retired portions of the city, they harmonize with the banana trees which shade them and with the primitive gardens which isolate every habitation. The streets, bordered with the white and red flowers of the periwinkle, and terminating in the surrounding forests, resemble the avenues of some imperial park; and the irregular paths that cross them and lose themselves in clumps of verdure on either hand, make a strange appeal to the imagination of the stranger, who is constantly tempted to explore the mysterious recesses to which they appear to lead. As one walks along contemplatively, he is suddenly startled by the whizzing flight of the humming-bird; but his eye scarcely falls on it, when seeming to emit a ruddy spark, it disappears among the branches, like some brilliant beetle, or rather like the sphinx, which it resembles in its flight. When

the sun approaches its zenith, and nature is sunk in silence and repose, the iguana may be surprised, extended on some branch of a tree, where he reposes in a state apparently between sleeping and waking; but his vigilance never abandons him. At the least sound he lifts his head, his throat dilates, his crest becomes elevated, and he listens without moving; but the changes in his color betray his uneasiness, his back of sky-blue deepens to purple, then he reflects the shades of the foliage which surrounds him, and in the midst of which he does not fall soon to vanish. The streets, as I have said, end only in the forest, which is an impenetrable thicket of thorny trees and vine-like plants, with velvety pods, which depend from the branches and when mature drop their seed on the ground to spring up again in new luxuriance.

Selected.

Day and night the prayers of my mother came up before me.—Until he was thirty years of age, Augustine was skeptical and immoral; yet his mother, the devoted Morrice, cherished the unshaken belief that he would become a christian; and this expectation gave ardor and importunity to her prayers in his behalf. "For nine years," he says, "while I was rolling in the filth of sin, often attempting to rise, and still sinking deeper, did she, in vigorous hope, persist in incessant prayer." In connection with her prayers to God, she frequently and affectionately admonished him, and with weeping, entreated him to abandon his sins, and devote himself to God. These tears made a deep impression on his heart.

Speaking of himself as he was in his unconverted state, full as he was of false philosophy, in relation to his praying, weeping, agonized mother, he says: "Thy hand, my God, in the secret of thy providence, foretook not my soul; day and night the prayers of my mother came up before me, and thou wroughtest on me in a way marvellous indeed."

Perhaps few things are more to be lamented, than that many of us are not enough convinced that there is no advancing in true Christian experience, and inheriting the riches and privileges, and consolations of the gospel of Christ, without submitting to his yoke, and bearing his cross.—W. G.

THE FRIEND.

SIXTH MONTH 3, 1871.

SUMMARY OF EVENTS.

FOREIGN.—The week ending on the 28th ult. was a terrible one for Paris. It was hoped when the government forces effected an entrance, that the insurgents would soon yield, and abandon a contest which was evidently hopeless; on the contrary, they evinced the utmost desperation, and prolonged the struggle throughout the entire week. When the government troops took the barricades in the centre of the city, the insurgents retired toward the eastern part, and held the territory adjoining the walls from Montmartre, north, to the river on the south-east, including Belleville, Pere la Chaise, Montmartre, &c. They here fortified themselves and continued the work of destruction by throwing petroleum shells into the city. While the bloody struggle was raging fierce conflagrations prevailed, by which it is estimated that at least one-fourth of the city buildings were destroyed, including many of the finest public edifices, which had been considered the pride and ornament of Paris.

In a circular of the 28th, Thiers announced the capture of the heights of Belleville, and stated that the insurrection was compressed within a space of a few hun-

ded yards, between the French and Prussian armies, and the remaining insurgents must die or surrender.

A special dispatch to the *New York Herald*, on the evening of the 25th, says: The remainder of the insurgents surrendered unconditionally, at nine o'clock this evening. The slaughter of the 24th and 25th, and the anticipated suppression of the Commune has cost over 60,000 lives, and the destruction of a third of Paris.

Another dispatch says: It is calculated that there are now upwards of 50,000 dead bodies in the houses and cellars of Paris, many of them women and children. A portion of the women were armed and fought furiously, others occupied themselves in spreading the conflagrations which desolated the city.

Assistance in suppressing the fires came from the surrounding country, and did good service. Foreign firemen also came to the rescue, including the fire brigade of London.

Favre, in a dispatch to the representatives of France in foreign countries, says the acts of the insurgents are of a criminal and not of a political nature, and he, therefore, desires them to request neighboring nations to extradite those who maintain their territory. The Spanish government has decided to stop all French refugees at the frontier, and deliver them up to the Versailles authorities.

Many numbers of the insurgents have been captured. Many of their leaders perished during the conflict, and others are now prisoners. The report that Rochet, an agent to Belgium is now said to be incorrect. He and many thousand others were captured and sent to Versailles.

Among the public buildings destroyed are the Palace of the Tuilleries, Hotel de Ville, Ministry of Finance, Prefecture of Police, Court of Accounts, Palace of the Legion of Honor, Monte de Piete, and others. The Legion of Honor was only partially destroyed. The library with its great collection of valuable books was burnt.

A dispatch from Spain to the *London Daily News* says, there is great agitation in Andalusia and Catalonia. Don Carlos is at Bayonne. A Carlist movement is imminent in Spain.

The official result of the census in London just taken, shows a total population rising 3,250,000.

The German Parliament has approved the supplementary clause to the postal treaty between Germany and the United States, under which letters will be sent forward by sea to and from America at the rate of 2] groen for every five cents, per half ounce.

Advice from Buenos Ayres to 4th mo. 27th, have been received. The death rate from yellow fever had fallen to about one hundred daily.

By Paris dispatches of the 29th, it appears the insurrection is completely crushed. After the capture of the heights and Pere la Chaise, the Commune held only one position, and when the government forces advanced upon it on the 28th ult., the insurgents hoisted a white flag and surrendered. They were immediately disarmed, and the great rebellion then ended.

General Vinoy is appointed Governor of Paris. It is proposed to divide the territory of Paris into the capital and twenty military districts, each strongly garrisoned, and this arrangement will be maintained until order is completely restored. Owing to the efficiency of the plans adopted by MacMahon for storming the barricades, the Versailles troops did not suffer heavily during the fighting in the streets. The loss of the army altogether is said to be only 2,895. The slaughter of the insurgents is so great that burning the bodies is seriously proposed as a sanitary measure.

The trial of the Communist leaders commences the present week. Conviction is inevitable, and it is believed every one will suffer death. Military law has been established in the city, and executions are daily made at the Champ de Mars and other places. The insurgents are shot in companies of fifty and one hundred men at a time. The disarmament of the National Guard is proceeding. Multitudes of people have been arrested.

In the insurrection the Communists placed many persons of distinction and influence in prison as hostages, announcing that their lives would be sacrificed if the war was pushed to extremities. In fulfillment of this threat sixty-nine hostages, including an Archbishop of Paris, the Mexican ambassador, several Archbishops of ecclesiastics and ten nuns, were shot on 24th ult., in La Roquette prison. One hundred and sixty-nine other hostages were saved from a similar fate by the capture of the prison before the insurgents had the opportunity of putting them to death.

The German papers have seized letters from leading members of the Paris Commune, disclosing a conspiracy against the government of Belgium. A plot had been

formed for the insurgents escaping from Paris to proceed to Brussels where the radical movement was continued. An insurrection was to be incited, the British States—*Miscellaneous*—Mortality in Philadelphia last week 242, which is 62 less than the corresponding week in 1870.

The U. S. Senate adjourned on the 27th ult. A treaty with Great Britain was ratified by a vote of 12. An officially certified copy of the treaty was forwarded to the President.

On the 27th ult., a sad disaster occurred at the Pittston coal mine, owned by the Lehigh Valley railroad Company, and worked by C. A. Blake & Co., New York. The shaft took fire, it is supposed, and rapidly gained headway. It was believed there about 40 men in the mine at the time. Up to noon the 28th, thirty-seven men had been taken out, fifteen of them being dead, and most of the others in visible and past recovery. The shaft was 300 feet and the mine, like that of Avondale, had but one level.

The debt of New York City now amounts to \$61,000. The city holds real estate and other property estimated to be worth far more than the municipal debt.

The Markets, &c.—The following were the quotations on the 29th ult. *New York*—American gold, 111 1/2. U. S. sixes, 107 1/2; ditto, 5-20's, 186 1/2. U. S. 10-40, 5 per cents, 109 1/2. Superfine flour, \$3.50; finer brands, \$6 to \$10.25. White Genesee, \$1.80; amber State, \$1.66 a \$1.68; No. 2 of spring, \$1.43 a \$1.49. Oats, 67 a 69 cts. Eye, Western mixed corn, 71 a 75 cts.; yellow, 75 a 78 cts. *Philadelphia*—Cotton, 17 a 17 1/2 cts. for upland Louisiana. Cuba sugar, 94 a 94 cts. Sup. flour, \$3.25 a \$3.50; finer brands, \$6 a \$9. Wheat, 1.80; Indiana red wheat, \$1.65 a \$1.68. Low corn, 75 cts. Oats, 67 a 70 cts. The arrivals of beef cattle at the Avenue Drove-yard, on the 29th, were: Ayrshire, 7; ditto, 1; 8 cts. fair to good at 4 and 4 1/2 cts. per lb. gross for clipped. Hogs, 87 per 100 lbs. net, for corn fed. *St. L.* Spring wheat, \$1.26 a \$1.30. Mixed corn, 60 a 65 cts. 49 1/2 a 52 1/2 cts. Lard, 10 1/2 cts. *Chicago*—wheat, \$1.26 1/2. No. 2 corn, 52 cts.

WANTED FOR A FREEDMEN'S SCHOOL.

Near Stevenson, Alabama.

An earnest, but prudent and thorough T. Colored—brought up among Friends—preferred place offers uncommon inducements as an opportunity for the kind of instruction now so much needed would be accepted if qualified. Address: _____

Y. WARD, Germantown, Philadelphia.

HAVERFORD COLLEGE.

The next term of Haverford College will be Fourth-day, the 13th of Ninth month, under the charge of Samuel J. Gummer, Thomas Cha John H. Dillingham.

For terms and other particulars, apply to SAMUEL J. GUMMER, President, West Haverford.

FRIENDS' BOARDING SCHOOL FOR INFANTS, CHILDREN, TUNESSASA, NEW YORK.

A suitable Friend and his wife are wanted charge of this Institution, and manage the Faculty. Application may be made to Elizabeth Worth, Marshfield, Chester Co., Thomas Wistar, Fox Chase P. O., Philadelphia, Samuel Morris, Olney P. O., Joseph Scattergood, 413 Spruce Street, Philadelphia.

FRIENDS' ASYLUM FOR THE INSANE Near Frankford, (Twenty-third Ward,) Philadelphia.

Physician and Superintendent—JOSUEPH H. KINGTON, M. D.

Applications for the Admission of Patients made to the Superintendent, or to any of the Managers.

MARRIED, at Friends' Meeting, Coal Creek, Co., Iowa, the 17th of Fifth month, 1871, M. HOLLOWAY to ANNA, daughter of John and Vail.

WILLIAM H. PALE, PRINTER, No. 422 Walnut Street.

Consumption.

BY CARL BOTH.

During a more recent period, when the *specific principle* theory of Consumption was the ascendant, it was natural that a *specific remedy* should be sought for. At one time *cury* was everywhere the most prominent remedy, it being thought that it possessed the power of destroying the *specific principle*, but the end was found to be bad. Another of the specific remedies, was what was known as the "emetic cure." It was thought that this specific principle of the disease (noxa) could in some way be induced to leave the body and be ejected through the operation of emetic. Antimony, arsenic, lead, gold, silver and other minerals, especially iron (when it became known that this metal formed a constituent of the body) have played a conspicuous part in the specific cure treatment. One time, prussic acid gained a high reputation as a specific, though opium maintained the first position, either by itself or in conjunction with sugar of lead. New remedies came in constant demand to satisfy the failing patient, who, like a drowning man, was ready to catch at anything. Sulphur and sulphuric acids were recommended by one; creosote, gums and resins, by another; and chloride of ammonium, with sea bathing, or sea-salt, &c., by another, and so on, *ad infinitum*. The great Hahnemannian *specific remedy* consists of animals suffering from horse glanders (Rotz-gift), in very high dilutions. Others recommended the poison of bees, and of venomous snakes, as the better antidote. In conjunction with a very strong faith and a lively imagination, it is not improbable that some of these remedies may have proved useful to patients. The effectiveness of this class of remedies, however, would doubtless have been more appreciated, had they for a basis something better to rest upon than such very highly diluted infinitesimal quantities of any physiology, physics, chemistry, and anatomy, that it would be impossible to determine. After the discovery of iodine it was thought that no remedy could be made to supercede it, like all previous specifics, it failed to

meet the expectations of its advocates. In the meantime the views of Laennec became predominant, and the conviction more or less established, that the disease was absolutely incurable. This view, however, was very strongly opposed by Broussais, who, by bleeding, thought he could extract the diseased blood, and, by creating new, save the patient; but his failures in practice only served to fortify the views of his opponents.

As the result of these opposing views relative to the curability of Consumption, greater attention was paid to the present comfort of the patient, by seeking to relieve the more urgent symptoms, and, when practicable, by sending them to different places for change of air, diet, scenery, &c., in accordance with the wishes or caprice of the patient, or the prevalent practice of the time. At one time, it was the sea, at another, Italy, then Egypt, and then to Greenland, because Consumption was not found there; then, again, to the south of France. They were also sent to coal mines, because the workmen were very seldom troubled with Consumption; and one man started the idea that living in stables was beneficial, because persons employed in them were free from this disease. Stables having extra accommodation, were therefore built for this purpose, but continued to be used only for a very short period.

The discovery of iodine in cod-liver oil by a chemist, led to its very general use some thirty years since in Germany. It was introduced into England by Bennet, and highly recommended by Williams, of London; and very soon became almost universally used as a remedy in this country. Its high reputation was not altogether due to imagination, as may be seen from the following. The poorer classes of Europe very seldom, if ever, ate the flesh or fat of animals, being unable to procure them. Their principal diet was composed of potatoes and rape-oil; an unwholesome vegetable oil, used principally for burning purposes. When such half-starved persons went to the dispensaries, and were treated with cod-liver oil, it was found that they immediately began to improve, and to gain in flesh and weight; and hence the prevalent idea of its curative qualities and extensive employment; but good beefsteak, with plenty of bread and good butter, would have produced similar, if not better results.

The demonstrations of Liebig relative to life—that it was a burning process through oxygen, and in reference to which Henle jokingly remarked, "if so, then we should be able to sustain latent life in the body by the exclusion of oxygen, as in grain by the exclusion of moisture"—led to the extensive use of fusel oil, which obtained a great reputation in England and in this country. A speculative Englishman, from the demonstrations of Liebig and the hint contained in the playful remark of Henle, concluded that if some remedy were employed which contained no

oxygen, the wasting or burning away of consumptive lungs might be arrested; and as fusel oil contained very little oxygen, the formula of which as used is $C^{10}H^{10} + 2H^2O$, he experimented with it, and published a pamphlet on the subject. In this way fusel oil came into use, and was largely prescribed for consumptives, very much to the disadvantage, however, of the digestion of the victims. Fusel oil may be recognized as one of the ingredients of vile liquors which makes people sick when they drink them.

In this connection we may here mention the use of alcohol as a remedy; it being still recommended by many physicians at home and abroad. It is one of the remnants of Brown's theories of diseases (based upon Galen), and of their treatment,—that want of force should be treated by stimulants. On this subject Dr. Anstie, of London, has the following: "The question of alcohol in phthisis of adults is hotly disputed; on the one hand, many authorities maintain that it is an unmitigated evil; on the other hand, the treatment possesses numerous advocates, and we even meet with records (by Flint and others) of patients almost exclusively nourished upon an alcoholic diet for prolonged periods, with apparently beneficial effect." "This subject has engaged our particular attention, and without expressing a very confident opinion, we have good grounds for believing that the following is a near approach to the truth." "There are two classes of cases in which alcohol appears to play an important part in the arrest of phthisis." "In a class of patients who have delicate skins and perspire very freely, and with whom, at the same time, oil and fatty matters habitually disagree (a not very common combination of conditions, but one which is seen in a certain number of instances,) we have more than once seen remarkable effects produced by the entire abandonment of all medication and the employment of large doses of spirit—whiskey or rum; and a singular point in these cases was the tolerance of alcohol that was shown, even from the first." "Our own experience has led us to believe that the question must be judged just as we have proposed that it should be judged in cases of acute disease,—*experimentally*." "In each case the effects of experimental doses upon the form of the pulse-wave, and on the temperature, and the elimination of alcohol by the kidneys, should be carefully tested; and according to what we have noted, in observing a large number of cases, we are justified in believing that when alcohol reduces temperature, and the dicretions of the pulse, and fails to pass away in notable quantity by the kidney, it *always does good*; but that the slightest degree of narcotic action of alcohol is harmful."

Our own opinion, however, of the action of alcohol in Pulmonary Consumption, and in cases that are mistaken as such, is: that nothing brings the patient more quickly and surely

to the grave, especially if taken during the period of tuberculous formations;—that by its fat accumulations it excludes minerals from the blood which are really the only hope of cure, and makes the death of the patient one of restless torture, when by other treatment he might have recovered; or, if otherwise, come to his death like a person falling asleep, without struggling and torturous suffocation.

We conceive that alcohol helps a consumptive person much in the same way as it helps a man failing in business, mind, or capacity. That it makes the patient feel better, in the meantime, while under the influence of the alcohol, we will not deny; but his feeling better and being better are two very distinct things.

The old Greek treatment of inhalations was revived again in Germany about twenty-five years ago. At first, chloride of ammonium was used; afterwards, narcotics were employed, from which the smoking of stramonium cigars had its origin. It was not long before other vapors were employed, and this treatment, in different variations, came to be employed by many physicians. To inhale finely dispersed liquids, holding medicine in solution, is one of the latest modifications of this treatment. There can be no doubt that many suffering from chronic bronchitis have been benefited and temporarily relieved by this method of treatment; and more especially is this the case in asthmatic affections, its effects being often immediate.

What was known as the cold water treatment of consumptives has also been somewhat extensively employed, but always with serious injury to the patient. To visit these cold water institutions and witness the chattering of teeth, the blue lips and nails of the poor fellows under treatment, was enough to call forth the pity and commiseration of a stone. The grape-cure has been employed with great benefit to many sufferers, by rectifying their digestion, and, with this object in view, is still recommended by the best physicians in Europe. But the milk-cure has proved even more beneficial, especially to the wealthy, whose means have permitted them to visit Switzerland, the Pyrenees, Sicily, or Peru, and to enjoy the best milk in connection with the pure mountain air. That most consumptives will feel better under these changed conditions of air, scenery, &c., than at home, shut up in a sick-room, especially for the first few months, it is not at all difficult to comprehend; while there are many cases of chronic bronchitis and catarrh which are in this way really cured.

(To be concluded.)

Fame.—A man writes an elaborate work upon a learned subject. In a few years' time, another man writes an elaborate work upon the same learned subject, and is kind enough to allude to the former author in a foot-note. Twenty or thirty years afterwards, this second man's work is also absorbed in a similar manner; and his labors, too, are chronicled in a foot-note. Now, the first man's fame, if you come to look at it carefully, is but small. His labors are kindly alluded to in a foot-note of a work which is also alluded to in a foot-note of a work published forty or fifty years hence.

Surely this *fame* in a foot-note is not much worth having.—*A. Helps.*

Memoirs of Mildred Ratcliff.

(Continued from page 322.)

A part of a letter from Mildred Ratcliff to Henry Hull.

"15th of 8th mo. 1799.

"Most dear and inwardly beloved friend,—Hearing of thy conclusion to visit the inhabitants of Kentucky, my heart is concerned to write to thee, in that love our Holy Leader exhorted his disciples to love one another with, when he was about to leave them as to his outward appearance. I have no doubt but thou, as well as unworthy me, have been sensible that there is a union of soul with those who seek not the honor and vanity of this world, but endeavor after a ready and humble obedience to the voice of the true Shepherd, and cheerfully to follow Him in all his requiremgs. I doubt not but thou hast experienced with me the overflowings of this love and union of soul which the world knows not of. This love constrains me at this time to give thee some account of my inward exercises. When I parted with thee, I hardly expected to have written so soon, but hearing thou hadst concluded to go to Kentucky, I could not feel easy without informing thee of the satisfaction I have with thy concern for that place. May the All-sufficient Arm of Power go with thee into that strange country. Mayst thou, dear friend, renewedly experience the fulfilling of that declaration, 'My grace is sufficient for thee.' I believe, through watchfulness, thou hast, and wilt more and more witness a growth in a concern for the good of mankind universally.

"I have, as I informed thee, five brothers with their families in that State, who feel very near and dear to me. Two of them are professors, as I once was, in the Baptist society. No tongue can tell the earnest breathings of soul I feel for them, with all my near relations after the flesh, that which may arise, shake themselves from the dead and formal worship they have been so long in; and come to own and to worship the Father, in Spirit and in Truth. This alone is acceptable worship.

"Oh, my friend! I felt much freedom and innocent love to thee, and received thy kind invitation to a communion of this kind, in that love wherein a man will lay down his life for his friend. In His love, his children can feel freedom indeed, and declare of his goodness. This makes some of his dear children willing to leave all that is dear to them in this world, being as fools in the eyes of those who know no better, to encourage the feeble-minded, and to invite others to come, taste and see how good the Lord is. Oh my soul knows He is good! Indeed he has been pleased renewedly to fill my soul with the overflowings of his love for these several days, so that at times I have felt lost in wonder, love and praise. Whilst I had thine and thy dear companion's encouraging company, and almost ever since, I have felt that I could adopt Joshua's resolution: Let others do as they will, I, through the help of Him who is able to give sufficient strength, will surely serve the Lord continually, that nothing may be able to separate my soul from him: for I am deeply sensible, that without His Arm to support, I shall fall by the hand of the enemy.

"I may give thee, my dear friend, some account of the visitations of Divine love to my

soul when a child. When very young I impressed my heart with the love of virtue and raised in me a hungering and thirsting after the enjoyment of his presence. Knowing the integrity of my heart, and that I was a weak vessel, and liable to be overcome by the unwearied enemy, he was pleased in the abundance of his mercy, plainly to discover me in a dream, how unwearied the devil would be in striving to take possession of me and to keep me from entering my Father's house, where there are many mansions.

"I saw in my sleep, when very young, an enemy of man, as plainly as if I had seen him with my mortal eyes. It was with him struggling, whilst on the soft and miry car I kept out of his hands; being many times my dream, as I have been since, ready to fall and give myself up to him. I could hardly put one foot before the other, I was so much and encumbered in the spongy ground. Sometimes he would have one paw open to hold me behind, whilst he would flash fiery darts in my face, so that I was almost overcome. But praises forever be given Him who will not utterly forsake any who rightly call upon him, he suffered not his hard master to take possession of me, but encouraged me to press forward, until I thought my feet were set upon a firm and beautiful path which led straight to my father's house. When I felt the earth under my feet was hard and firm, I thought I flew with much speed before my enemy, so that at times I left some distance behind. Oh! the joy I felt when I could get some distance before him towards my place of abode. I thought I wings and did fly, so at times he could come near me; and yet, through forgetfulness and loitering, at other times he would be close to me whilst I was unaware. The devil would lift up my wings again, and fly out of his reach. I shall never forget, I believe whilst in this life, that although I thus went on his way, he was unwearied, continuing his chase after me to the door of the house into which I flew. Then he gave over attempt to get me, and returned to his place. When I was safely in the house I thought said, 'Satan, I fear you not now! I am in my father's house!' I looked out, and saw him turn his back upon the house, for he could come in. I wish not to be tedious to thee, dear friend, in thus writing my dream; feeling my mind open in the overflowing of the Father's love, I am constrained to confess of his goodness to my poor soul even when a child.

"I have looked upon this dream as a great favor indeed, because it discovered plainly to me the subtle snares of the enemy of my soul. I have often since seen, and have had to experience the hard trial of his fiery darts flying in my face, as I saw in my sleep. Encouragement I received from my dream, that if I would not give up to the enemy, I would continue to press forward, although through great difficulties, I should at last enter into my Heavenly Father's house where he could never come.

"I have an undoubted right to believe I am no longer safe, than whilst we are in the watch tower. Oh! shall all that is in me, that I may not be found sleeping with the thief of souls shall come, but that I shall be on the watch, that he may not overthrow or rob me of my eternal salvation.

"Bear with me, my friend, in thus writing

feel a freedom with thee, now as when in my company, which has not been common. I find comfort in thine and thy companion's fellowship so large here to relate. But I know who alone deserves the praise. I believe I may say in truth, I love him whom I have reason to believe, love him in whom I trust, the Lord of glory. "O," saith my soul, as the company of his dear children is so delightful to me here, may nothing ever be able to keep me from following the footsteps of the true shepherd, who said, "Ye are my friends if ye do whatsoever I command you." May I never break or draw back from doing whatever the voice of Peace may be pleased to command me, so that he may number me among his friends with his friends. "Of a truth His love is greater to me than the honey in the honeycomb." May I go on with those who faithfully follow the meek and humble Jesus, so that we may all meet in his kingdom, where there will be no more parting. This I have thought, loved friend, will make up for all we may be to go through in this life."

How animating is the hope held out in the latter part of the above letter, that the Saviour's love may, through faithfulness, become dear to our taste than honey or the honeycomb; inciting to increased diligence in following the meek and lowly Jesus, so that, through mercy, all may meet where all tears shall be wiped from all faces, and sighs and farewells be a sound unknown. Which, M. R. encouragingly writes, will make up for all the sorrow and the suffering we may have to endure this life. May we never lose sight of this, on the great recompense of reward held out to the encouragement of those who, through any tribulations, seek after that rest promised for the people of God, "Exceedingly abundantly above all that we can ask or think" is the language of the apostle when describing the riches, the joy, and the blessing of the heavenly kingdom. "Ye have not seen, nor heard, neither have entered into the heart of man, the things that God has prepared for those that love him." With these promises, may we all, younger and older, press towards their eternal fruition, putting nothing too near or too dear to part with; but rather saying with the apostle, "I will not my life render unto myself, so that I might finish my course with joy." Surely light and darkness are not made unlike, that the peace of God which passeth understanding, and the fading and unsatisfying assurance, which arise from a complacency with the spirit of this vain and deceitful world, cover when the heart is given up to the lion, how he watches over it; saying as he of his vineyard: "If the Lord do keep it, I will water it every moment: lest any hurt it will keep it night and day."

Oh! the exceeding depth and riches of the Saviour's mercy! "The love of God in Christ is to our poor, lost souls! But in order to avail ourselves of this mercy, we should be a correct and lively sense of the destruction and misery from which we are, or may be delivered; the crown of glory to which we are called; and especially that stupendous act of heavenly love which opened a way for lost sinners to become restored to the state in which our first parents by transgression—the humiliation, suffering, and death of our dear Son of God. Surely the precious price paid for us, should induce us to glorify in an immaculate Lamb that was slain, in our

bodies and in our spirits which are His; and cause us in all lowliness and meekness, to walk worthy of the vocation wherewith we are called; till we all come in the unity of the faith, and of the knowledge of the Son of God, into a perfect man, unto the measure of the stature of the fullness of Christ.

(To be continued.)

Central America.

BY MORELET.

Palizada.—*Dye-woods.*—A few years ago, Palizada was only a miserable hamlet, exclusively inhabited by Indians. But the discovery of dye-woods in its neighborhood immediately created a business movement, and rapidly ameliorated the condition of its inhabitants. A number of young mulattoes without family or fortune, a disinherited race which the laxity of morals in Spanish America rapidly multiplies, first sought here the means of subsistence. Then the tailors, barbers, and merchants, in the hope of sharing the benefits of the new settlement. The war in which we were engaged with Mexico, in 1835, also introduced into Palizada a few Frenchmen, victims of the hatred which the success of our arms had excited in the breasts of our enemies. I was not a little surprised to meet with compatriots in this swampy, unknown region. They all seemed to be doing well, and to have no regrets for what they had lost by their expulsion. The trade in Campeachy wood is here, as in the island of Carmen, the only source of revenue, and the only calling pursued by the people. Every thing in the way of enterprise and capital concentrates in this pursuit; that is to say, in buying woods at the lowest prices here, to sell them at the highest possible rates at the Lagoon. This operation is an easy one with ready money, for the Spanish proprietors, continually driven to expedients for gratifying their ruling passion, that of gambling can never reject a golden appeal, and they submit to almost any reduction of price in order to procure ready money. When the supply of wood is scarce, the people are often driven to painful straits; but it is impossible to feel any great sympathy for a population possessing a soil so productive and fertile, and who are yet so indolent to turn it to account. Notwithstanding the size of the market, and its growing importance, it has no market. The commonest necessaries of life, and such things as game, fish, &c., which abound in its vicinity, can only be got with difficulty, and at exorbitant prices. In fact, every pursuit is absorbed in the prevailing struggle for dye-woods, precisely as in arid countries all industry is swallowed up in the struggle for gold, regardless of the thousand other treasures which nature spreads out on every hand.

Floating plants and birds.—The vast swamps surrounding Palizada are worthy of the attention of naturalists, and if known, would become a very El Dorado of hunters. Among the curiosities of the region is a singular plant with long fibrous roots, which vegetates on the surface of the water, spreading out from the shores of the lagoons and sluggish canals in a net-work of verdure, like a floating meadow. It never spreads entirely over the channels of the canals, which are consequently left open for navigation, but elsewhere it is so dense as to be impenetrable to boats, and in turn supports other varieties of plants and flowers. I have said that this low country is

studded here and there with little hills, almost deserving the name of islands, which rise among the swamps and above the general overflows. They are always densely wooded, and are the haunts of black squirrels and many other varieties of animals. But these are of course few in numbers as compared with the feathered inhabitants of these marshy regions. The latter through the earth, the air, and the water in countless multitudes, as they have doubtless done from the earliest ages of the world. Innumerable web-footed and long-legged birds swim, plunge, and fly around the trawler; the *tattler* with his hard crooked neck, trisk; heron white as the spotless snow, the shy spoon-bill in its pink plumage, the long-necked flamingo with flaming wings, infinite varieties of teal and ducks, and last of all the crane slowly pursuing his stately walk, or standing still and gazing solemnly on vacancy. Different species of birds of prey utter piercing cries, and describe great circles above the tree-tops. They pour rapidly into the swamps in search of prey, but instead of finding it they frequently fall into the hungry jaws of some alligator, concealed beneath the floating vegetation. And finally the vulture, perched on some dead tree-top watches over the evolutions of the feathered multitude. To the farthest limits of the horizon, one sees only birds filling the air and thronging the water. The greater part of these live on terms of strange familiarity with the cattle which roam over the savannas. I have frequently seen a white heron make use of the back of a cow or bull as a means of transport across a stream. It required some little effort for the bird to maintain its equilibrium, but it never abandoned its post before reaching the point for which it had set out. The turtles, which are equally numerous, contribute, in spite of their timidity, to the general animation. Now they swim in the open water, scarcely rippling its surface with their flippers; now they float on its bosom, and anon drag their heavy bodies toilsomely along the shore.

But of all the feathered inhabitants of these humid regions, the *jacana* is most distinguished for his grace and vivacity. Always in motion, he skims lightly, accompanied by his mate, over the floating verdure of the lagoons, tripping dexterously from leaf to leaf, as if fearful of wetting his toes. Nature has endowed him with a formidable weapon; he conceals beneath his wing a spur as sharp as steel, with which he can strike his enemy with fatal force. But he is by no means quarrelsome; when disturbed, he flies off with a scream to some other point, not far distant, having previously assured himself, from the top of some tall tree, that it is a safe retreat. After alighting he remains perfectly still for a moment, with wings expanded, ready for a flight in the event of the slightest alarm. This charming bird, I afterwards ascertained, is found all over tropical America. The Spaniards call him *gallorente*, and the Indians of Tabasco *chechnab*, bird of the *nab* or nymph.

Contentment.—When our meal was concluded, and every one had lighted his cigar, I questioned our host touching his solitary existence. His family consisted of a wife and two young children; his furniture of a couple of hammocks, a mat, and a few cooking utensils. His gun, fishing-line, and a small cultivated field near by supplied him with provi-

sions; when he had an abundance of these, he exchanged the surplus for such useful articles as the boatmen, who occasionally landed here, happened to bring with them. He had never been further away from this spot than to Palizada, and had no desire to exchange his solitary life and frugal independence for the excitement and sweets of civilization. "Porque?" Why? he exclaimed interrogatively, when I asked him if he would not like to see the great ocean, and the ships and people of other lands. "Porque? soy contento!" Why; am I not content? Nor was he alone in his philosophy; hundreds like him live and die in a like manner, without passing or seeking to pass beyond the congenial solitudes of the familiar wilds where their fathers lived and died before them.

Siesta.—Night, under the tropics, seems less a period of repose than the midday hours. When the sun reaches the zenith, as if by common accord, the breezes subside, the leaves droop, the birds retire to the coolest recesses of the forest, and man himself relapses into a sympathetic silence. Perhaps it was then that I most enjoyed the strange and rich variety and novelty of the scenes around me. In a half lethargic state I would lie back in the boat, and let the landscape float before my half-closed eyes, until gradually I would seem to lose my identity and become part of the scene itself, and absorbed in its mysterious embrace. Then I would drop off in slumber as dreamless and profound as if I had never known existence, nor shared the hopes and fears of human life.

To the Editors of "The Friend:"

In looking over the remarks of your Guernsey county correspondent, entitled "Tibit for Quakers," in the 33d number of the present volume, I felt inclined to make a few observations thereon. I was a member of another religious denomination till the meridian of life, consequently was not in the habit of using the plain language. About that time I was drawn to the Society of Friends, yet to many of its testimonies I felt a strong natural opposition, and to this of using the plain language particularly so; and when I was made to yield something like obedience to the requirements of truth, I felt and do still feel fearful lest I should imitate Friends in any practice which has not its foundation in truth. The deficiency alluded to by your correspondent, of using "thee" when "thou" is the proper word, is one that I never thought it right to copy. I am glad to see the subject introduced in the columns of "The Friend," yet do not approve the manner in which it is treated. Your correspondent thinks the deficiency so great that "Friends have not any plain speech such as cannot be condemned amongst them at this day." Now, while we admit and regret that the incorrect use of *thee* is too prevalent, I think it may safely be asserted that there are many Friends who do use the plain language even in this day. The error lies in making use of the objective *thee*, when the nominative *thou* should be employed.

Your correspondent says, "he would as lief hear Friends use *you*, to a single person, as *thee*, at all times correctly or incorrectly." Here he admits *thee* is sometimes used correctly; but you is never correct when applied to a single individual.

We frequently hear the maxim "of two evils 'tis wise to choose the least," but he

seems quite as willing to take the greatest; but both evils might be avoided by returning to the practice of early Friends and scriptural example, by using *thou* in its proper place.

There are many to be met with in the present day, who think and designate this as one of our minor testimonies, and of but little importance. It has been truly remarked, the testimonies of Friends are so interlocked and dovetailed together that one cannot be removed or fall to the ground without weakening the whole: Friends have never thought themselves at liberty to pick and chose in this matter, and like some of old to say, "With our tongues we will prevail: our lips are our own, who is lord over us?" The support of these precious testimonies is laid upon us and we cannot, as we believe, speak truthfully in any other way, and why should we abandon the plain language? Why should we not endeavor to uphold it by laying aside every custom contrary thereto? The strong good sense of Geo. Fox was never more manifest than in the defence of the plain language. We read in his journal that when imprisoned in Scarborough Castle, a priest, with the widow of Lord Fairfax, came to see him, he asked G. Fox "why we said thou and thee to people, for he counted us but fools and idiots for speaking so." Geo. Fox says, "I asked him whether they that translated the Scriptures, and that made the grammar and accidence were fools and idiots, seeing they translated the scriptures so, and made the grammar so, thou to one, and you to more than one, and left it so to us. If they were fools and idiots, why had not he, and such as he, that looked upon themselves as wise men, and that could not bear *thou* and *thee* to a singular, altered the grammar, accidence, and Bible, and put the plural instead of the singular. But if they were wise men that had so translated the Bible, and made the grammar and accidence so, I wished him to consider whether they were not fools and idiots themselves that did not speak as their grammars and Bibles taught them; but were offended with us and called us fools and idiots for speaking so."

In bringing this subject before the readers of "The Friend," I have felt the great influence of parents, especially the mother, in correcting or perpetuating this and other corrupt customs. From them the infant mind receives its first training, its first impressions so deep and lasting. The quick eyes and ears of children are wide awake to perceive when precept is not enforced by a consistent example; and it is certain that many of the present generation who use the pronoun *thee* in the manner complained of, can trace it to the custom of their parents, who have not been sufficiently informed or careful in this particular. Teachers of youth should give this subject a thoughtful examination, and if this custom is unsupported by grammatical rule and scriptural usage, is it not our duty, as ability is given, to retrace our steps and return to the wholesome, correct practice of early Friends. That it will be somewhat difficult I well know, for I have had it to learn; but I believe peace will ever be the reward of those who humbly submit to the convictions of truth. William Penn says, "Endeavor to do right, habit will make it most agreeable."

Winona, Ohio.

Do not adventure much until you are certain of the issue.

IN A GARRET.

BY ELIZABETH AKERS ALLEN.

This realm is relegated to the silent past,
Within its drowsy shades are treasures rare
Of dust and dreams; the years are long, since last
A stranger's foot-fall pressed the creaking stair.
This room no housewife's tidy hand disturbs;
And here, like some strange presence, ever cling
A homelike smell of dry, forgotten herbs—
A mazy odor as of mouldering things.

Here stores of withered roots and leaves repose,
For fancied virtues prized in days of yore,—
Gathered with thoughtful care, maybe by those
Whose earthly ills are healed for evermore.

Here shy Arachne weaves her endless thread,
And weaves her silken tapestry unseen,
Veiling the rough-hewn timbers overhead,
And looping gossamer festoons between.

Along the low joints of the sloping roof
Moth-eaten garments hang, a gloomy row,
Like tall, fantastic ghosts which stand aloof,
Holding grim converse with the long ago.

Here lie remembrances of childish joys,—
Old fiery-robbers conned and conned again;
A cradle, and a heap of battered toys,
Beloved by babes who now are bearded men.

Here in the summer, at a broken pane,
The yellow wasps come in, and buzz and build
Among the rafters;—wind and snow and rain
All enter, as the seasons are fulfilled.

This mildewed chest behind the chimney holds
Old letters, stained and nibbled,—faintly show
The faded phrases on the tattered folds
Once kissed, perhaps, or tear-wet,—who may know.

I turn a page like one who plans a crime,
And lo! love's prophecies and sweet regrets,—
A tress of chestnut hair,—a love-lyne rhyme,
And fragrant dust which once was violets.

I wonder if the small, sleek mouse, that shaped
His winter nest between these rugged beams,
Was happier that his bed was lined and draped
With the bright warp and woof of youthful dreams.

Here, where the gray, incessant spiders spin,
Shrouding from view the sunny world outside,
A golden humble-bee has blundered in,
And lost the way to liberty, and died.

So the lost present drops into the past;
So the warm living heart, that loves the light,
Faints in the unresponsive darkness vast,
Which hides Time's buried mysteries from sight.

Why rob these shadows of their sacred trust?
Let the thick cobwebs hide the day once more;
Leave the dead years to silence and to dust,
And close again the long-unopened door.

Scrivener's Month.

Doctors.—Seventy-four thousand doct Think of it. All this number in our country according to the present census, unless newspapers inform us falsely. In 1860 we were fifty-five thousand,—an increase 19,000 in ten years, or nearly two thousand a year!

Ought not these figures to "give us pause? Reflect a moment what an army they would make, even in this day of big armies; or what a city they would form, larger than any of the oldest States.

Or, look at it again from another point of view. What a mint of money it takes to support this army! Probably we are within a mark when we calculate that the average cost of the 74,000 from practice is a thousand dollars a year each. This makes \$74,000,000 a year, which the sick pay for medical aid. For their medicines it is safe to say they would add \$26,000,000 which remains to be added \$100,000,000 a year, as what sickness

e American people. And in this calculation e have left altogether out of account the ns and hogsheds of quack medicines which is misguided people pour down their throats e can safely estimate that at \$25,000,000 a more.

Let the people study these figures awhile d then reflect that probably one-half, or cerainly a large fraction of this expense, is irrored by a deliberate infraction of the laws health; that if they tipped less, smoked is, over-worked less, were less given to lech and wantonness, ate slower, exercised ore judiciously, were less "fast," and less ifindulgent, they would save some thirty forty millions a year.

Making money is in America the "chief end man;" and plenty of advisers are ready th their wise saws how it can be accomsh. We are one of them, and offer a sawe ite as true and less trite than any of them, d that it is this—keep healthy. Living in the dst of a commercial mart, and in the thick the desperate conflict for wealth, we have on many a hero in the fight lose all for want health; lose it, perhaps, just at the moment ne a month or two more of work would e made a fortune.

It is said that when Alexander VI. died, s son, the famous Cesar Borgia, had every vision made to seize the supreme power d make himself master of Italy, that he had ery possible contingency guarded, but one, d that was his own physical inability to advantage of the crisis. But sickened threatening illness by the same poison ed which killed his father, he lost his chance d died defeated, an exile and a captive. It is well if many an American business man k warning by the name this fragment of tory convers, and would remember that e labor of a life may be lost by the preventa- illness of a week.—*Medical and Surgical orteer.*

ad five of them were wise, and five were foolish."

We are accustomed to employ a great iety of terms, and to make many nice dis- tions in describing the varying shades of man character. But the language of the ble never descends to these particulars. It es not recognize those minute differences to igh, in judging of each other, we attach so uch importance. The righteous and the cked, the just and the unjust, the sheep and e goats—he that feareth the Lord and he that feareth him not,—such are the concise tinctions which divide the whole human ty. In the estimation of the Judge of all the th. The text furnishes us with one of a ilar kind, "The wise and the foolish."

It is exceedingly probable that if the ten gins of whom this brief account is given, e been described by some human observer, e would have been ten distinct characters; wn; and it is not very unlikely, that the tement of the text would then have been edly reversed; and that the five who would e been called the five foolish. One of m, perhaps, would have been pronounced yspicrite; another an enthusiast; another ightful; one melancholy; and the fifth ad. While the other five, who were, per- s, "wiser in their generation than the se- dren of light," might have been the sub- ts of high encomiums; for it often happens t those things which are "abomination in the sight of God, are highly esteemed among

men." One of them, it may be, would have been extolled for her grace and beauty; another for her distinguished attainments; a third for her wit and gaiety; a fourth for her engaging manners; and a fifth for her spirit and independence. However this might be, their characters are very concisely, and certainly very faithfully summed up by Him to whom all hearts are open; passing over unimportant shades of difference, he declares that "five of them were wise, and five were foolish."

God alone knows the worth of the soul that He has made. He alone can duly estimate the treasures of immortal happiness that are at stake; or comprehend the terrors of his impending wrath. Nothing therefore, in His mind, is wisdom but that conduct which secures his favor; and the deepest folly is that which risks the loss of it. Thus the most sagacious and gifted men in the estimation of their fellow creatures, are often only fools in His sight; and "the foolish things of this world" will one day confound their wisdom.

* * * * It is, however, not uncommon thing for the five foolish to look occasionally with an indolent eye at the stock of oil with which the five wise are provided, "I wish I were as serious as such an one," is the secret language of many a heart; but this too often only means that they wish they were as safe. Why are not such wishes oftener cherished and followed up with earnest and importunate prayer? "All things are ready." Let the most careless, unimpressed, and worldly-minded, but rouse themselves, *to ash*, and when they shall receive the very same blessings that their most pious friends are enjoying. There is oil enough for all the lamps; O, the folly of waiting till there is no time to procure it! When however persons do feel inclined, under any sudden impression to ask, they have reason to take great heed that they do not "ask amiss;" observe the terms that are employed in Scripture, as descriptive of true and prevailing prayer; we are exhorted to "lift up our voice for understanding; to seek it as for hidden treasure; to strive; or (as it means) to agonize to enter in at the straight gate." If such is the fervor, and earnestness and diligence which the importance of the case demands, no wonder that listless, heartless, or occasional petitioners receive no answer.

Judging of others is an idle, uncertain, and most injurious employment. It is not intended that these hints should set any one who may read them, about that unprofitable business. It is not for us to decide who among our acquaintance or fellow-worshippers are wise, or who are foolish. No; but let every reader put the serious question, *to himself*; to which class do I belong? Where should I be classed by Him who decided in the case of those ten virgins, each of whom held a lamp, and professed to "let her light shine before him?" It is possible that some may feel a difficulty in answering the question, because they are so fully determined to get oil to their lamps in good time, that they are consent to class themselves among the foolish. But, alas! just so they also intended who at last were told to "depart." In religion there is no good time but the present time, and it is the highest folly, perceiving what is good, to defer being possessed of it. Let every one who is conscious that the bridegroom's voice would be to him a sound of terror and consternation, pray with unremitting earnestness to be made

"wise unto salvation," remembering that appalling declaration which seems particularly applicable to persons who had made some profession, and were "almost persuaded to be Christians," that "many shall seek to enter in, and shall not be able."—*Jane Taylor.*

Scientific Seraps.

Tanned Cotton.—This is prepared by treating cotton fabrics in a similar manner to that in which skins and hides are treated for the manufacture of leather. Cotton thereby acquires greater strength, and is more enabled to resist the effects of moisture and disintegrating effects.

Cast-iron Tubes are now made for water or gas in England, by turning off one end conically, and boring out the end of the tube to which it is to be united at the same angle, so that the end of one tube may be inserted into the other without the addition of the ordinary cement. The junction is effected very quickly, and the joint is perfectly tight. Pipes 36 inches in diameter have been perfectly joined in this way. Liverpool has about 90 miles of gas-pipe joined in this way, and the leakage is said to be much less than in other cities.

A Cement For Leather is made by mixing 10 parts of sulphide of carbon with one of oil of turpentine, and then adding enough gutta-percha to make a tough, quickly-flowing liquid. One essential prerequisite to a thorough union of the parts consists in freedom of the surfaces to be joined from grease. This may be accomplished by laying on a hot cloth, and applying a hot iron for a time; and the cement is then applied to both pieces, the surfaces brought in contact, and pressure applied until the joint is dry.

Aluminium Bells.—It appears that some Belgian manufacturer has just had a bell cast of aluminium, and with good results. It is of course extremely light; so that, though large, it can be easily tolled; its tone is reported to be loud and of excellent pitch. Aluminium is the most sonorous of all metals.

Safety Envelopes.—It is stated, that the thick, tough sap, found in large quantities in the leaves of New Zealand flax, may be converted into a gum for sealing envelopes, which, when dry, unites the surfaces of paper so thoroughly that no process of steaming or soaking will permit them to be separated again. For this reason, it is now being used in large quantities in England, in the preparation of what are called "safety envelopes."

How to make Paper Transparent.—Artists, architects, land surveyors, and all who have occasion to make use of tracing-paper in their professional duties, will be glad to know that any paper capable of the transfer of a drawing in ordinary ink, pencil, or water-colors, and that even a stout drawing-paper, can be made as transparent as the thin yellowish paper at present used for tracing purposes. The liquid used is benzine. If the paper be damped with pure and fresh-distilled benzine it at once assumes a transparency, and permits of the tracing being made, and of ink or water-colors being used on its surface without any "running." The paper resumes its opacity as the benzine evaporates, and if the drawing is not then completed, the requisite portion of the paper must be again damped with the benzine. The transparent calico, on which indestructible tracings can be made, was a most valuable invention, and this new discovery of the properties of benzine will prove

of further service to many branches of the art profession, in allowing the use of stiff paper where formerly only a slight tissue could be used.

Tyndall's Discovery.—"It consists," to use his own words, "in subjecting the vapors of volatile liquids to the action of concentrated sunlight, or to the concentrated beam of the electric light;" and some of the results which he records are of singular beauty. When these vapors are exposed to the above-described action, clouds of the most beautiful appearance, and at some points vividly iridescent, show themselves in the tube.

The aqueous solution of hydrochloric acid yields a vapor which required an exposure of 15 or 20 minutes to the electric light for the production of a fully developed cloud. It was then divided into several sections, united to each other by a slender axis. "Each of these sections," says Dr. Tyndall, "possessed an exceedingly complex and ornate structure, exhibiting ribs, spars, ferns, leaves, involved scrolls, and trisected *heurs-de-lis*. Thus the structure of the cloud from beginning to end was perfectly symmetrical; it was a cloud of revolution, its corresponding points being at equal distances from the axis of the beam."

The aqueous vapor of hydriodic acid yields a nebula which so far resembles those of the two preceding acids that the process commences by the formation of two small clouds united by a cord; but it exhibits more vivid colors (green and crimson) than the other vapors. Of the various substances experimented on, none gave such astonishing results as this. "The development of the cloud," says Dr. Tyndall, "was like that of an organism, from a more or less formless mass at the commencement, to a structure of marvellous complexity;" and this grand simile is fully borne out by his description of the changing phenomena which he observed. After a time the cloud formed into a spectral cone with a circular base, from which filmy drapery seemed to descend. On this base was an exquisite vase, with a vase of similar shape in its interior, and from the edges of the vases fell the faintest clouds. The anterior portion of the cloud assumed in succession the forms of roses, tulips, and sunflowers; it also presented the appearance of a series of beautifully shaped bottles placed (like the funnels in a previous case) one within the other; and once it positively assumed the form of a fish, with eyes, gills, and feelers. "The *twoness* of the animal form," says the observer, "was displayed throughout, and no disc, coil, or speck existed on one side that did not exist on the other." For nearly two hours Dr. Tyndall looked in wonder at the extraordinary vision which his magic skill had evoked.

Complementary Colors.—Complementary colors, by reflected and transmitted light, are admirably shown by a simple arrangement, to which attention has been called by Prof. E. C. Pickering, of Boston. A plate of glass is coated with a layer of the violet-colored ink, made from aniline color, now much used, and this fluid is allowed to dry upon it. If we then place this in such a position that light is reflected from its surface to our eyes it will appear of a metallic golden color, as though coated with a gold bronze; but if we look through it at the light, the color will be a very rich purple. There are many other bodies having a similar action, and in none that we know of is it so striking as in this.

Thus, glass flashed with silver has a green color by reflected, and an orange-red by transmitted light. Salts of the sesquioxide of chromium, which are green by reflected, are red by transmitted light; a solution of ordinary litmus is blue by reflected, but red by transmitted light.—*Annual of Scientific Discovery.*

Selected.

My apprehension is, that the present time is a dangerous one to Friends. They are courted and smiled upon by the world; and, without *very great* caution, we are liable in our civil and religious intercourse with them, to be drawn away from that weightiness of spirit, wherein true religious advancement, I believe, is known. The true, real, and genuine ground upon which Friends have been mercifully brought, I believe to be exceedingly precious; and our safety and usefulness to others, much depend on our *keeping upon it*, that we may be strengthened availing by our example to invite others on to it, *instead of quitting it to go on to theirs.*

It becomes truly religious characters not to run with the changeable spirit of the times. We may maintain a care respecting this, and yet have very humble views of ourselves, not thinking ourselves better than others, nor prizing ourselves on any peculiarity; but in watchfulness and fear, endeavoring *not to quit our ranks*, or give occasion by our example to any fellow-soldier to desert his.—*W. G., 1822.*

The Sewerage System of China.

The Chinese are unquestionably the best agriculturists of any people, every one being an excellent gardener; for they all cultivate some kind of plants or other, and their whole country, so far from being worn out or exhausted, like many of the countries of antiquity, is as productive now as it was in the days of Confucius, a few thousand years ago; and this, there is no doubt, proceeds from their system of replenishing the soil with its best and most natural pabulum. Well may this be called also the flowery land; for every foot of land, rock, and even the water, sparkles with blossoms and flowers at certain seasons of the year, for a Chinaman would no more think of pouring filth into a river than he would of fetching his manure some thousand miles from the ends of the earth. Consequently their streams are generally as pure as the mountain torrent from which they take their rise.

China possesses within its boundaries every specimen of the animal, vegetable and mineral kingdoms that is to be found in any other country, and many more peculiar to itself. It is where the natives assert our first parents were started into life, and where, indeed, there exists the appearance of all we can fancy Eden was, with everything to delight the eye, and to please the taste. It is in this favorite region, which, from the above extracts, can be no mean authority as to salubrity, that men practice the following system of disposing of their disjecta membra:

The whole of the matter which we waste and flood away they collect, either by means of open water courses or underground drains. This is carried to some vacant space, either in the vicinity of the town, or oftentimes to a considerable distance, according as the land may be obtained or may be available for irrigation, after the other operations. On being conducted into a kind of sump prepared for

it steined round with gypsum, it is then pumped or lifted by more primitive means (such as a kind of turbine, wherein the fall of the sewer gives the power to work machinery for the raising, and several other simple contrivances, something like what call the Persian wheel, and a sort of pump) into two or more reservoirs, which have been formed either by digging on throwing up the earth to form the bank else by other materials brought to the spot for the same purpose.

After the sewage has been discharged one of these receptacles until it is entirely full, it is left to settle or subside; then same process is carried on with the next, so on to as many as the quantity of matter size of the town requires. By the time last is full, the water on the top of the that was charged is let off, to irrigate the surrounding lands, or conveyed to distance that may be required or available.

This course is repeated to the first reservoirs; in the meantime, the remainder is again and again, until the solid matter collected sufficiently to require removal, then the surface water is drained off as far as possible, and in a short time the remainder is dry enough to remove away in carts and wagons. This is done by breaking down the side, or anywhere most convenient, it is then reconstructed, and again made fit use; the same to the other reservoirs in succession. The sides of these are lined either gypsum or chalk; and where these are abundant or easily obtainable, the banks formed of them, and great quantities are thrown in the reservoirs during the time of filling.

These banks at first will allow of the water to ooze through; but, as they are used upon the same land which is afterward irrigated, this is of very little consequence, they very shortly become silted up with substances suspended, and get eventually too tight. Except in exceedingly wet seasons, a very small quantity of water reaches the river, and when it does so, it pours as the stream into which it flows. The reservoirs are of all manner of sizes and shapes, some round, some square, but are mostly long, about sixty yards long by about 10 yards broad, but this is entirely discretionary and immaterial as to the efficiency, same with the depth, which varies from two feet to twenty feet.

It will be noticed that we have been trying of a case where it has been compelled to raise the sewage; but where the fall of land is such as not to require any lifting, it is often a continuous line of these reservoirs and on many lands these have certainly existed in existence for ages. Then, in other instances, they are moved about on the estate; but the same principle is carried out in each.

The smell from these works is scarcely perceptible, which may be attributed to the sorption of the ammonia by the gypsum chalk, of which great quantities are drawn away and spread upon the land; also kinds of ashes are brought to the neighborhood and incorporated with the others in these receivers.

The expense and management of these works are generally undertaken by the owners of the land which is treated with the matter, and for which payment is made to the aut-

of the town; but in many instances they conducted by the town functionaries and the produce sold. In large cities it is not all conveyed to one locality, often in opposite directions, or wherever will command the highest price.—*London Alder.*

For "The Friend."

The following tract was printed for circulation in England. In some parts of that country, the declension from the former practices and principles of our Society had opened way for the reading of the Scriptures as of the proceedings of meetings for worship among Friends. What follows appears to have been intended to counteract this tendency.

To Friends who desire the Scriptures read in their Meetings for Worship.

There appears a desire among Friends to have a portion of Scripture read in the meeting for worship. The propriety or impropriety of this desire is not to be decided by an appeal to logic, or any system of reasoning more external. If our meetings for worship are poorly attended, and less profitable than they should be, depend upon it that the cause is not to be found without, but within; not simply because 'this is' or 'this is done.' The want is deeper, yea, it is in the worshippers. If the true spirit of worship be within the people, no mere outward appliances will be required to aid or fortify that spirit; nay, the outward effort will retard than assist, and indeed will interfere with the true spirit of worship which flows from such inducement. Do we sufficiently bear in mind that it is none other than the Spirit of Christ dwelling in us, whereby we are enabled to offer that worship which is acceptable to the Father, who himself is Spirit, and must be worshipped in the Spirit. The natural man cannot worship, for his service is rejected—for sin lieth at the root of his acceptance; because the carnal heart is enmity against God, for it is not subject to the law of God, neither indeed can be the testimony of Friends for ages past in the true spirit of worship has done much to illustrate to the world the Divine teaching of God is a Spirit, and they that worship must worship Him in spirit and in truth, they alone can worship to whom is given the spirit of worship—that same Spirit, which, if we have not, we can be none of his. If we attempt to interfere with these meetings for worship by introducing the reading of Scripture, for the benefit of others who may possess the spirit of worship, we ourselves suffer, and our testimony for the true spirit of worship will indeed be weakened. It is our duty to make these meetings attractive, and not for us to do. If the 'living Word' is in us; if we ourselves be faithful to the Spirit, and the light be burning within us, we will thereby take part of our testimony. They will seek our fellowship, and will be drawn to us by a power stronger than any outward aid.

This should be the great power of our testimony among us.

The present growing tendency to conformity among professors, or the 'churches' conformity to the outward forms—should not be in us a living desire for greater faithfulness amongst ourselves that our testimony to the evil thing may not only be heard

of, but may be seen by all, and that in this the day of the Lord with us, we be not wanting, but by showing forth a clear light, the darkness around me may be made manifest. Let us watch, lest we, while deploring the darkness of others, be led into darkness, while lamenting their coldness, be found neither cold nor hot ourselves. Is it not possible that we are halting, when we should be pressing forward? Has there no spirit of conformity crept in amongst us, which should never have entered? Has the truth, that 'they who will live godly must suffer persecution,' been ever in our mind? and do our young men forget 'that the friendship of the world is enmity with God,' and that whosoever will be 'a friend of the world is the enemy of God.' Friends, the 'call' is to you and yours. The labors and sufferings of your fathers before you have ascended up on high as a sweet-smelling savor—acceptable to Him they loved—and their works bear testimony, as a witness that they were owned by the Husbandman, and stamped by his approval. They have planted, and we eat of the fruit of their labors. Are we not to plant for those who come after?—is all gained that may be? Nay, friends, if ever ye were wanted ye are now. The world wants you, society wants you, the 'churches' want you, the great Husbandman wants you, and it is at your peril ye delay when He calls. Is there a single principle or doctrine held by those who have gone before that we in these days of spiritual declension can part with? The grand doctrine of the 'Seed,' as taught by George Fox; the inner light, as pleaded for by Wm. Penn; regeneration, as preached by Dewsbury, Howgill, and others—these great truths are as pure now as then, and are as powerful now as ever. O friends, if we would go back, then let us go back to such as these, and compare the spirit of this age with that of these beloved of the Lord. The great key-note of all their preaching was, 'Christ within.' Their cry was, 'Ye must be born again,' and their doctrine was, 'Christ died that we might live.' Now we die that Christ may live (in us)."

Prussian Agriculture.—The soil of Prussia, says the *Washington Chronicle*, is naturally poor, yet by an intelligent culture and a healthy social system, it not only supplies the home demand, but also furnishes a large annual surplus for export prior to the late war with France. Prussia stands next in importance to the United States and Russia as a source of supply of breadstuffs for the British market.

According to the returns of 1867, there were under crops and in grass or pasture 59,515,000 acres, about 14,000,000 more than in Great Britain and Ireland. Of this area 22,511,000 acres were in grain crops, rye absorbing 8,576,000 acres. Rye is the prevailing crop in all parts of the country except the Rhine provinces, which are wheat raising districts. Silesian and Westphalian rye is in special demand in foreign markets. Oats covering 5,717,000 acres, are generally cultivated throughout the kingdom, but especially in the sandy plains of the east. Peas and beans occupy 1,072,000 acres. Potatoes are generally cultivated, especially in the sandy soils, the produce of 1867 being 719,340,000 bushels. In 1867 the root crop amounted to 2,000,000 tons. The sugar beet is constantly enlarging its area of cultivation to meet the demand of sugar

manufacture. Grape sugar is also largely manufactured from potato starch, an industry which is rapidly advancing.

There is a combination of large and small holdings of land, giving employment to both large and small capitals; and this state of things has been found favorable to high production. Agricultural improvement is secured by the rapid increase of agricultural societies, of which in 1854, there were 55, in 1847, 136, and in 1847, 419. The improvement of machinery and farm implements is also marked. American plows are displacing English plows. In some places the people have formed associations for the importation of American agricultural implements. The population of Prussia, in 1867, was 23,971,000, of which number 11,709,000 are returned in the agricultural classes.

Bunyan and the Jailer.—Bunyan's character and the propriety of his conduct, while in prison at Bedford, appear to have operated powerfully on the mind of the jailer, who showed him much kindness, in permitting him to go out and visit his friends occasionally, and once to take a journey to London.

The following anecdote is told respecting the jailer and John Bunyan: It being known to some of his persecutors, in London, that he was often out of prison, they sent an officer to talk with the jailer on the subject; and, in order to discover the fact, he was to get there in the middle of the night. Bunyan was at home with his family, but so restless that he could not sleep; he therefore acquainted his wife that though the jailer had given him liberty to stay till morning, yet, from his uneasiness, he must immediately return. He did so, and the jailer blamed him for coming in at such an unseasonable hour. Early in the morning the messenger came, and interrogating the jailer, said, "Are all the prisoners safe?" "Yes," "Is John Bunyan safe?" "Yes." "Let me see him." He was called and appeared, and all was well. After the messenger was gone, the jailer, addressing Bunyan, said, "Well, you may go in and out just when you think proper, for you know when to return better than I can tell you."

The Great Tunnel through the Alps.—A traveller, who lately passed through the Mont Cenis Tunnel, coming from Italy, furnishes the following particulars:—He passed from Bardonecchia to the point of junction of the two galleries in less than a quarter of an hour, in a train employed in removing the materials excavated. The way is not yet constructed in its whole width for about a hundred yards in the centre, where blasting operations are still going on. But with that exception the double line is completed, and nothing more remains to be done but to replace the temporary rails by permanent ones. The middle of the excavation forms a culminating point, a slope of two in a hundred having been provided on each side for drainage, so that it is consequently from 230 to 250 metres above the level of the entrances. The temperature is still very high, but that circumstance is accounted for by the necessity of still keeping closed the gates constructed for the requirements of the service, and which are only opened after an explosion to let the smoke escape. The fact has been remarked that, when the door is thrown

open the current of air is rapidly established, and always in the direction of France to Italy. No one can pass over the line without a permission from the principal engineers, in order not to impede the progress of the works, which are expected to be completed in June next, and the inauguration to take place in July.—*Late Paper.*

If we love not the world, we shall surely be well content that the world should not love us.

THE FRIEND.

SIXTH MONTH 10, 1871.

SUMMARY OF EVENTS.

FOREIGN.—Earl De Grey, Sir Stafford Northcote and Lord Tenterden, of the British High Commission, and Robert C. Schenck, Envoy Extraordinary and Minister Plenipotentiary from the United States, arrived at Liverpool on the 3d inst., by the steamship Cuba, from New York. The U. S. Minister, soon after landing, was presented with an address of welcome by the Liverpool Chamber of Commerce, who waited on him in a body. The Emperor of Brazil was expected at Southampton on or before the 5th inst.

The National Guard throughout France will be disarmed and disbanded.

Dupanloup, Bishop of Orleans, will be the successor of the Archbishop of Paris who was murdered in prison. Dupanloup is sixty-nine years old, but still vigorous; he inflexibly opposed the dogma of papal infallibility.

The French press still discuss the question of the future character of the government, and are nearly unanimous for a republic. It is said a majority of the Assembly favors the proposition for the abrogation of the laws for the banishment of the princes of the house of Bourbon from France, and also the proposal to extend the powers of Thiers, as Chief Executive, for two years.

The Assembly has voted 1,033,000 francs to rebuild the house of Thiers which was torn down by order of the Commune.

The courts-martial have been established at Cherbourg for the trial of all prisoners sent there by the provost marshal. A summary investigation is held prior to the trial by the military court. The number of prisoners is supposed to be about 40,000, but the *Figaro* estimates the number of men who bore arms in the late insurrection, and who have not yet been identified or arrested, at 50,000, and the police are in constant danger from these men.

The search for arms is diligently kept up, and hundreds of thousands of rifles have been secured. The executions at Versailles still number one. Many of the insurgent leaders were killed in the struggle, and others captured, but some of them have not yet been found. General Cluseret has been shot. Henri Rochefort will be tried by military commission, on the charge of inciting civil war and pillage.

The sub-governor of the Republic of France states that he was forced to advance various sums of money to the Commune. No armed force, however, entered the bank, and none of its securities were destroyed. Marshal McMahon, in a proclamation issued, divides Paris into four commands—east, north, centre and south. General Vinoy is appointed to command the east, General L'Amiral the north, General Douai the centre, and General Cisry the south. The civil power is transferred to the military. It is proposed to construct forts within the walls of Paris, to prevent the possibility of a renewal of the insurrection. The barricades have all been taken down, and the streets repaired. The railways are all running and the schools have been re-opened.

It is stated that 8,000,000 francs have been paid the Germans for the maintenance of their army in the vicinity of Paris.

Attempts at assassination and arson continue. Many of those who were arrested and executed appeared, it is said, to be crazy.

Marshal MacMahon has issued an address to the soldiers of his army, praising the courage and devotion by which they have delivered Paris out of the hands of the wretches who attempted to destroy her. The next dispatch of the 4th says: No one is allowed to leave the city after nine P. M., from which hour all the gates

are closed and cavalry patrol the streets and suburbs until morning. The commission appointed for the reorganization of the army has decided to accept the advice of Thiers, who recommended the restoration of the law of 1832. Many strangers, including a number of Englishmen, have arrived here, and the arrival of foreigners is increasing daily.

A special dispatch to the *London Times*, from Versailles, says: It is the intention of the Orleans Princes to decline the seats to which they have been elected in the Assembly. A French loan of 100,000,000 francs is proposed.

Deputies in the Assembly from departments occupied by German troops intend to move that disjuncting debate in regard to the position of the Orleans Princes be postponed until the conclusion of a loan and the payment of the war indemnity has freed the country from the Germans.

The rumors of agitation and a Carlist rising in Spain are officially contradicted.

The government of Turkey, already overladen with debt, has obtained a further loan of £6,000,000, payment being guaranteed by the Egyptian tribute.

The Italian government has instructed its prefects throughout the country to capture all the fugitive Papal soldiers and bring them to trial.

The Pope has issued an encyclical letter, which declares that the Italian guarantees are a tissue of lies and hypocrisy, and formally protests against them.

A Singapore dispatch states that a volcanic eruption and earthquake has shaken the Island of Raa. The coast of the island is elevated to a height of 100 feet. The submarine cable between Singapore and Hong-Kong was successfully completed on the 3d inst. London is now in direct telegraphic communication with China.

In the House of Lords, Earl de Grey, just returned from his mission to the United States, a member of the Joint High Commission, appeared and resumed his seat. He received a pleasant welcome from his fellow members, and was warmly felicitated upon the conclusion of the treaty with the United States.

In the House of Commons, Gladstone declared the existing law to be ample to enable the government to fulfil the conditions of the Treaty of Washington.

London. Consols, 9½. U. S. Bonds of 1862, 9½; 1865, 9½; 1867, 9½; ten-forties, 5 per cents, 88½.

Liverpool, 6th mo. 5th.—Uplands cotton, 84; Orleans, 84½. Flour, 26s. 6d.

UNHEALTHY STATES.—*Miscellaneous.*—The interments in Philadelphia last week numbered 315. There were 46 deaths of consumption, and 18 of heart disease. The mean temperature of the Fifth month, by the Hospital record, was 66.02 deg. The highest during the month 91.50 deg. and the lowest 48 deg. Amount of rain 3.58 inches. The average of the mean temperature of the Fifth month for the past 82 years, is stated to be 62.69 deg. The highest mean, during that entire period, was 71 deg., and the lowest 51.75 deg. The mean temperature of the three spring months of 1871 has been 57.62 deg., which is the highest for the past 82 years, the average spring temperature for that entire period has been 51 deg.

From 1st mo. 1st to 5th mo. 28th, 1870, the deaths in this city from all causes amounted to 6,847, while during the corresponding period of the present year they numbered only 5,612, a diminution of 1,255, or 18 per cent.

On the first inst. the public debt, less amount in the Treasury, was \$2,299,134,185, having been reduced \$4,439,358 during the month preceding. Of the total debt \$113,816,966 bears no interest.

Last month 43,471 immigrants were landed at New York, making 77,191 thus far this year.

One of the Anglo-American telegraph cables has been recovered and repaired. Measures are in progress for the repair of the other broken cable. For many months past the communication with Europe has been kept up solely through the French cable.

The latest information in regard to a horrible massacre of Apache Indians, chiefly women and children, is given in the dispatches of Lieutenant Whitman, commanding the post at Camp Grant. He says that eight Indian men were killed in the recent Indian massacre. The party committing the outrage was composed of a number of white citizens and Mexicans from Tucson, with renegade Apaches and Papago Indians. All the wounded that have been found received prompt medical attendance at Camp Grant. All the chiefs and leading men have called on Lieut. Whitman and expressed their regret and indignation. He has written to the government. Lieut. Whitman repeats his statement that the Indians have conducted themselves in a proper

manner since they had been at that post, and had misled the Quartermaster's Department with one 150 Philip and 1000 Winchester cartridges.

There is no truth in the various reports that the Department apprehended a general Indian war summer, and that serious differences of opinion, conflicts of authority have arisen between the Int and War Departments in relation to the treatment of the Indians.

On the first inst. there were 214 grain and 50 molasses distilleries in operation in the United States, with total spirit-producing capacity of 192,059 gallons da falling off in daily capacity of 93,706 gallons of pord with 1870.

The Markets, &c.—The following were the quotations on the 5th inst.—New York.—American gold, 111½. U. S. 5 per cents, 1881, 117½. Uto, 5-20's, 1868, 1, 11½. Uto, 10-40, 5 per cents, 109½. Superfine flour, \$5.58; finer brands, \$6 a 10c 25c. No. 2 Chicago sp. wheat, \$1.48 a 1.50; amber State, \$1.62 a 1.63. 66 a 69 cts. Western mixed corn, 70 a 72 cts; 75 a 77 cts. *Philadelphia*.—Middling cotton, 13½ cts. for uplands and New Orleans. Superfine flour, \$5.25 a 5.50; finer brands, \$5.75 a 5.95. Western wheat, \$1.53 a 1.68; amber, \$1.70; white, \$1.84. Rye, \$1.12 a 1.15. Yellow corn, 75 cts. 97 a 69 cts. Uto, 10-40, 11½ cts. Cloverseed, 3 cts. Timothy, \$5 a 5.6. Flaxseed, \$2.30. The arrivals and sales of beef cattle at the Avenue Drove reached about 1,950 head: market dull and prices low extra selling at 7 a 7½ cts; fat to good, 6 a 6½ cts. common 4 a 5½ cts. per lb. gross. About 13,000 sheep sold at 5 a 5½ cts. Choice white wheat, \$1.90; fair to good, 1.45 a 1.65; prime to choice, 1.65 a 1.90; fair to good, 1.40 a 1.55. Ohio Indiana, 1.50 a 1.55. Yellow corn, 73 cts.; w 78 a 79 cts. Oats, 64 a 68 cts.

NOTICE.

The Committee appointed by our late Yearly Meeting on the report of Burlington Quarter, relative to Shrewsbury and Railway Monthly Meeting, will on the 16th inst., at 4 o'clock, P. M., in the large meeting-room on Arch street.

Sixth mo. 7th, 1871.

WANTED FOR A FREEDMEN'S SCHOOL
Near Stevenson, Alabama.

An earnest, but prudent and thorough Teacher Colored—brought up among Friends—preferred. A place offers uncommon inducements as an opportunity for the kind of instruction now so much needed how to make the best of the situation. A young F would be accepted if qualified. Address, Y. W. F.

Box No. 26, 1871. Germantown, Phila., Pa.

Haverford College.

The next term of Haverford College will be held Fourth-day, the 13th of Ninth month, under the charge of Samuel J. Gummer, Thomas Chase John H. Billingham.

For terms and other particulars, apply to
SAMUEL J. GUMMER, President
West Haverford,

FRIENDS' BOARDING SCHOOL FOR INFANTS, CHILDREN, TUNNESSA, NEW YORK

A suitable Friend and his wife are wanted to charge of this Institution, and manage the same. Application may be made to the Rev. Ebenezer Wistar, Marshalltown, Chester Co. Thomas Wistar, Fox Chase P. O., Philadelphia. Samuel Morris, Olney P. O., or George Scattergood, 413 Spruce Street, do

FRIENDS' ASYLUM FOR THE INSANE
Near Franklin, (Twenty-third Ward), Philadelphia.

Application may be made to the Superintendent—JOSUAH H. WILKINSON, M. D.

Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board of Managers.

BY MORELET.

Lost in the Forest.—One day, I heard in the neighborhood some notes which arrested my attention; they were clear, limpid, and full of grace, such as those produced by a musical note. As singing birds are rare in this part of the country, I concluded that these sounds proceeded from a wonderful variety of which the Indians had spoken to me, and which, according to their traditions, is only to be found in places where there are ruins. I shouldered my gun with the liveliest satisfaction, and started in pursuit of the unseen man. After listening a few moments, I found that the aerial voice proceeded from the banks of the stream. I slid down the embankment towards it with the greatest precaution; but the bird had already changed his position, and was singing on a neighboring hill, which I descended without feeling in the least disgraced. From the hill, as the note seemed to proceed, I went down into the valley beyond, giving little attention to the new scenery which surrounded me. I left behind me the dull and *debris* which usually served us as landmarks, following from thicket to thicket, in gladness to glade, the object of my ardent hunt. Frequently his notes seemed just above my head, sounding distinct and loud as a song of triumph. I gradually became acquainted with that feverish anxiety so common to hunters, and still more so among naturalists. I searched for the bird on every branch, frequently believing myself so close to him that my piece was raised to fire, when his note, sounding far away, would confound and discourage me. Finally his song seemed to recede farther and farther, until only a feeble echo reached my ear. At last even this ceased, leaving me alone, and bewildered in the dense forest. At first I experienced nothing of apprehension. I remained quiet, and listened for some time, until I found there was no longer any hope, and that the provoking bird with his siren song had indeed disappeared. Then I mechanically retraced my steps, wending my way, as I supposed, in the direction whence I had come. I continued on my course for a while without anxiety, directed as I was by the varieties of plants and

insects which I encountered in my path. After a while, however, I observed that the path was altogether strange and unfamiliar. The forest was free from undergrowth, the ground broken, and immense trees, with pyramidal trunks and wide-spreading arms, shadowed over a multitude of dwarf palms of the height of our fern trees. I became alarmed and hurriedly ascended a high point of ground near by and looked anxiously in all directions; but I saw nothing except the foliage of the great forest, and heard nothing but the beating of my own heart. With sudden energy and in alarm, I made an effort to climb to the top of a tree. Alas! after I had succeeded in doing so, I was terrified in the extreme to find only an ocean of verdure before my eyes, which appeared to extend to the very horizon, and seemed limitless.

I descended and shouted for my companion. But finding this unavailing, I seated myself at the foot of a tree and pressing my hands against my head endeavored to devise some means of escape from my dreadful situation; but I could not concentrate my thoughts. All my faculties seemed paralyzed, the blood appeared to rush to my head, and I was morally incapable of a single effort. The position of a man lost in a wilderness is cruelly dramatic, and can only be appreciated by one who has himself endured the agony of mind which it entails. I know not how long my mental faculties continued prostrated; but after a time I rose full of the worst forebodings, yet with a fixed plan of action. There was no fear of darkness overtaking me for several hours, which would afford ample time for me to retrace my steps. This I set about doing in the following manner. I selected the spot where I was standing as a point of departure, and determined, happen what might, never to lose sight of it for a moment. A colossal tree, the bark of which I whitened, and some stones which I piled up at its base, marked the spot and rendered it visible at a distance. My purpose was now to walk in a right line in every direction from this central point, until I encountered some sign of the ancient city.

Persuaded as I was that I had strayed to the eastward of the ruins, I walked, as I supposed in that direction, marking as I went certain trees, and breaking down the branches around me, to indicate my course. After several attempts to fix my direction, I reached a piece of swampy ground covered with *arums* and *scitamineae*. There were no longer any ligneous plants to be seen, and fancying that I had reached the confines of the wood, I crossed the marsh, where the broken stalks preserved the traces of my footsteps. I now beheld with pleasure the azure roof of the firmament, which seemed to smile on me while affording me free air and light. But I advanced in vain; no change was perceptible in the surrounding objects; there was only the same waving vegetation, the same lustrous

leaves, large as those of the banana tree, filling up the space with their wild luxuriance, and shutting the horizon from view. Finding here nothing that I remembered having seen before, I thought it useless to proceed in this direction, and sadly retraced my steps. As I reached the outskirts of the forest, a clear, musical, and sonorous note rang through its depths, like the ironical voice of an evil spirit. My feelings, on hearing this unexpected call, I can never forget. I know not what superstitious idea crossed my mind, and caused the blood to rush hurriedly through my veins; but I determined not to be misled a second time, but continued my course without even thinking of using my gun against the invisible bird which seemed to make a trial of its power over me by awakening, at different points, the echoes of its delusive melody.

With some difficulty I regained my starting point. Far from being discouraged by the want of success attending my first effort, I found myself more calm and collected than before. Reflection had strengthened my courage, by giving me confidence in the success of the plan which I had adopted. The ruins could not possibly be very far distant, and I should certainly reach them in the morning, if I failed in doing so to-day. Animated by new hopes of success, I directed my steps towards the north, not forgetting, however, to take the proper precaution for ensuring my return, if necessary. The forest in this direction was on rising ground, thickly covered with dead leaves. I successively traversed several hills separated by narrow valleys, in which reigned the profoundest silence. The undergrowth soon commenced, and rapidly became more and more dense. I was only able to make my way with the greatest effort through the maze of branches and vines which obstructed my progress. My brow was wet with perspiration, my face and hands were covered with blood, but no obstacle could turn me from my course. A single thicket absorbed my faculties, and my only fear was that of losing the thread which was to guide me. At last I succeeded in escaping from this almost impenetrable thicket, and saw before me a steep hill less thickly covered with vegetation. In ascending this I made a misstep and suffered a fall. At the moment I paid but little attention to this accident, but it subsequently appeared that a sharp point of rock had penetrated my right knee, reaching to the bone, and bruising it in such a manner as afterwards to occasion me the greatest pain and annoyance.

From the high point which I now succeeded in reaching, I could see nothing around me which wore a familiar look. Daylight was beginning to fade; there was nothing left for me to do but to retrace my steps, and make up my mind to remain at my station patiently until morning. My courage, however, was beginning to flag. The rapidly in-

creasing darkness, the prospects of a night of anxiety, an intolerable thirst, the silence of these woods, the disappointment which had thus far attended my efforts—all these contributed to sadden and discourage me. After I had repassed the thickets which obstructed the valley, I found, to my consternation, that either from want of care or absence of mind, I was again lost! A deathlike shudder passed over me; the perspiration started from every pore, and my very breath seemed suspended. These painful sensations, however, did not at all resemble the feeling of stupor which overwhelmed me when, for the first time, I became conscious of my terrible situation. I still retained my presence of mind, and was able to deliberate on the course which I should pursue.

It was unsafe to stay in the thicket, on account of the reptiles and wild beasts which infested it, and I therefore ascended the hill which I had just left, but in another direction, when I discovered through the trees another eminence, which, by its isolated situation and conical shape, particularly arrested my attention. I advanced towards it, and found that the stones scattered around its foot seemed to bear the traces of human industry, although defaced by age. They had evidently formed part of some ancient structure which time had levelled to the ground. I will not attempt to describe the surprise, the joy and the gratitude which swelled my heart at this unexpected discovery. I fell upon my knees, and from the depths of my soul thanked God for lending me his protecting aid, at the very moment when I began to doubt his clemency! This done, I proceeded on my way.

Great caution was necessary. The tumult before me was probably connected with other ruins, but nevertheless it was unfamiliar to my eyes. I resolved therefore to pursue the plan I had previously adopted, that is to say to explore the country around, but always adopting some point as a centre. I had advanced but a short distance, when new remains encouraged me to keep on in the same direction. I soon came to another small hillock, the top of which was covered with ruins. Their shape and style were becoming insensibly familiar to me, and without exactly taking in their details, which the darkness was rapidly veiling, I instinctively felt that they were not strangers. It was thus, link by link, that I succeeded in reuniting the chain which I had so imprudently broken. By the time the last ray of daylight had faded, I reached the southern front of the Palace worn out with fatigue, bruised, and bleeding—but I had acquired valuable experience for the future. Morin, in his anxiety for me, had forgotten to prepare supper, and as a crowning misfortune, Fido, [his dog] disgusted with so long a fast, devoured greedily the collection of birds and insects which had cost me so dear.

I think it is often the case, that such as have been much made use of, and favored with Heavenly gifts, are deeply plunged, at the end of their pilgrimage; but this is a merciful and last baptism, to prepare for the realms of bliss, and the girdle of the power of Truth will keep the garments, even the clothing of the Spirit of Jesus, close around, that no nakedness may appear, and strengthen the limbs to press onward to the good end that crowns all in peace.

For "The Friend."

Memoirs of Mildred Estell.

(Continued from page 331.)

On receiving the letter from Mildred acknowledging that his view of the exercises under which she was laboring was correct, Henry Hull, with much Christian freedom and instruction, thus replied to it:

"New Garden, N. C., 10th mo. 20th, 1799.

"Beloved Friend,—In the reviving of that love that makes brethren and sisters near one to another, I salute thee, and inform thee that I received thy very acceptable letter. I can truly say I was comforted in the reading thereof by the revival of feelings of sympathy. As one that sympathizes with thee under thy religious prospects, I am willing to pen a few observations as they may arise. I want to encourage thee in the right line; and the feeling prayer of my soul is for thy preservation. There are many baptisms for the chosen servants of the Lord to pass through, if they come to be inheritors of his kingdom. If they are careful enough to steer their course so as not to sink under them, though the cups they have to partake of may be bitter to nature, they will certainly have to witness a time of rejoicing, when it will be needful, yet very needful to remember what we are, and that it is in mercy we are raised, or brought to partake of the favor. There are the two extremes to pass between and avoid. I wish this may be thy happy lot, dear Mildred. Nothing but pure love and feeling sympathy are in my heart towards thee. I remember how long I waded under discouragements before I was willing to drop a few sentences in public. The Lord saw my desire to be pure towards him, and that it was not wilful disobedience, and did not lay it to my charge so as to cast me off: but in his exultation showed love. When I gave up, it was in much bowdown of soul before the Lord. I found humility to be safe; but a care is certainly necessary not to let in unprofitable discouragements. Though we are sometimes favored with outward help, it will not do for us, thou knowest, to depend upon anything short of the pure openings of the word of life operating in the heart. When this is vouchsafed to us, what further evidence can we have. This is not heard in the whirlwind nor earthquake nor fire. The prophet heard it after these had passed by, in a still small voice. Oh when the Lord commands, obey! Consult not with flesh and blood; and be not discouraged if even every avenue of comfort may appear at times stopped: for our fidelity to the Lord is sometimes tried this way.

"How many that have been called and run well for a time, have turned their backs in the day of battle. In such the Lord hath no pleasure. Others have become exalted, and lost the humble state suiting the followers of Christ; and the reward of sweet peace not being afforded them, they have heated themselves with fire of their own kindling, and have had to lay down in sorrow. Dear thee, these hints are not to discourage thee, nor to make the way look difficult. I believe without a doubt thou art a chosen vessel, and will have to bear the oil and the wine to hand out to others, if thou suffers not nature to warp thee, or otherwise to spoil thee. Remember the potter's vessel has not only to be dug out of the earth, but to be moulded, dried, and passed through the fire, before it is fit for use.

Through this how often it is to be washed keep it sweet and clean. If it is not thus carefully used, it becomes sour, mouldy, or dull. Though it had been intended to contain good and wholesome food, it has become unfit; is often a receptacle of mere filth, where prudent care might have prevented it. Know what we are, and I desire thou to witness an over walking in fear; but not trusting Him that has called thee to acknowledge the truth; for He is a present help in every needful time. Be valiant in his call but not rash. Clothed with charity for fellow-mortals, but not too easily led to believe all that is told thee. Feel for thyself. Whatsoever is to be known of God is manifested within. The cause is glorious, dignified with immortality and crowned with eternal life.

"How sweet is meditation and meditation prayer! Certainly they are the delight of the pious soul; but more precious is his silence before God, where strength is given to mount upward as with the wings of an eagle, run without being weary, and without fainting. Then the sweetness of meditation and mental prayer is witnessed flow from the fountain of Divine Goodness for our support. I want to be guarded in freedom, but it is hard to restrain unfeigned love, when it flows so preciously, as I feel to do towards thee at this time. I trust I am pure, being free from any mixture of flattery. I trust it will do no hurt. Thou hast known enough of the Lord's tender mercies, but thou not, to know that we must not let our love out to any mortal, so as to forget to every good and perfect gift comes from Him and that in return we must love him above all. Ah! how many there are that are trying in uncertain riches. Oh that the call of my God may evince their love and attachment to him by obedience to him. Then he crown them with glory in an endless life. These are the riches worthy our pursuit.

"My soul truly blesses the Lord for mercies to me. I am willing to pass through trials for his name's sake. Though I have a beloved bosom friend, and tender little dependents, I have no cause to complain; preciousness of His love, and the unity of love of his people abundantly supplying with consolation. It is no small comfort me to subscribe myself in sincerity thy friend and brother in the Truth,

HENRY HULL.

It was probably about the year 1800, that Mildred Estell came forth in the ministry which was to the satisfaction of her friend her manner being striking, her language pure and the savor of life generally attending her communications. In the year 1801, she received the following letter from her associate, sympathizing fellow-laborer in gospel, Henry Hull:

"New York, 10th mo. 9th, 1801

"Dear Friend,—It is so long since I have heard from thee, I am almost ready to thee with being unfriendly. But I feel I love thee in that purity of friendship that time and distance will not erase. I feel prayer of my soul to be for thy prosperity the never failing Truth; and in the line holy requiring. Mayst thou, my beloved friend, experience the peace that the world can neither give nor take away, the sureward of faithfulness. Marvel not if thou be

conflicts to endure. It is through many tribulations that we are to enter the kingdom. Do not think thyself alone if thou hast thy baptisms off, for others have had theirs also, or good it is in times of trial to know a being to the munition of rocks, where bread sure, and water never fails. Let the time itself suffice wherein thou hast suffered thy mind to be depressed under discouragements, or surely there is a reward for the righteous, and a God that judgeth in the earth. I much desire to know how it fares with thee, dear Eldred. Thou wast made precious near to when in your parts, and I know it was the influence of the one Spirit that enabled drink together. For thou wast a stranger to me when I felt the operation of gospel in sweet sympathy. This has ever remained with me. It may not appear strange such as know the unity of the Spirit, that write as I do to inquire after thy welfare. Ease to indulge me by writing.

I wish ever to remain thy friend,

HENRY HULL."

The sympathizing love and regard manifested by Henry Hull in the first letter to R., being thus conveyed:—"When the Lord commands obey. Consult not with flesh and blood; and be not discouraged if every sense of comfort may appear at times stopped; for our fidelity to the Lord is sometimes ended in this way." And in the second, "Remember if thou hast conflicts to endure. For we are to enter the kingdom. Do not think thyself alone if thou hast thy baptisms off, for others have had them also," &c., are fully calculated to help and encourage any one who may be passing through the humiliating wrappings and heart-cleansing baptisms, ordained by the great Refiner and Purifier, preparatory to entering upon the responsible work of the ministry. The more these turnings and overturnings of the Lord's holy hand on such for the trial of their faith which is more precious than gold, is patiently endured; the more the eye is made single to Him through the painful incisions and discipline the cross which He appoints; the more self-sacrificed and slain through that warfare which is with burning and fuel of fire, the less will the creaturely tool in the un sanctified bring be heard, and the more likely will be spiritual building be deeply laid upon Christ Jesus the ever-enduring and alone sure rock and Foundation.

May all seek to be thoroughly washed in the laver of regeneration; saying, with Simon Peter, "Lord, not my feet only, but also my hands and my head." That thus through an ingrafted into Christ the true and living vine, and through the Redeemer's mercy, and the power of an endless life, there may be used up, anointed, and sent forth, those who will not only stand for the law and the testimony committed to this people, but shall actually turn the hearts of men from darkness to light, and from the power of Satan to God. That from the rising of the sun to the going down of the same the Lord's name may be honored and magnified through all over all."

(To be continued.)

A man may learn so much of the Bible as to become a sort of living concordance, and have very little [or no] knowledge of divine things.

English Christian Names.—The London Spectator says: Somebody with plenty of time and free access to the Registrar General's office, has been writing an amusing paper about English Christian names. He finds it probable from careful calculations, that two-thirds of all the children in England and Wales are called by one of the following twenty-five names, certain that in any 100,000 children they will occur in the following order:

Names.	Numbers.
1. Mary,	6,819
2. William,	6,590
3. John,	6,230
4. Elizabeth,	4,617
5. Thomas,	3,876
6. George,	3,620
7. Sarah,	3,602
8. James,	3,060
9. Charles,	2,323
10. Henry,	2,060
11. Alice,	1,925
12. Joseph,	1,750
13. Ann,	1,718
14. Jane,	1,697
15. Ellen,	1,621
16. Emily,	1,615
17. Frederick,	1,604
18. Anne,	1,580
19. Margaret,	1,546
20. Emma,	1,540
21. Eliza,	1,507
22. Robert,	1,323
23. Arthur,	1,297
24. Alfred,	1,292
25. Edward,	1,170

65,802

If to these be added Richard, Peter, Charlotte, Lucy and a very few more, it is said we shall have the whole list of names with which the masses of the English people are familiar. They have not apparently, for a very long period, invented any new names which have passed into general use. Eccentric individuals do indeed show their folly from time to time by giving strange and fanciful names to their children, but they find very few to follow their example. On the Registrars books may be found such names as the following: "Cain," "Dellah," "Herod," "Pharoah," "Hosanna," "Selah," "Mahushalhashbiz;" also Green Leaf, Christmas Day, Rose Bud, Amiable Reading, Celestial Miller, Charming Nancy, Choice Pickrel, Enough Pearson, Giddy Edwards, Illustrious Sarah, Perfect Sparrow, and others equally ridiculous.

From "Good Health."

Consumption.

BY CARL BOTTL.
(Continued from page 250.)

The extract of malt, of meat, and the juice of various herbs, alone or in combination with other remedies, have been most thoroughly employed, with at least no disadvantage to most patients. The decoctions of mosses containing gelatine have also been employed in all periods. In Germany, it has been highly recommended that consumptives live in pine woods, that they may inhale the balsamic odor emitted by the trees. But the greatest expectations were raised, based upon increased and decreased atmospheric pressure, by means of bells and an air-pump. Patients were put under a glass bell, and the atmospheric pressure increased, with a view to the healing of the lungs. Again, the

patient was secured in a bell up to the neck, and the atmospheric pressure withdrawn, by pumping out the air, and by thus causing a congestion of the skin, it was thought to draw the inflammation from the lungs; but both these manipulations proved to be injurious, in a very high degree, to consumptives.

Phosphorus, in various forms, has, of late, been freely used, it being thought that phosphorus formed one of the predominant elements of animal life; but the results obtained have fared no better than those of other specifics. The best and most thoroughly educated physicians of the present, do not employ specific medicines. They endeavor to sustain their patients by appropriate nourishment, and to relieve as much as possible from the annoyance and discomfort arising from particular symptoms. For excessive coughing, expectorants, soothing balsams, antimonial preparations, narcotics, &c., are employed. Sleeplessness is overcome by morphia and other hypnotics; night-sweats by mineral acids and quinine, or other tonics; sore throat by inhalations, cauterization, &c. Consumptive patients are also sent to milder climates to spend the winter months: in Europe, they are sent to Africa or Madeira; in America, to Florida, Mexico, Chili, Peru, California, and other places, and occasionally to curative institutions which have been established in Germany, Sweden, and France. It has been proved by experience in England, that the establishment of hospitals for consumptives is not advisable.

In reference to the effect of climate: the influence of the soil, whether composed chiefly of sand, clay, loam, or an alluvial deposit, damp or dry, and in connection with its cultivation; of the atmosphere, rare, dense, moist, saline, or otherwise; of temperature, mild and even, or extreme and variable; of occupation, in or out door, mental or physical, sedentary or active; of the sea; of lakes; of rivers; of swamps; of winds; of electrical currents; of increased and decreased pressure, &c., the most thorough and searching investigations have been made, and statistics obtained with a view of ascertaining the cause and cure of Consumption. And in this connection we may here state, that probably no man living has made his name more widely known, or labored more earnestly and indefatigably in this direction, than Dr. Henry I. Bowditch.

Sea air was regarded by Lencæ as an antidote or preventive, while on the other hand Roehard proved, by statistics, that the mortality from Consumption was greater among the marine than among the land troops. Winteritz, however, was able to show that sailors were comparatively free from it. Boehard arrived at the following conclusions: That persons suffering from diabetes always exhibit tuberculosis; that cows kept upon food containing sugar, and deprived of free exercise in the open air, die of it; that monkeys, and even negroes die of it, when carried north; that indolence was one of its causes, which he endeavored to prove by citing cases of eretics and of nuns, who were accustomed to work hard, as outliving the indolent and inactive. He also cited in proof of his position cases of prisoners who were deprived of their usual exercise. He concluded from these facts, that lack of warmth was a productive cause of the disease. The fact, however, that this disease is unknown to the Esquimaux and inhabitants of the Hudson Bay, militates against this con-

clusion. It was ascertained by R. Foerster that children never exhibit tuberculosis under five years of age, with an occasional exception at the age of two, and not usually before the age of puberty. From statistics it has been shown by Lewin that the mortality among stone-masons, cotton-workers, porcelain-workers, and all such as are habitually exposed to dust, is greater from pneumonia and bronchitis than from tuberculosis. Pritchard, who lived about twenty years on the South Sea Islands, writes as follows: "Nothing kills the Indians so surely as coats, pants, and blankets; the pantaloon-wearing South Sea Islander catches cold and dies of consumption, a disease previously unknown to them." In 1860, a settlement was founded by the English on Vancouver's Island, which then belonged to a class of Indians who lived upon fish, wild berries, and roots, with an occasional change of wild game, and whose health had always been good. The English gave these Indians, in exchange for their land, flour, rice, syrup, potatoes, meat, blankets, clothing, and other luxuries. As the result of these changes in their modes of life, they very soon began to sicken, and two years later were destroyed in large numbers by tubercular consumption. In 1865, prisoners were taken by the English, in the Gulf of Bengal, transported to the opposite coast, and treated with the utmost kindness. They were provided with luxuries previously unknown to them, but very soon gave unmistakable signs of tuberculosis, of which large numbers of them perished, and the survivors saved from a similar fate only by being sent back again.

It is generally known that sewing-girls, shoemakers, clerks, &c., who are very much confined in their occupations, are among the surest victims of Consumption; and that athletes, ballet-dancers, gymnasts, and persons similarly engaged, die of this disease often after they relinquish their business. In mountainous regions, tubercular Consumption is almost unknown; but bronchitis and pneumonia take its place. Within the last fifty years, the significant fact has been noticed by physicians, that a disease of the right heart, which prevents the free flow of the blood to the lungs, is most generally complicated with tuberculosis, while the same disorder in the left heart absolutely excludes it. In other words, the comparatively small quantity of blood in the lungs in the first instance favors tuberculosis, while the comparative fullness of the lungs in the second instance positively prevents it. Another very peculiar fact that has been observed is, that tuberculosis is developed only in the upper points of the lungs, and never at the base of the lobes; while all other affections most generally make their appearance at the base of the lobes, or where the lungs are mostly used, the upper points being comparatively free from attack in such cases. While these facts have been observed and noted, no one has been able to give a satisfactory reason for them.

As to the contagiousness of Consumption, opinions have varied very much: practitioners, in general, taking the affirmative side of the question. A few years since, Dr. Budd, of Bristol, England, in the *London Lancet*, advanced the idea that the contagion probably consisted of minute germs (spores), originating from the sputa expectorated by consumptives, which, floating in the atmosphere,

were inhaled by others, and became productive of the disease. This germ theory of disease has had many advocates, and only very recently Prof. Tyndall made a series of experiments in this direction, an account of which was published; but the conclusions arrived at were not of a character to add much to the reputation he had previously gained. The fact is, that, in a great many cases, the observations which have been made, in connection with statistics, not only make the theory of contagion plausible, but seem to prove it; as to certainty, however, no evidence exists.

As previously stated, physicians at different periods avoided the study and practical use of anatomy, and, therefore, during the centuries that anatomy, as a science, had no existence, disease was regarded as an entity; a positive something inherited, or which walked about, travelled, or hid itself in clothing, &c., or leaped from one person to another; and hence the search for remedies against an enemy which appeared in different forms with different symptoms. As anatomy became developed, the name and form of this enemy was changed. At a very early period it was the devil, then it was contagion, miasma, inheritance, invisible spores, disease-germs, &c., &c.; but these having been swept away, the enemy (noxa) is now sought for in climate, air, &c.

In relation to the inheritability of consumption, physicians in general affirm that, in their opinion, it is inherited in most cases; though men like Louis, Bocharlat, Niemeyer, Virchow, and many others, have denied it, while they admit the inheritability of a tendency only; but on this point nothing has been established, it being simply a matter of opinion and of varying observations.

The curability of consumption, under certain circumstances, was never doubted by the old authors; and only since the establishment of the tubercular specific principle theory has a cure been considered impossible. These physicians who accepted the theory of the inflammatory nature of consumption considered it curable, the others as incurable.

The physicians of Germany, and the greater part of the physicians of France, now know that consumption is sometimes curable by nature, while, on the other hand, there are few in England, with the exception of Bennett, and those who are influenced by him, who consider it curable under any circumstances whatever; a view which is all but universal in this country.

In concluding this sketch of the history of consumption, we take the liberty of presenting an extract from the preface of a treatise on consumption by Prof. I. H. Bennett, of Edinburgh:

"For five years the author held the position of pathologist to the Royal Infirmary of Edinburgh, during which period he performed and recorded the results of upwards of two thousand post-mortem examinations." "Gradually one great fact became impressed upon his mind, viz.: that all organic diseases occasionally presented a tendency to spontaneous cure." "He was repeatedly meeting with instances where, although death was occasioned by disease in one organ, there were others which presented traces of previously existing lesions, which in some way had healed." "In no organs were such appearances more common than in the lungs, and of no disease was

evidence of a spontaneous cure more frequent than of pulmonary phthisis.

"Although it was generally considered the profession that no remedy and no plan of treatment yet proposed could be depended on in cases of consumption, it was obvious to author, that if the process employed by nature could be discovered, and then imitated by art, might ultimately arrive at the true principle cure."

TRUST.

I know not if dark or bright
I shall be my lot;
If that wherein my hopes delight
Be blest or not.

It may be mine to drag for years
Toll'd the heavy chain;
Or, day and night, my meat be tears
On bed of pain.

Dear faces may surround my hearth
With smiles and glees,
Or I may dwell alone, and mirth
Be strange to me.

My bark is wafted from the strand
By breath divine,
And on the helm there rests a hand
Other than mine.

One, who has known in storms to sail,
I have on board;
Above the racing of the gale
I hear my Lord.

He holds me when the billows smite;
I shall not fall.
If sharp, 'tis short; if long, 'tis light;
He tempers all.

Safe to the land! safe to the land!
The end is this!
And when with him go hand in hand
Far into bliss.

A Stone Wall.

A rough stone wall in any situation is an object of interest to a thoughtful mind. In different shapes of the stones, their various mineral character, the diversity of tints, flures and lines which occur in them, are suggestive of inquiry and reflection. Scarcely may thus be found in stones more profitable, perhaps, than many printed or spoken ones which he who runs may read. The small appearances link themselves with the grand phenomena; a minute speck supplies a track around which may cluster many a striking thought; and by means of a hint derived from a mere hue or line in a little stone—almost unperceivable to the general eye—may be constructed seas and continents that pass away thousands of ages ago—visions of landscape scenery to which the present aspect of the globe presents no parallel. This flexure of the stone tells me of violent volcanic eruptions, by which the soft, newly-deposited system—the muddy precipitate of ocean water—heaved and undulated like corn in a breeze; that lamination, of which the dark lines regularly alternate with the grey, speedily followed by gentle waves rippling music over sandy shores; and the irregular protrances, which I see here and there over the stone, are the casts of hollows or cracks produced in ancient tide-beaches by shrinkage—similar appearances being often seen upon our feet, as we walk over the pavement of most any of our towns. Yonder smooth striated surface of granite is the Runic writing of the northern Frost-king, transported me back in fancy to that wonderful age

when glaciers slid over mountain rocks, and flowed through lowland valleys, where now grows, and the snow seldom falls, and if there be a block of sandstone, it may chance to exhibit not only ripple-marks of ancient seas, but also footprints of unknown and strange tortoises that sought their food along the water's edge; and sometimes remains of former things more accidental and shadowy than even these—such as fossil snails, little circular and oval hollows, and their casts—supposed to be impressions produced by rain and hail, and indicating by their varying appearances the character of the shower, and the direction of the wind that prevailed when it was falling. Every one has heard of the crazy Greek who went about exhibiting a brick as a specimen of the building which he wished to sell; but in the structure of each geological system every stone is significant of the whole. Each fragment, however minute, is a record of the terrestrial changes that occurred when it was formed; and in every hue and line is the story of the physical conditions under which it was produced. The Ten Commandments were more clearly engraved on the two tables of stone than the laws of nature that operated in their formation are impressed upon the smallest pebble by the wayside. Its materials furnish an unmistakable clue to its origin, and its shape unfolds its subsequent history. I have impressed the marks of the revolutions of the earth not merely upon large tracts of country and enormous strata of rock and of various range—difficult of access and inconvenient for study—but even upon the smallest pebble, so that the annals of creation are multiplied by myriads of copies, and can never be lost.

Man cannot urge the excuse that he knows not of the doings of the Creator in the past silent ages of the earth, that the path in the deep and His footsteps in the waters are hopelessly unknown. Go where he may, look where he pleases, he will find the medals of creation—the signet marks of the Almighty—stamped indelibly and unalterably upon the smallest fragments of rock, of dumb, dead earth; so that if he should gratefully hold his peace, and withhold the tribute of praise to the Creator, “the very heavens would immediately cry out.” Anatomists of scenery, who look beneath the surface of the skeleton of the earth, tell us that the features of mountains and valleys are dependent upon the geological character of their strata; and, therefore, those who are skilled in the art can tell from the outlines of the landscape the nature of the underlying rocks, though no part of them crop above ground. A passing glance at the wayside walls will reveal the prominent geology of any district, as the shape of a single leaf and the arrangement of veins on its surface suggest the appearance of the whole tree from which it has fallen, or as a fragment of a tooth or a bone can call up the picture of the whole animal of whom it formed a part. In Aberystwyth, the walls are built principally of white, grey and red; in Perthshire, of gneiss and schist; in Mid-Lothian and Lanarkshire, of sandstone; and in the southern Scottish strata generally, of trap and porphyry. Sometimes they are composed of transported materials, not native to the district; and the variety of these opens up a field of delightful speculation. But there are no walls so interesting as those which occur in the mountain

districts of Derbyshire, and in some parts of Lancashire. In almost every stone are embedded fossil shells, and those beautiful jointed corals called encrinites, which look like petrified lilies, and have no living representatives in the ocean at the present day. Even the most homogeneous blocks are found on close inspection to be composed entirely of mineralized skeletons, and to form the graves of whole herds of shells and corallines long ago extinct. Strange to think that our limestone rocks are formed of the calcareous matter secreted by living creatures from the waters of the sea, and their own shelly coverings when dead, just as our coal-beds are the carbonized remains of former green, luxuriant forests. Thus, while walking along the highway in almost any locality, the most hasty examination of the wall on either side furnishes the student of nature with abundant subjects for reflection; and those lofty dykes, built by the farmer to keep in his cattle, or by the jealous proprietor to secure the privacy of his domain, while they forbid all views of the surrounding country, amply compensate for the restriction they impose by the truths engraven on their seemingly blank but really eloquent pages.—*Holidays on High Lands.*

Selected for “The Friend.”

Then I went to Chesterfield, to seek out and meet with those people called Independents; for I liked the name, seeing nothing at all in man to depend on; but they depended only upon the death and sufferings of Christ in his own body, yet did not come to see him nor his appearance in themselves to be their life, and had not heard his abiding, and the Word of God they had not abiding in them; so were dead professors, and dry trees, not bringing forth fruit. But they preached free grace, universal love, general redemption, and tendered mercy to all. This pleased me well, far better than the Presbyterian doctrine of election and reprobation; yet I was not satisfied nor easy, for I read Scripture very much, and saw by reading the Scriptures, with the secret help of Almighty God, which he afforded me in his infinite love, that as many as were led and guided by the Spirit of God, they were sons of God; and that, if any man has not the Spirit of Christ, he is none of his. This is such a clear distinction between the children of God and the children of the wicked one, or the children of this world, that there is no uniting them. This is clear from the holy Scriptures. For light and darkness are opposites; and Christ and Belial, believers and infidels are past uniting, without a new creation, a new birth, which the unconverted are encouraged to wait for, seek for, beg and hope for.

One day, in corn harvest, as I was riding on the road to Sheldon, in deep exercise, and taking a view of my condition, being in deep tribulation and anguish, condemning and judging myself, it pleased the Lord, on a sudden, unexpectedly and unlooked for, to cause the Day Star to arise in my heart, and the Sun of Righteousness with healing in his wings, even when the sorrows of hell seemed to take hold on me. Then it pleased the Lord to appear in me, and to visit me with the Day-spring from on high, in a very powerful and wonderful manner, in great mercy, goodness, and willful and infinite loving kindness. I was, in my inward man, full of the power and presence of Almighty God, and his heavenly,

glorious light shone in me mightily; so that I may truly say, it far exceeded the brightness of the outward day; and the eye of my understanding was opened, and I saw that it was the Lord's holy Spirit that appeared in me, and I believed, and could do no otherwise.

Oh! then I was glad, and my soul was filled with joy, because I had met with the Lord, who I knew was sufficient to teach me all things; and gave me to see that my sins would be remitted and forgiven, in and through Jesus Christ. Christ Jesus was now become my light and my salvation, and living faith sprang in me; for I felt power and strength to believe, and I then saw and felt what true faith was, and also that I never had had true, living faith before; this was the free gift of God, for it sprung up in his power, and stands in it.

I also saw life eternal manifested through Christ Jesus; so I tasted of the good word of God, and was made a partaker of the Holy Ghost, and was enlightened; for the life was manifested, and I saw it, and that the Son of God was come, and gave me an understanding, to know him that is true; for he revealed himself, or made himself known in me and to me.

Now my soul was quickened and enlivened in Him and by Him, in whom is life; and I also heard him as the Shepherd and Bishop of my soul, who was come near, even to my own soul; and the holy Scriptures were opened to me to my admiration and joy, and I understood them far beyond what I had done before; and they became more sweet, comfortable and precious to me, that I wondered I had never seen them so before, having read them so much night and day. But now the Lord gave me in measure to understand them, for they were very plain, and that no man knows them but those to whom it is given, by the holy Spirit of Him who hath the key of David, and opens and shuts as he pleaseth. I kept what I had found that day, and it was to me as the Pearl of great price, hid in my own field, that I had sought in divers forms and professions. And I now understood the parables of the lost piece of silver in my own house, and of the little leaven that lay hid in my three measures of meal, which I saw was my body, soul and spirit; and that it had long been working in me, whilst I knew it not, in order to leave my whole lump, with its own divine nature, that was capable of being leavened into good, by the working of that good and perfect gift which was come down from above, and was freely given me of God; for the sons of God were led and guided into all truth, by the holy Spirit of Truth.—*J. Gratton.*

For “The Friend.”

The English Government at the Siamese Court.

This curious book is the record of the experiences and observations of an English woman, who spent six years, from 1862 to 1868, at the residence of the King of Siam, employed by him as teacher for his children, and also in part as private secretary. It shows that the authoress was a woman possessed of considerable strength of intellect, as well as of unusual firmness and force of character; qualities which, in that despotic court and in the position which she held, were often severely tested.

The supreme sovereign, Maha Mongkut, (for in Siam there is a second king, with no very definite duties to perform) was called to

the throne in 1851, at the mature age of 45. His previous life had been mainly devoted to intellectual pursuits. He was a proficient in Sanscrit, an earnest student of the English language, and devoted much time to Theology, History, Geology, Chemistry, and especially Astronomy. In these studies he was assisted by the American missionaries residing in Siam, for whom he ever retained a sincere respect. Though he never embraced the religious doctrines they endeavored to inculcate, he manifested an enlightened toleration of all creeds and sects. After his elevation to supreme power, he retained his studious habits, though somewhat interrupted by official cares. The English language was an especially favorite subject of study, and it was this probably that led to the employment of our authoress to instruct some of his wives and children.

He appears to have been a useful prince, and well disposed to seek the good of his people, though often harsh in the government of his own palace, and exhibiting that selfish disregard of the comforts and rights of others, which is an almost inseparable accompaniment of despotic power. Some incidents related by our authoress furnish amusing illustrations of this, as well as of that fondness for study, which was a marked feature in his character.

"His majesty was the most capricious of kings as to his working moods,—busy when the average man should be sleeping, sleeping while letters, papers, despatches, messengers, mail-boats waited. More than once had we been aroused at dead of night by noisy female slaves, and dragged in hot haste and consternation to the Hall of Audience, only to find that his majesty was, not at his last gasp, as we had feared, but simply bothered to find in Webster's Dictionary some word that was to be found nowhere but in his own fertile brain; or perhaps in excited chase of the classical term for some trifle he was on the point of ordering from London,—and that word was sure to be a stranger to my brain.

"Before my arrival in Bangkok it had been his not uncommon practice to send for a missionary at midnight, have him beguiled or abducted from his bed, and conveyed by boat to the palace, some miles up the river, to inquire if it would not be more elegant to write *murky* instead of *obscure*, or *gloomily dark* rather than *not clearly apparent*. And if the wretched man should venture to declare his honest preference for the ordinary over the extraordinary form of expression, he was forthwith dismissed with irony, arrogance, or even insult, and without a word of apology for the rude invasion of his rest.

"One night, a little after twelve o'clock, as he was on the point of going to bed like any plain citizen of regular habits, his majesty fell to thinking how most accurately to render into English the troublesome Siamese word *phi**, which admits of a variety of interpretations. After puzzling over it for more than an hour, and all to no purpose, he ordered one of his lesser state barges to be manned and despatched with all speed for the British Consal. That functionary, inspired with lively alarm by so startling a summons, dressed himself with unceremonious celerity, and hurried to the palace, conjecturing on the way all imaginable possibilities of politics and diplomacy, revolution or invasion. To his vexa-

tion, not less than his surprise, he found the king in dishabille, engaged with a Siamese-English vocabulary. His preposterous majesty gravely laid the case before the consul, who, though inwardly chafing, had no choice but to decide with grace, and go back to bed with philosophy."

In the preface to her book, our authoress gives the following letter, written by the king himself, informing her of his acceptance of her offer to act as instructor to his children:

"ENGLISH ERA, 1862, 26th February,
Grand Royal Palace, Bangkok.

"To Mrs. A. H. Leonowens:—

"Madam: We are in good pleasure, and satisfaction in heart, that you are in willingness to undertake the education of our beloved royal children. And we hope that in doing your education on us and on our children (whom English call inhabitants of benighted land) you will do your best endeavor for knowledge of English language, science, and literature, and not for conversion to Christianity; as the followers of Buddha are mostly aware of the powerfulness of truth and virtue, as well as the followers of Christ, and are desirous to have facility of English language and literature, more than new religions.

"We beg to invite you to our royal palace to do your best endeavor upon us and our children. We shall expect to see you here on return of Siamese steamer *Chow Phya*.

"We have written to Mr. William Adamson, and to our consul at Singapore, to authorize to do best arrangement for you and ourselves.

"Believe me your faithfully,
(Signed) S. S. P. P. MAHA MONKUR."

(To be continued.)

For "The Friend."

William Wilberforce.

The following brief notice of this good and distinguished man is derived from Dr. Thomas' Biographical Dictionary.

"William Wilberforce, an illustrious English philanthropist and statesman, born at Hull, on the 24th of Eighth month, 1759, was a son of Robert Wilberforce, a merchant, who died in 1768. When he was about twelve years old, he felt deep religious impressions, which according to his own account, his friends spared no pains to stifle. He entered St. John's College, Cambridge in 1776, and became a general favorite among the students. 'There was no one' says I. Gisborne, 'at all like him for power of entertainment.' Wilberforce informs that he was a good classic, but neglected mathematics almost entirely. Before he was twenty years old, he inherited an ample fortune. He formed at Cambridge a slight acquaintance with William Pitt, of whom he became an intimate friend, soon after he left college. Having resolved to enter public life, he offered himself a candidate and was elected a member of parliament for Hull, in 1780. This election cost him over £8,000. He entered parliament as an opponent of the American war and of Lord North's administration; but he was rather an independent member than a partisan. After Pitt became a cabinet minister in 1782, he often lodged in Wilberforce's villa at Wembleton. With talents of the highest order, and eloquence surpassed by few, he entered upon public life possessed of the best personal connections in his intimate friendship with the great minister. In 1783

he visited France in company with Pitt. He made a famous speech against the coalition Lord North and Charles James Fox, in 1784, as a supporter of Pitt, was elected member for Yorkshire. He passed part of years 1784 and 1785 in a continental tour with Isaac Milner, during which he became deeply interested in vital religion. On his return, he commenced a private journal, which he kept a record of his spiritual conflicts and devotional exercises. 'He won gain,' says his sons, 'to open to his friends a change which had passed upon him.' In a letter to Pitt, he wrote, 'I can no more be much of a party man as I have been before.' Pitt's answer was full of kindness, but tried to reason him out of his convictions.

Among the results of his conversion was the devotion of his life to the arduous enterprise of the abolition of the slave trade. 1787 Thomas Clarkson, Granville Sharp, and ten others, formed a committee to promote the suppression of the trade, in co-operation with Wilberforce, who also received from them a promise of assistance. In 1788, Pitt moved a resolution binding the House to consider the subject of the slave trade early in the ensuing session. Wilberforce made a long and a speech on the subject in 1789. He was distinguished in the noblest manner by Pitt, Burke, and Fox. The movement, however, encountered long and bitter opposition. He opened the campaign in 1790, by a motion which he carried, for referring to a special committee the examination of witnesses. After the close of the session he made himself master of a vast mass of evidence which had been collected on the subject. In 1791 the motion for the abolition of the slave trade was rejected by eighty-eight members voting for it, and a hundred and sixty-three against it.

The war against France, which he opposed in 1792, caused the first decided political separation between him and Pitt. He had the courage to withstand the popular current, and offended many of his friends by moving an amendment to the address on the 17th of about the end of 1794. In 1796 he again brought in an abolition bill, which was defeated by a small majority.

He was re-elected a member for the county of York in 1796. In 1797 he married Barbara Ann Spooner, and published a work entitled a "Practical view of the Prevailing Religious System of Professed Christians, contrasted with Real Christianity," which received with great favor. It ran through five editions before the end of the year. In 1826, fifteen editions had been issued in England, besides twenty-five editions in the United States. In 1798 he renewed his motion for the abolition of the slave trade, and was defeated by a majority of four votes. In 1800 he made a speech in favor of immediate abolition, which was rejected by a majority of thirty. In 1804 he procured the assent of the House of Commons to the first reading of his abolition bill. Pitt pressed earnestly for a postponement of the abolition question. Wilberforce said he would never make a holy cause subservient to the interests of a party. On the second reading he was defeated by seventy-seven to seventy. The family opposed abolition, but the ministers Fox and Grenville, who came into power in 1806, cordially supported the measure, and triumphed at last in 1807. On the final passage of the bill in the House of Com-

* Ghost, spirit, soul, devil, evil angel.

hundred and eighty-three were for it and fifty sixteen against it.

He continued to represent Yorkshire until 182, having been elected five times without contest, and he was chosen a member for Lambeth in that year. He supported the motion for the emancipation of Roman Catholics in 1813, though "all the religious people on the other side."

About 1818 he began to agitate the emancipation of the West Indian slaves, on which wrote an appeal to the nation in 1823. On account of his declining health, he entrusted the management of the cause in the House of Commons to T. Fowell Buxton. He retired in Parliament in 1825, and survived until a bill for abolition of slavery was read a third time. Three days after that event he died in London in the Second mo., 1833.

Wilberforce took a prominent part in the formation of the Bible Society in 1803. He was a liberal contributor to various charitable institutions, and gave privately much money to the poor.

Contemporary with Lord Grenville and 'Pitt,' says Lord Brougham, 'appeared a man in some respects more illustrious than either,—one who among the greatest benefactors of the human race, holds an exalted position,—one whose genius was elevated by virtues, and exalted by his piety.'

THE FRIEND.

SIXTH MONTH 17, 1871.

Philadelphia, 6th mo. 5th, 1871.

Friends of "The Friend,"

steemed Friends,—From a tract recently laid quite extensively in Philadelphia and its vicinity, I copy the following expressions; and would ask, are they such as would likely to be spoken, printed or circulated by one convinced of the correctness of *his* views of Gospel truth; or, in other words, are they "sound in word and doctrine?" The italics are the author's.

Your friend, truly,

S.

"* * * But how can you become righteous?" is the great question. There are only ways by which you can be made righteous as to be accepted of God.

How is, to satisfy God for all the sins you committed against Him, and afterward keep his whole law perfectly. The other I find a substitute to do this in your stead. Now, by the first of these ways, you know your hearts that for you, righteousness in sight of God is impossible. But by the second the great end can be obtained. For not willing that we should perish, has led just such a substitute, in the person of our Son, "that whosoever believeth in him should not perish, but have everlasting life."

Jesus came to die in the stead of the sinner—to bear the curse which the law has placed upon the sinner's sin. And now, through His atoning death, 'all that believe are justified from all things.' So, if you believe in Christ really as your substitute and Saviour, you are, at this moment, *counted in him, and accepted in him, and in him* just before God as if you had never sinned; you are, properly speaking, *accepted in him* through believing in Christ. * *

And unless you are thus made good—unless you are born again, and made a new creature in Christ Jesus, you will be eternally lost. But if you thus believe in Christ as your substitute, who bore the dreadful punishment of your sin, and the curse of the law that you have broken, then you are saved."

In replying to the query respecting the above extract, we may first observe, that there are several points in it, which, if respectively referred to, would lead into an exposition of christian doctrine, for which, did we think ourselves competent, we have neither time nor space. But we apprehend the stress of the question relates mainly to the manner in which belief in Christ is spoken of in the extract, and the propriety of the use of the term "substitute."

The word "substitute" applied to Christ as expressive of his relation to sinners, is unscriptural, and it appears to us, inappropriate and calculated to lead to a false dependence. He is said to be our passover, sacrificed for us; to have borne our sins in his own body on the tree; to be the propitiation for the sins of the whole world; to have redeemed us from the curse of the law; to be made unto us, wisdom, righteousness, sanctification and redemption; but He is no where said to be our substitute, nor that He was treated by his Father as though He were a sinner. He voluntarily laid down his life, poured out his soul unto death, giving himself a ransom for our sins, and thus opening the door of reconciliation, but in no one of these offices can He be properly said to have been put in the place of the sinner, or been made a substitute for him.

We know not the tenor of the work from which the extract is taken, but as the latter is presented, it conveys the idea that by believing in Christ as He appeared among men, in "his atoning death," and as the sinner's substitute and Saviour, whether that belief is derived simply from the testimony of Scripture, from preaching or teaching, the sinner is justified, and without any change being wrought in himself, he is instantly accepted as righteous, and is complete in Christ. If this apparent meaning is what is intended to be conveyed by the paragraph, we have no hesitation in saying that it is unscriptural, and contrary to the belief of Friends. They have always held that repentance towards God, as well as faith in our Lord Jesus Christ, is indispensable; that none are accepted and complete in Christ while they are in sin; that faith without works is dead—works wrought in man by the transforming power of Christ within, and by man under the influence of his Spirit—and that it is only they "that do his commandments, who have a right to the tree of life, and may enter through the gates into the city."

If the words "believeth in Him" are intended to refer to that living, operative faith, which is the gift of God, by which Christ is laid hold of, as He is revealed in the soul by the Holy Spirit, as well as (in those who have the knowledge of it) faith in his outward appearance as God manifest in the flesh, and in his meritorious death as a propitiation for the sins of the world, then it comprehends co-operation with that Grace which bringeth salvation, enabling the soul to work out its salvation with fear and trembling, and is in accordance with the teaching of Christ and his apostles. Christ is the author of eternal sal-

vation to all those who obey him; but He is not our "substitute," to relieve us from condemnation and repentance for sin, nor so as to remove the necessity of our drinking—in our measure—of the cup that He drank of, and being baptized with the baptism wherewith He was baptized. All his true born children are crucified with Him; "buried with Him by baptism into death, that like as He was raised from the dead by the glory of the Father, even so they also should walk in newness of life." And unless we have been planted together in the likeness of his death, we cannot know what it is to be also in the likeness of his resurrection.

By his death Christ purchased for mankind the outpouring of his Holy Spirit, whereby He lighteth every man that cometh into the world. This unspeakable gift manifests itself in the soul, convicting of and condemning for sin; where given heed to and co-operated with leading to true repentance, and applying the purchased forgiveness for past transgressions by giving living faith in the Lamb of God and his atoning sacrifice. Thus it is those who walk in the Light, as God is in the light, that experience the blood of Jesus Christ his son to cleanse them from all sin. "Not by works of righteousness which we have done, but according to his mercy He saveth us by the washing of regeneration and renewing of the Holy Ghost."

R. Barclay says: "For since Christ said, 'It is finished,' and did finish his work, sixteen hundred years ago and upwards, if He so fully perfected redemption then, and did actually reconcile every one that is to be saved, not simply opening a door of mercy for them, offering the sacrifice of his body by which they may obtain remission of their sins when they repent, and communicating unto them a measure of his grace, by which they may see their sins and be able to repent; but really making them to be reputed as just, either before they believe—as say the Antinomians—or after they have assented to the truth of the history of Christ, or are sprinkled with the baptism of water; while nevertheless they are actually unjust, so that no part of their redemption is to be wrought by Him now, as to their reconciliation and justification; then the whole doctrinal part of the Bible is useless and of no profit: in vain were the apostles sent forth to preach repentance and remission of sins, and in vain do all the preachers bestow their labor, spend their breath and give forth writings * * * seeing it is all but *vanum agere*, but a vain and ineffectual essay to do that which is already perfectly done without them."

We take this opportunity to say, that while we think it right to uphold what we believe to be the correct views of christian faith held by Friends, and in meekness to render a reason for the hope that is in us, we nevertheless feel more and more deeply the solemn character of these sacred subjects, and that thus speaking of them is treading on holy ground. The great truths relating to the mission, the offices and the work of the Saviour of men, the utterly incomprehensible nature and propitiatory effects of his atoning sacrifice, and the supernatural process of the new birth unto righteousness through the transforming power of the Holy Spirit, are, one and all, so far beyond the natural powers of the human mind to comprehend and define, that we often shrink from essaying to treat on them, and

when doing so, endeavor to keep, as nearly as may be, to language employed by the holy men, who, under the inspiration of Him who sees the whole at a glance, left on record what their eyes had seen and their hands had handled of the Word of Life. It is one thing to speak or write of these things and quite another to be able to say from experience, "We know that the Son of God is come, and hath given us an understanding, that we may know Him that is true, and we are in Him that is true, even in his Son Jesus Christ." Would that all the members of our religious Society were more constantly bearing in mind and acting up to the simple truth, that they are the children of God who are under the government of the Spirit of God, and that it is the law of the Spirit of Life in Christ Jesus that sets free from the law of sin and death. Then would there be no dissent from the truth as it is in Jesus, and no divisions among us. Though they would certainly find that the christian's path is a narrow one, and the washing of regeneration, which prepares the fallen spirit of man for "glory, honor and immortality," is accompanied with many tribulations, and deep spiritual baptisms, yet as they continued faithful to the unfoldings of the light of Christ in the heart, bearing the cross laid upon them, they would experience, as each day passed by, the truth of the declaration of the apostle to the believers in his time, "Now is our salvation nearer than when we believed," and by perseverance in well doing become "complete in Christ," who by one offering hath perfected forever them that are sanctified.

SUMMARY OF EVENTS.

FOREIGN.—It is announced that the French prisoners are rapidly returning from Germany to France.

The restoration of the public buildings destroyed by the Paris insurgents has already commenced.

General Donat has issued an order that all civilians found with arms in their possession after a certain day, shall be tried by court-martial.

The sacred vessels and valuable ornaments taken by the Communists from the various places of public worship have, with a few exceptions, been discovered in the mint and other places.

It is expected that the seat of government will shortly be removed to Paris from Versailles.

The official journal announces that the elections to the Assembly in 113 departments, to be held on the 2nd proximo. The same journal assures the people that the deposits in the Bank of France are unimpaired. The official journal also states that the resignation of their seats by the Prince de Joinville and Duke de Aniane, was about to be communicated to the Assembly. These two Orleans princes had visited President Thiers, Grey, the President of the Assembly, and several members of the Cabinet, and were courteously received. At these interviews they disclaimed any intention of intriguing against the republic. The Assembly had previously, by a vote of 484 to 103, abolished the proscription of the House of Orleans, and removed the political disabilities imposed upon its members.

A motion for the prolongation of Thiers' term of office, as chief executive of France, has been postponed until after the completion of the supplementary elections to the Assembly. It is authoritatively announced that Thiers favors a republic for the future government of the country.

The arrest of the Communist leaders continues. Rossel and Courbet were found concealed in Paris.

The damage done to Paris by the fighting and fires, and wanton destruction of property, is estimated at 800,000,000 francs.

The Italian government promises to deliver into the hands of the French authorities, all fugitive insurgents who reach Italian soil.

The fortresses proposed for the interior of Paris have been located at Montmartre and Chaumont, and the engineers have already commenced their construction. A motion introduced to the Assembly for abolishing the Colonn Vendome, was afterwards withdrawn.

It is stated that twenty thousand of the Communist prisoners will be transported to New Caledonia, an island belonging to France, in the south Pacific Ocean. New Caledonia is nearly in the longitude of New Zealand, but much nearer the equator.

The Minister of Finance, in presenting to the Assembly a bill making provision for a loan of one hundred millions sterling, urged the payment of the war indemnity in order that France may be rid of the Germans. The minister relied for success in the raising of the loan, upon foreign confidence in the ability of France to meet her obligations, and the internal energy of the nation.

The German forces have commenced evacuating the Department of the Lower Seine.

The French Minister of Finance proposes to the Assembly the levying of additional taxes to the amount of 450,000,000 francs.

The Communists who are to be transported to New Caledonia will, it is stated, be allowed to take their families with them, and form colonies.

The resignation of Favre, as French Minister of Foreign Affairs, is reported. Paris is already crowded with fugitives from Germany and France.

The French government has determined to indemnify the owners of houses destroyed during the recent insurrection.

The weather in England continues cold. On the 10th there was a snow storm of an hours duration at Birmingham. On the previous day there was a fall of snow in Yorkshire.

The House of Commons has passed a bill enlarging the powers of the government for the repression of violence in Ireland. The army regulation bill is still under debate. On the 8th, Cardwell defended the clause abolishing the sale of military stores. An incidental vote, while it did not decide the question, showed that there was a decided majority in favor of the abolition.

The House of Lords has passed a bill authorizing Canada to organize territorial governments between the domain and the Pacific ocean.

A steamer from Liverpool took a coaling ship, in its voyage to Callao, had been burned at sea, and 600 coolies perished in the flames.

Commercial relations between France and Germany have been restored to the same footing as before the war.

The Emperor Alexander of Russia, and his son Alexis, arrived in Berlin on the 8th, and were received at the station by the Emperor William and his staff, and were escorted to the palace by the imperial guard. The Emperor left Berlin on the 10th.

The Russian campaign against Khiva has terminated successfully.

A St. Petersburg dispatch states that crops of all kinds in Russia promise an excellent yield.

The Italian government has officially informed all the foreign ambassadors that the capital of Italy, on the 4th of next month, will be transferred to Rome. The ambassadors asked instructions from their respective governments, before making arrangements for a change of residence. The Austrian government has instructed its representative to follow King Victor Emanuel to Rome.

An Athens dispatch says that brigandage has been nearly extirpated from the country. Turkey has given valuable assistance by arresting all brigands on her frontier.

The Bank of Holland has reduced the rate of interest to three per cent.

In 1851, London had 2,362,326 inhabitants; in 1861, 2,808,604, and by the census of this year the number is 3,251,854, an increase of 889,478 in the last twenty years.

On the 12th the treaty of Washington was discussed in the British House of Commons. Earl Russell opposed the ratification of the treaty unless the arbitrators were bound only by international and British laws existing at the time of the American war. The Marquis of Salisbury declared the treaty sacrificed the rights of neutrals to American susceptibilities. The speakers generally approved of the treaty and deprecated any opposition at this stage of the business. Earl Russell finally withdrew his motion and the debate was brought to a close. The weather in England is unfavorable for the season.

London, 6th mo. 12th.—Consols, 91½. U. S. 10-40s, 5 per cent, 88½.

Liverpool.—Uplands cotton, 8½ s½; Orleans, 8½ a 8½d.

The harvest prospects in both France and Prussia, are said to be disappointing. In the more eastern portions of Europe, however, the crops promise well. The emperor and empress of Brazil arrived in the

Tagus on the 12th inst. The regent of Brazil is vested with full powers during the absence of the emperor. The Brazilian government has presented the Chambers a bill for the emancipation of all slaves belonging to the crown. Convict slaves are also to be freed from the seven years imprisonment, their own to be indemnified from the treasury. The bill is with strong opposition in the Chambers.

UNITED STATES.—Miscellaneous.—The interim Philadelphia list week numbered 292. There were deaths of consumption, 11 of convulsions, 14 of cholera, 16 of inflammation of the lungs, 13 inflammation of the brain, and 10 old age.

Large deposits of canal coal of the most valuable kind have, it is stated, been found on the mainland Alaska, and on the Aleutian Islands, within a few hundred yards of an excellent harbor. A company has formed in San Francisco to work the mines.

The Arizona Miner, published at Prescott, and Citizen, published at Tucson, in the same territory, fitted the massacre of Apache Indians at Camp Grant alleging that these Indians, while camped under military protection at that point, made raids on the neighboring country, committing murders and driving the stock of the settlers.

The services of 316 assistant assessors of internal revenue have been dispensed with since the first of year, and a further reduction of about 150 will be effected during the present month.

The annual value of taxable property in the city of New York is \$1,075,000,000, and the income of the fixed rate of taxation, two per cent, is \$21,500,000.

The Markets, &c.—The following were the quotations on the 12th inst. *New York*.—American gold, 111½. U. S. sixes, 138½, 117½; ditto, 1368, 114½; 10-40, 106½. Superfine flour, \$5.60 a 36; finer, 12; \$6.15 a 39. White Michigan wheat, \$1.70; a State, \$1.65; No. 2 Chicago, \$1.52 a \$1.55. Low, corn, 77 a 79 cts. Oats, 66 a 69 cts. *Philadelphia*.—Flour, \$3.25 a 59. Western red wheat, \$1.44; Pa. extra, \$1.50. Yellow corn, 75 cts. Oats, 67 a 68 cts. Cattle sold at 4 cts. per lb. gross for common, 3½ a 4½ for medium, and from 4½ to 6½ for the best. Sheep, 5½ cts. per lb. gross, and hogs 6 a 6½ cts. per lb. for corn fed. *Pennsylvania*.—No. 2 spring wheat, \$1.90. No. 2 corn, 62½ a 53½ cts. No. 2 oats, 47½ a 59. Bye, 81 cts. St. Louis.—Cotton, 18 cts. Flour, \$4 a 7.75. No. 2 red winter wheat, \$1.55; No. 1 sp \$1.60; No. 1 extra 2 mixed corn, \$1.45 a 52 cts. 50 cts. Lard, 9½ cts.

WESTTOWN BOARDING SCHOOL.

A Stated Meeting of the Committee having charge of the Boarding School at Westtown, will be held on Thursday, the 21st inst., at 9.30 A. M. The Committee on Admissions will report on the same evening, and that on Instruction at 7 o'clock the next evening.

The Visiting Committee attend at the School Teaching-day, the 17th inst.

SAMUEL MORRIS, *Ch.*
Phila. 6th mo. 9th, 1871.

For the accommodation of the Committee, coaches will meet the trains that leave the city at 2.30 P. M. on the Seventh-day, the 17th, and on the 20th inst.

WANTED FOR A FREEDMEN'S SCHOOL.

Near Stevenson, Alabama.
An earnest, but prudent and thorough Test-Colored—through-out Friends—preferred—place offers uncommon inducements as an opportunity for the kind of instruction now so much needed, how to make the best of the situation. A young F would be accepted if qualified. Address,
Y. WARNER,
Fifth mo. 26, 1871. Germantown, Phila., Pa.

MARBLE, at Friends' Meeting-house, Tuckert J., on the sixteenth of Fifth month, 1871. J. C. HAINES, of Medford, to NAOMI PARKER, of the place.
—, on the eighteenth of Fifth month, 1871. Friends' Meeting-house, Westfield, N. J., J. W. WASHINGTON, of Philadelphia, to SCASSA RYBINGOTT, of the former place.
—, at Friends' Meeting-house, Pennville, Fifth month 20th, 1871, DAVID STEVENS, of Fifth month Meeting, Ohio, to ANNE MILLHOUSE, former place.

WILLIAM H. PILE, PRINTER.
No. 422 Walnut Street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XLIV.

SEVENTH-DAY, SIXTH MONTH 24, 1871.

NO. 44.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

at No. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Single Copies, when paid quarterly in advance, five cents.

Lichens and Mosses.

Almost every stone is made venerable, as the adjoining fruit-trees and espaliers, with the grey rosettes of that commonest of lichens, the stone parmelia. This plant is to be extensively employed by the High-landers in dyeing woollen stuffs of a dirty blue, or rather reddish-brown, color. It is sold by the London herbalists solely for use of bird-stuffers, who line the inside of their cases and decorate the branches of the nature trees upon which the birds perch it. There are also numerous specimens on the wall of the yellow parmelia. In the latter it is employed at the present day as a stuff, yielding a beautiful golden yellow tallizable coloring matter, called chrysanic acid, which is nearly identical with the yellow coloring matter of rhubarb; and, likewise, it may be used as a test for alkalies, which they invariably communicate to its coloring matter a beautiful red tint, the most ornamental of all our lichens. Bright, golden thallus, spreading in circles or three inches in diameter, and covered with numerous small orange shields, decks the lavish profusion the rough unmortared walls of the poor man's cottage; and many a patch of it may be seen covering the bounding stones of some hoary castle or long-ruined abbey as with a sunset glory. Growing in a concentric form, when it attains a certain size the central parts begin to decay and disappear, leaving only a narrow circular margin of living vegetable matter. In this manner it covers a whole wall or tree with spreading, upright, and decaying—analagous to the fairy rings formed by the growth and decay of mushrooms in a grassy field. This low wafer of vegetation is attached to the wall by slender white hairs on the under side, looking like roots, although they do not possess the power of selecting and appropriating the materials of growth peculiar to the organs. We know not by what means they derive nourishment. Some specimens only do disintegrate the stones on which they occur, and absorb the chemical and mineral substances which they contain, as is fully proved when they are analyzed. But there are numerous classes found only on the hardest stones, so closely appressed and level

with their surface that they seem to form an integral part of them. In this way they continue for years, age centuries and ages, unchanged—their matrix as well as their own intense vitality resisting all decay. There are instances of encrusting lichens covering the glaciated surfaces of quartz on the summits of our highest hills, which may probably be reckoned among the oldest of living organisms. Such species can obviously derive no benefit save mere mechanical support from their growing-place, and must procure their nourishment entirely from the atmosphere, and their coloring matter from solar reflection.

The eye of the naturalist, educated by practice to almost microscopic keenness, can discern scattered over the wall numerous other specimens of this singular vegetation, appearing like mere discolorations or weather-stains on the stones. Some are scaly fragments so minute as to require very close inspection to detect them. Others are indefinite films or nebulae of greyish matter, sprinkled with black dots about the size of a pin's head. Others are granular crusts of a circular form, with a zoned border; and when two or three of them come together, they do not coalesce and be identical. The frontier of each is strictly preserved by a narrow black border, however it may grow and extend itself, as zealously as that of France or Austria. The law against removing a neighbor's landmark is as strictly enforced in lichen as in human economy. When a stone is covered with a series of these independent lichens, it looks like a miniature map of Germany or America; the zoned patches resembling the states, the black dots the towns, and the lines and cracks in the crust the rivers. There is one species growing on pure quartz, an exquisite piece of natural mosaic of glossy black and primrose yellow, called the geographical lichen, from this resemblance.

Several of the stones are sprinkled with a grey, green, or yellow powder, as dry and finely pulverized as quicklime or sulphur. These grains are either the germs of lichens awaiting development, or they are individual vital cells, capable of growing into new plants, in the absence of proper fruit. It is difficult to distinguish these pulverulent masses from the powder of chalk, verdigris, or sulphur; and yet they are endowed with the most persistent vitality, which almost no adverse circumstances can extinguish. The principle of life resides in each of these grains as truly as in the most complicated organism; and, though reduced here to the very simplest expression of which it is capable, it is not divested of its mystery, but on the contrary rendered more wonderful and incomprehensible. A wide and impassable barrier separates these life-particles from the grains of the stone on which they occur, and yet it is very difficult in some cases to distinguish the one from the

other. The extreme simplicity of structure displayed by these protophytes is more puzzling to the botanist than any amount of complexity would have been. The rudimentary stages of all the flowerless plants appear in this singular form. The germs of a moss are similar to those of a lichen, and the germs of a lichen to those of a fern or sea-weed. These powdery grains represent the basis from which each separate system of life starts, to recede so widely in the highest forms of each order.

When the powdery lichens occur in large quantities, they give a very picturesque effect to rocks, trees, and buildings. The trunks and branches of trees in the outskirts of large towns are covered with a green powder, fostered by the impurity of the air; a similar substance is also produced in damp, low-lying woods, where the trees are so densely crowded as to prevent proper ventilation and free admission of light. In Roslin Chapel, near Edinburgh, the curious effect of the rich carvings of the walls and pillars is greatly enhanced by a species of *Leparia*, of a deep verdigris color, covering them with the utmost profusion. It gives an appearance of hoary antiquity to the structure, and is the genuine hue of poetry and romance. On boarded buildings, old palings, and walls may be sometimes seen a greyish film sprinkled with very red particles, turning yellow if rubbed, and exhaling when moistened a very perceptible odor of violets; from which circumstance it has obtained the name of *Leparia Folithus*. Linnaeus met with it frequently in his tour through Eland and East Gotland, covering the stones by the roadside with a blood-red pigment. It also spreads over the wet stones of St. Winifred's Well in North Wales, and is supposed to be the blood of the martyred saint—a superstition which, like the dark stain in the floor of Holyrood Palace, one has not the heart to disturb.

(To be concluded.)

For "The Friend."

"The secret of the Lord is with them that fear him, and he will show them his covenant." Such were Caleb and Joshua in their generation, and it is recorded of them, that they wholly followed the Lord, and were thus prepared not only to bring a good report of the promised land, but—very different from the evil spies—encouraged the children of Israel to go in and possess it. Their faith standing in the power of God, they could say to their brethren, "If the Lord delight in us then will he bring us into the land, which he promised to our fathers;" and in this manner did they still the murmurings of those who had lost the shield of faith in that Omnipotent Arm which had been so miraculously made bare in delivering them from their bondage in Egypt, and in bringing them thus far, by the cloud by day and the pillar of fire by night. It highly behoves the members of the So-

ciety of Friends, circumstanced and placed as they are among other bodies of christian professors, "to stand fast in that liberty wherewith Christ hath made them free, and not become entangled again with the yoke of bondage" of a ceremonial and formal profession of the Truth. The writer of these remarks being a member of a western Yearly Meeting, would, in the feelings of much brotherly love, say to his fellow professors every where, Friends, stand in the counsel of God, for his Arm is not shortened that He cannot save, nor his ear grown heavy that He cannot hear the crying of the poor, and the sighing of those who have no other helper but the Lord Almighty.

I well remember to have heard the late Samuel Bettle, who, with two other worthies spoken of in this essay, may be numbered with the princes in Israel, say, in lamenting over the division in New England Yearly Meeting, "We cannot expect the breach to be healed in the lifetime of those who have made it, but if Truth prevails it will be done in their children's time."

That dignified minister of the Gospel, Elizabeth Evans, in her last testimony among her friends at a meeting at Salem, N. J., a few hours before her death, said, "That it was in the night season Jacob wrestled with the angel, and it was declared of him, 'As a prince hast thou power with God and hast prevailed,'" adding, "what a mercy it was that we have a High Priest touched with a feeling of our infirmities; and wished to encourage all to persevere in this deep, inward, fervent prayer. She did believe that as such an exercise was maintained by those who mourned for the desolation of Zion, judges would be raised up, as at the first, and counsellors as at the beginning;" adding, "It is my firm belief and faith that it will be so, though I may not live to see it, yet it will be so."

After attending a meeting within the limits of Indiana Yearly Meeting, William Evans records his feelings in the following expressions: "I was impressed with the belief that the Lord would send forth messengers as in the rise of the Society, to gather the members back to practical obedience to the light of Christ in the heart." About two years before he was gathered (as we have good ground for believing) to his everlasting rest in Christ, he records a prospect impressed on his mind respecting his own Yearly Meeting, in the following manner, viz: "In contemplating the trials and overturnings to which our religious Society has been subjected for many years in this country, I was made to believe, a few days since, that the gracious Shepherd was still near to us, and that the time was not very far off when he would go through his flock, and renew the visitations of his love to the younger members; that He would bestow gifts upon them to be occupied in his church, and prepare and send forth servants to proclaim and spread the doctrines of the gospel, and his blessed cause from sea to sea, and from the rivers to the ends of the earth. Hereby the beauty and strength and influence of our Society in this Yearly Meeting, and in this city, will be restored; and a body of solid and deeply-exercised men and women would be again raised up as standard-bearers and watchmen on the walls of Zion. May the Lord hasten it in his time and way; and enable us to continue to bear patiently the sufferings that remain for us to endure, for

our own sakes and for one another, whatever they may be."

I cannot well conclude these few observations without alluding to the restoration of James Naylor, as it is recorded in the journal of William Dewsberry, in the belief that the Lord, as we stand in his counsel, renouncing the wisdom of man, which remains to be foolishness with God, is able to work for us far more exceedingly than we can either ask or think.

It is said that George Fox was with much difficulty reconciled to J. Naylor, and Wm. Dewsberry appears to have been a principal instrument in bringing it about. Speaking of a journey to London, and of the Lord's dealings with him in the course of it, the latter says: "Who hath restored many captives, and brought in many that were turned aside, in his much brokenness of heart in the sense of his mercy in their recovery, 'I was led of the Lord,'" he continues, "into London according to his will, in the service he had determined at that time in that place. I was much filled with comfort to behold his appearance amongst his people, who did mightily refresh his babes with his own presence. The Lord laid it upon me that G. Fox and J. Naylor might meet together; my travail was great in spirit, until the Lord answered, which in the day He determined was done; mighty was his majesty amongst his people in the day He healed up the breach which had been so long, to the sadness of the hearts of many. The Lord clothed my dear brethren George Fox, Edward Burrough, and Francis Howgill, with precious wisdom; his healing spirit did abound within them, with the rest of the Lord's people there that day, according to their measure, and the Lord was with J. Naylor and ordered him by his spirit, so that the measure of the Lord's spirit in all reached to embrace it with gladness of heart."

Whilst penning the foregoing, my mind has frequently recurred to the account we have of the severe famine in Israel, when Samaria was closely besieged; that the word of the Lord came to the Prophet Elisha, saying, "Hear ye the word of the Lord: to-morrow, about this time, shall a measure of fine flour be sold for a shekel, and two measures of barley for a shekel in the gate of Samaria." But a lord, on whom the king leaned, answered the man of God: "If the Lord would open the windows of heaven could this thing be? His unbelief in the power of God incurred the reply and its execution upon him: "Thou shalt see it with thine eyes, but shalt not eat thereof."

In concluding this memento of love to the brotherhood, wherever located, let me say to one and all again, Friends stand in the counsel of God: be willing to become as a little child, in order to obtain an admittance into the kingdom of Heaven. In this state of reduction the promise is sure: "His place of defence shall be the munitions of rocks: his bread shall be given him, his waters shall be sure."

It has appeared to me that the enemy of the Church of Christ is endeavoring to scatter the sheep, and overthrow the faith once delivered to the saints, in three ways, viz, to lessen our estimation of the doctrine of the light of Christ, to set the Scriptures above the Spirit, by which they were given forth, and to lower the standard of perfection.

Central America.

By MORELET.

Logwood.—The dye-wood of Campeach which the English call *logwood*, the Spaniards *palo de tinta*, and to which savants have given the barbarous appellation of *hematoxylin*. *Capechiannum*, is a tree of medium size and peculiar appearance, attaining a height, under favorable circumstances, of from twelve to thirteen yards. The trunk is much gnarled and full of irregular cavities. The leaves are pinnated; the small ones never fall off, all are smooth and heart-shaped. The flowers are small, yellowish in color, and hang in bunches from the ends of the branches. The fruit is a very flat, lanceolated husk, containing seeds which are eaten by fowls, as in fact are those of almost all the vegetables a fruits that are found here. The foliage of the logwood tree is of dark green and very lustrant. During the early period of its growth it forms thickets quite similar to those of the Hawthorn. But as it develops, it gathers impenetrable masses. In the forest it takes entire possession of the ground, which remains without vegetation under its shade. It is found on rocky mountains as well as on alluvial plains, but it grows better on hum deep soil which is periodically inundated by the overflow of the rivers. Its growth rapid, yet its wood is hard, compact, and is long preserved under ground. It is down when it attains ten years' growth. Sheltered from its shadow, the ground soon comes covered with a nursery of young plants which only need light and air to reach maturity. Industry can never imitate, in this respect, the economy of nature. The English vainly endeavored, in the Lucayo Islands, in various other of their transatlantic positions, to propagate this precious tree, which in its wild state, flourishes on the most friendly soil.

The bark of the logwood is of dark color and the thin and yellowish sap coat strongly with the reddish shade of the heart which darkens rapidly when it comes in contact with the atmosphere. This change of color, however, is only superficial; for when the billets have become faded by long exposure in a warehouse, the vendor always cleans off their surface, before delivering them to the purchaser. I must add that the price dye is not red, like that of the Brazil wood (*caesalpinia*), but is black, shading on purple, founded, with a yellow, which is sometimes a tree secretes, in addition, to gum Arac, a transparent substance, analogous to gum Arabic, which, it is said, gives the color in the dye.

The forests of Tabasco and Yucatan, where the logwood-tree abounds, are interspersed with the lagoons, which during the season the floods almost always communicate with the navigable streams. The wood can there be cheaply transported from place to place, yet no words can convey an idea of the ignorance and carelessness with which this trade is carried on. There is a total absence of efficient or economical management. The proprietor reposes a careless confidence in the woodcutters, who receive a real for a quintal of wood delivered at the point of fabrication. These men roam over the forest selecting and cutting down such trees as please them, according to their caprice or convenience. An agent, called the *Mayoral*, oversees the work, and every evening verifies the result of the day's labor. On receiving

wood, he carefully rejects all that is marked with orange colored spots, which are indications of decay, and then has the remainder weighed in his presence and the amount set down to the credit of the laborer. The woodcutters are all under the jurisdiction of this *Mayoral*, who does not court popularity, but seeks only to inspire his subordinates with a wholesome fear. The workmen under him are almost always debtors to his principal, and laboring to liquidate their liabilities, they ardily ever set about their tasks with spirit, declined to be intemperate, and always dispensed to put an end to their servitude by flight, it becomes necessary for the masters to keep a strict watch over them. The *Mayoral* frequently inflicts corporal chastisement, although the laws forbid and punish it, acquitting the debtor of all further liabilities. But the laws only fall heavily on the weak, in these distant and isolated regions, the profits of the *Mayoral* are in proportion to the amount of wood delivered in the course of the year, and in this way his interests are identified with those of his principals. At San Francisco, he receives three cents for every hundred weight of wood, equal, on a total of one hundred and fifty to three hundred thousand quintals, to little less than eight thousand dollars a year.

The cutting of the wood commences with the dry season, when the water begins to fall, and navigation becomes interrupted. With the rise of the waters, transportation is resumed, and the accumulated stock is rapidly cleared off. In favorable localities, where navigation is continuous for the whole year, the cutting of the wood goes on steadily, without regard to the seasons. Few establishments, however, are thus advantageously situated. Most of them, the wood, after being cut, is dragged down to high water mark on the banks and lagoons, where it awaits the periodical rise to be floated out to the *embarcaderos*. The traffic might be made constant in nearly all cases by the construction of roads, the removal of bars, or the deepening of channels, but the inhabitants of these countries prefer to wait on Providence to exerting themselves in enterprises of this kind. They are no means of transportation except such nature affords them gratuitously. This it should not be forgotten in judging of the merits of those numerous schemes of emigration which are constantly paraded before the public, and in which so much stress is laid on the quality of climate and productiveness of soil, without one word being said of the difficulties in the way of carrying them out, and which more than nullify the advantages which they are presumed to offer.

The too ready acceptance of papers of acknowledgment from such persons who accomplish their marriages out of the order of the Society, being of injurious consequence, and cause of much concern and exercise, it is earnestly recommended to Monthly Meetings that they be careful speedily to proceed to the rules of our discipline in practice against such offenders; and when papers of acknowledgment and commendation are offered, such meetings should be well assured that they proceed from a true ground of sincerity and conviction in the party, manifested by a consistency in life and conversation.—*Philadelphia Yearly Meeting Christian Advertis.*

Peat-Making in Scotland.

One of the most frequent incidents of the moorland, about the beginning of June, is peat-making, the most picturesque of Highland outdoor occupations. In those basin-shaped hollows which give the scenery an undulating aspect there are large deposits of peat, formed by the decay of numberless generations of those plants which delight in cool climates and moist soils. The history of this accumulation of carbonaceous matter is exceedingly interesting to the geologist. It furnishes a plausible solution of the difficulties involved in the question of the formation of coal; it provides data by which recent geological changes may be determined with some degree of accuracy; and frequently, owing to its antiseptic qualities, it becomes an archaeological cabinet, preserving the relics of former generations. In none of these aspects, however, are the peat-bogs of the Highland moors so interesting as in their connexion with the habits and customs of the peasantry. It is no easy task to thread one's way among the bogs and marshes where the peat is found, the danger being somewhat imminent of falling plump over the yielding edge into some open pool of inky water, or sinking up to the waist in some treacherous spot veiled over with a deceitful covering of the greenest moss. In the outskirts of this wilderness of bogs the peat-makers are hard at work. One man, with a peculiarly shaped spade, cuts the peats from the wall of turf before him and throws them up to the edge of the bog, where a woman dexterously receives and places them on a wheelbarrow, another woman rolling away the load and spreading it out carefully on some elevated hillock, exposed to the sunshine, in order to dry and harden. And thus the process goes on from sunrise to sunset, with an hour's rest for each meal. Though looked forward to, especially by the younger laborers, with much pleasure, as a delightful contrast to the monotony of their ordinary work about the farm, and as affording peculiar facilities for carrying on the mysteries of rustic courtship, peat-making is most fatiguing work; and when, as is often the case, they have to walk a distance of five or six miles to and from the spot, and to carry on their labors under the scorching glare of the sun, exposed without shelter to torrents of rain or piercing winds, it must be confessed that they pay dearly for the materials which in the long cheerless winter of the North afford them both fire and light. In remote, inaccessible districts, where wood is scarce and coal almost unknown on account of its enormous price, averaging from 30s. to 4l. a ton, peat is the sole fuel used by the inhabitants. The whole of a peat-bog, covering in many places an area of several acres, and occupying what was once evidently the bed of a lake, is parcelled out into several portions, which are generally annexed by the proprietor to the holdings of the tenants on his estate who are the nearest to the spot. These parcels of peat-bog are usually given free of rent; and the whole expense connected with peats is thus only the labor involved in their manufacture and carriage. So rough are the roads, however, and so long the distances to which they have in most cases to be carried, that peat is not so cheap and economical a fuel as might be supposed. The selling price is usually three shillings a cart, and six carts are understood to last as long as a ton of coal. Peat-making is not

nearly so common in the Highlands as it used to be. The facilities of carriage to almost every part of the country by sea and land are now numerous, and coal in consequence is so reduced in price, as to be more within reach of the poorer classes; while the use of that fuel saves time and labor which can be more profitably employed. — *Holidays on High Lands.*

For "The Friend."

It was pleasant and somewhat encouraging to find in the 42d number of the present vol. of "The Friend," the tract addressed "To Friends who desire the Scriptures read in their meetings for worship," and although issued in England where the declension has been greatest, we may hope it will be read by many in this land. Somewhat in the same spirit are the following extracts from the memoir of James Backhouse, published at London in 1870. He was absent from home about nine years, on a religious visit to Australia, South Africa, &c., and is mentioned in the journal of our friend Daniel Wheeler. He says: "In a meeting at Lamas, in Norfolk, a man inquired why the Society of Friends did not read the Scriptures in their meetings for worship? I replied that Friends met on such occasions to worship God, and not for the specific object of christian instruction. That God was worshipped by our directing our attention to Him, and to our own state before Him, and lifting up our hearts to Him according to the feeling we had of our wants, or of His mercies to us, or giving expression to doctrine, exhortation or prayer, according to the impression of duty under the constraining of the Spirit at the time. That we expected that those who met at such times were sufficiently acquainted with Scripture to recognize it when quoted, and that we enjoined on all our members to read the Scriptures in their families daily. That we regarded religious worship and religious instruction as different subjects, each having its proper place, and considering the public reading of the Holy Scriptures as religious instruction, we did not consider its appropriate place to be our meetings for worship." On another occasion he writes: "I have long observed a proportionate shallowness of religious experience to the measure in which vocal exercises were looked upon as essential to public and social worship. Not that I would be understood to think that no shallowness is to be found among Friends, for I have often had to lament its existence. But this I can say, that I have no where met with such depth of religious experience as among the spiritually minded in the Society of Friends, who I trust are not a small number in their body." "It was unhappily the writer's experience to have passed many of the earlier years of his life in other society, both religious and civil, than that which is to be found among Friends; seeking for that without, which is only to be found within, and he can most feelingly and fully indorse the sentiment expressed, that 'he had no where met with such depth of religious experience as among the spiritually minded of the Society of Friends.'"

Let no one imagine that the vain excuses of the creaturely heart will avail with Him who has only given us talents for His use, and who has expressly assured us, He will not fail to require His own at the hands of each of us with usury.

For "The Friend."

The English Governess at the Siamese Court.

(Continued from page 342.)

The little steamer in which she sailed arrived at Bangkok in the evening, and cast anchor. "Before long a showy gondola, fashioned like a dragon, with flashing torches and many paddles, approached; and a Siamese official mounted the side, swaying himself with an absolute air. The red *langotee*, or skirt, loosely folded about his person, did not reach his ankles; and to cover his chest and shoulders he had only his own brown polished skin. He was followed by a dozen attendants, who the moment they stepped from the gangway, sprawled on the deck like huge loads, doubling their arms and legs under them, and pressing their noses against the boards. Every Asiatic on deck, coolies and all, prostrates himself, except my two servants, who are bewildered.

"The Captain stepped forward and introduced us. His Excellency Chow Phya Sri Surin Wongse, Prime Minister of the kingdom of Siam!

"Half naked as he was, and without an emblem to denote his rank, there was yet something remarkable about this native chief, by virtue of which he compelled our respect from the first glance,—a sensibly magnetic quality of tone or look. With an air of command, he beckoned to a young attendant, who crawled to him as a dog crawls to an angry master. This was an interpreter, who at a word from his lord began to question me in English.

"Are you the lady who is to teach in the royal family?"

"On my replying in the affirmative, he asked, 'Have you friends in Bangkok?'

"Finding I had none, he was silent for a minute or two; then demanded: 'What will you do? Where will you sleep to-night?'

"Indeed I cannot tell, I said. 'I am a stranger here. But I understood from his majesty's letter that a residence would be provided for us on our arrival; and he has been duly informed that we were to arrive at this time.'

"His majesty cannot remember everything," said his excellency; the interpreter added, 'You can go where you like.' And away went master and slaves.

She spent the night with an Englishman residing in Bangkok, and the next morning "Soon after breakfast the Prime Minister's boat, with the slave interpreter who had questioned me on the steamer, arrived to take us to his excellency's palace.

"In about a quarter of a hour we found ourselves in front of a low gateway, which opened on a wide court-yard, or 'compound,' paved with rough-hewn slabs of stone. A brace of Chinese mandarins of ferocious aspect, cut in stone and mounted on stone horses, guarded the entrance. Further on, a pair of men-at-arms in bass-relief challenged us; and near these were posted two living sentries, in European costume, but without shoes. On the left was a pavilion for theatrical entertainments, one entire wall being covered with scenic pictures. On the right of this stood the palace of the prime minister, displaying a semicircular *facade*. His excellency's residence abounded within in carvings and gildings, elegant in design and color, that blended and harmonized in pleasing effects with the luxurious draperies that hung in rich folds from the windows.

"We moved softly, as the interpreter led us through a suite of spacious saloons, disposed in ascending tiers, and all carpeted, candelabraed, and appointed in the most costly European fashion. A superb vase of silver, embossed and burnished, stood on a table inlaid with mother-of-pearl and chased with silver. Flowers of great variety and beauty filled the rooms with a delicious though slightly oppressive fragrance. On every side my eyes were delighted with rare vases, jewelled cups and boxes, burnished chalices, dainty statuettes,—*objets de vertu*, Oriental and European, antique and modern, blending the old barbaric splendors with the graces of the younger arts."

After an interview with the prime minister, she was shown to two elegant rooms, reserved for herself and son, in the west end of the palace, which opened on a quiet piazza, shaded by fruit trees, and overlooking a small artificial lake, stocked with pretty, sportive fish.

Her first interview with the king is thus described: "A flood of light sweeping through the spacious Hall of Audience displayed a throng of noblemen in waiting. None turned a glance, or seemingly a thought, on us, and my child being tired and hungry, I urged Captain B—— to present us without delay. At once we mounted the marble steps, and entered the brilliant hall unannounced. Ranged on the carpet were many prostrate, mute, and motionless forms, over whose heads to step was a temptation as drolly natural as it was dangerous. His majesty spied us quickly, and advanced abruptly, petulantly screaming, 'Who? who? who?'

"Captain B—— (who, by the by, is a titled nobleman of Siam) introduced me as the English governess, engaged for the royal family. The king shook hands with us, and immediately proceeded to march up and down in quick step, putting one foot before the other with mathematical precision, as if under drill. Forewarned, I whispered that I should prepare myself for a sharp cross-questioning as to my age, my husband, children, and other strictly personal concerns. Suddenly his majesty, having cogitated sufficiently in his peculiar manner, with one long final stride halting in front of us, and, pointing straight at me with his forefinger, asked, 'How old shall you be.' On this point and some others of a personal nature, she declined to gratify his curiosity; and after being introduced to one of his favorite wives, was thus instructed as to the duties she was expected to perform. "I have sixty-seven children," said his majesty, when he had returned to the Audience Hall. 'You shall educate them, and as many of my wives, likewise, as may wish to learn English. And I have much correspondence in which you must assist me. And, moreover, I have much difficulty for reading and translating French letters; for French are fond of using gloomily deceiving terms. You must undertake; and you shall make all their murky sentences and gloomily deceiving propositions clear to me. And, furthermore, I have by every mail foreign letters whose writing is not easily read by me. You shall copy on round hand, for my readily perusal thereof.'

"*Nil desperandum*; but I began by despairing of my ability to accomplish tasks so multitalentous. I simply bowed, however, and so dismissed myself for that evening.

(To be continued.)

THE WORLD HARVEST.

Selecte

They are sowing their seed in the daylight fair,
They are sowing their seed in the noonday's glare,
They are sowing their seed in the soft twilight,
They are sowing their seed in the solemn night—
What shall the harvest be?

They are sowing their seed of pleasant thought,
In the spring's green light they have blithely wrought
They have brought their fancies from woods and de
Where the mosses creep and the flower buds swell;
Rare shall the harvest be!

They are sowing the seed of word and deed,
Which the cold snow nor, nor the careless heed,
Of the gentle word and the kindest deed
That have blest the heart in its sorest need;
Sweet shall the harvest be!

And some are sowing the seeds of pain,
Of late remorse and in maddened brain,
And the stars shall fall and the sun shall wane,
Ere they root the weeds from their soil again.
Dark will the harvest be!

And some are standing with idle hand,
Yet they scatter seed on their native land;
And some are sowing the seeds of care,
Which their soil has borne and still must bear;
Sad will the harvest be!

They are sowing the seed of noble deed,
With a sleepless watch and earnest heed;
With a ceaseless hand o'er the earth they sow,
And the fields are whitening wherever they go;
Rich will the harvest be!

Sown in darkness, or sown in light,
Sown in weakness, or sown in might,
Sown in meekness, or sown in wrath,
In the broad work-field or the shadowy path,
Sure will the harvest be!

For "The Friend"

Memoirs of Mildred Rateliff.

(Continued from page 335.)

In the spring of the year 1803, Mildred p
a visit among her sisters; and on her ret
felt best satisfied to write a letter to her o
sister, Mary Jones, a copy of which is as
lows:

"Campbell Co., 5th mo. 11th, 180

"Dear Sister Mary,—I received thy v
acceptable letter by William Roadman,
I was glad to see that thou once more thou
it worth thy while to write a few lines to
sister, who felt sometimes, even when am
you, as if she was looked at as an odd on
the family—one who had departed from
way of my education, and had taken upst
principles. I feel that I am looked at v
contemp and astonishment, because I can
agreeably to my conscience, dress, beha
and worship as thou and the rest of my fa
do.

"I cannot easily omit these hints to t
because I so sensibly felt whilst at your ho
your contemptible opinion of me, and of
friends the Quakers. I write this, not bec
I would have thee or any other person thi
am displeased with you, for I know I am
only I wish to let thee know that on som
sions my feelings were not a little hurt,
I wish thee to know I was not insensibl
though I was willing to conclude your opi
and my friends arose from a want of
better acquaintance with the Truth wh
they profess, and I trust in a good t
sure are led and guided by. I much de
in future, thou and all others may be fav
with at least so much charity as not to w
the feelings of a sister or brother in th
of Christ, when they may have their lots
among you. Remember if we do this to
little ones, we do it to Him, whose tende

rd extends to the sparrow upon the house,
p, or the partridge that is hunted upon the
ountains. The condition of these in a relig-
ous sense I sometimes feel to be mine. Not-
withstanding this, I often have to rejoice above
things, that I have been favored to see,
d that without a doubt, my duty to my
od Master; and in a good degree to do it.
ometimes this has been very much in the
ss to my own will. With thankfulness I
ak it, I have learned that if I am the dis-
le of Christ, it must be by taking up my
ny cross in whatsoever He may be pleased
appoint. Let my connexions or acquaint-
e think of me as they will, He has said,
e that forsaketh not father and mother,
ises or lands (when called for) for my
e, is not worthy of me." I look upon the
aning of this to be, that if their ways are
de to appear, by the grace of God in our
e hearts not to be best for us, we must for-
e them, and follow Him who said, "I am
e true Light, that lighteneth every man
e cometh into the world." This is the light
ave for some years endeavored to follow.
ve found it to be a safer guide for me than
ld be pointed out by any human creature.
s it is, dear sister, that has shown me that
ould worship the Father, I must wor-
him in spirit and in truth: not in my
y way and time, but in whatever way he
e pleased to appoint. Oh! saith my
that I may with thee, and all the pros-
ors of His name, be faithful unto death.
I may receive a crown of life. This I
e and pray may be the happy lot of us.
Now I desire, dear sister, that thou may
his with coolness and deliberation, and
gh the contents thereof by the Truth in
own heart. I did not expect to have en-
o so when I began to write, but my
being opened by the spirit of my Master,
to most easy to communicate to thee these
gs for thy consideration."

The following memoranda of Mildred Rat-
cliff represents a soul enamored of her Saviour;
His holiness; and, bowing to His yoke,
was made willing to make any sacrifices
the love of Him who had spoken to her,
calling her to glory and to virtue. The
spring from on high had visited and
her mind, and through its constrain-
power had wrought obedience to the uni-
al and saving light of Christ, by which
was engaged in good earnest, cheerfully
sign herself to the pursuit of His king-
dom, and the things that pertain to life and
eternity, notwithstanding all the difficulties
temptations that might attend the presen-
ce of what now had become the great-
est of her life. The sequel will prove the
salable gain that accrued to her through
pendending goodness and mercy of her
and Master; enabling her to adopt the
age the spouse of Christ did of Him:—
t down under his shadow with great de-
and his fruit was sweet to my taste,
ought me to the banqueting-house, and
nager over me was love." "Or ever I
ware, my soul made me like the chariots
uni-nadib."

at encouragement there is in such ex-
s for all of us; and especially those in
life, who have felt the tenderly drawing
ce of the Saviour's love, and have heard
ll, small and pleading voice within, to
up all for His sake and their precious
sake, which He came and died to save,

by opening up "a new and living way" by
which all might come to Him: how would He
then beautify the place of His sanctuary, and
make the place of His feet glorious; how
would He establish His kingdom within them,
consisting in righteousness, and peace, and
joy in the Holy Ghost: how would He make
such to be as plants grown up in their youth,
and as corner-stones polished after the simi-
tude of a palace. Mildred Ratcliff found in
the obedience which is of faith to the Em-
manuel her soul, all that that soul stood in
need of—"Wisdom, righteousness, sanctifica-
tion and redemption;" her all in all. And
the preaching of her life is: Follow me as I
have followed Christ. "For my Beloved is
mine, and I am his: He feedeth among the lilies."
He is the chiefest among ten thousand;—
altogether lovely. "Let my Beloved come
into his garden (the willing and obedient
heart), and eat his pleasant fruits."

"1st mo. 1st, 1805. How can I forbear to
pen down the wonderful goodness of my God!
Oh! the overflows of his love that I have
felt this day. Oh the new found songs of
praise that I have been favored to sing! yea,
may I not say acceptable hallelujah to the
Lord God of my life. Teach me, O my Father!
and I will confess to thy goodness, and declare
of thy wonderful works,—thy goodness, even
to thy poor worm, whilst my hands have been
employed about the necessary business of the
day. How hast thou arisen in my heart this
morning, and been felt to reign above all in
my inward parts. Oh! how have the incomes
of thy animating love overcome and reigned
above all, raising in my inward life new found
praises, adoration, thanksgivings, and suppli-
cations unto Thee, who liveth and abideth
forever. I have said in my heart, and abideth
in wonder, love, and praise; for Thou art
holy! holy! holy! Lord God Almighty! With
the beginning of the new year Thou hast been
graciously pleased to raise in my soul new
and fervent desires after thy glorious presence;
and humbling intercession that it may be con-
sistent with Thy will to preserve me, who am
but a little one, in renewed watchfulness to
Thee the Father and God of all strength!
Pleading in my heart, Lord be with me if it
pleaseth Thee through the vicissitudes of this
approaching year! May thy right hand sup-
port me, and thy left hand bear me up. Oh
dependent children, wherever dispersed the
world over; be pleased to be with me, one of
the least of all thine heritage! Hold me, as
me, as under the shadow of thy extended
wings! Preserve me, O thou strongest One,
from my strong enemy! Discover unto thy
of my soul's potent enemy, which may be laid
to catch my feet during the approaching year!
Oh may I keep a single eye to Thee! May I
ever be sensible of the necessity of lying low
in the valley of humility! May I ever feel
my own nothingness; and that my whole de-
pendence is on Thee alone! May I often say
in my heart, Father, let not thine hand spare,
nor thine eye pity, until thou hast so win-
nowed my chaff, so purged, washed, and made
white as well-pleasing in thy sight. Thus shall
I be nothing but what I am in Thee. Then
able to say, thy holy Apostle Paul, I may be truly
able to say, It is through the grace of my God,
that I am what I am. Oh Father! Thou

knowest that this is more the hungering and
thirsting of my mind, than for jewels set in
rings of gold. Surely I know thy love is
sweeter than the honey in the honey-comb.
In the arising thereof, my inward life is en-
abled to mount upward as on the wings of an
eagle, to walk without being weary, and to
run without fainting. Oh! may I be favored
to dwell deep in thy power; that if it shall
please Thee before the beginning of another
year to call me from works to rewards, and
I may be no more seen of men, I may be so
filled with thy love and animating presence,
that the cry of my spirit may be, 'Oh death!
where is thy sting? Oh grave! where is thy
victory?' To this, saith my soul, amen and
amen.

MILDRED RATCLIFF.

(To be continued.)

[The following extracts are taken from the
Report of the Executive Board of the Friends
Association of Philadelphia and its vicinity,
for the aid of Colored Freedmen, read at the
meeting of the Association, 4th mo. 17, 1871.]

That notwithstanding times of discouragement
during the past year, when the Freedmen
seemed to be nearly forgotten by their
Northern friends, the aggregate receipts show
that there is still a great interest felt in their
welfare.

The total amount of contributions during
the year ending 4th month, 11th, 1871, has
been \$11,197, and the aggregate from the be-
ginning of our work in 1863 to this time
\$264,612.98.

We have received from Friends in Ireland
through Samuel Bewley \$806.67, being the
proceeds of £150; from Friends in England
\$92, beside £10 sent to the teachers at Clover,
Virginia, specially for physical relief. Though
these sums are smaller than in previous years
yet we have satisfactory evidence of the con-
tinued interest of our friends abroad, notwith-
standing their active sympathies have been
so largely drawn upon on account of the suf-
ferings occasioned by the war in Europe.

The receipts from the Freedmen's Bureau
for the year have been \$2912.50, and from the
Peabody Fund to our teachers \$294. These
sources of revenue can no longer be counted
upon, the Commissioner of the Freedmen's
Bureau having informed us under date of 3d
month, 3d, 1871, that all hope of further ap-
propriations by Congress for this work is
abandoned.

The condition of affairs in North Carolina
has been very disheartening to the Freedmen
in that State, and ill calculated to increase
their pecuniary resources. If anything, we
think they have been less able than before,
to aid in their own support. Notwithstand-
ing this state of things the receipts from the
Freedmen during the past year for books and
tuition have amounted to \$1406.42, beside
\$1566.58, paid in the way of board to the
teachers; total \$2973, a very creditable
contribution towards their own education.

* * * * *

Twenty-one schools were kept in operation
during last summer, that course seeming de-
sirable from various causes. Most of the
larger schools, however, were closed from the
1st of the 6th to the 1st of 11th month.

* * * * *

Largest number of pupils enrolled 3574.
Average attendance during the summer 813,
during the present term 1826; average num-
ber of teachers during the summer 24, during

the term 40. Average number of school-sustained during the summer 21, during the present term 24.

* * * * *
In the plan of education adopted it has been our aim to give a thorough groundwork in a few practical branches rather than a superficial acquaintance with varied departments of knowledge. This course steadily pursued, though it may have occasioned some disappointment to ambitious pupils, has in the main been successful.

The schools are carefully graded. They are frequently visited and examined by the Superintendent, and their rate of proficiency is noted by him from time to time. Classes range from the Primer to the Fifth Reader, and from the first elements of Geography and Arithmetic, to the Intermediate Geography and Practical Arithmetic. Grammar, History and Philosophy are studied to some extent. As a class the children read well, having naturally good voices; they compose fluently, choosing, however, fine rather than accurate language. They learn descriptions in Geography, and definitions in Grammar with facility, but in writing and Orthography they are not so proficient.

Their ingrained habits of tardiness, and irregular attendance at school, though in large measure due to causes beyond their control, have in part been overcome by the patient and continued efforts of their instructors. The School Reports, from year to year, show a gradually increasing average attendance in proportion to the number enrolled.

The importance which even the most ignorant among them attach to the attainment of an education, the self-denials and privations which they willingly endure to avail themselves of the privileges of school, and the zeal with which they apply themselves to study, often excite our admiration, and encourage us to perseverance on their behalf.

The only Normal class sustained during this year has been that at Danville; this now numbers 30 pupils who acquit themselves creditably under the charge of a trained Normal teacher from Maine. One half or more of the class have been at different times engaged as teachers, and are therefore the more earnest in applying themselves to study.

* * * * *
If the public free school system were established at all points, and on a good basis, it would relieve the Association from further care in the matter of education. But these schools are only continued in force four or five months in the year, the teachers very inadequately and irregularly paid, in some cases not at all, and as the schools must be free, they are deprived of the tuition money, the payment of which is useful both to teacher and freedmen, eking out the meagre salary of the former, and teaching the latter habits of self-reliance and self-support.

So imperfect is the school system in North Carolina, and so crushing the opposition to the elevation of people of color, that there is reason to fear, if left quite to themselves, a short career of feeble schools would soon leave this portion of the population again entirely without means of education.

Another obstacle to the carrying out of any thorough system of common school education is the desperate financial condition of the State, which in conjunction with the want of appreciation of the value of education, almost

precludes the possibility of any early assumption by the commonwealth of the charge which in our latitude, we are accustomed to regard as a solemn obligation to the poorest citizen.

We have thankfully to acknowledge that, though several of our schools are situated in localities where much excitement has at times prevailed, they have been undisturbed, and that our superintendent and teachers, quietly pursuing their round of duties, have been mercifully preserved from all harm.

Great physical distress has prevailed at Danville, and in North Carolina during the past five months. Sickness engendered by the severity and dampness of the winter, and the lack of proper food and clothing has been almost universal. In the poor cabins of the Freedmen death has been a frequent visitor, removing by scores the young, the aged, and the feeble from a life in which truly they had found only much tribulation. Our agents, happy to act as almoners of the charities bestowed, have devoted much of their time and strength to the task of alleviating suffering, seeking out those that were "ready to perish," feeding the hungry, clothing the naked, and "caring for the widows and the fatherless."

Notwithstanding the liberal contributions received for this special use the destitution has been so wide-spread and in many cases so extreme that our resources have been heavily taxed to meet the unlooked for outlay, but we could not disregard the needs of those who had no other earthly friends to look to, and we have satisfaction in believing that the money has been judiciously applied.

The total amount expended for the relief of the destitute has been \$2449.81 for the year.

* * * * *
Continued attention has been given to the distribution of copies of the Holy Scriptures, and other suitable reading matter, and we have increasing evidence of the importance of this work. * * * * *

We have again to acknowledge valuable gifts from the "Bible Association of Friends," the "American Bible Society," and from several interested Friends in England and this country.

Such is the résumé of the operations of your Board in the past year, and although there is no marked change in the aspect of affairs, and no striking events have transpired, the good work of elevating the Freedmen has been steadily progressing.

The raising of four millions people from the state of degradation into which they have been sunk by generations of slavery is not the labor of a year, nor of years, but that of an age, and it may as much occupy the attention of our children as it does our own. We do not regard this as discouraging, however, feeling amply compensated for any expenditure of time and money, by the consciousness of being engaged in lifting a numerous people out of a state bordering on barbarism into civilization, enlightenment, and the enjoyment of the truths and privileges of the blessed gospel.

Selected.

You should never despair.—"I was desperate," says Cecil, "I was determined to go on board a privateer. But I had a pious mother. She talked to me, and went while she talked. There are soft moments, even to desperadoes: God does not all at once abandon

them." One of the largest and most intelligent audiences in London were once exceedingly moved to hear him exclaim from the pulpit with great candor and humility, "A public witness for God and his truth, I must tell you that you should never despair. A distressed woman ever hoped more again, hope, than the mother of your preacher. She prayed, and waited patiently. She trusted in an Omnipotent Arm. She never prayed, but she instructed his mind; then waited God's season. She lived long enough to hear that child preach the gospel which he once despised. And she said, 'N Lord, lettest thou thy servant depart in peace.'" *—*

The Lord can turn the hearts of his children, even as a man turneth the water-course in his field. He waiteth long to be gracious.

The Lord can change this evil heart,
And give a holy mind,
And his own heavenly grace impart,
Which those who seek shall find.

The Cornplanter Indians.

The Committee of Philadelphia Yearly Meeting having charge of Indian affairs, at different times within past years, taken action in order to relieve the descendants of the celebrated chief, Cornplanter, from ones embarrassment, occasioned by credit who had obtained judgment against the property held by them, for debts incautiously contracted. It is but a few years since a sum of money was raised by some members of the Committee to satisfy such a judgment, thus prevent the land being sold for amount claimed. From the following communication, originally prepared for the *mantown Telegraph*, it appears the Cornplanter has successfully aided those Indians to obtain from the Legislature of Pennsylvania for the passage of a law which is designed to exclude the possibility of such sacrifice of landed estate of the old chief being made.

"In the year 1791 the State of Pennsylvania gave to Cornplanter, a distinguished chief of the Seneca Nation, for important services rendered prior to that period, a tract of land containing 780 acres, lying on the Allegany river, in the county of Warren, and near the State line of New York. Here the said chief lived in peace and comparative comfort until 1836, when he died at an advanced age, testate, leaving a numerous family of descendants. Serious embarrassments having occurred since his death, at different times in consequence of judgments having been obtained by white men against his heirs for debts contracted by them, by which their entire estate was greatly endangered, the Friends who for a long time have been endeavoring to promote their welfare, advised them to apply to the Legislature for an act, not only authorizing a partition of their land among the respective heirs, (now more than 200 in number), so that it should be held in severalty, but releasing it from judgment for debt, and exempting it from taxation, and saving to an heir or to a member of the Seneca Nation.

During the past month such a petition was presented, and to the credit of our country it passed both branches without amendment, being promptly signed by our Governor, and passing free of all delay through the Secretary's office, (and in a late to thank him we will do so now) has

some law, to which we are disposed to cling with something akin to State pride. In the present term of the court at War., Judge Johnson will apply for the appointment of three commissioners to carry into effect the provisions of this benevolent act, for the confirmation of guardians for the orphan heirs.*

The white man may hereafter cast his rancorous eye on this last and only asylum for Indians within our borders, but that is all *now* can do, the day for making it his sacred, and passed forever!

We believe that this act of protection so earnestly granted to those whose ancestors ended the hand of friendship to the early sowers of our great commonwealth, will not essentially promote their civilization and effort, but will be cordially approved by all who are interested in the honor of our State in sympathy with a deeply-injured race. Acts of justice was Pennsylvania settled, had political virtue which renders to every man his due. Our illustrious founder proscribed by a scrupulous adherence to this righteous rule; our present legislators have, by their recent act, endorsed his Christian policy and may they too have their reward."

For "The Friend."

Plain Language.

is somewhat hopeful to notice in the columns of "The Friend," the articles in reference to the correct use of plain language. It may be that this subject has more importance than is commonly attached to it, whatever there may be of sound judgment or correct practice among us, should in any way be brought to bear against the imbecile habit alluded to. It might avail but to repeat that the use of thee in the native case, is at variance with the rules of grammar. Neither would it be likely to persuade those who are in this habit, to tell us that it is not the form of plain language which G. Fox, and his contemporaries truth felt bound to adopt. But if we would intimate that "the light" by which this practice was discovered to ancient Friends their duty, would if followed with a sincere heart, lead us to the same testimony in its plainness, it would present a view of the subject that should bring us to serious reflection. It may be admitted that in the avoidance of "thou" to a single person, we fulfil the very condition upon which this testimony is based. But has it not occurred to many of us when we have listened to the words of some Friend of our acquaintance, that from the lips of some Friend of our acquaintance, sedate appearance, that he had passed through the ordinary experience, a little below the ordinary depth. Have not many looked upon the practice, as desirable, but a kind of crowning mark of the character of the devoted Christian? Have we not thought the time might come when practice would be required of them, for the time being their conscience is bound to speak as others speak. It would be a true assumption that such reflections not infrequently with awakened or only awakened minds, it goes to prove the high mission of the Society of Friends in the world, can never be completely lost, while this corrupt language is in vogue. It may not be criminal in a brother

or sister to use such language, who has felt nothing of its impropriety. But we may question whether those who are settling in the habit, have sufficiently heeded the injunction "be ye perfect" even as your Father who is in Heaven is perfect. It may well be questioned whether in such cases, we are laying our religious principles upon a firm foundation.

At a time when our testimony to plain language is assailed both from within and without, it is of great importance that those who profess to maintain it, should be guarded against any thing which may tend to weaken it themselves. If any find that the use of the pronoun "thou" would involve in their case a life of less conformity with the world, the reflection may prove an admonition for their profit. If there be those to whom the practice seems easy,—whatever the particular motive, it were well for Friends to strengthen the hands of one another in the support of "sound speech that cannot be condemned."

THE FRIEND.

SIXTH MONTH 24, 1871.

There has been no act of the Government, since the proclamation of President Lincoln liberating the slaves, which is so cheering and encouraging to the Christian and philanthropist, as its ratification of the treaty prepared by the Joint High Commission which met at Washington, to examine into and if possible settle the terms on which the subjects of dispute between Great Britain and the United States should be brought to a peaceful solution. The causes of contention between the two governments were peculiarly calculated to arouse national pride, and involve what the world considers national honor, and it was easily seen that while they remained unremoved, some outward and unlooked for occurrence might speedily inflame the passions of the people, and hurry the two nations into a contest which, beside its wickedness, would necessarily be an unmitigated detriment to both. The course which, after several ineffectual attempts at diplomatic negotiation, was finally adopted by the two governments, to appoint Commissioners who should meet in friendly conference, investigate the whole matter dispassionately, agree as to what should be conceded on each side, and recommend the manner by which the other international difficulties should be terminated, with whichever party it may have originated, is an unusual testimony to the wisdom and sense of right of both; and without pretending to judge of the exact bearing of the political principles involved in the conclusions arrived at, we think it will be acknowledged that the terms of the treaty show that the Commissioners brought to their work breadth and clearness of view, and were actuated by moral qualities accompanying nobleness and impartiality.

If we may estimate the art of diplomacy, and the characteristic of what has been considered the greatest proficiency in it, by the revelations made in the history of the past, we are led to the conclusion that it was considered necessarily to involve duplicity, and the skilful arrangement of facts and inferences, true or feigned, so as to deceive; each party considering itself justified to employ whatever means could be pressed into service

that was likely to secure its desired end. Hence the almost invariable discovery by one or the other of the contracting powers, mostly after it was too late to rectify, that it had been overreached, and must suffer the penalty until an opportunity might present to obtain revenge. But it is the concurrent testimony of the members of this Commission, that when they were convinced there was a mutual desire to make "an honest endeavor to meet the just claims of both parties," the way was at once open to bring the points which had so long and so dangerously stood conspicuous in the dispute, into the clearest light, and by frank and unreserved discussion, to come to such an arrangement of them, as would insure an "amicable settlement of all causes of difference between the two countries."

In national controversies, as well as others, both parties are almost sure to carry their accusations or their respective claims, further than truth and justice warrant, and each resists its opponent in proportion to his assumed freedom from wrong, or his insisted monopoly of right. But if either manifests a disposition to yield, so far as to treat his antagonist's demands and arguments with the respect that implies a willingness to admit what is true and just, the example can hardly fail to be contagious, and the door is thus open for good results.

Contrasting the stipulations of this treaty, providing for the removal of the irritating causes that have so long prevented the free exchange of the fraternal feeling that ought to exist between the mother country and her offspring, and the horrors and losses of a war which might have sprung from them, had they continued to rankle in the national breasts, the advantages it confers on both countries are incalculable. But beside this powerful recommendation to pursue so honorable a course in the treatment of political affairs, it opens the way for further good, by its example giving an impulse to a reform which, perhaps, at the time, there was no intention to initiate or pursue. There are many changes going on in the world, in the social relations and in the dominion of Science, and we may surely believe there are changes for the better also taking place, silently but effectively, in the minds of very many in relation to the obligation to observe the requirements of the religion professed from generation to generation; but which has been imperfectly understood, or at least in some respects generally disregarded. In no one respect have the evil passions of men more disastrously betrayed them into gross violation of the plainest principles of Christianity, than in pursuing the insane and destructive policy of war. Contrary to reason, contrary to the whole tenor of the gospel, and to the clearly marked interests of humanity, throughout every age since the advent of Christ, the sword has been the accepted arbiter of disputed rights, and the avenger of injuries, supposed or real, among the nations professing to be his disciples. Even in this nineteenth century, though the wickedness and folly of the war policy are clearly demonstrated by many good men in different countries, such is the power of custom and the force of man's carnal propensities, and such the treason of the pulpit to the cause of the Prince of Peace, that it maintains its tyrannical sway over the dictates of religion, and all the finer feelings of humanity. But may we not hope that by

*Application has been made and three members of the committee appointed by the court.—EDTORS.

the christian and rational course here pursued by the two most enlightened nations of the earth, for the adjustment of their serious differences, the ground has been so broken up about the roots of this monstrous evil and scourge of the race, as to prepare the way for its being eradicated. It certainly powerfully commends a peaceful and honorable way for other nations to escape from political entanglements, and the loss, sufferings, and perhaps ruin, inseparable from war; and it may well induce sovereigns and statesmen, when hereafter called on to seek for settlement of national disputes, to act in accordance with larger and worthier views of the religion they profess, and of the rights and interests of the people they govern.

For years there have been strong indications of the development of wiser thought and better feeling among the people in different countries, in the question having been raised, why they should tamely submit to suffer the evils of war, because their rulers chose to resort to it, and their forefathers had endured the misery it inflicted? and notwithstanding interested parties have labored to silence the inquiry, by repeating more emphatically the necessity and the rightfulness of appealing to the sword, still the demand is reiterated, why those who gain the least and suffer the most should take this for granted, and continue the barbarous practice? Will not this practical example of the incomparable benefits of this mode of removing difficulties and settling disputes, strengthen this rational inquiry and its convictions, until nations and their rulers learn to estimate the work of the Joint High Commission as a great boon to the civilized world.

SUMMARY OF EVENTS.

FOREIGN.—The latest advices from Paris report the city to be healthy and business improving. Crowds of visitors arrive by every train. It is announced that General Cisneros is alive and has been arrested. The whole number of arrests since the capture of Cisneros is stated to be 18,000. A very large number of prisoners are awaiting trial, and some of the cases will probably consume a great deal of time.

Trochu has made a series of able speeches before the Assembly in justification of his administration. It appears that he urges the necessity of stipulating that participation in the war. One of his greatest difficulties in the defence was the disorderly element in the population.

A manifesto, signed by eighty-one Republican deputies of the Assembly, has been issued. It accuses the monarchist deputies of not keeping the agreement made at Bordeaux, whereby the republicans stipulated that participation should be avoided, and charges that members from the provinces are intriguing for the restoration of a monarchy, and for intervention in Italy in favor of the Pope. The *Temps* remarks, that French bishops are actively moving for the reinstatement of the Pope in his temporal possessions.

A London dispatch says: Persons arriving from Paris say that half has not been told of the troubles in that city, and that the destruction of life and property vastly exceeds both the government and newspaper accounts.

The *London Times* says, the discussion in the House of Lords shows that the advantages of the Treaty of Washington greatly overbalance its deficiencies. The machinery of arbitration is satisfactory, and the claims on both sides could hardly be settled in a better way.

A gang of supposed Fenians broke into an armory at Mallow, Ireland, and stole 29 rifles.

The owners of coal mines in South Wales, have agreed to settle their differences with the miners by arbitration, provided the whole subject of wages is referred.

The German Parliament has passed the military pensions bill, and they a bill stipulating that partisan officers and statesmen who distinguished themselves in the war. Four million thalers is placed at the disposal of the emperor for this purpose.

A marriage has been arranged between the Princess Thyra, of Denmark, and the Duke of Edinburgh, second son of Queen Victoria.

The workmen of Paris are almost unanimously Communist, and bitterly hate both Thiers and the late emperor.

The Bank of Prussia has been authorized to establish branches in Alsace and Lorraine.

The triumphal entry of the great German army into Berlin took place on the 16th, amid great enthusiasm. The city was crowded with people who had been thronging the streets for the previous two weeks. The troops marched between ten thousand cannon ranged in two rows, which had been taken during the war. The ceremonies closed with the conferring of honors on the victorious commanders.

The Belgian government has asked of the Chambers for 25,000,000 francs for public works. Authority is also requested for the negotiation of a loan of 50,000,000 francs.

The jubilee of Pope Pius IX. was celebrated at Rome on the 16th, the day on which he completed the twenty-fifth year of his pontificate. More than 5,000 pilgrims from all parts of the world were present. The pope, from the Italian Minister of the Interior to Prefects, instructed them to give full liberty to the people throughout Italy to celebrate the Pope's jubilee, but to take proper precaution against disturbance. Pius IX. is the first Roman Pontiff who has served the full term of two pontificates.

A Stockholm dispatch of the 16th says: The railway from Stockholm to Christiana was opened to-day. The trip between the cities is now made in fifteen and a half hours.

The Mexican Congress has adjourned. The national government has succeeded in putting down the insurrection in Guerrero, and crushing that at Tampico, by military power. The government of Juarez appears to be firm and as little objectionable as any that Mexico has had of late years, but it encounters opposition in almost every State.

A London dispatch of the 19th says: The Assembly, to-day, passed a bill giving natives of Alsace and Lorraine, residing in France, the right to vote, and making them eligible to the Assembly. Jules Favre informed the House that 180,000 French prisoners remained in Germany, but they were returning at the rate of 3,500 daily.

Paris dispatches of the 19th state that 2,500 women, convicted of setting fire, or attempting to set fire to buildings in Paris, have been sentenced to transportation to New Caledonia. A special dispatch to the *New York World* says: Indications of a renewal of the insurrection multiply. Workingmen openly insult the Government. Attempts at assassination and incendiary continue.

The father and mother of General Rossel have implored mercy for their son of Thiers, but the president is unyielding, and says the law must take its course.

On the 19th, the British House of Lords debated the declaration of Paris, 1856, abolishing privateering. Earl Cowper thought the refusal of the United States to agree to the declaration was no ground for its repudiation by Great Britain. The Earl of Malmesbury denounced the convention, and quoted opinions pronounced against it by the late E. G. Kerley and Sir G. Compton Lewis. The refusal of the American government to adhere to the agreement made it worthless. Earl Granville declared it was not within the power of England to repudiate a treaty which had been signed by all the great powers of Europe. At a caucus of the Tory members of the House of Lords it was decided to oppose the abolition of the purchase system in the army, and to accept the ballot bill.

A large number of the members of the International Society have been arrested in Brussels. They appear to be in correspondence with the disturbers of order in Paris.

It has been discovered which was concocted in London, Florence and Paris, by members of the International Society, for the assassination of the Pope on 17th inst.

The Pope's jubilee, it is stated, was attended with great eclat. All the European sovereigns, including Queen Victoria, were present.

London, 4th mo. 19th.—Consols, 92½. U. S. Bonds of 1867, 90½; ditto, 10-40's, 5 per cents, 88½.

Liverpool.—Uplands cotton, 8½d.; Orleans, 8½ a 8½d. Sales of the day 25,000 bales. Market buoyant.

AGRICULTURE.—Miscellaneous.—The Department of Agriculture has received the returns from 24 productive districts of each of the cotton States, finds that between 14 and 15 per cent. less land than in 1870, has been planted in cotton this year. The condition of

the growing plant under an average in nearly every State. The spring has been unusually wet and cold, retarding the growth and causing many of the plants to turn yellow. It is estimated that the crop will not exceed 3,500,000 bales, and an inopportune season would reduce it to 3,000,000 bales or less.

The interments in Philadelphia last week numbered 283, viz: 161 males and 122 females. There were deaths of consumption, 26 cholera infantum, 14 convulsions, 21 debility, marasmus 11, old age 5.

The post office department has been officially notified of the establishment of a mail route of British steam and a monthly mail service between Sidney, New South Wales and San Francisco, Cal., via the Fejee Islands and Honolulu. There are now two lines of mail steam running monthly between the United States and Australian colonies.

The latest information received at the Indian Bureau, the Indians everywhere are quiet, with exception of those in Arizona and northern Texas. The frontier of the latter State, Indian ravages are precluded.

The Markets, &c.—The following were the quotations on the 19th inst.—New York.—American gold, 1 U. S. sixes, 1881, 117½; ditto, 1868, 114½; ditto, 10 5 per cents, 110½. Superfine flour, \$5.45 a \$5.75; brands, 26 a \$10.75. No. 1 Chicago spring wheat, \$1.51; No. 2, do. \$1.50; amber western, \$1.60. 6½ a 68 cts. Western mixed corn, 75 a 76 cts; yellow 77 cts. Corn, 91 a 92 cts. Meal, 10½ a 11 cts. 100 lbs. Philadelphia.—Cotton, 21 a 21½ cts. for uplands New Orleans. Superfine flour, \$5.25 a \$5.50; brands, \$5.75 a \$9. White wheat, \$1.67 a \$1.75; 1868, \$1.64 a \$1.66; Indiana red, \$1.60. Rye, \$1. \$1.30. Western mixed corn, 75 a 76 cts.; yellow 77 cts. Corn, 91 a 92 cts. Meal, 10½ a 11 cts. 100 lbs. extra, 10 a 10½ cts. for a few cts. 6½ a 7 cts. for fair to good, and 4½ a 6 cts. for common. About 14,000 sheep sold at \$7.75. Corn, 91 a 92 cts. Meal, 10½ a 11 cts. 100 lbs. extra, for corn fed. St. Louis.—Superfine flour, \$5.45, \$5.75 a \$6. No. 2 red winter wheat, \$5. No. 2 spring, \$1.18. Mixed corn, 51½ cts. Oats, 52 cts. Chicago.—No. 2 spring wheat, \$1.20½. 2 mixed corn, 53½ cts. No. 2 oats, 48½ cts. Rye, 74 cts. *Genesee*, 80 cts.

No. 1 red winter wheat, \$1.45. Corn, 57 cts. 53 a 57 cts. Lard, 10 cts.

FRIENDS' BOARDING SCHOOL FOR IND CHILDREN, TUNESSA, NEW YORK.

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm needed with it. Apply to

Ebenezer Worth, Marshallton, Chester Co.
 Thomas Wistar, Fox Chase P. O., Philadelp.

 Joseph Scattergood, 418 Spruce Street, do.

MARRIED, at Middleton, Ohio, Fifth mo. 25th, DAVID ELYSON, of Upper Springfield, to MARGARET daughter of Amos Cope, of the former place.

DIED, in this city, Fourth mo. 15th, 1871, at the decease of her father, George Reid, ESTHER F., w. Nathan Cope, in the 25th year of her age. She her protracted illness with christian fortitude and patience, evincing to those around her that the impetus of her soul's salvation was silently and steadily progressing. A child of innocence and simplicity was manifested, and she frequently expressed gratitude to her Heavenly Father, and to all those administered to her comfort. On being asked why she could give up all her earthly ties, she answered that she resigned all into the hands of Israel's God. Her cheerful and happy resignation, and her cheerful spirit might be brought up in the nurture and affection of the Lord. A short time before the close affectionately counselled and advised her relative friends; after which her work on earth appeared finished, and she quietly and peacefully departed, leaving the mourning bells to toll for her. Her dear spirit is being rest the mansions of the blessed, and on the morning of Fifth mo. 11th, 1871, a short illness, at the residence of her nephew, J. M. Brinton, in Philadelphia, SUSAN F. BRINTON, aged 6th year, a member of Sadsbury Monthly meeting.

Single Copies, when paid quarterly in advance, five cents.

For "The Friend,"

The English Governess at the Siamese Court.

(Continued from page 248.)

"When next I 'interviewed' the king, I was accompanied by the premier's sister, a friendly woman, whose whole stock of English was, 'Good morning, sir'; and in this somewhat irrelevant greeting, a few times in an hour, though the hour were short, she relieved her pent-up feelings, and gave expression to her sympathy and regard for me.

We landed at a showy pavilion, and after reversing several covered passages came to a carriage guarded by Amazons, to whom the lady was evidently well known, for they easily opened the gate for us, and 'squatting' till passed. A hot walk of twenty minutes brought us to a curious oval door of polished silver, which opened and shut noiselessly in a richly ornate frame. This admitted us to a retreat, on one side of which were several temples or chapels in antique styles, and on the other a long dim gallery. On the marble floor of this pavilion a number of interesting children sat or sprawled, and quaint babies tottered or frolicked in their nurses' arms. It was indeed, a grateful change from the oppressive, irritating heat and glare through which we had just passed.

The loungers started up to greet our friendly guide, who humbly prostrated herself before them; and then refreshments were brought in on large silver trays, with covers of scarlet silk in the form of a bee-hive. As knife or fork or spoon was visible, boy after boy came to content ourselves with grapes, wherewith we made ourselves an unctuous but cheerful show for the entertainment and edification of those juvenile spectators of the royal family of Siam. I specified to my hand to them, for they were, without exception, attractive children; they shyly shrank from me.

"Thus the better part of the day passed, and longer I rested dreaming there, the more animated seemed the world within those walls. I was aroused by a slight noise proceeding from the covered gallery, whence an elderly woman appeared bearing a candlestick of silver with branches supporting four lighted candles. I afterward learned that these were

daily offerings, which the king on awakening from his forenoon slumber, sent to the Watt Phra Kéan. This apparition was the signal for much stir.

"I readily guessed that his majesty was the cause of all this bustle, and began to feel uneasy myself, as my ordinal approached. For an hour I stood on thorns. Then there was a general frantic rush. Attendants, nurses, slaves, vanished through doors, around corners, behind pillars, under stairways; and at last, preceded by a sharp, 'cross' cough, behold the king!

"We found his majesty in a less genial mood than at my first reception. He approached us coughing loudly and repeatedly, a sufficiently ominous fashion of announcing himself, which greatly discouraged my darling boy, who clung to me anxiously. Shaking hands with me coldly, but remarking upon the beauty of the child's hair, half buried in the folds of my dress, he turned to the premier's sister, and conversed at some length with her, she apparently acquiescing in all that he had to say. He then approached me, and said, in a loud and domineering tone:—

"It is our pleasure that you shall reside within this palace with our family!

"I replied that it would be quite impossible for me to do so; that, being as yet unable to speak the language, and the gates being shut every evening, I should feel like an unhappy prisoner in the palace.

"Where do you go every evening?" he demanded.

"Not anywhere, your majesty. I am a stranger here."

"Then why you shall object to the gates being shut?"

"I do not clearly know," I replied, with a secret shudder at the idea of sleeping within these walls; "but I am afraid I could not do it."

I beg your majesty will remember that in your gracious letter you promised me "a residence adjoining the royal palace," not within it!

"He turned and looked at me, his face growing almost purple with rage. "I do not know I have promised. I do not know former condition. I do not know anything but you are our servant; and it is our pleasure that you must live in this palace, and—you shall obey." Those last three words he fairly screamed.

"I trembled in every limb, and for some time knew not how to reply. At length I ventured to say, 'I am prepared to obey all your majesty's commands within the obligation of my duty to your family, but beyond that I can promise no obedience.'

"You shall live in palace," he roared,—"you shall live in palace! I will give woman slaves to wait on you. You shall commence royal school in this pavilion on Thursday next. That is the best day for such undertaking, in the estimation of our astrologers."

"With that, he addressed, in a frantic man-

ner, commands, unintelligible to me, to some of the old women about the pavilion. My boy began to cry; tears filled my own eyes; and the premier's sister, so kind but an hour before, cast fierce glances at us both. I turned and led my child toward the oval brass door. We heard voices behind us crying, 'Mam! Mam! Mam!' I turned again, and saw the king beckoning and calling to me. I bowed to him profoundly, but passed on through the brass door. The prime minister's sister bounced after us in a distraction of excitement, tugging at my cloak, shaking her finger in my face, and crying, 'My di! my di!' All the way back, in the boat, and on the street, to the very door of my apartments, instead of her joyful 'Good morning sir,' I heard nothing but my di.

"But kings, who are not mad, have their sober second-thoughts like other rational people. His golden-footed majesty presently repented, and in due time my ultimatum was accepted."

"On the Thursday appointed for the opening of my classes in the palace, one of the king's barges conveyed us across the Meinam. At the landing I was met by slave-girls, who conducted me to the palace through the gate called Patoo Sap, 'Gate of Knowledge.' Here I was received by some Amazons, who in turn gave notice to other slave-girls waiting to escort us to a pavilion—or, more correctly, temple—dedicated to the wives and daughters of Siam. The profound solitude of this refuge, embowered in its twilight grove of orange and palm trees, was strangely tranquillizing. The religion of the place seemed to overcome us, as we waited among the tall, gilded pillars of the temple. On one side was an altar, enriched with some of the most curious and precious offerings of art to be found in the East. There was a gilded rostrum also, from which the priests daily officiated; and near by, on the summit of a curiously carved trunk of an old Bho tree, the goddess of Mind presided.

"The floor of this beautiful temple was a somewhat gaudy mosaic of variegated marble and precious stones; but the gilded pillars, the friezes that surmounted them, and the vaulted roof of gilded arabesques, seemed to tone down the whole to their own chaste harmony of design.

"In the centre of the temple stood a long table, finely carved, and some gilt chairs. The king and most of the nobler ladies of the court were present, with a few of the chief priests, among whom I recognized, for the first time, his lordship Chow Khoo Sáh.

"His majesty received me and my little boy most kindly. After an interval of silence he clasped his hands lightly, and instantly the lower hall was filled with female slaves. A word or two, dropped from his lips, bowed every head and dispersed the attendants. But they presently returned laden, some with

* Bad, bad!

boxes containing books, slates, pens, pencils, and ink; others with lighted tapers and vases filled with the white lotos, which they set down before the gilded chairs.

"At a signal from the king, the priests chanted a hymn from the 'P'ra-jana Paramita,*' and then a burst of music announced the entrance of the princes and princesses, my future pupils. They advanced in the order of their ages. The Princess Ying 'ou Wah-lacks ('First born among Women,') having precedence, approached and prostrated herself before her royal father, the others following her example. I admired the beauty of her skin, the delicacy of her form, and the subdued lustre of her dreamy eyes. The king took her gently by the hand, and presented me to her, saying simply, 'The English teacher.' Her greeting was quiet and self-possessed. Taking both my hands, she bowed, and touched them with her forehead; then, at a word from the king, retired to her place on the right. One by one, in like manner, all the royal children were presented and saluted me, and the music ceased.

"His majesty then spoke briefly, to this effect: 'Dear children, as this is to be an English school, you will have to learn and observe the English modes of salutation, address, conversation, and etiquette; and each and every one of you shall be at liberty to sit in my presence, unless it be your own pleasure not to do so.' The children all bowed, and touched their foreheads with their folded palms, in acquiescence.

"Then his majesty departed with the priests; and the moment he was fairly out of sight, the ladies of the court began, with much noise and confusion, to ask questions, turn over the leaves of books, and chatter and giggle together. Of course, no teaching was possible in such a din; my young princes and princesses disappeared in the arms of their nurses and slaves, and I retired to my apartments in the prime minister's palace. But the serious business of my school began on the following Thursday.

"On that day a crowd of half-naked children followed me and my Louis to the palace gates, where our guide gave us in charge to a consequential female slave, at whose request the ponderous portal was opened barely wide enough to admit one person at a time. We advanced through the noiseless oval door, and entered the dim, cool pavilion, in the centre of which the tables were arranged for school. Away flew several venerable dames who had awaited our arrival, and in about an hour returned, bringing with them twenty-one scions of Siamese royalty, to be initiated into the mysteries of reading, writing, and arithmetic, after the European, and especially the English manner.

"It was not long before my scholars were ranged in chairs around the long table, with Webster's far-famed spelling-books before them, repeating audibly after me the letters of the alphabet. While I stood at one end of the table, my little Louis at the other, mounted on a chair, the better to command his division, mimicked me with a fidelity of tone and manner very quaint and charming. Patiently his small finger pointed out to his class the characters so strange to them, and not yet perfectly familiar to himself.

"About noon, a number of young women were brought to me, to be taught like the rest. I received them sympathetically, at the same time making a memorandum of their names in a book of my own. This created a general and lively alarm, which it was not in my power immediately to allay, my knowledge of their language being confined to a few simple sentences; but when at last their courage and confidence were restored, they began to take observations and an inventory of me that were by no means agreeable. They fingered my hair and dress, my collar, belt, and rings. One donned my hat and cloak, and made a promenade of the pavilion; another pounced upon my gloves and veil, and disguised herself in them, to the great delight of the little ones, who laughed boisterously. A grim daenna, who had heard the noise, bustled wrathfully into the pavilion. Instantly hat, cloak, veil, gloves, were flung right and left, and the young women dropped on the floor, repeating shrilly, like truant urchins caught in the act, their 'ha, be, bi, bo.'

"At the far end of the table, bending over a little prince, her eyes riveted on the letters my boy was naming to her, stood a pale young woman, whose aspect was dejected and forlorn. She had entered unannounced and unnoticed, as one who had no interest in common with the others; and now she stood apart and alone, intent only on mastering the alphabet with the help of her small teacher. When we were about to dismiss the school, she repeated her lesson to my wise lad, who listened with imposing gravity, pronounced her a 'very good child,' and said she might go now."

(To be continued.)

Grief.

For "The Friend."

The following extract from a letter of Hugh Miller to an invalid friend, on the death of two of her near relatives, contains a beautiful and touching allusion to those finer feelings of sorrow which attend upon the severance of the ties of kindred and of friendship.

"I am not unacquainted with grief. There are friends separated from me by the wide, dark, impassable gulf, whom I cannot think of even yet without feeling my heart swell. Shall I not describe to you that process of suffering of which my own mind has been the subject? There may be some comfort to you in the reflection that what you experience is to use the language of Scripture, 'according to the nature of man.' The similarity in the structure of our bodies, which shows us to belong to the same race, obtains also in our minds; and as dangerous wounds in the one are followed in most cases by fevers and inflammations, which bear the same names in every subject, and to which we apply the same remedies, so wounds of the other are commonly followed by similar symptoms of derangement in the feelings, and to mitigate the smart and the fever, philosophy applies the same salves, and religion, when called upon, pours in the same balm.

"There is an analogy between grief in its first stage and that state of imperfect consciousness which is induced by a severe blow. We are stupefied rather than pained, and our only feeling seems to be one of wonder and regret that we should feel so little. We ask our hearts why they are so callous and indifferent, and wonder that what we so prized as the lost should be so little regretted. But we

know not that, were we affected less, we should feel more. The chords have been rudely struck, that, instead of yielding the shrillest notes, they have fallen slacken from the stops, and time must recover the tone ere they vibrate in unison with the event. In this first stage whole hours pass away which the memory retains no firmer hold than if they had been spent in sleep. Seven years ago, when residing in Inverness, word was brought me that an uncle, to whom I was much attached, and who, though indisposed for some time previous, was not deemed seriously ill, was dead. I set out for Cromarty and must have been about four hours on the road; but all that I next day recollected the journey was that the road was very dark (I travelled by night,) and that, as I drew near to the town, I saw the moon in her quarter, rising red and lightless out of the sea.

"Sorrow in its second stage is more reflective. The feelings have in some degree covered their tone, and we no longer deem them weak or blunted. At times, indeed, they may sink into the apathy of exhaustion, but when some sudden recollection plants its danger in the heart, we start up to a fearful consciousness of our bereavement, and for the moment all is agony. The mind during this stage seems to exist alternately in two distinct states. In the one it pursues its ordinary thoughts or its commoner imaginings, but when thus engaged the image of the departed starts up before it without the ordinary association to call it in,—it starts up suddenly as an apparition, and the heart swells, as the tears burst out. And this forms the second state. I have remarked as not a little strange the want of connection between the two. Occasionally, indeed, some recollection awakes in the first may lead to the second, but more often I have found the commoner principle of association set aside altogether, and the image of the deceased starting up as unequal for by the previous train of ideas as if it were truly a spectre. And oh, the aspect of the image! How graceful its attitude! How kind its expression! How beautiful does she look at us through the features! Best, kindest, and most affectionate, and when felt with most certainty that we were true dear to him! And hence the depth of our regret,—the bitterness of our sorrow. Grief is an idolater. It first deifies, and then worships. It has a strange power, too, laying hold of the moral sense, so that becomes a matter of consequence with us to deny ourselves all pleasure, and to feel all comfort, in what we deem justice to the deceased. There is something wonderful in the feeling I have not yet seen explained. It seems to have its seat deep in the mysterious parts of our nature, and constitutes a power to connect, as it were, the living with the dead. No man who truly deserves the name can desire to die wholly unlamented; and regret which the heart claims for itself willingly—oh, how willingly!—renders to others. We weep not for ourselves, but for justice to the lost, and even after exhaustion nature cannot yield another tear, there is conscience in us that chides us for having sorrowed so little. I need not ask you if you have experienced this feeling; no heart ever truly sorrowful without the experience of it. It is a sentiment of our nature that contiguous, if I may so express myself, to

* 'Accomplishment of Reason,' or 'Transcendental Wisdom.'

ble sentiment which leads us, independent of our reasonings, to feel that there is a hereafter. For do we not think of the dead to whom we owe so many tears, as a being who helps; and could we owe anything to either heap of dust or a mere recollection? It may well, however, to remind you that there is time when the claims of this moral sense could be resisted. It continues to urge that bute be given to the dead long after the bute is fully paid, and spurs on exhausted to fresh sorrows, when the voice of pity and the prostration of the energies call to repose."

Retribution.

For "The Friend."

The following article cut from the "Tribune," perhaps about the time of publication, I read now, with the light of recent events in Paris full upon it, reads almost like prophecy. Where now is the prominent actor that magnificent pageant, and to what a path has he fallen?

"*Belshazzar in Paris.*—If we may trust the vulgar account that has been brought us by cable of the ceremony at the distribution prizes at the Paris Exposition by the French Emperor—few more splendid pageants have been witnessed by the present generation. Seventy-one thousand people assembled in the great central hall of the building, crowded every passage of approach, and loudly applauding, and the surge of an ocean of outsiders beat for long hours against the walls of the Imperial Gasometer. When the magnificent procession, with its high-stepping horses, its gilded carriages, its mounted gendarmes, its generals in uniform, its ladies arrayed like the ladies of the field, and Solomon, its princes and potentates, had reached the Hall of Ceremony it would seem that nothing this earth has of luxury and grandeur was centred in that single spot. High as a throne of royal state, which far outshone the wealth of Ormus or of Ind, the Emperor sat state. On one side was the Empress with white satin and silver lace, with pearls and diamonds about her throat, and one great gem told her beads of heart in flashes of an imperial ray. On the other sat Haroun al Raschid, or what is left of him, and about the feet of these three lights of empire there shined a crowd of princes, princelings, nobles, dignitaries, statesmen, officials, lackeys, and so on, till at a vast remove, one began to see the existence of the swarming people of Asia and the world. And while the eye took in this manifold spectacle, there burst into the ears the hitherto dumb, expectant instruments of the band of twelve hundred musicians, the wonderful embroidery of flute, and violin and trumpet, on a back ground of rolling music in harmony, fringed with the jangling music of joy bells. Then, when silence fell in, the Emperor stood up in his high place, and made a speech, so pure, and good, and noble, that one marvels as he reads it whether the old legends may not be true that tell how man's own spirit was sometimes rapt out of its body, for a season, while an angel or a moon took the vacant place, and blessed or cursed the unaccustomed lips.

A curious incident that occurred just at the moment the cable, doubtless for fear of disturbing the harmony of the narrative, omits to mention. When Mr. Hughes, the inventor of the Printing Telegraph, was called up to

receive his prize, the Emperor took his hand, making him an exception to all the other recipients of medals. Mr. Hughes, as he touched the Imperial finger, slipped into the august palm of his serene Highness a little bit of paper containing the last message received by the cable and printed by the machine for which he was just being decorated. It contained these words: "Maximilian is shot. His last words were 'Poor Carlotta!'" His Royal Serenity read the telegram, and immediately gave evidence of a fearful agitation. His cheek blanched, his hands trembled, and the diamonds on the Imperial garb quivered so in the sunlight that a shout arose from the admiring multitude. What the Emperor thought is, of course, not to be exactly known. But we may conjecture that he heard over all the shouts and music, above the booming of guns and the salvos of artillery, the single shot that was death to his insane ambition as to his deluded dupe, the single cry as of a woman young, beautiful, and good—answering to the last cry of her young husband—"Poor Carlotta!" "Poor Maximilian!"

Where, in all this tumult of rejoicing, this whirl of splendor, this pomp of luxury, were the victims of his crafty and wicked lust of power. For the rest of his life he drags the bodies of these dead about with him. Wherever he goes that pale face shall look at him as from out the cell where, in madness and utter desolation, she is to drag out the remnant of life. When he looks into the face, still comely, of that wife of his, he shall see, not her eyes, but another's, full of reproach, too bitter and too silent to bear. He shall live; but, hard heart, dull conscience, low mind that he has—the heart shall feel, and the conscience shall prick, and the mind shall know that these victims are with him to the end. That shot he shall forever hear, and that cry. His judgment day is come, and all the pomp and splendor that he can gather about him shall not avail to hide him from himself."

Selected for "The Friend."

I had a great fear of bringing any shade or reproach upon the profession of the Truth, or upon the Society to which I belonged; and whenever any business presented, however profitable, which appeared to me to conflict with either, I felt most easy to decline engaging in it. Although my transactions were on a small scale, and consequently did not open the way for the accumulation of riches, which sometimes was humiliating and produced sensations of dissatisfaction that I was not likely to stand among men as independent as many others, or procure the accommodations which they had, yet I never was involved in any difficulty in timely meeting my engagements, and was able always to provide every comfort in life that I desired. Since that day I have observed some among us who had succeeded in accumulating wealth, plain in their garb, and active in religious Society, who looked upon those who were in small business with contempt, and at times spoke slyly of their scruples respecting Friends engaging in extensive concerns. But the latter have a refuge which cannot be assailed by the pride or superciliousness of man, into which they are often permitted to flow and find safety. Whenever I was subjected to sensations of that kind, retirement to my divine Lord and Master, committing myself and the course I

had taken to Him, and looking to Him for consolation and the recompense of reward at the end of the race, raised me above these earthly and sordid views, and gave me authority and dominion over that spirit, of which none could deprive me. Wealth and the importance arising from it were nothing to me, and not worthy of comparison with a place in the Lord's house, and the honor and dignity with which He clothes his humble, faithful children.—*Journal of Wm. Evans.*

Lichens and Mosses.

(Concluded from page 343.)

It is among the mosses of the wall, however, that the richest harvest of beauty and interest may be gathered. Long have my mingled wonder and admiration been given to these tiny forms of vegetable life—beautiful in every situation—spreading on the floor of ancient forests, yielding carpets that "steal all noises from the foot," and over which the golden sunbeams chase each other in waves of light and shade throughout the long summer day—throwing over the decaying tree and the mouldering ruin a veil of delicate beauty—honored everywhere of God to perform a most important though unnoticed part in this great creation. Will do I remember the bright July afternoon when their wonderful structure and peculiarities were first unveiled to me by one long since dead, whose cultivated eye saw strange loveliness in things which others idly passed, and whose simple, warm heart was ever alive to the mute appeals of humblest wild flowers or tiniest moss. There was opened up to me that day a new world of hitherto undreamt-of beauty and intellectual delight; in the structural details of the moss which illustrated the lesson I got a glimpse of some deeper aspect of the Divine character than mere intelligence. Methought I saw Him not as the mere contriver or designer, but in His own loving nature, having His tender mercies over all His works.

A careful search will reveal upwards of a score of mosses on our garden wall, in almost every stage of growth, from a dim film of greenness to radiating plumes spreading over the stones, and cushion-like tufts projecting out of the crevices, and crowned with a forest of pink fruit-covered stems. One is amazed at the exuberance of life displayed on so small and unpromising a surface. It gives us a more graphic idea than we commonly possess of the vast and varied resources of creation.

Prominent among these mosses are the curious little tortulas, found abundantly on every old wall—when there is sufficient moisture and shade—but loving especially the rude stone gable and thatched roof of the Highland cottage, covering them with deep cushions of verdure till the whole structure appears more like a work of nature than man's handiwork. I have always great pleasure in looking at this tribe of mosses through a lens. The leaves are beautifully transparent and reticulated, and readily revive, when scorched and shrivelled by the sunshine, under the first shower of rain. The most noticeable thing about the tortulas is the curious fringe which covers the mouth of the seed-vessel. In all the species, of which there are about fourteen in this country, the fringe is twisted in different ways like the wick of a candle. This peculiarity may be easily seen by the naked eye, as it projects considerably beyond the fruit-vessel, and is of a lighter color; but the

microscope reveals it in all its beauty. It is a wide departure from the ordinary type, according to which the teeth of the fruit-vessel are made to lock into each other, and thus form a wheel-like lid, composed of separate spokes, which fill up the aperture. The great length of the teeth in the tortulas prevents this arrangement of them; their tops are therefore twisted, as the farmer twists the sheaves at the top of his wheat-stack, so as to keep out the rain; and this plan seems to answer the purpose as effectually as the normal one. Some of the tortula tufts are of a pale reddish color, as if withered by old age, or scorched by the sun. This peculiar blight extends in a circular form from the centre to the circumference of a tuft, where filmy grey textures, like fragments of a spider's web interweaving among the leaves, proclaim the presence of an obscure fungus, in whose deadly embrace the moss has perished. Thus even the humblest kinds of life are preyed upon by others still humbler in the scale. Besides this parasite, there are other species of life nourished by these tufts. If one of them be saturated with moisture, and a drop squeezed out upon a glass, and placed under a good microscope, the muddy liquid will be found swarming with animalcule, little animated cells, wandering with electric activity amid the endless mazes of the strange forest-vegetation; and among them there is sure to be one or more lordly Rotiferas, lengthening and contracting their transparent bodies as they glide rapidly out of view, or halting a moment to protrude and whirl their wheel-like cilia in the process of feeding—the most interesting of microscopic spectacles.

One of the commonest of the mosses on the wall is the little grey *Grimmia*; looking, with its brown capsules nestling among the leaves, like tiny round cushions stuck full of pins. The nerves of the leaves project beyond the point, and give an appearance of hoariness to the plant, in fine keeping with the antique character of the wall. This moss grows on the barest and hardest surfaces—on granite and trap rocks, where not a particle of soil can lodge; and yet every cushion of it rests comfortably upon a considerable quantity of earth carefully gathered within its leaves, which must have been blown there as dust by the wind, or disintegrated by its own roots from the substance of the rock. Our garden wall displays two or three tiny tufts of a curious moss occurring not very frequently on moist shady walls built with lime. It is called the Extinguisher moss, because the cover of the fruit-vessel is exactly like the extinguisher of a candle, or the calyx of the yellow garden *Escholtzia*. We have also a few specimens, in the more retired crevices, of the *Bartramia*, or apple-moss—one of the loveliest of all the species—with its bright green hairy cushions and round capsules, like fairy apples. It fruits most abundantly in spring, appearing in its full beauty when the primrose makes mimic sunshine on the braid, and the cuckoo gives an air of enchantment to the hazel copse. A subalpine species, it is somewhat uncommon in lowland districts; but it would be well worth while to grow it in a fernery. Its Latin name appropriately perpetuates the memory of John Bartram—one of the most devoted of American naturalists—a simple farmer and self-taught, yet a man of great and varied attainments, concealed by a too modest and retiring disposition. Linnaeus pronounced

him "the greatest natural botanist in the world."

The line of turf along the top of the wall is a perfect Lilliputian garden. It bears a bright and interesting succession of plants from January to December. The little lichens and mosses claim exclusive possession of it during the winter months; for these simple hardy forms of life are most luxuriant when the weather is most severe; they are the first to come to any spot, and the last to leave it—growing through sunshine and gloom with meek and unruined serenity.

When the first mild days of early spring come, the *Draba*, or whitlow-grass, puts forth its tiny white flowers, and greets the returning warmth, when there is not a daisy in the meadow, or a single golden blossom on the whiny hill-side. Then follows a bright array of chance wild flowers, wayward adventurers, whose seeds the winds have wafted or the birds have dropped upon this elevated site.

I love, in the silent eve, when there is scarcely a breath in the garden, and the sunset is flushing the flowers and purpling the hills, to sit near that richly-decorated wall, in full view of its autumn flowers, smiling on the lap of death, for ever perishing, but immortal. They speak of hope and love, bright as their own hue, and vague as their perfume; they speak of the mystery of human life, its beautiful blossoming and its sudden fading; and, more than all, they speak of Him, who, holy, harmless, undefiled, and separate from sinners, found on earth most congenial fellowship with these emblems of purity and innocence; whose favorite resort was the garden of Gethsemane; whose lesson of faith and trust in Providence was illustrated by the growth of the lilies.—*Holidays in the Highlands.*

For "The Friend."

Memoirs of Mildred Ratcliff.

(Continued from page 349.)

"1805, 11th mo. 18th. This day whilst my hands were employed about the business thereof, my mind was employed about the things of God. My meditation was about ancient Israel: the mighty Arm of power by which the people were brought out of Egypt; their many turnings aside; their making unto themselves graven images, contrary to the law given by Moses; the many unwearied intercessions Moses poured forth on their behalf unto his God, through which the fierce anger of greatly offended Omnipotence was often turned away from them. Israel seemed to me to bear a lively emblem of us as a people, brought forth out of spiritual Egypt, out of the world, and the vanities thereof, by the same unchangeable Arm of power, and almost by as many wonders. Our very great deliverances were to the admiration of our enemies, or the enemies of Truth. How then were the mighty men numbered, and how did they go forth to battle in the beginning of us as a people. Not in their own strength, but in the strength of ancient Israel's God, by whose omnipotent Arm one was able to chase a thousand, and two to put ten thousand to flight. So it was then. But alas! alas! how is it now? How are the mighty fallen in the streets! How are the young men grown faint and quite weary; turning their backs in the day of battle! We scarcely know where to find a valiant warrior. How are the mighty fallen! How are the beautiful sons and daughters taken captive, has again and again been

the language of my mind this day. I have often had to say with one formerly, 'Oh thou my head were waters, and mine eyes a fountain of tears, that I might weep day and night for the slain of the daughter of my people! Oh that I knew how to put sackcloth on my nolos, and dust upon my head, and bow down before the great omnipotent I Am, interesting before him for the slain of the daughter of my people. That if it pleased Him, Ziti might arise and shake herself from the dust of the earth, and put on her beautiful garments as in earlier days; that so judges might be raised up as at the first, and counsellors and lawgivers as in the beginning. The beautiful sons might come unto him from afar, and daughters from the very ends of the earth! But alas! how are the mighty fallen, seems to be the language of my very soul. How are the mighty men and choice women in many families fallen from their first love, so that there seem to be none in many families—teach their beloved children by their example an obedience to that law written in the hearts: to rehearse unto them the many wonders of our God unto us in the beginning when first he brought us out of the land of Egypt, and from the house of bondage. Wha retrospective view takes place in my mind as has this day, and an inspection into the present state of things, how doth my spirit mourn, and my heart almost faint, because the desolation of Zion; because the might or such as might have been in her borders are fallen, and her young men and maids have grown weary of her beauty. What shall I say then; surely this is my resolution through that Arm of power in which I trust; thou thousands fall on the right hand, and thousands on the left, yet will I joy in thy Lord and rejoice in the God of my salvation!

MILDRED RATCLIFF.

No date. "How can I forbear to acknowledge the goodness—the unspeakable goodness of a Saviour's love. Oh! that I know how to adore and praise Him aright for this renewed visitation of His love to me these several days past. I am 'lost in wonder, love and praise.' He that knows the integrity of my heart, has in great condescension granted me such an overflow of his presence, that I can scarcely contain it. But fear to spend my portion! Oh Lord! I will continue thy loving kindness to my feeble soul. Oh Thon, who dost unite the hearts of thy dear followers, though strangers, in the pure and undefiled love of the meek and humble Jesus! Oh, invisible Comforter, be pleased I pray Thee to continue the strengthening Arm of thy power to me! Preserve me from the enemy's hands, out of the claws of the hard master! I praise Thee, O Father, for the visitations of thy love in my infancy years! May I never forget to praise thee, the favors I have received at thy bounty! Hand! Oh then, our Father, who alone knowest the desire of my soul, I pray thee keep as in the hollow of thy Holy Hand, all days of my appointed time! Thou know thy name and presence are sweeter to a thirsty soul than honey in the honey comb! I am bold to acknowledge thy love has been more to me, at times, than my natural life! I have felt universal love to flow for my feeble creatures, though in a particular manner the friend of my bosom, and my relations as the flesh. Oh Thon, who hast borne love with them, be pleased to extend the arm

mercy yet further to them! Make them
and daughters to thee! And O, so over-
e, that nothing may ever be able to wean
soul from thee, after such an overflowing
thy love.
MILDED RATCLIFF."

Without date. "Oh, the sweetness! Oh,
rapture! Oh, the heavenly and angelic
lody which there is to be enjoyed in rever-
sal, solemn singing of praise." I say sing-
of praise to Him that sitteth on the throne
I hitherto forever."

1806. 7th mo. 15th. I feel constrained
s morning to pen down something of the
adness of my God, my holy King and ever-
sord Redeemer, who regardeth all who love
I fear Him as the apple of His eye. His
adness is extended to the smallest of the
relationship of his hands. His gracious care
to the sparrow upon the house-top. To
s great Caretaker I have inwardly said,
d thou knowest all things, thou knowest
I love thee. Before Him, the great I
my mind has bowed in awful reveren-
ce. Thou art holy, holy, holy, Lord God
nightly! thou art worthy of all my affec-
s. Thou knowest the incomes of thy love
sweeter to thy poor little handmaid than
honey in the honey comb. In the aris-
s thereof at times, as has been the case this
I feel my soul to mount upwards as on
wings of an eagle, taking courage to hope,
receiving faith through Thy power to
ever I shall yet be enabled to run without
growing weary, and to walk without fainting.

I feel that I love Thee above all, and
in feeling I remember it is said, 'Eye hath
seen, nor ear heard, neither hath it en-
ded the heart of man to conceive' what thou
didst lay up in store for those who love thee.
Father! thou knowest that I love thee,
desire to love thee more and more, and
to thee better and better. Be thou pleased
with me every day and every night, and
nothing shall be able to separate me from thy

If thou withdraw from me, what am I?
Weak and nothing! how apt to forget
necessary charge, 'Watch!' 'Watch and
pray that ye enter not into temptation,'
carefulness against every evil, O my Father,
pray for more and more, that the enemy of
peace may never be able to creep up un-
noticed. Oh Thou! who to me art the chiefest
angel to me thousand, a Beloved altogether
dearly to me; O be pleased to so be with me,
to enable me to watch on the right hand
on the left! That every snare laid for
me may be discovered and escaped. That so
rough thy power, my inward life may often
know every difficulty, and sing unto thee
in song of praise, and make melody in my
soul to thee.

Oh that the beautiful sons and daughters
of heaven would come unto thee, O Lord, and
to see and see for themselves that thou art
to see that an humble walking in fear be-
fore thee, is more to be desired than jewels
in rings of gold. What is a man profited
if he gain the whole world, and lose his own,
precious, his immortal soul! What would
he give in exchange for his soul? What
can the perishing things of the world do
for us on our sick beds. Then if not before,
it will appear as they really are, lighter
than vanity,—not worth our attention, much
our affection.
My soul, let others do as they will, see

thou to it to be ever careful to lay up for thy-
self treasure in Heaven, in bags that wax not
old. Thou art well assured that here thou
hast no continuing city. Therefore let thou
be as careless as they will, see that thou art
careful to seek one eternal in the heavens,
whose builder and maker is God. He is thy
only portion! He is thy all in all! Make Him
thy only choice and delight! Draw near to
him all the day long; and in the silent watches
of the night, seek his protection. It has
pleased Him to show unto thee afresh this
day whereunto he has called thee, to the per-
fecting holiness in fear before Him. Keep a
single eye to Him, and he will more and more
wash thee and make thee clean in the precious
blood of his beloved Son, whereby, weak and
nothing as thou art, thou shalt be enabled to
preach the everlasting gospel unto the chil-
dren of men. For this purpose He hath raised
thee up and anointed thee. As thou art al-
together dependent on Him, watching unto
prayer, He will be with thee, and afresh an-
oint thee from time to time, as he showed
thee long ago, when thou felt thyself lonely
as the sparrow upon the house-top. Never
forget the word of his power when thus dis-
consolate and alone. Now, even this morning
he has revived it with fresh confirmation, that
as thou art careful to look unto Him alone
for strength and wisdom, not one jot or tittle
shall fail of all which was spoken unto thee
then. How wast thou humbled into the dust
before him at the first clear intimation of this
duty. Oh my soul! how wast thou melted
into tears because of the awful prospect. How
wast thou overcome with unbelief, saying
again and again, 'it is impossible;' notwith-
standing the word of power was undeniable,
as it has since often been. Well then, O my
soul, seeing that a willing obedience is re-
quired of thee, arise with fresh vigor and trust
in God. Thank and adore Him, and take
courage to press through troops of difficulties,
and skip over every opposing wall. Do what-
ever thy blessed Master commands thee, and
that thou wilt be numbered with his friends. Hold
fast the profession of thy faith unto the end,
and thou shalt have a crown of life. Oh
Father! be always near thy feeble worm. Be
thou my strength; and at thy command I will
advocate thy glorious cause of righteousness
in the earth. At thy command I will be still,
and silently worship and adore thy great and
worthy Name. I know that although I am
weak, thou in whom I trust art strong; al-
though I am poor and needy, thou art rich
and glorious, having in thy storehouse all
manner of rich dainties, and will not turn
empty away the hungry and thirsty soul.
Therefore, O Israel's King! thou knowest I
ask not a long life, or any thing which this
world affords! For blessed be thy worthy
name, thou hast, I trust, in good measure re-
deemed me therefrom! But I ask grace to
know and to do thy will. Be thou pleased,
O Father! to strengthen my faith in Thee!
Be thou my hope, and clothe me with charity,
that noble virtue, without which it is im-
possible to please thee. Then, O thou King of
kings, and Lord of lords! command me, and
I will obey thee; send me, and I will go; call
me, and I will come unto thee! All I ask is
preservation in thee. I am nothing, and can
do nothing; but through the arisings of Thy
love, I am all things, and can do all things
necessary unto my salvation. For in the flesh
I know I shall have trouble; but in Thee, O

my Sovereign, joy and peace in the Holy
Ghost. — MILDED RATCLIFF."
(To be continued.)

ON SILENT WORSHIP.

"Thou worshipp'st at the temple's inner shrine,
God being with thee when thou know'st it not."

Though glorious O God! must Thy temple have been
On the day of its first dedication?
When the cherubim's wings widely waving were seen,
On high o'er the Ark's holy station.

When even the chosh of Levi; though skill'd
To minister in sacred before Thee,
Retired from the cloud which the people then filled
And Thy glory made Israel adore Thee.

Though awfully grand was Thy Majesty then,
Yet the worship Thy gospel disclose,
Less splendid in pomp, to the visions of men,
Far surpasses the ritual of Moses.

And by whom was that ritual ever repealed?
But by Him unto whom it was given;
To enter that oracle where it revealed!
Not the cloud—but the brightness of Heaven.

Who having once entered hath shown us the way,
Oh God! how to worship before Thee,
Not in shadowy forms of that earlier day,
But in spirit and truth to adore Thee.

This, this, is the worship the Saviour made known,
When she of Samaria found him,
By the Patriarch's well, sitting weary, alone;
With the stillness of evening around Him.

How sublime, yet how simple the worship He taught,
To her who enquired about the fountain,
"If Jehovah at Solomon's shrine should be sought,
Or adored at Samaria's mountain?"

Woman, believe me, the hour is near,
When He, if ye rightly worship, shall find Him
Will neither be worshipp'd exclusively here,
Nor yet at the altar of Salem.

For God is a spirit, and they who aught
Would perform the mere worship, He loveth,
In the heart's holy temple will seek with delight
That spirit the Father approveth.

And many that prophecy's truth will declare
Whose bosom's have livingly known it,
Whom God hath instructed to worship Him there
And convinced that His mercy will own it.

The temple that Solomon built to His name,
Now lives but in history's story,
Extinguished, long since its altar's bright flame,
And vanished each glimpse of its glory.

But the Christian made wise by a wisdom divine,
Though all human fabrics may flatter,
Still finds in his heart, a far holier shrine,
When the fire burns, unquenched on the altar.

—E. Barton.

For "The Friend."

The New Zealand Snow-Storm of 1867.

In a recent work entitled "Station life in
New Zealand," is the following graphic de-
scription of a very severe snow-storm, such as
there was no record of having before occurred,
either in the memory of the English settlers,
or in the traditions of the natives. The
writer was the wife of an English sheep farmer,
and she relates her adventures in a letter to
one of her home friends. It must be borne
in mind, that the locality being in the south-
ern hemisphere, the winter season is contem-
poraneous with summer in our part of the
world.

"I have had my first experience of real
hardships since I last wrote to you. Yes, we
have all had to endure positions of hunger and
cold, and what I found much harder to bear,
great anxiety of mind. I think I mentioned
that the weather towards the end of July had

been unusually disagreeable, but not very cold. This wet fortnight had a great deal to do with our sufferings afterwards, for it came exactly at the time we were accustomed to send our dray down to Christchurch for supplies of flour and groceries, and to lay in a good stock of coals for the winter; these latter had been ordered, and were expected every day. Just the last few days of July the weather cleared up, and became like our usual most beautiful winter climate; so, after waiting a day or two, to allow the roads to dry a little, the dray was despatched to town, bearing a long list of orders, and with many injunctions to the driver to return as quickly as possible, for all the stores were at the lowest ebb. I am obliged to tell you these domestic details, in order that you may understand the reason of our privations. I am going to give you all the exact dates, for this snow-storm will be a matter of history, during the present generation at all events; there is no tradition among the Maoris of such a severe one ever having occurred; and what made it more fatal in its financial consequences to every one was, that the lambing season had only just commenced or terminated on most of the runs. Only a few days before he left, F— had taken me for a ride in the sheltered valleys, that he might see the state of the lambs, and pronounced it most satisfactory; thousands of the pretty little creatures were skipping about by their mothers' side.

"I find, by my diary, July 29th, marked as the beginning of a 'sou'-wester.' F— had arranged to start that morning, and as his business was urgent, he did not like to delay his departure, though the day was most unpromising, a steady, fine-drizzle, and raw atmosphere; however, we hurried breakfast, and he set off, determining to push on to town as quickly as possible. I never spent such a dismal day in my life; my mind was disturbed by secret anxieties about the possibility of the dray being detained by wet weather, and there was such an extraordinary weight in the air, the dense mist seemed pressing everything down to the ground; however I drew the sofa to the fire, made up a good blaze (the last I saw for some time), and prepared to pass a lazy day with a book; but I felt so restless and miserable I did not know what was the matter with me. I wandered from window to window, and still the same unusual sight met my eyes; a long procession of ewes and lambs, all travelling steadily down from the hills towards the large flat in front of the house; the bleating was incessant, and added to the intense melancholy of the whole affair. When Mr. U— came in to dinner, at one o'clock, he agreed with me that it was most unusual weather, and said, that on the other ranges the sheep were drifting before the cold mist and rain just in the same way. Our only anxiety arose from the certainty that the dray would be delayed at least a day, and perhaps two; this was a dreadful idea: for some time past we had been economizing our resources to make them last, and we knew that there was absolutely nothing at the home-station, nor at our nearest neighbor's for they had sent to borrow tea and sugar from us. Just at dusk that evening, two gentlemen rode up, not knowing F— was from home, and asked if they might remain for the night. I knew them both very well; in fact, one was our cousin T—, and the other an old friend; so

they put up their horses, and housed their dogs (for each had a valuable sheep-dog, with him) in a barrel full of clean straw, and we all tried to spend a cheerful evening, but every body confessed to the same extraordinary depression of spirits that I felt.

"When I awoke the next morning, I was not much surprised to see the snow falling thick and fast: no sheep were now visible, there was a great silence, and the oppression in the atmosphere had if possible increased. We had a very poor breakfast,—no porridge, very little mutton (for, in expectation of the house being nearly empty, the shepherd had not brought any over the preceding day), and very weak tea; coffee and cocoa all finished, and about an ounce of tea in the chest. I don't know how the gentlemen amused themselves that day; I believe they smoked a good deal; I could only afford a small fire in the drawing-room, over which I shivered. The snow continued to fall in dense clouds, quite unlike any snow I ever saw before, and towards night I fancied the garden fence was becoming very much dwarfed. Still the consolation was, 'Oh, it won't last; New Zealand snow never does.' However, on Wednesday morning things began to look very serious indeed; the snow covered the ground to a depth of four feet in the shallowest places, and still continued to fall steadily; the cows we knew must be in the paddock were not to be seen any where; the fowl-house and pig-styes which stood towards the weather quarter had entirely disappeared: every scrap of wood (and several logs were lying about at the back) was quite covered up; both the verandahs were impassable; in one the snow was six feet deep, and the only door which could be opened was the back-kitchen door, as that opened inwards; but here the snow was half way over the roof, so it took a good deal of work with the kitchen shovel, for no spades could be found, to dig out a passage. Indoors, we were approaching our last mouthful very rapidly; the tea at breakfast was merely coloured hot water, and we had some picnic biscuits with it. For dinner we had the last tin of sardines, the last pot of apricot jam, and a tin of ratifia biscuits—a most extraordinary mixture, I admit, but there was nothing else. There were six people to be fed every day, and nothing to feed them with. Thursday's breakfast was a discovered crust of dry bread, very stale, and our dinner that day was rice and salt—the last rice in the store-room. The snow still never ceased falling, and only one window in the house afforded us any light; every box was broken and used for fuel. The gentlemen used to go all together and cut, or rather dig, a passage through the huge drift in front of the stable, and with much difficulty get some food for the seven starving horses outside, who were keeping a few yards clear by incessantly moving about, the snow making high walls all around them.

"It was wonderful to see how completely the whole aspect of the surrounding scenery was changed; the gullies were all filled up, and nearly level with the downs; sharp-pointed cliffs were now round bluffs; there was no vestige of a fence or gate or shrub to be seen, and still the snow came down as if it had only just begun to fall; up of doors the silence was like death, I was told, for I could only peep down the tunnel dug every few hours at the back-kitchen door. My two maids now gave way, and sat clasped in each

other's arms all day, crying piteously, and bewailing their fate, asking me whenever I came into the kitchen, which was about every half-hour, for there was no fire elsewhere 'And oh, when do you think we'll be four mums?' Of course this only referred to the ultimate discovery of our bodies. There was a great search to-day for the cows, but it was useless, the gentlemen sank up to their shoulders in snow. Friday, the same state of things: a little flour had been discovered, discarded flour bag, and we had a sort of die-cake and water. The only thing remaining in the storeroom was some blacklead, as I was considering seriously how that could be cooked, or whether it would be better raw: we were all more than half-starved, a quite frozen: very little fire in the kitchen and none in any other room. Of course, the constant thought was, 'Where are the sheep? Not a sign or sound could be heard. The dogs' kennels were covered several feet deep so we could not get at them at all. Saturday morning: the first good news I heard was that the cows had been found, and dragged by ropes down to the enclosure the horse had made for themselves: they were half-dead, poor beasts; but after struggling four hours to end from a haystack two hundred yards off, one of which was unbribe some oat hay was procured for them.

"There was now not a particle of food in the house. The servants remained in the beds, declining to get up, and alleging they might as well 'die warm.' In the middle of the day a sort of forlorn-hope was gauged by the gentlemen to try to find the fowl-house, but they could not get through the drift: however, they dug a passage to the wash-house, and returned in triumph with about a pound of very rusty bacon they had found hanging up there; this was used without fuel, so they dug for a little leading to the garden, fortunately hit whereabouts, and soon had it broken up in the kitchen grate. By dint of taking the lead out of the tea chests, shaking it, collecting every pinch of tea-dust, and enough to make a teapot of the weakest—a cup of which I took to my poor ery maids in their beds, having first put a spoonful of the last bottle of whisky which the house possessed into it, for there was no sugar nor milk to be had. At midnight snow ceased for a few hours, and a hard frost set in; this made our position worse for they could now make no impression in the snow, and only broke the shovels in going. I began to think seriously of following the maids' example, in order to 'die warm.' We could do nothing but wait patiently until we went to a sort of attic where odds and ends were stowed away, in search of something, eat, but could find nothing more temp than a supply of wax matches. We knew there was a cat under the house, for we had her mew; and it was suggested to take the carpets first, then the boards, and to hunt for the poor old pussy; but we agreed to bear our hunger a little longer, chiefly an afraid, because she was known to be a thin and aged.

"Towards noon on Sunday, the weather suddenly changed, and rain began to come down heavily and steadily; this cheered all immensely, as it would wash the snow away probably,—and so it did to some degree the highest drifts near the house lessened

erably in a few hours, and the gentlemen, so by this time were desperately hungry, made a final attempt in the direction of the glass-house, found the roof, tore off some shingles, and returned with a few aged hens, which were mere bundles of feathers after six week's starvation. The servants contended to rise and pluck them, whilst the gentlemen sallied forth once more to the stock-yard, and with great difficulty got off two or three cap or top rails, so we had a splendid high transitory blaze, and some hot stewing oil; it was more of a soup than anything else, but still we thought it delicious; and everybody went to bed again, for the gas was quite dark still, and the oil and candles were running very low. On Monday morning the snow was washed off the roof, and died by the deluge of rain which had either ceased to come steadily down, and the ditches were cleared a little, just at the top; we were delighted at the improvement, and had some cold weak fowl-soup for breakfast, which we thought excellent. On getting up the doors, the gentlemen reported the ditches to be much swollen and rushing in low streams down the sides of the hills, and the snow, which was apparently as thick as ever; but it was now easier to get through the surface, though quite solid for many miles from the ground. A window was scraped, through which I could see the desolate landscape out of doors, and some hay was tied with much trouble to the starving oxen and horses, but this was a work of almost incredible difficulty. Some more fowls were procured to-day, nearly the last, for a hole in the roof showed most of them full of cold and hunger.

(To be concluded.)

The Siege of Paris. How the Libraries were protected.—The Paris correspondent of Child's "Publishers' Circular," writes as follows:—"During the siege, our libraries (with one exception, the Luxembourg Library), were not closed, but turned topsy-turvy. The manuscripts were placed in the cellars, and most valuable books were carried there, if there was room, and when these cellars were full they were carried to the cellars of the Tuileries and Versailles. There they are still, it is next to impossible to get Frenchmen to work while the government gives them five or fifty cents a day to do nothing but to buy gay clothes behind a band of music. The great library in Rue Richelieu has not closed its doors, simply because it has not yet been able to find men to bring back the books to the cellars of the Tuileries and Louvre. The persons employed by the library are very engaged transferring these volumes. The work proceeds slowly with so few persons. The great library the yards were unpaired bombs might bury themselves harmless on the ground. In every room huge reservoirs were placed and filled with water; zinc plates, sponges, and blankets were placed about each reservoir. There was a pile of sand several yards to extinguish incendiary bombs filled with petroleum oil. Several persons were placed by each pile of sand. All persons employed by the library were led into watches who were on duty day and night. No bombs fell near the library, but fell thickly around the Luxembourg, the Geneveire, and the Garden of Plants, but injured none of them. The mu-

seums and hot-houses of the Garden of Plants suffered severely, and one or two shells fell in the Museum of the Mining School, without, however, doing sensible damage. It was a touching sight to see all the persons belonging to the Garden of Plants, headed by the venerable widow of Geoffroy St. Hilaire and by the venerable M. Chevrel, the eminent chemist, each of whom is ninety years old, go down into the cellars to escape the bombs."

Selected.

There is but one road to the kingdom of God. That royal road, leading through the lowly depths of humility and contrition of soul, which the prophets and patriarchs have trodden before thee. The door of entrance is Christ. Nor can any man enter that door without repentance; for, saith the apostle, "Repent ye, therefore, and be converted, that your sins may be blotted out, when the times of refreshing shall come from the presence of the Lord."

THE FRIEND.

SEVENTH MONTH 1, 1871.

We are now in the season when those, who have been long laboring in their respective spheres, are anxious to escape for a time from their daily toil, and seek relaxation from care and mental or physical strain, amid other scenes and associations, where the wearied frame and the overtaxed mind may obtain rest, and recruit their exhausted strength. As the body confined altogether to one kind of labor becomes cramped or deformed, so the mind, occupied with the same routine of objects and thought, loses its expansiveness, is contracted in its reasoning, and may become dwarfed. It is right therefore, where circumstances will admit of it, to avail ourselves of a retreat from the pressure of continued business; inasmuch as the interval, if properly improved, may restore, in measure, the long taxed strength, and prepare for more efficient re-engagement in our necessary or accustomed pursuits.

But it is too often the case that a mistake is made in deciding on the course to be pursued for obtaining the result desired, and though benefit may be procured, it is not in the full measure that might be anticipated. In this, as in so many other important movements, fashion often has too much influence, and people resort to places crowded, inconvenient and uncomfortable because others go there, and it is the custom.

For citizens, who have been long living in the tumult and turmoil of a metropolis, it would seem particularly desirable to escape from a multitude packed into narrow limits, and to seek some place of tranquillity, where the beauties of nature, the invigoration of pure air and healthful exercise may be enjoyed with the charm of comparative solitude, apart from the bustle of thronged hotels, and free from the restraints of conventional etiquette. Change, as complete as circumstances will allow, ought to be sought, not only as to place, but in the objects claiming attention and thought, and likely to give pleasure by the train of reflections called up by natural associations; so that while the mind is unburdened from its accustomed tension, it may yet find employment for its powers in fresh and animating cogitations.

Not that it is desirable to be isolated. Sufficient society for intelligent social intercourse is almost indispensable to rational enjoyment, and where there is congeniality of taste and feeling, the multiplication of pleasurable emotions attending it, is reciprocal. This is especially the case where the bond of religious fellowship unites one with another, and each appreciates, in his or her measure, the goodness and wisdom manifested in the works of the great Architect of the universe, and has the heart warmed with gratitude and praise for his beneficence. Such companions in their unselfish enjoyments, realize in one, and that a large sense, a similar community of interest to that mentioned as existing among the primitive believers, "Neither said any that aught of the things he possessed was his own, but they had all things in common."

There is another consideration connected with the enjoyment of the summer holidays, that should ever have due place with all, and which Friends who desire to commend their self-denying religion to those around them, should never lose sight of. It is, that while in pursuit of pleasurable and profitable recreation, there is as much, if not more, need to obey the injunction "watch and pray lest ye enter into temptation," as at any other time, or under any other circumstances. Those who have had opportunity to make observation of the general character of the conduct, conversation and occupation at places of fashionable resort, will, we think, admit the justness of the following remarks, taken from the *Journal* of the late William Evans, and which we prefer to anything we could ourselves offer on the subject.

"Living with a class of people whose habits and opinions are very different from those of Friends, is trying. There being nothing like seriousness among some of them, we seem to be in each others way. Unless Friends keep steadily on their watch in such places, they are in danger of being leavened with the spirit such persons live in, and gradually falling into their manners, and imitating their changeable fashions in dress. The amusements which are prepared for the light spirits there are a strong temptation to young people, especially when they are not watched over by consistent parents under a proper religious concern themselves, and who would restrain them from resorting to such entertainments. It seems as if some felt themselves freed from proper restraint and at liberty to indulge in frivolity. In this way they crucify to themselves the Son of God afresh, and put Him to open shame. Such are evil examples to others. * * I consider it dangerous for irreligious or light persons to be long mingled with religious or light persons on terms of courtesy and familiarity. There is danger of being leavened with their spirit, of losing their strength, and then falling in with something that will grieve the Holy Spirit and wound their own souls; and when once wounded they may never recover, but go halting all their days. Very many are ashamed of the simplicity of the cross. Some who may be pretty staid among their friends at home, and yet not very firm against the current of fashion and libertinism, may be thus drawn into it, and at such places lay aside the Quaker character and manners, almost altogether, thereby bringing reproach upon the name and cause of Christ. Those who are enemies to religion, and ready to disseminate their poisonous op-

inions, are often found in these places of public resort, where they put on great politeness and blandness of manner, to insinuate themselves more effectually into the esteem of strangers. They often carry an exterior of great kindness and interest in the accommodation of others; by which unwary young people may be attracted to them, and led to think that where such apparently disinterested good-will exist, the principles cannot be dangerous. To send young people where they will mingle with such, exposes them to receive a harmful bias, which it may be extremely difficult to eradicate, and which may be used by Satan to destroy their faith in the christian religion, and hinder them from giving up to walk in the path of self-denial. We cannot expect, while in this world, to avoid all intercourse with those who have little or no religious scruples, but the less of it the better."

As this was written while tarrying with an invalid at a place of great resort, where there was ample opportunity for observation, and by one accustomed to weigh things in the balance of the sanctuary, it may be taken as a word of caution, in good season.

SUMMARY OF EVENTS.

FOREIGN.—Berlin dispatches state that Bismarck has addressed an imperative demand to the French government for the immediate payment of the first instalment of the war indemnity, which, according to the terms of the treaty of peace, is to be paid thirty days after the re-establishment of the authority of the French government in Paris. According to Bismarck's view of the case \$50,000,000 francs must be paid in gold, before the 24th of sixth month. Thiers has requested delay, saying that the funds were needed for the relief of Paris and to carry on the government, and that the sum for the payment of the first instalment could, at present, only be obtained on ruinous terms. He offered bank notes in payment of the first instalment, and replies that the imperial government would not further delay, and hints that forced requisitions and dangerous consequences will ensue if the money does not come forward.

A Paris dispatch of the 24th says, there is great distress in that city, and large numbers of people are constantly applying to the parish authorities for relief. It is calculated that there are two hundred and forty thousand objects of charity in Paris. Labor is scarce, and there is trouble relative to the payment of overdue rents. A second postponement of the trial of Rochefort, Rossel, and other Communist leaders, has been made in consequence of illness.

Forty-seven ships of the French navy have been disarmed, and twelve thousand sailors dismissed.

In the French Assembly during the debate on the loan bill, President Thiers made a statement of the financial condition of the country. He said the Government had received three milliards of francs. The deficit of the fiscal year 1870-71, reached 1,631,000,000 francs, but of this amount the Bank of France had advanced to the government 1,330,000,000 francs, so that the immediate deficiency for the year was reduced to 301,000,000 francs; but to this must be added \$36,000,000 francs for expenses since incurred in the suppression of the insurrection in Paris. The total deficit was 737,000,000 francs. Thiers proposed to meet this by imposing new taxes. The situation, he said, was difficult but not disastrous. The loan bill passed unanimously.

A letter from the Archbishop of Cambray and the Bishop of Arras to the Assembly, demanding the resumption of French protection of Rome, has been presented to that body.

A number of arrests have been made at Marseilles for connection with the International Society. The society, composed chiefly of workmen, has branches all the large cities throughout Europe.

The French postal service has been entirely re-established, but the telegraphic service has not.

A letter from Guizot on the state of France is published. It counsels the maintenance of Thiers in power, unless his policy distinctly desires a speedy solution of the monarchical question.

Many Communist refugees from Paris have arrived

at Malta, among them members of the Central Committee and of the International Society.

The French Minister of the Interior has informed the Assembly that it would be inopportune to raise the question of Paris at present, but that he would not allow to every liberty in the coming elections not inconsistent with public safety. The public utterance of insurrectionary doctrines and inflammatory appeals would not, however, be permitted.

A serious complication has arisen between Germany and England, which has decidedly displeased the latter. The German government is very desirous to obtain Heligoland, a small island belonging to Great Britain, but located only 45 miles from the mouths of the rivers Elbe and Weiser; and has instructed its representative in London to make a proposition to that effect. The British minister replied that the British government would entertain no proposition looking to the cession of the island. Bismarck, in his rejoinder, said that the acquisition of Heligoland was necessary for the protection of the German coast, that on account of its close proximity it must be considered German territory, and its possession by a foreign power was a standing menace to Germany. Earl Granville replied that England was only bound to consider her own interests; that the wish of the German government to acquire Heligoland did not constitute any right to it, as the island had never been under German rule.

The House of Commons has rejected a bill authorizing the construction of horse railroads. The Chancellor of the Exchequer stated that it was impossible to discontinue the pension of £40,000 granted to the descendants of William Penn, in consequence of the American revolution. The present recipient of the pension is one William Stewart. The Chancellor said he would cause an investigation as to the possibility of commuting the pension into three per cent. annuities.

Two fruitless attacks on royal privileges have been made in the House of Commons. One was a proposition to make a much needed public road through the grounds of the site of the Buckingham Palace. The other was a proposal to sell unoccupied palaces, such as St. James and Hampton Court, and to apply the proceeds to the reduction of the public debt. Both were rejected.

On the 23d ult. the Spanish Cortes adopted an address of congratulation to the Emperor of Brazil. The entire ministry then announced their resignation, and Marshal Serrano has been entrusted by the king with the formation of a new ministry.

The Emperor and Empress of Brazil were at Madrid on the 25th ult. They expect to visit France, England, Germany, and Italy, and return to Brazil the second of next month, without coming to the United States.

In the Brazilian Chambers a vote has been taken upon the clause of the speech from the throne relating to the emancipation of slaves belonging to the crown, and resulted in a majority for the government. The debate on the emancipation bill itself has not yet commenced.

The Naturalization Convention between Austria, Hungary and the United States, has been approved by the Hungarian Parliament and signed by the Emperor.

Twenty-two Austrian bishops have petitioned the Emperor in favor of the re-estimation of the total power of the Pope. Emperor Bentz has stated in the Imperial Diet that the relations of Austria with the western Powers were excellent, and there was no reason to apprehend a collision with Prussia.

A terrible hurricane in the Malay Archipelago has devastated the nutmeg and mace plantations of the Banda Islands. The loss is estimated at £700,000, and the planters will not recover from the blow for some years.

A Paris dispatch of the 26th says, the Communists of Paris are quiet, but their organization is still kept up. The government has received favorable accounts from the provinces for its suppression of the *Verite* says: Fearing detection Communists and workmen appear to have decided to refrain from voting.

Gambetta has accepted the candidacy to the Assembly from one of the districts of Paris. He was in that city on the 26th, but expected to leave the next day.

A singular case occurred at Shields, on the 25th ult. A thousand workmen have been thrown out of employment by the burning of a cotton mill at Manchester.

London, 6th mo. 26th.—Consols, 92. U. S. 5-20's of 1862, 90½; ten-forties, 88½.

Stocks.—Railroads, 100; Atlantic Coast, 8½; S. & O. 8½. Sale of the day, 12,000 barrels.

The slave trade on the east coast of Africa is said to be flourishing, notwithstanding the efforts of the British

crusiers. The atrocities committed in the capture and march of slaves from the interior to the coast are described as horrible, and involve a sacrifice of 200,000 slaves annually.

UNITED STATES.—*Miscellaneous.*—The internet Philadelphia lat week numbered 321. There were deaths from consumption, 36 cholera infantum, marasmus, and one third of all the deaths were inf under one year of age.

The returns made to the Department of Agriculture indicate a small increase in the acreage of wheat amounting to about four per cent. Nearly all the increase is west of the Mississippi river. If no disaster occur the crop will probably be fully equal to last year.

The Indian Bureau, proposing to reform the system of Indian government, has called a convention of tribes which is now in session. Those represented are Cherokeees, Creeks, Choctaws, Chickasaws, Seneca Shawnees, Delawares, Seminoles, Sacs and Foxes, Ojegas, Arapahoes, Wachitas, Cheyennes, Caddoes, Ion Kechies and Pockawontes. Several government agents are in attendance to give their advice. The jealousy of the tribes have hitherto prevented their ratifying territorial constitution presented to them some times last year.

The Markets, &c.—The following were the quotations on the 26th ult. New York.—American gold, 110 1/2; U. S. 5's, 85 1/2; consols, 92; do, 92; do, 92; do, 10-40; 4 per cents, 110 1/2. Superfine flour, \$5.25; 55's, finer brands, \$5.10 to \$5.175. White Michigan wheat, \$1.60 a \$1.71; red western, \$1.55 a \$1.57; 2 Chicago spring, \$1.48. Oats, 66 a 69 cts. Wes. mixed corn, 72 a 74 cts.; yellow, 75 a 76 cts. *Pull* flour.—Cotton, 18 1/2 cts. for uplands and New Orleans. Superfine gold, \$1.25 a \$1.50; finer br. \$5.62 a \$5.75. Western red wheat, \$1.53 a \$1.55; br., \$1.60 a \$1.62. Rye, \$1. Western mixed corn cts.; yellow, 75 a 76 cts.; white, 76 cts. Oats, 64 cts. Lard, 10 1/2 a 11 cts. Clover-seed, 9 1/2 a 10. Timothy, 8 1/2 a 9. Haxseed, 52 a 59. Sugar, 10 1/2 cts. for extra, 6 a 7 cts. for fair, for good, 4 1/2 a 5 1/2 for common. About 17,000 sheep sold at 5 a 6 cts. lb. gross, and 3000 hogs at \$6.50 a \$6.75 per 100 net. *Baltimore.*—New white wheat, \$1.55 a \$1.80 do, \$1.30 a \$1.70; prime new red, \$1.40 a \$1.80 do, \$1.30 a \$1.58. Yellow corn, 75 a 77 cts. 64 a 66 cts. *Chicago.*—No. 2 winter wheat, \$1.70, 10 a 10 1/2 cts. *St. Louis.*—Flour, \$6.25 a \$8.25; wheat, \$1.15 a \$1.30. Oats, 50 cts. *Cincinnati.* 1 red winter wheat, \$1.38; choice, \$1.40. Corn, 50 cts, 52 a 57 cts. New barley, 83 cts. Lard, 10 cts.

FRIENDS' BOARDING SCHOOL FOR INDIVIDUAL CHILDREN, TUNESSA, NEW YORK.

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm attached to it. Application may be made to Elizabeth Worth, Manchester, Chester Co., Thomas Wistar, Fox Chase P. O., do. Samuel Morris, Olney P. O., do. Joseph Scattergood, 413 Spruce Street, do.

FRIENDS' ASYLUM FOR THE INSANE.

Friends' Asylum, (Twenty-third Ward,) Philadelphia.

Physician and Superintendent—JOSIAH H. WINTHROP, M. D.

Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

DIED, in this city, on the evening of Sixth mo. 1871, ESTER ZABETH WYNN, in the sixty-sixth year of age, a member of Northern District Monthly Meeting.

She bore a lingering and painful illness, with patience and christian resignation. As the close drew near, being asked if any thing rested on her mind gave her uneasiness: as a punishment she replied, "I have nothing to compare, 'No,' and 'I wish that a mercy to feel the dear Saviour near at hand; 'time as this, what must those poor people do who love the Lord,' and signified what a privilege it was to live in the atoning blood, the love and mercy of our compassionate Saviour, who died for our dear friend, Bessie, the pure in heart for they shall see God. And I a voice from Heaven saying unto me write, Bless the dead which die in the Lord from henceforth saith the spirit, that they may rest from their labors and their works do follow them.

Funeral services were held on the 7th ult., at the residence of the deceased.

W. HILLYARD, Jr., in the 28th year of his age, son of Joseph W. Hillyard, a member of New Monthly Meeting.

For "The Friend."

The New Zealand Snow-Storm of 1867.

(Continued from page 359.)

"We were all in much better spirits on this night, for there were signs of the wind shifting from south to north-west; and, for the first time in our lives I suppose, we were anxiously watching and desiring this change, it was the only chance of saving the thousands of sheep and lambs we now knew lay buried under the smooth white winding-sheet snow. Before bedtime we heard the fulfilment as we knew so well, and had never before filled with such deep joy and thankfulness. Every time I woke the same welcome sound the roaring warm gale met my ears; and we were prepared for the pleasant sight, on the tops standing out gaunt and bare once more. The wind was blowing the snow off the hills in clouds like spray, and melting it anywhere so rapidly that we began to have new anxiety, for the creeks were rising fast, and running in wide, angry-looking rivers over the frozen snow on the banks. All immediate apprehension of starvation, however, removed, for the gentlemen dug a pig out of its sty, where he had been warm and comfortable with plenty of straw, and slaughtered it; and in the loft of the stable was found a bag of Indian meal for fattening poultry, which made excellent cakes of bread. It was very nasty having only ice-cold water to drink every meal. I especially missed my tea-breakfast; but felt ashamed to grumble, my disagreeables were very light compared to those of the three gentlemen. From rising till night they were wet through, as snow of course melted the moment they were indoors. All the first part of the last week they used to work out of doors, trying to get food and fuel or feeding the horses, in the teeth of a bitter wind, with the snow falling like powdered glass against their wetting hands and faces; and they were as merry and merry as possible through it all, trying hard to pretend they were neither angry nor cold, when they must have been both. Going out of doors at this stage of the storm simply meant plunging up to their middle in a slush of half-melted snow which they waded through in a moment; and they

never had dry clothes on again till they changed after dark, when there was no more possibility of outdoor work.

"Wednesday morning broke bright and clear for the first time since Sunday week; we actually saw the sun. Although the 'nor-wester' had done so much good for us, and a light wind still blew softly from that quarter, the snow was yet very deep; but I felt in such high spirits that I determined to venture out, and equipped myself in a huge pair of F——'s riding-boots made of kangaroo-skin, well greased with weka-oil to keep the wet out. These I put on over my own thick boots, but my precaution 'did nought avail,' for the first step I took sank me deep in the snow over the tops of my enormous boots. They filled immediately, and then merely served to keep the snow securely packed round my ankles; however, I struggled bravely on, every now and then sinking up to my shoulders, and having to be hauled out by main force. The first thing done was to dig out the dogs, who assisted the process by vigorously scratching away inside and tunnelling towards us. Poor things, how thin they looked, but they were quite warm; and after indulging in a long drink at the nearest creek, they bounded about like mad creatures. The only casualties in the kennels were two little puppies, who were lying cuddled up as if they were asleep, but proved to be stiff and cold; and a very old but still valuable colly called 'Gipsy.' She was enduring such agonies from rheumatism that it was terrible to hear her howls; and after trying to relieve her by rubbing, taking her into the stable—and in fact doing all we could for her—it seemed better and kinder to shoot her two days afterwards.

"We now agreed to venture into the paddock and see what had happened to the bathing-place about three hundred yards from the creek. I don't think I have told you that the creek had been here dammed up with a sod wall twelve feet high, and a fine deep and broad pond made, which was cleared of weeds and grass, and kept entirely for the gentlemen to have a plunge and swim at daylight of a summer's morning; there had been a wide trench cut about two feet from the top, so as to carry off the water, and hitherto this had answered perfectly. The first thing we had to do was to walk over the high five-barred gate leading into the paddock: just the topmost bar was sticking up, but there was not a trace of the little garden-gate or of the fence, which was quite a low one. We were, however, rejoiced to see that on the ridges of the sunny downs there were patches, or rather streaks, of tussocks visible, and they spread in size every moment, for the sun was quite warm, and the 'nor-wester' had done much towards softening the snow. It took us a long time to get down to where the bathing-place had been, for the sod wall was quite carried away, and there was now only a heap of ruin, with a muddy torrent pouring through

the large gap and washing it still more away. Close to this was a very sunny sheltered down, or rather hill; and as the snow was rapidly melting off its warm sloping sides, we agreed to climb it and see if any sheep could be discovered, for up to this time there had been none seen or heard, though we knew several thousand must be on this flat and the adjoining ones.

"As soon as we got to the top the first glance showed us a small dusky patch close to the edge of one of the deepest and widest creeks at the bottom of the paddock; experienced eyes saw they were sheep, but to me they had not the shape of animals at all, though they were quite near enough to be seen distinctly. I observed the gentlemen exchange looks of alarm, and they said to each other some low words, from which I gathered that they feared the worst. Before we went down to the flat we took a long, careful look round, and made out another patch, dark by comparison with the snow, some two hundred yards lower down the creek, but apparently in the water. On the other side of the hill the snow seemed to have drifted even more deeply, for the long narrow valley which lay there presented, as far as we could see, one smooth, level snow-field. On the dazzling white surface the least fleck shows, and I can never forget how beautiful some swamp-hens, with their dark blue plumage, short, pert, white tails, and long bright legs, looked, as they searched slowly along the banks of the swollen creek for some traces of their former haunts; but every tuft of tohigrass lay bent and buried deep beneath its heavy covering. The gentlemen wanted me to go home before they attempted to see the extent of the disaster, which we all felt must be very great; but I found it impossible to do anything but accompany them. I am half glad and half sorry now that I was obstinate; glad, because I helped a little at a time when the least help was precious, and sorry because it was really such a horrible sight. Even the first glance showed us that, as soon as we got near the spot we had observed, we were walking on frozen sheep embedded in the snow one over the other; but at all events their misery had been over some time. It was more horrible to see the drowning, or just drowned, huddled-up 'mob' (as sheep *en masse* are technically called) which had made the dusky patch we had noticed from the hill.

"No one can ever tell how many hundred ewes and lambs had taken refuge under the high terrace which forms the bank of the creek. The snow had soon covered them up, but they probably were quite warm and dry at first. The terrible mischief was caused by the creek rising so rapidly, and, filtering through the snow which it gradually dissolved, drowned them as they stood huddled together. Those nearest the edge of the water of course went first, but we were fortunately in time to save a good many, though the liv-

ing seemed as nothing compared to the heaps of dead. We did not waste a moment in regrets or idleness; the most experienced of the gentlemen said briefly what was to be done, and took his coat off; the other coats and my little Astrachan jacket were lying by its side in an instant, and we all set to work, sometimes up to our knees in icy water, digging at the bank of snow above us—if you can call it digging when we had nothing but our hands to dig, or rather scratch with. Oh, how hot we were in five minutes! the sun beating on us, and the reflection from the snow making its rays almost blinding. It was of no use my attempting to rescue the sheep, for I could not move them, even when I had *scratched* the snow away from one. A sheep, especially with its fleeces full of snow, is beyond my small powers: even the lambs I found a tremendous weight, and it must have been very absurd, if an idler had been by, to see me, with a little lamb in my arms, tumbling down at every second step, but still struggling manfully towards the dry oasis where we put each animal as it was dug out. The dear doggies helped us beautifully, working so eagerly and yet so wisely under their master's eye, as patient and gentle with the poor stiffened creatures as if they could feel for them. I was astonished at the vitality of some of the survivors; if they had been very far back and not chilled by the water, they were quite lively. The strongest sheep were put across the stream by the dogs, who were obedient to their master's finger, and not to be induced on any terms to allow the sheep to land a yard to one side of the place on the opposite bank, but just where they were to go. A good many were swept away, but after six hours' work we counted 1,400 rescued ones slowly 'trailing' up the low sunny hill I have mentioned, and nibbling at the tussocks as they went. The proportion of lambs was, of course, very small, but the only wonder to me is that any were alive at all. If I had been able to stop my scratching but for a moment, I would have had what the servants call a 'good cry' over one little group I laid bare. Two fine young ewes were standing leaning against each other in a sloping position like a tent, frozen and immovable: between them, quite dry, and as lively as a kitten, was a dear little lamb of about a month old belonging to one; the lamb of the other lay curled up at her feet, dead and cold; I really believe they had hit upon this way of keeping the other alive. A more pathetic sight I never beheld.

"It is needless to say that we were all most dreadfully exhausted by the time the sun went down, and it began to freeze; nothing but the sheer impossibility of doing anything more in the hardening snow and approaching darkness made us leave off even then, though we had not tasted food all day. The gentlemen took an old ewe, who could not stand, though it was not actually dead, up to the stable and killed it, to give the poor dogs a good meal, and then they had to get some more rails off the stock-yard to cook our own supper of pork and maize.

"The next morning was again bright, with a warm wind; so the effect of the night's frost soon disappeared, and we were hard at work directly after breakfast. Nothing would induce me to stay at home, but I armed myself with a coal-scoop to dig, and we made our way to the other 'mob'; but, alas there was nothing to do in the way of saving life, for all

the sheep were dead. There was a large island formed at a bend in the creek, where the water had swept with such fury round a point as to wash the snow and sheep all away together, till at some little obstacle they began to accumulate in a heap. I counted ninety-two dead ewes in one spot, but I did not stay to count the lambs. We returned to the place where we had been digging the day before, and set the dogs to hunt in the drifts; wherever they began to scratch we shovelled the snow away, and were sure to find sheep either dead or nearly so: however, we liberated a good many more. This sort of work continued till the following Saturday, when F— returned, having had a most dangerous journey, as the roads are still blocked up in places with snow-drifts; but he was anxious to get back, knowing I must have been going through 'hard times.' He was terribly shocked at the state of things among the sheep; in Christchurch no definite news had reached them from any quarter: all the coaches were stopped and the telegraph wires broken down by the snow. He arrived about mid-day, and directly after the meal we still called dinner, started off over the hills to my 'nest of Cockatoos,' and brought back some of the men with him to help to search for the sheep, and to skin those that were dead as fast as possible. He worked himself all day at the skinning—a horrible job; but the fleeces were worth something, and soon all the fleeces, as they began to emerge from the snow, were tapes tried with these ghastly skins, and walking became most disagreeable, on account of the evil odors arising every few yards.

"We forgot all our personal sufferings in anxiety about the surviving sheep, and when the long-expected dray arrived it seemed a small boon compared to the discovery of a nice little 'mob' feeding tranquilly on a sunny spur. It is impossible to estimate our loss until the grand muster at shearing, but we may set it down at half our flock, and all our lambs, or at least 90 per cent. of them. Our neighbors are all as busy as we are, so no accurate accounts of their sufferings or losses have reached us; but, to judge by appearances, the distant 'back-country' ranges must have felt the storm more severely even than we have; and although the snow did not drift to such a depth on the plains as with us, or lie so long on the ground, they suffered just as much,—for the sheep took shelter under the higher banks, and the tragedy of the creeks was enacted on a still larger scale; or they drifted along before the first day's gale till they came to a wire fence, and there they were soon covered up, and trampled each other to death. Not only were sheep, but cattle, found dead in hundreds along the fences on the plains. The newspapers give half a million as a rough estimate of the loss among the flocks in this province alone. We have no reliable news from other parts of the island, only vague rumors of the storm having been still more severe in the Province of Otago, which lies to the south, and would be right in its track; the only thing which all are agreed in saying is, that there never has been such a storm before, for the Maories are strong in weather traditions, and though they prophesied this one, it is said they have no legend of anything like it ever having happened."

Anger previous to meeting, a bad preparation for it. Overseer, oversee thyself.

The revival of some of the exercises of Jo Rutty, presented such a true delineation of the simplicity and self-denial of Quakerism that I could not but welcome their appearance in the columns of "The Friend," belling, as I do, that much lies at our door neglecting and undervaluing the dear-bought testimonies of those who counted not their lives dear unto them, but sealed their faithness by laying them down in the support of them. And shall we of the present generation count them of no value? I fear many times we are not sensible of their worth; we judge from the appearance of many of our habitations of our members, who give little evidence of their being followers of Him who was crowned with thorns for our sakes; y for our sakes; and who said, "The foxes have holes, and the birds of the air have nests, but the Son of Man hath not where to lay head." Ah! if the Son of Man had where lay His head in our hearts, these departed would not be so conspicuous: we should see pendant from our parlor walls so many scenery, so many photographs and portraits, neither would sculpture nor statuary bury our tables, as well as flowers, that nature made. Why need we so much indulgence the lust of the eye? does time hang here that we require these decorations to amuse and cause the precious moments of life to go swiftly by, and turn us away from the all-important business of working out our salvation? We must not persuade ourselves "That if we have eaten and drunk in His name, and He has taught in our streets," shall be opened unto, when once the door of the house is risen up and shut to the door and we have not *striven* to enter in at the straight gate, for the awful announcement will be "I know not whence ye are, depart from me all ye workers of iniquity." Then we are ready to say to the mountains, "Cover and to the hills fall on us!" to hide from the displeasure of Him, whose merciful visitations have been slyghted and disobeyed, days upon number. But oh! how different is comforting language to those who have proved their time, talents and gifts to honor and glory of the great Giver, in visit the sick, feeding the hungry, clothing the naked, and in every way in their power, seeking the afflicted, endeavoring, as much as in them lies, to keep themselves unspotted from the world, feeling that they are not their own, but are bought with a price. Can do too much for Him, who has done so much for us: even casting all our sins behind back, and loving us freely? Then, dear my friends, let no sacrifice feel too great to make for His sake, who left the bosom of His Father, and endured the contradiction of sinners; He might redeem us from all iniquity, if we present us faultless before His Father's throne (if we acknowledge Him before men).

"Come ye blessed of my Father, inherit kingdom prepared for you from the foundation of the world."

"For a flower that's offered in the bud
Is no vain sacrifice."

It is easy to pretend to Christ; but to true Christian is very precious, and no tribulations and deep afflictions are to be passed through before it be attained unto those who are made so by the Lord exercise.—I. Penington.

Catching Cold, or Catching Heat.

The season during which the complaints usually called "colds" prevail most extensively is now upon us, and their very general prevalence at this season, may justly entitle them to be called fashionable, for there are thousands in disease and in medicine as well as in other things. Of course their being fashionable will prevent a large number from taking precautions against contracting them, as they are troublesome, at least, and by attention and ignorance may become dangerous, and as it is easier to avoid them than get rid of them, we will try to explain how colds are contracted, and what they are. There is a general misapprehension of the true nature of these affections, and their causes, the very phrases cold and catching cold being misnomers, and we propose to show that many cases the trouble is caused by catching heat rather than catching cold.

The parts usually affected by colds, are the mucous membranes of the nose, throat and lungs, more properly, of the bronchial tubes; for when the lung substance is attacked, the affection is of a very different and more severe character than a common cold. Every time we breathe, the air which we draw into our lungs passes through the nose, throat, bronchial tubes, and finally into the air-cells of the lungs. These are all covered with a thin delicate membrane similar to that on the inside of lips, plentifully supplied with blood-vessels, with innumerable little follicles, that secrete a milky fluid called *mucus*, for the purpose of keeping the membrane in a moist and pliable condition. The mucous membrane of the nose, mouth, and throat, is constantly covered with this mucus, yet, when the secretory surface is in a healthy condition, its presence in the air-passages gives us no trouble; only when affected by cold or some other exciting cause, that we know anything of this secretion, and then its presence in increased quantity in the nose is manifested by the necessity for the free use of the handkerchief, in the throat and bronchial tubes, by coughing and coughing, produced by the irritating presence of the *mucus*. These are the most common symptoms of colds, and we do not enumerate any others, as these are the only ones to be considered in connection with the subject we wish to speak of at present, and that these pulmonary complaints may be contracted by exposure to heat, as well as to cold. Every one knows that in going from a warm room to a cold one, or to the outside air in cold weather, they are liable to get cold, and very few know that they incur the same danger in going from a cold atmosphere into a warmer one. It is but a short time since the theory was first advanced, and it has not attracted the attention its importance would warrant, for nobody likes to trouble himself at a slight cold, lest he should be thought silly," &c., but it should be remembered that these affections do not always remain confined to colds, and that what is apparently but a trifling attack may become a prolonged and dangerous one, and have a dangerous or even a fatal termination; so, for the benefit of those who are particularly susceptible to colds, and who wish to avoid them, we will try to show how they may be contracted by heat.

As before stated, the mucous membranes of the air-passages are the parts affected in colds, and are supplied freely with blood-vessels and with follicles, which in health pour out suf-

ficient *mucus* to keep the membrane moist and healthy; when a cold is contracted, the increase of this mucus is one of the most prominent symptoms, and is caused in this way: you probably know that when cold is applied to the skin in any way it drives the blood from it by constricting the vessels, and that as soon as the column of blood regains its force, the fluid returns to the skin in increased quantity; this fact is well illustrated by plunging the hand into hot water after it has been benumbed with cold; the redness of the skin, and the painful tingling produced, give pretty good evidence of the force with which the blood returns. Now this is just what happens in the mucous membrane of the air-passages; the cold air, passing over the membrane, drives the blood from it temporarily, but when it returns it comes with greater force and in larger quantity than is natural, distending the blood-vessels, and forcing a greater amount of the fluid to the mucous surface, exciting them to increased activity, and they then pour out a larger amount of the mucous secretion than is discharged in health, in order to relieve the congested state of the mucous membrane. Suppose a case, to illustrate this point. A man leaves the office, or work-room where he has been breathing an atmosphere of 70 to 80 degrees Fah., plunges at once into the cold outside air of 10 to 20 degrees Fah., and after an exposure to this of half an hour, more or less, reaches his home, and at once encounters as great a change again, passing suddenly from an atmosphere approaching zero to one seventy or eighty degrees above it. Of course these sudden transitions from one extreme of temperature to another affect the mucous membrane, which is exposed to the air very unfavorably, and the different alterations to cold and heat to which it is subjected produce their characteristic results, ending in the congestion and increased secretion of the mucous surfaces. Now, as you have some idea of the cause of colds, and as knowledge is power, you can take measures to avoid them, for "an ounce of prevention is better than a pound of cure," and it is much easier to avoid a cold than to get rid of one. How can we avoid them, you ask, if both cold and heat give us colds; we cannot reduce the temperature of our rooms below a comfortable degree, nor elevate that of the outside air; very true; but you can very often avoid going immediately from a cold room into a hot one, and *vice versa*. After coming in from very cold outside air, linger for a minute or two in the hall, or on the staircase, before entering the heated rooms—which, by the way, are much too hot generally—and on leaving the house observe the same rule. Many will consider these needless precautions, useless trouble, &c., but some people are exceedingly susceptible to colds without knowing why they contract them, when, as they suppose, they have not been exposed to any exciting cause, and it is to those who are so exceedingly susceptible that these precautions are particularly recommended; at first, perhaps their observance will be a little troublesome, but after following them for a short time, and experiencing their benefit, those who have been sufferers from almost continuous colds during the winter season, will feel well repaid for their attention, by the unusual freedom from these troublesome complaints which they will experience.

—From Good Health.

For "The Friend."

Memoirs of Mildred Ratcliff.

(Continued from page 357.)

"1896. 9th mo. 20th. I awoke this morning with the word of truth sounding aloud in my heart, God is great and greatly to be feared. To which I humbly assented, and said, yea, verily, O thou God of my life! I know thou art great and greatly to be feared, revered, and adored by all on earth and all in heaven. My prayer was, as it often is, that the Lord's gracious care may be extended over me through the trials of the day. Oh, how have I needed his help this day. My trials have been such that I knew not which way to turn. For this my cries have been put up unto the great Omnipotent One, that he would be pleased to be near and preserve me through all. Again and again I have said, Lord thou knowest all things! Thou knowest I have none but Thee in Heaven nor in all the earth! Thou knowest that I love thee above all, and that I desire to serve thee in the gospel of thy Son. But I am encompassed on every hand, so that I know not which way to turn! The tempest ariseth, and beareth upon me, so that I am almost overwhelmed. Therefore I cry unto thee, O Lord my God! that thou wouldst be pleased to arise for my help. Speak the word only, and I know the winds and the waves will obey thee as in the days of old. Magnified be thy worthy name, thou wast pleased to speak unto my inward ear, saying, I will never leave thee nor forsake thee, as thine eye is single unto me! O Father! may I ever keep it up to thee through every dispensation. For I have none but Thee alone; neither in heaven nor in all the earth. Be pleased to be near, and I will follow thee whithersoever thou art pleased to lead; for I am thine, and I desire to be thine, in time and in eternity.

MILDRED RATCLIFF."

In the Eighth month 1807, Mildred Ratcliff addressed this letter to Sarah the wife of Henry Hull:

"Dear Friend,—Perhaps at the first view of these lines, thou mayst think it strange to receive a letter from a friend thou hast never seen. Yet from the agreeable acquaintance I had with thy beloved husband when in gospel love he was amongst us some years ago, and an invitation he in one of his letters gave me to write to thee, I do so, there now appearing to be an opportunity, by some Friends of this Quarter who are going as far as Baltimore. I feel a desire to send thee the salutation of love unfeigned, since it is in that precious love which makes dear the whole heritage of God however scattered. I am glad to hear good tidings of any of my Father's children, and I may say good tidings I have heard of thee; and have often had thee in remembrance, with thy husband and tender offspring, craving your health and prosperity every way. I am not quite without hope of seeing you sometime or other on earth. If it please my good Master and Father of mercies, be it so! If not I am resigned. Suffer me to say, my dear, I have made a pretty full surrender of body, soul, and spirit, to Him under the power of the cross. I am His, and desire to be so in time and in eternity. He is the Beloved of my soul, the chiefest of ten thousand; and not doubting but He has the first fruits of all thy affections, is why I write as I do. Thou wilt understand me, and I hope will excuse my

freedom. Oh may we dwell deep in His power to the end of our days; so that we may meet, if never on earth, where the morning stars join in singing hallelujah, and all the sons of God say, amen.

MILDRED RATCLIFF."

"25th of 3d mo. 1807."

A dearly beloved friend, Rebecca Preston, of Virginia, addressed the following to Mildred Ratcliff. This valuable letter commends the good old way to the kingdom; which must unchangeably be through self-denial, sacrifices, baptisms, humiliations, and the obedience that is of faith. Which, though hard to flesh and blood, and the unmortified will, and wisdom of the natural unrenewed mind, is nevertheless the only safe path, being legitimately the straight and narrow way which alone leadeth to life. May every temptation to seek new ways that do not lead to an abhorring of ourselves, and a putting the mouth in the dust if so be there may be hope; or that are not marked by the footsteps and tribulations of the flock of Christ's companions, cause a recurrence to the Saviour's precept: "No man also having drunk old wine straightway desireth new: for he saith, the old is better."

"7th mo. 4th, 1807.

"Dearly Beloved Friend,—I can truly say it was not the want of tender love and near affection toward thee, that I have not written, but through discouragement. I felt myself so poor, little and nothing, I did not feel capable; and remain much so at this time. Let us not however be too much discouraged, beloved! Remember the Lord's people ever were, and ever will be, a tried people. I believe, poor and weak as I am, if we do but keep the faith, and abide in the patience, He whose right it is to rule and reign in the hearts of his children and people, will arise in his own time, and help us with a little of his saving help. Through this we shall be enabled to journey forward towards the Promised Land; and have, at last, to sing the song of salvation as on the banks of deliverance.

"I do not know why a poor weak creature as I am, should write after this manner to one whom I have cause to believe has been brought through various trials and tribulations, whereby thou hast received a qualification for, and been called to the weighty work of the ministry; and hast been enabled by the mighty power of the Most High to plead for his cause. Therefore, thank God, and take courage! Be faithful and obedient. Keep low and humble. Then, no doubt, thou shalt see greater things. I know there is a necessity for me as well as for thee to be on the watch every hour, lest the enemy gain advantage. When he once gets entrance, he is not easily cast out. As our dear Lord and Master said, this cometh to pass only by deep fasting and prayer.

"I have often had to mourn on account of the low state of our meeting, with humble cries to Him who knoweth the secret recesses of every heart, that he would arise and stir up the minds of Friends, and bring them humbly to wait upon Him in Spirit and in Truth. Please excuse my simple way of writing.

"Thy friend, REBECCA PRESTON."

"1808. 8th mo. 6th. In humble fear and awful dread, I now take my pen in hand, O

Father! my counsellor and holy commander, to commit to writing thy wonderful dealings with me this day. Well assured I am that in thy counsel there is safety, and in obeying thy voice much peace. It is thou alone that canst comfort the disconsolate, and make glad that soul whose confidence is placed in thee. It is thou alone that helpeth thy little ones when no man can help; and reanimates their depressed spirits when all consolations fail by the incomes of thy animating love: so that they bow in awful prostration at thy footstool, and in solemn silence celebrate thy praise! Even whilst employed about the needful business of the day, they offer up unto thee a sacrifice more pleasing in thy sight than the blood of bullocks or the fat of rams. With these thou hast long since been weary. But glory be unto thy great Name, a broken heart and a contrite spirit thou wilt never despise. Therefore, O Father! through thy saving help, I will magnify thy worthy name, whilst I have any sense of being! because thou art mindful of me, and helpeth me in time of trouble. When sorrows compass me about, and floods seem ready to swallow me up; when my faith is ready to fail, and my confidence is almost lost; when the javelin is cast violently at my head, and the weapons of war made ready; and the snares of death deeply laid by my enemy, so that I am ready to cry out "Surely I shall fall one day or other by the hand of the enemy!" Then! O then! thou Fountain of unsearchable goodness! Thou dost arise for my help, enabling thy little handmaid to escape the mischief designed. My spirit is humbled under a sense of thy goodness; my faith is increased in thy power; my confidence made strong in thy love. In the fresh feelings whereof, my soul is made to mount upward as on eagles' wings, and join the angelic host who are saying Thou art worthy, worthy, O thou omnipotent King, to be worshipped, magnified, and adored by all on earth and in heaven! This has been the language of my soul this day. When sorrow and distress encompassed me about, discouragements and sore entanglements presented to my view, I looked for mourning but joy sprang up, and for disconsolate feelings through the day, but Thou, the God of my life didst arise to my rejoicing. As with healing in thy wings thou didst re-animate my soul with thy love, and put a new song of praise in my heart. In sweet melody my inward life was enabled to shout forth loud praises unto the Lord God and the Lamb, saying, Holy, holy, holy, Lord God Almighty! Thou art ever worthy to be trusted in by all. Oh Father! I will trust in thee whilst I have life, through the arisings of thy power. Without this I feelingly know I can do nothing, for I am but a little lonely one, and have none else to look unto, neither in heaven nor in all the earth. This thou knowest right well. Yea, thou art Alpha and Omega! the beginning of a good work in me; and I pray that thou mayst be the finisher thereof; for Thou art my all in all. Be thou pleased to be thus unto me all my life long. Then thou beloved of my soul! thou chiefest of ten thousand, command me, and I will obey thee; teach me, and I will hearken unto thee; reprove me, and I will humbly submit myself unto thee; chastise me, and I will adore thy goodness! I know all thy dispensations are in fatherly love unto those that put their trust in thee.

"Oh thou disconsolate soul, if into the

hands of such an one these lines may come when I am unclothed of this tabernacle of clay, and am seen of men no more, lift up thy head in hope! Look unto the rock from whence thou wast hewn, and the pit from whence thou wast digged. Love the Lord thy God with all thine heart, with all thy mind, with all thy soul, and with all thy strength. Suffer no rival to interpose; for He is jealous of his honor, and his praise will not suffer another to have. Then lie down before him, humble thyself at his footsteps, and thou shalt experience a being filled with good things, while the rich are sent empty away. Thou shalt know a having thy eye covered in the day of battle, and no weapon of war formed against thee shall prosper. Thou need not fear the great Goliath, though they may seem to vaunt themselves against thee. As thy eye is kept singly unto the Captain, thy Saviour and Redeemer; and thy confidence is placed, and faith fixed on the mighty God of Israel, thou need not fear. He will fight the battle for thee, and bring thee through, conquering and to conquer. He will string thy bow for battle, and teach thy fingers to fight. Yea, he will make thee chase a thousand, and put ten thousand to flight. Therefore thank and adore His name who was the strength of David's arm, who went forth to meet the great Goliath, and dared to defy the armies of the living God. Remember he is the same, yesterday, to-day, and forever. A thousand years with him as one day, and one day as a thousand year. With him is no variableness, nor shadow of turning. This I most surely believe; and the experience of his all-sufficient power, goodness and love through many deep provocations, can the more feelingly recommend a disconsolate soul who feels its need of Him, and that they have none else to look unto in time of sore trial. I say I can the more feelingly recommend thee to look unto Him. Love him above all. Cleave unto him with all thy might, and thou shalt surely find him to be a present helper in every needful trial. Well assured I am he looketh down from heaven, his holy habitation of light, with pitying eye upon all who in nothingness of self, ery day and night unto him. I am daily sensible, and that by a happy experience according to my small measure. He will in his own time arise for their help; yea, he will arise as a morning without clouds, disperse beauty for ashes, the oil of joy for mourning, and the garment of praise for the spirit of heaviness. He will lead them into his quieting house, and his banner over them shall be love. He is still good unto all, rich to all who put their trust in him; and love above all. Praises! praises! praise! and may they be given unto Him by all.

After an allusion to a call of her dear Master to go to Carolina, and in His authority to proclaim His message to the people, thus continues:—"This has been in substance the language again and again sounded of in my inward ear, which has bowed in assent all that is alive within me, under a sense of my littleness and unworthiness for a fearful undertaking; and I have been ready say under my present situation, how possible? But my mouth is stopped from uses, and in humble prostration I am bound to say, Not my will, O Father! but thine, in and by me. Therefore if in clear light thou still continue this prosp

labor for obedience. Thou knowest I have no other joy but what I have in thee,

MILDRED RATCLIFF."

(To be continued.)

Purity of Water.—At a meeting of the Royal Institution, Prof. Tyndall lectured on the color of water, and on the scattering of it in water and in the air, and some of the facts which he laid before his hearers were very curious and interesting. Scattering is a term applied to the irregular reflection of light from particles of matter suspended in water or in air. The color of sea water had long interested him; and, having been in the Cape Expedition to Oran, he availed himself of the opportunity to make some experiments on the subject; and the result shows that there is almost as much difference in the color and optive purity of different sea waters as among fresh waters. Between Gibraltar and the coast he filled nineteen bottles, at various depths, with sea water. The first three specimens were taken in Gibraltar harbor, about five miles from the land, and are described as blue, a clearer green, and light green; and the difference of color is thus accounted for, on examination of the waters after reaching shore, the first was thick with suspended matter, the second less thick, and the third still thicker. The green brightened as the suspended matter became less. They now passed slowly into indigo water; and the water as it slowly increased in purity as the suspended matter became even less. Beyond Tarifa the color changed to cobalt blue; and this water is distinctly purer than the green. When we got within twelve miles of Cadiz the color changed to a yellowish green. The water here proved to be thick with suspended matter. But at a point fourteen miles from Cadiz, in the homeward direction, there is a sudden change from yellow green to a clear emerald green, and with it a corresponding decrease in the quantity of suspended matter. Between Capes St. Mary and St. Vincent, however, the water changes to the darkest indigo; and this, in point of purity, exceeds the emerald green water. And so, through several other changes of shade, until we enter the Bay of Biscay. Here the indigo assumes its sway, and the water is remarkably pure. A second specimen of water, taken from the Bay of Biscay, held in suspension fine particles of a peculiar kind, the size of them being such as to render the water very iridescent; and showed itself green, or salmon color, according to the line of vision. The last specimens were bottled near the same one off the Isle of Wight, the other off the coast. The sea, at both these places, is green; and both specimens were thick with suspended matter. From suspended matter in sea water to suspended matter in drinking water, the transition is easy, and is invaded with dirt, not only in the very breathe, but in the water we drink. Professor Tyndall quaintly puts it, "Here, for instance, is a bottle of water, intended to quench the lecturer's thirst, and it would be for the lecturer not to scrutinize it too fully. In the track of the beam of electric sent through, it simply reveals itself as water." He then goes on to say that most careful filtering, even through charcoal and sifted carbon, is useless to intercept the atoms revealed by the microscope. A glass of sparkling water is a luxury on a hot,

thirsty day; but, we fear many of us will be put sadly out of conceit with the filtered draught when we are told that it is next to impossible, by artificial means, to produce a pure water. The purest water that can be obtained is probably from melted ice; but even this, from contact of the ice with water-filled air, is not absolutely pure. The water of the Lake of Geneva is remarkable for its purity.—*Once a Week.*

NO ACT FALLS FRUITLESS.

Scorn not the slightest word or deed,
Nor deem it void of power;
There's fruit in each well-waited seed
That waits its natal hour.
A whispered word may touch the heart,
And look it back to life;
A word of love bid sin depart,
And still unholily strife.
No act falls fruitless; none can tell
How vast its power may be,
Nor what results unfolded dwell
Within it silently.
Work on, despair not, bring thy mite,
Nor care how small it be;
God is with all that serve the right,
The holy, true, and free.

Selected.

Red Snow.—In descending I had to traverse a long snow-field as smooth and hard as ice, and lying at a pretty steep angle on the hillside. I had no sooner stepped upon it than my feet went from under me and I descended with great rapidity down the slope, striking very hard against some birch stumps that protruded out of the snow at the bottom. I was soaked to the skin and a good deal stunned; but I forgot every bodily discomfort in astonishment at the strange sight which my fall had disclosed. I had noticed before stepping on the snow that the surface was of a curious salmon color in some places, and covered with fine particles like brick dust; and now I found that wherever my body had pressed the snow together, there was a long crimson streak, as if a creature's blood had been shed there. This was the famous red snow, which is so frequently found in the Arctic regions and on the Alps, produced by an immense multitude of microscopic plants, consisting only of gelatinous cells. Captain Ross on one occasion noticed a snowy ridge extending eight miles in length, tinged with this singular hue to the depth of several feet. Vast masses of it spread over the Appennines in 1818; and it is recorded that in the beginning of this century the vicinity of Belluno and Feltri was covered with rose colored snow to the depth of twenty centimetres. The snow is not its natural situation, for it is found, like the *nostoc* and other gelatinous algae, on moist rocks in this country; but its great tenacity of life enables it not only to preserve its vitality when its germs fall on this ungenial surface, but to grow and propagate itself with the astonishing rapidity of its family, favored by the heat of the sun and the melting of the snow. Its color in this country, when growing on rocks is green; but it has been observed that there is a curious coincidence between a white ground and a red flower, so that its brilliant carmine hue on the snow may be produced by the excess of light reflected by its chilly habitat. Had I not been familiar with this curious phenomenon—having seen it on the Alps—I should have been alarmed, naturally supposing that the crimson streaks had been shed from my own veins by the accident.—*Holidays on High Lands.*

Selected for "The Friend."

Encouraging Words in a World of Trouble.—I find, that to be a fool, as to worldly wisdom, and to commit my cause unto God, not fearing to displease men, who take offence at the simplicity of truth, is the way to remain unmoved. The fear of man brings a snare; by halting in our duty, and giving back in times of trial, our hands grow weaker; our spirits get mingled with the people; our ears grow dull, as to hearing the language of the true Shepherd, so that, when we look at the way of the sincere followers of Christ, it seems as if it was not for us to walk in their footsteps.

There is a love clothes my mind, whilst I am writing this, which is superior to all expression; and my heart is open to encourage thee to a holy emulation, to advance forward in Christian firmness.

Humility is a strong bulwark, and as we enter into it we find safety. Being unclouded of our own wisdom, and knowing the abasement of the creature, therein we find that life to arise, which gives health and vigour to us.—*John Woolman.*

For "The Friend."

The English Governess at the Siamese Court.

(Continued from page 254.)

The routine of life in the palace is thus described. "The king, as well as most of the principal members of his household, rose at five in the morning, and immediately partook of a slight repast, served by ladies who had been in waiting through the night; after which, attended by them and his sisters and elder children, he descended and took his station on a long strip of matting, laid from one of the gates through all the avenues to another. Before each was placed a large silver tray containing offerings of boiled rice, fruit, cakes, and the serf lace; some even had cigars.

"A little after five, the Patoe Dharma (Gate of Merit, called by the populace 'Patoe Boon') was thrown open and the Amazons of the guard drawn up on either side. Then the priests entered, always by that gate,—one hundred and ninety-nine of them, escorted on the right and left by men armed with swords and clubs,—and as they entered they chanted: 'Take thy meat, but think it dust! Eat but to live, and but to know thyself, and what thou art below! And say withal unto thy heart, it is earth I eat, that to the earth I may new life impart.'

"Then the chief priest, who led the procession, advanced with downcast eyes and lowly mien, and very simply presented his bowl (slung from his neck by a cord, and until that moment, quite hidden under the folds of his yellow robe) to the members of the royal household, who offered their fruit or cakes, or their spoonfuls of rice or sweet-meats. In like manner did all his brethren. If, by any chance, one before whom a tray was placed was not ready and waiting with an offering, no priest stopped, but all continued to advance slowly, taking only what was freely offered, without thanks or even a look of acknowledgment, until the end of the royal train was reached, when the procession retired, chanting as before, by the gate called Dinn, or, in the court language, *Prithi*, 'Gate of Earth.'

"After this, the king and all his company repaired to his private temple, Watt Sasmiras Manda-thung, so called because it was dedicated by his majesty to the memory of his mother. This is an edifice of unique and

charming beauty, decorated throughout by artists from Japan, who have represented on the walls, in designs as diverse and ingenious as they are costly, the numerous metempsychoses of Buddha.

"Here his majesty ascended alone the steps of the altar, rang a bell to announce the hour of devotion, lighted the consecrated tapers, and offered the white lotos and the roses. Then he spent an hour in prayer, and in reading texts from the P'ra-jana and the Parmita and the P'hra-ti Moksha.

"This service over, he retired for another nap.

"His majesty usually passed his mornings in study, or in dictating or writing English letters and despatches. His breakfast, though a repast sufficiently frugal for Oriental royalty, was served with awesome forms. In an ante-chamber adjoining a noble hall, rich in grotesque carvings and gildings, a throng of females waited, while his majesty sat at a long table, near which knelt twelve women before great silver trays laden with twelve varieties of viands,—soups, meats, game, poultry, fish, vegetables, cakes, jellies, preserves, sauces, fruits and teas. Each tray, in its order, was passed by three ladies to the head wife, who removed the silver covers, and at least seemed to taste the contents of each dish; and then, advancing on her knees, she set them on the long table before the king.

"But his majesty was notably temperate in his diet, and by no means a gastronome. In his long seclusion in a Buddhist cloister he had acquired habits of severe simplicity and frugality, as a preparation for the exercise of those powers of mental concentration for which he was remarkable. At these morning repasts it was his custom to detain me in conversation relating to some topic of interest derived from his studies, or in reading or translating. He was more systematically educated, and a more capacious devourer of books and news, than perhaps any man of equal rank in our day. But much learning had made him morally mad; his extensive reading had engendered in his mind an extreme scepticism concerning all existing religious systems. Inborn integrity and steadfast principle he had no faith whatever.

"But aside from the too manifest bias of his early education and experience, it is due to his memory to say that his practice was less faithless than his profession, toward those persons and principles to which he was attracted by a just regard. In many grave considerations he displayed soundness of understanding and clearness of judgment,—a genuine nobility of mind, established upon universal ethics and philosophic reason,—where his passions were not dominant; but when these broke in between the man and the majesty, they effectually barred his advance in the direction of true greatness; beyond them he could not, or would not, make way.

"At two o'clock he bestirred himself, and bathed and anointed his person. Then he descended to a breakfast chamber, where he was served with the most substantial meal of the day. Here he chatted with his favorites among the wives, and caressed his children, taking them in his arms, embracing them, plying them with puzzling or funny questions, and making droll faces at the babies; the more agreeable the mother, the dearer the child. The love of children was the constant

and hearty virtue of this forlorn despot. They appealed to him by their beauty and their trustfulness, they refreshed him with the bold innocence of their ways, so frolicsome, graceful and quaint.

From this scene of domestic condescension and kindness he passed to his Hall of Audience to consider official matters. Twice a week at sunset he appeared at one of the gates of the palace to hear the complaints and petitions of the poorest of his subjects, who at no other time or place could reach his ear. It was most pitiful to see the helpless, awe-stricken wretches, prostrate and abject as toads, many too terrified to present the precious petition after all.

"At nine he retired to his private apartments."

"The love of his children, shown by the King of Siam, is touchingly illustrated in the account given of one of his daughters. "Will you teach me to draw?" said an irresistible young voice to me, as I sat at the school-room table, one bright afternoon. "It is so much more pleasant to sit by you than to go to my Sanskrit class. My Sanskrit teacher is not like my English teacher; she bends my hands back when I make mistakes. I don't like Sanskrit, I like English. There are so many pretty pictures in your books. Will you take me to England with you, Mam cha?" pleaded the engaging little prattler.

"I am afraid his majesty will not let you go with me," I replied.

"O yes he will!" said the child with smiling confidence. "He lets me do as I like. You know I am the Somdetch Chow Fa-ying; he will let me go."

"I am glad to hear it," said I, "and very glad to hear that you love English and drawing. Let us go up and ask his majesty if you may learn drawing instead of Sanskrit."

"With sparkling eyes and a happy smile, she sprang from my lap, and, seizing my hand eagerly, said, 'O yes! let us go now.' We went, and our prayer was granted.

"Never did work seem more like pleasure than it did to me as I sat with this sweet, bright little princess, day after day, at the hour when all her brothers and sisters were at their Sanskrit, drawing herself, as the humor seized her, or watching me draw; but oftener listening, her large questioning eyes fixed on my face, as step by step I led her out of the shadow-land of myth into the realm of the truth as it is in Christ Jesus. 'The wisdom of this world is foolishness with God,' and I felt that this child of smiles and tears, was nearer and dearer to her Father in heaven than to her father on earth.

"Her mother, the late queen consort, in dying, left three sons and this one daughter, whom, with peculiar tenderness and anxiety, she commended to the loving kindness of the king; and now the child was the fondled darling of this lonely, bitter man, having quickly won her way to his heart by the charm of her fearless innocence and trustfulness, her sprightly intelligence and changeful grace.

"Morning dawned fair on the river, the sunshine flickering on the silver ripples, and gilding the boats of the market people as they softly glide up or down to the lazy swing of the oars. The floating shops were all awake, displaying their various and fantastic wares to attract the passing citizen or stranger.

"As Boy and I gazed from our piazza on

this strangely picturesque panorama, the swept across the river a royal barge filled with slaves, who the moment they had landed hurried up to me.

"My lady," they cried, "there is cholera the palace! Three slaves are lying dead the princess' court; and her highness, the young Somdetch Chow Fa-ying, was seized this morning. She sends for you. O, come to her, quickly! and with that they put in my hand a scrap of paper; it was from her majesty.

"MY DEAR MAM,—Our well-beloved daughter, your favorite pupil, is attacked with cholera, and has earnest desire to see you and is heard much to make frequent repetition of your name. I beg that you will favor her wish. I fear her illness is mortal, there has been three deaths since morning. She is best beloved of my children.

"I am your afflicted friend,

"S. S. P. M. MAHA MONGKUT."

"In a moment I was in my boat. I entered, I flattered, I scolded the rowers. How slow they were! how strong the opposing current! And when we did reach the heavy gates, how slowly they moved, with what suspicious caution they admitted me. I was fierce with impatience. And when last I stood panting at the door of my young's chamber—too late! even Dr. Campbell (the surgeon of the British consulate) had come too late.

"There was no need to prolong that anxious wait in the car of the deaf child, 'Ph' Arahang! P'h'ra-Arahang!' She would never forget her way; she would never move herself on the road to Heaven. Beyond above the P'h'ra-Arahang, she had soared in the eternal, tender arms of the P'h'ra-Jesus, whom she was wont to say in her infant wonder and eagerness, *Mam cha, chan P'h'ra-Jesus mak* ('Mam dear, I love your Jesus.')

"An attendant hurried me to the king, who reading the heavy tidings in my silent covered his face with his hands and we passionately.

"Bitterly he bewailed his darling, calling her by such tender, touching epithets as lips of loving Christian mothers use. 'Who could I say? What could I do but weep for him, and then steal quietly away and let the king to the Father?'

"On this occasion the bereaved father, I prepared a circular for distribution among friends, in which he detailed with affectionate minuteness the virtues and history of the child.

(To be continued.)

One of the blackest things in human nature and one which gives occasion for most of a most continuous kind, is the practice of teasing. It has been wittily said that if the persons were on a desert island together, of them would combine to make the third slave. I do not know how this may be; I am sure that the two would combine to make the third, and to ridicule all his ways and peculiarities.

Whenever you come to know well any knot of human beings, whether in a family, school, an office, a ship's company, an office mess, a factory, a workshop, or any other assembly, you generally find that there is a poor creature who is perpetually made a target for the arrows of the mean wit of the as-

ge, and whose life is made considerably venerable thereby. This is one of the most verdantly propensities in human nature, and deserves to be treated with the utmost severity.

The victim is often victimised for his good qualities, and especially on account of his diffidence in some important particulars from the people around him.

A great man said to me the other day, "The school whom we ridiculed most, and despised most, for his many faults and oddities has turned out to be the best of us. It is he who, as a Christian missionary, has gone to distant lands, and who has sacrificed everything for the spiritual good of the heathen. He was the boy of greatest soul mind amongst us; but we did not know and we led him a very hard life."—A. S.

Resist Temptation.

My son, if sinners entice thee, consent thou not; enter not into the path of the wicked, and do not sit in the way of evil men.

For thou in the fear of the Lord all the day shalt be able to resist temptation: that which is evil; cleave to that which is good.

Keep thy tongue from evil, and thy lips speaking guile.

Sin has a thousand treacherous arts

To practice on the mind;

With flattering looks she tempts our hearts,

But leaves a sting behind.

But lest my feeble steps should slide,

O wander from thy way,

Lord, condescend to be my guide,

And I shall never stray.

Set thou a watch, O Lord,

And guard our lips from sin;

And, lest we ever should offend,

Create us pure within.

God's deeds are heavenly doings.

THE FRIEND.

SEVENTH MONTH 8, 1871.

LONDON YEARLY MEETING.

From the extended accounts published in London and British Friend, we condense the following narrative of the proceedings of the year.

It was opened on Fourth-day morning, 5th 4th, and continued by adjournments to sixth-day of the following week, 6th mo.

The regular business of the meeting did not require so much time, were it not that sittings are postponed and arranged to permit its members to attend meetings for the promotion of Temperance, Foreign Missions, &c. It is very evidently the tendency of these and similar subjects to press the time and sympathies of Friends, overshadowing and hindering of the immediate and imperative business of the Yearly Meeting—the consideration of the affairs of its own members and meetings, and the preservation in the faith and practices near to the true members of our Society. It was shown by the report of a committee that it had been intrusted to propose the management of business. They proposed to

save time by reading only the summaries of the answers to the queries, except in the case of the 1st and 2d queries. This was opposed on the ground that it was a preliminary step tending to the future entire abolition of the Queries, but after considerable discussion was acquiesced. Their next proposition, to omit the reading of testimonies for deceased ministers, was set aside, as it was believed that such testimonies had often been made useful in confirming the faith of Friends and strengthening their attachment to the Society. They also proposed greatly to shorten the epistles to other Yearly Meetings, of which it was stated they had eleven to write, which was no small burden to the sub-committees that prepared them. It was thought that it would be quite sufficient to send a few paragraphs in addition to the general printed epistle, and a minute was made to that effect. In objecting to one of the changes proposed, a Friend remarked that it could not be denied that the object was to make room for "extraneous matters—matters connected with things beyond the pale of the Society. The business of the Yearly Meeting should be confined to that of the Society; any philanthropic or benevolent matters conducted by individuals, and not by the meeting, should not be allowed to interrupt the regular business."

The distressing events at that time taking place in and around Paris, caused much feeling and claimed considerable time. The subject was referred to the care of the large Committee, to which all the representatives (131 in number), belong, and whose sittings are open to any Friend who may desire to attend. It resulted in the bringing forward and adoption of three addresses; the first of which was "to all in France who love the Lord Jesus Christ in sincerity." A second—"to the French nation, and especially the inhabitants of Paris." A third was "to the people of France," which was especially designed for the rural districts.

The statistical statement for the end of 1870, showed that there were 325 regular meetings, as well as several "allowed" ones; and some at sea-side places during the period of resort. The number of members was 14,013, which was 58 more than the year before. The number of births had been 274, and of deaths 270.

In considering the state of Society, it was said that the low state of the Church was caused by individual unfaithfulness. To this, in measure, was to be attributed the low standard of the ministry, its exercise not being accompanied with the blessing and living power of the Lord, in the same degree as was formerly the case. The deficiency in the attendance of meetings was thought to be increasing, especially on First-day evening and week-days. This was in part attributed to the attendance of places of worship of other societies, a practice which was defended by one present, who yet took an active part in the business of the Yearly Meeting. The large extent of "home mission work" also interfered with meetings. One Friend thought that the manner in which they were held, was the reason that they were not attractive to the young; for but little was heard of the primary duty of life—minding the conviction of the Holy Spirit upon the heart as the first principle of religion. Another Friend said, we should be willing to renounce those principles from which we had departed, or but

lightly esteemed. He believed the Lord was yet disposed to be gracious to us, and that we needed no new arrangements or institutions.

The morning meeting of Ministers and Elders, proposing that their regular meetings should be reduced from four to three in the year, it was acceded to. This meeting is of very ancient standing, and formerly had the general care of ministers in and about London, and the care and revision of books for the press. Its principal office now is the liberating and receiving of Friends from abroad.

A report was read from a committee of the Meeting for Sufferings on manuscripts, showing that care was being taken to collect and preserve documents throwing light on the early history of Friends.

From the reports of the committees appointed to correspond with continental Friends, it appeared that there were professing with us sixty-six in Germany, six at Minden, and seven at Pyrmont. The number had decreased in Norway, many having emigrated to America.

The report of the Executive Committee of the War Victims' Fund to the Meeting for Sufferings, showed that the subscriptions had exceeded £70,000, of which £17,000 was from America. This was expended principally in clothing, provisions and agricultural implements, £27,400 being for seed corn and potatoes.

A request was read from the Western Yearly Meeting for a conference of Yearly Meetings to be held at New York in 1872. After some consideration, the conclusion was reached that way did not open to join therein.

In the consideration of the report of the Printing Committee of the Meeting for Sufferings, attention was called to the circumstance that that body had not recently issued any edition of Barclay's Apology. The remarks which followed developed the fact that there were many Friends who were no longer prepared fully to endorse this standard work.

Private information corroborates the impression produced by the reading of the printed reports, that much of the time of the Yearly Meeting was so closely occupied by discussions and remarks, a large portion of which we have left unnoticed, as to furnish less opportunity than would have been desirable, for an inward and gathered state of the assembly, which would have qualified for the transaction of the business in a more weighty and solid manner. Yet the concluding sittings are represented to have been characterized, through the Lord's goodness, with more of that solemn quiet in which His people are edified.

Dublin Yearly Meeting convened on Fourth day, 3rd of Fifth month, and concluded on the Fifth day of the following week.

Certificates were read for Sarah M. Hyatt from Minnesota, who with her husband Asher Hyatt, had been liberated for religious service in the British Isles and on the Continent of Europe.

A communication from the Western Yearly Meeting, expressing a desire for a more perfect union of the Yearly Meetings in America, and recommending the holding of a general council in New York, after the conclusion of Canada Yearly Meeting in 1872, for the consideration of religious and philanthropic subjects, was attached to the Epistle received from that body: this proposition was also

referred to approvingly in a postscript to the Epistle from Baltimore. After some consideration in two of the sittings, a minute was made in relation thereto, postponing the further consideration of it until next year.

A proposition from Indiana Yearly Meeting to establish the new Yearly Meeting of Kansas, to be first held in the Tenth month, 1872, was united with.

A report of the Meeting of Ministers and Elders, stated, that the number of the former constituting that body was 33 and of the latter 53. The total number of members at the end of last year, was, as appears by the statistical returns, 2911 viz; 1327 males and 1584 females, which was an increase of 9 during the year.

A protracted discussion occurred during a consideration of the state of the Society after hearing the answers to the Queries, upon the subject of reading the Scriptures at meetings for worship, which was continued in several subsequent sittings. It was hoped by many of the members that the permission thereto, which it was understood had been verbally granted on a previous occasion should be maintained. Objection however was made to this course, and it was finally left to the judgment of the Friends named to draw up a minute on the state of the Society, to introduce in their minute if thought best. A paragraph relating thereto was prepared, but when afterwards read in the Yearly Meeting objection to it was again made by some Friends and such adversity of opinion appeared that it was finally entirely omitted. A fact which we are glad to be able to record.

Reports were made from the Quarterly Meetings in reference to the action taken since the last meeting, with regard to Friends engaged in the sale of intoxicating liquors. In Lisburn a committee was appointed to visit such.

A proposal was made by the Yearly Meeting's committee, that the Fifth Query with regard to the payment of ecclesiastical demands should not be answered in future; in reference to which a Friend stated that although there are now no ecclesiastical demands, Friends have still a testimony against a hiring ministry. It was however concluded to accede to this proposition.

SUMMARY OF EVENTS.

FOREIGN.—A London dispatch says that the German attempt to excite dissatisfaction with the British government amongst the inhabitants of Heligoland, has proved a failure.

The Secretary of the British Legation at Washington has been appointed agent in the United States to receive the claims of British subjects coming within the provisions of the late treaty of the town.

The miners on a strike in South Wales now number 9,000, and there seems to be no present prospect of a settlement of the difficulties with the companies.

Subterranean fires are raging at Sheffield, England, and fears are entertained that it is an old colliery which extends to the very centre of the town.

The ex-Emperor Napoleon has visited London and been re-elected a member of the army and navy club.

The ratifications of the Treaty of Washington were exchanged on the 17th ult., and commissioners will shortly be named to carry the stipulations into effect.

The Crown Prince Frederick of Denmark, Germany, and his wife, the daughter of Queen Victoria, are expected to make a visit of some length to England.

The deaths from small pox in London, now number about two hundred and forty weekly.

The little vessel, City of Ragusa, from New York, reached England safely.

The Aragon pilot steamer of the Bristol and New York Line, sailed from the former port on the first inst. with 44 passengers and a full cargo.

Details of the English census returns show that the great cotton manufacturing centres, which suffered from a scarcity of raw material during the American war, have now a positive loss in population since 1861. London.—Consols, 92 $\frac{1}{2}$. U. S. 5-20's of 1862, 91 $\frac{1}{2}$; ditto, ten-forties, 95 cents, 88 $\frac{1}{2}$.

Liverpool, 7th mo. 3d.—Uplands cotton, 8 $\frac{1}{2}$ d.; Orleans, 9 $\frac{1}{2}$ d. California wide welt, 11s. 9 $\frac{1}{2}$; red winter, 11s. 3d.; red spring, 14s. 6d.; blue, 11s.

The new French loan, contrary to the general expectation, was not very successful. The amount desired was subscribed for many times over. Even peasants and servants have invested their savings in the loan. One of the ministers stated in the Assembly that in less than six hours, agents of the Treasury received offers of 4,500,000 francs for the new loan.

The Khedive of Egypt has sent 100,000 francs to the orphans of the French civil war.

The Bank of France has commenced the publication of its returns. The bullion in its vaults is 550,000,000 francs, and the treasury balance 150,000,000 francs. Fave stated in the French Assembly that several districts in Algeria were still in the hands of the insurgents, but said reinforcements were going forward, and that the insurrection would soon be suppressed.

Orders have been issued from the German head-quarters forbidding officers of the army of occupation from entering France.

The court-martial in session at Marseilles has tried, convicted and sentenced a number of the insurgents, some to death, others to labor in the galleys, others to transportation, and some to imprisonment. Six of the accused were acquitted.

The work of rebuilding Paris is progressing. Fully 60,000 masons are engaged in repairing the damaged buildings and erecting new ones. The city is also being thoroughly disinfected.

The Pope, in reply to an address of sympathy from the French Catholics, praises them for their zeal in the cause of the Church and himself, and denounces the atheistic as well as the anti-republican character of the Commune.

The elections to fill vacancies in the French Assembly, which were held on the 2d inst., were conducted in a quiet and orderly manner. A Versailles correspondent writes that it is now considered that eighty or ninety of the hundred and fourteen deputies chosen yesterday to the Assembly, are moderate republicans, and will support the administration of President Thiers.

Gambetta has been returned to the Assembly from Marseilles. Candidates pledged solely to the restoration of the territorial integrity of France, have been elected in several districts. The vote was generally light. In the department of Gironde the republicans secured 65,000 votes, the imperialists 18,000, and the royalists 19,000.

Rochefort, whose trial has been postponed from time to time, is pronounced insane.

The French loan is already much above the price at which it was issued, because of the quiet manner in which the elections passed off. On the whole the situation of French affairs appears to be more hopeful.

A Berlin dispatch states that the Prince Imperial Frederick William, and wife, would leave Berlin on the 4th inst., on a visit to England. Bismarck, as Chancellor of the German Empire, has called in the first issue of fifty-one millions of German bonds, interest on which will cease at the end of the present year.

Terrible riots have occurred among the miners in the Imperial Iron Works in Silesia. The riots were suppressed by the military, but not without serious bloodshed.

The Emperor has granted amnesty to all natives of Alsace and Lorraine, under sentence for political or military offences, except where such offences are combined with other crimes.

All the German troops in France are to form one contribution to be called the Army of Occupation, of which General Manteuffel has been appointed commander.

King Victor Emmanuel arrived in Rome on the 2nd inst., and had an enthusiastic reception from the citizens. Ministers from Germany, Sweden, Turkey, Holland, Russia, Spain and the United States, to the court of the King of Italy, were in Rome.

The Russian government has suspended the publication of the Moscow Gazette, for disobedience of the laws against the use of libellous language respecting the constituted authorities.

The Spanish Minister Moret, informs the Cortes that he will be able to effect a large reduction in the expenditures of the coming fiscal year.

Count Beust made a speech to the Austrian Reichsrath on the 1st inst., in which he declared that the

relations of the empire with all foreign powers w

UNITED STATES.—The Public Debt statement published on the first inst., shows a reduction during the sixth month of \$7,103,349.91. The total debt, amount in the Treasury on the first inst., was \$2,463,834,390. The amount of U. S. per cent. bonds, \$30,200,000; of 5 per cent. bonds \$271,256,515; of \$10's, \$165,665,680 bears no interest. The decrease debt since 3d mo. Ist, 1869, has been \$233,432,245.

The shipments of gold and silver from New York last week reached \$4,942,207. The imports of foreign merchandise continue to be heavy.

The acting treasurer at New York has been re-elected by the acting secretary of the U. S. Treasury \$1,000,000 of U. S. bonds on each Fourth-day, to sell \$1,000,000 of gold on each Fifth-day, every week during the present month.

The subscriptions to the new U. S. 5 per cent. have reached \$89,334,650. Of this less than \$0,000,000 was received during the Sixth month.

The receipts from customs for the past year equal by \$10,000,000 the receipts for the previous fiscal year. In the internal revenue collections there has been a large decrease in consequence of the reduction of duties on certain taxes. The receipts for the fiscal ending 6th mo. 30th, 1870, were \$185,255,867, and ending 6th mo. 30th, 1871, \$114,969,283, a decrease \$70,286,584.

The Markets, &c.—New York.—American gold, U. S. sixes, 1881, 114 $\frac{1}{2}$; ditto, 5-20's, 135 $\frac{1}{2}$; 12 $\frac{1}{2}$; 10-40's, 110 $\frac{1}{2}$. Superfine flour, \$5.05 to \$5.55; finer \$5.75 to \$10.25. No. 2 Chicago spring wheat, \$4.50; number western, \$1.34; white Genesee, \$1.65 to \$1.85; Oats, 66 to 68 cts. Western mixed corn, 71 to 72 yellow, 73 to 74 cts. Middling uplands cotton, 20 Orleans, 21 cts. Philadelphia.—Western red wheat, 1.44 to \$1.49. Yellow, 75 cts. to \$1.55 to \$1.60. Oats, 66 to 68 cts. The sales of beef cattle at the Avondale-yard, on the 3d inst., reached about 2,400. Prime sold at 74 to 83 cts. per lb. gross, medium, 73 cts., and common 5 to 6 cts. per lb. Sheep sold 6 to 6 cts. per lb. gross, and hogs, 67 to 7 cts. per lb. **Baltimore.**—Amber wheat, prime, \$1.50 to \$1.65. No. 1, \$1.40 to \$1.50. No. 2, \$1.30 to \$1.45. No. 3, \$1.20 to \$1.30. No. 4, \$1.10 to \$1.20. No. 5, \$1.00 to \$1.10. No. 6, \$0.90 to \$1.00. No. 7, \$0.80 to \$0.90. No. 8, \$0.70 to \$0.80. No. 9, \$0.60 to \$0.70. No. 10, \$0.50 to \$0.60. No. 11, \$0.40 to \$0.50. No. 12, \$0.30 to \$0.40. No. 13, \$0.20 to \$0.30. No. 14, \$0.10 to \$0.20. No. 15, \$0.05 to \$0.10. No. 16, \$0.02 to \$0.05. No. 17, \$0.01 to \$0.02. No. 18, \$0.00 to \$0.01. No. 19, \$0.00 to \$0.00. No. 20, \$0.00 to \$0.00.

FRIENDS' BOARDING SCHOOL FOR INFANTS, CHILDREN, YOUNG MEN, AND YOUNG WOMEN, TUNNESSA, NEW YORK.

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm attached to it. Application may be made to Ebenezer Wistar, Marshalltown, Chester Co., Pa.; Thomas Wistar, Fox Chase P. O., Philadelphia; Samuel Morris, Olney P. O., or Joseph Scattergood, 413 Spruce Street, do.

FRIENDS' ASYLUM FOR THE INSANE, New Frankford, (Twenty-third Ward,) Philadelphia.

Physician and Superintendent.—JOSUAH H. WATSON, M. D.

Applications for the Admission of Patients in need of the Superintendent, or to any of the Board of Managers.

DIED, on the 11th of Fifth mo. 1871, at Ra N. J., MAETHA, wife of Aaron Wills, in the 77th year of her age, a member and elder of Burlington M. Meeting. This dear friend was of a meek and amiable spirit, and adorned her profession by a humble, unspotted life and conversation.

—, on the 19th of Fifth mo. 1871, GEORGE in the 69th year of his age, an esteemed member of Birmingham Monthly Meeting, Pa.

—, on the morning of the 10th of Fifth mo. at the residence of her parents, John and Miriam THOMAS, ELIZABETH, wife of Charles Gamble, 22d year of her age, a member of Hickorygrove M. Meeting, Iowa. She bore a lingering and painful illness, under which she was afflicted in much weakness, patience and christian spirit to the end. Her mind was in her illness her mind appeared to be centered in Divine love, and under the precious in which we believe she finished her course, and into the mansions of everlasting rest and peace.

English Government at the Siamese Court.

(Continued from page 366.)

In concluding extract we shall make from work, presents one of the most favorable illustrations that could be selected of Buddhism in its better aspects. We know that in every nation, he that feareth God is accepted of Him, and that therefore we may trust to His mercy and goodness, those who are ignorant of outward knowledge of Christian truth, who, as the Apostle expresses it, show works of the law written in their hearts, how great is the satisfaction of knowing Christians, that we need not grope after truth all our life long, with the attendant gloom of uncertainty as to what it is; but we have a sure revelation of the Divine confirmed to us individually, by the assurance of its teachings with that which we find in ourselves to be the language of the Spirit. If the priest of Buddha, whose death is here described, had been favored with knowledge of Christianity, how much misery might he have been spared, and how much more comfort and true satisfaction it have attended him through life!

"Do you understand the word 'charity,' *maïtri*, as your apostle St. Paul explains it in the thirteenth chapter of his First Epistle to the Corinthians?" said his majesty to me this morning, when he had been discussing religion of Sakyamuni, the Buddha.

"I believe I do, your majesty," was my answer. "Then, tell me, what does St. Paul really mean, to what custom does he allude, when he says, 'Even if I give my body to be burned, have not charity, it profiteth me nothing.' Custom?" said I. "I do not know of any such."

"Now," said the king, taking several long strides in the vestibule of his library, "I declare to you his habitual emphasis, Paul, in this chapter, evidently and emphatically applies the Buddhist's word *maïtri*, *akree*, as pronounced by some Sanskrit scholars; and explains it through the Buddhist custom of giving the body to be burned, a practice practised centuries before the Christian era, and is found unchanged in parts of India, Ceylon, and Siam to this day. The

giving of the body to be burned has ever been considered by devout Buddhists the most excellent act of self-abnegation.

"I know a man, of royal parentage, and once possessed of untold riches. In his youth he felt such pity for the poor, the old, the sick, and such as were troubled and sorrowful, that he became melancholy, and after spending several years in the continual relief of the needy and helpless, he, in a moment, gave all his goods,—in a word, ALL,—to feed the poor." This man has never heard of St. Paul or his writings; but he knows, and tries to comprehend in its fulness, the Buddhist word *maïtri*.

"At thirty he became a priest. For five years he had toiled as a gardener; for that was the occupation he preferred, because in the pursuit of it he acquired much useful knowledge of the medicinal properties of plants, and so became a ready physician to those who could not pay for their healing. But he could not rest content with so imperfect a life, while the way to perfect knowledge of excellence, truth, and charity remained open to him; so he became a priest.

"This happened sixty-five years ago. Now he is ninety-five years old; and, I fear, has not yet found the truth and excellence he has been in search of so long. But I know no greater man than he. He is great in the Christian sense,—loving, pitiful, forbearing, pure.

"Once, when he was a gardener, he was robbed of his few poor tools by one whom he had befriended in many ways. Some time after that, the king met him, and inquired of his necessities. He said he needed tools for his gardening. A great abundance of such implements was sent to him; and immediately he shared them with his neighbors, taking care to send the most and best to the man who had robbed him.

"Of the little that remained to him, he gave freely to all who lacked. Not his own, but another's wants, were his sole argument in asking or bestowing. Now, he is great in the Buddhist sense also,—not loving life nor fearing death, desiring nothing the world can give, beyond the peace of a beatified spirit. This man—who is now the High-Priest of Siam—would, without so much as a thought of shrinking, give his body, alive or dead, to be burned, if so he might obtain one glimpse of eternal truth, or save one soul from death or sorrow."

"More than eighteen months after the First King of Siam had entertained me with this essentially Buddhistic argument, and its simple and impressive illustration, a party of pages hurried me away with them, just as the setting sun was trailing his last long, lingering shadows through the porches of the palace. The sun had set in glory below the red horizon when I entered the extensive range of monastic buildings that adjoin the

"The pages left me seated on a stone step, and ran to announce my presence to the king. Long after the moon had come out clear and cool, and I had begun to wonder where all this would end, a young man, robed in pure white, and bearing in one hand a small lighted taper and a lily in the other, beckoned me to enter, and follow him.

"As the page approached the threshold of one of the cells, he whispered to me, in a voice full of entreaty, to put off my shoes; at the same time prostrating himself with a movement and expression of the most abject humility before the door, where he remained, without changing his posture. I stooped involuntarily, and scanned curiously, anxiously, the scene within the cell. There sat the king; and at a sign from him I presently entered, and sat down beside him.

"On a rude pallet, about six and a half feet long, and not more than three feet wide, and with a bare block of wood for a pillow, lay a dying priest. A simple garment of faded yellow covered his person; his hands were folded on his breast; his head was bald, and the few blanched hairs that might have remained to fringe his sunken temples had been carefully shorn—his eyebrows, too, were closely shaven; his feet were bare and exposed; his eyes were fixed, not in the vacant stare of death, but with solemn contemplation or scrutiny, upward.

"My entrance and approach made no change in him. At his right side was a dim taper in a gold candlestick; on the left a dainty golden vase, filled with white lilies, freshly gathered; these were offerings from the king. One of the lilies had been laid on his breast, and contrasted touchingly with the dingy, faded yellow of his robe. Just over the region of the heart lay a coil of unspun cotton thread, which, being divided into seventy-seven filaments, was distributed to the hands of the priests, who, closely seated, quite filled the cell, so that none could have moved without difficulty. Before each priest were a lighted taper and a lily, symbols of faith and purity. From time to time one or other of that solemn company raised his voice, and chanted strangely; and all the choir responded in unison. These were the words, as they were afterward translated for me by the king.

"*First Voice.* Thou Excellence, or Perfection! I take refuge in thee.

"*All.* Thou who art named Poot-tho!—either God, Buddha, or Mercy,—I take refuge in thee.

"*First Voice.* Thou Holy One! I take refuge in thee.

"*All.* Thou Truth, I take refuge in thee. "As the sound of the prayer fell on his ear, a flickering smile lit up the pale, sorrowful countenance of the dying man, he said: 'To your majesty I commend the poor; and this that remains of me I give to be burned.' And that, his last gift, was indeed his all.

"Gradually his breathing became more la-

borious; and presently, turning with a great effort toward the king, he said, *Chan cha pi dant!*—"I will go now!" Instantly the priests joined in a loud psalm and chant, "Thou Sacred One, I take refuge in thee." A few minutes more, and the spirit of the High-Priest of Siara had calmly breathed itself away. The eyes were open and fixed; the hands still clasped; the expression sweetly content. My heart and eyes were full of tears, yet I was comforted. By what hope? I know not, for I dared not question it."

New Expeditions to the Arctic Regions.

A Swedish North Pole expedition, under the direction of Professor Nordenskiöld, has sailed from Stockholm. It consists of the ships *Geogard*, Captain J. W. von Otter, and *Gladan*, Captain P. M. von Krusenstjerna.

The U. S. expedition, authorized by Congress, under the auspices of Captain Hall, of Arctic fame, is nearly ready for a start and will shortly sail from New York. The vessel selected is the *Polaris*.

The steamer is about 400 tons measurement, considerably larger than the *Advance*, in which Dr. Kane undertook his famous voyage, and about the same size as the *Germania*, which left Bremen two years ago on an expedition to the Arctic Seas. She has been planked all over her sides with six inches of solid white oak timbers, and has throughout been nearly doubled in strength; her bows being almost a solid mass of timber, sheathed with iron, and terminating in a sharp iron prow with which to cut through the ice. Her engine, which was built some years ago at Neafie & Levy's works, in Philadelphia, is exceedingly powerful and compact, taking up but comparatively little space, and being peculiarly adapted for hard and severe work; and the propeller is arranged in such a manner, that it can be unshipped and lifted up on deck, through a shaft or "propeller well" in the stern, which is a great advantage when the vessel is under sail or surrounded by floating ice that might easily damage the blades. And, even in the worst case, a supply of extra blades has been provided, so that if one should by accident be broken, it can always be replaced. There is also an extra rudder on board, and several suits of sails and sets of spars of all dimensions. Of the two boilers, one is supplied with an apparatus to use whale oil for the generation of steam, as this, in all probability, have to be relied upon when other fuel gives out, not only to furnish the propelling power, but also to heat up the vessel throughout by steam, which will, of course, be necessary as soon as the cold and wintry regions have been reached.

Steam will merely be used as an auxiliary, as the *Polaris* is rigged as a foretopsail schooner, and is fully able to sail and steer under canvas only. A novel and interesting feature in her construction is a new sort of life-preserving buoy, which is placed on the outside of the vessel, in the stern, and can be lowered into the water, by touching a spring which is placed near the pilot-house. By touching another spring, an electric light, which is fixed upon the buoy about two feet above water, is ignited by completing the circuit of an electric current from a galvanic battery on board; and no matter how dark the night, or how obscure the arctic winter, the buoy can always be distinctly seen, and the man who has fallen overboard will know in what direc-

tion to swim for hope and help. Another excellent and peculiar part of her outfit is a canvas boat, which is 20 feet long, four feet wide and two deep, has a carrying capacity of four tons, weighs only 250 pounds, and can carry with ease and safety 20 men. It consists of an interior frame, built of hickory and ash woods, over which is stretched a canvas coat that has been previously soaked in a preparation to render it perfectly water-proof; and the whole boat can be taken apart and folded together in a space less than one eighth of its original size, in about three minutes, and by the assistance of a couple of men only. When folded up it is flat, and can be transported on a sledge across the ice without the least difficulty. When open water is reached the boat is unpacked and spread out, and the sledge and its contents taken on board, dog team and all.

Those who are going to be the principals in this adventurous and dangerous expedition, are all told, 29 men. The leader and commander in chief is Captain Hall; among the others are William Morton, who was Dr. Kane's trusted friend and companion, and the Esquimaux interpreter, Joe, and his wife, Hannah. This latter interesting couple, with their little daughter, are genuine specimens of the Esquimaux, but having been in constant company with Captain Hall for eight years past, they speak very good English, and have acquired civilized manners. Their little daughter, who will accompany them, is five years old, and has been for some time at school in Connecticut, where her parents have been lately residing.—*Late Paper.*

For "The Friend."

London Yearly Meeting.

In the lengthy account of the late London Yearly Meeting, as printed in the *British and London Friends*, are found remarks affording evidence that a portion of its members still maintain a concern for the continuance of our Society upon its ancient foundation. It was spoken of as matter of regret upon one occasion, that "no opportunity had been allowed for the meeting to settle reverently, after several very weighty addresses," on the subject of an interesting memorial which had been read. The speaker "rejoiced in the belief that He who was withdrawing his gifted ones from amongst us, was not withdrawing his gifts." Feeling sensible of the pouring out of the spirit of supplication upon the meeting, he remarks, "that if we had waited for it a little more we should have enjoyed the blessing of communion with our Heavenly Father. He almost feared we had talked it away."

How do these latter remarks apply to meetings for worship, the life of which seem sometimes destroyed by extended, unsavory communications, taking up nearly the whole time of them, and this sometimes by those who make not the outward appearance of being our members, and whose discourses have more of a resemblance to pulpit oratory than true gospel ministry. Says another member of the Yearly Meeting referred to, "Surely the vitality and power of our meetings for worship—the living, gathering, baptizing influence of any minister for (Christ) worth calling a minister—depended upon the extension of his love, upon the baptism of his Holy Spirit, upon the renewed participation of the anction from him, the Holy One."

It was remarked by another upon the cause

of our decline, as a people, that he "though it might be summed up in a few words, was undoubtedly great individual unfaithness. To this, in a measure, was to be attributed the low standard of the ministry; exercise not being accompanied with the blessing of the Lord, and the living power which it used to be."

In reference to meetings for worship it is remarked, that the reason why these were unattractive to the young, was to be found largely in "the mode in which they were held; they did not bear much of the primary duty of life—minding the conviction of the Holy Spirit upon the heart as the first principle of our religion. As this made way in the mind we should be prepared to receive those of great and glorious principles the gospel forth. Until we held the doctrine of Christ inwardly in the heart, no outward belief his coming would be of any avail to us. Another Friend said "he was pained, not to see one of the most important of our sittings used for, should he say, speech-making; that in this important subject if we would liberate under the influence of our holy (He) we should each feel the necessity that words should be few. We gave, comparatively speaking, very little time for divine worship."

The fear was expressed that "in yielding to the temptations of what looked fair to sight, we had lost a true sense of the tast, what we once knew as individuals and people;" and the wish was expressed that should be willing to recur to those principles from which we had departed, or lightly teased; admonishing us to "keep that by which we had in any measure attained. It was further and justly remarked by other, that "if we lived up to and understood our principles, we should be strengthened and the Society would benefit more than regulations."

This Yearly Meeting seems to have some trouble from the desire and endeavor to introduce extraneous matters, as is found those in America, and it is to be feared, the presuming, persistent efforts of those whose labors tend, however imperceptible themselves, to undermine our religious life; may continue to unsettle our confidence in the immediate, inward teachings of the Holy Spirit; and thus lessen our sense of obligation to wait upon our holy Head and Leader for renewal of spiritual strength, for re-qualification, and the word of command, religious exercises and labors; substitute human strength, wisdom and inventions for Divine assistance and direction—seeking easier way than the cross to our own will; waiting patiently upon God for the coming of his time, for the seasons of refreshing in his living presence.

Vegetation of the Andes.—A late S. American traveller remarks, "The laws of decrease of heat are plainly written on rapid slopes of the Cordilleras. On the steaming low lands of the coast, reign bananas and palms. As these thin out, trees take their place. Losing these, we found cinchona bedewed by the cool clouds of Cuzco; and last of all among the trees polylepis. The twisted, gnarled trunks of mixed as well as its size and silvery foliage, remind us of the olive, but the bark resembles that of the birch. It reaches the great elevation of any tree on the globe."

all flowers. The most conspicuous trees the palms, to which the prize of beauty has been given by the concurrent voice of all ages. The earliest civilization of mankind ranged to countries bordering on the region of palms. South America, the continent of light heat and moisture, excels the rest of the world in the number and perfection of palms. They are mostly of the feathery fan-like species; the latter are inferior in rank to the former. The peculiarly majestic character of the palm is given not only by its lofty stems, but also in a very high degree by the form and arrangement of their fronds. How diverse, yet equally graceful, the aspiring branches of the jagua and drooping foliage of the cocoa, the shuttlecock-shaped crowns of the ubressie, and the meses of the jupati, forty feet in length. The presence always springs from the top of trunk, and the male flowers are generally ovish. Unlike the oak, all species of palm have similar fruit, there is a vast difference in the fruits of the palm; compare the angular cocoa-nut, the peach-like date, and the pebble assai. The silk cotton tree is the glory of the palm in dignity; it has a white crown and a lofty flat crown. Among the finest children of Flora we must include mimosa, with its delicately pinnated foliage endowed with sensibility that it seems as if slipped out of the bounds of vegetable life.

The bamboo, the king of grasses, forms a distinctive feature in the landscape of the tropics, frequently rising eighty feet in length, high not in height, for the fronds curve inward. Fancy the airy grace of our dew grasses united with the lordly growth of the poplar, and you have a faint idea of the beauty.—Orton.

Selected for "The Friend."

The Lord's Testimony Through Us.

The testimony given to us, as a people, in our branches, hath been a stone of stumbling and a rock of offence to many, who have looked for our crown without our cross, and overlooked and despised the peculiarity of our testimony, or rather the Lord's testimony through us. The language, fashions, customs of the world, though by many deemed indifferent, are not so to us, but are part of the growth of that lofty Lebanon, the day of the Lord is to come upon us, as well as the cedars; and when that day comes, it will burn as an oven, with prevail heat, and leave them neither root nor chaff. All who have entered into fellowship with us, by the baptism of Christ, which is the right door of entrance, have found it their duty to attend to these testimonies, from imitation, but from conviction of propriety. We might have many preach-break in upon us, were we at liberty to let them upon the bottom of general speculative truth, without their coming to the door of the spirit.—Samuel Fothergill.

Of Control.—The Encyclopædia of Ancestry has the following among other instances of control.

The Duke of Marlborough possessed great command of temper, and never permitted it to be ruffled by little things, in which even the greatest men have occasionally been found wanting. As he was one day riding with his mistress Marriot, it began to rain, and he told her to his servant for his cloak. The ser-

vant not bringing it immediately, he called for it again. The servant, being embarrassed with the straps and buckles, did not come up to him. At last, it raining very hard, the duke called to him again, and asked him what he was about, that he did not bring his cloak. "You may stay, sir," grumbled the servant. "If it rains cats and dogs, till I can get at it." The duke turned round to Marriot, and said, very coolly, "Now I would not be of that fellow's temper for all the world."

Socrates finding himself in great emotion against a slave, said, "I would beat you if I were not angry." Having received a box on the ear, he contented himself by only saying with a smile, "It is a pity we do not know when to put on a helmet." Meeting a person of rank in the street, Socrates saluted him, but the man took no notice of it. His friends in company observing what passed, told the philosopher "they were so exasperated at the man's ineivility, that they had a great mind to resent it." But he very calmly made answer, "If you meet any person in the road in a worse habit of body than yourself, would you think you had reason to be enraged with him on that account; pray then, what greater reason can you have for being incensed at a man for a worse habit of mind than any of yourselves?"

Antigonus, king of Syria, during one of his campaigns, one day overheard some of his soldiers reviling him behind his tent. But instead of summoning them to appear and answer for their contumely, and exercising his authority in their punishment, he barely drew aside the curtain of his tent, and said, "Gentlemen, just remove to a greater distance, for your king hears you."

Canals, Ancient and Modern.

The ancients early recognized the importance of canals as mediums for internal communication. Probably the first work of this kind was constructed by the Egyptians. It connected the Nile with the Red sea, and in 1798 the work was in such a state of preservation that a company of French engineers reported that it only needed cleansing to render it navigable once more. Herodotus attributes its commencement to Pharaoh Nechos, in the year 616 B. C. Although Pliny, Strabo, and other historians do not agree with Herodotus as to the date of its commencement and the name of its founder, they all agree in that there was such a canal, and that it was commenced some five or six centuries before the Christian era. Strabo says the canal was 150 feet (100 cubits) broad, and that ships were four days in sailing through it.

The Chiddians, ancient inhabitants of Caria, in Asia Minor, designed and dug a channel through the isthmus joining their territory to the continent.

The Greeks made an unsuccessful attempt to cut a navigable passage between the Ionian sea and the Archipelago.

The Romans built large canals, called "Fosses Philistinae," at the mouth of the Eridanus or Po river. The canals of the Pontine marshes accomplished 162 B. C., and, after a long period of disuse, were restored by the Emperor Trajan.

From time immemorial, the rivers of China have been united by canals, and there is no country on the face of the globe where the advantages of such a network of canals are so

manifest; for these canals, with the natural water communications, render the tonnage of that country but a little less than the combined tonnage of the rest of the world. The Grand canal of China is the most stupendous work of the kind ever executed. It was commenced in the tenth century of our era. It is nearly seven hundred miles in length, and extends from Hang-choo-fo to Yan-liang river, forming an unbroken connection between fifty cities. It joins the great rivers Yang-tse-king, twenty-nine hundred miles long, and Ho-hang ho, two thousand miles.

This and other Chinese canals are not constructed upon the same plan as the canals of Europe and America, nor composed like them of standing water, fed by reservoirs, elevated and lowered by means of locks. The want of locks obliges the Chinese to conduct their canals around the different elevations encountered, and to lift the boats by means of chain and capstan. The irrigation supplied by the Grand canal renders the country through which it passes exceedingly fertile, and, in proportion to its size, the most populous spot in the world.

The construction of canals in modern Europe was commenced in the twelfth century. Sluices, with double doors, were not introduced until 1481. They were first used at Viterbo, in Italy.

The first canal made in England connected the rivers Trent and William. It was begun during the reign of Henry I. England has now 2,800 miles of canal communication, Ireland 300, and Scotland 175, making a total of 3,275 miles for the united kingdom. The longest of these canals is that which joins Leeds and Liverpool, 127 miles in length, finished in 1816. The New river, which has supplied London with water, is a canal. The canal connecting Manchester with Worsley, built by the duke of Bridgewater, in 1755, was cut for eighteen miles under ground, at a cost of £170,000.

The canal of Briare, the oldest in France, was commenced in the year 1606, during the reign of Henri Quatre, and finished in 1740. It is 341 miles long, and, in conjunction with the canal of Loing, at Montargis, forms a communication between the rivers Loire and Seine. It was constructed under Ingues Cromier, a renowned engineer of that time. The celebrated canal of Languedoc is the largest in France. It has more than one hundred locks, is 153 miles in length, and is capable of admitting vessels of one hundred tons burthen. Commencing in the river Garonne, at Toulouse, terminating in the lake of Thau, it forms a connection between the Atlantic and Mediterranean seas. The canal from the Durance to Marseilles is 52 miles long; 11 miles of this length are subterranean passages through the Alps. It was finished July 8, 1817.

Holland, the land of dikes and ditches, is completely cut up into small islands by its extensive system of canals, which cross and interlace each other like the threads of some large fishing net. Owing to the level state of the country, the construction of a canal involves but comparatively little labor and expense, and many of them are used as substitutes for public highways; in the winter, their frozen surfaces offer convenient roads for skaters.

The North Holland canal, the finest work of its kind in Europe, was built during the years 1819-23, at a cost of \$4,750,000. It is 50 miles long, 125 feet broad at the surface, 36

feet at the bottom, and has an average depth of 21 feet. By means of this canal, ships bound to Amsterdam avoid the danger and delay incurred in navigating the Zuyder Zee. Since not only the surface, but the bed of many of these canals is above the level of the land, the drainage of the meadow lands, through which they run, is a matter of great solicitude. It is effected by means of wind mills, working pumps.

In spite of many difficulties, Russia is traversed by canals. An unbroken communication, by this means, has been established between St. Petersburg and the Caspian sea; the Baltic and Black seas, and the White and the Caspian are in like manner united. A traveller can go from St. Petersburg to Selmsk, in Siberia, with the exception of a few miles, all the way by water.

In 1817, Mehemet Ali, perceiving the importance of Alexandria as a commercial centre, restored the ancient communication with the Nile by means of the Mahmoudieh canal. Since the building of this canal, the population of Alexandria has quadrupled. About a half a century after the completion of the Mahmoudieh canal, the great canal of Suez was opened to the commerce of the world.

The first canals constructed in the United States were those of South Hadley and Montague, in the state of Massachusetts. The company received its charter in 1792, and the work was commenced without delay. The South Hadley canal was built to afford a safe transit around the South Hadley falls. It is two miles long, has five locks, and for a distance of 300 feet is cut 40 feet deep through solid clay-slate rock. The Montague canal passes around Turner's falls, is three miles long, and has 75 feet of lockage.

The Welland canal, in Cahada, which connects the Lakes Erie and Ontario, avoiding Niagara falls, is but 36 miles in length, yet it cost the enormous sum of \$7,000,000.

With the invention of the locomotive engine, and its subsequent introduction, the time of the construction of large and expensive canals passed away. While the increase in the total length of the canals of the United States during the past twenty years, can be not more than a thousand miles, the increase in the total length of railway, during the same period, is more than 40,000. An additional barrier to an extensive increase of canal communication, looms up in the shape of narrow gauge railways, which are attracting great attention at this time, and which at no distant day will be the great freight-carrying method of this country.—*Scientific American.*

Selected for "The Friend."

The State of our Society in 1759.

The state of our Society calls for mourning: the numerous slips of those in exalted stations increases the revolt; and tends to strengthen those who have taken their flight in this day of outward ease. When I look round, and take a view of the sorrowful appearance of things, I am ready to say, Who is sufficient for the work? who is able to stop the rampant strides that the offspring of the professors of truth are making into undue liberty? except the Lord turn them they cannot be turned; except in the riches of his mercy he pardon them, they cannot be pardoned; their condemnation will be greater than that of those who never sat under the teachings of a

free ministry, nor had been taught to believe in the inward manifestations of the Spirit of Christ.

With humble desires for our mutual enlargement in Christian experience, I remain thy affectionate friend,

SAMUEL NEALE.

The so-called "Cardiff Giant."

It will be remembered that, two or three years since, a considerable excitement was created by the alleged discovery upon the farm of a Mr. Newell, near the city of Syracuse, in the State of New York, of a human figure of gigantic proportions, which was exposed during an excavation undertaken by the owner with the avowed purpose of digging a well for the supply of water to his cattle. The obvious folly of excavating for a well in the bed of a stream of water was commented on at the time, and was not easily explained away. The popular appetite for marvels was, however, adroitly quickened by the story first of a "fossil man," of pre-historic age; for who did not believe that "there were giants in those times?" The absurdity of such a theory soon compelled the milder statement that while the recumbent giant was of acknowledged human origin, it was unquestionably of an unknown but very high antiquity, and hence must possess great archeological interest. With this hypothesis the so-called

"Cardiff Giant" commenced the tour of exhibition, after thousands of curious spectators had visited him in his resting place, as he lay exposed in the excavation upon the Newell farm; and for a time multitudes thronged the places in various cities where this supposed relic of an earlier age was to be seen. We have lately had the matter brought home to our own doors through a visit of this venerable personage to New Haven, and although we had supposed the fraud had long since ceased to be capable of exciting more than a feeling of contempt, mingled with curiosity to see by what means the delusion was produced, we have been surprised at the facility with which people, otherwise sensible, give credit to the greatest absurdities, even after the "humbug" had been fully exposed. We think, therefore, it is worth while to record very briefly, the real history of this sham, that it may find its place in the already large catalogue of popular delusions. We suppress names, but give the main facts as we have ascertained them from an intelligent witness who was cognizant of the origin and progress of the statue.

The block of gypsum from which the Cardiff Giant was carved, was quarried near Fort Dodge, in Iowa, where there is an inexhaustible supply of massive gypsum of Mesozoic age.* It was transported to Chicago, in Illinois, where it was placed in the workshop of Mr. Burckhardt, a well known marble-worker of that city, who contracted with the originators of the scheme, for a not very considerable sum of money, to produce a gigantic recumbent figure of a man. This position, resting with the left arm under the body, the right arm thrown across the body over the pelvis, and with the legs slightly flexed at the knees, was measurably a necessity of the form of the block of stone at the artist's command. This figure was first modelled in clay by or under the direction of Mr. Burckhardt, and was then

transferred to the stone. Our informant states that he saw the figure more than once during its preparation. The appearance of age was given partly by treating the surface with acids to remove the tool-marks and the rough look of a recently tooled surface, and the effect was subsequently heightened by the grime and soil of a seven month's interment. Thus prepared, the newly-made antique was transported by rail to a point near the Newell farm, and thence by teams to the farm itself, where, by the aid of a body of work people brought from a distance, it was placed in its resting place, near the bed of a small stream. Those engaged in the work of removal at interment were taken away furtively, at thus no one at or near Syracuse, but who engaged in the speculation, knew of its existence. By a singular accident, an eye-witness to its making in the Chicago workshop happened to be in Syracuse at the time its discovery was announced, and, visiting the Newell farm with the crowd of curious spectators, was surprised to see there his old acquaintance half buried in the earth. We have taken pains to verify this statement, and a promised at an early day a detailed statement from the workshop of Mr. Burckhardt of its entire history, which we may take another occasion to publish.

B. S.
—*Silvanus's Journal.*

It was a pleasant sunny afternoon when I visited Greenwood [Cemetery], and it looked charmingly beautiful, with its tall trees, its graceful willows sweeping the ground, its bright green grass, and placid little sheets of water, spread over hill and valley; but the coldest and most imposing monuments seem to me but as poor and unsatisfactory attempts to cling to an earthly name. We saw in its part appropriated as the common burial ground, a great many children's graves, with their toys spread over them, and sometimes their little half-worn shoes. It looked very singular to me. Cousin G. said it was materialism. So much appeals to the sense such places, it seems almost like a want of christian faith in a life beyond the grave.

The North American Lakes.—The following figures are given as the latest measurements of the great lakes—Superior, Michigan, Huron, Erie, and Ontario. The greatest length of Lake Superior is 335 miles; greatest breadth 160 miles; mean depth, 638 feet; elevation above the level of the sea, 627 feet; area, 900 square miles. The greatest length of Lake Michigan is 390 miles; greatest breadth, 141 miles; mean depth, 900 feet; elevation 4 feet; area 23,000 square miles. The greatest length of Lake Huron is 200 miles; greatest breadth, 160 miles; mean depth, 600 feet; elevation, 270 feet; area, 20,000 square miles. The greatest length of Lake Erie is 250 miles; greatest breadth, 80 miles; mean depth, 84 feet; elevation, 555 feet; area, 6,000 square miles. The greatest length of Lake Ontario is 181 miles; greatest breadth, 65 miles; mean depth, 500 feet; elevation 260 feet; area, 6,000 square miles. The length of all the five lakes is 1,584 miles, and they cover an area of 130,000 square miles.

A little sin becomes a great one in the life of Truth.

* See Dr. White's report on the Geology of Iowa, vol. ii. p. 299.

wood shrubby fuschias, calceolaria, epaupa, and red and purple gentian; around and are arenal, a sandy and gravelly district, a form mantle of monocotyledonous plants, scattered tufts of valeriana, viola and animum, all with rigid leaves in the characteristic rosettes of super-alpine vegetation; in the porphyritic and trachytic side of morazo, lichens alone. Snow then covers fast effort of vegetable life.

Guaranda is a healthy locality, lying in a valley on the west bank of the Chimbo, an elevation of 8,840 feet, and having a temperature slightly less than that of Quito. It is a place of importance, inasmuch as the resting place for ascending or after sending the still loftier ranges, and much so because it is the capital of the region which yields the invaluable cinchona or Peruvian bark. This tree is indigenous to the Andes, where it is found on the western slope on the altitude of two thousand and a thousand feet, the species richest in alkaloids occupying the higher elevations, where the air is moist. There are many varieties of this tree, but the only one of value remains in the region of Guaranda is the cinchona rubra, (the calisaya having run out), and also is said to be nearly extinct, as it has been destroyed to obtain the bark; species is a beautiful tree, having large, oval, deep green shining leaves, white, fragrant flowers, and red bark, and sometimes, but rarely attains the height of sixty feet, or five feet in circumference will yield on hundred pounds of green bark, or a hundred of the dry. The roots contain most alkaloid, though the branches are rarely barked for commerce.

This valuable tree was introduced into Inca in 1801, and appears to flourish there on slopes of the Himalayas. The bark is reported to be even stronger than that of the cedar, and it is not improbable the quinine commerce will, at a future day, come from the Himalayas instead of the Andes.

For "The Friend."

Memoirs of Mildred Rateliff.

(Continued from page 305.)

1808. 8th mo. 8th. I take my pen in hand to leave behind me some hints of my since the 6th instant, which I trust will be some encouragement to some lonely or Zionward, when I am in another's of being. Well satisfied I am, however unincircumised in heart, that the humong whose lot it is to trace the same path, understand me, and I trust be encouraged. How the Lamb whithersoever he may be led to lead. I may add I surely know to stubborn nature, it is hard to become able; to feel as though I was a speckled bird pointed at, seemed at times enough to turn me; and because of an unwillingness to bear the cross, my language often is, 'Oh my habitation was in the desert; that I have in the wilderness where no eye beheld me, nor ear hear my voice, where should could be continually poured out before the Lord.' But this allotment is not seen for me by the Beloved of my soul, the best of all my joy, but quite contrariwise. I use of an unwillingness to bear his cross, that rejoicing I long for; and for inclining to a finch in time of trial, I am often ready to bear myself, feeling a sense of my un-

worthiness to be called into the vineyard of the great Husbandman for public labor, or to stand as a fool for his Name's sake; and when he gives command to hand out the fruits thereof. Oh that thou, who may have in a day to come, the same kind of labor, I desire thou mayst, by obedience, render thyself more worthy than I have done; that thou mayst escape many sorrows which I have merited for want of that rejoicing under the power of the cross of Christ which ought to be experienced by all the faithful; even rejoicing that they are counted worthy to be called a fool for the Truth's sake. Oh then be faithful, whoever thou art, that may read these lines, when I am gone to give account of my stewardship: be faithful unto thy Lord. When he commands, obey. Consult not with flesh and blood. Remember whatsoever is to be known of God is made manifest within; and when He is graciously pleased thus to manifest his will to his depending children, these need no further evidence, however singular they may appear to them. Surely he changes not, and will safely lead all those who put their trust in Him, who lean not to their own understanding.

"I may mention how it fared with me yesterday in our own meeting. Perhaps it may afford encouragement to some in a future day. The meeting was unusually small; and soon after it gathered, there appeared an intelligible language in the life and power of Truth, though in few words, to an individual then present, by name. This was cause of joy in my heart, until I believed it required of me to hand it forth to the individual by name. This was a thing so uncommon in a public meeting, though a very small one, that I waived the matter, and plead many excuses, planning out a more private opportunity; not being willing to appear singular. After a sore conflict, I gave up in obedience, in which I found peace. I was renewedly confirmed there is cause for these things, which we must leave to the Allwise Disposer of events. Yet it seems hard at times to keep that down in us which hates to be called a fool, or pointed at as a speckled bird.

"It is an inexpressible favor to know the way to the kingdom is through many tribulations, many proving dispensations, many deep wadings and fiery trials, to stubborn nature, that all the dross, the tin, and the reprobate silver may be cleansed out, and the pure gold made fit to dwell where no uncleanness is. O the many strokes requisite for that necessary death which all must die, to the world and the things thereof, before they can live with Christ Jesus in glory, where nothing impure can dwell. O Lord my God! I pray thee to be with me, and all that love thee, the world over. Thou knowest who and where they are, of whatsoever name or denomination of people. Be thou pleased for thy beloved Son's sake, to be the strength of their day, so that the work may be accomplished in the day time! O my Father! be pleased to be near thy little handmaid in the time of need! Be my strength and my all! Thou knowest that I love thee! Therefore will I follow thee, through thine own power, through evil as well as good report, whilst I have any life left. Then I humbly hope when my work is done on earth, to mount upward to praise thy name forevermore, where the wicked cease from troubling and the weary are at rest. Thou art worthy, with the Son of thy

bosom, to be magnified and adored through all generations, world without end. Amen!

"These things are written in fear, under a sense of duty to God, who has been very mindful of me, a poor worm of the earth, and showed mercy unto me when no man could help. He still continued his fatherly care over me, whereby I am induced to labor for obedience in whatsoever he requires. I leave this written testimony to his goodness to me, hoping some may be encouraged thereby to obedience in the day of their visitation. Keeping humble: for it is the humble he teaches of his ways, and the meek he guides in judgment. May I ever be humble, ever meek, ever sensible that of myself I am nothing, and can do nothing conducive to my own peace, or for the help of another. M. R."

Soon after writing this Mildred Rateliff laid before her Friends of South River Monthly Meeting her prospect of religious service in Virginia and Carolina; and having their unity, and a suitable companion in Rebecca Preston, she in the Tenth month set off to accomplish it. The following is a journal she kept of her travels:

"I set off to attend the Yearly Meeting in North Carolina, the 20th of the 10th month, 1808, in company with my well-beloved Friends Rebecca Preston, and William Preston, her son. We reached our friend Samuel Johnson's; where we met our dear friend — Stratton, and she joined our company.

"21st. Reached R. F.'s. They were very kind, and I think I may say great was my desire that they may not lose their reward. Next day, 22d, we had a tiresome travel through much rain, yet we have cause to magnify that glorious Hound that has helped us thus far. Saith my soul may we never distrust his care. We got to a house where we staid, though not a place for Friends to desire to quarter at.

"23d. We reached the settlement of Friends at Gravelly Run, and lodged at our well-beloved friend Joseph Butler's, where we were much refreshed. How pleasant it is, after being exposed among strangers, and traveling till we are tired, to meet with children of our Father; where we are received in love, and the unity of the Spirit is felt sweetly to flow as from the bosom of the nearest relations. This can enable the little ones truly to magnify that power which ever did, and ever will, preserve his own seed, wherever they may be, holding them as in the hollow of his hand. These will give Him all the praise, for he is worthy. Oh, my soul, I charge thee trust in him always. Love him above all. Be willing to give up all for his name's sake, since thou knowest hitherto he has helped thee. Therefore fail not to put thy trust in him for days to come.

"24th. Reached Wm. Honnicut's. Were kindly received here also. Surely we know the principle is one and the same, uniting us together as children of one Father, whenever we are favored to meet together. Oh that we as a people may dwell deep in the power of an endless life; that we may ever be found keeping the unity of the spirit in the bond of peace.

"25th. We reached Jesse Bailey's; and were received in friendship as among our friends. May we ever walk worthy of the regard of all that love the Truth. Surely it is a truth that God is love, and they that dwell in him, dwell in love.

"26th. Reached Eliza Johnson's. This family appeared to show the mark of discipleship, receiving us, poor strangers, in much love, as children of one Father; so that I have been ready to say, I am glad our lots were cast here. How consolatory it is to find a living remnant up and down, who love the Truth, and can freely receive and entertain such who are lovers of the same. Holy Father! be pleased to be with us through this little journey, and give us a kind reception amongst thy people.

"27th. Reached —'s. These Friends received and used us kindly. They have the outward mark of Friends, yet it feels to me as if a deeper abiding in the root of life would be beneficial to them. Oh, the desire I feel, that we as a people might dig deep, and lay the foundation sure: that nothing might satisfy short of the substance of the ever-blessed Truth. For if we are saved, we must be born again. We felt a concern to have an opportunity, with the few Friends present, of waiting on that glorious Fountain that had hitherto helped us. This we did to edification.

"28th. We got to Exum Newby's. These Friends possess much of the good things of this life: yet I hope the Truth is prized by them above all."

(To be continued.)

How Matches are Made.—A correspondent of the *Mechanics Magazine* who has been visiting an extensive London manufactory, thus describes it: "The factories are situated in the Fairfield road, Bow, and cover five acres of land. There are four distinct branches of manufacture carried on here, namely, that of patent safety matches, which ignite only on the box; that of ordinary matches, of vesuvian, and of wax vestas. Following the order of manufacture, we will first take our readers into the yard where is a series of stacks of spruce timber, selected for its superior quality and fineness of grain. This timber is used for making the match boxes, which, however, are not made on the premises, but afford work to a great number of women and children, principally in the east end of London. Passing by an extensive suite of offices on the right, we enter a large building, which is used for a store for empty match boxes. At right angles to this is another building of similar size, appropriated to a similar purpose; in this and the adjoining store were immense piles of reams of packing boxes, besides hundreds of packets of labels of every kind and pattern. The subjects of these labels are extremely well engraved, and some of them were very tastefully designed.

Quitting the stores, we proceed to the department where the manufacture of the patent safety matches is carried on, which is a very large building. The splints, which are supplied to the works in bundles of 1,900 each, are first prepared by dipping the ends in melted wax. The splints are 5 in. long, double the length of the made matches; the bundles are placed on end upon a hot plate, by which they are slightly charred. They are then dipped endwise in a pan of melted wax, a boy reverses them, and the opposite end is then dipped in the wax, which is absorbed by the wood to the depth of about $\frac{1}{2}$ in. and causes the match to burn freely. One man will dip as many as 1,000 bundles per

hour. The prepared splints are then conveyed to machines to be filled into frames for dipping in the igniting composition.

From the filling machines the frames are conveyed to the dipping department. The patent composition consists of chlorate of potash and other ingredients for working it into a paste. This is spread upon a slab to the thickness of about $\frac{1}{4}$ in., and the ends of the splints, which project from one side of the frame, are dipped in it. As the frames are dipped, they are removed to the drying houses. The time occupied in drying the matches varies according to the state of the atmosphere; if the air be damp, the matches may require a day, whilst if it be dry, a few hours will suffice. When one side is dry, the frames are taken back to the dipper and the opposite ends of the splints are dipped, and the frames returned to the drying rooms. When the second side is dry, the frames are taken to the boxing benches, and the double ended matches are removed from the frames and laid in a pile by the side of the box hands. The operator takes in her hand what she judges will be enough when cut to fill two boxes, and her judgment rarely fails her. The matches are placed in a grooved rest, the centre of the handful being placed exactly under the knife, which is brought sharply down, cutting the matches through, the end of the blade being fixed by a pin as a centre on which it turns. The operator first seizes one and then the other half of the bundle of severed matches, and places each in a box, a pile of boxes being ready to hand beside her. From the filler the boxes are carried away to another department, where the patent composition is laid on their sides.

And here it may be as well to explain what to many is a great mystery, namely, how the safety matches are made to ignite only on the box. The secret of this real safety depends simply upon the circumstance that, instead of ignition being produced by simple friction as in the ordinary matches, it is the result of chemical combination, one material being placed on the box and the matches being tipped with another. After the composition has dried on the boxes they are carried to the wrapping room, where a number of girls are engaged in wrapping the boxes in paper and forcing them into parcels. From this room, they are passed on to the packing room, where they are packed in cases for the market or for exportation. In another part of the safety factory are three vertical boilers, which supply steam to the engines which drive the various machinery. They also supply steam to heat the wax for the first, and the composition for the last process of dipping.

There are two buildings in which the ordinary matches are made. The processes carried on in them are much the same as in the patent safety match factory. The ends of the splints are dipped in wax, they are then taken to the frame filling machines, and from thence in the frames to the dippers, and on to the drying room, after which they are cut, boxed, and packed in the same way as the others are. The composition with which the ordinary matches are tipped is of course different from that used for the safety matches, and is prepared in a separate building, their manufacture being much the same as that of matches, with modifications in the dipping process.

NIGHT THOUGHT.

In silence of the voiceless night,
When chased by dreams the slumbers flee,
Whom in the darkness do I seek,
O God, but thee?

And if there weigh upon my breast
Vague memories of the day foregone,
Scarce knowing why, I fly to thee,
And lay them down.

Or if it be the gloom that comes
In dread of an impending ill,
My bosom heeds not what it is,
Since 'tis thy will.

For oh! in spite of constant care,
Or aught beside, how joyfully
I pass that solitary hour,
My God, with thee.

More tranquil than the stilly night,
More peaceful than that voiceless hour,
Supremely blest, my bosom lies
Beneath thy power.

For what on earth can I desire
Of all it hath to offer me?
Or whom in heaven do I seek,
O God, but thee?

Forests in Ecuador.

Here, as throughout its whole course, the Napo runs between two walls of evergreen verdure. On either hand are low clay banks (no rocks are visible), and from these the forest rises to a uniform height of seventy-eight feet. It has a more cheerful aspect than the sombre, silent wilderness of Bae. Old aristocrats of the woods are overrun by a gay democracy of creepers and climber which interlace the entire forest, and, descending to take root again, appear like the shrubs and staves of a line of battle ship. Monks gambol on this wild rigging, and mingle their chatter with the screams of the parrot. Trees as lofty as our oaks, are covered with flowers as beautiful as our lilies. Here are orchids of softest tints; flowering ferns, fifty feet high, the graceful bamboo and wild banana; which high over all countless species of palm wear their nodding plumes. Art could not arrange these beautiful forms so harmoniously as nature has done.

The tropics, moreover, are strangers to the uniformity of association seen in temperate climes. We have so many social plants that we speak of a forest of oaks, and pines, and birches; but here variety is the law. Individuals of the same species are seldom growing together. Every tree is surrounded by strangers that seemingly prefer its rot to its company; and such is the struggle for possession of the soil, it is difficult to tell which stem the different leaves and flow belong. The peculiar charm of a tropical forest is increased by the mystery of its penetrable thicket. Within that dense, marshy shrubbery, and behind that palux of trees the imagination of the traveller sees all manner of four footed beasts and creeping things. Tropical vegetation is of fresher verdure, more luxuriant and succulent, and adorned with larger and more shining leaves than the vegetation of the north. The leaves are not periodically—a character common, not to the equator, but also to the whole south hemisphere. Yet there is a variety of tint though not autumnal. The leaves put their best attire while budding instead falling—passing, as they come to maturity through different shades of red, brown, and green. The majority of tropical trees t

Manufacture of Spring Knives.—Few people, says the *Mechanic's Magazine*, have any idea how much a number of hands their pocket knives have passed in the process of manufacture. A bar of steel destined to furnish a number of blades is heated to redness. A length is cut off, and the forger speedily cools it, this, that is, shapes it roughly into the form of a pocket knife blade. Another operation is then required to fit the end for being fashioned into the tang, and yet another for it can undergo the further operation "smithing," the last stage of which is stamping of the mark of the thumb nail to facilitate grinding. The tang is then ground, and the blade marked with the name of the firm, the slight bulge on the reverse side caused by this operation is removed by fire or the grindstone. The blade is then hardened by plunging it into redness and then plunging it into water up to the tang. The tempering process comes next, the bluish yellow tint being considered as indicating that the proper degree of heat at which to immerse the blade once more in cold water has been attained. After the various kinds of blades are classified in the warehouse, and undergo sundry grinding operations to fit them for being hafted, twelve distinct processes have by this time gone through, and many more are necessary before the knife is completely finished, although the number of hands which it has now passed through depends in a great measure on the finish to be given to the handle, according to the quality of the blades with which it is fitted, and the price which the completed article is intended to realize.

THE FRIEND.

SEVENTH MONTH 15, 1871.

As many of our readers are deeply interested in the action of London Yearly Meeting relative to the rejection of Barclay's *Apology* as an authorized exposition of the views of Friends, we give the following report of the discussion concerning it, as found in the *British Friend*. It must be borne in mind that meeting has heretofore again and again endorsed that standard work, by sanctioning its publication in different languages, and widely distributing it. It is only since changes in faith and practice introduced some of the members of latter years, and generally adopted, that objection has been made to the work. Attacks upon it, such as that of Dr. Ash, have been repeatedly made, and efforts put forth to induce the Meeting for Sufferings in London to withhold its sanction and circulation, but until within the past two or three years without success, though it was foreseen that if the modified *Apology*, introduced of latter time, gained ascendancy, it must lead to the repudiation of Barclay's *Apology*, the hope was cherished that London Yearly Meeting would ever go so far as to shrink from continuing approval of a work which has ever been acknowledged by Friends as a scriptural and answerable exposition and defence of the principles promulgated by the founders of the Society, and still held dear by those who are willing to give that faith up.

In reading the account of the discussion, we think it is striking, that those who plead

for taking this important step, attempted to give the impression that opposition to publishing the work was because it was improper thus to sanction the work of an individual, and that the Yearly Meeting's own documents are the alone accepted declaration of its religious belief. The latter is true, but those documents are the work of some individual, and derive their authority by passing the meeting. The same has been the case with Barclay's *Apology*. As we have said, it became the authorized exhibit of the Christian belief of London Yearly Meeting through its adopting it repeatedly by issuing it to the world. It would have been more ingenious and honorable to have given the true reason for their present rejection of it—that they no longer held the faith therein set forth. We are nevertheless unwilling to give up the hope, as no minute was made, that a reaction may at some time take place, and the brand attempted to be affixed on Barclay will be erased.

Isaac Brown had felt great regret to find in the account presented by the Printing Committee any works printed at the expense of the Society. He thought it not well that the Society should ever print anything except that which emanated from itself. Would Presbyterians or Baptists bind themselves by any work written by any of their members?

Edward Marsh stated that certain valuable works had been bought by him when being almost thrown away in a considerable quantity in the town of Norwich.

J. Armfield asked why a similar course was not pursued with regard to R. Barclay's *Apology*; in which case also cheap copies had come to the notice of the committee. He thought the Meeting for Sufferings were abrogating their functions in declining to print the work on the ground of having some copies on hand.

W. Graham deemed the *Apology* a very Scriptural work. He read it at nineteen, and had many times since. He had turned to the Bible as he went on, and found the admirable quotations so perfectly to the point, that he had put it down with the firm conviction that Friends were right. He had lately bought a large copy, and had 2000 copies of G. Fox's Testimony to R. Barclay printed out of it to circulate now amongst his friends.

W. Watkins thought the *Apology* differed from the writings referred to by I. Brown, as those were expressions of opinion, this was the expression of actual Christian experience. R. B. wrote from revelation. We might change, but Truth would not. He had never expected to live to see the day when they were ashamed to acknowledge this standard work on the Christian principles of the Society.

J. B. Foster agreed with the view of the undesirability of the Society's having the printing of books. The *Apology* had already received the Society's sanction. He deemed it hardly straightforward to suppress the book without being willing to give information on the subject. He would have liked rather more openness. He thought it undesirable that any Friend past or present should be placed in the position of overruling our individuality.

S. Fox much hoped that the meeting would still act upon the sound principle of not publishing any private exposition of our principles as a church. W. Ball united here-

in, as well as Jos. Thorp, who deemed it contrary to principle so to do. They could not treat either R. Barclay or J. J. Gurney as the standard by which they should be bound. W. Ball spoke of the remark made to him by Samuel Tuke when he asked by what we should be bound, "Never any individual authority, but the published documents of the Yearly Meeting."

T. Brewin very aptly quoted an extraordinary saying of R. Barclay's which had somewhere seen, "God forbid that I should be made a creed-master. I abhor all such."

Caleb R. Kemp thought, referring to the discussion in the Meeting for Sufferings upon the *Apology*, the copies before the meeting were not (as averred) the issue on which the non-republication turned. T. G. Darton felt this was correct. There had been two questions rather mixed up on the occasion—whether it was a sound principle that as a Society we should make ourselves responsible for the writings of individual members, and whether we should adopt certain works. In former years we certainly had largely committed ourselves to individual works.

A Friend thought Barclay's *Apology* very readable, but to be received with caution out of the Society. He found it needed natural capacity as well as advanced education fully to be understood, and he trusted each would read and judge.

William Ercoyd accepted it as an exposition of our religious principles in regard to the doctrine and practice of the Society. As in every work, there might be portions in this to which every individual could not agree. It had been painful to him to notice the manner in which so able an exposition had been deemed unfit for circulation. He fully endorsed the statement of Caleb Kemp.

John Hodgkin concluded there had been no recent issue, and agreed also with Caleb Kemp as to the cause of non-publication. The question had arisen of giving away, and the *Apology* had not been refused. He thought 'splitting of hairs' unworthy of us, and could see no difference between printing and buying or circulating; but there was, he thought, a difference between this and issuing anything as an authoritative declaration of doctrine. The difference as regards the body might render the body acting for it uneasy to give away many works which contained a great amount of truth, although they could not sign them, for there would be imperfections in all of us to be allowed for. Thus, while giving books and tracts individually was an important service, increasing care was needful in the church's doing so.

Charles Smith thought the reason why many Friends repudiated Barclay's *Apology* was that they did not know that depth of religious experience, or the enlightened mind which the writer possessed. There was not a sufficient value for the doctrines set forth.

J. B. Foster wished to know whether R. Barclay's work would be circulated as much as—say J. J. Gurney's or S. Grellett's.

W. Watkins thought, to be consistent, we must refrain from publishing any documents. He understood the *animus* against the *Apology*—those who had become Friends by immediate revelation could accept it, and others not.

H. Hipsley hoped no documents would be issued by the Meeting for Sufferings but representative ones.

"Charles Thompson, John Hodgson, and Henry Wilson concurred with this, and Jos. Bottomley, while doing so, was very sorry for any professing the dear cause of Friends should disparage the work. He had been greatly pained at what had passed. Many had been drawn to the Society through the instrumentality of Barclay's *Apology*.

"A Friend thought the great defect in the young was a want of a proper acquaintance with the principles of Friends which were set forth herein. If we wished to know what our principles were, to the pages of Robert Barclay we ought to turn. If we could receive this teaching, our meetings for worship would be more attended.

"Hadson Scott referred to the great value of this work to the public, and to those in the humbler grades of life. A railway driver whom Friends had received had been convinced by reading it, and bought a copy, and also others to sell to his acquaintances. He had himself bought 2000 copies for circulation.

"W. Pollard and F. Wheeler having spoken, J. Armfield testified to the correctness of C. R. Kemp's expression, and said that the Meeting for Sufferings had twice refused to procure the very cheap one shilling copy, which a Friend had brought out by subscription.

"No decision upon the subject was come to, nor was it deemed desirable to enter it upon the minutes.

"After some remarks from J. Armfield and W. Graham, Robert Charlton, at the conclusion of the discussion, feelingly expressed his thankfulness that we had been able to conduct one in some respects rather trying with such a degree of Christian calmness, consideration, and forbearance."

SUMMARY OF EVENTS.

FOREIGN.—The present harvest in France will fall below the usual average. The French Assembly, by a vote of 483 to 6, has passed a bill imposing additional tax on colonial produce. The Assembly has passed a bill requiring caution money to be paid by a vote of 317 to 199.

The French Minister of Finance, on the 6th inst., remitted 104,000,000 francs in specie, to the German authorities at Strasbourg, on account of the war indemnity. In the Assembly the motion for the imposition of a tax on passports, being under discussion, Favre expressed his regrets of the attacks made by the mover upon English excursionists, and spoke in glowing terms of the charity shown by the government and people of England to France during her recent calamities. Favre also stated that the government wished to prevent conflict with the German army of occupation, and desired the maintenance of peace.

The republican journals rejoice over the large vote given for the candidates of their party in the country districts, and regard the victory as one calculated to establish permanently a republic in France. Of 165 deputies chosen to the Assembly, one is called a Bonapartist, two legitimists, three Orleanists, thirteen radicals, and eighty-six Thierists, or conservative republicans. Gambetta has written a letter rejoicing over the result of the elections, and urging moderation and patience on all. Several Algerian tribes have submitted to the French, and it was hoped the end of the insurrection was near.

It is announced that Paris will issue a loan of six hundred million francs, to be expended in repairing and rebuilding the monuments and public works damaged or destroyed during the siege. The health of France is improving, and the weekly mortality rapidly lessening. A new census of the city is soon to be taken. News has been received of the total loss of the French ship *Louvenana*, on the coast of Africa, near the Cape of Good Hope. All on board were lost. One hundred and fifty bodies had been washed ashore.

The Second Chamber of the States-General of the Netherlands has ratified the treaty for the cession of the Island of New Guinea, in the Pacific ocean, to England.

A London dispatch of the 7th says: Great freshets have occurred in the Derwent, Wye, Severn and Costa rivers, and have caused heavy loss to farmers by the destruction of buildings and crops. Unusually severe thunder storms have visited the suburbs of London. Much damage to the crops on fire, lightning and destroyed, and a number of lives lost.

The Atlantic Cable lines are all working, but the high charges continue upon them. The existing companies pay ten per cent. to their stockholders. The British press calls for an effective opposition, and it is suggested that the growing industry of Germany is looking out for a new line, which will meet encouragement in England.

It is said that Napoleon will soon leave England for Geneva, and Eugenie will, at the same time, pay a visit to her mother in Spain.

Princess Victoria, Crown Prince of Prussia, and his wife, are in England on a visit to the Queen.

In tabulated form, the general returns of the aggregate population of Great Britain (excepting the islands of Man, Jersey, Guernsey, &c.) are as follows:

	Persons.	Males.	Females.	
United Kingdom, 1871.....	13,465,480	15,276,150	16,180,321	
Kingdom, 1861.....	12,897,485	14,676,747	15,484,008	
England 1871.....	12,704,100	14,525,745	15,353,745	
Wales.....	239,066,224	276,259	10,289,965	
Scotland.....	1871.....	3,358,613	3,641,833	1,756,980
1861.....	3,062,294	1,449,848	1,612,446	
Ireland.....	1871.....	5,402,759	6,234,123	2,768,639
1861.....	5,798,967	2,837,500	2,961,957	

In the House of Commons on the 10th, Gladstone explained that the delay in the arrival of Minister Schickel from the United States had caused a postponement of negotiations for a reduction of postage to America. They would, however, soon proceed.

London.—Consols, 93½. U. S. 5-20's of 1862, 92½ ten-forties, 90½.

Liverpool.—Uplands cotton, 94 9/16; Orleans, 93½. Count Waldenser has complained to the French Government of the bitter language used against Germany and the Germans by the French newspapers. The official journal, in making this statement, advises the other journals to exercise the utmost forbearance in their allusions to the Germans. Field Marshal Count Moltke, has given orders to the German commanders in France to abstain from any further punishment upon offenders whom the French law can reach.

General Manteuffel, commander of the German army of occupation, with his staff, have paid a visit of ceremony to President Thiers. The general subsequently dined with Count Waldenser, the German Charge d'Affaires.

Amiens has been declared in a state of siege in consequence of the murder of a German and the failure of the local authorities to discover the murderer.

The Emperor of Germany has gone to Eins to meet the Czar Alexander, who is still at that place. The Spanish Cortes motion of a vote of censure of the government was rejected. During the debate one of the members took occasion to denounce, in bitter language, King Victor Emmanuel's occupation of Rome. Aloazio, in reply, protested against the expression of any opinion on the subject by the Cortes.

On the 5th inst., King Victor Emmanuel visited Florence from Rome. It is stated that the conduct of the Romans during the visit of the king, justified the transfer of the capital, and proved that Rome was attached to the dynasty.

The pope has written to President Thiers that he will remain in Rome. The French President had invited the pope to take up his residence in France at the same time apologizing for the inability of France to interfere in behalf of his temporal power in the Roman States, but Thiers declares it his earnest conviction that Italian unity is impossible.

The French Official Journal announces that elections for the Chamber of Deputies will be held on the 23d of next month. The sessions of the courts-martial will begin on the 15th inst. Sixteen thousand of the Communist prisoners at Versailles, had been released by order of government, leaving about the same number who are still held for trial.

The Swiss Government has paid to Switzerland 2,000,000 francs as partial reimbursement of expenses incurred in the maintenance of French soldiers who took refuge on Swiss soil. Switzerland restoring to France the greater portion of the war material brought across the frontier by the French army.

General Barrial, of the Postal Service General, has prohibited the reading by members of the Church in the Roman States, of non-clerical newspapers.

Dispatches from the City of Mexico, to 7th mo. 2d,

state that it is believed the opposition to Juarez will have a majority in Congress.

The leading journal says the ruin of Mexico is owing to contracts with and reclamations by the United States which led Mexico to the loss of a million.

The Batopilas mines of Chihuahua are yielding large returns. One mine yields 550,000 weekly. Some masses of pure silver, weighing several hundred pounds have been taken out.

The Cuban insurgents appear to be now reduced to small bands, many have surrendered, and others have been captured and executed by the Spanish forces.

UNITED STATES.—Miscellaneous.—For the fiscal year ending 6th mo. 30th, 1871, there were issued \$150,956 in stamps for tobacco, snuff and segars, being an increase of 5,883,345 in stamps, and an increase of seven millions in the amount of tobacco, snuff and a half of cigars over the previous fiscal year. There is a falling off in the amount received from the sale of whisky stamps.

The Eastern Chronicle, a Nova Scotia journal, says that whether the Canadian Parliament rejects or ratifies the provisions of the Washington treaty upon which will depend the fate of the treaty will be to hasten the annexation of the provinces to the United States.

The grape crop of California promises to be large for the present year. The yield of wine is expected to be 1,800,000, or 10,000,000 gallons.

The first fire in Philadelphia during the week ending on the 10th inst. broke out at 11 o'clock, and during one year of age. The report of the Chief Police shows the number of arrests during the year 1870 to be 32,094, (a decrease of 6655 as compared with the previous year;) of the whole number of arrests 10,991 were for intoxication and disorderly conduct. The number of persons obtaining shelter at the different station-houses amounted to 69,168, against 76,130 the previous year.

The Markets, &c.—The following were the quotations on the 10th inst. New York.—American gold, 117. S. sixes, 1881, 115; ditto, 5-20's, 1865, 114; ditto, 10-5's cents, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. Superior flour, \$4.85; 85's finer brands, \$5.50 a \$9.55. No. 1 Chicago spr wheat, \$1.47; No. 2, do., \$1.44; amber winter, 11, white Illinois, \$1.65. Oats, 65 a 70 cts. West mixed corn, 72 a 75 cts.; yellow, 75 a 76 cts. Carrot rice, 8½ a 9 cts.; India, 7½ a 7 cts. Middling cotton, 11 a 5 cts. per cent, 112½. THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XLIV.

SEVENTH-DAY, SEVENTH MONTH 22, 1871.

NO. 48.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Age, when paid quarterly in advance, five cents.

For "The Friend."

The Great Geysers of Wyoming.

new persons probably are aware that our country contains geysers far surpassing famous ones in Iceland, but recent explosions show that such is really the case.

The north-western part of the new territory of Wyoming, in about lat. 44.30 N., and west of Washington, lies Lake Yellowstone, a sheet of water about 30 miles long, north to south, and 15 miles wide. The Ostonte river, an affluent of the Missouri, is through the lake which is nestled in Rocky Mountains at an elevation of 8,300 above the sea. The summit of the main chain is within half a mile of the shore of the lake, and in some places mountains rise but little above it, but on south side there is a precipitous elevation 1,162 feet above the sea, or 2,863 feet higher than the level of the lake. The whole is described as being most wild and massive in aspect. The adjacent mountains are covered with pine trees, generally, but scraggy and irregular, and with lumps like hornet's nests upon their sides. Warm springs of great size and number depth abound, some of which extend under the lake, but have no connection with it. The water of these springs is hot, a trout caught in the lake and thrown one of the springs on its margin was killed in one minute. There are also deep and hot lakes scattered about the district one of which was found to be 450 paces circumference.

The great features however are the geysers erupting columns of hot water. These are numerous, and some of them are thus described by a recent visitor: "The following we traveled north-west and soon reached Fire Hole River. After passing by a fine ledge, we forded the river and camped in noon in the midst of the most wonderful geysers yet discovered in any country. The basin in which they were situated was two miles long, and about a mile wide. It was nearly destitute of vegetation, but there were a few clumps of trees scattered about, and in one place we found grass for our horses. The basin was chiefly on west side of the river, but there was a

narrow strip, with an average width of three hundred yards, on the east side, which was literally alive with geysers and steam jets. We remained two days in this wonderful basin. The most prominent geysers which we saw in operation were named as follows:—'Old Faithful,' which was farthest up the river on the western bank; 'The Castle,' which was a third of a mile below 'Old Faithful'; 'The Giant,' which was half a mile below 'The Castle'; 'The Grotto,' a short distance below 'The Giant'; then crossing the river lower down was the 'Fountain,' and much higher up, nearly opposite 'Old Faithful,' were the 'Giantess' and 'Beehive.'

"All around the geysers the ground was covered with incrustations and subsilia; and immediately above the vent of most of them the incrustations rose several feet above the surrounding level, assuming grotesque and fanciful shapes.

"'Old Faithful' was the first geyser we saw throwing up a column of water. It was named on account of its almost constant action. It did not intermit for more than an hour at any time during our stay. It had a vent of five feet by three, and projected a solid column of water to a height of eighty or ninety feet. All around it were found pebbles and small stones, which, when broken open, proved to be simply pieces of wood, thoroughly incrustated, and perfectly hard and smooth on the outside, having the appearance of an ordinary stone.

"About the crater of the 'Castle' was the largest cone, or mass of incrustations, in the basin. For a hundred yards around, the ground, flooded with subsilia, of glittering whiteness, sloped gradually up to the cone, which itself rose thirty feet, nearly perpendicular. It was quite rugged and efflorescent, and on its outer sides had a number of benches, sufficiently wide for a man to stand upon. These enabled us to climb up and look into its crater, which was irregular in shape, and about seven feet the longest way, by five feet the shortest. The outside of the mound was nearly round, and not less than thirty feet through at its base. We called it the 'Castle' on account of its size and commanding appearance. It was in action a short time on the morning after our arrival, but only threw water about thirty feet high. The water did not retain the shape of a column but rather splashed up and slopped over.

"The mound around the 'Giant' was about twelve feet high, and had a piece knocked out of one side of it, so that we could look into the crater, which was shaped like a hollow cylinder, and six feet in diameter. 'The Giant' discharged a column of water, of the same size as its crater, to a height of a hundred feet. It played as if through an immense hose. We thought it deserved to be called the 'Giant,' as it threw out more water than any other geyser which we saw in operation. Its cone was also large, and the water was

very hot; as, in fact, was the case with the water of all the geysers. The day of our arrival, it was in nearly constant action for about three hours, after which we did not see it again discharge. 'The Grotto' has two craters, connected on the surface by the incrustations which surround them. We did not ascertain whether there was any subterranean connection between them. We did not observe both craters discharge at the same time, but one began when the other ceased. Neither was in action for more than an hour. A solid stream was thrown up more than sixty feet; that from the larger crater being about five feet in diameter, and that from the smaller one more than three feet. The larger mound of incrustations was about ten feet high, and twenty feet through at the base. There were several holes in it large enough for a man to creep through, which some of the party did when the geyser was not in action. The smaller mound was not more than five feet high, and shaped like a hay-cock, with a portion of the top knocked off. The two mounds were about twenty feet apart, and connected by a ridge of incrustations two feet high.

"Crossing the river, we named the 'Fountain' geyser from the fact that it discharged two streams, which spread out very much like a fan.

"One of the most remarkable geysers was the 'Giantess.' For yards around the ground rose gradually to its crater, but immediately about it was no formation rising above the surface, as was the case with all the other geysers which we saw in active operation. When quiet, it was a clear, beautiful pool, caught in a subsilia urn, or vase, with a hollow bottomless stem, through which the steam came bubbling, just like the effervescence of champagne from the bottom of a long, hollow-necked glass. The mouth of the vase, represented by the surface, was twenty feet by thirty; and the neck fifty feet below, was fifteen feet by ten. The water, at times, retired to the level of the neck, or vent, and at other times rose nearly to the surface. When in action the 'Giantess' became a fountain with five jets, shooting the spray to a height of two hundred feet. At the surface the largest jet was about two feet in diameter, and it kept in solid column for more than a hundred and fifty feet before breaking into drops and spray. It burst forth just before sunset, and the last rays of light gave prismatic tints to the glistening drops, when having reached their utmost altitude, they trembled at their coming fall. The clouds of steam, which in this, as in all other instances, accompanied the boiling water, became a golden fleece lit up by wreaths of rainbows. Though inferior to the 'Giant' in volume, and perhaps in grandeur, the 'Giantess' was by far the most beautiful sight we saw in the geyser basin.

"The 'Beehive,' named from the shape of

ts mound, was quite small, but threw its water higher than any other geyser which we saw. The stream was less than two feet in diameter, and ascended two hundred and twenty feet, from accurate measurement by triangulation. It remained in action only a few moments."

The preceding description is taken from a narrative of the Washburne Yellowstone expedition, published in the last number of the "Overland Monthly."

The explorers saw many other geysers in action, but those described were the most notable. They were all intermittent, few of them continuing in action more than half an hour at a time. There were also many mounds from which the hot water was evidently discharged at times, but which were quiet at the time of the visit.

For "The Friend."

Memoirs of Mildred Ratliff.

(Continued from page 372.)

"1808. 10th mo. 29th. This day arrived at Friends' meeting-house on Little River, in Perquimans county. Attended the select meeting for ministers and elders, to much satisfaction. In beholding so many members, who stood or ought to stand as so many pillars in the church, my soul had to rejoice, and great was my desire that each one might stand upright in their proper places; that no decay or unsoundness might be found amongst them. In an awful approaching period, when he or she who may not have on the wedding garment will be pointed out, and the just sentence pronounced, Bind him hand and foot, and cast him into outer darkness, where there will be weeping, wailing, and gnashing of teeth. Such will be the sentence on the unfaithful, however dignified their stations may have been in the church. Oh that there may not be such an one found amongst us!

"30th of the month, and First of the week, was the public meeting for worship. There was a pretty large gathering of different sorts of people who behaved well; manifesting by their deportment some sense of the weightiness of the occasion for which they were assembled. In this meeting our dear friend Nathan Hunt had good service, and was much favored in explaining the Scriptures. For which I trust my soul was enabled to return acceptable thanks unto Him who alone can give the right qualification for gospel ministry. He has the key of David who opens and none can shut, and shuts and none can open; magnified be his mighty power forever and forever more! In this meeting I also had a small service for God, He whom my soul loveth. I felt as amongst the least that were ever called to that kind of labor in the vineyard of the great Husbandman. Yet it has often been the fervent desire of my soul that I may never distrust that Arm of omnipotent Power which is able to bring strength out of weakness, and perfect praise out of the mouth of babes and sucklings. After meeting we were introduced to our beloved friend Nathan Morris, of Pasquotank county, who resided about two miles from the meeting-house, and received a kind invitation from him and his wife to quarter with them. Indeed it is pleasant to be here. May we ever walk worthy of the regard of such Friends as love the Truth above all.

"31st. This day the meeting for business was opened, and though their manner of

transacting it was not quite like Friends in Virginia, yet I had to believe the unity of the Spirit was, and the same as in our own Yearly Meeting. So, although there is a diversity of gifts, all centre in one Spirit: differing without any shadow of doubt, that we are, agreeable to Scripture declaration, but one Lord, one faith, and one baptism, presiding over the whole universe. Well assured I am, that wherever the one glorious Lord is reverently feared, the one faith in his everlasting power felt, we are then favored to experience the efficacy of the one saving baptism of the Holy Ghost. Thereby we are centered into a oneness of soul, and can as with the voice of one man, give all the glory, praise and renown unto the one universal Lord of all. Oh, that all who love the outward name amongst us as a people, may come to the enjoyment of the inward life and power! This has been the fervent cry of my spirit this day.

"11th mo. 1st. Friends met near the time adjourned to. In this meeting I may just say, my soul rejoiced in the love of my heavenly Father; and through the raisings of His power, I was enabled in some measure to relieve my mind to my own rejoicing, and for aught I know, to the satisfaction of Friends. May I ever stand firm in the might of his power, who has seen me meet to call me into his vineyard. I well know I am but a little one, and have nought of my own to trust to.

"2d. To-day we were again renewedly refreshed at meeting, also at our lodgings, under a sense of Divine regard: so that a secret language seemed to prevail in my heart this afternoon after this manner, Quietness as a canopy covers my mind. It is now superseded by, 'What shall I render unto the Lord for all his benefits?' This night we have been favored with the agreeable company of our affectionate friend Nathan Hunt, who came in love to see us. Oh what cause of thankfulness we have found in feeling such unity of spirit with our friends in the bond of peace. May we walk worthy of the same to the end of our days.

"3rd. This day was the last of this annual solemn assembly. Surely I may say it seemed reasonable to conclude it would prove a memorable season to many minds that were baptized and cemented together, brought into a oneness, and humbly bowed under a sense of Divine regard through the course of the meeting. But now the days of feasting were to be ended for the present; and near and dear friends were to repair to their several homes. The parting I think was memorable. I may remark, the openness of our beloved Friends at this meeting; their tender affection and near love to us poor, little ones, strangers amongst them; the encouragement and consolation handed to us from many of the fathers and mothers in Israel, we think no small cause for thanksgiving, praise and renown unto Him alone from whom all good cometh. Yea, verily, my soul is deeply sensible He is worthy to be adored and magnified by all on earth, and all in heaven. Oh that I, with all that profess to love Him, may by our fruits manifest that we do love Him above all!

"4th. This morning in deep humility of soul, my breathing was, O Father! be thou pleased to hear my fervent cry, and answer my request. To-day we reached our friend William Porter's, on our way to the Quarterly Meeting at the Western Branch.

"5th. Attended the Select Meeting to sat faction.

"6th. Was at the public meeting. Several testimonies were borne to the Truth. May they be remembered by the parties concerned to their profit. From the select meeting we went home with our well beloved friend Ann Scott. Our friends W. D. and J. D. Jr., from our own Monthly Meeting, a J. D. from Goose Creek, met us at meetix and quartered with us at A. S.'s. This Friend has from appearance great riches on earth, yet agreeably to my feelings, I think there is a well grounded hope she has much great in Heaven. These last I trust she will make partaker of, when she is done taking care of the little ones on earth.

"7th was the Quarterly Meeting for business at West Branch. I think it may be said! When the sons of God meet to present the selves before the Lord, Satan comes a amongst them, and presents himself. I thought I felt very sensibly a spirit of this kind hovering round about this place. Yet there was no cause to fear or be dismayed, whilst mightier than he was at hand to defeat him and preserve his own seed. So that, to my feelings, the little ones here have cause to rejoice and be exceeding glad: yea, to hold forth the profession of their faith in Him, who is able through the might of his power to make one chase a thousand, and two put ten thousand to flight. Oh the desire I feel that Friends may stand fast in the power of Him who has called them to faithfulness, and give the command that their lights should shine before men. So that, whether they are constrained by our good works or not to glorify our Father which is in Heaven, we may clear of their blood in the Master's sight. Is His will for his people when they have done all, to stand. Yea, verily, such will stand clear of the blood of all people. He is our hard Master, but is willing, when he has done all he requires, we should stand and walk in further directions; and if none are given, shall be clear, and received into the fold rest in the day when he makes up his jaw. Oh that Friends everywhere may know firm standing on the immovable Foundation against which no tempest can prevail. At this meeting I felt straightened whether pursue our journey homeward, or to wait the Quarterly Meeting at Wain Oak. In length we concluded it best to return from meeting to our friend Ann Scott's. Our horses has been unwell for some time, and is not yet fit to make a day's travel, think I was not many minutes in the house at A. S.'s, before I was satisfied it was for us to wait for the Quarterly Meeting, which, in some degree, seemed to be the presson I had before I left home—to some of the meetings in these lower parts cannot but be glad, although it is under power of the cross, that an opportunity of tending some of these meetings is afforded since there is no other way for me to at the crown but through the cross. Oh Father! my Father! be thou pleased to hold me up that I may be faithful unto thee to the end of my days. There was a select committee of Friends appointed by the Quarterly Meeting to visit some of their members. They seemed desirous that we should accompany them—that is Rebecca Perrier and myself. This we were free to do in intervals of meetings. So we left D. Stra

th W. P. at A. S.'s, and joined the committee that evening.

"7th. Came to R. J.'s, a widow. Had an opportunity in the family, which was a teaching one to my mind.

"8th. Came to E. J.'s, and had a satisfactory opportunity with his family. Here R. and myself felt easy to let the committee go on, and leave us to attend the meeting here tomorrow.

"9th. This morning our friends D. S. and P. are with us, and we shall take care how to separate. To-day attended the meeting, called Johnson's meeting. Soon after taking my seat in meeting, the old proverbierich: 'They that beg of a beggar will never be rich;' which I expressed, and I may remark that though there were some whose eyes were too much outward when the meeting first gathered, they seemed after a little to get more inward, turning the attention more to the Master. This I rejoiced to see, being sensible it was the surest way to meet with his blessing. Indeed it turned out

For the love of the good Shepherd and caretaker of his flock seemed to arise more and more to the praise of his own worthy name; who often is pleased when there is a speaking to Him alone, to feed his flock, both sheep and lambs, to the full. In this meeting, and that unexpectedly, my heart was much enlarged towards the dear youth, in the arisings of the love of Christ, that there might be amongst them an early submission to his yoke, and a willingness to wear his yoke in bloom and prime of their day; so that I think we were favored with a gladdening opportunity together. I felt thankful we did not miss this meeting. Oh the desire I feel, at Friends everywhere, when they meet together to worship that God who is a spirit, might so abide in the spirit and in the Truth professed by them, that their worship might be truly spiritual in the sight of Him who searches the hearts, and trieth the reins of children of men, that there might not be much outward looking as to deprive them that inward peace which is intended for them. But alas! there is even among Friends itching ear."

(To be continued.)

Geographical Discovery.—At a recent meeting of the Royal Geographical Society, M. Shaw gave an account of his travels to Yarkand and Kashgar, which merits particular attention. The common idea of Tartary as an expanse of great plains, over which wander barbarous hordes with cattle and tents; but it will surprise many readers to learn that a remarkably mountainous country was found here, full of elevated habitations, with flourishing cities of more than one hundred thousand inhabitants, where numerous arts are practised, and a considerable amount of civilization exists. Life and property are secure; commerce is protected; light carts drawn by horses frequent the roads; and markets are held on a fixed day the week even in the smallest villages. In Yarkand alone there are sixty colleges, with professors in law, for the education of students in Mussulman law and divinity; and in every street is a well-attended school attached to a mosque. Merchandise is abundant; one street are displayed the silks of China; another, the cotton goods and prints of Russia; and elsewhere, tea, spices, and all kinds of foreign produce. Horse-flesh, camel, beef,

and mutton are found in the butchers' quarter; the bakers offer excellent light loaves made by a process of steaming; and shops for the sale of iced sherbet and of tea are everywhere to be seen. The estimates formed of the number of the population are from twenty to sixty millions. Their industry is remarkable; for as no rain falls, the fields and gardens are everywhere watered by canals and water-courses, great and small. If the system of artificial irrigation were cut off, the whole country would become a bowling desert. Yakob Bog, the ruler, is a man of intelligence and energy, under whom the extension of irrigation, road-making, bridge building, and sinking wells in the desert for the use of travellers are actively carried on. This interesting country was visited by Marco Polo five hundred years ago; but it is so cut off from the rest of the world by high mountains and deserts, as to be lost in the vast and unknown regions described as Tartary.

For "The Friend."

Family Reading.

In a recent article published in "The Friend," the remark is made "that we enjoined on all our members to read the Scriptures in their families daily." This revived the question which has several times presented itself of late, whether this wholesome practice is sufficiently observed amongst us. Where, at a suitable time, the family are convened, for example, the morning meal, and a few verses of the Bible are seriously read, with a suitable pause before and after; and this not in a merely formal way, but with desires to feel that we are in the presence of our Heavenly Father, to whom we must look for all spiritual and temporal blessings, it has a settling, quieting effect upon the minds of those present, and seems like bearing a testimony to our sense of the value of religion. Such opportunities have often been abundantly owned by the sweet and solemn sense of Divine goodness, raising renewed desires to be preserved watchful and faithful.

Objection has been made, that such reading of the Scriptures at regular times, may lead to formality. Such might be the case, if this reading should be considered as Divine worship, or be substituted for that waiting upon God in the silence of all flesh, which our religious doctrines so strongly inculcate; but if rightly carried out, it is one of those helps to the maintenance of religious watchfulness and zeal, which it is proper to avail ourselves of, and which experience has shown to be of great advantage.

There has been manifested in some parts of our society within the last few years, an increasing tendency to introduce the reading of the Scriptures as part of the service of our meetings for worship. With this we have no unity. Those who advocate such a course, are in great danger (if they have not already reached that point) of imbuing the sentiment that a meeting cannot be rightly held without some vocal service; and hence they may be led to abandon the ground of pure spiritual worship, in which the heart is bowed in the presence of its Creator, waiting to feel the quickening power of his Holy Spirit to enable it to offer unto Him sacrifices of His own preparing. Gradually they may come to feel, like persons of some other religious persuasions, that they cannot hold a meeting without a preacher, and thus be drawn back to

that dependence on man, from which our forefathers in the Truth were redeemed.

But we think there is also danger, lest those who see this tendency of the times should err on the other hand, as poor human nature is apt to do, and neglect too much that serious perusal of the sacred volume, from which Christians in all ages have derived so much comfort and instruction. Care in this respect is especially important where there are young persons growing up in our families. A serious responsibility rests upon us, to do all we can to help these forward on their heavenly journey, and it is wise to avail ourselves of such things as may assist in strengthening their love for what is good, and directing their thoughts to religious subjects.

Influence of Trees on Climate.—The subject of the influence of "forestry," or the planting of trees, upon the climate of a country, and of "deforesting," or destroying the forest growth, continues to excite much interest throughout the world, as it is now well established that the climate of many localities has been materially altered by one or the other of these processes. Systematic efforts have been made, in different parts of the world, for introducing a growth of trees where these had never been known, from which important results had followed in many instances. We have before referred to the effect upon the climate of India of planting extensive forests of different species; and we are informed that, as the consequence of a similar experiment, Egypt, which formerly had only about six rainy days, every year, since being replanted on a large scale has already attained to twenty-four.

Among the enlightened measures of the administration of the French government, one which is especially noteworthy, is that of planting immense tracts of land in Algiers, especially with Australian trees namely, the *Acacia mollissima* and *Acacia ophthalma*. Plantations of these trees, started a few years ago, have attained a height, of from nine to twelve feet, and in their rapid growth and great extent have already changed the climate very much—twice as much rain and dew falling in the neighborhood as before.

Under the same auspices sixteen square miles of the swampy, unhealthy country along the coast of the Bay of Biscay, in the department of the Landes, was planted with millions of trees—especially the cork oak and swamp pine—with surprisingly beneficial results, the trees having drained the land so as to destroy the swamp fevers, and to change it into a healthy country with pine forest. Biscay law requires that for every tree cut down two shall be planted, and it is said to be executed with rigorous severity.

Selected.

If all men were perfect, we should meet with nothing in the conduct of others to suffer for the sake of God. But in the present fallen state of human nature, it is his blessed will that we should learn to "bear one another's burdens," and as no man is free from some burden of sin or sorrow, as none has strength and wisdom sufficient for all the purposes of life and duty, the necessity of mutual forbearance, mutual consolation, mutual support, instruction and advice, is founded upon our mutual imperfections, troubles and wants. Besides, by outward occasions of suffering from the conduct of others, the nature and

degree of every man's inward strength is more plainly discovered; for outward occasions do not make him frail, but only show him what he is in himself.

How Printing Ink is made.—It is not very hazardous to assume that a great many persons who have handled printing ink all their working lives have no very clear idea as to how it is made. A vague notion of lampblack and varnish possesses them; but if asked just what ingredients enter into the compound, and how, and in what proportions they are put together, they usually find it difficult to give a satisfactory answer. With the purpose of dissipating the general ignorance as to a point which all printers, at least, should be familiar with, we, says the Record (Boston), went out to South Dedham, recently, and took a walk through the famous ink works of George H. Morrill. And a very dirty walk it was too.

There are five separate buildings belonging to the works, the whole containing one million bricks. Besides these there are eight lampblack houses, with one oil tank of 20,000 gallons capacity and five of 2,000 gallons. The oil from these is fed through a pipe into furnaces, and then burned, the flame being conducted into the lampblack houses, where the smoke is condensed and forms the lampblack, falling on the floors like a black snow storm.

The essential ingredients of printing ink are varnish and lampblack. The varnish is made by boiling or burning linseed oil, and mixing crude turpentine and gum copal. Lampblack is a fine soot gathered from the smoke of resinous substances. The substance used in Morrill's factory is resin, and a heavy petroleum oil. To the soot gathered from the flames of these is added a certain amount of spirit, on the quality of which depends the fineness of the black.

The varnish and lampblack being mixed, they are put together into mixers, and thoroughly amalgamated; the compound is then run through breaking rollers, and finally through eccentric mills, in which the ink, at this stage, is ground fine. It is then put into barrels and kegs, and is ready for use. Before it is turned into the mixer, the varnish is run through a strainer having 100 strands to the inch—the netting surrounding the sides of the strainer, whose bottom is perforated, so that all dirt and foreign substances sink and pass off, while the varnish passes through the strands, clear and pure. Dirty as an ink factory is, the most scrupulous cleanliness is required in handling and packing the ink—the barrels in which it is put being free from all dirt.

The color of printing ink depends on the quality of the lampblack used in its composition; the working quality depends on the varnish. So that in order to make good ink, the greatest care and skill must be exercised in the manufacture of these ingredients. Most people would naturally suppose all lampblack to be alike and of a uniform hue; but at Morrill's factory may be seen specimens of the substance, which contrast in color as strongly as a heap of sand and a raven's wing. The best lampblack is of an intense and glossy black; the poorest qualities of a dull brown. It makes inks of various kinds, varying in price from fourteen cents to five dollars per pound. His average daily product is 2,000

pounds; but when the works are run at nights, as frequently happens, this is increased to 3,000 pounds.

A BETTER DAY.

Yes! there will come a better day,
I see it but not nigh;
The threatening clouds will pass away,
And leave a brighter sky.

They whom the wintry storms abide,
Shall deepen in the root,
Shall spread their branches far and wide,
And yield both flower and fruit.

The church has now her sackcloth on,—
The precious seed lies low;
White men were sleeping, tars were sown,
By an unwearied foe.

Athenian like, this restless age,
Is seeking something new;
This spirit e'en the church invades,
And would our faith undo.

Alas! in this enlightened day,
Some hold as idle dreams
The ancient faith: the good old way,
Too straight and narrow seems.

The faith our fathers suffered for,
The doctrines which they taught,
Are by professors of their name,
Despised as things of naught.

For this, a faithful remnant mourns,—
Their hearts are filled with fears;
For Zion's sake they cannot rest,
But strew their way with tears.

But there will come a better day,
I see it, but not now;
Then lift each drooping head in hope,
And clear each anxious brow.

Redeemer! Thou canst make these storms,
Work out Thy sovereign will;
The raging of the winds and waves,
Thy purposes fulfil.

Many are straying from the fold,
Far from the beaten track,
In which our fathers trod of old;
Oh! bring these wanderers back!

Restore the strength and zeal of youth,
When Barclay, Fox, and Penn,
Displayed a banner for the Truth,
Before their fellow men.

Oh! keep me with thy little flock,
Thy poor and lowly tie,
Which though the world deride and mock,
Is owned and loved by Thee.

The Truth,—the same our fathers knew,—
Shall yet revive and reign;
And they who closely yield thereto,
Shall lift their heads again.

Bring round in Thy appointed time,
A better, brighter day,
And cause Thy face again to shine,
And chase the clouds away.

Speak kindly to the erring!
Thou yet mayest lead him back,
With holy words, and tones of love,
From misery's thorny track,
Forget not, thou hast often sinned
And, sinful yet must be—
Deal gently with the erring one,
As God has dealt with thee.

From the point of view of almost unvarying success, the farmer's life becomes beautiful, poetic. Every thing is an aid and help to him. Nature puts her shoulder to his wheel. He takes the winds, the clouds, the sunbeams into partnership, and asking no dividend, they let him retain all the entire profits.

Selected.

Weather Warnings.—The British Board Trade has published, for the benefit of seafarers, the following remarks on the appearance of the sky: A rosy sunset presages fair weather, and a bright yellowish sky in evening indicates wind, and a pale yellow wet weather.—A neutral gray is a favorable sign in the evening, and an unfavorable one in the morning. If the forms of the clouds are soft, undefined, and feathery, the weather will be fine; but if the edges are hard, sharp, and well-defined, it will be foul. Any unusual lines bounding the clouds betoken wind or rain, while quiet and delicate tips bespeak fair weather.

Dr. Fothergill.—The eminent physician John Fothergill, was a humble, conscientious and consistent Friend, and was much employed in important services for the religious society of which he was a member. Dr. Thom in his Biographical Dictionary, informs that he was born at Carr End, near Richmond in Yorkshire, in 1712, he graduated Edinburgh in 1737, and after making the tour of Europe, settled in London, where he maintained a large and lucrative practice. Being deeply interested in natural history and rural economy, he laid out at Upton a large garden in which he collected and acclimated such exotic plants as are useful in medicine to the arts. Dr. Fothergill wrote numerous treatises on therapeutics, pharmacy, &c.

He was a coadjutor of Howard, in his efforts to reform the management of prisons. Franklin once wrote of him. "I can hardly conceive that a better man ever existed." He died in 1780. This worthy man was a son John Fothergill, and brother of Samuel Fothergill, both of whom were eminent ministers and diligent laborers in the Lord's service.

Dr. Fothergill acquired wealth by his profession, but seems to have valued money little, except as a means of doing good, and relieving the distresses of his fellow creature. The following is one of many instances who are related of his generosity and benevolence. A respectable man who had a large family support on a salary of £50 per annum, was brought into a great strait when epidemic disease seized upon his wife and five of his children. In this state of distress, he greatly desired to have the advice of Dr. Fothergill but dared not apply for it, from a consciousness of being unable to reward him for his tendance. A friend kindly offered to accompany him to the doctor's, and give him his fee. They took advantage of his hour of absence, and after a description of the severe cases, the fee was offered and rejected, but note was taken of his place of residence. The doctor assiduously called from day to day until his attendance was no longer necessary. The grateful man, anxious to return some evidence of the sense he entertained of services, strained every nerve to accomplish it; but his astonishment was great, when Fothergill, instead of receiving the money offered, put ten guineas into his hands, desiring him to apply to him without hesitating in future difficulties.

Selected.

An ingenious application of photography has been made to indicate when locks have been tampered with, although it does not, however, prevent tampering. In many cases, to make certain that tampering with a lock will be uniformly discovered is enough

prevent any attempt to open them. The application has been made with success to the cars on the railroads acting as bonded carriers in the transportation of goods in bond, under the act of Congress authorizing such transportation. Simple padlocks are used, provided with the custom-house seal. This is a small piece of glass, which is passed over the keyhole, and held by a spring in such a way that it cannot be removed except by breaking the glass. The seals are made by etching in New York large sheets of glass so that they shall be covered with irregular figures that cannot be duplicated. These are sent to the Treasury department at Washington where they are photographed. These photographs are taken, and then the glass and the photographs are cut into small squares, and each square of glass with its photographs, is forwarded to the officers in New York. When a car is locked one of these seals is put over the keyhole, and a photograph is forwarded to the officer of the destination to which the goods are shipped. A comparison of the photograph with the seal one shows whether the lock has been opened or not.

For "The Friend."

Meetings for Discipline.

In the management of our meetings for discipline, the Society of Friends act on the theory that the Supreme Head of the Church is the present and controlling power, and that those who take a visible, active part in the proceedings, ought to be careful to act as in His presence, and with submission to His will. The apostle declares, "One is your Master, even Christ, and all ye are brethren." Here this is known and felt in our meetings for business, there is a reverent dependence on the Divine Will for guidance and direction in the important concerns which are to be considered and decided upon; those who speak do it with a proper respect for the views and feelings of others, and with that care and caution which becomes poor fallible mortals, who are endeavoring to do the Lord's work.

It is instructive and edifying to witness the transaction of church affairs when so performed. But it is evident that this reverent dependence on Divine power must be maintained, or our system will lead to confusion and disorder. As that sense of holy solemnity which is at once the crown and the safeguard of our assemblies, withers away, and the feelings and views of our members become more outward, there will be less and less check upon that disposition which leads men to propose measures and make speeches, from a mere hope of attracting attention to themselves; and less restraint upon those who are too rashly to reach forth the unbidden and to stay the trembling ark. We may therefore expect, that in proportion as the love and power of truth decay in a meeting, we shall find crude propositions, inconsiderate speeches, wordy debates and various extraneous matters taking the place of that quiet clinging after Divine judgment, the few words seasoned with grace, and the general solidity and solemnity with which the business meetings of this people have been often so remarkably favored.

In the transaction of its business, at the annual gathering of Philadelphia Yearly Meeting, there has often been much to comfort those who are zealously concerned for the

law and the testimony; but there have been occasions, and it is feared more frequently in the last few years, in which a sufficient guard has not been placed over their lips by some of our members; and the fear has arisen lest this tendency should increase among us, to the injury both of individuals and the meeting. Such also would seem to be the case in London Yearly Meeting, for we observe in the reports of its recent sitting, that the tendency to talk had become so burdensome, that the committee on arrangements proposed to invest the clerk with authority to silence any speaker who might introduce irrelevant matter, or become tedious, or speak too frequently. It is truly sorrowful that the dignity of our meetings should be so lowered, as to render it necessary to devolve such duties on a clerk; reminding one of the Israelites of old, who pleaded with the prophet Samuel to appoint one to be a king over them, like the other nations, instead of having the Lord alone for their king. We should fear that the effect of conferring such powers on a clerk, would be to lead to other changes in our meetings for discipline, which would be undesirable and hurtful.

There are various important committees of the Society, such as those having charge of our schools, of the Indians, &c., whose duties are of a mixed nature. In these there are financial, educational and business arrangements to be considered and disposed of; but in their deliberations the religious element should not be lost sight of. The sense of a little overshadowing of Heavenly goodness, tendering and solemnizing the hearts of those present, has often been very refreshing to those Friends engaged in such services. There is, however, danger that the attention may become so absorbed in the suggestions and considerations an active intellect may bring forward, of a business or intellectual character, that sufficient care may not be taken, and sufficient time not be given, to seek that feeling of Divine approbation which should season all our efforts to promote the welfare of our religious Society, and of the concerns which originate with it.

The Ant Lion.

On the twenty-ninth of August, while hunting spiders among the rocks on the hill north of Bartholomew's pond in South Danvers, Mass., I unexpectedly found the pit of an ant lion (*Myrmaleo immaculatus* De Geer), in a clear space under the shade of a large boulder. The pit was about two inches in diameter and one deep. The insect himself was hid at the bottom, but when I dropped bits of earth into the hole he showed his position by throwing up sand. I then dug him out and took him home with me, where I put him into a bowl of dry, coarse sand, such as is used by masons for mortar. He remained buried for several days, but finally came to the surface, dug his pitfall, and gave me an opportunity of observing his habits. At first he was so timid that as soon as any one approached he stopped where he was and remained motionless until left alone. If his pitfall was destroyed he dug a new one; but during all the time I kept him I never saw the whole process of digging it. When taken out of the sand and laid on the surface he would keep quite still for a few moments, then retreat backward, by jerks, under the sand. He never moved forward but always backward, by the contractions of his

abdomen as much as by his feet, making a furrow through the sand. He seldom traveled an inch in one direction, and often made a complete circle in that distance. I think he commenced his pitfall by making a circle of this kind, and afterward throwing out the sand from the centre. In digging he used his flat head and jaws, which were pushed under several grains of sand and then jerked upward, throwing their load sometimes as far as six inches, and always far enough to avoid leaving a ridge around the pitfall. When the pit was finished he was entirely concealed beneath it, except his jaws, which were spread apart horizontally at the bottom. The surface of the pit being as steep as the sand could be piled up was very easily disturbed, and when an insect ventured over the edge the ant-lion was apprised of it at once by the falling sand. He immediately began to throw up sand from the bottom, deepening the pit and causing the sand to slip down from the sides and the insect with it. The ant-lion seized it with his long jaws and held it up above his head until he had sucked all he wanted from it, when he threw the remainder out of the hole and repaired the trap. On the under side of each jaw is a groove extending from one end to the other, and partly filled by the slender maxilla which lies in it, forming a tube, one end of which passes into the insect which is bitten, while the other opens near the mouth of the ant-lion. After eating he became more timid, and sometimes would not take a second insect. If, however, several were put into the pit at once, he would bite one after the other until all were killed, before deciding on which to begin. I fed him two or three times a week, usually with house-flies, cutting their wings off and letting him take them in his own way. In October, having occasion to travel some distance, I put him in an ounce bottle half filled with sand, corked him up, and carried him with me in my bag. In about a week I gave him a large house-fly, which he did not catch, not having room enough in the bottle to make a pitfall. I gave him no more food till the next March. Meanwhile he remained for several months on a shelf in my room. Occasionally I tipped him out and always found him lively enough to right himself if turned on his back, and to retreat. In January he was packed up in my trunk for more than a week, and when I opened it, after it had remained several days in a warm room, I found him as lively as when first caught. He afterwards became quite torpid again in a cold closet, where he remained through the rest of the winter. About the first of March, when flies began to be plenty, I commenced to feed him again. He found it rather awkward to catch insects in the bottle as there was not room enough to make a pitfall, and his inability to move forward made it hard for him to seize an insect unless he met it directly between his jaws. He soon, however, made pitfalls half an inch in diameter, which answered the purpose. Sometimes he lay on the surface of the sand with a few grains scattered over his back to conceal him from notice, and his jaws extended on the surface. If a fly was put into the bottle it would circle around close to the glass and usually run over the ant-lion's back. He would jerk up his head and attempt to seize it, which he seldom succeeded in doing the first time. If he caught a leg or wing he was unable to move nearer and shorten his

hold, and the fly escaped. He would often throw up the sand and try to undermine the fly. He would sometimes work an hour in these ways before the fly would get into a favorable position. I fed him every day or two until May 15th, when he spun a spherical cocoon around him, and remained enclosed until June 25th, a very hot day, when he came partly out and leaving his pupa skin half in the cocoon appeared as a perfect fly but did not spread his wings completely.—*American Naturalist.*

Selected for "The Friend."

The following extracts are from John Barclay's Letters. They may be carefully read and seriously pondered at the present time: "The discouragements of the day I have never seen so deeply before, though I am not blind to the encouraging features: Oh! how short are we of what the Lord would do for us as a people, were we only simple, sincere, plain, humble enough! If we go on but as we do, I fear, notwithstanding all that is stirring, we shall as a Society, be weaker than we now are."

"It is in my view of much importance, to endeavor to maintain entire the 'uncorruptness,' the genuineness, the unsophisticated artlessness, which is of the Truth. Every little habit, every compliance with custom in things that are thought indifferent, and which trenches upon these, endangers the tender principle of life; and indirectly, perhaps almost imperceptibly, lands us in bondage, impedes us in a straightforward, unaffected course of acting, thinking and judging. Thus the mind and character becomes involved, and prejudicially affected."

"Ah! the simplicity of a true babe in Christ, is what we want most: a little of this goes a great way; it is the faith which pleases God, and removes the mountains; and by which we are to walk, rather than by sight: it leads to look not at self with anxiety, however we shall be provided either with discernment, courage, or what else is needed; but to rest in the Lord, and cast our burden on him, knowing he is ready to sustain such, so that they shall lack nothing; nor are they much moved by what arises to perplex, discourage, or prove them, trusting over all in never-failing goodness."

"No divination can prevail against the humble, teachable followers of our Lord: they are preserved in the hollow of his hand, and under his wing; and he delights to tabernacle with them. Oh! that nothing may turn these aside from following on to know the Lord in the way that he leads, the good old way, in the footsteps of the flock; whose faith they may safely follow."

Singular Manners and Customs of the Hornbills during the Breeding Season.—No sooner has the hen commenced the labor of incubation, say several trustworthy observers on this subject, than the male walls up the hole in the hollow tree in which the hen is sitting on her eggs, until there is only room for the point of her bill to protrude, so that until her young birds are hatched she remains confined to her nest, and is in the meantime assiduously fed by her mate, who devotes himself entirely to this object. This habit has been testified to not only by Tickell, Layard, and other Indian naturalists concerning some of the Asiatic species, but is also spoken of by Dr. Living-

stone in the case of hornbills met with during his African explorations, and there appears to be no doubt of its authenticity. In Sumatra, in 1862, Wallace heard the samestory from his hunters, and was taken to see a nest of the concave-casqued hornbill, in which, after the male bird had been shot while in the act of feeding its mate, the female was discovered walled up. "With great difficulty," Wallace tells us, "I persuaded some natives to climb up the tree, and bring me the bird. This they did, alive, and along with it a young one, apparently not many days old, and a most remarkable object. It was about the size of a half-grown duckling, but so flabby and semi-transparent as to resemble a bladder of jelly, furnished with head, legs, and rudimentary wings, but with not a sign of a feather, except a few lines of points indicating where they would come."—*Nature.*

Errands of Mercy.

TRACTS ON "THE FOURTH."

Feeling some love for the sailors, I took a bundle of tracts, and thought thus: what a rough day for this work! true—but it is better to face the Soul Destroyer than to be flanked by him: so the path seemed plain. The first notable incident was in Baitbridge street. "Friend, hand me one," said a pallid, but bright faced young man, sitting on a step, recovering from a debauch, and stretching out his arms, to get some solace for an accusing conscience. The bundle was not wrapped—he could see what it was. Looking him in the face inquiringly, and then turning over the tracts, my eye fell on "John Davis." Eagerly, as if anticipating both my thought and act, he started up with emotion, saying "Does he say how bad he was himself?" What hidden agonies in those significant words! This opened an interview, which ended with mutual encouragement: the teaching of it being "Cling to Jesus." "He sticketh closer than any brother." The next incident was in the same street. From the window of a groggery came a voice, "come in here." "Speaking to me?" "Yes sir." A countenance anxious and downcast, drew me in. "I owe ten dollars—I have to pay it to day. Oh?" * * A few minutes sufficed to hear and to answer the tale of woe and degradation. A little further on a group of children quietly enjoying the outbreaking subbeans, attracted my attention; but before offering, or even showing my wares, a clear-eyed boy said, "Give me one for my sister; she is sick." The group increased to a crowd; all quiet; and a blessed opportunity, from which it was hard to break away. The next was a family, children and parents, on the steps; a likely set, I thought; but on offering some, I was answered thus, with a sneer, "We dont read them, we are Catholics." Along the shipping I observed how often the first salutation was from the sailors, thus, "Have you them for us?" and many touching devotions tended to settle on my mind the conviction that a little more dealing with souls, and less with merchandise, would be good for us of the large cities. For instance, a sailor remarked, "When I am in Boston, I can go into a nice quiet reading room; many of us go there: we like it. But here we don't find any." Why not inquire into this, and see if there is a sailors' reading room or Home, furnished with means of mental improvement, a shelter from city vices;

and if there be none, to see what is for Christian people to do.

This little errand wound up with a reflection on the many channels of crime and licentiousness, conspicuous in so short a sojourn in their midst. The practical query is: shall these floods of iniquity be stayed? Or shall these souls be rescued? Here are causes here are effects. Here are great powers urging their increasing momentum against religion, against domestic happiness, against national life! What is to be done? how to be stopped? Not by the force of per law alone; not by prosecutions and jail Love—heaven directed love alone can do. The various channels through which this love must operate, will be seen by those who labor under its influence. We must have protection in the law against open violence; and it right to visit upon crime committed, its just appropriate punishment. But how is it to be presented and checked, but by Christian love working through her varied means and influences, upon the fountain waters of the streams of society, and thus upon nationalities. We want the indefatigable clean-handed working-men and women, love-committed, to go between the tempted ones and the law avenger. The great truth of the Second Commandment, which makes every man his brother's keeper, needs to be lived up to, assented to, only. The reign of intemperance, lasciviousness, and the innumerable transgressions of self-indulgence, call for commerce every-day work from every soldier of the cross; just in what way, each one must judge for himself.

But to wrap one's self up in non-interference, saying, "it is not my business," "religionists do that," or "my duties don't permit me," what is this but to "make the commandment of God of none effect." What a thy thoughts about? Are they on God, as his kingdom, his goodness? What art thou seeking? "First the kingdom of Heaven as the righteousness thereof," believing that "things needful will be added?" Then canst thou be neglectful of that law which makes every man thy brother, and every man thy neighbor, to whom is given thee opportunity to communicate? What, if we give our money to print tracts, our thoughts at time in part to write and prepare them? We get up meetings and lectures, and various public demonstrations to uphold virtue. It is well as far as it goes, when well do. But where are the great nurseries of vice? Whence come the poisons by which our youth are baited? Let us look to it. There are ways of reaching them. Love will reach those ways. Love will even heal the poisoned souls. Time is short: days are passing; they don't come back: "work while it day." Y. W.

Germanatown, 7th mo. 4, 1871.

Number of Farms in the United States.—The following statement of the number of farms throughout the United States may be interesting. Beginning with the smallest, there are 52,642 farms of 3 acres and under 10 acres; 157,810 of 10 acres and under 20 acres; 624,520 of 20 acres and under 50 acres; 607,610 of 50 acres and under 100 acres; 486,239 of 100 acres and under 500 acres; 20,289 of 500 acres and under 1000 acres; and 5,345, 1000 acres and upwards. The total number of farms is 1,942,241.

For "The Friend."

Galileo.

The interest which has ever been felt by literary and scientific world in this eminent philosopher and amiable man, has been fresh quickened by the publication within a year, of a series of letters addressed to him by his eldest daughter, who as a nun, under the name of Maria Celeste, was a inmate of the Franciscan Convent, St. Matthew, Florence. The details of his trial before the Inquisition, extracted from the original papers yet preserved in the Vatican, have also recently presented to the public by M. de l'Épinois. Their perusal fills the mind with a tide of mingled emotions. Pity for the poor victim of persecution rises spontaneously; pity for the persecutors, among whom there was no doubt some intellectual brightness, associated with hypocritical pretence of zeal for religion, which is of slower growth, and the result of mental and moral rot. A righteous indignation is felt at the inhuman system which endeavors to fetter the mind of thought by the severest outward penalties; and pretends to promote the cause of Truth and righteousness by cruelty and deceit.

A work entitled "The Private Life of Galileo," has been recently issued from the press, which contains many interesting details from which the following extracts are taken.

Galileo Galilei was born at Pisa in 1564. His father though a Florentine noble, and of great talent and learning, was in straitened circumstances. Anxious that his son might escape the trials of that poverty, with which he had been compelled to struggle, he determined to educate him as a physician, with this intention sent him to the University of Pisa. Galileo was then seventeen or eighteen half years old, and was already well versed in Latin and Greek, and an excellent student. For three or four years he followed the usual course in medicine and philosophy. In the latter, we are told, that he was in the habit of examining an assertion to see what was worth, instead of relying on the weight of authority. This gained him the reputation of being the narrow-minded professors of being led by a spirit of contradiction.

The connection of the great bronze lamp which hangs in the cathedral at Pisa with Galileo's earliest mechanical discovery, the pendulum, is well known. Viviani says, that he observed the unerring regularity of the oscillations of this lamp, and of other swinging bodies, the idea occurred to him of an instrument might be constructed on this principle, which should mark with accuracy the rate and variation of the pulse. An instrument he constructed, after a series of careful experiments. This invention, though imperfect, was hailed with delight by the physicians of the day and was soon taken into general use, under the name of *pulsilogia*.

At the time of which we are speaking, the study of mathematics was completely neglected in Italy. The names of Euclid and Archimedes were but empty sound to the mass of students who daily thronged the academical halls of Bologna, the ancient and the free, of Padua, and even of learned Padua. Galileo's undervaluing a science in which he was assured he was well versed, considered the time spent in the study of mathe-

matics would be so much time wasted in the case of one who was destined to the medical profession. He not only abstained from teaching Galileo what he himself knew, but endeavored to prevent his obtaining knowledge from other sources, assuring him that it would be time enough to enter upon such a new pursuit when his medical studies were finished. But Galileo was not to be thus put off.

He persuaded one of his father's friends, who was in the daily habit of visiting their house, to give him some instruction, and though this was discontinued before the completion of the first book of Euclid, he finished without further assistance the whole six books of that distinguished Geometrician.

"Convinced at length, not only by the fact of the boy's secret studies, but by the rare facility with which he invented various new problems, that in truth his son was a born mathematician, Vincenzo Galilei withdrew his opposition, and from that time abandoned all hope of Galileo making his fortune in the practice of medicine."

In 1586, at the age of twenty-two, he composed his first essay, on the Hydrostatic Balance. This was followed by a treatise on the position of the centre of gravity in solid bodies, which however was not printed till 50 years after. In 1589 he was appointed Mathematical Professor at Pisa, with a salary of only 60 crowns per annum—about £15. Most of the professors, as well as the heads of the University, were staunch disciples of Aristotle, and were therefore not well disposed towards one, who even when a student, had dared to think for himself, and to disregard the authority of their favorite author. He remained but a short time in this position, and in 1592 was chosen by the Venetian Senate to the Mathematical chair of Padua, with a yearly stipend of 180 florins, about £32 English.

"The whole period of Galileo's residence at Padua was one of unceasing industry. His lecture-room was filled to overflowing, and he had a large house full of private pupils. Among the many treatises which he composed during the first few years of his professorship, may be mentioned the treatise on Fortification, that on Mechanics, on Gnomonics, besides many others, all written for, and circulated in manuscript among, his disciples, by whom copies were scattered through almost every country in Europe. From his carelessness in not attaching his name to many of these writings, a carelessness which probably arose from his slight opinion of their value, it happened in more than one instance that all which was most precious in them was adopted by some impudent plagiarist, and put forth as his own invention. As an example of this, it may be sufficient to mention the case of Baldassare Capra, who, after having pirated Galileo's geometrical and military compass, now called the sector, wrote a book in which he endeavored to prove that Galileo, who had invented this compass about the year 1597, was the plagiarist. Galileo, who had dedicated his treatise on the use of the compass to Prince Cosmo, took some pains in this instance to prove his claim to the invention, and so far succeeded that Baldassare Capra's book was burned by order of the Senate.

"From the year 1597 Galileo seems to have turned his attention particularly to the manufacture and improvement of various scientific instruments. From his memorandum-book

we find that, from the 5th of July, 1599, he took a workman of the name of Mazzoleni, with his family, to lodge in his house, in order that the manufacture of instruments might proceed under his personal direction, and that his own inventions and improvements might be less liable to piracy."

In this round of employment his time was spent, until in 1610 he accepted the position of Mathematician and Philosopher to Cosmo, 2nd Grand Duke of Tuscany. One principal object in making the change was, that he would then be able to devote his time, with less interruption, to those scientific studies and experiments in which he so greatly delighted, and have leisure to prepare for the press the results of his unwearied labors. The extent and variety of which were truly remarkable.

The year 1609 is memorable as the date of Galileo's invention of the telescope. He thus describes his discovery in a letter to * * * "You must know, then, that about two months ago there was a report spread here that in Flanders some one had presented to Count Maurice (of Nassau) a glass, manufactured in such a way as to make distant objects appear very near, so that a man at a distance of two miles could be clearly seen. This seemed to me so marvellous that I began to think about it: as it appeared to me to have a foundation in the science of perspective, I set about thinking how to make it, and at length I found out, and have succeeded so well that the one I have made is far superior to the Dutch telescope. It was reported in Venice that I had made one, and a week since I was commanded to show it to his Serenity and to all the members of the Senate, to their infinite amazement. Many gentlemen and senators, even the oldest, have ascended at various times the highest bell-towers in Venice, to spy out ships at sea, making sail for the mouth of the harbor, and have seen them clearly, though without my telescope they would have been invisible for more than two hours. The effect of this instrument is to show an object at a distance of say fifty miles, as if it were but five miles off."

Galileo himself seems at first to have been unconscious of the immense importance of his discovery. Writing, in 1609, to Michel Angelo Buonarroti the younger, he mentions casually that he had introduced some improvements into the manufacture of telescopes, and that perhaps he might make some further discovery. He had used the telescope to make observations on the moon, subversive of the crystalline theory then in vogue, but the discovery of Jupiter's satellites took him quite as much by surprise as it did the rest of the world."

(To be continued.)

Knowledge cannot be truly ours till we have appropriated it by some operation of our own minds. The best writers on property in land attribute that right to the first proprietor—having blended his own labor with the soil.—*Macintosh.*

A Piece of Steel in the Eye for Twenty-nine Years—Singular Results of a Surgical Operation.—Twenty nine years ago, while building the Tomlinson bridge in New Haven, Connecticut, of No. 30 Wooster st., in this city, was injured in the right eye by a small and sharp piece of steel, which flew from a

steel roller as the result of a blow. It pained him for several days, but gradually the pain wore off, and for many years he felt no other inconvenience from it than this—that he would occasionally see objects double. The eye looked somewhat different from the other eye, but not to any marked degree. Gradually it began to lose the power of sight. This was many years after the accident.

Finally the eye lost all power of sight—became totally blind. It did not present such an appearance however. In this way it continued for fourteen years, causing, if we are correctly informed, no pain. About six weeks ago a boil made its appearance on the inside of his right nostril. Its obstinately painful character led him to puncture it with the small blade of a penknife, when out came, among some purulent matter, the identical little bit of steel which had entered his eye twenty-nine years ago! The sore healed, but afterward he became conscious of a dimness in his remaining (left) eye, as if there was a veil over it. He consulted a New York oculist, who found it to be the result of sympathetic action from the nerves of the other eye, and advised him to have the right eye (which had been for some years totally blind) removed from its socket. This, he told S. H., could save him from becoming totally blind. After returning home he decided to do this. The patient was put under the influence of chloroform and the eye extracted, for a glass one in due time to take its place. Curiously enough, any ray of light that enters the apartment pains the empty socket of the departed eye. Even a picture with a gilt frame, hanging on the opposite wall, had to be turned face to the wall, the reflection of the gilt frame in the darkened room being painfully perceptible. This sensitiveness, however, is rapidly wearing off, if it be not already gone, and he will soon, no doubt, be out of doors again.

In a world of dangers and difficulties, like a desolate, thorny wilderness, how precious, how comfortable, how safe, are the leadings of Christ, the good Shepherd; who said, "I know my sheep, and am known of mine."—*J. Woolman.*

THE FRIEND.

SEVENTH MONTH 22, 1871.

SUMMARY OF EVENTS.

FOREIGN.—The French Official Journal pronounces the alleged letters to the Pope a forgery. On the 14th a terrible explosion occurred at the powder works of St. Marie, Vincennes. The accident occurred from the unloading of some powder carts in too close proximity to the machinery used in the preparation of projectiles. The destruction of property was great, but the loss of life has been comparatively small, only six persons having been killed.

Dupanloup, Bishop of Orleans, having declined the appointment of Archbishop of Paris, it has been offered to Guibert, Bishop of Tours, who has accepted it.

The committee of the Assembly on the re-organization of the army has adopted the principle of compulsory service, and the National Guard will, therefore, be disbanded throughout the country.

Thiers informed a deputation of the members of the Left in the Assembly, that the state of siege in Paris will shortly be raised, and that the capital will be removed to that city after the recess in the Tenth month next.

The Minister of Marine, in an address before the Assembly, gave explicit contradiction to the report which obtained publicity that a thousand women, arrested in Paris as incendiaries, after the occupation of the Versailles army, were to be transported to Cayenne.

Americans in Paris are endeavoring to secure possession of Communist prisoners as colonists. They are wanted for Lower California, Arizona, and Colorado.

The French government is negotiating with the Germans for the restoration of four hundred railroad cars seized during the war.

The effective strength of the French army is reported at 230,000 men.

The military commander of Paris has notified the proprietors of theatres, cafes and other places of public resort, that they must all be closed at midnight.

The government has dispatched a representative to induce the British government to a modification of the treaty of commerce between France and England which was made in 1860.

The Assembly from provinces occupied by the German troops, are earnestly pressing the policy of anticipating future payments of the indemnity, so as to get rid of the Germans at an earlier period than the treaty proposes.

Owing to delay caused by certain technicalities, the delivery of the first half million of the indemnity to the Germans is not yet consummated.

A great fire was occasioned at Rheims on the 16th, by the explosion of a quantity of petroleum. Fifty persons were killed and wounded by the explosion, and many buildings in the business portion of the city were destroyed.

A Berlin dispatch says, the regular diplomatic representative to France will be postponed until after the complete evacuation of French territory by the German armies.

A Prussian journal gives the following summary of the capture of a galleon by the Germans in the late war: France, viz: 5,817 cannon, of all calibres; at Sedan 490; Toul, 197; Strasbourg, 1070; Metz, 541; Thionville, 200; Longuy, 200; Paris, 1959. Mitrailleurs, 171. The number of prisoners 445,769. This, with the heavy indemnity and the wide spread devastation, makes an ample reparation for injury done.

The Provincial Correspondence says, Germany watches with calmness and sympathy the re-development of France. Her only desire is to bring about, as speedily as possible, the re-establishment of friendly relations.

The Minister of War in Austria reports, that that country is actually able to furnish an army of 650,000 men. Count Von Beust, in a speech supporting the estimates, said now was the best time for thoroughly organizing the army without creating distrust. The Austrian government has formally ratified the naturalization treaty with the United States.

Cuba has been excited in the Spanish Cortes upon the Colonial policy of the nation, introduced by the opposition, who demand a vigorous prosecution of the war to prevent the loss of Cuba. It was resolved that the island should not be sold to the United States, but must be kept at any cost.

A deputation from the American Evangelical Alliance was received by Prince Gortschakoff a few days since, and their address to the Czar was presented and favorably received. The address consists of an earnest and able plea in favor of freedom of conscience, and entire religious liberty, and the Czar is entreated to confer these blessings on all his subjects.

The London Times makes the New York riots the text for an article upon the condition of affairs in Ireland, which concludes as follows: "If Irish feuds are as implacable in America as they are in Ireland, and more sanguinary, Irishmen must ask themselves whether they are not more responsible for the troubles in Ireland than English misrule."

In the House of Lords, during the debate on the army reorganization, Earl Derby astonished the tory members by denouncing the purchase system and proposing a fair scheme for the retirement of officers. The Earl of Carnarvon is thought to have been responsible for the Earl Derby's arguments.

The arsenal at Rio Janeiro has been totally destroyed by fire. The loss exceeds \$1,500,000.

A London dispatch of the 17th says: Prince Gortschakoff has expressed to the deputation of the American Evangelical Alliance the sympathy of the Czar with the object of their prayers, viz, the advancement of the cause of religious liberty in Russia.

It is officially announced that the Asiatic cholera has made its appearance in several places in Poland.

The North German Gazette sharply reproves the Catholic Alliance in Germany for their encroachments on the civil power.

London, 7th mo. 17th.—Consols, 95 $\frac{1}{2}$. U. S. 5-20s of 1862, 92 $\frac{1}{2}$; of 1867, 91 $\frac{1}{2}$; ten-forties, 91 $\frac{1}{2}$.

Liverpool.—Uplands cotton, 8 $\frac{1}{2}$ a 9 $\frac{1}{2}$; Orleans, 9 $\frac{1}{2}$ d. California white water, 11s. 6d.; red water, 11s.; red spring, 10s. 4d. a 10s. 6d. per 100 pounds.

UNITED STATES.—Miscellaneous.—On the 12th savage and disgraceful riot occurred in New York, consequence of an attempted parade of the Orange Rifles, a branch of the 69th Regt. The actions of the Irish Catholics brought them into collision with the police and military who were ordered to protect a procession. In the conflict about forty persons were killed and four or five times that number wounded many of whom have since died. About 200 of the marchers were taken to places in Philadelphia.

The number of interments in Philadelphia, from the first to the eighth of this month, was 379, including 2 children under two years of age. There were 81 dead of cholera infantum. From the 8th to the 15th the interments numbered 460, including 293 under two years of age. There were 2 deaths of cholera, 5 of cholera morbus, and 113 cholera infantum.

The President has directed the Attorney General rigidly enforce the bill passed for the suppression of outrages in the South, and especially in North Carolina. Additional assistant attorneys will be appointed, at the law strictly enforced every where in the South.

The latest revised tables at the Census Office show the following aggregate population of all the States and organized Territories. The uncivilized Indians do not seem to be included. White, 33,681,580; colored, 4,878,323; Indians, 25,773; Japanese, 55; Chinese, 14; total, 38,595,737.

Ely S. Parker, Commissioner of Indian Affairs, has resigned in consequence of disagreements with the Board of Indian Commissioners. President Grant, his letter accepting General Parker's resignation, bears testimony to his integrity and ability. He says, "My management of the Indian bureau has been in entire harmony with my policy, which I hope will tend to civilization of the Indian race. It has also been a just and discreet." General Parker is a Seneca Indian, a was General Grant's chief of staff throughout the late war.

Markets, &c.—The following were the quotations on the 17th inst. New York.—American gold, 111 U. S. sixes, 1881, 1115; ditto, 5-20s, 1862, 114; ditto, 1867, 112 $\frac{1}{2}$; ditto, 10-40, 5 per cents, 112 $\frac{1}{2}$. Superfine flour, 24-40 a 55; finer brands, 25-25 a 58.75. No. 1 Chicago spring wheat, 81.35; No. 2 do, 81.38 a 81.6 red western, 81.37 a 81.40; amber do., 81.44 a 81.45 white Michigan, 81.50 a 81.55. Oats, 66 a 70 Western mixed corn, 71 71 $\frac{1}{2}$ cts.; yellow, 74 choice white, 82 cts. Middling cotton, 20 $\frac{1}{2}$ a 21 $\frac{1}{2}$ Philadelphia.—Cotton, 21 a 21 $\frac{1}{2}$ cts. for uplands New Orleans. Flour, 5 a 8.50 per bbl. Galileo.

For "The Friend."

(Continued from page 383.)

In a letter written in the First month of 1610, he says: "I am at present staying at Padua for the purpose of getting printed some observations which I have been making on the celestial bodies by means of a telescope which I have, and being infinitely amazed and great, so do I give infinite thanks to God, who has been pleased to make me the first discoverer of marvelous things, unrevealed to former ages. I had already ascertained that the Moon was a body most similar to the Earth, and had shown our Most Serene master such, but imperfectly, not having such an excellent telescope as I now possess, which, besides showing me the moon, has revealed to me a multitude of fixed stars never yet seen; more than ten times the number of those that can be seen with the unassisted eye."

Moreover, I have ascertained what has always been a matter of controversy among philosophers; namely, the nature of the Milky Way. But the greatest marvel of all is the discovery I have made of four new planets: I observed their proper motions in relation to themselves and to each other, and therein they differ from all the other motions of the other stars. And these new planets are found another very great star, in the way as Venus and Mercury, and therefore the other known planets, move round the Sun. As soon as my tract is printed, I shall, as an advertisement, intend sending philosophers and mathematicians, I shall send a copy to the Most Serene Grand Duke, with an excellent telescope, which will enable him to judge for himself of the truth of these novelties."

In 1610, these satellites of Jupiter, whose existence was thus announced, were an essential object of curiosity. During the Easter recess Galileo visited the Court of Tuscany, for the express purpose of showing the Grand Duke the new satellites. His highness asked for and obtained the gift of a telescope with which the discovery had been made, though Galileo ultimately, as it afterwards turned out, kept it in his own hands; and it did become the property of the Grand Duke, and died in Galileo's life-time, but of his suc-

cessor. It may well be believed that Galileo could not make up his mind to part with his 'old discoverer,' as he affectionately calls this telescope, even to gratify the Grand Duke's whim.

"We learn from Galileo's correspondence with Vinta, that the second edition of his 'Nuncius Siderius,' or 'Messenger of the Stars,' was put into press in less than two months, after the appearance of the first edition, which, by an after-thought, was dedicated to the Grand Duke. At the same time, he tells us, he reprinted his treatise on the 'Use of the Geometric and Military Compass,' of which there was not a single copy left. Besides this, he was continually occupied in the manufacture of these compasses, of which, since 1596, more than three hundred had passed through his hands. Of the telescopes he had manufactured above a hundred, with great cost and labor; and of these, but ten were capable of showing the satellites and the fixed stars.

"Throughout Florence the excitement was immense. Every one desired to possess a Venetian glass. Alessandro Sertini, a clever advocate and old friend of Galileo, writes an amusing letter describing the irrepresible curiosity of some of his friends on hearing that the Venetian courier had brought him a small box from Galileo. There must surely be a telescope in it. The box must be opened then and there. When it was found to contain no telescope, but only the 'Nuncius Siderius,' still the curiosity did not abate. Sertini was forced to read that portion of the 'Nuncius' relating to the new planets aloud to a circle assembled at a friend's house.

"The whole University crowded to hear his three lectures on the satellites. Most were convinced; and a few merely pretended to be convinced; and a small minority declared that even if they were forced to look through the telescope and see the satellites, they would not believe them to be in the sky, 'because the heavens were unchangeable.' The force of this argument is obvious: the satellites were not there before Galileo saw them.

"From the letters of Martin Hasdale, an Englishman settled at Prague, we get an amusing account of the wordy war waged against Galileo. Magini, a native of Padua, but professor at Bologna, had declared speculatively that Galileo had deceived himself, or that his telescope had deceived him, just in the same way as he (Magini) had been for a moment deceived by the sight of three suns on the occasion of viewing a solar eclipse through some colored spectacles which he had made himself. It was utterly ridiculous to suppose that such a thing could exist as that four planets were constantly chasing each other round a larger planet!" Magini's secretary, Martin Horky, wrote to the celebrated Kepler that he will die before he will concede to that Italian (Galileo) his four planets, and published a book on the subject,

in which he gravely argues that as we had done very well without these new planets hitherto, there could be no reason for their thus starting into existence! "Wodderburn, a Scotchman then studying at Padua, answered with the dry humor of his nation, that the evident use of the new planets was to torment and put to confusion Horky and all superstitious astrologers."

In the 7th mo. 1610, Galileo discovered Saturn's ring, and a few months afterwards the phases of Venus. "The discovery of the phases of Venus was felt by Galileo to be highly important, as containing in it the solution of that vast problem, the truth or falsity of the Copernican system."

At the suggestion of the Grand Duke of Tuscany, and at his expense, Galileo proceeded to Rome to show his discoveries, "and in the gardens of the Quirinal, did Galileo display his 'celestial novelties,' as they were styled, the satellites, Saturn's ring, and the phases of Venus, to a crowd of Cardinals and Monsignori, adding his latest discovery, that of the solar spots."

The Copernican theory of the revolutions of the heavenly bodies, which Galileo had revived, was opposed to the teaching of Aristotle—the accepted authority of that age,—and to the system of belief in relation to these subjects held by the ecclesiastical authorities.

To advance such opinions was consequently to incur the danger of being considered heretical—a danger which at that time involved the probability of the severest penalties and of personal torture at the hands of the Inquisition. Galileo early foresaw the trouble which awaited him if these views were brought under the ban of ecclesiastical censure, and judiciously labored to show that his discoveries were not necessarily hostile to religion, seeing that scripture was silent upon many of the sciences, and that so little notice of astronomy appears in it that the names of all the planets were not mentioned. In a letter to one of his friends who had been advocating his views before the Grand Duke and Duchess, with much earnestness and success, he thus expressed himself in reference to the apparent conflict between them and the Holy Scriptures:

"It seems to me that it was well said by Madama Sereuissima, and insisted on by your reverence, that the Holy Scriptures cannot err, and that the decrees therein contained are absolutely true and inviolable. But I should in your place have added that, though Scripture cannot err, its expounders and interpreters are liable to err in many ways; and one error in particular would be most grave and most frequent, if we always stopped short at the literal signification of the words. For in this wise not only many contradictions would be apparent, but grave heresies and blasphemies. Holy Scripture and nature are both emanations from the Divine word; the former dictated by the Holy

Spirit, the latter, the executrix of God's commands. Holy Scripture has to be accommodated to the common understanding in many things which differ in reality from the terms used in speaking of them.

"And who can assert or sustain that, in speaking incidentally of the sun, or of the earth, or of other created bodies, Scripture should have elected to restrain itself rigorously to the strict signification of the words used? May it not be, that, had the truth been represented to us bare and naked, its intention would have been annulled, from the vulgar being thereby rendered more contumacious and difficult of persuasion in the articles concerning their salvation? This, then, being conceded, and it being manifest that two truths cannot be contrary to each other, it becomes the office of wise expounders to labor till they find how to make these passages of Holy Writ concordant with those conclusions, of which either necessary demonstration or the evidence of our senses have made us sure and certain."

A copy of this letter fell into the hands of the Dominican monks of the convent "St. Mark," who denounced it to the authorities of Rome. Galileo, to vindicate himself against these charges, wrote to several influential persons in that city, defending himself by adducing various quotations from the Psalms and from the writings of the fathers, and by the advice of his friends even went to Rome to plead for himself and for the Copernican doctrine. But though he counted numerous friends among the cardinals and learned ecclesiastics, not to speak of the host of laymen whose adherence he had gained, the Dominican's ignorance eventually gained the day.

The Congregation of the Index which had previously prohibited Copernicus' book, now decreed, in 1616, that "the doctrine attributed to Copernicus, respecting the motion of the earth round the sun, to be contrary to Scripture, and therefore not to be held nor defended." "This decree was a great blow to Galileo, who had hoped for a far different result. It was a small thing to him that he escaped personal censure. Convinced of the truth of the Copernican theory, and having convinced others daily, in hall and antechamber, wherever he could find listeners, the condemnation of that theory was not only a proof of the willing subservience of the Congregation to the views of an unscientific and perhaps prejudiced Pope [Paul V.] but seemed to him to be likely to damage the interests of the Catholic religion, and to bring into dispute that Church of which he was a sincere and faithful member. Of all the calumnies raised by his enemies, the only one which affected him painfully, was that which accused him of being a bad Catholic."

(To be continued.)

Night in the Jungles of Ceylon.—I know nothing more interesting than the acquaintance with all the wild denizens of mountain and plain, lake and river. There is always something new to admire in the boundless works of creation. There is a charm in every sound in Nature where the voice of man is seldom heard to disturb her works. Every sound gladdens the ear in the stillness of solitude, when night has overshadowed the earth and all sleep but the wild animals of the forest. Then I have often banished all ideas

of rest and have silently wandered from the tent to listen to the solemn quiet of night.

I have seen the tired coolies stretched round the smouldering fires sound asleep after their day's march, wrapped in white clothes, like so many corpses, laid upon the ground. The flickering logs on the great pile of embers crackling and sinking as they consume; now falling suddenly and throwing up a shower of sparks, then resting again in a dull red heat, casting a silvery moonlike glare upon the foliage of the spreading trees above. A little farther on, and the horses standing sleepily at their tethers, their heads drooping in a doze. Beyond them, and all is darkness and wilderness. No human dwelling or being beyond the little encampment I have quitted; the dark lake reflecting the stars like a mirror, and the thin crescent moon giving a pale and indistinct glare which just makes night visible.

It is a lovely hour then to wander forth and wait for wild sounds. All is still except the tiny hum of the musketees. Then the low chucking note of the night hawk sounds soft and melancholy in the distance; and again all is still, save the heavy and impatient stamp of a horse as the musketeer irritate him by their bites. Quiet again for a few seconds, when presently the loud alarm of the plover rings over the plain—"Did he do it?" the bird's harsh cry speaks these words as plainly as a human being. This alarm is a certain warning that some beast is stalking abroad which has disturbed it from its roost, but presently it is again hushed.

The loud hoarse bark of an elk now unexpectedly startles the ear; presently it is replied to by another, and once more the plover shrieks "Did he do it?" and a peacock waking on his roost gives one loud scream and sleeps again.

The heavy and regular splashing of water now marks the measured tread of a single elephant as he roams out into the cooled lake, and you can hear the more gentle falling of water as he spouts a shower over his body. Hark at the deep guttural sigh of pleasure that travels over the lake like a moan of the wind!—what giant lungs to heave such a breath; but hark again! There was a fine trumpet! as clear as any bugle note blown by a hundred breaths it rung through the still air. How beautiful! There! the note is answered; not by so fine a tone, but by discordant screams and roars from the opposite side, and the louder splashing tells that the herd is closing up to the old bull. Like distant thunder a deep roar grows across the lake as the old monarch mutters to himself in angry impatience.

Then the long, tremulous hoot of the owl disturbs the night, mingled with the harsh cries of flights of water-fowl, which doubtless the elephants have disturbed while bathing.

Once more all sounds sink to rest for a few minutes, until the low, grating roar of a leopard nearer home warns the horses of their danger and wakes up the sleeping horsekeeper, who piles fresh wood upon the fires, and the bright blaze shoots up among the trees and throw a dull, ruddy glow across the surface of the water. And morning comes at length ushered in, before night has yet departed, by the strong, shrill cry of the great fish-eagle, as he sits on the topmost bough of some forest tree and at measured periods repeats his quivering and unearthly yell like

an evil spirit calling. But hark at that dull, low note of indescribable pain and suffering! long and heavy it swells and dies away. It is the devil-bird; and whoever sees that bird must surely die soon after, according to Cingalese superstition.

A more cheering sound charms the ear the gray tint of morning makes the stars grow pale; clear, rich notes, now prolonged and full, now plaintive and low, set the example to other singing birds, as the bulbul, first to awake, proclaims the morning. Wild, gleeful songs the birds indulge in; not if our steady thrushes of Old England, but charming in their quaintness. The jung partridge now wakes up, and with his low cries subdues all other sounds, until the numerous peacocks, perched on the high trees around the lake, commence their discordant yells, which master everything.—S. Baker.

For "The Friend."

Observations on Worship, Ministry, Separations, &c.

"I was educated," says an eminent, departed minister, "in the belief that divinity was performed in spirit and in truth and that the qualification for this essential duty was to be waited for in the silence of flesh. When in meeting I endeavored to have my mind gathered from all visible things, at times was favored with the presence of the Shepherd and Bishop of souls, who is in the midst of those who are met together in I name, sometimes tendering my spirit with his goodness, and at others instructing me those things which pertain to salvation; as I felt it a religious duty *diligently* to attend all the meetings to which I belonged as that came in course."

This was in the days of his minority, during which, he says, he was induced to attend Methodist meeting several times, upon which he remarks: "I never saw anything among them that attracted me, or produced any satisfaction with my own religious profession. On the contrary, in some of their prayer meetings the passions appeared to be much excited, and their efforts to convert persons from their evil ways that they might 'give religion,' as they call it, seemed to operate much through the nervous system. Familiar association with other professors, or attending their meetings, appears to me quite improper for the members of our Society. Those whose feelings are lively may be caught in the excitement, and receive a bias which may unsettle them for a long time, perhaps through life."

How evident is the prejudicial effect of the familiar mingling, upon some of the staff of ministers amongst us, who bring with them from their attendance upon "revival meetings" as they are called, something of the *sensational* manner of treating religion as is found therein, by which the heart rather than the heart, the natural rather than the spiritual senses, are gratified and instructed.

In reference to silent worship our author writes: "There is a material difference between what we call good thoughts and being brought to sit under the teachings of Christ in our hearts, when assembled for divine worship. His words are spirit, and they are led to the soul; but the wanderings of the mind in contemplating religious truths, without the influence of his Spirit, must end in barrenness and poverty. Hence it is our chief business to labor to get to a state of *humble waiting*."

re Him, that we may be instructed by the precious words that still proceed from Him in His spiritual appearance in the heart."

If this was our engagement when assembled for the purpose of divine worship, how could it free us from the faith-destroying excise of the natural mind and wisdom in the office of the ministry, making our religious meetings seasons for unsavory declamation, oratorical displays in word and manner, the burdening of the living members who are enabled to penetrate beneath the outward manifestation, with ears qualified to "try words as the mouth tasteth meat." Such a ministry is one of the trials of the church in our day, and calls for the exercise of faithful prayer towards the authors of it, that they may be brought to see the harm they are doing, and weakening the faith of their hearers in divine inspiration.

While this and other trials are besetting the church, it behoves us to endeavor to keep our posts, occupying the gifts entrusted to us in the endeavor to remove, as far as may be the causes of jarring and discord, according to the sentiment of our author who, in 1833, remarked in conversation on the present state of our Society, that he "did not wish to wish Friends running out of a back door, to get away from trouble. Our place is stand firm, contending for the truth and opposing wrong things as they appear. Separation deprives those who leave of the opportunity of opposing error in the members from whom they have separated; and none know upon whom something may again arise among ourselves to create contention, and lead to their separation. If we keep our places, I bear a faithful testimony for the truth, against all departures from it, though at times we do not see the effect, yet we may have that the Lord will carry that testimony home to the hearts of some, so that it will arise from time to time with convincing power, and finally prevail. Jerusalem is a precious stone to those who would pervert it to turn judgment backward, and the Lord save by few or many.

The trials of this day are hard to bear, if they drive us more and more to the center, and keep out a light spirit, and deepen in the blessed Truth, so that our example be effectual to draw others to the love of which will be great blessings to us, and fit for greater service in the Lord's church vineyard. We have depended much on another, instead of relying upon the Lord for guidance, wisdom, and strength; He has been taking from us fathers and mothers, and permitting the spirit of separation to get in, by which many Friends have been alienated from each other. The unity which the Spirit being greatly lost, the strength which it gives is much withdrawn. There is a way by which the strength of the church may be restored but by the members coming back to the first principle, of individual waiting upon the Lord, and seeking to receive from Him the spirit of prayer, that He would reveal to us, and show us our real condition; that He would have us to come out of us, and that high and holy way He would have us to walk in. His mercies are the same from generation to generation; and when we are truly humbled and brought back, He will ascend again to our low estate, and lift up and put songs of praise into our mouths; and the children will be enabled to join in

thanksgiving and praise to his great and adorable Name."

Mock Humility.

For "The Friend."

It is related of Charles Wesley, the celebrated Methodist preacher, that a woman once came to him, complaining that she was the chief of sinners, the worst of transgressors, utterly lost and helpless. He replied, "I have no doubt, Madam, that you are bad enough." She instantly flew into a passion, and declared that she was no worse than her neighbors, accused him of slandering her, and from her gestures she would have boxed his ears if he had not suddenly retired from the room. This incident brings to mind the anecdote that is told of a very nice housekeeper, who was perhaps unduly and excessively particular in the care of her house. A knock on the front door one day brought her there to give admittance to a friend who had called. Opening the door she invited him to come in, if he could, on account of the dirt. He replied, "I will try," and picking his steps very carefully, as if crossing a muddy street, he passed through her door once.

We may well be amused at such occurrences, but they are only illustrations of that mock humility which a close observer will find largely diffused throughout society, and which I doubt not many of us have in measure partaken of. I can well remember, in my early school-boy days, how distinctly this principle was exhibited. A boy, in conversation, would depreciate his own abilities; would say he was not able to understand this study, or to write a composition like that companion; or had not skill and strength to compete in ball-playing with another; and all this for the pleasure of hearing himself contradicted, and his vanity gratified, by being praised for his ability or skill. School-boys often use very expressive terms; and this practice they called "fishing for compliments."

What a weakness in the human composition, is the *inordinate* love of approbation, and how much wantfulness and how many struggles are required to bring and keep it in right control, as we travel on the path towards Christian perfection, in which we are all called to walk!

For "The Friend."

Memoirs of Middlestead Ratliff.

(Continued from page 379.)

"1808. 11th mo. 10th. We attended Somerville Meeting to good satisfaction. Oh! may all, who are thus favored in public opportunities of waiting on and worshipping the dear Master, remember these times of refreshing derived alone from him, to their profit; and evince their gratitude of soul by renewed dedication and obedience in days to come. We went with J. C. to his home and dined; several Friends being with us. Here our beloved friend Joseph Butler, with several others, concluded to appoint a meeting at Black Creek, just for Friends; giving us liberty to attend; which rather enlarged the opportunity of my being more amongst them than could well be come at in the short space of time I had. I could not but feel bowed in awful thankfulness under the power of the cross before the Author of all good, that He should be pleased to put it into the hearts of his servants thus to give me an opportunity of visiting one more neighborhood or meeting

than I should otherwise have done. This, I may remark, was put into the minds of my affectionate friends I trust by the good Shepherd who careth for the flock: not from a hint from me to any one of them. And I may truly say, although I am glad it is so, yet the prospect is truly weighty, and I rejoice to feel my trust alone in Him who is able to perfect praise unto his worthy name from the mouth of babes and sucklings. From J. C.'s we went to his brother James' the same evening, feeling a concern to visit his wife who is under great affliction of body. O may her afflictions tend to the purifying of her mind. This visit was conducive to my peace, and I believed it was to the beloved friends, my companions.

"11th. James bore us company as far as E. J.'s, where we stopped to get dinner. After which James returned home, and bore us company to J. D.'s, where we met that night with our friends who appointed the meeting at the before mentioned place. I rejoiced to meet with them; yet the prospect of my being the means of calling Friends together for public worship was truly humbling to me, although I often felt encouraged in the secret of my heart to stand fast, and keep a single eye to the Author of this appointment; and then there would be no danger but He would glorify his own worthy name therein. A hope of this animating kind was truly as an anchor to my mind, and I said in my heart, It is enough. This was my exercise when meeting with the before-mentioned Friends.

"12th. This morning, as soon as I awoke, I was again encouraged in a degree of living faith in my only Helper, that He approved of this meeting, and would glorify his name; at which my spirit bowed and said, It is enough. Even so be it, O my Father! So we attended the same, and now surely I may remark with deep gratitude of soul, my Master was as good as his word. O such proofs of his goodness! May they be remembered to the strengthening of my faith in his power while I have any life. Father! be thou pleased so to continue thy saving help through this little journey, that in and through all, thy wonderful goodness, power, and love may be promoted: That so we, thy little ones, may rejoice evermore, and in everything give thanks.

"13th. Was at Black Water Meeting. Here was dispensed unto us a portion of suffering with the suffering seed, the life of religion being at a very low ebb: so that I felt there was great cause for mourning and lamentation; yet I had to rejoice in the secret of my soul, in that we were counted worthy to suffer with the suffering seed, nor desire any greater favor than to be with the Master; striving to follow Him in simplicity and singleness of heart, though thereby we might at times have to pass through the very region and shadow of death; remembering that where He is, there should his servants be. And I am more and more confirmed in the belief, that if we would reign with him, we must be willing to suffer with him. I have said in my heart, thou Beloved of my soul, only be pleased to permit me to be with Thee, and it matters not whether it is in life or in death: only be thou pleased to lead me as by the hand, and forsake me not, and I will follow thee to the end of my days. For thou knowest all things. Thou knowest that I love thee, and have given up all to follow Thee. From this meeting we went with J. B. and wife to T. P.'s. We

were not sorry for going, though there was not much cause for rejoicing, except it was in suffering with the precious seed of life.

"14th. Was not easy without having a religious opportunity with the family. Here I think I may remark Friends were favored in some degree to relieve their minds. Oh that they of that house may remember it to their profit. From thence we went to J. P.'s, where we seemed to get refreshed inwardly as well as outwardly. In the evening we reached our well beloved friend Jesse Bailey's. He and his dear wife have travelled with us about two weeks; she returned home from their Quarterly Meeting at the Western branch, but he continued with us until after Black Water meeting. Here was a place of resting as at noon, under the shadow of the Master's wing. We felt refreshed in the company one of another, under a sense of the continuation of Divine regard, extended to the humble in heart. O the desire I feel, that I with all His little dependent ones may ever know the place of safe standing, in the humiliation and abasement of the creature.

"15th. This morning we parted in the near unity of the spirit, being refreshed with the overshadowing of the Master's love. May we keep the eye so single unto Him, that the whole body may be full of light; that He who has hitherto helped us in this little journey, may be pleased to be with us, and help us to the end, to the praise of his own worthy name. I think I may say my confidence is unshaken that He will, if we stand single enough in resignation.

"16th. Were at Burleigh Meeting, which was small. There are some precious Friends here, as in most neighborhoods where our lots have been cast; yet there are others who are poor indeed, through indolence and sloth, who may be said to sleep in time of harvest. These without an amendment shall surely beg and have nothing. They will find in the time of extremity, when the midnight cry is heard, that it is vain to beg oil of the wise, and those whose hands have been diligent to labor. For, 'If the righteous scarcely be saved, where shall the ungodly and sinner appear.'

"17th. Continuing our journey, we came through Petersburg, and called to see a Friend who was indisposed, she being, as I understood, the only member in this place; or at least, the only female member. I felt sympathy with her, and was glad we called to see her. She kindly invited us to stay and dine, but we felt most easy to go a little further. As we travelled along this afternoon, I had, as I have often before, to take a view of our proceedings from place to place, and of the wonderful dealings, care and preservation of our gracious Benefactor towards us since we left home, and my spirit bowed in humble adoration; and this language often revived: 'Quietness as a canopy covers my mind. May I so watch unto prayer whilst I stay on earth, that nothing may turn me aside to the right hand or to the left. Went home with J. A., being received by his pleasant looking wife and children in much love; and were kindly entertained.'

"18th. Rested here till after dinner; then walked about a mile to visit J. B., an aged Friend under great affliction; there not being much probability of his continuing long. I felt near sympathy with him, and he seemed glad to see us. In this little journey we have

had frequent opportunities of seeing the sick, and taking a view of mortality. May it tend to our lasting profit, that we may often call to mind how swiftly precious time passes away, and that we as well as others must ere long go down to the grave, where there is no knowledge or device. May the living remember they have to die, and after death to give an account how they have lived in this world.

"19th. Attended their Monthly Meeting which was low and dull.

"20th. Attended meeting at the same place, which seemed in some degree favored with Divine regard. After which we found hard work to determine whether to return home, or to go to Wain Oak Quarterly Meeting. Meanwhile we visited several families of Friends in the neighborhood; and on Fourth-day, the 24th, again attended meeting at Gravelly Run.

"25th. Set off in company with R. B. and W. W. for Wain Oak. We reached Curles and quartered at P. P.'s. But alas, alas, what can be said of Curles or its inhabitants? Must not the language be, darkness has covered the earth, and gross darkness the people! We started early, and got to select meeting at Wain Oak.

"28th was the Quarterly Meeting for business; after which we set our faces homeward.

"12th mo. 4th. Attended Seneca Meeting; after which met with my dear husband, he being in health, and I also. For which favor I humbly hope I shall ever return grateful thanksgiving and praise."

(To be continued.)

Human Brotherhood.—The race of mankind would perish did they cease to aid each other. From the time that the mother binds the child's head, till the moment that some kind assistant wipes the deathdamp from the brows of the dying, we cannot exist without mutual help. All, therefore, that need aid have a right to ask it of their fellow-mortals: no one who holds the power of granting can refuse it without guilt.

The deadliest foe to a man's longevity is an unnatural and unreasonable excitement. Every man is born with a certain stock of vitality, which cannot be increased, but which may be husbanded or expended rapidly, as he deems best. Within certain limits he has his choice to live fast or slow, to live abstemiously or intently, to draw his little amount of life over a large space, or condense it into a narrow one; but when his stock is exhausted he has no more. He who lives abstemiously, who avoids all stimulants, takes light exercise, never overtakes himself, indulges no exhausting passions, feeds his mind and heart on no exciting material, has no debilitating pleasures, and lets nothing ruffle his temper, is sure to extend his life to the longest limit which it is possible to attain; while he who lives intently, who feeds on high-seasoned food, whether material or mental, fatigues his body or brain by hard labor, exposes himself to inflammatory diseases, seeks continual excitement, gives loose rein to his passions, frets at every trouble, and enjoys little repose, is burning the candle at both ends, and is sure to shorten his days.

A Christian should be ashamed of mourning any loss as irreparable; since he possesses God, who can more than fill the place of any and of every creature.

THE BETTER COUNTRY.

Sweet place, sweet place alone,
The court of God Most High,
The heaven of heavens, the throne,
Of spacious majesty!
The stranger homeward bends,
And sigheth for his rest:
Heaven is my home; my friends
Lodge there in Abraham's breast.
Earth's but a sorry tent
Pitched for a few frail days,
A short-leas'd tenement;
Heaven's still my song, my praise.
No tears from any eyes
Drop in that holy choir;
But death itself there dies,
And sighs themselves expire.
There should temptations cease;
My frailties there should end;
There should I rest in peace,
In the arms of my best Friend.
Jerusalem on high
My song and city is,
My home whene'er I die,
The centre of my bliss.
Thy walls, sweet city, thine,
With pearls are garnished;
Thy gates with praises shine,
Thy streets with gold are spread;
No sun by day shines there,
Nor moon by silent night;
Oh no! these needless are;
The Lamb's the city's light.
Oh happy place!
When shall I be
My God, with thee,
To see thy Face?

NOW AND HEREAFTER.

"Two hands upon the breast, and labor is past." *Russian Proverb.*

Two hands upon the breast,
And labor's done;
Two pale feet crossed in rest—
The race is run!
Two eyes with coin-weights shut,
And all tears cease;
Two lips where grief's mute,
And wrath at peace."
So pray we oftentimes, mounting our lot
God in his kindness answereth not.

"Two hands to work address,
Aye for His praise;
Two feet that never rest,
Walking His ways;
Two eyes that look above,
Still through all tears;
Two lips that breathe but love,
Nevermore fears."
So cry we afterwards, low at our knees,
Pardon those erring prayers, Father! Hear the

For "The Friend."

Intelligence of Ants.

The remarks of the French naturalist, M. naut, on this subject will, we think, be interesting to some of our younger readers. E says: "The intelligence of the ants has been subject of remark for many ages. The o biographer, Plutarch, relates the observatio made on these insects by the Greek philo sopher Cleanthes, three hundred years befo the Christian era. The French philosoph and essayist, Montaigne, describes thei wonderful means of mutual communication wit out the aid of speech.

Their organization is, indeed, very remarkable. The head is large; the jaw strong; t antennae long and delicate; the feet sma and furnished with claws, by which thei cli to objects; the body light, without orname or any means of protection. The ants, wh hatched, are completely naked; but they ha good nurses, who lavish on them the m assiduous care, bestow upon them the m

der caresses, expose them to the sun in warm weather, and keep them in the cells if it becomes cold. The ants make up for weakness of their bodies by the swiftness of their feet, the fineness of their touch, and number of their eyes, which inform them approaching danger. They possess a powerful acid, which is ejected against foes, and, some species, will even blacken or burn trees on which these insects make their nests.

They have a government, too, which is pure democracy, and seems to realize the ideal dreams of Plato, or those of Sir James More. Of course in this insect republic the property belongs equally to all; and the babies are claimed by the state. The whole community form a brotherhood, and individual is distinguished by aught save mutual love for the public good. * * *

These facts prove, surely, intelligence in ants. We think it needless to speak of the fineness or sagacity of the female workers, which are wood-cutters, carpenters, and purifiers; or to reproduce the excellent description given by Hubre of the ant's nests.

However, we will give some account of the colored ants, which construct their nests differently from all other species. Their work is neat, simple, compared with their ingenuity in red or meadow ants; but they at least like intelligent apprentices. Their hill is made of a dome of earth, closed entirely, except at the bottom, where it is entered by a long and winding gallery, hidden in the earth at some distance from the nest.

If they wish to raise the house higher," says Victor Rendu, "they begin by covering up with a layer of earth drawn from the interior. In this stratum they then trace the plan of another story. First, one of the ants little furrows at unequal distances, but equally of the same depth. The solid ridges which form the minute excavations serve as foundations for the inner walls, which form compartments for the various working chambers connected with them. The excavated earth is used for constructing the ceiling. When the cells have been formed in the trenches, the architect has only to finish the roof. One worker begins to take away the earth; she is followed by a second, which by degrees becomes a trench on each side of which is a bank. This forms at last a sort of path, leading to the gallery, at the bottom of the nest. When it is finished, another ant begins another gallery, which is also near to the apartments of the nest. The ants which thus trace the plan of a wall, apartment, gallery, or avenue, do each one by itself; and sometimes it happens, in consequence, that the different parts of the structure do not agree one with another. One arch, for instance, is closed up; another too low for the wall to which it should lead; sometimes it is only half the height it should be. Such an obstacle appears insurmountable for such a feeble insect. The ant which is not started at this; one ant sees the error, destroys the road commenced, raises the wall on which the path should rest, and makes a new road, which is constructed by an experienced workman perfectly all the conditions. It is an act of comparison, of judgment, of intelligence?"

When the ant commences such an enterprise," says Hubre, "that we see she is wise while she works, and realizes her ideas as she works. When one of these insects sees

on the nest two little bits of grass, which cross one another, and which would serve for the construction of a cell, or when she sees several small sticks of angular shape, she examines all these things, and then places a little earth in each of the spaces and along the sides of the sticks with great skill, without paying any attention to the work that others may have sketched already. So much is she ruled by the idea she has conceived, and which she carries out without distraction, that she goes, comes and returns, until her idea is understood by the others; then all work together in common to carry out the plan which one has commenced. The first ant which conceives a plan sketches it; the others have only to continue the work commenced. At the inspection of the first works, the insects judge which they will undertake; they know how to sketch, continue, polish or complete their work, according to circumstances. Their teeth-like jaws serve for cutting tools, their antennae for instruments of measurement; and their front feet are the trowels with which they mix the mortar, apply, spread, and fix it as solid cement."

Dr. Ebrand, an author of keen observation on the habits of the ant, was one day witness of the stratagem of the black ant, which showed the most ingenious calculation on the part of the insect. "One day," says he, "I saw on the summit of an ant-hill an entire sketch of a new story in construction. It was a series of galleries, formed by two parallel walls, half covered and intersected by numerous and unfinished cells. The upper part of the party walls in these little rooms projected inwards about one-tenth of an inch, leaving spaces between, about seven-tenths of an inch wide, uncovered. The black ants do not fetch bits of sticks or grass, neither do they construct pillars. How did they contrive, then, to finish covering in the cells before the materials forming the arches fell by their own weight? The soil was wet, and the work in full force. It was a constant running to and fro of ants, coming from their subterranean dwelling, and carrying particles of earth, which they adapted to the old constructions. Concentrating my attention on the largest cell, I saw that only one ant worked there; the work advanced nevertheless. In spite of a projection inside, between the upper part of the walls there still remained a space of about half an inch to cover in. This was the time to support the earth of the roofs by little pillars, beams, or the remnants of dried leaves; but the black ants never have recourse to any of these means, it is not in their nature to employ them. The solitary ant left her work for a moment, and went to a corn (wheat) stalk a little distance off. She ran up and down several long and narrow leaves, then choosing the leaf nearest to her, she fetched wet earth, which she fixed at the upper extremity. She continued this operation until, under the weight of earth, the leaf inclined gently towards the spot it was necessary to cover. This inclination took place, unfortunately, near the top of the leaf, which seemed inclined to break off. The ant, noticing this new inconvenience, gnawed the leaf at the bottom, so that it fell down full length; the position was now right. The worker arranged it properly by putting earth between the base of the plant and that of the leaf, until the leaf fell sufficiently low. The do-

sired end obtained, she used the leaf as a buttress to support the materials with which she intended to form the arch."

(To be continued.)

"My yoke is easy, and my burden is light."

Is it not very strange and inconsistent for those who profess to believe that every word of God is true, to feel a doubt concerning any plain assertion of the Scriptures? Yet much of this unbelief prevails with respect to particular statements in the Bible. The reluctance which those persons betray towards religion who are but "almost persuaded to be Christians," and who go on from year to year hesitating and undecided, must arise from an inward disbelief of the declaration in the text. Persons who are worldly in their spirit, and who are much engrossed by the business or pleasures of life, cannot be persuaded that the yoke of Christ is really easy, nor that his burden is literally light. They imagine that after all religion demands sacrifices that are very costly, and requires duties that are exceedingly burdensome, so that they shrink from it, and delay, hoping that a time will come, when they shall be better able and more willing to perform its hard conditions. Thus they tacitly deny the direct and absolute assertion of our Lord himself.

Young persons are especially exposed to this inconsistency; for not having long worn the galling yoke of the world, nor felt the weight of that burden which it imposes, they are not easily persuaded to relinquish them, nor to make trial of others, however highly recommended.

Some of the truths contained in the Bible are from their nature, incapable of demonstration; we believe them simply because God has declared them. But there are others which are corroborated by reflection and daily experience; and this, in the text, is one of the number. If Christ had never said it, yet all true Christians would have known with equal certainty, that his yoke is easy; and impartial reflection would enable those who have never yet worn it, to acquiesce in the truth of the assertion.

The only yoke that our Lord imposes on his disciples, is that of "keeping his commandments;" and "his commandments are not grievous." No, for they do but lay restraints on those tempers and passions, the indulgence of which makes us miserable; and they only require the fulfilment of those duties, in the exercise of which true happiness consists. It is far from being the ease (as many suppose) that the only advantage of wearing this yoke, is its being the condition of our future safety; for it is the pleasantest companion we can have in our pilgrimage; nor is there any burden so light as that which those carry who are travelling to heaven. * * * The Saviour says, "Seek first the kingdom of God and his righteousness, and all other things shall be added unto you;" and he adds that, "they who resign all for him shall receive manifold more in this present life." And how strikingly do we sometimes see this promise fulfilled. Persons who have made an early and complete surrender of their bodies and spirits to the Lord, are not infrequently distinguished by his providential favors from those who have shrunk from the sacrifice. And what is the sacrifice? Not the common comforts of life; not the endearing relations of society; not the

enjoyments of rational intercourse; not the pleasures of taste or the pursuits of knowledge. No surrender of these, wisely and moderately used, is now generally required. For these are not the days in which the disciples of the Lord are honored with such high tests of their fidelity and love as distinguished Christians of some other times. With respect to all these lawful comforts, the wise and merciful commands of our Saviour impose those restraints only which are necessary for the true enjoyment of them; which are essential to our welfare, and to all that is amiable, sterling and dignified in the character.—*Jane Taylor.*

Decay and Preservation of Building Stone.—There is scarcely any building stone that, in the course of time, will not undergo a change on its surface, and become deteriorated by the action of the elements. In a climate where there is much moisture and frost, this will be more rapid than where these two powerful agents of destruction are scarce or totally absent. The obelisk of Luxor, a shaft of granite which the first Napoleon transported from Egypt, where it had stood for more than forty centuries without being perceptibly affected, and which in the beginning of this century was erected in Paris, has suffered more in the last forty years than in the previous 4,000 in Egypt. It is now full of small cracks, and blanched, and evidently will crumble into fragments before four centuries have passed. If this is the case in the comparatively mild climate of France, we may easily anticipate what will be the fate of the buildings in the more rigorous climate of the greater portion of the United States, where the rapid succession of dryness and excessive moisture, tropical summer heat and severe winter frost, acts so very severely on all kinds of building material.

Granite in a moist climate becomes the seat of minute cryptogamic plants, commonly called mould, which aid powerfully in its destruction. The rapidity of its deterioration depends greatly on the quality of the stone, and chiefly on the manner in which the three constituents are intermixed. As well known, granite consists of a mixture of three substances, quartz, mica and feldspar, which are easily recognized in every sample: the quartz being the most resistant and hardest, must be prominent, and be the groundwork which combines the other two; the mica, which shows itself as small spangles, must be so united as not to be easily detached; and the feldspar, which by itself cannot well resist atmospheric influences, but changes into clay, serves chiefly to temper the quartz which alone would be too hard for profitable working into the required shapes.—*Manufacturer and Builder.*

Selected.

It is not water-baptism nor any kind of rituals whatsoever, which renders any man a Christian in our Saviour's account; but, obedience to the operation of his Holy Spirit which humbly the heart, purifieth the soul, and baptiseth it measurably into the Divine nature. But mortification of self being irksome and highly disagreeable to the flesh, too many are rather willing to content themselves with assuming the name of Christians under the outward sign, than to endure the pain of crossing their carnal propensities, in order to put on Christ, and become Christians indeed.

"A Visit to my Father Land."

For "The Friend."

Being notes of a journey to Syria and Palestine, by R. H. Herschel, and published by Henry Longstreth, is the title of a small volume that has recently fallen under the writer's notice, though issued from the press some years since.

There is no account of the author prefixed to the work, but he is known to be a converted Jew, and a clergyman of some protestant persuasion of England.

His description of Gethsemane, with some reflections thereon, are submitted for insertion in "The Friend," if thought suitable.

"Jesus went forth with his disciples over the brook Cedron where was a garden; and Judas knew the place, for Jesus oftentimes resorted thither with his disciples." The brook Cedron or Kidron is now only a dry channel, through which no stream flows except during the heavy rains of winter; but on crossing it you near the north-east corner of the city, you come to a plot of ground enclosed with a stone wall, which has long been pointed out as the garden of Gethsemane; and as the situation corresponds to the place described in the gospel narrative, being near the mount of Olives, there is little reason to doubt that in or near this spot the mysterious agony of our blessed Lord, when he 'offered up prayers and supplications with strong crying and tears unto Him that was able to save him from death, took place. In this enclosure are eight very old olive trees. I felt this a solemn spot; it was impossible to visit it for the first time at least, without a lively recollection of Him who 'poured out his soul unto death.' I felt how natural to the human mind is the worship of the visible,—the love of relics. I could not resist pulling many twigs of those ancient Olive Trees. It is easy to understand how, from the time of Peter unto the present day, men should be disposed to say, when deeply imbrued in a particular spot, 'let us build a tabernacle here;' but even if experience had not shown the futility of such attempts to perpetuate the impression, I believe the principle is in itself wrong, as tending to encourage a low estimate of the degree in which God's presence may be now enjoyed. If we really believe that where two or three are gathered together in Christ's name, He is there in the midst of them, actually, though invisibly present, we ought to feel that to us, the place where he is now present in spirit, is more holy, than the place where he was in person many hundred years ago; and thus the upper room, the open field, or our own private chamber, where God condescends to meet with us, should be to us 'none other than the house of God, the gate of heaven.' I firmly believe that if we seek to affect the mind by the aid of architecture, painting, or music, the impression produced by these adjuncts, is just so much subtracted from the worship of the unseen Jehovah. If the outward eye is taken up with material splendor, or forms of external beauty, the mind's eye sees but little of 'Him who is invisible;' the ear that is entranced with the melody of sweet sounds, listens not to the 'still small voice,' by which the Lord makes his presence known."

A good name is rather to be chosen than great riches, and loving favor rather than silver and gold.

Intelligence of Bees.—The wonderful economy and management of the hive, has excited astonishment in all ages. When exceptions and troubles arise, bees sometimes also manifest a degree of ingenuity in meeting them, which was not to be expected in insect.

When the elder, states that in 1806, the death's-head moth abounded, and that great quantities of honey they entered the hives, and brood of the combs with their great bodies, made times larger than that of a bee. The bees were alarmed, having never before been obliged to defend themselves from such an enemy they however at length employed the following device, which succeeded. A thick bark of wax was raised at the entrance of the hives in the neighborhood, with small floors, only allowing one bee to pass at a time. The greedy moths, deprived of offensive weapons, flew fluttering against the obstacle but could not enter. After two or three days the enemy returned in greater force, and immediately the bees shut the openings of the hives as before.

Maurice Girard who, says Menault, has written an excellent book on the metamorphoses of insects, mentions several examples of the strong memory of bees. They recognize their hives, he says, in the midst of a crowd of others; if a field is covered with flowers which they like, they return the year after to the same place, even though the culture is quite changed.

A wandering swarm had fixed itself on the beams of a roof, and had there begun to build their golden combs, when the householder then into a hive. The place first chosen pleased the bees, for during eight years the swarms from this hive sent some explorers to the spot. The memory of the locality was not only preserved in the little nation, but transmitted to several generations of descendants.

Every truly convinced Friend will feel concerned that the pure principles of the gospel as held by our religious Society, may be acknowledged and lived up to by all other professors; but the light of Christ in his heart which has brought him to understand and embrace those principles, will restrain him from uniting with anything or with any other whatever may be the professed object in view where these principles, or the testimony whereby out of them, will be compromised or obscured. Unless under a clear sense of religious duty, he will feel that he may not be self, nor encourage his fellow members, to enter into association with others for religious purposes, where the temptation is strong to comply with forms of worship, or mode of action, consonant with those associates, inconsistent with a faithful support of doctrines and practices.

On National Debts.—The national debt of England began to assume large proportions at the time of the Revolution in 1688, when William III, introduced on a large scale an expedient for paying the current expenses of the nation. In 1763 it was £138,000,000. The war with America raised it to £249,000,000, and the French war about the beginning of the present century to £861,000,000 amount has been reduced to £749,000,000 in 1870. With the interval of the Crimean a steady reduction went on for many years.

raging about £2,500,000 annually, but the point by which it is diminished in times of peace bears but a small proportion to the ratio with which it is increased in time of

the French debt stood at £245,000,000, at commencement of the Empire in 1852, and it had risen to £518,000,000. Under second Empire the increase was £15,000,000 a year, and there had never been a period of uninterrupted deficits. Her debt in 1869 was £300,000,000. Russia had run most lessly and rapidly into debt. The amount £300,000,000. The debt of Spain was £700,000,000. Italy had gone into debt in most headlong manner, showing an average increase since 1861 of £19,000,000 per m. Prussia's debt was the least of all the European nations. North Germany had now £1,016,000,000 and South Germany 900,000,000, or £15,000,000 for all Germany, adding £15,000,000 on account of the present war, and her costs in the present war are to be paid by France. The Dutch debt 1869 was £80,000,000, having been reduced many years at the rate of £1,000,000 per m. On the whole while the commercial tries had steadily reduced their debts on commercial had enormously increased. — *Report British Association, 1870.*

Selected for "The Friend."

every parent performing his or her duty, giving a right qualification to impart to children such religious instruction as is adapted to their respective ages and s, enforcing it by the powerful influence consistent example, there would be no cement to send their beloved off-pring to schools set up for the formal study and explanation of the scriptures. Such schools, both for our own members and others, are now in many places, but we believe their tendency is to foster unprofitable activity, and dependence on critical investigation into divine truths which can only be derived spiritually, and thus obstruct, in devoted minds, a solid growth in the truth, by substituting a literal knowledge of scriptures for an inward growth in grace, clinging in them with others, whose religious feelings and feelings are very different from our Friends, can hardly fail to betray sentiments and practices altogether inconsistent with our religious principles, and we believe, has already often been exposed.

workers on an English railway lately a thrush's nest under a rail, with the peacefully sitting on four eggs, undisturbed by the thundering of passing trains. The strongest man as well as the weakest may learn a lesson from the little thrush. The nest was her strong tower. It was shaven every hour, while shrill whistles sounded, clattering cars rolled over it, but she had no fear. Most who dwell in the secret place of the Most High, rest under the shadow of the rock, and fear no evil, even when the tempest, and the foundations of the earth are shaken.

disposed to think, that it is with many as it is with many bodies amongst human beings; and, that just as some of them are in their physical nature, so liable to in-

flammatory disorders, that the least excess in diet throws them into fever; or exposure to the weather into a hazard of catching cold, so, in some minds, there is such a tendency to inflammatory action on the emotional side of their being, that they are only safe, as the physically feeble people only are safe, by guarding themselves on every side against such things as disturb the low, simple, and uniform method by which they are obliged to manage themselves in order to maintain their health.

THE FRIEND.

SEVENTH MONTH 29, 1871.

In the present day of shaking and instability among the professors of the name of Christ, we have abundant evidence that no safe dependence can be placed on man, whatever his station or intellectual endowments and acquisitions may be, no certainty arrived at even in his profession of the truths of the gospel, unless he has experienced their reality through obedience to the revelation of the Holy Spirit in his heart, and is enabled by the same Spirit to abide therein. It is one thing to have the understanding convinced of those truths by accepting the premises and reasoning according to the rules of testimony, but it is altogether a different thing to have the truths themselves, brought home to the soul by the immediate teaching and convincing power of their great Author, heard and known in the silence of the flesh. The testimony of Christ's apostles recorded in the Holy Scriptures is full and strong, and may meet the demands of reason, and produce a belief that satisfies the intellect; but when He by His Spirit speaks in the soul, and grants living faith in His word, it not only carries conviction, but penetrates the whole nature. Thus it is that Christ manifested within, becomes the certain hope of glory, through the consciousness of His presence and power, and the sensible participation of the manifold riches of His grace. Those who have been thus settled in a knowledge of the truth, as they know it to be in Jesus, according to the measure that has been revealed, are not moved by the changeableness or the erroneous belief of others, but are kept steadily to their divine Master by the word of His grace, and in unity with his servants, in their testimony to the truth, and against the spirit and the religion of the world; and though they may be surrounded with darkness, their path is as a steady light, shining more and more unto the perfect day.

Well is it for us, a gainsaying and backsliding people, that some such are preserved among us; men and women, who have long been learners in the school of Christ, and who having been made willing to walk in his light, know from experience that the doctrines of Holy Scripture, as set forth by R. Barclay, and held by the Society for more than two hundred years, are not cunningly devised fables, but the truths of the new dispensation, which will never be changed. "I will leave in the midst of thee an afflicted and poor people, and they shall trust in the name of the Lord."

Great is the responsibility of those who occupy, whether in their social circle only, or in the Society, a position similar to that of

those of whom the apostle speaks where he says: "Remember them which have by the word of God. Whose faith follow, considering the end of their conversation; Jesus Christ the same yesterday, to-day and forever." How instrumental may such be to extend the Redeemer's kingdom, by strengthening and encouraging others, especially the young in years, to enter the strait gate, and walk in the narrow way; to follow them as they follow Christ, and thus become acquainted with the footsteps of his flock. Their conduct and conversation should be such as are calculated to assure the troubled heart of the trembling believer; to fortify the wavering resolution, and to confirm the conflicting spirit, as yet not fully given up to yield implicit obedience to the convictions of the unerring monitor within.

On the other hand, what evil may not result to those who are looking to their elders for instruction and example, and are induced to follow them, if they are not keeping the true faith, or not living up to the requisitions and injunctions of the saving gospel of Jesus. The critical, though not always discriminating observation of the young and inexperienced is upon them, and if they see any thing like laxity of principle, latitudinarianism of doctrine, or want of self-denial in practice, they may be led to conclude that religion is very much a matter of theory, and need not be allowed to control motives, actions and conversation. More especially may the evil results be incalculable, should any thing in the teaching or example of such, wound the sensitive feelings of the newly quickened or convinced, or distract their minds with doubts and fears, so as to deter them from striving to walk in the narrow way, or leading them to suppose there is no defined meaning in the doctrine of self-denial and bearing the daily cross; or to think that Jesus Christ and his religion may not be the same yesterday, to-day and forever. It is not only possible, but we believe such sad events have occurred, as that the unsound or repulsive remarks, or the unguarded actions of some who, from their position in religious society ought to have been wise in things pertaining to the kingdom of heaven, have so far chilled the first warm feelings of the soul longing to escape from the burden of sin, as to induce it to doubt the worth of its heavenly awakening, and to question the origin of the tender drawings of its Heavenly Father's love; thus turning it back dissatisfied, if not with disgust, and causing it, by disobedience or indifference, to lose what would have proved as the dew of its youth in spiritual things.

The religion of Christ, the religion which Friends profess, is intended to bring every one to the enjoyment of that heavenly peace which accompanies keeping the two commandments on which hang all the law and the prophets. It is essentially the religion of love, and its conquest of spiritual ignorance and hate will be by the disarming and softening influence of the Spirit of the Lamb. Once this love reigned preëminently throughout the whole Society, cementing it together as individual members and as a body, and others seeing in its fruits the evidence of discipleship with Christ, were drawn to unite with it, in that fellowship which is with the Father and with his Son Jesus Christ. Now, alas! differences in religious views and belief, have

broken up its former unity in faith and practice, and it is as a house divided against itself. Its organization has been preserved without the outward helps and human contrivances which have been found necessary for the support of other fabrics, not recognizing the spiritual principle that lays at the foundation of its system. But our Saviour has declared that a house divided against itself cannot stand, and unless there is a more thorough and wide-spread submission to his baptism and government, a more general equipment with his armor, a more constant use of those weapons which are "not carnal, but mighty through God to the pulling down of strong-holds, casting down imaginations and every thing that exalteth itself against the knowledge of God," this declaration may be fulfilled it. Addition of numbers who have never been truly convinced of the principles of Truth as held by Friends, is only the accumulation of weakness and sources of trouble. Re-edification as a spiritual house on the foundation of many generations, can be known only by the same implicit reliance on the great Master Builder, which marked the actions and teachings of our worthy predecessors; by being clothed with the same unfeigned love, the same willingness to make self of no reputation, the same renunciation of the world and its spirit, and dedication to the self-denying religion of the cross.

A firm trust in the overruling providence, favor and assistance of their Almighty Father, will bring to those thus faithful, patience, hope, and resignation to bear the trials they cannot escape. Their purified spirits will be filled with gratitude and reverent thankfulness, under the sense that it is through his abounding mercy they are made partakers of the blessings of life; and watching unto prayer amid discouragement and suffering, will prevent their trials from being embittered by murmuring and discontent. May the Lord increase the number of such dedicated servants, and hasten the day when they may stand between the living and the dead, and stay the plague!

SUMMARY OF EVENTS.

FOREIGN.—There was an exciting debate in the French Assembly on the 22d inst., upon the subject of a resolution of Bismarck's in regard to temporal power of the Pope. Thiers, who was the chief speaker, declared unequivocally that he would in any way compromise the policy of the country, but would do his best to secure the Pope's independence. He said it was impossible to adopt a course which would lead to war. The same policy, he said, would be to re-organize treaties and no steps should be taken which would even tend to alienate Italy. Gambetta followed in a speech approving the sentiments of Thiers. The petition was then referred to the Minister of Foreign Affairs.

The French have completed the payment of the first instalment of the war indemnity, and the German troops are now evacuating the departments of the Eure, Somme and Seine Inférieure, and will return at once to Germany. The French troops have re-occupied Amiens.

The municipal elections in Paris resulted in the choice of six Republican conservatives and forty-nine moderate Republicans. The vote cast was very small. The Communists convicted by military commissions at Marseilles, have been sentenced to various terms of imprisonment. It is probable the sentence of death imposed upon the insurgent generals will be commuted to exile, transportation or imprisonment for life. It is reported that Washburne, the American Minister, has assured the French Government that no person convicted of criminal acts in Paris against the National Government during the reign of the Commune, will be permitted to reside in the United States.

The French budget of 1871 is reduced 124,000,000

francs, though the appropriations for the war department are unaltered.

The British Ministry have been endeavoring to effect the abolition of the old custom of permitting officers to purchase commissions in the army, a reform which they considered absolutely essential to the efficiency and proper re-organization of the service. After a long contest the bill for that object has been defeated. It is to be feared that the same will appear to make but little progress in the House of Lords. While the matter was in this position the Queen, by the advice of her ministers, decided to solve the purchase problem by cancelling the royal warrant legalizing the purchase of commissions. Gladstone, in announcing this fact to the House of Commons, declared that the House of Lords, though impugning the government plan for its abolition, had failed to sustain the purchase system, and hence the ministers had advised the action which effectually disposed of the question, in accordance with the manifest will of the country. This bold measure seems to have taken parliament and the nation by surprise. It is strongly condemned as revolutionary and unconstitutional by the London *Times* and other papers, and as warmly commended by others. If this course, say the conservatives, can be taken once, it can be taken again, and the present war, which the House of Commons has accepted before the intervention of the royal prerogative on the side of the Commons.

The weather throughout England has been fair and favorable to the growing crops.

London, 7th mo. 22d.—Consols, 93½. U. S. Bonds, 117½. Foreign Exchange, 109½. 91 ditto, 105. 91 ditto, Liverpool.—The cotton market firm. Sales of the day, 18,000 bales. Sales at sea, nearly due from New Orleans, have been made at 97-104, for middling.

A deputation of German, Dutch and Austrian Banks have sailed from Europe to the United States for the purpose of entering into an arrangement for the re-organization of the work, and financial prospects of the Northern Pacific Railroad.

A new Spanish Ministry has been formed, consisting of Serrano, President of the Council and Minister of War; Topete, Foreign Affairs; Interior, Sagasta; Justice, Pizarro; Agriculture, Cortes; War, Castelar; Education, Malcampo; Colonies, Ayala. Serrano has proposed to the king a decree outlawing members of the International Society in Spain. He recommends a rigorous policy on all questions of public order. The Cortes is engaged in considering the subject of trial by jury in questions committed by members of the press.

The upper Chamber of the Parliament of the Netherlands, by a vote of 16 to 15, postponed indefinitely the further consideration of the treaty for the cession of the island of New Guinea to England.

The Swiss Council of State recommends that the Federal Government in reference to the new agreement of the powers to a definition of the rights and obligations of neutrals, binding on all.

Advices from Athens announce a terrible disaster on board of a Greek man-of-war. The magazine of the steamer *Europa* exploded on the 3d inst. in the Greek harbor of Anapargos, and forty persons of the crew were killed, and nearly all the rest were more or less injured, while the vessel itself was almost entirely destroyed.

Dispatches from the east represent that the cholera prevails alarmingly in Persia, and that the ravages caused by the disease are dreadful. In some parts of Persia a frightful famine exists, and a great starvation, causing the death of many of the people from starvation. The yellow fever had entirely disappeared from Buenos Ayres on the 25th ult.

The coasts of Newfoundland and Labrador have been visited by heavy storms. Sir Wm. Logan and a geological surveying party had been cut off by the flooding of the roads, and they were believed to be safe. The effect of the storm on the coast was terrible. Three hundred and twenty-five fishing smacks, twenty-three dwelling houses, over forty stores, and \$1,500,000 worth of property were destroyed, and ninety-three lives lost.

Advices from Algeria indicate that the insurrection against the French rule had been nearly crushed out.

The Cuban revolt has not been entirely suppressed, and the insurgents from time to time are encouraged by the landing of small parties, which have come to their aid.

UNITED STATES.—Miscellaneous.—During the quarter ending 6th mo. 30th, 1871, the total number of passengers who arrived at the port of New York from foreign countries was 107,114, of whom 64,213 were males, and 42,901 females. Of these 29,259 were from Great Britain; 26,449 from Ireland; Germany, 30,814; Austria, 1,987; Norway, 1,320; Denmark, 1,320; Prussia, 1,143; Italy, 8,671; other parts of Europe 2,038.

The total circulation of the national banks is stated to be \$18,986,990.

There were 856 deaths in New York city in the week ending on the 15th inst., and 346 in Brooklyn.

The interments in Philadelphia in the week end on the 22d inst., were 421, including 242 children under two years of age. There were 98 deaths of cholera infans and 25 of marasmus; there were 15 deaths of Asiatic cholera.

On the 20th inst., at one o'clock A. M., an earthquake was felt an Boston, Portland, Portsmouth, N. H., and many other places in that part of the country. It passed from north to south, and was accompanied by heavy rumbling noise, especially at Concord, N. H., where the motion was sufficient to ring bells.

Professor Hitchcock and party, now making a geological survey of New Hampshire, have discovered beautiful lake, 200 feet below the summit of Haystack Mountain, and 3,787 feet above the sea level. No mention is made of any chart, and it is bounded in such thick foliage and craggy bluffs, the Professor thinks it has never before been visited by white men.

The Markets, &c.—The following were the quotations on the 22d inst. New York.—American gold, 111½. U. S. notes, 188½, 116½; ditto, 5-20's, 186½, 111½; ditto, 100's, 9 per cent, 112½. Superior flour, \$4 25; 11½; finer brands, \$5.25 to 5.25. No. 2 Chicago spring wheat, \$1.36; amber western, \$1.40 a \$1. white Michigan, \$1.60. New Ohio oats, 65 a 66 Western mixed corn, 68 cts.; yellow, 74 cts.; white, 84 cts. Carolina rice, 61 a 9 cts.; India, 61 a 73 cts. Cuba sugar, 9 per cent, 31½. Sugar, 30 cts. Philadelphia.—Cotton, 21 a 21½ cts. for uplands and No. Orleans. New Orleans sugar, 93 a 104 cts. Timot seed, \$4.50 a 5. Superfine flour, 4.75 a 5; 6 brands, \$5.25 a 5.75. Old western red wheat, \$1.51-42. Rye, 88 cts. Yellow corn, 69 a 70 cts. 61 a 67 cts. Corn, 57 a 60 cts. Corn, 57 a 60 cts. 40 a 45 cts. Earley, 80 a 90 cts. Lard, 100. Baltimore.—Choice white wheat, \$1.50 a \$1.60; good prime, 1.35 a 1.45; good to prime red, 1.40 a 1.51 Ohio and Indiana, \$1.30 a \$1.40. White corn, 80 cts.; yellow, 72 a 73 cts. Oats, 37 a 41 cts. St. Louis Cotton, 19½ cts. No. 2 red winter wheat, \$1.25. Oats 45 a 46 cts. New oats, 36 a 37 cts. Rye, 58 cts. Ohio—No. 2 spring wheat, \$1.12. No. 2 corn, 48½ a 49 Oats, 43 a 43½ cts. Rye, 59 cts. No. 2 rye, 71 cts.

WANTED,

A Teacher for the Classical Department of the B School at Westtown: to commence his duties at opening of the next Session, on the first of the Eleventh month. Application to be made to Joseph Passmore, Goshen, Chester Co., or Samuel Morris, Olney, Philadelphia, or Charles Evans, M. D., 702 Race street.

TEACHER WANTED,

A well qualified teacher is wanted to take charge a small Friends' School. Application may be made to Henry Mendehowellville P. O., or Thomas Smedley, Litua P. Delaware Co., Pa.

FRIENDS' BOARDING SCHOOL FOR INDIVIDUAL CHILDREN, TUNESSA, NEW YORK.

A suitable Friend and his wife are wanted to charge of this Institution, and manage the Farm connected with it. Application may be made to Ebenezer Worth, Maxwellton, Chester Co., or Thomas Wistar, Fox Chase P. O., Philadelphia. Samuel Morris, Olney P. O., do. Joseph Scattergood, 413 Spruce Street, do.

FRIENDS' ASYLUM FOR THE INSANE Near Philadelphia, (Trenton, N. J. W.) Philadelphia Friends' Asylum and Superintendent—JOSIEFA H. WORTINGTON, M. D.

Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

MARRIED, at Friends' Meeting-house, Spring Linn Co., Iowa, 6th mo. 13th, 1871, by J. H. BARNUM, son of Jonathan and Rebecca Cowley, of Hickory Gap Cedar Co., Iowa, to MARY, daughter of Parker & Rebecca Askew, of the former place.

WILLIAM H. PILE, PRINTER,
No. 422 Walnut Street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XLIV.

SEVENTH-DAY, EIGHTH MONTH 5, 1871.

NO. 50.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Age, when paid quarterly in advance, five cents.

Galileo.

For "The Friend."

(Continued from page 386.)

dispersed with the history of Galileo's scientific discoveries and eventful career, are very interesting incidents which throw light upon the customs and domestic life of that time and country.

By the death of his father in 1591 Galileo became the head of his family. This position, always attaching a grave responsibility to its possessor, was at the time we are speaking of, and in Galileo's case in particular, fraught with care and heavy anxiety. He not only was expected to provide money for the household requirements of the family, but it was his duty to see to his brother's settlement in life. A still more sacred duty was that of finding a suitable husband for his sister, a girl's marrying was to be left to chance, a doctrine which would have been condemned in those days at least as heretical and dangerous as that of the earth's motion. Such a spectacle as a house full of daughters, all grown up, the comfort of a mother's old age, never seen. The girl's education finished, paths were open, not for her to choose for, but to be chosen for her. One led to the cloister, the other to the house of a husband.

The cloister was the refuge of such as were pressed not dowries equal to the requirements of their birth."

Two of his daughters were placed, when young, at the convent St. Matthew, at Padua, the eldest being then but thirteen years of age. This daughter afterward took the name of Sister Maria Celeste. We know of her from that time it is told in letters to her father. His letters to her though we know that she kept them carefully, and was in the habit of perusing them during such leisure moments as her father in the pharmacy and still-room left to her have disappeared; nor was a trace of them to be found when the search for his written correspondence brought to light all his papers now carefully preserved in the Pittagoriana. "These letters, one hundred and fifty in number, bear evidence throughout of a clear sense and sober judgment, joined to a noble piety, rare, perhaps, at any time, but very rarely rare in those days." This daughter

died in 1633, when about 33 years of age, and her father on writing to a friend of her death says, "she was a woman of exquisite mind, singular goodness, and most tenderly attached to me; * * * she died after six days' illness, leaving me in deep affliction."

The following extracts from letters written in 1630, when the plague had been raging for some time in Florence, and domestic trouble was adding to the distress of her father, show her religious sensibility and affectionate feeling.

"I entreat you to omit no possible precaution against the present danger. I believe that you have by you all the remedies and preventives which are required, so I will not repeat. Yet I would entreat you, with all due reverence and filial confidence, to procure one more remedy, the best of all, to wit, the grace of God, by means of true contrition and penitence. This is without doubt the most efficacious medicine both for soul and body. For if, in order to avoid this sickness, it is necessary to be always of good cheer, what greater joy can we have in this world than the possession of a good and serene conscience?"

"It is certain that once having this treasure we shall fear neither danger nor death. And since the Lord sees fit to chastise us with these plagues, let us by his help stand prepared to receive the stroke from his Almighty hand, who, having given us life, may take it from us when and how it pleases Him.

"I pray you not to take the knife of these crosses and disturbances by the wrong end, so that you may not offend because of them. But rather take it by the haft, and use it to cut through all the imperfections which you may discover in yourself, that being thus freed from all impediments, you may in like manner, as with a lynx-like eye you have penetrated the heavens, so, penetrating the things of this lower world you may come to know the vanity and fallacy of all earthly things. . . . For neither the love of children, nor pleasures, nor honor, nor riches, can give us true happiness, seeing that all these things are by nature too unstable. Only in our gracious God can we find true rest. O, what rejoicing will be ours, when the thin veil that enfolds us is rent, and we are able to see the Most High face to face!"

On his return from Rome after his unsuccessful attempt to prevent the rejection of the Copernican theory by the Roman Court, Galileo resumed those observations upon the heavenly bodies which had at that time made his name prominent in the literary and scientific world. The appearance of three great comets in the autumn of 1618, attracted his attention as well as the other astronomers of Europe, and several of his reflections upon these phenomena were printed. In these remarks some opinions of the Jesuit Grassi, the mathematician of the Roman College, were contradicted, and a controversy was thus

commenced, which ended in directing against Galileo the ill-will and open hostility of the powerful order of the Jesuits, who declared that the arguments of Grassi were unanswerable. This took place several years after the decree of Pius V. concerning those matters had been promulgated, and had much to do with the subsequent rigorous treatment which he received from the authorities at Rome.

"The foundation of the great work of Galileo's life, 'The Dialogue on the Two Great Systems,' had long been laid. But, mindful of the decree of 1616, he took measures to discover the Pope's opinion by writing an essay or pamphlet in the form of a letter of reply to a certain Ingoli, who had some years before written a treatise on the Copernican system."

This was in 1624. The Cardinal Berberini, who at that time had been raised to the pontifical chair under the title of Urban VIII., had been a personal friend of Galileo, and disposed at least to tolerate his astronomical theories. Cardinal Zoller informed Galileo that he had represented to the Pope "that all the heretics considered the truth of the Copernican theory to be beyond doubt, and that therefore it would be necessary to be extremely circumspect in coming to any resolution," to which the Pope had replied that the Church had not condemned it, nor was it to be condemned as heretical, but only as rash, adding, that there was no fear of any one undertaking to prove that it must necessarily be true."

Early in the year 1630, the great work was completed in which Galileo hoped to be able to propound, in a manner likely to excite little opposition, the truths in relation to the earth's motion, which lie at the basis of modern astronomical science. After a considerable delay the consent of the requisite authorities was obtained for its publication, and it appeared in print early in 1632.

"In the various hindrances which had met its author at every step ere the final authorization of the book was granted, there had been a slight foretaste of the persecution which was to be his lot for the remainder of his days."

It purports to be a dialogue between three characters on the merits of the Ptolemaic and Copernican systems, and bore this title: "Dialogue by Galileo Galilei, Mathematician Extraordinary of the University of Pisa, and Principal Mathematician and Philosopher of the Most Serene Grand Duke of Tuscany, in which, in a conference lasting four days, are discussed the two principal systems of the world, proposing indifferently the philosophical arguments on each side."

The preface was in substance the work of Ricciardi and the Pope, by whom it was imposed on Galileo. Had he not accepted it, he would never have obtained the Imprimatur.

"Of all Galileo's friends and followers, only one was far-sighted enough to see how fraught

with evil was this great work to their master. Blinded by admiration, they had, with one solitary exception, urged him on, forgetful of possible consequences."

A few months after the book had passed into circulation, a stringent order came suddenly from Rome to sequester every copy in the booksellers' shops throughout Italy: Galileo's publisher received an injunction to suspend its publication, and forward to Rome all the copies he might have in his possession.

This summary proceeding on the part of the Inquisition appears to have been due to the influence of the Jesuits, who instilled into the Pope's mind the idea that Galileo had meant to hold him up to ridicule in the person of one of the characters in the Dialogue. A congregation was convened by the Pope's order to examine the suspected book, which resulted in a summons to Galileo to appear before the Inquisition in Rome. This order was received by him in the 10th month 1632, when he was in his sixty-ninth year. On account of his age and physical infirmity, he was allowed a considerable time to perform the journey, and he arrived in Rome early in the following year. Here he was received with great respect by his friend Niccolini, the ambassador of the Grand Duke of Tuscany; whose residence continued to be his home until he was removed to a place of close confinement in one of the rooms of the prison of the Inquisition.

"Tormented with the gout, and deprived of the society of the ambassador and his gracious and sympathizing wife, Galileo seems to have borne his imprisonment with a degree of impatience at variance with his natural serenity. We must bear in mind the ever-present fear that each forthcoming examination might end in the application of the torture. Apart from this he had no cause for complaint. Since the establishment of the tribunal in 1215, no prisoner had ever been treated with the leniency accorded to Galileo, the Grand Duke's servant. Princes, prelates, and noblemen, all had been consigned to the secret dungeons from the very commencement of their trial. Had Galileo been a scion of a royal house, he could scarcely have met with more consideration, or have been treated with more distinction. Yet he ceased not to complain, of and to entreat greater expedition in the conduct of his case by, a body whose power of prostration was scarcely equalled by its cold ferocity."

(To be continued.)

Baptism and the Supper.

In a little work published in London in 1865, and entitled "The Friend in his Family," is contained a well-prepared statement of the views of "Friends" in reference to Baptism and what is called "The Lord's Supper," which it is hoped may tend to settle the faith and remove the doubts, if such should exist in the minds of any of the readers of "The Friend," as to the correctness of the doctrines ever held by our religious Society on these important subjects.

"There are two subjects upon which I wish to say a few words, and respecting which I apprehend a few will suffice, because you have access to so many valuable dissertations on those subjects, as well as to some smaller works and tracts, in which the views of Friends are briefly epitomised. First, as regards Christian

Baptism. We have already seen in the discussion of more than one subject, that the religion of Christ is not formal, ceremonial and typical, but spiritual; the Realization of that, which the ceremonies and types of the law Foreshadowed. When Christ had suffered and finished the work which was given Him of the Father, the types were exchanged for the Antitype, the figures, for the thing figured, the shadows for the Substance; the rites and sacrifices of the law, 'which stood only in meats and drinks, and divers washings, and carnal ordinances, imposed until the time of reformation,' which, says the Apostle, 'was a figure for the time then present,' were abolished by 'the blood of Christ, who, through the Eternal Spirit offered Himself, without spot to God, to purge the conscience from dead works';—"which the law could not do in that it was weak;"—"for the law made nothing perfect, but the bringing in of a better hope did."

"But it may be objected that water baptism is not a remnant of Jewish law. I believe it had its origin in Jewish law; and it cannot be denied, that at least it was of a similar character, elementary, shadowy, typical. But water baptism undoubtedly was a part, both before and after the coming of Christ, of the customary Jewish ritual. Nothing could be plainer, than that according to the ceremonial law of the Jews, there could be no removal of uncleanness, no purification, without ablution in water. The 'divers washings,' were many of them, effected by dipping or immersion, and are in the Greek described as baptisms. And the Jews baptised their proselytes; and when a proselyte was baptised, it was usually extended to his family or household. Nor is there in the Scripture narrative, a word from which it could appear, that the Baptism of John was anything novel or strange. It had features peculiar to itself, but in the mode of its administration, it bore close resemblance to some of the 'divers washings' to which they were accustomed, so that 'there arose a question between some of John's disciples and the Jews,' not about the novelty of his proceedings, but about that which they immediately recognised in it, 'about purifying.' Certain it is, that in its character it was like unto theirs; not instrumental, but typical, of a change from a state of sin and uncleanness, to one of purity. The Jews understood what it was 'to be born of water;' though they had yet to learn what that was which it typified, the 'being born of the Spirit.'

"When, however, in the early Christian church that was learnt, and not the sign, but the thing signified known, and the thing typified experienced, then the imposing upon Christians the ceremony and the sign, is spoken of as a 'turning again to the weak and begarly elements,' as being no part of the real and spiritual gospel of Christ, who, 'abolished the law of commandments contained in ordinances;' and therefore, asks the Apostle, in referring to this same subject in another Epistle, 'If ye be dead with Christ, from the rudiments of the world, why, as though living in the world, are ye subject to ordinances, after the commandments and doctrines of men?'"

"We cannot think that there is even an allusion to elementary water, in many of those passages which some think countenance water baptism; and in others where an allusion is made, we believe, that it is wholly figurative.

In such texts, as 'Except a man be born of water, and of the Spirit;'—"But ye are washed but ye are sanctified, but ye are justified the name of the Lord Jesus, and by the Spirit of our God;"—"By the washing of regeneration, and the renewing of the Holy Ghost, and many others which may occur to you, there is no unequal yoking of the ceremony with the spiritual, or putting new wine in old bottles; but there is an interpreting an enforcing one expression by the other. As, in the corresponding figure 'of fire,' an enlightening, cleansing, refining operation the Holy Ghost is set forth; so in this more frequent figure of water and of washing, is the purifying work of the Spirit, illustrated; and by the use of both terms, the sign and the thing signified, is the one effect the more fully represented and strengthened."

"Now let me remind you, how John the Baptist himself always spoke of his baptism not as similar to, but in contrast to, that of Christ. He indeed was sent to baptise with water, but he was to decrease; He, who forerunner John was, whose way he came to prepare, and who was to increase. 'The same is He which baptizeth with the Holy Ghost. The baptism of one was with water, elementary, external, emblematic; of the other, with the Spirit and with fire, internal, thorough, effectual. In conformity with the work which, whilst they had more immediate reference to sacrifices and burnt-offerings, is applied to the characteristics of both dispositions, 'He taketh away the first, that He may establish the second.' John also declared, 'I must increase, but I must decrease.'

"The Baptism of Christ, of which John the Baptist was a figure, and in contradistinction to which it was placed, not only by John, but by our Lord himself, 'For John truly baptised with water, but ye shall be baptised with the Holy Ghost, not many days hence;' and lest it should suggest a limit to this gracious promise, the Apostle emphatically adds, 'For I promise it unto you and to your children, and to all that are afar off, even as many as shall love our Lord our God shall call;' this Baptism of the Holy Ghost is in harmony with all we know of this dispensation of the Spirit; as was that of water with the one preceding it. The baptism which belonged to the dispensation of John, and which distinguished it from the Christian, was a Baptism of Water; the 'one baptism,' which 'now saveth,' which belongs to the Christian dispensation, and distinguished it from John's, is the Baptism of the Spirit."

"The 'One Baptism of Christ which was to increase, surely is not a modified repetition, or in its character like unto, that of John which was to decrease. Instead of being applied by man, to the body; it is applied to the soul, by the power of the Holy Ghost, and regenerates and saves. Thus saith the Apostle, 'For by one Spirit are we all baptised in one body.' The baptism which doth not save us, is not the putting away of the uncleanness of the flesh, but the answer of a good conscience toward God, by the resurrection of Jesus Christ.' 'For as many as have been baptised into Christ, have put on Christ. This can never be said of water baptism. It may be urged that our Lord Himself was baptised with water. So was He circumcised. He came 'to fulfil the law;' and submitted Himself thereto; saying, 'Suffer it to be so now; for thus it becometh us to fulfil all righteousness.' It would be more to the purpo-

ld it be shown that our Lord had Himself sused; but it is distinctly stated, that s His Himself baptised not; nor can it be wn that He ever enjoined water baptism others.

That water baptism was to some extent tised in the early Church, can be no ter of surprise, when we consider, how ched to their rites and traditions, were uly the converts, but to some extent the sties themselves, and how gradually was lded to them the spirituality of the Gospel enation; the great principle of which at God was no longer to be served by intervention of sacerdotal and typical inions, but through the mediation of the and under the influence of the Spirit, g after the Jewish ritual was abolished he death of Christ, many of His devoted ants adhered with strictness to parts of As long as they observed some of the onies of Judaism in their own person, were not prepared for a full reception of doctrine, that the ordinances and shadows a law were now to be disused, it cannot, ad, be a matter of surprise, that in the otion of converts to the new faith, they overed in the practice of baptising them water. There were, no doubt, many in which, as has been mentioned was former practice, on the reception of a olyte, they baptised him and all his house; but it must not, on the other hand, be ooked, that whilst there were these inces of those who left their Judaism or hemism for a profession of Christianity, ng that rite performed upon them, there a single instance given of the baptism ter of any person born of Christian ants.

on remember how he, who was 'not a behind the chiefest Apostles,' regarded bondage' and 'doctrine of baptisms,' and g purer and fuller views than many ad him of the excellence and spirituality e Gospel, and of his own mission in it, ed God that he, 'who took Timothy and ceised him,' had baptised only two whom mes.

ut had the practice of the Apostles been or and more uniform, their example ot not have rendered imperative, or of nent obligation, on the Church, a rite as was not enjoined by our Lord Himself, outward and ceremonial character of was contrary to the spirituality of His ing and Kingdom; and, if not of those s themselves, of the nature of those s, which His coming 'in the fulness of me' abrogated and disannulled. To e mind graciously awakened to Divine ty, to feel the operation of the Holy Spirit r hearts, and then to fall back upon ordinances,' is as practical an illustra- s the present days could supply, of that vor of which the Apostle warns us, ng begun in the Spirit, to be made per- y the flesh.' 'Stand fast, therefore, in erty wherewith Christ hath made us and be not entangled again with the of bondage.' His is the dispensation, the shadow, but of the substance; not signs, but of the Reality; not of the but of the Spirit. How widely different the dogma of those who say, that Water sm is the Door of the Church,' is the tion of our Lord, 'I am the Door: by ay man enter, he shall be saved, and

shall go in and out, and find pasture;' or from that of His Apostle, 'God hath sent forth the Spirit of His Son into your hearts, crying, "Abba, Father."' And when by the Baptism of His Spirit, you have joined the Church, and, through His infinite love and mercy in 'Christ Jesus, of whom the whole family in Heaven and earth is named,' have known the cry raised in your hearts by the Spirit of His Son, 'Abba, Father;' you will be prepared to sit at the Lord's table, and partake of His Supper.

(To be continued.)

For "The Friend."
Intelligence of Ants.
(Concluded from page 389.)

After these different observations, which give us incontestable proof of the intelligence of the ants, we will relate what we have seen with our own eyes. It was in the latter end of May, when the cockchafers, after having devoured the leaves of the trees, began to die on the roads, and became the prey of beetles and ants. I was walking with one of my friends, a lover of natural history, when we found some ants actively occupied round a wing of a cockchafer. They were pulling the wing towards a little hole, which was certainly too small to admit it. How could they manage the matter, then? They were obliged to think. The ants are never embarrassed. It is very probable, however, that they had never before encountered such an obstacle; that what they were obliged to do now was not a matter of habit. They began to direct one of the extremities of the wing towards the little gallery of their home. Three of them, judging that the thing could not go alone, went into the hole, pulling the wing underneath, while the others pushed it from above. But, vain effort! the wing would not enter. What could they do? Must they abandon such a great prize? No; the ants are as courageous as they are intelligent. Without losing confidence in their activity and their genius, they renounced their first idea. They placed the wing against one of the partitions of the opening, and went into the nest on the other side of the wing. They no doubt thought what it would be necessary to do. They then resolved, full of activity, to enlarge the gallery. Each one descended in turn, bringing up a particle of earth, which she placed at the side of the opening. They worked so well, that in less than half an hour the opening was half as large again. It was nearly three-tenths of an inch in diameter, and the wing was three-fourths pushed in. No doubt in a little time the wing will be completely in; when lo! behold another ant arrived, pulling, triumphantly and alone, another insect. Her sisters saw her, went to meet her, and dragged the insect towards the opening, where the wing of the cockchafer was still waiting. They slipped along the wing as if it were an inclined plane. Two or three descended, dragging the insect by the head. One minute afterwards it had disappeared. The ants, happy and proud of their success, returned to the wing of the cockchafer. They tried for some time to make it enter by force, but it was impossible. Then an ant took it in his mouth carried it outside the hole, and his sisters began to work again. They ran up and down the particles of earth they had taken from the partition to make the passage larger. Some of them, in a great

hurry, took the wing, and pulled it again towards them. It nearly enters, when something intervenes. The bottom of the opening was, without doubt, not quite large enough. Some did all they could to pull at the top; others push to the right, others push to the left, to make it enter more easily. It was, however, necessary to abandon this proceeding, or take away the obstacle. The ants took the wing out again, and removed all that appeared to be in their way. A third time they tried to get the wing in. The new difficulty arose—a storm which swamped the earth. I do not know if it were by chance or by calculation that the wing, which was upside down, and by this time once more over the opening, served as a shelter to the ants, who continued their work. At last, at nearly six o'clock in the evening, after working for three hours and a half with patience, intelligence, and great effort, the hole was large enough, and the wing went to the bottom of the nest. Will any one, after this, say that these insects are accustomed to such work, that they have executed it by instinct, without calculation, without reflection and without intelligence? We must have less judgment than the ant themselves to think of them in this way.

A last example will show us how much the development of a sense can aid the intelligence. The ants, we know, are guided by their touch and by their sense of smell, which is situated principally in the antennae. Stop the ants in their course, disperse them to right and left, and they seem to be embarrassed, not knowing what to do. They go back to the spot whence they started, sounding the earth with their antennae; then, when they have examined the spot, they retrace their steps, recover and pursue their road. Is it not by the fineness of their smell or the delicacy of their touch that they find the direction again? An ant one day saw on the road the leg of a gold beetle. She wished to drag it to the ant-hill, which was a difficult task, as she was alone, all the others being, doubtless, occupied at other business. The distance was not very great, it is true; it was only half a yard that she had to go; but the road was rough, difficult, covered with stones and little lumps of earth. To tell you all the troubles this little ant encountered would be impossible. The smallest projection was to her a mountain. Sometimes she went round the stones in her way, at other times she was forced to creep over them. Nevertheless, she arrived almost at the top of one of the little hillocks, when her prey slipped from her, and rolled down again; and the poor ant, was obliged to go after it. Then like a hound, she went here and there, seeming to sniff the air and feel the earth. After a little time she regained her prize. Just think of the patience and courage of these little insects. It was not until after two hours work, and over many obstacles that she arrived at the ant-hill, which was in the grass near the road. There our ant found help; many of her companions ran to her aid, and in a short time, in spite of the net work of weeds, the leg of the gold-beetle arrived entire at the ant-hill.

It is also by the contact of the antennae that the ant knows a friend from an enemy. By particular signs, understood by all the inhabitants of the same nest, they avoid mistakes. This is known by experiment. We give an example. Take away the ants from a hill,

and put them back again after a certain time into their nest. The first feeling of these emigrants in returning to the cell is that of uneasiness. They wish to escape, but flight is not easy in such a noisy crowd, which goes, comes and circulates in all parts of the ant-hill. The first workers they meet, seem to ask them for the watchword. They then touch each other's antennae, and thus exchange signs.

It is well; they understand one another. The exiles belong to that country; their agitation ceases; they penetrate with confidence into the native labyrinth, where they are received as sisters who have been believed lost. "Now let us," says Rendu, "make the reverse experiment. Introduce into the ant-hill some ants of the same species, but of another nest, and other signs than those we have mentioned will be noted. The same preliminaries are observed, but the question by means of the antennae, instead of assuring the intruders, only increases their fright and their hurry to flee. They do not belong to that nest. The hue and cry commences; the warning is given; they are furiously chased. Woe be to them if they are caught! The furious multitudes grasp the feet, the bodies and the antennae of the intruders, and drag them by force to the interior of the cavern." When by chance some ants of another tribe venture to make an unlawful incursion into the nest of others, their lives are exposed to great danger. An infuriated chase commences, they are assailed on all sides by combatants, who are reinforced at each instant. If the ants know how to defend themselves courageously against strangers, in their family, they show the most intelligent brotherly feeling. Who does not know that the ants feed one another? The worker is often too much occupied to fetch her own food. When she is hungry she tells one of her companions by striking rapidly with her antennae. The purveyor instantly approaches and puts food into the mouth of the hungry ant. The worker gives thanks, caresses the friend with her antennae, and strokes her head with the front feet. Is not this intelligence? or more, is it not family love?"

It is well known that the red ant sometimes renounces her subterranean dwelling place to live in the trunks of old trees. She there cuts her cells as the black ant would, builds her nest several stories high, which are supported sometimes by little columns, sometimes on thin partitions.

The red ant, then, remarks Rendu, cultivates two distinct professions. She raises herself, if she pleases, to the difficult art of sculpture, or descends to the modest trade of a mason; she does not think she demeans herself by changing the chisel of the artist for the trowel of the workman, when necessity enforces her to do so. This necessity, in all beings, is the most lively stimulant of intelligence.

"Whatsoever ye do in word, or in deed, do all in the name of the Lord Jesus." How totally in opposition to this language of the Apostle, is the habit of gossiping, for where is the man or woman, young or old, who in gossiping about another could say that they did it in the name of the Lord Jesus. How different is this from his own beautiful example. He sought not to expose errors in others but to draw forth the good in them.

HEAVENLY TREASURE.

Every coin of earthly treasure
We have lavished upon earth,
For our simple worldly pleasure,
May be reckoned something worth;
For the spending was not losing
Though the purchase were but small;
It has perished with the using;
We have had it—that is all!

All the gold we leave behind us
When we turn to dust again,
Though our avarice may blind us
We have gathered quite in vain:
Since we neither can direct it,
By the winds of fortune tossed,
Nor in other worlds expect it,
What we hoarded we have lost!

But each merciful oblation,
Seed of pity wisely sown—
What we give in self-negation,
We may safely call our own;
For the treasure freely given
Is the treasure that we hoard,
Since the angels keep, in heaven,
What is lent unto the Lord!

HAMPTON COURT.

The Windows of the Fountain Court
Are glittering in the morn,
But no more in the palace hall
You hear the dance and tune—
No more beyond dim corridors
Lamps spread a golden noon.

No longer from half open doors
Bursts forth a gust of song;
No longer with a roll of drums,
Sweeps by a silken throng,
With diamond stars, keen glittering,
The ribbons blue among.

No pages bearing each a torch,
Now scale the lofty stair;
No ladies trip with wealth of pearls,
Fanning their wealth of hair;
No white-capped cook, with flaming face,
Bears up the dish with care.

The swartly king with heavy brows,
Fades no more the court;
Base Rochester and Killgrew
Have long since ceased to sport;
No more fair wantons at the cards
Think the long night too short.

Silent the court, and still the hall,
Lights long ago put out,
The colors faded from the silks
That deck the walls about;
No longer at the outer gates
The noisy rabble shout.

Yet still within the fountain pool,
The gold fish steer and swim,
As when King Charles with jewelled hand
Was paddling at the brook;
At Charing-cross he's seen in bronze,
No danger more from him!

Yet still in lonely evening hours,
When the moon has long gone in,
You hear the fountain's ceaseless tears,
As for some hopeless sin;
And far without the nightingale
Of past grief warbling.

—All the Year Round.

Selected.

A sinner under conviction is in great danger of being more anxious to be comforted than to be converted. Conviction, without patient submission to the spirit of judgment and burning, may leave us midway between carelessness and conversion, as Lot's wife was left between Sodom and Zoar. If your convictions do not lead to Christ, you may become familiar with them, and their effect be lost upon you.—Conviction is not conversion.

The Art of Needle Making.

A pleasant run of about fifteen miles from Birmingham, on the Midland railway, brings us to the great centre of the English needle trade. Redditch is a fair-looking, compact, bustling, clean country town, surrounded some of the most charming scenery in Worcestershire, and presents a striking contrast to the black and busy "hardware village" we have just left behind us. Why the needle makers chose this place above all others which to settle down to the pursuit of calling, there is no evidence to show. As early as the year 1650, however, one Christopher Greening appears to have set up a needle shop at Little Crendon, a hamlet just outside Redditch, and he was followed in the course of a few years by several other members of the craft from London. In a short time, however, Crendon was abandoned, owing to the absence of waterpower, and the needle makers established themselves at Alcester, Studley and Redditch. In times still more remote the district lying between Alcester and Redditch was great industrial centre of some kind, mill-stones, longer used, still remaining to tell of a depressed and forgotten industry.

The first mills used in the needle trade were horse mills, one being established at Studley very early in the last century. These were used for scouring and pointing needles, superseding the primitive method of washing up the needles in buckram with emery dust and olive oil, and rolling them to and fro by the movement of the workman's foot. The earliest needles made in this district were "square-eyed," a shape most readily produced. It was with square-eyed needles that Mary Queen of Scots wrought those beautiful tapestries for the walls of her prison cell. After many fruitless attempts, drilled-eyed needles were successfully brought out in 1826, a two years later the burnishing machine, which gave a beautiful finish to the eye, was introduced. In this latter process, as now carried out, the needles are threaded on steel wires which have been "roughed" with a file and hardened. The ends of these wires are then attached to a steam machine by which the needles are made to revolve at an enormous speed with an oscillating motion round the wires.

Previous to the year 1840, needles were hardened in water, during which process the majority became crooked, and straightening the crooks was, in consequence, an occupation of a considerable number of workpeople. In the year mentioned, however, a Redditch manufacturer revived the practice of hardening oil, and the result was that crooked needles were the exception instead of being the rule. This so exasperated the crook straighteners that they mobbed the enterprising manufacturer out of the town, and for some time great tumult prevailed. Eventually, however, the revived process came to be generally adopted. A pointing machine is the latest invention of importance in the needle trade. This invention, Messrs. Bartlett and Woodward—two excellent authorities—thus reported a little while since.

The needle-pointing machine is an English invention, though it is not generally supposed to be so, and its forerunner, which, though not perfect, approached so nearly to perfection as to alarm the pointers, was some years ago purchased by them and broken to pieces.

ditch church green. The needle-pointing machine is as yet only partially used in this district. A grooved grindstone, revolving great speed, is employed to grind the end of each wire into the desired shape. To this the stone the wires are applied from an inclined plane, on which a number are placed side by side to the right length. By means of a disc, surrounded with caoutchouc, revolving in a direction transverse to the grindstone, a continuous supply of wires rapidly revolving in succession is supplied to the stone, the same disc causes the wires to revolve and be pointed. In Redditch and the neighborhood needle making now employs either like eight hundred workpeople, a considerable proportion of whom are females. Their earnings vary considerably, those of children ranging from 1s. 6d. to 5s.; women, 8s. 6s., and men, 12s. to 40s. per week.

The needle has to pass through seventy pairs and before it is considered to be finished ready for use; a subdivision of labor to which may be attributed the combination of excellence and cheapness in the production of articles. The variety of needles made these days is marvellous, the surgeon, tail-barnes maker, bookbinder, felt worker, maker, saddler, glover, embroiderer and sewife, each requiring needles of shapes, and lengths almost infinite. Redditch the immediate district, may be regarded the only important centre of the needle in the three kingdoms. The principle of the industry on the continent is Aix-la-Puy, but at Lyons and one or two in Normandy the common qualities are largely made.

The Chinese supply their own requirements the needle way, and it is thought that the needle is more ancient in the celestial empire in Europe. Certain it is that round-eyed needles were made in China long before the native square-eyed ones were known in England. There is nothing new under the sun.—*Mechanics' Magazine.*

For "The Friend."

Memoirs of Mildred Ratcliff.

(Continued from page 388.)

near the close of the year 1808, Mildred's heart being turned in near affection to her kind friend Ann Scott, she addressed her to her wherein she expresses her desire that they may live in that which will enable them to render thanksgiving and renown to the Almighty Preserver of his children. Him who weans the heart from earthly things, and furnishes strength and aid by things which they can live in faith upon Him in every season of extremity. He who formed the sea and the land, the bits of the earth and of the water; who sees the cattle on a thousand hills; who has power to bless and blast, can bring even the lofty mind of man into the dust, in humbly submission and childlike dependence and faith in him.

She then expresses her conviction that her dear friend is a living witness of the truth of what has been written, and if faithful to the end, "a priceless crown awaits thee after death."

On the 13th of the Second month, 1809, Mildred's mind was drawn into contemplation of the love of God to the children of men, his willingness to be found of them, if they would but draw near and seek to know

and do his will. To such as thus seek, she felt that her experience justified her in declaring that the Lord would in His goodness manifest himself by his Holy Spirit, making known his will and pleasure, and thus opening to them the way to his everlasting kingdom of rest.

Some time during the year 1809, Harrison Ratcliff removed himself and wife over the Ohio river, and settled near Hillsboro, in Highland county. There were many Friends in that neighborhood, and a meeting was established.

During the summer of the same year, Stephen Grellet, on a religious visit through the western country, was taken sick at or near Hillsboro; and being reduced very low, his recovery was considered doubtful. Mildred had been much united to him in spirit, and now believed it right for her to go wait upon him, and minister to his bodily wants and infirmities. After he had so far recovered strength as to be ready to continue his journey, she presented him an affectionate farewell address, dated "8th mo. 29th, 1809."

Selections from this letter follow:—

"Dear Brother,—I think the impression which induced me to write these lines" as a little present before we part, was derived from the Fountain of unmixed love. I feel an unshaken confidence in the unchangeable power which induced the prophet to say, "They that feared the Lord spake often one to another, and a book of remembrance was written before him for them." Not doubting but the Lord is the same affectionate Father of love, delighting in the same thing which he did then, I am strengthened, though a little one, to communicate in some degree, the sensations I have been favored with since thy lot has been cast amongst us. It has been a time, at least to me, of renewed teaching, and of favor, derived from the Fountain of good."

Desiring Stephen to remember her when it may be well with him, she concludes,

"M. RATCLIFF."

The following letter, soon after date, reached her from her beloved friend and late companion, Rebecca Preston.

"24th of 10th mo. 1809.

"Endeared Friend,—I received thy letter dated 9th mo. 2d last, and was truly glad to hear from thee, and that thou and thy family were favored with health. This is a great blessing, and with all others, is derived from the Fountain of good. May we, dear friend, ever keep truly humble; and, bowing before Him as in the dust, implore Him to grant his gracious assistance through every afflictive dispensation which in wisdom he is pleased to try us with.

"Dear friend, it was truly satisfactory to hear thou wast favored to settle in a large neighborhood of kind Friends. Although thou mayst feel as a stranger amongst them, and often have to sit, as it were, in solitary places, yet be not discouraged. Remember the Lord's people ever were a tried people; having many deep baptisms and provings to pass through whilst in this probationary state.

"My dear sister—I think I may call thee so, for thou hast felt near to me, and it was harder to part with thee than with my own sisters who are near and dear to me—thou

remarked in thy letter the necessity there was for thee to keep a single eye to the Best of teachers, to know through His holy assistance with whom to associate. This is a safe step which I have ever found best for me. I have also found it best to be careful amongst strangers to let my words be few. Now, dear friend, how very becoming it is for ministers of the gospel to let their words be few and savory; and as one highly favored, such I esteem thee. I have not forgotten thee, Thou art often on my mind in that sweet and precious love which nearly unites the truly humble little ones, although far separated as to the outward.

"A number of Friends were appointed in the Select Yearly Meeting to visit all the Select Meetings in the lower parts of Virginia. Amongst those appointed were John Lynch, Enoch Roberts, and Mary Anthony. They expect to start on the journey this day.

"Now, dear friend, I may inform thee of the state of things amongst us. Our meetings are getting smaller, so many Friends are moving to your parts; and many more intend to go as soon as way opens for it. Yet I can go with thankfulness say, that a degree of precious love which nearly unites, is often felt to flow as it were from vessel to vessel, in our little solemn, silent meetings. This is cause of rejoicing indeed. We are not always favored with such seasons; but when the Great Master is pleased to draw his curtain, and hide himself from us, O the need of patient abiding before him as in the dust, imploring his assistance in deep humility of heart. When we do thus, he surely will arise in his own time, and help us with a little of his saving help; whereby we shall have cause to thank him and take courage. Although we may have to pass through many deep conflicts and sore trials, we must remember that this is not the place of our rest, but that we are placed here to be prepared for a place of everlasting rest, where no trouble shall annoy.

"I have a small prospect of attending the Yearly Meeting at Philadelphia next spring, if favored with health. Dear friend, I should be glad to see thee again, though it don't look likely I shall soon. I rather expect way will be made for our removal to Ohio next Fall. I am very sorry to hear that Harrison is not comfortable, after going through so much trouble in order to settle there. I am in hopes after further trials he will be better satisfied.

"It is little matter what corner of the world we are placed in, if we do but keep our places in the ever blessed Truth: although it is truly comfortable to live amongst sympathizing Friends. I hope there are some such in every place where Friends are settled. I believe I have found such wherever my lot has been cast. I now feel willing to leave this place (Virginia) of sore oppression and cruelty, if way is made for our removal. I expect my trials will not be few whilst this side the grave, but feel willing to submit to every dispensation of Providence. Dear friend I conclude, with unfeigned love to thee, thy husband, and dear little ———.

REBECCA PRESTON."

A heavenly-minded man has expressed himself to the import, that when he was in a city he was in a Babel, and when at home there was a babel in him; so that, in effect, small was the difference. Which agrees pretty well

* Alluding to some lines in rhyme which accompanied the letter.

with what the correspondent of Mildred Ratcliff has above set forth, viz: "It is little matter what corner of the world we are placed in, if we do but keep our places in the ever blessed Truth." This is the great speciality; to be just where Divine Wisdom would place us; being in accordance with the precept, "Trust in the Lord with all thine heart; and lean not unto thine own understanding. In all thy ways acknowledge him, and he shall direct thy paths."

The Poet has written,

"God gives to every man

The virtue, temper, understanding, taste,
That lifts him into life, and lets him fall
Just in the niche he was ordained to fill."

Upon the conditions, we would add, that the heart be yielded in obedience to the All-wise; which obedience shall also keep pace with the knowledge communicated by Him. For the true knowledge is "life eternal;" and when obedience keeps pace therewith, the promise concerning the dear Sent of God becomes fulfilled to us: "Though he were a Son, yet learned he obedience by the things which he suffered; and being made perfect, he became the author of eternal salvation unto all them that obey him." And again saith the Apostle Peter in writing of the Saviour: "We are his witnesses; * * and so is also the Holy Ghost, whom God hath given to them that obey him." It is this obedience to the word of our Lord and Saviour Jesus Christ, nigh in the heart, that constitutes our safety and true freedom in every position or condition of life; and is thus characterized by the same Christian Poet from whom we have already quoted:—

"His freedom is the same in every state;
And no condition of the creature,
So manifold in cares, whomev'ry day
Brings its own evil with it, makes it less;
For he has wings, that neither sickness, pain,
Nor penury, can cripple or confine.
No work so narrow, but he spreads them there
With ease, and is at large. The oppressor holds
His body bound; but knows not what a range
His spirit takes, unconscions of a chain;
And that to bind him is a vain attempt,
Whom God delights in, and in whom He dwells."

(To be continued.)

Eating cures Dyspepsia.

Dyspepsia, or indigestion, both words mean essentially the same thing, is the inability of the stomach to obtain sufficient nutriment out of the food eaten to meet the wants of the system; and not having food enough, blind instinct calls for more; this call or desire for nourishment is denominated hunger, which is gratified ordinarily by taking food into the stomach. But, in a sense, nature or instinct makes a mistake, and calls for more food when in reality it is not food that is wanting, but the nourishment which is in the food already eaten, and which the stomach has not the strength to withdraw; hence it is that a dyspeptic has a craving appetite, in aggravated cases is always eating, and is always hungry. But to eat more under such circumstances, is like giving a faithful but invalid servant more work to do, when there really is not strength enough to perform what is already in hand; or it is like adding greater weight for the noble horse to draw when he is already so oppressed by a heavy load, as to be scarce able to drag it along a single step.

All dyspeptics are weak, they lack strength,

the whole body is feeble, and the stomach has its share of debility, of weakness; hence the essence of cure is to increase the stomach's strength. But all bodily strength comes from the food eaten, and cannot possibly come from any other source; hence the only cure for dyspepsia is eating. But how to eat is the great practical question of this age and nation; for dyspepsia is a national disease, and a national sin, since its one great cause is intemperance in eating, excessive indulgence of the appetite, in connection with unwise habits at the table.

A faithful servant may be able to do a little work well when recovering from a debilitating disease, but in the conscientious effort to perform an overtask, it is not only not accomplished, but none of it is well done. So a weak stomach may digest a little food well, get all the nourishment, all the strength out of it; but if it has to work up a large meal, the work is badly done; and as the blood is made out of the nourishment derived from the food eaten, if that nourishment is imperfect, the blood made out of it is imperfect, is bad, and all know that "bad blood," is disease.

Nor is this the only trouble: the new blood made from each meal taken, is mixed in a few hours afterwards with the blood already in the system. But if this new blood is bad, it corrupts the whole mass of blood in the body, makes the whole mass of blood bad, diseased, and carries disease and discomfort to every fibre of the system. Hence the ailments, the symptoms of which dyspeptics complain, are very numerous, and extend to every part of the body,—to hands, feet, head, heart, lungs, stomach, everywhere; for the hands burn after meals, the feet are cold all the time, the head aches, the heart palpitates, the lungs are oppressed, and the stomach is sick. No one dyspeptic may have these all at one time, but all and many others, in the progress of the disease, serve to make of life a protracted misery.

The first great point then, in the cure of dyspepsia, is to eat but little at a time. And without going into detail as to other measures to be taken, it is of importance to add, that as the stomach is weak in dyspepsia, in fact is the essence of the disease, the food given it should not only be small in amount, but it should be such as is most easily worked up, most easily converted into blood; for from the blood all strength comes. As the flesh of animals, fish, poultry, is nearer being flesh of our flesh and bone of our bone than vegetables, so meat is more easily worked up by the stomach to impart nutriment to the system and make good blood than vegetables. And as bread is the staff of life, the main food of the dyspeptic should be meat and bread; the most tender meat properly broiled, and well-baked common wheat bread several days old, or, which is better, the whole product of the grain made up with water only, and a little salt, formed into thin small cakes, and baked quickly in a hot oven, pan or skillet, and eaten cold or hot.

As it requires about four hours for the stomach to digest such a meal, and it must have rest after work, just as the hands or feet require rest after their work, there should be at least five hours between the meals of dyspeptics, and not an atom of anything should be eaten between. As, therefore, there should be at least five hours' interval between meals for the dyspeptic, and it is not necessary to

eat at night, for then we are asleep, it follows that we should not eat often than thrice a day.

But it would be of little use to get the nutriment out of food, and make it into blood unless it were conveyed to every part of the system, to reach every fibre, so as to impart strength to limbs and brain, and stomach and lungs; to do this, exercise must be taken, without exercise the blood begins to stagnate in half an hour, gathers round the heart, leaving the feet and hands cold and the skin pale; and dyspeptics are always chilly and cold to take cold. And as every part of the system of the dyspeptic is weak, it is important that the exercise taken should be aced enough to send the blood to the remote parts; and as meals are taken three times a day, the exercise should be taken three times a day. And as the blood gets the greater part of its life from pure air, and there is no pure air except that out of doors, the exercise the dyspeptic should be in the open air; as exercise is more exhilarating, carries the mind more away from the body, and passes time more pleasantly, it is important that the exercise should be agreeable, should interest, and even absorb the attention; and * that man will soonest get well of dyspepsia who steadily follows some out-door occupation which is encouragingly remunerative. *Hall's Journal of Health.*

For "The Friend."

A Seed shall Serve Him.

It is a testimony of the Psalmist, "a seed shall serve Him; it shall be accounted to the Lord for a generation." We believe that this is still the case; and that amid whatever trials the church has, or may have to sustain, that He in whom our fathers trusted, and in whom they found deliverance, is still round about his "afflicted and poor people;" enabling the with faith and patience to put their trust in him; and from season to season freshly quaffing to renew their covenants with Him, set up their banners, and to go forth in the warfare, which is "mighty through God, the pulling down of strongholds;" &c.

It is declared by the prophet, that "a book of remembrance was written before him, them that feared the Lord, and that thoug upon his name. And they shall be mine, saith the Lord of hosts, in that day when I make up my jewels; and I will spare them as a man spareth his own son that serveth him." Those that fear the Lord, and that think upon His name, in this day of many voices, and "tumult of those that rise up against him," will feel many times lonely, desolate and afflicted because of the removal of fathers and mother because of their own prevailing sense of weakness; and because of the strictness of the siege and the warfare they are called to; yet will the Lord Almighty never leave nor forsake such as are engaged to look to Him, as to build upon him, the ever sure refuge and foundation; but will be to them, as their God, is kept single to Him alone, strength in weakness, riches in poverty, and an ever-present helper in every needful time. Then in His name may these set up their banners! Although conflicts and crosses and tribulation assail, as they ever must here, these shall keep in the evil time, and in the days of famine they shall be satisfied. Those therefore whom the Lord through his prophet declares "shall come with weeping and with supplication"

is will I lead them," were "to walk in a right way, (but) wherein they shall not stumble."

lay this tribulated "seed," however lonely the situation, and wherever scattered, never in sight of the arm of the Lord that brought it; and which is as near and as ably nower, to be a wall of defence on the right and on the left, that the billows shall pass over to their hurt. The Lord's hand cut shortened, neither doth his mercy fail that hunger and thirst after Him. "His life is sufficient for all the need of these; it is made perfect in their weakness. Cast away your confidence then that hath great impense of reward. Continue to walk unswervingly before the Lord of hosts," who discerneth "between the righteous and wicked; between him that serveth God him that serveth him not." Neglect not daily sacrifices, whereby the abomination maketh desolate is set up. Be encouraged by the mark set upon the forehead of, of scripture record, that sighed and cried for the abominations done in the city of Jerusalem. Be willing to suffer with it, the only way to reign with him; to be united with him more and more by baptism into death, if thereby He may be willed to be the resurrection into newness of life and power, to your eternal peace and joy. Be baptized, deep and oft-renewed baptism is for all. "Deep calleth unto deep," is the sign of the Christian's experience. It is here he learns the wonders of the Lord, and is led to sing His praise. It was out of the midst of Jordan, in the place where the priests which bore the ark of the covenant stood, that the men prepared took the great stones and pitched them for a meal unto the children of Israel, and for the name of the eternally excellent name, who wrought their deliverance. Finally, may rest in the Lord at all times; pour out your hearts before Him; and then thoughts may abound, and deep provings of His love, they will, as uprightly endured, patience; patience experience; and patience hope; and hope maketh not ashamed because the love of God is shed abroad in our hearts by the Holy Ghost, which is given us.

anliness in Holland.—Paine, in his "Art of the Netherlands," speaks at length of the neatness, he says:

There is no stone in this country,—nothing in adhesive clay, suitable for men and to mire their feet in. It occurred to people, however, to bake it, and in this brick and tile, which are the best defensive and humility, came, into their hands. See well contrived buildings of an agreeable aspect, with red, brown, and rosy walls, adorned with bright stucco, white facades, and sometimes decorated with dried flowers, animals, medallions, and columns. In the older cities the house stands with its gable to the street, festooned with arcades, branchings and leafage, terminate in a bird, an apple, or a bust; or, as in other cities, a continuation of a log-house,—an abstract compartment of barracks,—but an object apart, endowed with special and private character, at once striking and picturesque. Nothing could be kept cleaner and clearer.

Dodai, the poorest have their domicile

whitewashed once a year, outside and in, it being necessary to engage the whitewashers six months in advance. In Antwerp, in Ghent, and in Bruges, and especially in the small towns, most of the facades seem to be newly painted or freshened the day before. Washing and sweeping are going on on all sides. When you reach Holland there is extra care, even to exaggeration. You see domestics at five o'clock in the morning, scrubbing the sidewalks.

There are stables for cows, the flooring of which is cabinet work; you can enter them only in slippers or sabots, placed at the entrance for that purpose; a spot of dirt would be scandalous, and still more so any odor. Vehicles are prohibited from entering the village; the sidewalks of brick and blue porcelain are more irreproachable than a vestibule with us. In autumn, children come and gather up the fallen leaves in the street, to deposit them in a pit. Everywhere, in the small rooms, seemingly the state-rooms of a ship, the order and arrangement are the same as on a ship. In Broeck, it is said there is in each house a particular room which is only entered once a week, in order to clean and rub the furniture, and then carefully closed; in a country so damp, dirt immediately becomes deleterious mold; man, compelled to scrupulous cleanliness, contracts the habit, experiences its necessity, and at last falls under its tyranny.

You would be pleased, however, to see the humblest shop of the smallest street in Amsterdam, with its brown casks, its immaculate counter, its scoured benches, everything in its place, the economy of small quarters, the intelligent and handy arrangement of all utensils. Guiccardini remarks, "that their houses and their clothes are clean, handsome and well arranged, that they have much furniture, utensils, and domestic objects, kept in better order and with a finer lustre than any other country." It is necessary to see the comfort of their apartments, especially the houses of the middle classes, carpets, waxed cloths for the floors, warm heat-saving chimneys of iron and porcelain, triple curtains at the windows, clear, dark, and highly polished window panes, vases of flowers and green plants, innumerable nicknacks indicative of sedentary habits, which rendered home-life pleasant, mirrors placed so as to reflect those passing in streets, together with its changing aspects,—every detail shows some inconvenience remedied, some want satisfied, some contrivance, some thoughtful provision, in short the universal reign of a sagacious activity and the extreme of comfort.

Anecdote of Bernard Gilpin.—When this zealous minister was on his way to London, to be tried before the popish party, he broke his leg by a fall, which put a stop for some time to his journey. The person in whose custody he was, took occasion from this circumstance to retort upon him an observation he used frequently to make, "That nothing happened to the people of God but what is intended for their good;" asking him "whether he thought his broken leg was so." He answered, meekly, "I make no question but it is." And so it proved; for before he was able to travel, Queen Mary died. Being thus providentially released from probable death, he returned to Houghton through crowds of people who rejoiced in his deliverance.

How Palm Leaf Hats are Made.—From Cuba the raw leaf is shipped to New London, Connecticut, in bunches of twenty five leaves each, and the stock is unloaded and placed on cars which stop at the door of the bleaching house. As delivered, the leaf is from four to five feet long. This, standing on the stock end, is closely packed in the bleaching rooms, where it is kept sixteen days. Brimstone is used to whiten the leaf. The rooms are closed airtight and the brimstone burnt in pans standing in the room. When bleached to the requisite whiteness, the next process the leaf undergoes is splitting. Nearly a third of all that passes the splitters is absolutely worthless for use here. Till recently it was thrown away; but since paper manufacturers have been straitened for material, this palm leaf has been found to make good paper, Fifty dollars a ton are paid for it at the paper mills.

After the straw is now ready to be worked into hats, all the work must be done by hand. In all the New England States, except Rhode Island, are agents of the firm who send the leaf out into the country among the wives and daughters of the farmers, by whom it is braided into hats and woven into webs for shaker hoods. Large teams are constantly passing over the rugged hills, carrying material to be braided, or the work that has been finished. The number of people who find employment in this business is very great. Little children are kept at it, for it is light work, and a nimble fingered girl of ten or twelve can earn as much in a day as an adult woman. The pay for the work is small but it is, with many, a work of odd moments which would otherwise be wasted, so the frugal house-wife will include in her day's work a "stent" of so much braiding to be done. In some parts of the country, chair bottoming is practiced in the same way. Country merchants frequently take the leaf and put it out in their neighborhoods.—*Late Paper.*

The Victoria Falls.—The last number of Petermann's Mittheilungen contains an interesting description, by Herr Mohr, of a visit to the Victoria Falls, on the Zambesi. "I attained the object," he says, "for which I had made so many sacrifices, after innumerable difficulties and endless trials of patience, on the morning of the 21st of June. To proceed any further—an undertaking which I had often contemplated—was unfortunately impossible; the negroes could not be persuaded by any means to go beyond the waterfall; my clothes were torn to pieces, my provisions greatly reduced, and I had not powder for eight days. The length of the fall is nearly an English mile; it is four hundred feet deep, and the cliff over which the water flows is from two hundred and eighty to three hundred and sixty feet wide. The stream above the fall flows from north-northwest to south-southeast. To the south of the fall, and parallel with it, lies a thick tropical wood on a peninsula; its soil is covered all over with the footprints of buffaloes, rhinoceroses, and elephants. Nearly in the middle of the stream, close to the fall, lies Garden Island, where its discoverer, Dr. Livingstone, landed and planted a small garden with useful plants, which, however, have been destroyed long ago by animals and weeds. The most imposing view of the fall is from a point at the extreme east of the western peninsula. The greatest mass of water comes from the west, the least from

the east; the two unite under your feet, and the combined stream flows on in a channel only two hundred and seventy feet wide, between dark precipices."

Those who love and serve God in the time of prosperity will not be forgotten or deserted by him in the day of adversity.—*W. Evans.*

THE FRIEND.

EIGHTH MONTH 5, 1871.

SUMMARY OF EVENTS.

FOREIGN.—Particulars have been received of the terrible famine in Persia. The drought last year in the central and southern provinces and partial failure of the crops, caused great misery all winter. At the same time the sufferings were greatly increased by taxation, the new Governor of Laristan having promised to raise not only the usual sum but more, and this oppression drove the country people from their homes to the cities, where the taxes are lighter. The failure of crops in Laristan was rendered more disastrous because the people ate their children, having previously consumed all their domestic animals. In Yezd, which produces only opium, the people subsisted upon grass and roots. The horrors of pestilence have followed the famine, depopulating the country to a fearful extent. The Persian Minister at London asserts that these accounts are really correct. He says there is undoubtedly lamentable scarcity of food among the poorer classes, who are fed at the expense of the government in the cemeteries, because there is in them alone sufficient room for the great crowds who appeal to the authorities for subsistence.

The island of Canagacia, in the Philippine Islands, with a population of 26,000, has been abandoned by its inhabitants in consequence of an earthquake and volcanic eruption. During several months last spring, there was a succession of violent shocks which opened extensive crevices in the earth, and finally on the 1st of Fifth month, a plain on the river bank, whose houses were situated, sunk, engulfing one hundred and fifty persons. The lava beneath the crater of a volcano 1,500 feet wide, and the woods became ignited from the flames, compelling the people to flee for their lives.

The *Journal de Paris* announces that Jules Favre is no longer a minister, and is replaced in the Office of Foreign Affairs by Götland, recently one of the French negotiators for peace at Brussels.

The rumor that Bismarck had consented to the evacuation of the environs of Paris on the 31st of Eighth month, is pronounced to be without foundation. The German troops will not be withdrawn from their present position in the environs of Paris, until 1,500,000 francs of the indemnity are paid, and it will be impossible for the French government to pay that amount by the time named.

The restoration of the fortifications of Paris is going on at a rapid rate.

Gambetta has laid before Thiers a proposition for the reorganization of the army and civil service. Thiers and MacMahon, it is stated, approve of the plans submitted. In preparing them Gambetta had the assistance of Generals Faidherbe and Chanzy, in conjunction with the Duke d'Annamale and Prince de Joinville. The French government has given a qualified assent to the scheme for the emigration of the communist prisoners in three classes: First, violent persons and those guilty of crimes who are sentenced to hard labor for life; second, dangerous persons who are to be sent to a penal colony; and to a third class general amnesty is granted in case of their voluntary emigration. Those who are permitted to go to Arizona, the government giving them transportation and mining tools, tents, arms and subsistence for six months.

The Emperor and Empress of Brazil and Prince Frederick William of Prussia, are at present sojourning in England.

In the House of Commons, George Dixon, member for Birmingham, wished to know if the reduction of the civil list was possible. Gladstone replied that he be-

lieved the question arose from misapprehension of the character of the list, which, he said, was a solemn compact made between the Sovereign and the people at the beginning of each reign. Any economical advantages which resulted were to be credited to the Crown, and not to the treasury. It would be well for Parliament to maintain the view of the civil list, as it would contribute to encourage the Queen's servants to fulfil their duties.

On the 27th ult., the amount of bullion in the Bank of England was £27,441,019, a greater sum than has been held by the bank since its charter in 1694.

The bank rate of interest has been reduced to 2 per cent. The Pope has issued another protest against the occupation of Rome by the King of Italy, and a new syllabus, which is an explanatory commentary on the doctrines of the Holy See. The syllabus, assuming the infallibility of the Pope, contains a declaration to the effect that temporal powers are created only by Providence to serve the Church; that the Church has the right to establish and to revoke them; and that every authority which opposes the decrees of the Church ought to be legitimate *ipso facto*.

The Pope, however, disclaims any intention on the part of the papacy to lay claim to inherit power to dispossess sovereigns, or to assume direction over the worldly affairs of nations.

The Spanish government has resolved to reduce the salaries of all functionaries 20 per cent. The attempt to reduce a ministry under Serrano was a failure. He thereupon resigned, and another was arranged with Zorrilla at its head, composed altogether of members of the liberal or progressist party.

The American Commission from the Evangelical Alliance have had several interviews with Gortschakoff, who treated them with marked courtesy and distinction. They speak encouragingly of the prospects of their mission, and expected to have an audience with the Emperor in a few days.

The Grand Duke Alexis was at Cronstadt, preparing his fleet for the contemplated voyage to the U. States.

In the British House of Commons, on the 21st ult., the Duke of Richmond moved a vote of censure of the queen's message abolishing the purchase system in the army, as unworthy of ministerial resort. The motion was supported by the Earl of Derby, Earl Russell, the Marquis of Salisbury and others, and opposed by Earl Russell, the Duke of Devonshire, Lord Cairns, and the motion of censure defeated by a large majority.

It was expected that a proposition to censure the government for abolishing the system of purchase of army commissions by royal warrant would be introduced and debated in the House of Commons.

The House of Commons have granted an allowance of £15,000 per annum to Prince Arthur. The Prince of Wales is making a visit to Ireland.

London, 7th mo, 31st.—Consols, 93½. U. S. 5-20's of 1862, 92; of 1867, 92; 10-40 5 per cents, 92.

Liverpool.—Uplands cotton, 5½d.; Orleans, 9½d. So. of the day 8,000 lbs.

UNITED STATES.—*News-items.*—The interments in Philadelphia last week numbered 336. There were 77 deaths from cholera infantum; 44 of consumption; 12 old age; and 205 were under two years of age.

As the State Island ferry-boat, Westfield, crowded with passengers, was about leaving the wharf at New York on the 27th ult., her boiler burst, and she made a complete wreck of the vessel, and killing and wounding a multitude of persons. The most reliable reports of the casualties give a total of 55 killed, and about 130 wounded, many of the latter being fatally injured.

One of the Commissioners provided for by the Treaty of Washington, to examine claims for individual damages during the rebellion, have been appointed. Judge Frazer, of Indiana, is the American, and Russell Gordon, of London, the British representative. They are to select a third, and will then immediately enter upon their duties at Washington. None of the arbitrators to meet at Geneva have yet been named.

The Secretary of the Treasury has notified the Assistant Treasurer, at New York, to purchase five millions of U. S. Bonds during the 8th month, and to sell seven millions of gold in the same period.

Nearly one hundred witnesses have already been examined in connection with the commission sitting at Washington. The testimony is printed as the examination progresses, and will make several large volumes. The committee have resolved to adjourn to the 20th of Ninth month.

The exports of cotton during the year 1870, amounted to 2,115,000 bales; of broad-stuff, 864,075; of raw cotton, 383,271,837; tobacco, 116,629,904; bacon, pork, cheese, butter and lard, 236,079,089.

The net earnings of the Union Pacific Railroad, the first six months of 1871, have been \$1,723,330. During the first six months of 1870 they were \$1,060,079.

During the year ending 6th mo. 30th, the Post Office Department has established 2,407 new offices, and discontinued 54 offices. There are now 30,945 post offices in the United States.

A striking instance of the hasty, careless business habits of our people, is afforded in the fact that during the last Sixth month more than \$38,000,000 of letters, directed or otherwise not deliverable, were received by the local letter office in Washington. Of these more than 11,700 contained money, checks, drafts, or other documents of value.

A treaty for the interchange of money orders between the United States and the Kingdom of Great Britain has been signed by the President. A similar arrangement has been made with the Republic of Switzerland.

The Markets, &c.—The following were the quotations on the 31st ult. *New York.*—American gold, 115 11/2. U. S. sixes, 1851, 116; ditto, 5-20's, 1862, 1/2 ditto, 10-40, 113½. Superfine flour, \$1.80 a 55½; 6 brands, \$3.50 a \$8.55; No. 1 Chicago spring wheat, \$1.40; No. 2 do, \$1.36; \$1.37. Oats, 62 a 68. Yellow corn, 69 a 70 cts.; western mixed, 66. Philadelphia.—Uplands cotton, 19½ a 20 cts.; New Orleans, 20 cts. Cuba sugar, 9½ cts. Superfine oil, \$4.75 a 5.12; finer brands, \$5.25 a \$8.50. West and southern red wheat, \$3.40 a \$3.55; amber, \$1.15 a 1.20. Old corn, 70 cts. No. southern, 52 a 57 cts.; all white western, 70 cts. No. 3 beef cattle were offered at the Avenue Drove-y-Sales of choice at 7½ cts.; fair to good, 6 a 7 cts.; common 4 a 5½ cts. per lb. gross. About 18,000 lbs sold at 5 a 6 cts. per lb. gross, and 2,031 hogs at 7½ cts. per lb. net. *Chicago.*—Red wheat, \$1.16. Corn, 54 a 52 cts. Rye, 63 a 65 cts. Oats a 39 cts. Lard, 91 cts. *St. Louis.*—Cotton, 19 a cts. No. 2 red winter wheat, \$1.23; No. 3 do, \$1.15. Corn, 40 a 42 cts. *Wash.* 31½ a 32½ cts. *Ohio.* No. 2 spring wheat, \$1.05. No. 2 corn, 44 a 45. No. 2 oats, 32 cts. No. 2 rye, 52 a 54. Barley a 66 cts. *Baltimore.*—Good to choice amber, \$1.52 a \$1.57; good to prime red, \$1.45 a \$1.50; diana and Ohio, \$1.40.

WANTED.

A Teacher for the Classical Department of the B School at Westtown: to commence his duties at opening of the next Session, on the first of the Eleventh month. Application to be made to

Samuel Morris, Olney, Philadelphia, Chester Co.
Charles Evans, M. D., 702 Race street.

TEACHER WANTED.

A well qualified teacher is wanted to take charge a small Friends' School.

Application may be made to Henry Mendenhall, Philadelphia, or to Thomas Suedley, Lima Pa., Delaware Co., Pa.

FRIENDS' BOARDING SCHOOL FOR INDIA CHILDREN, TUNESSA, NEW YORK.

A suitable Friend and his wife are wanted to take charge of this Institution, and manage the Farm connected with it. Application may be made to Ebenezer Worth, Marshallton, Chester Co.; Thomas Wistar, Fox Chase P. O., Philadelphia; Samuel Morris, Olney P. O., do. Joseph Scattergood, 413 Spruce Street, do.

FRIENDS' ASYLUM FOR THE INSANE Near Frankford, (Twenty-third Ward,) Philadelphia.

Physician and Superintendent.—*JOSUEA H. WORTHINGTON, M. D.*

Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

DIED, on the morning of the 8th of 7th month, 1871, at the residence of her brother-in-law, Benjamin Lord, near Woodbury, N. J., ELIZABETH C., wife of JOHN C. CACON, a beloved member of our District Monthly Meeting of Philadelphia, in the year of her age. Her friends have the consoling belief that her end was peace, and that through the merciful Saviour she is now at rest with Him.

WILLIAM H. PILE, PRINTER.

No. 422 Walnut Street.

PHILADELPHIA.

Single Copies, when paid quarterly in advance, five cents.

For "The Friend."

The English Sparrow.

The introduction of this bird into our large cities, and its rapid increase, have excited considerable interest among their citizens, and to one of these it may be interesting to know the character it bears in its native country. A very observant friend of the writer, who is familiar with the habits of many of our birds, remarked some years since, that it would be difficult to induce any large number of our native songsters to take up their summer residences in the city parks. The want of underwood, and the absence of tangled thickets, in the privacy of whose retreats they could securely rear their young, he thought would be an effectual barrier to their coming long us. So it proved; and when the ravages of the worms in our city trees had become an intolerable nuisance, the number of wild-wood inhabitants which were tempted to visit the crowded thoroughfares, and the much frequented parks of the city, was too all to keep the evil in check. What was needed was a half domesticated bird, fearless, man, and eager in the pursuit of its food. The common house-sparrow of England excellently filled these conditions, and the effective manner in which it has nearly destroyed within our limits, the numerous worms which merly swung by their silken cords from almost every tree, has confirmed the predictions those who introduced it.

A recent English work entitled "British Birds and their Haunts," thus describes our familiar little friend.

What were the haunts of the sparrow at a period when men dwelt in tents, and there were neither farmhouses nor villages, much towns and cities, it were hard to say. It is now that thoroughly wild sparrows are not to be met with in districts remote from human dwellings and cultivation; they have left the hill-side and forest as if by common consent, and have pitched their tents where man builds, or ploughs, or digs, and nowhere else. In the city, the seaport town, the mining village, the hamlet, the farmhouse, near the cot on the lone waste and by the roadside smithy, they are always present, varying in the amount of confidence they place in their patrons, but all depending on

man to a certain extent. And not only do they court his society, but they have adopted his diet. Whatever is the staple food of a household, the sparrows that nestle around will be right pleased to share it; bread, meat, potatoes, rice, pastry, raisins, nuts, if they could have these for the asking, they would not trouble themselves to search farther; but obliged as they are to provide for themselves, they must be content with humble fare; and so skilful are they as caterers, that whatever other birds may chance to die of starvation, a sparrow is always round and plump, while not a few have paid for their voracity by their lives. Much difference of opinion exists as to whether sparrows should be courted by man as allies, or exterminated as enemies. The fact that great efforts are at the present time being made to introduce them into New Zealand, where the corn crops suffer great injury from the attacks of insects, which the presence of sparrows would, it is believed, materially check, leads to the conclusion that their mission is one of utility. That sparrows consume a very large quantity of corn in summer there can be no doubt; as soon as the grain has attained its full size, and long before it is ripe, they make descents on the standing corn, and if undisturbed will clear so effectually of their contents the ears nearest to the hedges, that this portion of the crop is sometimes scarcely worth threshing. During harvest they transfer their attention to the sheaves, while the reapers and binders are occupied elsewhere; as gleaners they are indefatigable; they participate, too, in the joys of harvest home, for their food is then brought to their very doors. The most skilful binder leaves at least a few ears exposed at the wrong end of the sheaf, and these are searched for diligently in the rick; and the barns must be well closed indeed into which they cannot find admission. At threshings and winnowings they are constant attendants, feeding among the poultry, and snatching up the scattered grains under the formidable beak of chancier himself.* At seed-time their depredations are yet more serious, as they now come in not simply for a share of the produce, but undermine the very foundations of the future crop. I once had the curiosity to examine the crop of a sparrow which had been shot as it flew up from a newly-sown field, and found no less than forty-two grains of wheat. A writer in the 'Zoologist,' who professes himself a deadly enemy of the sparrow, states that he once took 180 grains of good wheat from the crops of five birds, giving an average of thirty-six for a meal. Now if sparrows had the opportunity of feeding on grain all

* The reader of Cowper may remember his lines describing the feeding of the poultry.

"The sparrows peep, and quit the sheltering eaves,
To seize the fair occasion; well they eye
The scattered grain, and thievishly resolved
To escape the impending famine, often scared
As oft return, a pert voracious kind."

the year round, they would be unmitigated pests, and a war of extermination against them could not be waged too vigorously; but during the far greater portion of the year they have not the power of doing mischief, and all this time they have to find food for themselves. Against their will, perhaps, they now hunt for the seeds of various weeds; and these being smaller than grains of corn and less nutritious, they consume an immense number of them, varying their repast with myriads of caterpillars, wireworms, and other noxious grubs. They thus compensate, certainly in part, perhaps wholly, for the mischief they do at other seasons; and it is even questionable whether, if a balance were struck between them and the agriculturists, the obligation would not be on the side of the latter.

It is scarcely necessary to say much of the habits of a bird which stands on such familiar terms with the human race as the sparrow. During no period of the year do sparrows live together in perfect amity; if half a dozen descend to pick up a handful of scattered crumbs, each in his turn will peck at any other who comes too near his share of the feast, and with a peculiar sidelong shuffle or hop, will show his intention of appropriating as large a portion of the feeding-ground as he can. In spring, this bickering assumes a more formidable character. A duel is commenced among the branches of a tree, obstinate and noisy; all the sparrows within hearing flock to the scene of combat, joining at first with their voices, and finally with their beaks; a general riot ensues, with as little object seemingly as an Irish 'row'; for suddenly the outcry ceases, and the combatants return to their various occupations. A writer in the 'Naturalist' gives an account of a fray of this kind, during which three male birds fell at his feet one after another either dead or dying; but cases of this kind are very rare.

Sparrows build their nests at a considerable elevation from the ground, but are by no means particular as to the locality. At the period when most farmhouses and cottages were thatched, the eaves were their favorite resort, and here they hollowed out for themselves most comfortable dwellings. The general employment of tiles or slates has interfered with this arrangement; but they will fix upon any projection, niche, crack, or hole which will hold a nest, and if these are all occupied, content themselves with a tree; but as far as my own observation goes, the number built in trees far exceeds that to be found in other localities. The nest itself is a rude structure, composed mainly of straw and hay, and lined with feathers and any other soft materials which they can find. Two or three broods are reared every year, the number of eggs being usually five. The young are fed on worms, caterpillars, and insects of various kinds."

Labor and God's mercy bring riches.

For "The Friend."

Memoirs of Mildred Ratcliff.

(Continued from page 398.)

The following extracts from a letter to her sympathising friends J. and M. Tomlinson, seem to have been written under the humiliating prospect of religious service in Virginia, N. Carolina and Tennessee.

"19th of 11th mo. 1809.

"My dear friends,—The near and dear acquaintance which we have made in the short space of a few months, in which we were associated together, (praises be to the Beloved of my soul), encourages me to make a free communication to you. I think I may say in that freedom which the Truth alone can give, I may tell you, my dear friends, I have asked the approbation of my Master and holy Commander, whether I might open my mind to you as fellow-travellers and sympathisers with unworthy me. Feeling not only his liberty but approbation for this communication, I write this to let you know how it has fared with me since I parted with you at J. J.'s. When I started alone, my all-glorious, also ether lovely Companion drew near, and went with me to the meeting-house: and may I not say, sat by my side. This you need not doubt, had a tendency to bow my spirit under a renewed sense of his heavenly condescension and matchless love towards his unworthy handmaid. But oh, my endeared friends, I must tell you, after my Beloved had paved the way and left me no hole to creep out at, feeling no desire but to be his every whit, in time and in eternity; then, whilst sitting in awful silence of all my own wishes, then, O then it was, though quite unknown to me before, I heard the positive command; 'Thou must go to Virginia Yearly Meeting; and from thence as I will show thee the way, to visit my seed through some parts of Virginia, North Carolina and Tennessee.' Oh! my sympathising friends, can you feel with me? Can you form an idea of my feelings when I heard my Master utter these words? Knowing his heavenly voice, what could I say short of, 'Lord, I am thine: do with me what seemeth thee good.' This was the answer of my heart under the operation of the feelings which truly bring into the dust all of remaining nature.

"20th. A little opportunity again offers for writing. I may tell you the language is to-day as yesterday. The thing is established with my Master, so that no twisting or screwing will avail me anything. I am bound in humble obedience and awful prostration, to bow low in the dust, yea, to bow and say, 'Thy will, O Father, be done in and by me, and not my will!' Thou knowest I have given up body, soul, and spirit to thy service. Therefore, O Lord my God, all I ask is thy preserving power to be with me through all. This thou hast in matchless goodness promised to me. Thou knowest I have said in my heart, It is enough! My life, and my all thou hast given me. Therefore, in deep humility of soul, I offer, freely offer all up to thee on this occasion. I desire through Thy mighty power, without which thou knowest I can do nothing, on all occasions whilst I have life, to give all up to follow thee. What good will my life or anything else do me, if I do not follow thee? Now, my endeared friends, I may say the task seemed so great, and my situation such, that at the prospect, and in reviewing it, all that is alive within me is humbled

in the dust; so that a considerable part of my sleep has departed from me. Yea! I seem as if I can get little or none. When I can come to a spirit of resignation, then I shall have sweet sleep. In great fear and deep humility I have interceded with the Beloved of my soul to prove the fleece for me, wet and dry, again and again; that I might surely know the thing was established, and that no excuse would avail before any mortal might have a hint thereof. My friends the thing is established, the fleece proven; and so far from any excuse availing, 'the woe,' I have felt pronounced against me, if by any means, or under any discouragements, short of a positive prohibition, I was negligent in doing my part in order for the accomplishment of the task. Now, my dear friends, you need not wonder why I suffered so much in being hurried away from Virginia before the time. I knew not till since this prospect opened, why it was so; but since I have been fully satisfied in that matter. I said in my heart, my Father, why was there not a prohibition, seeing all power is in thy hands, and thou know how soon thou would send me back again? Why, O Father! thou knew my situation every way: why not have hindered our coming before the time? In this matter also, he has satisfied my soul; showing me that things were in such a situation that a positive prohibition was not best; and seemed to reply, 'I know all things, and the work I have laid off for thee to do. I came with thee, and gave thee favor with thy people. For thy consolation know thou that the thing through which the enemy thought to lay waste thy service, I have and will make use of to promote my cause. I did so in days of old, when I permitted Joseph to be separated from his father's house.

Be not dismayed, what'er befall,
For I will carry thee through all,
Satan may rage in all his power,
But I will keep thee every hour.

The tempest will rise high, I know,
But I my calming power will show,
The waves of Jordan I'll divide,
The sea a path shall open wide.

The mountains great like rams shall flee,
As thou in meekness follows me,
Thou need not fear Goliath's arm,
My saving faith shall shield from harm.

I'll bring thy bow, and teach to fight,
And clothe thee with my gospel might,
The work is great; thy strength is small,
Yet I will carry thee through all!

"These have been the exercises in part of my mind, since I saw you, beloved friends. I have written enough to show in some degree, how it has fared with me. Oh, my friends, when it is well with you, forget me not! I must now conclude in near love to you both, and in much fear and trembling of heart, before the dread majesty of heaven and earth: committing my cause and my all to him.

M. RATCLIFF.

"1809. 11th mo. 20th. It is now bedtime, and my family have retired; but my exercised soul is like a full vessel which wanteth vent. My hands have been busily employed, whilst all that is alive in me has been bowed in amazement. Yea, lost in wonder, love, and praise, under a renewed sense of the matchless love and heavenly condescension of the Lord God and the Lamb towards the workmanship of his hands. Great and marvellous

have been the representations thereof to my mind this night.

"Having none to whom I dare unfold these things, I again take my pen, in hopes thereby to get some relief. Perhaps these times may be some encouragement to some poor exercised soul who may have to tread the same path when I am no more seen of men. If I should be so, dear heart, give all the praise to God, and take courage to follow Him in willing obedience; yea, I hope in more willing obedience than thy unworthy sister has done. Follow Him, I entreat thee, whosoever may be pleased to lead thee. For verily he is a rich rewarder of the faithful. He is God that judgeth in the earth. Many thing he has showed me this night. A part of them is in substance as follows:—

Here, in the original, follow some lines in rhyme, in which our friend not unfrequently indulged her pen; the substance of which I intended to be embraced in the following: In this thy proposed journey (the one she was about to take) thou shalt cause the faithful to rejoice through a magnifying of my power before them: who, if they continue to trust in me, shall be fed with food convenient for them; bread shall be given them, their water shall be sure. Others who are travelling in pain and sorrow for the more full arising of my light and life, thou shalt comfort saying, My grace is sufficient for them, and is able to bear up the soul in every extremity being made perfect in weakness. Some who are yet bound, but desirous to be released from the slavery to the cruel task-master, thou must point to faithful obedience to me; and uphold before them my ancient precept, 'It is good for a man that he bear thy yoke in his youth. He sitteth alone and keepeth silence because he hath borne it upon him. He putteth his mouth in the dust; if there be any hope, there may be hope.' That thus through humility and death of self, they may live unto me who died for them; and who has a balm for every wound. To 'backsliders, hardened stout, and proud,' my warnings must be sounded; lest the day of precious visitation be passed unheeded by, and the dread night shall come wherein no man can work. This, so with humility and contrition of soul, the may repent, and return to wisdom's way, and know their peace to flow;—a peace which this world can neither give nor take away. The 'neither cold nor hot'—for Laodicea, yet there are—counsel to buy of me gold tried in the fire that they may be rich, and white raiment that they may be clothed, and the shame of their nakedness (known least perhaps to themselves) do not appear. It is the eye salve of the kingdom that they stand in need of; that they may see of the things which belong to their peace, before they may be hid from their 'lukewarm' eyes. Those who 'in evil ways forgetful live,' stir up thy faithfulness to the great Lord of the harvest: lest the evil days come on apace when they shall say they have no pleasure in them, and before the earthly stewardship is finished, the saving oil of my grace is secured to replenish the wasted lamp when the midnight cry shall be sounded, from which there is no appeal, 'Behold the Bridegroom cometh; ye forth to meet him.' Tell all of the abundance of oil for every lamp; and that there be bread enough and to spare in the Father's house. That the leaves of the tree of life may yet forthcoming and effectual to heal all, will

-sick, longing for the Father's house, and sought to a sense of their lost and undone condition, apply to me for succor and deliverance. O there is yet balm in Gilead for these, and a skillful, all-remedial Physician there: no will save unto the very utmost all that he unto God by him, seeing he ever liveth make intercession for them. My grace is powerful to save the soul; and where obedience thereto keeps pace with knowledge, shall be made more than conquerors, though the power of an endless life.

M. Ratcliff thus concludes: "Under these questions what can I do but bow myself in full prostration and say, Amen! Amen! It even as thou hast said, O my Father, my Father! Only be thou pleased ever to be my thy little handmaid. M. RATCLIFF."

(To be continued.)

Anecdote of Thomas Brassey, the Great English Rail Road Contractor.

The patient sagacity and calm resolution to abide by the rules he had laid down for his conduct, which enabled T. Brassey to perform, at the same time, an amount of work equal to that of three or four Ministers of public Works put together, may be illustrated by an anecdote never until now published.

In the year 1862 T. Brassey was in Turin, in Italian notables of that day called upon him at the Hotel Trombetta, in order to obtain his support for one of the great enterprises which it was then sought to enrich the Peninsula. T. Brassey was conversing with an English engineer (who had himself served by an Italian Government much a captive kite is served by the game-keeper who suspends him as a terror to other predatory birds), when the deputation arrived,—a lawyer of eminence, a member of the administration, more than one deputy of Chamber. Ensnaring his companion in the most chamber of the suit, where every detail that passed was distinctly heard, and where he was asked to wait for half an hour, Brassey received his visitors. Nothing could be more apparently satisfactory than the commencement of the interview. The advantage of the project was set forth by the projectors, and admitted by T. Brassey, whose occasional remarks showed that he had thoroughly mastered the subject. When the whole matter had been presented in its fairest light, by one and another of its advocates, Brassey remarked that it might save time he explained the invariable principles on which he conducted business. He was willing to afford a large measure of support to every enterprise of which he undertook the risks. He was prepared, in such case, to subscribe to the capital, and to hold, without meddling on the market, a certain proportion shares, or bonds, or both. But such financial arrangements must be entirely distinct from those made for the execution of the risks. For that he must receive monthly dividends in cash, according to regular month-certificates by the engineer, of from 80 to 100 per cent. of the value of work done. If the directors were prepared to deal on those terms, he should be ready to enter at once into the details of prices.

The deputation were delighted. Nothing could be more to the point, or more in accordance with their ideas of business and habits of action. Then they commenced a review

of the features of the scheme, and travelled, a second time over the ground already covered, rising, however, in enthusiasm as they dwelt on the unrivalled advantages which the shareholders would enjoy. They considered the contract as settled with T. Brassey. The terms were fully acceptable to both sides, and they would send their engineer to meet T. Brassey's engineer, and settle the details of the schedule, as to which no difficulty could arise, as there were ample precedents to follow. They would take their leave of their honored friend with the utmost content. The little noise which accompanied the rising of half a dozen persons succeeded. The door opened, and, just in backing out, "Of course," said the first speaker, "T. Brassey had no objection to accept, as cash, the shares of the Company for which he had promised to subscribe!"

"Stop, gentlemen," said T. Brassey. "I am sorry that I have failed to explain my meaning. You must not go away under a mistake. I told you, that if we agreed to the details, I would subscribe for a certain proportion of shares. But I told you that this must be kept quite distinct from the monthly payments. They must be regularly made in cash, to my bankers; on no other consideration will I look at the business. I have large sums to pay every month, and I cannot allow any uncertainty to subsist as to the regularity of my receipts. Pray understand that. It is *sine qua non*."

"Of course, if T. Brassey put it in that way, the directors would be delighted to meet his views. They had merely intended to avoid trouble, by proposing one transaction instead of two. But it was for T. Brassey to decide." Then followed a second repetition of the entire argument, to which T. Brassey listened with great patience. Again the leave-taking process was gone through; and, again, as if a mere casual remark—"The directors understood that the company's obligations were equivalent to cash, as, in point of fact, they were at 3 per cent. premium, and therefore worth more than bank notes."

"In that case," T. Brassey rejoined, "it would be easy for the company to convert them, and to pay him in money. He did not wish for more than his price. The advantage to be derived from the premium on the obligations might be very large. So much the better for the company, but he had explained his own invariable system."

It would be intolerably tedious to attempt a more detailed account of the entire conversation. In a word, the half hour for which T. Brassey had imprisoned his countryman, lasted from six till nearly ten P. M., when the deputation at length retired, making arrangements for a second interview. The Italians were thoroughly beaten and tired out with their own efforts. They had not made an inch of way. The regular payment, insisted on by the Englishman, they had never dreamed of really making. They brought their fullest experience of legal and Parliamentary tactics to bear on the unaided common sense of the great contractor, whom they endeavored to use; and they came to grief against his clear-sighted honesty. He never undertook their contract.—*The Builder*.

The religion of our Lord Jesus Christ, not only destroys the fear of death, but gives a full assurance, and a blessed foretaste of immortal happiness.

For "The Friend."

Baptism and the Supper.

(Continued from page 393.)

"Many of the remarks which I made with regard to Water Baptism,—that being in its nature shadowy and ceremonial, it belonged to 'the first things which He taketh away,' rather than to 'the second which He established—you will see, will apply also to the elementary or outward Supper. Friends do not believe either of them was instituted by our Lord, who was, and is Himself the Bread and Water of Life;—The Lord's Supper,—the realization of those words, 'I will come in to him, and sup with him, and he with Me; without which we are not of His Church,' 'Except ye eat the flesh of the Son of Man, and drink His blood, ye have no life in you,'—like unto His baptism, 'If I wash thee not, thou hast no part with Me,'—is a Spiritual experience. It is not by these supposed ordinances, but says the Apostle Peter, 'to us are given exceeding great and precious promises, that by these ye might be made partakers of the Divine nature.' And whilst some think that the outward observances may aid in the attainment of the substance, (and far be it from us to suggest that this is not to some extent the case,) yet Friends believe, that to a very far greater extent, and in a far greater degree, do those observances, and the great importance attached to them, cause the mind to be diverted from, and fall short of, the enjoyment of the Blessed Reality.

"We readily admit that Christ broke bread with His disciples; and that after He left them, they were accustomed to do so among themselves; that 'the breaking of bread' was indeed a prevalent practice with them, and that the injunction, 'This do in remembrance of Me,' might apply to the 'Passover supper' which He was then keeping, or to the practice of 'breaking bread,' or to both; and that these early Christians had their public repasts, of which the rich and the poor partook together, their 'love feasts,' in which they did 'show forth the Lord's death.' But to 'show forth the Lord's death,' and to partake of 'the flesh and blood of Christ,' are, it is obvious, two different things. Friends deny that our Lord instituted any outward observance as of permanent obligation on His Church; or that the practice of the early members thereof, rendered it so, any more than did their having all things common, their abstinence from things strangled, their washing one another's feet, or their anointing the sick with oil, make similar practices incumbent upon us.

"It is very worthy of remark, that whilst our Lord laid down for His Church no such observances, He continually raised the thoughts of those around Him, from the things of the earth, to the higher truths of His kingdom. Thus did He take occasion, when drinking water at the well of Samaria, to tell the woman and ourselves of that *Living Water* which He gives, and which He is. But He did not thereby establish any special connection between *that truth*, and *that well*, even Jacob's well. So when the Jews followed Him, because they 'did eat of the loaves, and were filled,' He told them of 'that Meat which endureth unto Everlasting life,' and of 'the Bread which cometh down from Heaven.' And so again when He was at supper with His disciples, he uses the bread and the wine, as figures of the body which should be broken, and the blood which should be shed for the

remission of sins; and teaches them, that as their bodies are fed and nourished by the outward food, so might their souls feed on Him whose flesh is meat indeed, and whose blood is drink indeed.' 'This,' said He, 'is that bread which came down from Heaven; not as your fathers did eat manna and are dead; but that eateth of this bread, shall live for ever.'

"Therefore, although Christians while they are partaking of the bread and wine, if they do so, not unworthily, but in singleness of heart, in remembrance of Him, may be permitted to 'eat the flesh, and drink the blood of the Son of Man,' there is no necessary relation between the external ceremony, and the spiritual eating and drinking. But rather, we are bound to testify, that in any and every time or place, without the use of any elements, yea, as oft as they meet together, the true Children of God, they who live by faith in the Son of God, may be favored to feed together, in a spiritual sense, on the body and blood of Christ, and experience the truest Communion with their Holy Head, and one with another in Him.

"Great stress is laid, by those who regard the outward supper as an ordinance of Christ, on the words, 'Do this in remembrance of Me.' But Matthew, who gives a very minute description of our Lord's Supper with His disciples,—and it should not be overlooked, that in eating this supper, our Lord was 'keeping the Passover with His disciples,'—Matthew, who wrote at a much earlier date than either of the other Evangelists, who was himself present, says nothing of those words upon which alone could the supposed new ordinance have been founded. Mark, the Son and companion of Peter, whose narrative is supposed to have been written under his superintendence, if not from his dictation, which is throughout characterised by the exactness of its details, makes no reference to them. Neither does the other eye witness, the beloved John, who 'was leaning on Jesus's bosom.' Of the four Evangelists, these words are given by Luke only. But from this we do not conclude that they were not spoken; on the contrary, from the testimony of Luke, and from their repetition by Paul, we fully accept them as a part of the discourse. But we do conclude therefrom, that in the estimation of the Apostles, who themselves were present, but did not record them, that there was no thought on the part of our Lord, to base thereon, either a continuance of the then present, or the establishment of a new ordinance in His church. I said that we should not overlook that this was the Passover supper; instituted in remembrance of Israel's deliverance out of Egypt. Buxtorf and other writers inform us, that 'at the celebration of the Passover, it was the custom among the Jews, for the master of the family to take bread, and bless and break it, and give it unto the rest; likewise to take the cup, and give thanks and distribute it: so that the very actions performed by Christ were 'paschal actions;' and He tells them at that 'feast of unleavened bread,' instituted in remembrance of their deliverance out of natural Egypt, henceforth, as oft as they eat it, to do it in remembrance of Him, their soul's Saviour and Deliverer out of spiritual Egypt. Hence the Apostolic exhortation, 'Purge out, therefore, the old leaven, that ye may be a new lump, as ye are unleavened. For even Christ our Passover is sacrificed for us. Therefore, let

us keep the feast, not with old leaven, neither with the leaven of malice and wickedness; but with the unleavened Bread of sincerity and truth.'

"But whilst on the solemn occasion of which we have been speaking, our Lord gave no commandment respecting the supper, he did respecting another act, in very positive terms. 'He riseth from supper, and laid aside His garments; and took a towel and girded Himself. After that He poureth water into a bason, and began to wash the disciples' feet, and to wipe them with the towel wherewith He was girded.' 'So after He had washed their feet, and had taken His garments, and was sat down again, He said unto them, know ye what I have done unto you? Ye call me Master and Lord; and ye say well; for so I am. If I then, your Lord and Master, have washed your feet, ye also ought to wash one another's feet. For I have given you an example that ye should do as I have done unto you.' Here are the accompaniments equally striking, and the words much more explicit, than those respecting the bread and wine.

"It is at once seen, that the washing of feet does not become a standing ordinance in the Church. The command is positive and limited, not moral and universal; having reference to the peculiar habits of the persons addressed, and binding only on them. What we have to learn from it, is a lesson of brotherly love and humility, a willingness to wash one another's feet, in the sense in which we are elsewhere enjoined, to 'give unto one of these little ones a cup of cold water.' And Friends can see no reason, why a different mode of interpretation is to be adopted, with regard to the bread and the wine.

"We cannot but esteem any departure from the truth, and simplicity, and spirituality of the Gospel, either in doctrine or practice, but as objectionable. Yet, apart from this, we are willing to admit, that there is little that is objectionable, in the 'breaking of bread,' or in the Communion of the Lord's table,' as it is observed by some Christian societies. But to how few, comparatively how very few, does this remark apply. If we review, and we can do so but most imperfectly, the history of this subject, from the day that our Lord 'did eat the Passover with His disciples,' to the present time, we shall see that the making it an outward ordinance or sacrament, contrary to its truly spiritual character, has been, and yet is, the prolific source of exaggerated and false notions, of hypocrisies, contentions, and woeful heresies, beyond perhaps any other subject, far beyond the power of words to express, or the human mind adequately to conceive."

Selected.

May Friends be careful to give our professed views, in regard to the right qualification and authority for the ministry, due place and practice among themselves, that so the Society may be preserved from the withering effects of formal, wordly exhortations, or lifeless doctrinal discourses, which can do no more than amuse the ear without affecting the heart. As with preaching, so likewise with teaching, and all other gifts bestowed for the edification of the church, they can only be imparted by Christ, and are to be exercised under the renewed anointing of the Holy Spirit.

Galileo.

(Concluded from page 394.)

After the first and second examination he was again allowed the privilege of residing in the Tuscan Ambassador's, a privilege which appears to have been granted him partly on account of his professed willingness to submit cheerfully to whatever demand the Inquisitors should make, and the high estimation in which his character was held by the powerful Duke of Tuscany and other eminent persons throughout Italy. After another examination, Galileo was finally conducted to the great hall of the Inquisition on the 22d of the 6th mo. 1633. and in the presence of the Pope's magistracy of the Roman power, the Pope being absent, was made "to kneel and hear the sentence, which declared him vehemently suspected of heresy, and condemned him to imprisonment during the pleasure of the Holy Office. As a salutary penance, he was ordered to say the Penitential Psalms once a week for three years. He was then made to recite the abjuration dictated beforehand by the Pope.

The following is an extract from the sentence of this tribunal: "We say, pronounce sentence, and declare, that thou, the said Galileo, by the things deduced during this trial, and by thee confessed as above, hast rendered thyself vehemently suspected of heresy by this Holy Office, that is, of having believed and held a doctrine which is false, and contrary to the Holy Scriptures, to wit: that the Sun is the centre of the universe, and that does not move from east to west, and that the Earth moves and is not the centre of the universe: and that an opinion may be held and defended as probable after having been declared and defined as contrary to Holy Scripture; and in consequence thou hast incurred all the censures and penalties of the Sacred Canons, and other Decrees both general and particular, against such offenders imposed and promulgated. From the which We are content that thou shouldst be absolved, if, first of all, with a sincere heart and a feigned faith, thou dost before Us abjure, curse, and detest the above-mentioned errors and heresies, and any other error and heresy contrary to the Catholic and Apostolic Roman Church, after the manner that We shall require of thee."

"It is said that Galileo, on rising from his knees after his abjuration, muttered 'Eppur si muove!' 'It does move, though!' This one of those fine things which are put in the mouths of great men, but which in fact are not said except by their biographers. It is indeed impossible that Galileo should have uttered such words as would have caused his instant consignment to the deepest dungeons of the Inquisition. Alone and without support in the midst of that stern assembly, dressed in mind and suffering in body, we may fairly suppose that, prudential motives apart, his wit, far from being sharpened, had been numbed by despair and anguish at his humiliation.

"Immediately after the ceremony, copy of the sentence and the abjuration were dispatched to all the apostolic nuncios. The Inquisitor General at Florence was ordered read both documents publicly in the hall of Inquisition, and to serve notices to attend all Galileo's disciples and adherents, and all public professors. Thus Aggiunti, Guido

all who loved their master best, were to participate in his humiliation.

Not one of the decrees or orders relating to the trial of Galileo is officially ratified by Pope. They all begin, it is true, with the words 'Sanctissimus mandavit,' but, being not the Pope's signature, they are to be considered as merely representing the fallible judgment of an assembly of cardinals. This is usually the case with the decree of 1616, as is the sentence of 1633. Neither Paul V. or Urban VIII. ratified these documents by their signatures. This fact is too important to be lost sight of. If indeed Galileo was persecuted (as he himself and all his followers have avowed,) he was not persecuted by the Pope infallible Vicar of Christ, but by Maffeo Barberini in his private capacity of a mean, sordid, vain man; the instrument in his hands being a subservient Congregation of lay cardinals. Even if we do not choose to censure the proceedings against Galileo a peremptory sentence, the fact still remains—that he was persecuted, that the Congregation were mistaken, and that he was punished unjustly. Tiraboschi the Jesuit, and by many other writers belonging to the Church of Rome, have so far from being considered as a misfortune, has been made a matter for exultation, and a peculiar manifestation of God's providence. The Vicar of Christ not having spoken infallibly, his infallibility could neither then nor in future ages be called in question. To Galileo, however, though he was a sincere Catholic, this view does not appear to have yielded any consolation."

This rigorous sentence was, after a time, modified to close confinement in his own cell at Arcetri, to which he was allowed to retire after an absence from it of about a year.

The letters of his amiable daughter during the time of her father's severe ordeal, show the warmth of her filial affection, and her attention to the details of all that concerned her honored parent. When Galileo was allowed to leave Rome and proceed as far as the house of the Archbishop of Siena, she writes, "I wish that I could describe the rejoicing of all the mothers and sisters on hearing of your happy arrival at Siena. It was indeed most extraordinary! On hearing the news, Mother Abbess and many of the nuns to me, embracing me and weeping for joy and tenderness."

"My name is erased from the book of the living," he wrote in a moment of bitterness. "I am," says Sister Celeste's ready reply, "say that your name is struck out of *de libro viventium*, for it is not so; neither in the other part of the world nor in your own country. Indeed it seems to me that if for a moment your name and fame were removed, they are now restored to greater brightness; at which I am much astonished, I know that generally 'Nemo propheta est in patria sua.' I am afraid that being quoted Latin I shall fall into some error. But indeed you are loved and honored here more than ever."

While ever thinking of his spiritual welfare, not one whit did he abate of his diligence in looking after his worldly affairs. She is him of the fruit and the wine which have been sold; she keeps a strict account of his money. We learn that the vines had been cut by hail, that thieves had been in the garden, that 'my lady mule' was behaving

arrogantly, and would carry no one now her master was away; that a terrible storm had carried off one end of the roof, and broken in pieces one of the vases which held the orange-trees.

"In succeeding letters we hear of more convenient trials. Sister Luisa was ill of an incurable complaint, and Sister Maria Celeste was in daily and nightly attendance on her. Seven of the nuns were down in fever. Sister Maria Silvia, once the loveliest girl that had been seen in Florence for three hundred years, was dying of consumption at the age of twenty-two. Then we hear of poor neighbors sick and starving; recommended, never in vain, as fit objects for her father's charity. From Siena the same kindness was shown to the convent as when Galileo was at Florence. He takes charge of divers small commissions, he forwards letters for the nuns who cannot pay the courier, buys cheap thread and saffron and flax for the Mother Abbess, chooses sonatas for the organist, Mother Achilea; he sends presents of gray partridges for the invalids, and cream-cheese, and the famous *panforte* of Siena.

"At length the weariness and sickness of heart caused by hope deferred began to tell upon Sister Maria Celeste. Worn by continual ill-health, by nightly watchings in the infirmary and daily occupations which could not be neglected, she would appear to have felt a presentiment of her approaching dissolution. She strove gently to prepare her father, telling him that it was for him to live long to the service and glory of the God who had endowed him with such a wondrous intellect, and to the comfort of many by whom his loss would be severely felt. But as for her, she could neither do much for the glory of God, nor be of much good to any one, and her living or dying would make but little difference.

"When at length the news reached Sister Maria Celeste that her father's prison had been changed to Arcetri, and that he would shortly set out on his return, she had not long enough left in her to be glad. 'I do not think,' she wrote on the 3d of December, 1633, 'that I shall live to see that hour. Yet may God grant it, if it be for the best.'

"Her last prayer was granted. Before she lay down in her narrow bed side by side with her sister nuns in the little convent cemetery, she was allowed once more to embrace her father."

Galileo's health and spirits declined so rapidly after his daughter's death that it seemed to him at first as if he were soon to follow her, but he survived her about eight years. "Though broken down by grief, the habits of industry acquired in youth could not be laid aside in old age. Work was more than a consolation; it was a necessity to him. But he felt the gradual approach of mental decay. 'My restless brain goes grinding on,' he wrote to Micanzio, 'in a way that causes great waste of time; because the thought which comes last into my head in respect of some novelty, drives out all that had been there before.' He was then engaged in completing the 'Dialogues on Motion,' wishing, as he told Diodati, that the world should see the last of his labors, before his time of departure came. But as he wrote, thoughts crowded thick and fast upon him, so that his work increased, while each day lessened his span of life."

In 1637, just before his sight failed him,

Galileo made the discovery of the moon's libration. He says in a letter, 'I have observed a most marvellous appearance on the surface of the moon. Though she has been looked at such millions of times by such millions of men, I do not find that any have observed the slightest alteration in her surface, but that exactly the same side has always been supposed to be represented to our eyes. Now I find that such is not the case, but on the contrary that she changes her aspect, as one who, having his full face turned towards us, should move it sideways, first to the right and then to the left, or should raise and then lower it, and lastly incline it first to the right, then to the left shoulder. All these changes I see in the moon; and the large, anciently known spots which are seen in her face, may help to make evident the truth of what I say.'

"This was the last of the long list of discoveries Galileo was permitted to make. His sight rapidly decayed, and blindness was soon added to his other miseries. 'I have been in my bed for five weeks,' he wrote to Diodati, while there still remained a vestige of hope that the blindness might not prove incurable, 'oppressed with weakness and other infirmities from which my age, seventy-four years, permits me not to hope release. Added to this (*proh dolor!*) the sight of my right eye—that eye whose labors (I dare say it) have had such glorious results—is forever lost. That of the left, which was and is imperfect, is rendered null by a continual weeping.'

"Alas!" he wrote again to the same friend a few months later, 'your dear friend and servant Galileo has been for the last month hopelessly blind; so that this heaven, this earth, this universe, which I by my marvelous discoveries and clear demonstrations had enlarged a hundred thousand times beyond the belief of the wise men of by-gone ages, henceforward for me is shrunk into such a small space as is filled by my own bodily sensations.'

"But when his blindness was known to be without earthly remedy, then complaint ceased, and, instead of enlarging on his misery of mind and body, he only desired his friends to remember him in their prayers."

The last work of his old age was a short treatise on the secondary light of the moon, in which he combated the opinion of a professor at Padua, who maintained that that body was phosphorescent and shone from its own light. In reference to the writing of this book, he says, "I am obliged to have recourse to other hands and other pens than mine, since my sad loss of sight." His labors were interrupted by an attack of low fever, accompanied by palpitation of the heart, which terminated his life on the 8th of 1st mo. 1642, after two months' suffering, borne, says his biographer, "with most philosophic and Christian fortitude."

Selected.

Our religious Society has always regarded the institution of the Sabbath as part of the typical law of Moses, and as such believes it to be abrogated by the coming of Christ the great Antitype, in whom all the types and shadows of that dispensation were fulfilled. He being the true believer's Sabbath or rest. It is therefore a departure from what we believe sound words, and calculated to strengthen an error in the professing church, to designate the first day of the week as the Sabbath.

For "The Friend."

Women—their Wages.

Among the books that have grown out of the agitation of the question of the position of woman in the social and political circles, a small English work entitled "Woman—her Position and Power," is worth perusal. Of course we do not endorse all its author, W. Landels, says. Below will be found an extract from the work, on the subject of women's wages.

"We do not so understand the principles of political economy, as to suppose that legislation can, or ought to determine the amount of remuneration which woman shall receive for her labour. If the labor-market be overstocked, and the rate of remuneration low in consequence, we have no faith in the permanent result of any attempt to raise or keep it up by artificial means. Legislation cannot make water flow upward, nor destroy the connection between cause and effect. Nor will public sentiment be very effectual in inducing employers to give so much for work done, when there are many glad to do it equally well for so much less. Nevertheless it behoves all parties to do what they can to secure, that where woman does the same work as man, and does it as well, she shall not be paid at a lower rate than he. It is no interference with the laws of political economy to aim at such a result, but a blow at artificial distinctions of sex, which ought not to exist, and which, because they are artificial, are doomed to destruction. Go they must, sooner or later, and we are working in accordance with natural laws, when we do what we can to hasten their exit. Many of the advocates of woman's rights on the other side of the Atlantic would never have gone to such absurd lengths, had not these unjust inequalities supplied provocation. And both here and there, a manifest earnest determination to get rid of them, would do not a little to prevent and to settle agitations which are neither seemly nor profitable."

We have been requested to publish the following communication.

For "The Friend."

An easy and sure way to help the Freedmen.

In the progress of science and thrifty living, it is true that "knowledge is power." When the plan was first conceived of sending seeds to Freedmen at points where our work favored it, one of the most prolific agencies of help was established. In Tennessee it is desirable to extend a similar one in the spreading of good journals, books, drawings, farm stock, seeds, implements, &c.

In course of visiting the schools and families of Freedmen, frequent opportunities offered to inculcate methods of farm management and household order. Such opportunities were followed by many inquiries, as, "How do you do this?" The answer was given by the help of the blackboard—for instance, the drawing of a field after the oats crop is supposed to be just removed, is laid off and lined, as a good farmer would his field with a plow, preparatory to hauling out manure. The spotting and spreading, and all the routine crops, and harvesting, &c., till that field comes in again with oats—the liming, top-dressing and pasturing, are all illustrated successfully. The interest thus elicited is wonderfully pleasing to both parties

concerned. Many ask for farm-books and papers, because they have no living examples.

In pursuance of the evident leadings of these inquiries, and of the maxim quoted in the second line of this, it is now proposed that every liberal-minded farmer or other person, who is able, may have the opportunity of taking in hand a few pupils as proteges in the South to learn sensible farming and gardening. He may either subscribe for and send to one of the addresses which will be sent to him, a farm journal or other periodical; or he may fold his own papers, after having read them, and put on a two cent stamp, and address.

He may, if his heart approves, send choice seeds, even plants, by mails. He may send eggs, boxed up in saw-dust, and young stock, trees, &c., by railroad. Very striking results would be seen in a few years. To be convinced of this, one only needs to behold the present agricultural destitution, the great improvements where fair experiments have been tried, and to give due consideration to the following facts, viz: The Freedmen are fast becoming freeholders of lands. One in Blount county owns and manages 600 acres, with the mansion, where once he and his family were slaves. One in Knox county 400 acres, bought of the son of his former master, and doing well. Many own from five to sixty acres in places familiar to us; and in one county in Alabama, 5000 acres are held in fee by Freedmen—all having been bought by them since emancipation—and nearly all paid for.

They seek to know the best way of farming generally, fencing, managing manures and crops, fruit culture and canning. One man said, "Do bring us down some good breed of chickens: some that lay big eggs; and make plenty of meat." It would be pleasant perhaps for the donors, feeling this direct care and interest, to try a small correspondence with their proteges, and find out what good comes, or fails to come, and urge them to save money and pay up subscriptions themselves after the first year's help.

It will be understood that the persons to be named will be almoners in the neighborhoods. That will be attended to by responsible parties. A few intelligent white persons are among those proposed, where the distribution would be somewhat difficult for the colored. This plan, if extended successfully, would certainly raise a great interest also among the white farmers and tradesmen, which, it is easy to see, ought to be prudently met and satisfied.

The club plan for papers will be employed where practicable. Teacher's journals or other periodicals for schools, would be very useful.

Any one wishing to send books, periodicals, drawings, seeds, plants, eggs, stock, implements, either for housekeepers or for the farm and garden, or any other aid to right living, will please to write to the undersigned, informing what is the proposed donation. A name or names, with P. O. or other address, will be sent back, so that the purpose may be answered, and such things distributed in places somewhat distant from each other. The letter should be marked so that it might be read either by Y. Warner or Wm. P. Hastings, Maryville, Tennessee.

The joy of heaven will last and be perpetuated for ever and ever, without end.

Rambles for Relics.

I am neither an antiquarian nor an archaeologist, in pretension, and I lay no claim appear in print as a "scientific American," but, having a liking for old and curious things which has led me, for the last two years, look about and into earth-works, mounds, shell heaps, stone piles, cave sepulchres, and other remains of the primitive people of Tennessee, I assume the privilege of recording your journal some of my observations. A field of my late rambles is in Jefferson county not far from the railway station, at Strawberry Plains. Near that village the Holston river, flowing from the East, turns in a northerly direction, and, after accomplishing a circuit of five miles, comes back to within half a mile of its former course, shaping a tract of land known as "The Bent."

My attention was directed to the Bent by the Holston, hearing that a stone imbedded in it was not a "giant," but a dwarfed representation of the human form—had been discovered in a cave of one of the limestone ridges of the district. The idol (a real antique) was exchanged for a bushel of wheat, and sent to Knoxville; hence it passed through successive hands to Washington, and it now occupies a conspicuous place in the archaeological collection of the Smithsonian Institute.

The ordinary relics of the ancient Cherokee scattered in the valleys of the Tennessee and its tributaries, occur at the Bent; such flint arrow and spear heads, axes, hatchet cores, flakes, pestles, fragments of pottery and rough, discoidal stones, called weight stones, probably as rollers in a game of skill described by the old trader and author, Adair. Rambling from this class remains to the left by the same race, I noticed traces of an arena, or chunkyard—a place of amusement and exhibition, where captives in war were sometimes immolated—within an elevation earth a foot and a half high, inclosing a space twenty-five feet in diameter. In the center in a plain raised above the surface, was a hole, which had held the stake to which the victim was fastened. The area resembles a ring of a circus in the fields, after the covering is removed.

Objects of a higher grade of art than that that have been mentioned, which probably belonged to a different people, are sometimes turned up by the plow. Of such was one brought to me, after they had been thrown aside as worthless, but which rose astonishingly in their flight of valuation—many better too high to be reached by my short name—I specify a disk, with a round edge, cut silicious rock, five inches in diameter and inch and a half thick, having a shallow cavity in both of the flat sides, and a perforation the centre of the plane; a cup-shaped out-let of a fine variety of earthenware, coated with a dark, shining pigment which would be called glazing, if the art of the glazer had been known to the potters of the "Stone Age" the imaged head and neck of a sea-turtle, argillite, evidently a fragment; and for rare specimen of taste and skill in representative forms in stone, the combined figures of a pi and bird—an orifice in the end, communicating with the bowl of the pipe on the base of the image.

The head and neck, in the outline, characterize a buzzard at rest, looking down upon its prey. Any one who has observed the traits of this species of hawk must acknowledge

the resemblance. The object, which is incased in a fine variety of mica slate, is inches long and weighs more than two pounds. It was found by a laborer, on the bank of the Holston, at a point where freshet of 1867 had washed away two feet of surface soil.

On the east side of the river an ancient mound was observed in the Bent, near a curve in the bank, which has been scooped to form a beach or landing place. This was occupied, evidently, by the recent Indians, for their misspagan earthenware in vessels, rough hatchets, and arrow heads, were found in the locality. There, within sight of a century back, fancy might figure warriors of the last tribe that roamed through the cane meadows of the Holston, habited, before embarking in their canoes, on a onslaught down the river, into the "dark country;" or, after their return from a successful expedition, with "fresh scalps." The grass or wood inclosures, in ruins, on hills made by art or on natural bluffs, are frequented by persons living, who remember the natives described them as places for council meetings. The same race sometimes buried their dead in the mounds. This fact, in connection with the other, though it is important to the investigator, in ascertaining their character and in separating original accidental deposits, need not confound him, as it has done some authors.

On inspecting the mound under our immediate notice, the "oldest inhabitant" reported when his father drew the first furrow and it, large oak trees grew upon the summit. Being now without any protecting vegetation, and having been ploughed over for seven or five years, it has lost its original proportions. It retains the shape of a truncated cone fifteen feet high, and one hundred and eighty feet in circumference, at the base.

On excavation to the bottom, eight feet in depth, showed its composition to be, chiefly compact sand-loam, with such an intermixture of clay as would come from the red surface soil with portions of the stratum. Two large pits or sink holes, probably contributed some of the material. From the cavity were brought out, at intervals, for several feet down, coal, ashes, burned clay, and fragments of pottery.

At first regular deposit was reached at a depth of four feet, below the original summit, consisted of splinters of wood and strips of partially decayed, laid horizontally. Below this layer, after the soft black earth mold, in which it was embedded, were, through, the outline of a human skeleton lying on the left side, the head being directed to the east, and the leg bones doubled first, and then bent, a position regarded, at first, as unusual, but which conformed to the mode of burial throughout the mound. The bed of the skeleton rested upon a clay foundation, two or three square yards in extent.

Organic remains were well enough preserved to allow removal of the skull and the ribs, bones of the trunk and the members. Below these remains, there appeared various depths, from two to four feet, two more skeletons on the same level, laid in the same manner, with a covering of wood bark. Skeletons were found down to the bottom of the excavation—no particular po-

sition having been observed as to the cardinal points.

(To be continued.)

THE FRIEND.

EIGHTH MONTH 12, 1871.

The rules of life as set forth in the gospel, are as remarkable for their simplicity, as the means provided to enable man to comply with them are full of mercy and wisdom. Christ taught that the service required of man by his compassionate Creator was not a service of mystery, of ritual and ceremony, but consisted in obedience and love. Obedience, springing from heartfelt love to his heavenly Father as supreme, and love for his fellow men, as for himself. On these hang all the law and the prophets, and when this service is fully rendered, it must ensure the sacrifice of man's will to that of his almighty Benefactor, and forgetfulness of self, to promote the good of his fellow probationers; for which he enjoys the peace that passeth understanding. This had been the substance of the religion of the multitude that no man could number, that John saw standing before the throne and before the Lamb, clothed in white robes and with palms in their hands, who had come out of all nations, and kindreds, and people, and tongues, having washed their robes and made them white in the blood of the Lamb.

The work of this religion is the conquest of self, attained by the discipline of the cross, under the illumination and guidance of the grace of God, which bringeth salvation, and has been given to every man to profit withal. It thus draws and binds together all Christ's true disciples, however situated, into one family, of which He is the glorified Head, and prompts them to one common purpose, working out the soul's salvation with fear and trembling, rendering glory to God in the highest, and promoting peace on earth, good will to men, while it requires in all to whom a knowledge of the truths recorded in the holy Scriptures has been extended, living, operative faith in Christ as the Redeemer, who offered up himself as a propitiation for the sins of the whole world, and likewise in the manifestation of the Holy Spirit, by the aid of which alone, man can make the greatest and the most hambling sacrifice exacted from him, the sacrifice of himself; it admits of no substitute for unreserved obedience to manifested duty, and the practical piety resulting from it.

All Christian denominations claim to believe in the divine revelation of the religion they profess, and in its transforming power, when sincerely embraced. But if we admit the truth of the declaration that a tree is known by its fruit, we must concede that the creeds, man's truly held, are the expression of their principles and thoughts upon themselves, exhibited by their conduct and conversation, and the influence they exert on those around them. Thus, there are few of the professors of Christianity but will confess the danger of possessing riches, and the consequent theoretic value of poverty, admitting the importance of seeking the kingdom of heaven and its righteousness, in preference to striving for the accumulation of wealth; but in practice how generally they contradict the precepts they profess to believe to be true; and show, by the course of their lives, assent to the belief

that the eager pursuit, if not the enjoyment of the things pertaining to this life only, is of far more importance and interest to them, than the self denying struggle to lay hold of the treasures reserved for the righteous, in the world beyond the grave. As it is with regard to the practical service of mammon, so it is with very many, in relation to the other requirements of the gospel, their conduct refutes their profession.

Were we dependent on the letter of the Scriptures alone, for a knowledge of the primary rule of faith and practice, we could readily understand how those who have to trust to others for such knowledge of the letter as they may choose to communicate, or those who read or study the Scriptures but little, if at all, would frequently forget their teaching, or lightly appreciate the application of the truths taught in them to the pressing, everyday duties and temptations of life. With a general admission of their truths and of their divine origin, they would be easily forgotten or overlooked, as a guide in thought, words, and actions. But the rule or guidance of life is left to no such uncertainty. "The grace of God that bringeth salvation hath appeared unto all men, teaching us that denying ungodliness and worldly lusts, we should live soberly, righteously and godly in this present world."

The Society of Friends have ever held that Christ's religion is a ministrations of life to all who receive it in sincerity and simplicity. Its rightly qualified ministers, and other godly members have inculcated no notional or outside religion, but have called all to Christ within; the light and the life within, the inestimable value of which, as an ever present teacher and guide, they have set forth in their scriptural clearness and fulness, not merely by words, but as distinctly exhibited and enforced in its practical effects on the lives and conduct of all who continue to yield obedience to its internal manifestations. It is this, and this only, which gives the humble, sincere christian, however unlearned in the knowledge of the schools, a true understanding of the sacred truths contained in the Scriptures referring to life and salvation; for as Wm. Penn says, "The inward sight, sense, and knowledge of the will of God, by the operation of his Light and Spirit, shining and working in our hearts, and the spiritual sense of that blessed appearance of the Son of God in the flesh, and the moral end of it to our benefit and advantage, are no more conceivable by carnal men, than is regeneration, without which no man can enter into the kingdom of God."

It was practical belief in this doctrine, and conformity thereto in word and deed, under theunction of the Holy One, that gave such striking success to the founders of our religious society, in spreading the pure, spiritual doctrines of the gospel, and which produced the no less striking oneness of faith in their converts, and sameness of its blessed fruits, the support of the testimonies growing out of it. The same cause and effects have been exhibited by the faithful members in every generation since its rise. The promulgation and support of those pure principles, and the exemplification of christianity as a ministrations of life, are a most important trust committed to us as a people. It is worth while seriously to ponder, what is the cause why so large a part of the members have ceased to show the

same marked difference in their ministry, their manners, their habits and style of living, from those who openly profess that the Scriptures are their only guide, as once characterized Friends.

We are obliged to our friend in the West, who sent us the reply of Supt. Hoag, to an article that appeared in "The Lawrance Tribune," and also the Address of Col. W. Penn Adair, in behalf of the Cherokee Nation. We cannot well give space for them in our columns at present, but may find use for them hereafter.

As the present volume of "The Friend" is near completion, we wish to remind our Subscribers, that the terms are \$2 in advance, and \$2 50 if payment is deferred until after the sixth number. We have been much benefitted by, and grateful for the almost universal compliance of our Subscribers with prompt payment in advance, and as the whole pecuniary proceeds are required to defray the expenses of publication, without compensation to "The Contributors," they feel free to solicit a continuance of the liberal patronage heretofore extended to the Journal, and the same promptness of payment therefor.

SUMMARY OF EVENTS.

FOREIGN.—A London dispatch says: The mooted conference of President Thiers, Baron Von Bismarck, and Lord Granville, ostensibly on the eastern question, is really to be held in relation to the International Society. The British Charge d'Affaires at Teheran telegraphs to the Foreign Office that the famine in Persia is over, but that provisions are still at an exorbitant price. The weather throughout England continues favorable to the crops.

The Treaty of Washington is still the subject of discussion in the House of Commons. Some of the speakers insist that England was clearly right in the attitude she formerly assumed, and that that position had been yielded and America indemnified. In spite of the prohibition of the authorities an attempt was made on the 5th inst. to hold a public meeting in Dublin for the purpose of demanding the release of the Irish political prisoners. A great crowd having assembled in Phoenix Park, they were attacked and dispersed by the police after a severe contest, in which many persons were killed and a greater number badly wounded.

The French government will soon introduce in the Assembly bills against the International Society.

In consequence of rumors as to the intentions of the International Society, all vessels laden with petroleum are forbidden to ascend the Seine to Paris.

This dangerous association, composed chiefly of workmen in the large cities, was, it is stated, founded in London in 1864. At the present time sections of the society exist in France, England, Belgium, Spain, Italy, Austria, Germany, Holland and the United States. Paris alone has three sections, and is directly under their control, in Lyons thirty, in Marseilles twenty-seven and all the other prominent cities of France have more or less organizations controlled by the Internationals. The committee of the Assembly has reported unfavorably upon the proposition for the transfer of the Chamber to Paris.

Cholera has appeared in the south of France. Measures have been adopted to prevent the spread of the disease.

The French government, in order to meet the necessary demands on the Treasury, propose to raise 244,000,000 francs yearly by customs and duties, and to make a large increase in the taxes on beer, sugar, wines and liquors, beer, tobacco, paper, matches, and various other articles, so as to provide an additional revenue altogether of 483,000,000 francs.

The minister of Finance has completed the payment of another instalment of the German indemnity. The German army of occupation has been reduced to 150,000 men.

The only French prisoners now in Germany are ten officers and eight hundred privates in hospital, and ten officers and seventy privates imprisoned for various offences.

The French post office authorities are about arranging a money order system with England and the United States. Count Bismarck has been appointed Minister of Foreign Affairs in place of Jules Favre resigned.

The advices from Algeria continue alarming. The natives of the province of Oran have joined the insurrectionists, and the French commander, who they had alleged, refuse to obey orders, and the general commencing threatens to resign.

Trains for the transportation of passengers and freight will commence running through the Mont Cenis tunnel on the 15th of next month.

The Swiss Official Journal promulgates a law recently passed by the Cortes, authorizing the government to grant a general amnesty for political offences.

The publication of a Constantinople newspaper, *La Turquie*, is suspended by order of the Turkish government, in consequence of an attack on the pope which was contained in its columns. A street railway has been opened to the public in Constantinople, and is said to be a great success.

A census of Japan has been published, which shows that on the first of 24 mo. last the entire population was 34,783,321. The total revenue of the country is about \$24,000,000.

The Mexican Congress have counted the Presidential vote, and find it so divided between the three candidates that neither has the constitutional majority. General Diaz has a small majority over President Juarez, and an effort is being made to induce the adherents of the latter to accept of Diaz. The decision is a very important one for Mexico, but the probabilities are that, whatever that may be, a rancorous civil war will be the consequence.

A Versailles dispatch of the 7th says: The first court-martial for the trial of communists opened to-day, and the judgments were read. Some of the prisoners at the proceedings with levity, whereupon the court prohibited them from communicating with one another. The examination will begin to-morrow.

Troubles continue in portions of France occupied by the Germans. A Prussian subject having been hanged July 4th at Poligny, in the department of the Moselle, a riot followed, in which the German soldiers wounded about twenty citizens, and threatened to burn the place. Quiet was restored, and the authorities promise the arrest of the offenders.

UNITED STATES.—The Public Debt.—On the first inst. the total debt of the United States, less cash in the Treasury, was \$38,328,858, having been reduced \$8,701,377 since 7th mo. 1st last, and \$242,134,502 since 31st mo. 1st, 1869. The balance in the Treasury consisted of \$83,743,709 in coin, and \$8,163,318 currency. The debt on which no interest is paid amounts to \$419,565,680.

The Internationals in Philadelphia last week numbered 319, including 156 children under two years of age. There were 96 deaths of cholera infantum, 24 of miasmus, 21 of debility, 40 of consumption, and 10 old age. The average temperature of the last Seventh month, according to the Pennsylvania Hospital record, was 76.6 deg., and the highest temperature to 80.7 deg.

The amount of rain during the month 6.81 inches. The average of the mean temperature of the Seventh month for the past eighty-two years, is stated to be 75.83 deg., the highest mean of temperature during that entire period was 81 deg., in 1793-1858, the lowest mean 68 deg., occurred in 1811, and in fall of the last seven months of 1871 has been 28.13 inches, against 29.37 inches in the corresponding months of 1870.

American ship building and commerce has been on the decline for some years past. In 1869, the exports and imports in American vessels amounted to \$307,247,572, and in foreign vessels to \$255,040,783. In 1870, the exports and imports in American vessels had fallen to \$352,849,769, and those in foreign vessels had increased to \$639,907,500.

Felix Braun, of Pittsburg, Pa., has been appointed Commissioner of Indian affairs in place of General Peck, resigned.

The destruction of life by the explosion of the steamer Westfield at New York, proves to be greater than was at first apprehended a week ago, the number of the dead reached seventy-nine, and of 110 persons remaining in the Hospital, it was not expected that fifty would recover.

The Chicago census, just completed, shows a population of 334,270; viz: 170,276 males, and 163,994 females.

Last month, report of the Department of Agriculture, estimates the cotton crop of this year at from 2,700,000 bales to 3,200,000, according to the market price. The crop of hay has fallen below the average, the potato crop generally good.

The Markets, &c.—The following were the quotations on the 7th inst. *New York*.—American gold, 110 U. S. sixes, 1881, 113½; ditto, 5-20's, 1868, 113½; ditto 10-40, 5 per cents, 113½; Superfine flour, \$4.65 a finer brands, \$5.25 to \$5.55. No. 1 Chicago super, 53½; No. 2 do., 51½; and No. 3 do., 49½. Indiana, \$4.50 white Michigan, \$1.50. New Ohio oats, 60 a 62 cts. Jersey, 55 a 58 cts. Western mixed corn, 65 a 66. Middling cotton, 19½ a 20 cts. *Philadelphia*.—Cott. 19 a 20 cts. for uplands and New Orleans. Superfine flour, \$4.75 a \$5; finer brands, \$5.25 to \$5.50. No. 1 western red wheat, \$1.31 a \$1.35. Yellow corn, 68 cts. Oats, 45 a 48 cts. Timothy seed, \$2.75. The market was dull, choice selling at 7 a 7½ cts.; fair good, 5½ a 6½ cts., and common, 4 a 5 cts. per lb. gross. About 19,000 sheep sold at 5 a 5½ cts. per lb. gross, 2,624 hogs at 7 a 7½ cts. per lb. net for corn fed. *Baltimore*.—Choice white wheat, \$1.35 a \$1.60. No. 1 Indiana red, \$1.35 a \$1.40. White corn, 73 a 75 cts. yellow, 66 a 68 cts. Oats, 44 a 48 cts. *St. Louis*.—2 red winter wheat, \$1.22½; No. 3 do., \$1.11. No. 4 corn, 43 cts. Oats, 35 cts. Lard, 10 cts. *Chicago*.—No. 2 spring wheat, \$1.04. No. 2 mixed corn, 44½. No. 2 oats, 31½ cts. Lard, 8½ cts.

RECEIPTS.

Received from Thos. E. Lee, Pa., \$2, vol. 45, and Sarah P. Lee, vol. 45; from Sarah A. Cope, \$2, vol. 45.

FRIENDS' SELECT SCHOOLS.

These schools, under the care of the four Monthly Meetings of Philadelphia, opened after the suspension on Second-day, 9th mo. 4th, 1871. The School, on Cherry St., above Eighth St., is under the care of Zebecde Haines as Principal. The Girls' School on Seventh St., below Race St., is under the care of Margaret Lightfoot. There are also two Primary Schools, the elementary instruction of those children who are not going to attend the higher schools, on which is held in Meeting-house at the corner of 5th and Noble streets, and the other in the Boys' School building on Cherry St.

The attention of Friends residing in this city and neighborhood, is particularly invited to these schools in the principal ones the children may acquire a high education embracing a considerable variety of the full branches of study, at a moderate cost; and in primary schools the pupils are well grounded in that of a more elementary character.

It is desirable that applications for the admission of children should be made early in the session, and parents returning children to the schools should do them at the beginning of the term.

WANTED.

A Teacher for the Classical Department of the B. School at Westtown; to commence his duties at opening of the next Session, on the first of the Eleventh month. Application to be made to

Joseph Passmore, Goshen, Chester county, Samuel M. Pritchard, Philadelphia, or Charles Evans, M. D., 702 Race Street.

TEACHER WANTED.

A well qualified teacher is wanted to take charge of a small Friends' School.

Application may be made to Henry Menden Howellville P. O., or Thomas Smedley, Lima P. Delaware Co., Pa.

FRIENDS' ASYLUM FOR THE INSANE—*New Frankford, (Twenty-third Ward), Philadelphia*—Physician and Superintendent—JOSHUA H. WASHINGTON, M. D.

Applications for the Admission of Patients may be made to the Superintendent, or to any of the Board Managers.

DIED, on First-day night, Sixth month 25th, MARY THOMAS, aged 63 years, a member of Philadelphia Monthly Meeting.

—, on Second-day, Seventh month 3d, 1871, S. BROOKS, M. D., in the 55th year of his age, a member of the Western District of Philadelphia.

DIED, on Fifth-day, the 3d inst., ELWOOD RICE in the 61st year of his age, a member of the North District Monthly Meeting.

WILLIAM H. PILE, PRINTER.

No. 422 Walnut Street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

OL. XLIV.

SEVENTH-DAY, EIGHTH MONTH 19, 1871.

NO. 52.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Age, when paid quarterly in advance, five cents.

Overwork of the Brain.

J. S. Weir Mitchell has issued in pamphlet an enlarged edition of an article that he has lately appeared in *Lippincott's Magazine*, on "Overwork of the brain." He thinks that there is some peculiarity in our climate which renders the American people especially susceptible to the evil effects resulting from such violations of the laws of health as affect the nervous system. In consequence of this we do not perform the same amount of intellectual labor as our European relatives, without the danger of injuring the brain, for it is the organ mainly employed in such situations.

The early settlement of all parts of our country, the active, out-of-door life led by the pioneers, tended to develop physical strength and vigor; but in his view, in many of the large and more thickly settled portions, especially in the great cities, the nervous system is being overtaxed by "the cruel competition for the dollar, the new and exacting demands of business, the racing speed which the telegraph and railway have introduced into commercial life, the new value which great fortunes have come to possess as means towards social advancement, and the overeducation and overstraining of our young people." In the elaboration of this view he brings forward statistics of Chicago, a town in which the fierce competition and energy are perhaps more developed as in any city of the Union, comparing the number of deaths in that city, from different causes, in 1852 and 1862, he says that while the population has increased, the deaths from the different varieties of nervous disease is 20.4 times greater than in 1852, or in other words the proportion of deaths from these causes is four and a half as great.

Considering the question, why excess in mental should be more hurtful than in muscular labor, our author says: "The simple reason is, that mental overwork is harder, because as a rule it is closest or counting-room, or fast indoor work—sedentary, in a word, and man who is intensely using his brain is habitually employing any other organs, and he more intense his application the less active does he become. On the other

hand, however a man abuses his powers of motion in the way of work, he is at all events encouraging that collateral functional activity which mental labor discourages: he is quickening the heart, driving the blood through unopened channels, hastening the breathing and increasing the secretions of the skin—all excellent results, and, even if excessive, better than a too inoperative use of these functions."

"When a man uses his muscles, after a time comes the feeling called fatigue—a sensation always referred to the muscles, and due most probably to the deposit in the tissues of certain substances formed during motor activity. Warned by this weariness, the man takes rest—may indeed be forced to do so; but, unless I am mistaken, he who is intensely using the brain does not feel in the common use of it any sensation referable to the organ itself which warns him that he has taxed it enough. It is apt, like a well-bred creature, to get into a sort of exalted state under the stimulus of need, so that its owner feels amazed at the ease of its processes and at the sense of *wide-awakenedness* and power that accompanies them. It is only after very long misuse that the brain begins to have means of saying, 'I have done enough;' and at this stage the warning comes too often in the shape of some one of the many symptoms which indicate that the organ is already talking with the tongue of disease."

Another reason for the injurious effects of mental overwork is thus described: "We sternly concentrate attention on our task, whatever it be; we do this too long, or under circumstances which make labor difficult, such as during digestion or when weighted by anxiety. At last we stop and propose to find rest in bed. Not so, says the ill-used brain, now morbidly wide awake; and whether we will or not, the mind keeps turning over and over the work of the day, the business or legal problem, or mumbling, so to speak, some wearisome question in a fashion made useless by the denial of full attention. Or else the imagination soars away with the unrestful energy of a demon, conjuring up an endless procession of broken images and disconnected thoughts, so that sleep is utterly banished."

"Looking broadly at the question of the influence of excessive and prolonged use of the brain upon the health of the nervous system, we learn, first, that cases of cerebral exhaustion in people who live wisely are rare. Eat regularly and exercise freely, and there is scarce a limit to the work you may get out of the thinking organs. But if into the life of a man whose powers are fully taxed we bring the elements of great anxiety or worry, the whole machinery begins at once to work, as it were, with a dangerous amount of friction. Add to this constant fatigue of body, such as some forms of business brings about, and you have all the means needed to ruin the man's power of useful labor."

After mentioning among those who fre-

quently suffer from exhaustion of the brain and nervous system the overtasked men of science, manufacturers and railway officials, and indeed all classes of men who use the brain severely, and who have also "seasons of excessive anxiety or grave responsibility," he adds: "The worst instances to be met with are among young men suddenly cast into business positions involving weighty responsibility. I can recall several cases of men under or just over twenty-one who have lost health while attempting to carry the responsibilities of great manufactories. Excited and stimulated by the pride of such a charge, they have worked with a certain exaltation of brain, and, achieving success, have been stricken down in the moment of triumph. This too frequent practice of immature men going into business, especially with borrowed capital, is a serious evil. The same person, gradually trained to naturally and slowly increasing burdens, would have been sure of healthy success. In individual cases I have found it so often vain to remonstrate or to point out the various habits which collectively act for mischief on our business class that I may well despair of doing good by a mere general statement. As I have noted them, connected with cases of overwork, they are these: Late hours of work, irregular meals bolted in haste away from home, the want of holidays and of pursuits outside of business, and the consequent practice of carrying home, as the only subject of talk, the cares and successes of the counting-house and the stock-board. Most of these evil habits require no comment.

"The wearing, incessant cares of overwork, of business anxiety, and the like, produce directly diseases of the nervous system, and are also the fertile parents of dyspepsia, consumption, and maladies of the heart. Happily, functional troubles of the heart or stomach are far from unfrequent precursors of the graver mischief which finally falls upon the nerve centres, if the lighter warnings have been neglected; and for this reason no man who has to use his brain energetically and for long periods, can afford to disregard the hints which he gets from attacks of palpitation of heart or from a disordered stomach.

"When in active use, the thinking organs become full of blood, and, as Dr. Lombard has shown, rise in temperature, while the feet and hands become cold. Nature meant that, for their work, they should be, in the first place, supplied with food; next, that they should have certain intervals of rest to rid themselves of the excess of blood accumulated during their periods of activity, and this is to be done by sleep, and also by bringing into play the physical machinery of the body, such as the muscles—that is to say, by exercise which flushes the parts engaged in it and so depletes the brain. She meant, also, that the various brain-organs should aid in the relief, by being used in other directions than mere thought; and lastly, she directed that, during digestion,

all the surplus blood of the body should go to the stomach, intestines, and liver, and that neither blood nor nerve-power should be then misdirected upon the brain; in other words, she did not mean that we should try to carry on, with equal energy, two kinds of important functional business at once.

"If, then, the brain-user wishes to be healthy he must limit his hours of work according to rules which will come of experience, and which no man can lay down for him. Above all, let him eat regularly and not at too long intervals. As to exercise in the fresh air, I need say little, except that if the exercise can be made to have a distinct object, not in the way of business, so much the better. Nor should I need to add that we may relieve the thinking and worrying mechanisms by light reading and other amusements, or enforce the lesson that no hard work should be attempted during digestion.

"When an overworked and worried victim has sufficiently sinned against these simple laws, if he does not luckily suffer from disturbances of heart or stomach, he begins to have certain signs of nervous exhaustion.

"As a rule, one of two symptoms appears first, though sometimes both come together. Work gets to be a little less facile; this astounds the subject, especially if he has been under high pressure and doing his tasks with that ease which comes of excitement. With this, or a little later, he discovers that he sleeps badly, and that the thoughts of the day infest his dreams, or so possess him as to make slumber difficult. Unrefreshed, he rises and plunges anew into the labor for which he is no longer competent. Let him stop here; he has had his warning. Day after day the work grows more trying, but the varied stimulants to exertion come into play, the mind, aroused, forgets in the cares of the day the weariness of the night season; and so, with lessening power and growing burden, he pursues his purpose. At last come certain new symptoms, such as giddiness, dimness of sight, neuralgia of the face or scalp, with entire nights of insomnia and growing difficulty in the use of the mental powers; so that to attempt a calculation, or any form of intellectual labor, is to insure a sense of distress in the head, or such absolute pain as proves how deeply the organs concerned have suffered. Every act to read is sometimes almost impossible; and there still remains a delusion arising from the fact that under enough of moral stimulus the man may be able, for a few hours, to plunge into business cares, without such pain as completely to incapacitate him for immediate activity.

Without fail, however, night brings the punishment; and at last the slightest exertion of mind becomes impossible. In the worst cases the scalp itself grows sore, and a sudden jar hurts the brain, or seems to do so, while the mere act of stopping from a curbstone produces positive pain.

"Strange as it may seem, all of this may happen to a man, and he may still struggle onward, ignorant of the terrible demands he is making upon an exhausted brain. Usually, by this time he has sought advice, and, if his doctor be worthy of the title, has learned that while there are certain aids for his symptoms in the shape of drugs, there is only one real remedy. Happy he if not too late in discovering that complete and prolonged cessation from work is the one thing needful. Not a week of holiday, or a month, but probably a

year or more of utter idleness may be absolutely essential. Only this will answer in cases so extreme as that I have tried to depict, and even this will not always insure a return to a state of active working health.

For "The Friend"

Memoirs of Mildred Ratliff.

(Continued from page 405.)

"1809. 11th mo. 27th. I take my pen in hand whilst the rest are in bed. It seems to be the only quiet time I can get of late to do this part of my day's work: which, O my Father, I am almost out of heart of ever accomplishing. I am faint, and almost ready to despair of standing fast through all that to despair of standing fast through all that assaults, so as to finish the great work in due season. O Lord, my God! thou knowest I am weak, and my enemies many and strong, I am weak, and cannot of myself withstand them. If thou, everlasting Father, withdraw thyself from me, I shall fall by the hand of my enemy, who has long sought to take away my life. O Thou that art stronger than he. Thou, O Father, in whom alone my confidence stands, seest thou not how his malice is enraged against thy poor little handmaid? How has the cruel monster manifested this day his unwearied resolution to take away my life in Thee. And I know He will accomplish his cruel end, except Thou, O Lord, fight for me. Except thou hold me up, I shall fall. Thou knowest, O Father! I have no strength at all. I am unworthy, but thou art worthy; and the Beloved of thy bosom is worthy: for whose sake I humbly intercede that thou mayst be pleased to manifest thy power for my preservation. Oh forbid, most gracious King, that I should live to dishonor thy cause, or disobey thy command! Rather, O Father! when I can no longer stand in thy Truth, be thou pleased to cut short the work in righteousness! Speak the word, let my earthen clog be laid in its mother's bosom, and take my spirit home to thyself. Thou knowest that I love thee, and would rather not live, than not to live to thee. But O, my enemies are many and mighty, and at times I fear I shall not be able to stand the trials of my day.

"The wind and waves tempestuously roar, and almost take away my strength: especially, O my Saviour, when thou hidest thy face, or seems to be asleep! Then, in awful dread, my spirit cries, O Master! Master! carest thou not that I perish! that I be swallowed up! Awaken, O Lord, and prove thou hast the same almighty power as in the days of old! Save me in this tribulated hour! If the wrath of the serpent has raised such a furious blast already, how shall I stand my trials, when I am at Thy command, at a distance from home, laboring through thy power to the pulling down of his kingdom! O Father! draw near me, and be my strength. Shut the lion's mouth, or I surely shall become a prey! Awake! O glorious Lamb! awake, and help thy lonely handmaid! She has none but Thee to advocate her cause. Thou knowest I am weak, and have no power to keep myself from falling. Oh Thou, my soul's delight, wilt thou draw near, and keep me through every day and through every night of storm and gloom? But, praises to Thy name, Thou over-glorious Lamb of God! I know whilst my confidence is reposed in thee, thou wilt shelter me from the wrath of the serpent. Though the monster would afflict me, and

wound me from my head to my feet, through Thy help I can overcome him at last; and when this earthly conflict is over, be safely gathered to my Father's home."

The above, written under the prospect of extensive religious service, shows how Satan "from going to and fro in the earth," is sometimes permitted as in the case of poor Job whose "grief was very great," to present himself for the tempting, trial, and humiliation of the Lord's people: if possible to have the hedge removed which He hath placed about them that are His, even, in the language of the Saviour, as "the mountains are round about Jerusalem."

How often is the humble, sincere follower of his or her Lord, reminded like M. R. that this is not the place of rest; and that in this world such shall have tribulation. But here it is they learn to endure hardness as good soldiers, and prove abundantly that *whoso saeet* the Lord loveth he chasteneth: and that in the way of His judgments they may wait for Him. Dear Mildred poured out her penitent soul in agonizing prayer unto Him who seeth in secret; who hath said, "Before they call I will answer, and while they are yet speaking I will hear;" and who no doubt satisfied the fervent travail of her spirit, dispensing in His own time the rich blessing of His consolations; saying, "Fear thou not for I am with thee: be not dismayed, for am thy God."

The full time, as M. R. believed, being come and having been liberated by her Friends Ohio for this weighty service to the South the visit was accomplished. Of this journey she has left the following:

"An account of my journey from Highgate county, in the State of Ohio, to Virginia North Carolina, and Tennessee.

"I set off from my dear friend Josiah Tomlinson's, in company with D. H. and M. Tomlinson, the 23d of the Fourth month 1811 and reached Chillicothe that night. We lodged at the house of B. H. He and his wife were very kind to us, poor things. May they be rewarded.

"24th. We reached the salt works. I up at A. W.'s. Oh, righteous Father! thou knowest all things! Thou knowest what it has induced me to undertake this arduous task! Thou knowest it is in obedience to thee, and for thy sake alone! Thou knowest O my Father, what I have passed through since I heard the command from thy holy altar, that I must go this journey! Now holy Oae, thou seest that in obedience to Thee I have made ready, poor and nothing I am, and have set off to perform it! He thou from thy dwelling place the humbly petition of thy little handmaid,—often put before she left her home, and now renewed: "Be pleased to go with me, and be all this unto me everywhere! Thou knowest I have said in my heart, it matters not what I dergo. It matters nothing where I am the face of thy earth, if thou art but with me. This is all I ask. Thou knowest I have of said, that is enough! Leave me not at one moment; for, without Thee, I am able to stand.

"25th. We reached G. M.'s. This seemed much more like a resting-place for poor we travellers, than where we were last night.

"26th. Got to B. J.'s, and staid all night. Here we felt a hope we should find a resting place. But alas! how were we disappointed.

they had ever known any thing that was I, I thought they had little remaining bore the mark; so that in much secret we left them.

27th. This morning we came to Morrisson; and indeed may esteem it a favor we found a resting-place in the beautiful, where things are sweet and clean. Some days before we got here, our friend and companion D. H. was taken with a sharp pain in his right knee; occasioned we think by taking from an open window under which he last night. Instead of growing better he grew worse, and we poor things, out of the love of our friends; so that the present prospect seemed trying and proving to our faith.

I trust we are enabled to say, Not our sins, but thine, O Father, be done in all things! Thou knowest it was to do thy will, which induced us to leave our homes, and undertake this journey. Thus far we have reaped of thy hand, good things. And now, thou shalt meet to try our faith with evils, shall we murmur? Surely no. Through thy mighty power, without which we can do nothing, we will still trust in Thee, and in thy humility bless thy worthy name, through and over all. For Thou alone art worthy to be trusted in forever!

Beyond what we might have expected, our friend D. H. was so much mended as to be about 28 miles, where we again found a resting place and civil people. I may as I rode along over hill and mead, although I had no great things to glory in, or great feasting, yet I esteemed it a favor that my mind was kept quiet and comfortable; so that I might truly say, I have been in the inward life, and that sufficeth.

This evening I have been ready to say; have often said in my heart, Hitherto the Lord hath helped us; blessed be His name. May we take heed of distrusting Him day to day to come.

29th. This has been a day of trial. My horse was a good deal stiff, having eaten too much; so that it was not only hard upon the animal, but a good deal so to me to get along. I have had in addition the sick-lache to-day. We passed many tremendous cliffs, and meeting with no convenient place to refresh ourselves, we stopped at a house to feed the weary horses. There we, beside the family, several neighboring people gathered; but they were such a set, felt no inclination for eating, but preferred roughing as it was. Indeed it is lessening to climb the rocks and mountains, to be at some places, and feel the dark fits of the inhabitants. This has been a day of trial. We passed over hills, rocks, and mountains, and were caught in a storm of lightning and thunder. I have been ready to say, can any one that has not had a large part to read, feel with poor travellers as us. If, however, we can live through it, we are instruments in the Mighty Hand, of bringing any from darkness to light, and from the power of Satan to a merciful God, surely, in this we may rejoice, and in every good thing give thanks.

30th. This day we are detained by higher power. I am thankful my mind has been, and preserved in quietude, waiting in a good degree of patience until we may safely pass this rapid creek. O thou called of the High! if into thy hands this little ac-

tion may come, fear not to put all thy trust in the Lord, for in His arm is everlasting strength. Magnified be his worthy name! His Fatherly care is still over all who fear Him. O my soul, thou hast experienced enough of His tender mercies to enable thee to say, He is worthy to be trusted in: He is worthy to be followed, whithersoever he is pleased to lead. If thou follow him not, what canst thou enjoy? What good would many rich dainties do thee? Such is the nature of his presence and love, hard things are made thereby easy, and bitter cups are made sweet. Yea, so great is the reward of obedience even in this world, that I have often had to say, O Thou beloved of my soul! thou chiefest of all delights! Thou knowest my delight is to be with thee, and where it pleaseth thee best for me to be, though as to the outward, the situation may be proving. Be thou pleased to be near my side, and be all things unto me. Then as I covenanted with thee before I left my home, and again even now. O my Father, I covenant with thee, that if Thou wilt be pleased to be with me every where and on all occasions, being all things necessary to me, I will do thy will and not my own. For O, I am deeply sensible, nothing but thy will is best for me! Hitherto, O righteous Father, thou hast helped us! O, be pleased so to be with us through all, that thy worthy name may be glorified; for thou art worthy forever!"

(To be continued.)

For "The Friend."

Anecdotes of Dogs.

Ménault, in his work on the intelligence of animals, gives the following recitals illustrated by some of the canine species. He says: "We have yet another anecdote, proving the excellence of disposition in the Newfoundland dog. A dog of this race and a mastiff detested each other. Every day produced fresh battles between them. But it happened that in one of these terrible and prolonged combats on the jetty of Donaghadee, they both fell into the sea. The jetty was long and steep; they had no other means of escape but that of swimming, and the distance was considerable. The Newfoundland, being a good swimmer, managed to reach the shore without much difficulty. He landed dripping wet, and began shaking himself. A moment after, he saw that his late antagonist was exhausting himself in struggling against the waves, and was just on the point of sinking. The Newfoundland was moved with a feeling of generosity; he flung himself again into the water, seized the mastiff by the collar, and holding his head above the water, brought him safe to land. This happy deliverance was followed by a scene between these two animals that was truly touching. They never fought again, and were always seen together. The Newfoundland, being at last crushed beneath a wagon loaded with stones, the other dog was for a long time inconsolable."

In his work on the education of the dog, M. de Tarade relates an incident recently told by M. Léance Guine. Two children, of the ages of twelve and fifteen,—the age with little pity—came to a part of the Seine, level with the Rue de la Grand-arches, to drown a poor and blind dog, half dead with hunger and old age. He had become useless as a servant, and they were about to dismiss him in the usual manner—they would drown him, to spare

him the sufferings of desertion and hunger! What could be more reasonable? Is it not thus that domestic animals are generally treated when they become good for nothing? It was with malicious pleasure and cruel joy that these children had thrown the poor animal into the river. Not content with this, the little murderers pelted their victim with a shower of stones. His piteous howlings and cries of despair, far from moving their compassion, only excited their cruel mirth. By low moaning at intervals, they learned, to their great satisfaction, that the poor dog was wounded by their missiles. "I was about to close my window," says M. Guine, "so as to shut out this painful sight—amusing, no doubt, to the idle and worthless, though much opposed to the usually humane character of the Parisians—when suddenly I heard loud shouts and great clapping of hands from the mob who were diverting themselves with this brutal spectacle. I looked, and perceived with some surprise my dog Vaillant, who, attracted by the mournful cries of one of his own species, had jumped into the river, and was swimming towards him. He went through the water with incredible activity. His joyful cries, and the direction he was taking, at once convinced me of the animal's intentions. Vaillant was hastening to the rescue!

"The poor blind dog, guessing that unexpected help was at hand, seemed to renew his efforts for life. A few more struggles brought him to Vaillant. The latter, well knowing the danger of the task he had undertaken, raised his hind-quarters in such a manner that the poor drowning beast could cling securely with his front paws, without interfering too much with his own movements. He then began to swim vigorously towards the shore. His efforts were crowned with success. In a few minutes he was on terra-firma, proudly shaking his fine coat, while his companion fell exhausted at his side. My dog's devotion, however, did not stop there. The children, who had not reckoned on the unexpected rescue, and who still wished to indulge themselves with the spectacle of a drowning dog, tried to drive him away with a stick, but in approaching him, they were so terrified by the sight of his flashing eyes and the rows of formidable white teeth which he displayed in his fury, that they were forced to renounce their intention, and retrace their steps. This action on the part of Vaillant did not surprise me much, because he is an affectionate animal, as well as very intelligent; but the spectators, who did not know him so well as I, loaded him with so many caresses, that I feared he would adopt the same means to get rid of their importunities that he had taken to drive away the two boys. I therefore put an end to the general enthusiasm by calling Vaillant to me. For the first time, I may say, the docile animal refused to obey my call. I soon comprehended his motive: he was not willing to leave his protégé to the mercy of his enemies. At my request, one of the mob took the poor blind dog on his shoulder, it being still too weak to drag itself along, and carried it to my dog's bed. It was only on this condition that the latter could be induced to steal away from the ovation of the crowd, in order to pay to his guest the honors of the kennel."

Without God's assistance we can do nothing, and without his blessing all we do will come to nothing.

Rambles for Relics.

(Concluded from page 407.)

Parts of eight skeletons, including eight entire skulls, were removed. The absence of implements and utensils of various sorts was remarkable, in the burial place of a people known to have been in the habit of depositing with the dead their most valued effects. Fragments of earthenware, composed of a paste mixed with siliceous particles or pulverized mussel-shells, alone rewarded my curiosity. I had observed in the wall of the cavity, four feet from the top, part of a cedar post three feet long, and four or five inches thick, set in an upright position.

My assistants, who could conceive of no other reason for my operations than a mercenary one (and who regarded the relic as a pointer to a pot of gold "hid by the Indians when they left the country," which had come to my knowledge by the spontaneous turning of the forked twig of an apple tree, held firmly by each hand, or by some necromancy of that sort), made extraordinary efforts to reach the treasure. The mattocks clanked upon some loose stones which were thrown out in such haste as prevented a thorough examination of the pile. Broken vessels, charcoal, burnt earth, ashes, shells, calcined bones of animals, among which were those of the deer, indicated that the structure was a hearth or fireplace, perhaps an altar of offering to the Sun, by firey rites.

Without flinching gold for an encouragement, our labors were renewed on the west side of the mound, by digging a trench ten feet wide, twelve feet long, and from twelve to fifteen feet deep, to meet the central opening. At the depths of five feet a layer of wood and bark covered the form of a child, apparently about six years old. It was laid with much care, perhaps by the hand of affection; a tortoise-shell covered the head, and a string of pearl beads encircled the neck. Three feet from the skeleton, in the same plane, one of a female was exposed, and upon the ribs lay the bones of an infant. Beads and a cruciform shell ornament were with these remains. Nearer the central cavity a rotten cedar post, like that which had excited the cupidty of the workmen, was observed, corresponding with others describing a rectangular figure. Within the space lay a skeleton on its side, doubled up in the usual manner, and distinguished by its size from all others exhumed during the excavations.

The skull was large and round. The intellectual development would have pleased Dr. Gall or Mr. Fowler. The maxillary bones had full rows of sound teeth; and those of the trunk and limbs must have belonged to a man of massive build, about six feet high. Ten large beads, perforated lengthwise through the center, cut from the column of a marine shell, eight flint arrow points of slender shape, and sharpened at the base to be fitted to the shaft, were found on one side of the skeleton; an implement of polished serpentine, which, I imagine, was the battle axe of the chief, whose mortal remains were under my observation, was on the other. The points, only an inch and a quarter in length, had the delicate shape and finish of a class of objects usually found only in the mounds. The rough and clumsy heads, chipped from flint and other quartz rocks, and scattered over the plain, do not occur among

the primary deposits, in any of these structures.

The rotted cedar posts were signs of a mode of burial in wood enclosures, practiced by the ancient people. These were not made by hewing and fastening stakes, for their connections had no marks of the axe or the hammer, but by placing logs and pieces of timber one above the other against upright posts, so as to support a roof of the same material. Remains of similar vaults have been disclosed in other mounds, one of which was examined by myself at "The Forks" of the Holston and French Broad, and another near Chattanooga, opened during the late war. While I am writing, a publisher's account comes to me of a "visit to an Indian mound in East St. Louis," in which narrative "a square structure," with "sides lined with wood," "wooden columns," and "cedar posts," is mentioned.

In an earth mound opened near Newark, Ohio, in 1850, a trough covered with logs, contained the skeleton of a man. (Smithsonian Report, 1866.) A similar object was disclosed in a frame of wood, at the bottom of an ancient mound, by Squier and Davis.

In the further prosecution of our work, ten skeletons, invariably doubled, but laid without order as to their relative positions, under wood and bark, and portions of ten others were discovered, at various depths. Several skulls were obtained entire, and the bones of a single frame. The solid parts of most of the remains, having lost their animal consistency, easily crumbled. Eight feet down the cavity were the first signs of incremation. A layer of red clay, several yards square, covered a mass of earth, ashes, charcoal, charred bones, calcined shells, broken vessels, and carbonized seeds of a species of plant, probably the cane, the stalks of which had evidently been used in the burning. This layer rested upon another bed of clay, burnt to the hardness and color of brick. These were indications of a usage of the mound-building race in Tennessee—burning their dead with their treasures, in connection with the carcass of a domestic animal or one of the chase. When the remains were partially burnt, earth was thrown upon the pile, smothering the flame, which had an extinguisher in the clay layer.—*Scientific American.*

Tenderness of Heart.—I once asked John W. Edmonds, one of the Inspectors of Sing Sing Prison, how it was that a Wall street lawyer, brought into sharp collision with the world, had preserved so much tenderness of heart? "My mother was a Quaker," said he, "and a serious conversation she had with me when I was four or five years old has affected my whole life. I had joined some boys who were tormenting a kitten. We chased her and threw stones till we killed her. When I came into the house, I told my mother what we had done. She took me on her lap, and talked to me in such a moving style about my cruelty to the poor helpless little animal, that I sobbed as if my heart would break. Afterwards, if I were tempted to do any thing unkind, she would tell me to remember how sorry I was for having hurt the little kitten. For a long time after, I could not think of it without tears. It impressed me so deeply, when I became a man, I could never see a forlorn suffering wretch run down by his fellow-beings without thinking of that hunted and pelted little

beast. Even now the ghost of that kitten and the recollection of my dear mother's gentle lessons, come between me and the prison at Sing Sing, and for ever admonish me to humane and forbearing."—*L. M. Child.*

To a young Friend who said rather despondently a First-day evening, "To-morrow I must return to world again."

"Holy Father, keep through thine own name them whom thou hast given me, that they may be one with us. I pray not for thee, that thou shouldst take them from the world, but that thou shouldst keep them from the evil." Neither pray I for these alone; but for them which shall believe on me through their works; that they all may be one; as Thou, Father, art in me, and I in thee; that they also may be one in us; that the world may believe that thou hast sent me.—*J. xvii.*

Thus at his solemn feast our Saviour prayed, Just ere that hour of agony was come Where, by his false disciple's hand betrayed, He stood, "a lamb before his shearers, dumb."

The blessed influence of that heavenly prayer, Sustained his followers through each varying scene Imparted power to resist the tempter's snare, And made them count this life a fleeting dream.

In after ages, when the sweeping flood Of cold apostasy o'erwhelmed the earth, And priestly tyranny, like Herod stood Ready to quench the immortal Spirit's birth;

The indwelling witness, midst that rayless night Of moral darkness, broke the dull repose; He spake with voice of power, "and there was light," Fox, and his band, bright morning stars, arose.

The meekly folded, even unto death, Where'er their Master's banner was unfurled; Their souls upborne on the strong wing of Faith, "Like ships at sea, while in, above the world."

So will He surely still preserve and bless Thy soul, if thou canst trust in Him alone, Who sought thee in the world's bleak wilderness, And led thee "by a way thou hadst not known."

In ripening age mayest thou more truly know, The unerring Guide who turned thee in thy youth Be strong to combat with thy spirit's foe, And need to suffer in the cause of Truth!

However lonely now thy lot appears, Yet art thou blest with one unfailing Friend, Who through the conflicts of thy future years, Can still sustain thee to thy journey's end.

E. P. ***

W. C. 1st mo. 24th, 1846.

GENTLE WORD—LOVING SMILES.

The sun may warm the grass to life,
The dew the drooping flower,
And eyes grow bright and watch the light
Of Autumn's opening hour—
But words that breathe of tenderness,
And smiles that know are true,
Are warmer than the summer-time,
And brighter than the dew.

It is not much the world can give,
With all its subtle art,
And gold and gems are not the things
To satisfy the heart;
But oh, if those who cluster round
The altar and the hearth,
Have gentle words and loving smiles,
How beautiful is earth!

Anecdote of Joseph Carrington.

Joseph Carrington was a minister, residing in Pennsylvania. He was not endowed with fine talents, but often showed great weakness though in conversation he was below me in authority, yet in preaching the gospel he was clear and powerful. To him the Lord's strength in weakness, a present help in time of need. When on a religious visit to B.

nd, the Friend at whose house he lodged
tered his room one morning, and excused
self for leaving home, which he was ob-
ed to do, as he was on a committee appoint-
to endeavor to settle a difference between
o Friends, Joseph said, "I will rise and go
th there." His host, knowing Joseph was
weak man when left to his own resources,
as afraid to take him with him, lest he should
ave a hindrance, and replied, "No, thou
d best remain here and rest thyself;" but
seph persisted in getting up and dressing
self; and they set off on horseback.

They soon had occasion to ford a small
er, when Joseph's horse stumbled and threw
a into the mud. "Now," said his friend,
"thou wilt have to go back, thou cannot
ntinue on in this plight." "Oh yes," said
seph; "I will go on, I cannot return now;
it was an effort of the devil to prevent me
going."

On arriving at the appointed place, they
nd the committee assembled, and the differ-
e Friends present. Joseph requested the
o Friends to be pointed out to him, and
ed them to take a seat, one on each side
him. He then turned to one and said,
"ow, John, let me hear thy story about this
icently." "Thomas, thou must not say
nd until he finishes." John commenced
ating the cause of dissension, but had not
ceeded far, before Thomas interrupted
h, "No, that was not so." "Stop, Thomas,"
Joseph; "thou must wait for thy turn to
it." After a little while, Thomas again
traded John's statement. "Hold thy
gue, Thomas," said our Friend, laying his
nd on his knee. At length John finished
account, when Joseph turned to the other
and told him to begin. He was soon inter-
ted by John, who was silenced by being
id, "Thou hast had thy turn, and I have
rd thee patiently: now thou must let
omas go on, and thou be silent." When
omas had proceeded a while, John again
led the statement, and Joseph desired him
remain quiet. When Thomas had no more
ay, Joseph said, "John, thou art to blame,
thou began the difficulty;" and then ex-
ned how all had originated, and convinced
n, who acknowledged he had done wrong,
that he regretted it. Thomas imme-
ely said, "I, too, was to blame; if John
an wrong, I was to blame for taking of-
fice at it. I confess my error, and ask John
pass it by." They both arose and shook
ds, and remained good friends ever after,
as was settled a difficulty which had caused
h trouble to the meeting for several years.
Social Hours with Friends.

For "The Friend."

late paper in an advertisement upon an ex-
tion of a dramatic character, in which re-
ous truths were designed to be illustrated,
to a large gathering of First-day school-
ars, remarks in reference to these schools
enar:

There is becoming common a certain tam-
ing with sacred ideas and words, growing
of the way in which Sunday schools are
lly conducted, to which many religious
ple are so accustomed as to be unconscious,
which is to every finer taste of the de-
mind inexpressibly painful and humiliat-
ing. How, too, are future men to be ben-
efited by ideas which, when children, reached
a without the force of solemnity, awe, or

any guise of divine truth? Sunday schools,
we are told, are the great proselytizing ma-
chinery of Christianity. But are they so?
They were established by Raikes for a noble
purpose: the religious instruction of the young
who would or could receive no religious in-
struction at home. They are crowded now
in the cities with the children of the rich.
Now, no mother able to give to her child his
first ideas of God and his Saviour has the
right to submit his blank mind and untang-
led soul to the careless handling of the young
boys and girls who (with praiseworthy aims,
no doubt) usually fill the ranks of teachers in
these schools."

How closely these remarks may apply to
those members of our Society who send their
children to First-day schools which in some
places have been carried on among us, we
know not; but is there not much to fear from
a disposition on the part of parents to en-
deavor to evade that responsibility which
rests upon them to bring up their children
"in the nurture and admonition of the Lord."

For "The Friend."

The Pueblo or Village Indians.

In the year 1846, the United States ac-
quired by the cession of the territory now
known as Arizona and New Mexico, the ju-
isdiction over the remnants of a once power-
ful race inhabiting that district which, from a
peculiarity in the construction of their dwell-
ing, are known as Pueblo or Village Indians.
These Indians, if they can be properly so
called, differ widely from the wild tribes
around them in their national traits, habits of
life, and that state of semi-civilization in which
they have lived for the past three centuries.
They are believed to number about sixteen
thousand, and are scattered over a wide ex-
tent of country, in which however frequent
ruins attest their former existence in far
greater numbers. It is supposed that they
are of Aztec origin, and that they spread from
Mexico into this region before the Spanish
conquest, as historical records show that they
were dwelling there as early as 1539, when
they were visited by the Spanish explorers.
A recent traveller, Dr. W. A. Bell, in his
"New Tracks in North America," gives the
following interesting information in regard to
them:

"I first met a small party of these people
on the plain a few miles west of the Pecos;
they were neatly dressed in buckskin; they
wore moccasins on their feet, and a girdle
around their waist." "They were short in
stature, thickly built, with quiet, intelligent
faces, and large sorrowful eyes. I never dur-
ing my residence in their valley, saw a Pueblo
Indian laugh; I do not remember even a
smile." "At Santa Fe I watched these peo-
ple coming and going, bringing their produce
in the morning—peaches, grapes, onions,
beans, melons, and hay—for sale, then buying
what necessities they wanted, and trudging
off in the afternoon quietly and modestly to
their country villages."

These Indians are only found in New
Mexico and Arizona south of the 36th parallel
of latitude, nor is there any proof that they
have spread further northward than the Rio
Grande valley, and the accessible branches of
the San Juan river. In these two territories
—together, equal in size to France—only five
small remnants of this once powerful nation

remain at the present time. These are the
Pueblo Indians of the Rio Grande valley,
population 5866. The Indians of Zuni, 1200.
The Indians of seven Moqui pueblos, popu-
lation 2500. The Pimas of the Gila valley,
occupying eight villages, population 3500, and
the Papago Indians, occupying about nineteen
villages, and numbering not less than 4000 in
all. These different communities "do not all
speak the same tongue, and resort to the
Spanish language which they acquire with
tolerable facility as a common medium of
communication." Their dwellings are flat-
roofed structures, capable of accommodating
many different families, and frequently of
more than one story in height. They are
often built around a common court yard or
open space, and thus present the appearance of
a solid block of houses, with terraces at each
of the stories. "Neither windows nor doors
are to be found on the outer wall of the first
story; the second rises a little back from the
roof of the first, leaving a ledge in front of it.
Ladders are used to mount to this ledge; they
are then drawn up, and the rooms are entered
either by openings in the roof, leading to the
ground floor, or by doors giving entrance from
the ledge to the second suite of rooms; the
latter alone are used for sleeping." These
dwellings though common in the fertile val-
leys, are also frequently found located upon
the flat topped hills or "mesas" which occur
in that country, the perpendicular walls of
which often rise to a height of some hundreds
of feet. These hill tops are often large enough
to allow of the raising of a considerable quan-
tity of food in the immediate neighborhood
of the villages. One of these, Acoma, a large
and interesting pueblo, is thus described: "It
rests on the summit of a flat mesa, whose
perpendicular cliffs rise to a height of from
300 to 400 feet above the valley. The houses
here are three stories high, built on the usual
principle, each successive story being smaller
than that on which it rests. Ladders are also
used to reach the ledges. The flat top of the
mesa includes about fifty acres of land; it is
reached by a steep winding path cut in the
rock, and so placed as to be easily defended.
It is a very wealthy pueblo: the Indians own
abundance of cattle, and grow large quantities
of corn, peaches, pumpkins and other pro-
duce."

"The most interesting of all the pueblos is
undoubtedly Zuni. It is built on a rising
ground, affording an extensive view of the
surrounding country, and six terraces at least
can be counted, one above the other. Lad-
ders planted against the wall give access to
the different terraces upon which the doors
of the apartments open." "In the valley
through which the Zuni river (a tributary of
the Colorado Chiquito) flows, are to be seen
orchards—chiefly of peach trees, vineyards,
fine corn plots, and vegetable gardens, pro-
ducing onions, beans, melons, red pepper,
pumpkins, &c. They do not raise their crops
by irrigation, but depend entirely upon the
rain-fall."

The seven villages of the Moqui "are mostly
of three stories, built in the form of a square,
with a court, common to the whole com-
munity, forming the centre. The first story or
basement, consists of a stone wall 15 feet high,
the top of which forms a landing extending
round the whole. A flight of stone steps leads
from the first to the second landing. The
houses are three rooms deep; the first being

used for eating, cooking, &c., the others as sleeping apartments."

The remains of these deserted dwellings are so numerous that "there is scarcely a valley in the Rio Grande basin in which the stone or adobe foundations of villages are not to be found; there is scarcely a spring, a lagoon, or a marsh upon the plateau, which is not overlooked by some ruined fortress." "If a stream runs near them, the remains of acequias, or irrigating canals, are generally to be found." The banks of the Rio Verde, a branch of the Colorado Chiquito, are represented to be "covered with ruins of stone houses and regular fortifications, which were evidently the work of a very civilized race, but do not appear to have been inhabited for centuries." "The walls were of solid masonry, of rectangular form, some twenty or thirty paces in length, and from ten to fifteen feet in height."

In the valley of the Gila, the ruins of deserted pueblos are so numerous that it is estimated that at least one hundred thousand persons must formerly have inhabited it.

A large pile of ruins, called the Casas Grandes, located just within the Mexican boundary, appears to be among the most extensive of these remains. It consists of fallen and erect walls, the latter from five to thirty feet in height, built chiefly of sun-dried bricks. The entire edifice was about 800 feet in length, and 250 feet in width, and appears to have been in some portions six stories high.

At the time of the first visits of the Spaniards to this country, it must have been thickly peopled. Antonio de Espejo, who traversed the Rio Grande valley in 1583, "describes no less than sixteen provinces or kingdoms, and mentions others from hearsay; and if his estimates of population at all approach the truth, there were far more people in that one valley in the sixteenth century than there now are in the whole of New Mexico and Arizona, including both Mexicans and Americans."

Within the comparatively short period that these Indians have been under the control of the United States, a marked decline in their number has taken place, and the same gradual extinction appears to be going on among them which is apparent in many of the tribes of the aborigines on this continent. When the seven Moque villages were first visited in 1850 by an American, — Leroux, their population was estimated at 6700. Since then the small pox has committed terrible ravages among them; and they have also suffered for several seasons from great deficiency of rainfall, and scarcity of food. After a careful inspection of these different communities their late agent, John Ward, placed their population in 1864, at only 2500. Since that period a migration has taken place, and the latest enumeration, 9th mo. 1870, makes their total number only 1505.

In the Report of the Commissioner of Indian Affairs, we find the character of these Indians thus stated in 1867, by the late Chief Justice of New Mexico: "As far as his history can be traced, they have been a pastoral and agricultural people, raising flocks, and cultivating the soil." "They manufacture nearly all of their blankets, clothing, agricultural and culinary implements, &c. Integrity and virtue among them are fostered and encouraged. They are as intelligent as most nations or people deprived of means or facilities for education. Their names, their cus-

toms, their habits are similar to those of the people in whose midst they reside, or in the midst of whom their pueblos are situated. The criminal records of the courts of the territory, scarcely contain the name of a Pueblo Indian. In short, they are a peaceable, industrious, intelligent, honest, and virtuous people. They are Indians only in feature, complexion, and a few of their habits; in all other respects superior to all but a few of the civilized Indian tribes of the country, and the equal of the most civilized thereof. "Such was their character at the time of the acquisition of New Mexico, such is their character now."

The above favorable statement does not appear to be fully sustained by subsequent reports, which show that they are now suffering the injurious effects of frequent intercourse with that lawless class of the population which exists on the western frontier. They are also discouraged by the decision of a legal tribunal which declared that the act of Congress for the protection of the Indians does not apply to them, and the consequent occupation of their lands by white settlers.

This decision which having already exposed them to the loss of their lands, secured by patents dating back to 1567, and granted them an unwelcome privilege in citizenship, has been appealed from to the Supreme Court of the United States.

Home for Aged and Infirm Colored Persons.

This institution was established about seven years ago, at 340 S. Front Street, where it has since sheltered and comforted from 25 to 30 aged ones at a time—that being the greatest number which the house could accommodate; but there were so many applicants—so many *needing* just such a home, where they could be cared for, until the Master called them to enter a better one, that a generous friend donated an acre of ground, and furnished the means to build one outside the city, which would accommodate not only thirty, but one hundred and thirty of these poor feeble ones; and to this new Home the former occupants of No. 340 are now removed, fully enjoying the change from the stifling heat of the city, to the pure, refreshing breezes of their new location. Many who have been long waiting for room, we hope, now very soon to admit; but our larger accommodations and greatly increased family, will, of course multiply our expenses, so that it seems necessary to make known the need of help for this most excellent charity, trusting that all who have the means, and feel it a pleasure to do good, even a privilege to help the helpless, will freely respond to this appeal, and aid us what they can. Much more furniture is also required; donations in such pieces as friends can spare, such as bureaus, bedding, sofas, settees, &c., can be sent to the Home, near the corner of Girard and Belmont Avenues, and in money to either of the undersigned.

The Depths of the Sea.—The ocean has, like the firm land, its beautiful meadows, its vast forests. Its mountains and valleys are covered by a multitude of various plants, each species requiring its own particular climate,

but the contrary one of that which it would choose on the surface of the earth. In ascending a mountain we see how vegetation decreases gradually as we ascend higher and higher; how it by and by gets a sickly appearance, and at last disappears entirely to give way to everlasting snow.

An entirely contrary phenomenon would be observed in the waters of the ocean. The further we descend into the deep depths of the sea, the more does vegetation diminish; and from a depth of 2000 metres the plumb never brought up any particle or trace of any plants; we are, therefore, entitled to argue that the deepest submarine abysses are totally deprived of vegetation. Land plants do not grow beyond the boundary of snow; sea plants cannot exist in considerable depths. Some of the sea plants prefer a quiet place where they are not touched by currents; others attach themselves firmly to rocks or other solid masses, around which a constant whirlpool is roaring and raging. These latter seem to thrive best in the stormiest roaring of the surges. Cane, reed, grass, sedge, rush, salerbs, &c., which require air and light, grow close to the shore or the level of the water and while their roots are nourished from the shallow bottom of the sea, their branches and blossoms form charming little islands, of which water fowls are building their nests.

In the transparent waters of the Pacific the vegetation of the sea displays its greatest splendor and richness. Various kinds of moss, of the greatest tenderness and the most splendid blending of colors, forming the richest Oriental carpets that fancy's witchcraft able to produce, are spread out in enormous dimensions. In the seasons of calms, we admire the wonderful nuances of their color in a depth of more than 100 metres. On the slopes of the elevations at the bottom of the sea, is the silky *Anerina*, its ribbed branch resembling trimmings of silk; and small, pile-red *algæ*, which, when standing together give a red lustre to the sea. Seaweed, *Fucus*, forming extensive meadow grounds the Atlantic ocean, is growing here also. The plants, when by some accident torn off from their native standing place, swim for years on the surface of the water without fading; and we see them floating thousands of miles distant from their original place. A collection of floating berry seaweed (*Sargassum baccatum*), extending from the Azores near Cape Verde, and covering a space of 60,000 square miles, gives to this part of the Atlantic the name of the Sargasso sea.

In the waters surrounding the equator there are plants belonging to the delicate Florida having a bright red and yellow color; the plants cast their seed vessels far away, when they burst open, leaving the contents exposed to the pleasures of wind and waves; thus giving a fragrance far away from its mother plant. The *Laminaria*, resembling reptiles, well soaked and decayed sufficiently, are converted into a transparent gelatin, or jelly, which is regarded as a delicate dish in Chili, from La to La Concepcion. Ulvæ are found in great multitude in the waters of the oceans; sometimes, by the name of sea lettuce, are eaten, by the sea plants growing close to shore there are many which furnish palatable food to men; others serve for industrial purposes, and form a profitable article of commerce. The *Borax* species supply us with iodine, which finds frequent application in

dicament, especially for scrofula; besides, it has been a great medium for art purposes, and the invention of daguerotypes and photographs. By washing in lye the ashes of certain prickly algae, growing on all the seashores of Europe in vast multitude, soda is produced, which is a main ingredient of soap, and is used many other ways. Remains of plants, torn up the rocks by the ever toiling surges, and driven up to the ocean's surface during a storm, spread over the soil, an excellent manure it, and serve therefore to increase the prosperity and wealth of the inhabitants of the coast.

The submarine vegetable kingdom has by means unavaild all its wonders to us; and constant investigations of those men, who ply themselves exclusively to this branch of science, will reveal the greater discoveries in that department, in that it was formerly noted by navigators and investigators.—*Anti-fine American.*

THE FRIEND.

EIGHTH MONTH 19, 1871.

There has been some contrariety of opinion among ethical writers, as to the exact meaning to be attached to the declaration of the Bible that "The love of money is the root of all evil;" which while some coveted after, I have erred from the faith, and pierced myself through with many sorrows." He has interpreted money to mean the gold—the love of such things as money will—and some Mammon, as our Lord said, "Ye cannot serve God and Mammon." Be exact exegesis of the text what it may, it is certain that the love of riches and the eager pursuit after them, are almost inevitably conjoined with temptations to evil of all kinds; where either governs, it is hard, if not possible, to be strictly honest. If in our dealings with others we are bent on obtaining the highest price that can be exacted, or purchasing at the lowest that the owner is necessitated to take, it will be remarkable if our covetousness never leads into a violation of strict justice.

It sometimes hear it said of some one, that he is close but honest. Where persons are so, their necessities may oblige them to deal only to their own interest. But in most of this kind of dealing is found among the comparatively rich, and is the result of a propensity to serve Mammon, who has no regard for strict honesty. The only principle that can regulate every transaction, buying or selling, or exchanges of every kind, is that contained in the injunction of our omniscient Saviour, "Whatever ye would men should do unto you, do ye even so to them." Herein is the standard of perfect love and honesty, and as it is kept to, it excludes the possibility of the love of money, we desire to obtain it, betraying into imposition upon, or driving hard bargains with fellow men.

The mode of seeking dishonest advantage in pecuniary transactions, is set forth in the parable of Solomon, where he says, "It is profitable, it is sought, saith the buyer; but when he is gone his way, then he boasteth." A strictly honest man cannot depreciate the value of any thing, in order to buy it below what he knows to be its real worth; nor

can he take advantage of another's ignorance, nor represent the value of an article he wishes to sell to be greater than what he really believes it to be, nor by silence conceal a defect which should impair its price. Where the golden rule is carried out in all our business transactions, it secures mutual advantage to all parties, and enables each to deal with the other in accordance with the spirit of another injunction, "Thou shalt love thy neighbor as thyself."

How greatly does the community stand in need of these christian principles being universally accepted and allowed to govern in all their commercial intercourse; that so the unchanging and uncompromising standard of the religion we profess, should be acted up to, and men cease to think themselves justified, if they comply merely with the loose and selfish rules of trade that too generally prevail. How does the haste to be rich lead into unscrupulous competition, and modes of obtaining trade and money, which convert business almost into a game of hazard, and often deprives the honest, conscientious dealer of a living profit. Truly the present state of society confirms the truth that the love of money is the root of all evil, and brings home the solemn consideration how hardly can they who are rich, and they who are eagerly seeking to be rich, enter the kingdom of heaven; that kingdom of righteousness and peace which is within the good man's breast; where Christ sways his righteous sceptre; bringing all evil passions and propensities under the restraint of his yoke and cross: The greed for and love of money may be as much cherished by those who are not rich as by those who are, and there may be as wicked departure from strict justice and honesty in selling a pound of sugar or a bushel of potatoes, as in disposing of a cargo of imported goods. "He that is faithful in that which is least, is faithful also in much; and he that is unjust in the least, is unjust also in much."

We are far from thinking that the possession of wealth must necessarily be wrong, or yet that "the deceitfulness of riches" will always "choke the word;" but certainly the making haste to be rich, and the tendency of wealth to betray "into many foolish and hurtful lusts, which drown men in destruction and perdition," are so nearly uniform, that it is no marvel that the commands of Christ, and the exhortations of his Apostles, anxiously to guard against so dangerous a snare, are reiterated, and strikingly imperative. "It is required in stewards, that a man be found faithful," and we are all trustees of the gifts bestowed upon us by Him who created all things and by whom all things consist. If a man who, as a trustee, holds property belonging to others, designed for a particular purpose, is found using it for his own enjoyment, and the gratification of his lusts, while those who were intended to be the beneficiaries, are suffering for the want of it, he would be branded as dishonest, and be made either to relinquish the trust, or apply the fund to the object for which it was created. Every rich man is a steward of the manifold gifts bestowed upon him; they are part of the "talents" entrusted to his care, with the command "occupy till I come;" and whether through sloth or avarice he buries them in the earth, the acknowledgment of its possession and to whom it really belonged, to be made only at the day of reckoning; or they are spent in luxury and

self gratification, each in forgetfulness of the claims of the poor and needy, the danger is incurred of being ranked with the servant whom the Lord pronounced not only slothful but wicked.

John Woolman observes, "As the minds of people are settled in a steady concern not to hold or possess anything but what may be held consistently with the wisdom which is from above, they consider what they possess as the gift of God, and are inwardly exercised that in all parts of their conduct they may act agreeable to the nature of the peaceable government of Christ." "Great wealth is frequently attended with power, which nothing but divine love can qualify the mind to use rightly; and as to the humility and upright-ness of our children after us, how great is the uncertainty. If in acquiring wealth, we take hold of the wisdom which is from beneath, and depart from the loadings of Truth, and example our children herein, we have great cause to apprehend that wealth may be a snare to them, and prove an injury to others over whom their wealth may give them power."

SUMMARY OF EVENTS.

FORGOTTEN.—The late advices from Algeria are more favorable, and report that the insurgents are rapidly submitting to the French authorities. General Laugel reports a victory over the insurgents at West Sudek.

The French budget commission has proposed three per cent. tax on all bonded goods except corn and coal, and estimates the yield therefrom at 75,000,000 francs per annum. The tax is under discussion in the Assembly. The portions of the bill which provide for duties on raw materials employed in manufactures will probably be rejected. The war budget has been increased 271,000,000 francs. Thiers urges the necessity of a large and efficient army.

The directors of the Lower California Company have proposed to release all the Communist prisoners as colonists, and Thiers has promised to lay the offer before the Assembly.

The Assembly has passed a bill to indemnify the people of the provinces invaded by the Germans, for loss and damage suffered during the war, either from the enemy or French troops, after due investigation of the claims and settlement of the amount. The Minister of Finance is authorized to distribute immediately 100,000,000 francs among the most needy claimants. A bill has been introduced providing for a system of compulsory and gratuitous education throughout the country.

The Germans are evacuating the forts north and east of Paris, and the city of Troyes.

The trial of the republican leaders is in progress. Assi and others take high ground, and are bold and defiant in their bearing before the court. Assi boastfully admitted the share he had taken in the execution of captives, and defended it on the ground that it was justified by the laws of retaliation resorted to by all civilized nations in time of war.

A deputation of the Municipal Council of Paris has waited upon Thiers and begged him to exert his influence in favor of the removal of the capital to Paris. The President, in reply, said the decision in question rested with the Assembly, and should not be trammelled by any action on his part. The City Council has voted to raise a loan of three hundred and fifty millions francs, to be used for rebuilding and repairing the edifices destroyed or injured during the reign of the Commune.

In the Assembly on the 12th inst., a motion was made that the title of "President of the Republic" be conferred on Thiers, and that all powers which he has heretofore exercised as chief of the executive power be prolonged for the period of three years. The motion was declared "urgent," but no definite action in the matter was taken.

Lord Chief Justice Cockburn has been appointed British Representative to the Geneva Board of Arbitration, to which Charles Francis Adams has been appointed on behalf of the United States. Sir Roundell Palmer will attend as counsel in behalf of England.

By an explosion of gun cotton at Stowmarket, about 27 persons were killed, and nearly 60 injured more, or less seriously.

A large meeting was held in London on the 13th inst., to protest against the suppression of the Phoenix Park, market in Dublin on the 14th inst. Twenty thousand people attended, and speeches were from six different stands. Communist and American flags, and Irish banners were displayed. The crowd was quiet and orderly.

The Assistant Secretary of the U. S. Treasury has estimated the negotiation of the balance of the new American five per cent. bonds with the London house of Jay Cooke, McCulloch & Co.

A London dispatch of the 5th says: The House of Commons was to-day the scene of a severe encounter between the leaders of the Tory and Liberal parties, who charged Gladstone with bad leadership both in the House and in his party; with wasting many weeks on subjects subsequently abandoned; with needlessly invoking the exercise of the royal prerogative, and with postponing important and evocative legislation.

Gladstone retorted that Disraeli's so-called facts were but the offspring of his imagination and lingual powers, and that the lost time was due to the resistance made by the Tories to electoral reform.

Gladstone implored the House to pass the ballot bill forthwith.

A personal and partisan debate followed, after which Forster summed up for the bill, as one demanded by the people. It then passed the House, but on the 10th was rejected in the House of Lords.

The postmaster general has announced that a reduction of telegraph charges to 6d. for ten words throughout the United Kingdom, would be made upon the completion of the new general office.

Bismarck, as Chancellor of Germany, has decided that the school of administration of Alsace be non-sectarian.

The cholera has appeared in Germany in a fatal form. The government, as well as the local authorities, are taking the most stringent measures for preventing the spread of the disease.

The Emperor of Austria received a visit from the Emperor of Germany, at Wils, on the 11th inst. Cordial greetings were exchanged, and the conference is surmised to have some political significance. The Emperor of Austria will hold Heidelberg to take measures for the foundation of a German Catholic Church. Delegates were present from Germany, Austria, and Switzerland. A committee was appointed to draw up a constitution for the new church. Its main features will be the separation of Church and State, prohibition of laymen, and management of the church, free election of bishops, communal election of pastors, and a modification of the confessional. The delegates were divided in opinion as to whether the new church should acknowledge the primacy of the Pope. The meeting adjourned to receive the report of the Committee at a future date.

The Italian Official Gazette publishes a decree appropriating for public use, two convents and three plots of ground in Rome belonging to religious bodies.

The Pope has issued an encyclical letter urging the faithful to offer prayers for the freedom of the Holy See, and the triumph and tranquility of the Church.

The Swiss Government has received 5,000,000 francs from the French Minister of Finance, for the maintenance of the army of Bourbak while taking refuge in Switzerland. Payments will be continued by the French Treasury until the entire debt is paid.

It is reported that military organization in Russia is being pushed vigorously on the Prussian system. Compulsory service is vigorously exacted without exception.

The French government is reported to have requested the extradition of Communists who have taken refuge upon British soil. The reply of the British Cabinet is said to be a decided refusal.

A Berlin dispatch of the 14th says, Prince Bismarck has gone to Gastein to attend the meeting of the Emperors of Germany and Austria.

A dreadful calamity has visited the small island of Tagalanda, in the Malay Archipelago, about fifty miles north-east of Celebes. An outbreak of the volcano of Pinakawa was attended by a conflagration, and a wave, forty yards in height, which swept all human beings, cattle and horses, from the island. The number of persons who perished was five hundred and sixteen.

The weather throughout England continued fair and pleasant to the crops, and generally of the month.

London, 8th mo. 14th.—Consols, 93½. U. S. 5-20's of 1862, 93½; ten-forty 5 per cents, 92½.

Liverpool.—Uplands cotton, 83½; Orleans, 9d.

UNITED STATES.—The U. S. Secretary of the Treasury announces that arrangements have been made for the disposal of the remainder of the two hundred millions of 4 per cent. bonds, bearing interest at the rate of \$130,000,000. Agents for the sale or refunding of the U. S. Loans will hereafter be limited to the sale of equal amounts of the 4½ and 5 per cent. bonds, or equal amounts of 4 and 5 per cent. bonds.

For a considerable time past a misunderstanding has existed between the U. S. Secretary of the Treasury and General Pleasanton, Commissioner of Internal Revenue, in relation to their respective duties and powers. In order to terminate this difficulty General Pleasanton was invited by the President to resign, but he declined doing so; whereupon President Grant suspended him, and appointed to his duties, W. D. Douglass, First Deputy Commissioner of Internal Revenue.

The first bale of cotton raised in Georgia this year, was received in Savannah on the 9th inst., and sold at auction for 32½ cents per pound.

The oil wells of Pennsylvania appear to be still increasing their production. In 1868 about ninety-nine millions of gallons were exported, and in 1870 the quantity reached one hundred and forty millions.

The interments in Philadelphia last week reached 329, including 173 children under two years of age. There were 55 deaths of cholera infantum, 42 of consumption, 20 of diphtheria, 20 of scarlet fever, &c. &c. The Directors of the American Steamship Company have contracted for the building of four iron screw propeller steamships, for the line between Philadelphia and Liverpool. The first steamer is to be completed within twelve months, and the fourth vessel within sixteen months. The price to be paid the builders, Williams Cramp & Sons, is \$2,500,000 for each vessel.

The Markets, &c.—The following were the quotations on the 14th inst. *New York*—American gold, 122½. U. S. sixes, 1881, 117½; ditto, 5-20's, 1868, 113½; ditto, 10-40, 5 per cents, 113½. Superfine flour, \$4.50 a 5½; finer brands, \$5.25 a \$8.40. No. 2 Chicago spring wheat, \$3.75; and western, \$1.40 a \$1.50. No. 1 do., \$1.50 a \$1.60. Michigan, \$1.50 a \$1.52. New Ohio oats, 45 a 47 cts. white, 48 a 51 cts. Western yellow corn, 71 cts. mixed, 67 a 68½ cts. *Philadelphia*.—Superfine flour, \$4.75 a 5½; finer brands, \$5.25 a \$8.50. Western red wheat, \$1.30 a \$1.37. Rye, 70 cts. Yellow corn, 68 a 70 cts. White oats, 47 cts. mixed, 44 a 45. Land 91 a 10 cts. Sales of 2294 head cattle at 7 a 7½ cts. for extra, 5½ a 6½ for fair to good, and 3½ a 4½ cts. for lb. gross for common. About 9000 sheep sold at 5 a 5½ cts. per lb. gross, and 2800 hogs at \$6.75 a 7.25 per 100 lb. net, the latter for corn fed. *Baltimore*.—Choice white wheat, \$5.00. Yellow corn, 67 a 68½ cts. Southern, 75 a 77 cts. Oats, 43 a 48 cts. *Chicago*.—No. 2 spring wheat, \$1.06. No. 2 corn, 47½ cts. No. 2 oats, 29½ a 30 cts. Rye, 57 cts. Barley, 57 a 59 cts. *Lard*, 83 cts. *St. Louis*.—Flour, \$4.75 a \$7. No. 2 red winter wheat, \$1.17 a \$1.20. No. 2 corn, 41 cts.

RECEIPTS.

Received from Jane B. Davis, Pa., \$2, vol. 45; from Samuel Shaw, Agent, U. S., vol. 45, and for John Lipsey, Robert Ellison, William Blackburn, Levi Bonham, Amos Cope, Milton Schwarzer, Joly Almon, Barak Ashton, Linton Hall, Nathan M. Blackburn, Jonathan Blackburn, Benjamin Harrison, Isaac C. Cadwalader, Thomas Blackburn, and James A. Cope, \$2 each, vol. 45; from Dr. George Thomas, Pa., \$2, to No. 23, vol. 46, and for J. Preston Thomas, \$2, to No. 23, vol. 46, and James M. Zook, \$2, from Margaretta T. Webb, Pa., \$2, vol. 45; from Benjamin Gilbert, Agent, Pa., \$2, vol. 45; and for James Means, Isaac Price, Uriah Price, Joshua Gilbert, Edward Y. Cope, and Joshua Cope, \$2 each, vol. 45; from Richard C. Shoenberger, Pa., \$2, vol. 45; from David J. Brown, Philadelphia, \$4, vol. 45; from Jeremiah Foster, L. E., \$2, vol. 45, from Mrs. M. C. Moore, \$2, from Dr. James E. Rhoads, Germantown, \$2, vol. 45.

Remittances received after Fourth-day morning will not appear in the Receipts until the following week.

WESTTOWN BOARDING SCHOOL.

The Winter Session of 1871-72 commences on Sunday, the 30th of Tenth month next. Friends who are desirous to enter their children for the coming term, are requested to make early application to AARON SARRIS, Principal, at the Westtown Boarding School, Westtown, Pa., or to CHARLES J. ALLEN, Treasurer, No. 304 Arch Street, Philadelphia.

WESTTOWN BOARDING SCHOOL.

A Stated Meeting of the COMMITTEE ON INSTITUTION is to be held at Philadelphia on Seventh-day morning, the 26th instant, at 10 o'clock.

CHARLES J. ALLEN, Clerk.

Eighth mo. 15th, 1871.

FRIENDS' SELECT SCHOOLS.

These schools, under the care of the four Monthly Meetings of Philadelphia, re-open after the summer vacation on Second-day, 9th mo. 4th, 1871. The Boys' School, on Cherry St., above Eighth St., is under the care of Zetzel's Friends' Principal. The Girls' School, on Seventh St., below Race St., is under the care of Margaret Lightfoot. There are also two Primary Schools for the elementary instruction of those children who are too young to attend the higher schools: one of which is held in Meeting-house at the corner of Sixth and Noble streets, and the other in the Boys' School building on Cherry St.

The attention of Friends residing in this city and its neighborhood, is particularly invited to these schools. In the principal ones the children may acquire a liberal education embracing a considerable variety of the useful branches of study, at a moderate cost, and the primary schools the pupils are well grounded in the use of a more elementary character.

It is desirable that applications for the admission of children should be made early in the session, and that parents returning children to the schools should send them at the beginning of the term.

MARRIED, at Friends' Meeting-house, West Chester Pa., on the 20th of Seventh month, 1871, JOHN I. DELINGHADE, of Haverford, Pa., to MARY P. M. of former place.

DIED, on the morning of the 26th of 7th month, 1871, at the residence of her mother, in West Chester, Chester Co., PA., LYNBIA H. TOMLINSON, in the 32d yr. of her age, a member of Birmingham Monthly Meeting. Being endeared to her kind and friends by a consistent life and conversation, her removal is deeply felt; but they have the consoling hope that through D. Lord's mercy her end was peace. From the beginning of the illness of this dear young friend it seemed to impressed upon her mind that she should not record. On the 24th she wished to bid all her family farewell "while her head was clear." She said, "The Lord has been merciful to me many times and I think he will still." "I feel that my sins have gone beforehand. She expressed the desire that her coffin and shroud should be plain, without ornament. After passing through a season of despondency, in which her peculiar language was, "Has the Lord forsaken me?" she again favored with a renewal of the light of his countenance. On the morning of the 25th, after passing pretty comfortable night, her breathing became short and shorter, until her purified spirit took its flight, humbly believe, to the realms of eternal day. On the morning of the 28th ult., at the residence of her mother, Mary C. Moore, in this city, P. M. PHILLIPS, wife of Benjamin Phillips, in the 40th yr. of her age, an esteemed member of London Grove Monthly Meeting, Chester Co., Pa., Possessed of unusually cheerful, amiable, and disposed to be helpful to all her relatives and friends, and was not felt a loss in her departure, but have abundant cause for hope and rejoicing, in the confident belief that her lamp was trimmed and burning; prepared to meet the Bridegroom of souls. As her close drew near she was embled, through the kindness of her friends, with a beautiful and most valuable life, to the keeping of the Great Shepherd, and even to rejoice in the prospect awaiting her.
